Cause: One of the following occurred: - There was no comma separating the two column definitions. - A left parenthesis was entered without a closing right parenthesis, or extra information was contained in the parentheses. - A data type was misspelled.

Action: Insert a comma between the column definitions.

OCI-03063: Packing or unpacking data types is not supported.

Cause: Packed or unpacked data types were not supported in this statement.

Action: Remove the PACKED or UNPACKED keyword.

OCI-03064: encountered FROM clause but expected optional WHERE, RETURNING or ERROR_LOGGING clauses

Cause: FROM clause was encountered after the UPDATE_SET clause in an UPDATE statement. UPDATE statement supports only optional WHERE, RETURNING or ERROR_LOGGING clauses after the UPDATE_SET clause.

Action: Remove the FROM clause or replace it with the optional WHERE, RETURNING or ERROR_LOGGING clauses.

OCI-03065: invalid GV\$ query

Cause: An error occurred while processing a query involving a GV\$ view.

Action: Check the GV\$ query.

OCI-03066: invalid PL/SQL expression

Cause: The PL/SQL expression that was provided was invalid.

Action: Correct the PL/SQL expression.

OCI-03067: invalid PL/SQL record variable in INSERT or UPDATE

Cause: The record variable used in the VALUES clause of a PL/SQL INSERT statement or the SET clause of a PL/SQL UPDATE statement was invalid.

Action: Correct the record variable in the VALUES clause of the PL/SQL INSERT statement or the SET clause of the PL/SQL UPDATE statement.

OCI-03068: invalid expression in the PARTITION BY clause of a partitioned outer join

Cause: The PARTITION BY clause of a partitioned outer join contained an invalid expression.

Action: Correct the PARTITION BY clause of the partitioned outer join. There should be no subqueries, and the expressions should only refer to the table reference immediately preceding the PARTITION BY clause. For more information refer to the section on the outer join clause in the SQL Language Reference manual.

OCI-03069: unsupported use of SYS_OP_LBID operator

Cause: The SYS_OP_LBID operator was used when there was no index present.

Action: Ensure that there is an index that the SYS_OP_LBID operator can process.

OCI-03070: GROUP BY position must be the ordinal number of a SELECT list expression

Cause: GROUP BY position was not the ordinal number of a SELECT list column.

Action: The GROUP BY position must be a number between 1 and the number of columns in the SELECT list. Check the column number and retry the statement.

OCI-03071: ENABLE DICTIONARY PROTECTION already specified

Cause: ENABLE DICTIONARY PROTECTION was already specified.

Action: Remove ENABLE DICTIONARY PROTECTION.

OCI-03072: DISABLE DICTIONARY PROTECTION already specified

Cause: DISABLE DICTIONARY PROTECTION was already specified.

Action: Remove DISABLE DICTIONARY PROTECTION.

OCI-03073: IDENTIFIED clause is specified with ENABLE DICTIONARY PROTECTION clause

Cause: IDENTIFIED clause not supported when using DICTIONARY PROTECTION clause.

Action: Remove the IDENTIFIED clause and retry the operation.

OCI-03074: Size cannot be specified for data type *string*.

Cause: The data type entered in the CREATE or ALTER TABLE statement did not support a size parameter.

Action: Remove the size parameter.

OCI-03075: unexpected item *string* in an out-of-line constraint

Cause: An unexpected item occurred in an out-of-line constraint. Either there was a missing comma or right parenthesis, or there were items out of order or misspelled.

Action: Check the item and the list to correct the error.

OCI-03076: unexpected item *string* in a column definition or inline constraint

Cause: An unexpected item occurred in a column definition or inline constraint definition. Either there was a missing comma or right parenthesis, or there were items out of order or misspelled.

Action: Check the item and the list to correct the error.

OCI-03077: unexpected left parenthesis after *string*

Cause: An unexpected left parenthesis occurred after the indicated symbol. Either there was a missing or incorrect item, or there were items out of order or misspelled.

Action: Check the item and the list to correct the error.

OCI-03078: unexpected right parenthesis after *string*

Cause: An unexpected right parenthesis occurred after the indicated symbol. Either there was a missing or incorrect item, or there were items out of order or misspelled.

Action: Check the item and the list to correct the error.

OCI-03079: missing required column definition list

Cause: The statement required a column definition list, but the list was not included.

Action: Add a column definition list.

OCI-03080: 'string': invalid character in 'string'

Cause: An invalid character has been encountered in the SQL statement.

Action: Remove the invalid character. If it is part of an identifier, enclose the identifier in double quotation marks. *Params: 1) character_value: The invalid character causing the error. 2) string_value: The string in which the invalid character causing the error occurs.

OCI-03081: invalid character encountered during direct path conversion

Cause: TODO

Action: TODO

OCI-03082: VALIDATE keyword not allowed in view constraints

Cause: The view constraint definition included the VALIDATE keyword, which was not allowed. Only NOVALIDATE can be used.

Action: Modify the view constraint definition to either remove VALIDATE or replace it with NOVALIDATE.

OCI-03083: Missing column or expression in the SET clause of an UPDATE statement

Cause: Another column or expression was expected after the comma or left parenthesis in the SET clause of an UPDATE statement but was not found.

Action: One of the following: - Remove the dangling comma if the intention was to end the SET clause. - Double quote the keyword after the comma if it is a reserved word and the intention was to add another column or expression.

OCI-03084: invalid character set ID (CSID) string

Cause: The specified character set ID (CSID) was invalid.

Action: Specify a valid character set ID (CSID).

OCI-03085: invalid timeout value

Cause: The timeout value was not a valid number.

Action: Specify a valid number as the timeout value.

OCI-03086: invalid depth string in the hierarchy cube SQL function

Cause: The depth for the hierarchy cube SQL function HIER_DESCENDANTS, HIER_LEVEL_MEMBERS or HIER_COLUMN was invalid.

Action: Specify a valid number as the depth for the hierarchy cube SQL function HIER_DESCENDANTS, HIER_LEVEL_MEMBERS or HIER_COLUMN.

OCI-03087: unable to convert BINARY_FLOAT or BINARY_DOUBLE NaN (Not a Number) value to NUMBER

Cause: The conversion from BINARY_FLOAT or BINARY_DOUBLE NaN (Not a Number) value to NUMBER failed.

Action: Check BINARY_FLOAT and BINARY_DOUBLE, and make sure they are valid.

OCI-03089: invalid number containing *string*

Cause: The number containing specified character or string was invalid. Only numeric fields are allowed.

Action: Check the number in the function or expression. Ensure that they contain only numbers, a sign, a decimal point, and the character "E" or "e", and retry the operation.

OCI-03090: invalid number containing *string* for '*string*'

Cause: The number containing specified character or string for column or expression was invalid. Only numeric fields are allowed.

Action: Check the number in the column or expression. Ensure that they contain only numbers, a sign, a decimal point, and the character "E" or "e", and retry the operation.

OCI-03096: invalid argument [*string*] passed to function SYS_OP_COUNTCHG

Cause: The specified argument to SYS_OP_COUNTCHG is invalid. The first argument should be a column or a function. The second argument should be a constant literal integer greater than 0 and less than 256.

Action: Ensure that the arguments passed to SYS_OP_COUNTCHG are valid.

*Params: 1) argument_position: The position of the invalid argument.

OCI-03097: windowing clause not allowed for function *string*

Cause: Windowing clause was not allowed for the given function.

Action: Use the function without specifying windowing clause.

OCI-03098: unexpected item *string* in an expression

Cause: An unexpected item occurred in an expression. Either there was a missing operator or extra operator, or there were items out of order or misspelled, or the types of the operands were not compatible with the operator.

Action: Check the item and the expression to correct the error.

OCI-03099: unexpected item *string* in a column definition

Cause: An unexpected item occurred in a column definition. Either there was a missing comma or right parenthesis, or there were items out of order or misspelled, or an inline constraint was misspelled.

Action: Check the item and the list to correct the error.

OCI-03100: communication area cannot be allocated; insufficient memory

Cause: An attempt to allocate stack space for communication purposes failed. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03101: invalid input data for *string*

Cause: Invalid input data was detected for the specified data type.

Action: Pass a valid value for the specified data type.

OCI-03102: invalid character set detected during data conversion either to or from the client

Cause: Either a malformed network packet describing the character set was received or the client character set was invalid. Hence, the character set was not recognized.

Action: If the error persists, verify network stability. Contact Oracle Support Services, if necessary.

OCI-03103: malformed network packet from client rejected for network RPC (string) with reason number

Cause: An invalid input was detected for the specified Remote Procedural Call (RPC).

Action: Contact Oracle Support.

OCI-03105: internal protocol error

OCI-03106: fatal two-task communication protocol error

Cause: The communication path between Oracle and the user task has stopped. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03107: oranet buffer underflow

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03108: this version of the Oracle Client libraries is not supported by the database version

Cause: A connection attempt was made from an application using a version of the Oracle Client libraries that is not supported by the database version.

Action: Upgrade to the latest version of the Oracle Client libraries and try again.

OCI-03109: oranet buffer overflow

Cause: Data being transferred between the user program and Oracle overflowed the buffer space available. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03110: oranet: ORACLE does not support this SQL version

Cause: The version of Oracle connected to via Net8 does not support the version of the Net8 protocol.

Action: Upgrade the older version of Oracle and try again.

OCI-03111: break received on communication channel

Cause: A break was processed on the communications channel, but was not properly handled by Net8 software. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03112: a server linked as single-task cannot use SQL*Net

Cause: A statement containing a SQL*Net connect string was issued to the single-task server. For example, a database link was used in a SQL statement.

Action: Do not use SQL*Net connect strings in a single-task environment.

OCI-03113: end-of-file on communication channel

Cause: The connection between the Client and Server process was broken. The cause may be that the database instance experienced a maintenance or unplanned outage, or that the Server process had a fatal error, or that the network connection was interrupted.

Action: Check the alert log of the database instance to see if a planned or unplanned outage occurred. Check the alert log to see if a process termination (ORA-07445, kill, or ORA-00600) occurred. Check for network problems and review the SQL*Net setup. After the problem is identified and resolved, retry the operation.

OCI-03114: not connected to ORACLE

Cause: The connection between the Client and Server process did not exist. This is likely the result of an earlier ORA-03113 error. The cause may be that the database instance experienced a maintenance or unplanned outage, or that the Server process had a fatal error, or that the network connection was interrupted.

Action: Check the alert log of the database instance to see if a planned or unplanned outage occurred. Check the alert log to see if a process termination (ORA-07445, kill, or ORA-00600) occurred. Check for network problems and review the SQL*Net setup. After the problem is identified and resolved, retry the operation.

OCI-03115: unsupported data type or representation was received from remote connection

Cause: An unsupported data type was provided for this bind or define operation.

Action: Upgrade to the latest client and server versions.

OCI-03116: invalid buffer length passed to a conversion routine

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-03119: two-task detected inconsistent data type specification

Cause: There was both a data type, and an anonymous data type declaration found.

Action: Correct the specification.

OCI-03120: two-task conversion routine: integer overflow

Cause: An integer value in an internal Oracle structure overflowed when being sent or received over a heterogeneous connection. This can happen when an invalid buffer length or too great a row count is specified. It usually indicates a bug in the user application.

Action: Check parameters to Oracle calls. If the problem recurs, reduce all integer parameters, column values not included, to less than 32767.

OCI-03121: no interface driver connected - function not performed

Cause: This message occurred usually because the Net8 driver was not loaded into memory or there was a mismatch of the version of the driver. A user program linked with an obsolete library may also cause this message. Only programs provided by Oracle Corporation should use this interface.

Action: If the message occurred during use of a program provided by Oracle Corporation, contact Oracle Support Services. If a user program caused the message, relink the program with current versions of the Oracle libraries.

OCI-03122: attempt to close ORACLE-side window on user side

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-03123: current operation is still executing in non-blocking mode

Cause: This is a status code that indicates that the operation cannot complete now.

Action: This is not an error. The operation should be retried again for completion.

OCI-03124: two-task internal error

Cause: Internal error.

Action: Contact Oracle Support Services.

OCI-03125: client-server protocol violation

Cause: The application received a bad escape sequence from the server and may indicate a problem with the client application user code.

Action: Contact Oracle Support Services.

OCI-03126: network driver does not support non-blocking operations

Cause: A non-blocking operation was attempted and the network driver does not support non-blocking operations.

Action: Use default blocking operations or use a driver supporting non-blocking operations.

OCI-03127: no new operations allowed until the active operation ends

Cause: An attempt was made to execute a new operation before the active non-blocking operation completed or a new operation was attempted before all the pieces of a column were inserted or fetched.

Action: Execute the new operation after the non-blocking operation completes. If piecewise binds/defines were done, execute the new operation after all the pieces have been inserted or fetched.

OCI-03128: connection is in blocking mode

Cause: The OCI test for non-blocking mode on a connection indicates that the connection is in blocking mode.

Action: If non-blocking mode is required use appropriate OCI calls to change the mode.

OCI-03129: the next piece to be inserted is required

Cause: The application performed a piecewise bind on a column.

Action: Provide the next piece of this bind variable.

OCI-03130: the buffer for the next piece to be fetched is required

Cause: The application performed a piecewise define on the column.

Action: Provide the next buffer for the next piece to be retrieved.

OCI-03131: an invalid buffer was provided for the next piece

Cause: The application either provided the length of the buffer for the next piece to be zero or provided a null pointer.

Action: Verify if the buffer pointer for the next piece is null or if the length is zero.

OCI-03132: two-task default value overflow

Cause: The default value specified for a record field was too large.

Action: Change the default value to fit the field size.

OCI-03134: Connections to this server version are no longer supported.

Cause: An unsupported connection attempt was made to an Oracle server of an older version.

Action: See Oracle Database documentation for additional information.

OCI-03135: connection lost contact

Cause: 1) Server unexpectedly terminated or was forced to terminate. 2) Server timed out the connection.

Action: 1) Check if the server session was terminated. 2) Check if the timeout parameters are set properly in sqlnet.ora.

OCI-03136: inbound connection timed out

Cause: The inbound connection was timed out by the server because user authentication did not complete within the time specified by SQLNET.INBOUND_CONNECT_TIMEOUT or its default value.

Action: 1) Check the SQL*NET and RDBMS logs for traces of suspicious connections. 2) Configure SQL*NET with a larger value for the SQLNET.INBOUND_CONNECT_TIMEOUT parameter, if necessary.

OCI-03137: malformed TTC packet from client rejected: [string] [string] [string] [string] [string] [string] [string] [string]

Cause: A malformed TTC (Two-Task Common) packet was received from the client.

Action: Contact Oracle Support Services.

OCI-03138: connection terminated due to security policy violation

Cause: The connection was terminated due to a security policy violation.

Action: Contact the database administrator.

OCI-03139: This OCI call has been disabled by the DBA

Cause: The SEC_DISABLE_OLDER_ORACLE_RPC initialization parameter was enabled.

Action: Contact the Database Administrator

OCI-03140: I/O operation in progress

Cause: The current I/O operation was not complete. The error is typically returned from vectored and/or asynchronous I/O calls.

Action: Perform the necessary operation to complete or abort the current I/O.

OCI-03141: I/O request queue full

Cause: The I/O request queue was full and no more requests could be queued.

Action: Perform the proper operations to complete part or all of the current in-progress I/O requests.

OCI-03142: Session ID: *number* Serial number: *number*

Cause: Connection was lost for the specified session and serial number. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

OCI-03143: Process ID: *string* Thread ID: *string*

Cause: Connection was lost for the specified process ID and thread ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

OCI-03144: Process ID: *string*

Cause: Connection was lost for the specified process ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

OCI-03145: I/O streaming direction error

Cause: Attempted to PUT data when GET streaming was in progress or attempted to GET data when PUT streaming was in progress.

Action: Complete current stream read or write I/O before attempting I/O in reverse direction.

OCI-03146: invalid buffer length for TTC field

Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

OCI-03147: missing mandatory TTC field

Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

OCI-03148: OCI_ATTR_ROW_COUNT cannot return a row count exceeding UB4MAXVAL. The actual row count is [*string*]

Cause: The row count was larger than UB4MAXVAL. OCI clients using OCI_ATTR_ROW_COUNT cannot see row counts larger than UB4MAXVAL.

Action: Upgrade Oracle client to version 12 client libraries or higher and use OCI_ATTR_UB8_ROW_COUNT instead.

OCI-03149: invalid Oracle error code

Cause: An invalid Oracle error code was received by the server.

Action: Contact Oracle Support Services.

OCI-03150: end-of-file on communication channel for database link

Cause: The connection between the client and the remote server process was broken.

Action: Look in the alert.log file of the remote server for any errors. Also, check to see whether the remote server process is dead and whether a trace file was generated at failure time.

OCI-03151: schema name length exceeding UB1MAXVAL

Cause: The schema name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

OCI-03152: object name length exceeding UB1MAXVAL

Cause: The object name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

OCI-03153: column name length exceeding UB1MAXVAL

Cause: The column name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

OCI-03154: Deprecated TTC operation is disallowed.

Cause: A Deprecated Two-Task Common (TTC) remote procedural call (RPC) was invoked.

Action: Contact Oracle Support Services for further assistance.

OCI-03155: SQL statement not supported for remote execution

Cause: Statement execution could not proceed because the rewritten statement that was issued to the remote had a different ordering (or number) of bind variables as compared to the original statement issued locally.

Action: Rewrite the statement issued locally to more closely match the rewritten statement issued to the remote (especially in terms of order and number of bind variables). Contact Oracle Support Services for further assistance.

OCI-03156: OCI call timed out

Cause: The OCI call was timed out because it was not completed within the timeout specified by OCI_ATTR_CALL_TIMEOUT.

Action: Check the current value of OCI_ATTR_CALL_TIMEOUT and increase it to an appropriate value.

OCI-03160: An invalid client operation was requested by the server

Cause: You are using an Oracle client application linked with libraries with lower version than the current server version.

Action: Upgrade client libraries to be same as or higher than the server version.

OCI-03161: illegal target ID (*string*) in multi-target database link name (*string*)

Cause: The target ID in the multi-target database link name was either non-numeric or its value was greater than UB4MAXVAL.

Action: Fix the target ID in the multi-target database link name to be numeric and at most UB4MAXVAL.

OCI-03162: *string*: must appear in the GROUP BY clause or be used in an aggregate function as 'group_by_position_enabled' is FALSE

Cause: The specified expression is not part of either the GROUP BY clause, an aggregate function, or a constant but appears in a part of the query that is processed after the GROUP BY clause, such as the SELECT clause, the ORDER BY clause, or the HAVING clause. Because group by position is disabled by default, the integer number in the GROUP BY clause is not treated as the position of an expression in the SELECT list.

Action: Either add the expression to the GROUP BY clause or enable group by position and add the position of the expression in the GROUP BY clause. Ensure that any columns in the SELECT list that are not part of an aggregate function are present in the GROUP BY clause. Ensure parameter 'group_by_position_enabled' is set to TRUE if the integer number in the GROUP BY clause is intended as the position of an expression in the SELECT list. *Params: 1) expression: The expression that is missing from the GROUP BY clause.

OCI-03170: deadlocked on readable physical standby (undo segment *string*)

Cause: A new undo segment was added. A query can occasionally deadlock when issued around the time an undo segment is added and used immediately on the primary.

Action: Retry the query. Avoid creating new undo segments when using standby as a regular part of operation.

OCI-03171: Recovery was terminated during query execution

Cause: Recovery was terminated. A query can occasionally deadlock when recovery is terminated because it needs a block with changes that are made after the point at which recovery was terminated.

Action: Retry the query. Avoid cancelling recovery on standby.

OCI-03172: STANDBY_MAX_DATA_DELAY of *string* seconds exceeded

Cause: Standby recovery fell behind the STANDBY_MAX_DATA_DELAY requirement.

Action: Tune recovery and retry the query later, or switch to another standby database within the data delay requirement.

OCI-03173: Standby may not be synced with primary

Cause: ALTER SESSION SYNC WITH PRIMARY did not work because either the standby was not synchronous or in a data-loss mode with regard to the primary, or the standby recovery was terminated.

Action: Make the standby synchronous and no-data-loss with regard to the primary. Make the standby recovery active.

OCI-03174: STANDBY_MAX_DATA_DELAY does not apply to SYS users

Cause: ALTER SESSION SET STANDBY_MAX_DATA_DELAY did not work for SYS users.

Action: Issue ALTER SESSION SET STANDBY_MAX_DATA_DELAY for non-SYS users.

OCI-03175: parameter *string* mismatch

Cause: The value of the %s parameter was not the same in all instances.

Action: Check %s in all instances.

OCI-03176: *string* only works on an open physical or logical standby database

Cause: The database was not an open physical or logical standby database.

Action: Issue the command on an open physical or logical standby database.

OCI-03177: enable read-only violation logging

OCI-03178: duplicate SESSION or GLOBAL specifications

Cause: Duplicate SESSION or GLOBAL specifications were specified.

Action: Remove the duplicate specification.

OCI-03179: NOCACHE or ORDER sequences cannot be accessed from Active Data Guard standby

Cause: NOCACHE or ORDER sequences were not supported for Active Data Guard standby.

Action: Alter the sequence properties.

OCI-03180: Sequence values cannot be allocated for Oracle Active Data Guard standby or at True Cache.

Cause: Connection to the primary database failed. The primary database might be down.

Action: Verify that the primary database is up and retry.

OCI-03181: The sequence *string.string* on the Oracle Active Data Guard primary database is no longer accessible.

Cause: The Oracle Active Data Guard standby database tried to access the referenced sequence on the primary database and found it was no longer accessible. This can happen when the sequence on the primary database is dropped, or its access permissions have changed.

Action: Check the sequence and its status on the primary database. Ensure that it exists and is accessible. *Params: 1) schema_name: The schema in which the sequence resides. 2) sequence_name: The sequence name.

OCI-03182: The sequence object is no longer a global sequence for the Oracle Active Data Guard standby database.

Cause: The sequence object might have been altered by the primary database.

Action: Check the sequence status on the primary database.

OCI-03183: Parameter *string* value change failed.

Cause: The parameter could not be changed during Oracle Active Data Guard (Oracle ADG) recovery.

Action: Stop the Oracle ADG recovery and then change the parameter value.

OCI-03185: The value change failed for parameter *string*.

Cause: An attempt was made to enable the parameter on a non-Engineered system or it was not on a Platform as a Service.

Action: Contact Oracle Support Services.

OCI-03186: Cannot start Oracle ADG recovery on a non-Oracle Cloud database on a server that is not a primary server.

Cause: An attempt was made to start Oracle Active Data Guard (Oracle ADG) recovery on a non-Oracle Cloud database that was not on the primary server.

Action: Contact Oracle Support Services.

OCI-03187: Preplugin recovery cannot start from a backup belonging to a prior PDB incarnation.

Cause: An attempt was made to start preplugin recovery from a backup prior to the current pluggable database (PDB) incarnation.

Action: Contact Oracle Support Services.

OCI-03200: the segment type specification is invalid

Cause: segment type is not TABLE, INDEX, or CLUSTER

Action: use a correct segment type

OCI-03201: the group number specification is invalid

Cause: the freelist group number was either negative or larger than the the number of freelist groups in the segment

Action: use a correct group number

OCI-03202: the scan limit specification is invalid

Cause: the scan limit did not have a positive integer value the number of freelist groups in the segment

Action: use a correct scan limit

OCI-03203: concurrent update activity makes space analysis impossible

Cause: high volume of user updates interfere with the space analysis

Action: retry the command or lock the underlying objects

OCI-03204: the segment type specification should indicate partitioning

Cause: partition name is specified for the space analysis, but the object type does not indicate partitioning

Action: specify PARTITION in the segment type, if the object is partitioned, otherwise, omit the partition name

OCI-03205: partition name is required when partitioned type is specified

Cause: partition name is not specified for the space analysis, but the object type indicates partitioning

Action: specify partition name, if the object is partitioned, otherwise, specify a non-partitioned type

OCI-03206: maximum file size of (*string*) blocks in AUTOEXTEND clause is out of range

Cause: The maximum file size for an autoextendable file has exceeded the maximum number of blocks allowed.

Action: Reduce the size and retry.

OCI-03207: subpartitioned type must be specified for composite object

Cause: partition type is specified for the space analysis, but the object type indicates composite partitioning

Action: specify subpartition name and subpartition type

OCI-03208: partitioned type must be specified for a non-composite object

Cause: subpartition type is specified for the space analysis, but the object type indicates non-composite partitioning

Action: specify partition name and partition type

OCI-03209: DBMS_SPACE_ADMIN package invalid file or block specification

Cause: The value of the file number or block number was outside of the limits or was inconsistent.

Action: Fix the file number or block number value.

OCI-03210: DBMS_SPACE_ADMIN package invalid option specification

Cause: The value of one of the option parameters was incorrect.

Action: Fix the option value.

OCI-03211: The segment does not exist or is not in a valid state

Cause: The segment specified in the DBMS_SPACE_ADMIN or DBMS_SPACE operation does not exist or is not in a state appropriate for this operation

Action: Fix the segment specification, or put the segment in the appropriate state.

OCI-03212: Temporary Segment cannot be created in locally-managed tablespace

Cause: Attempt to create a temporary segment for sort/hash/lobs in in permanent tablespace of kind locally-managed

Action: Alter temporary tablespace of user to a temporary tablespace or a dictionary-managed permanent tablespace

OCI-03213: invalid large object (LOB) segment name in DBMS_SPACE package

Cause: The large object (LOB) segment specified in the DBMS_SPACE procedure does not exist.

Action: Provide a valid LOB segment name.

OCI-03214: The specified file size is smaller than the minimum blocks *string*.

Cause: The file size specified in ADD or RESIZE command for a data file or temp file is too small to create an allocation unit.

Action: Increase the file size. Retry. *Params: 1) min_size: The minimum number of blocks required.

OCI-03215: File Size specified for resize is too small

Cause: File Size specified for resize datafile/tempfile causes bitmap control structures to overlap

Action: Increase the specification for file size

OCI-03216: Tablespace/Segment Verification cannot proceed

Cause: Corruptions detected during verification which cannot be dealt with

Action: Do manual verification

OCI-03217: invalid option for alter of TEMPORARY TABLESPACE

Cause: invalid option for alter of temporary tablespace was specified

Action: Specify one of the valid options: ADD TEMPFILE, TEMPFILE ONLINE, TEMPFILE OFFLINE

OCI-03218: invalid option for CREATE/ALTER TABLESPACE

Cause: invalid option for create/alter tablespace of type locally-managed

Action: Specify one of the valid options.

OCI-03219: Tablespace '*string*' is dictionary-managed, offline or temporary

Cause: Operation which is only applicable to permanent, online, locally-managed tablespaces is specified for a tablespace which is either dictionary-managed, offline or temporary

Action: Reissue operation for a different tablespace, mount the tablespace or do not issue it at all, since it does not apply for the given tablespace

OCI-03220: DBMS_SPACE_ADMIN required parameter is NULL or missing

Cause: Some of the procedures was called with missing or NULL parameters

Action: Specify the missing parameter

OCI-03221: Temporary tablespaces and temporary segments must have standard block size

Cause: An attempt was made to do one of the following : (1) create a temporary tablespace with a non-standard block size or, (2) alter an existing permanent tablespace of non-standard block size to a temporary tablespace or, (3) issue a DDL statement that would result in the creation of a temporary segment in a tablespace of non-standard block size.

Action: (1) If creating a temporary tablespace, do not specify a block size different from the standard block size. (2) If altering an existing permanent tablespace to a temporary tablespace, ensure that it is of standard block size. (3) Ensure that the user's temporary tablespace is a tablespace having the standard block size.

OCI-03222: average row size and row count must be greater than zero

Cause: Either a bad value passed to `dbms_space.create_table_cost()` or explain plan did not pass through size information.

Action: Check the row size parameter in `dbms_space.create_table_cost()`. For explain plan, make sure statistics have been computed for all source tables in the CREATE TABLE AS SELECT statement.

OCI-03223: Bitmap index block addressable limitation reached

Cause: The limitation of addressability of BMIB (Bitmap Index Block) was reached for the current blocksize.

Action: If the segment size has grown greater than addressability of BMIB (Bitmap Index Block), do the following: (1) Partition the table. (2) Move the segment to a tablespace having bigger blocksize.

OCI-03224: DBMS_SPACE_ADMIN requires a 12c bigfile tablespace

Cause: An attempt was made to perform an operation which was supported only for bigfile tablespaces created in 12c or later.

Action: Use the appropriate bigfile tablespace.

OCI-03230: segment only contains *string* blocks of unused space above high water mark

Cause: Attempt to preserve too many blocks.

Action: reduce the KEEP amount.

OCI-03231: the INITIAL extent may not be deallocated

Cause: Attempt to deallocate space from the segment which was truncated prior to the 7.3 release.

Action: increase the KEEP amount, or truncate the segment, and reissue the command.

OCI-03233: unable to extend table *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for table subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-03234: unable to extend index *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for index subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-03235: max # extents (*string*) reached in table *string.string* subpartition *string*

Cause: A table subpartition tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

OCI-03236: max # extents (*string*) reached in index *string.string* subpartition *string*

Cause: An index subpartition tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

OCI-03237: Initial Extent of specified size cannot be allocated in tablespace (*string*)

Cause: Too large a size for an initial extent due to freelist group specification

Action: Reduce number of freelist groups specified for segment

OCI-03238: unable to extend LOB segment *string.string* subpartition *string* by *string* in tablespace *string*

Cause: An attempt was made to allocate an extent for LOB subpartition segment in tablespace, but the extent could not be allocated because there is not enough space in the tablespace indicated.

Action: Use the ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-03239: maxextents (*string*) reached in LOB segment *string.string* subpartition *string*

Cause: A LOB subpartition segment tried to extend past maxextents.

Action: If maxextents is less than the system maximum, raise it. Otherwise, recreate the subpartition with larger INITIAL, NEXT, or PCTINCREASE parameters.

OCI-03240: User's temporary tablespace same as tablespace being migrated

Cause: Users default temporary tablespace must be different from the tablespace being migrated.

Action: alter users default temporary tablespace to be different.

OCI-03241: Invalid unit size

Cause: User specified an invalid unit size for the tablespace

Action: Specify the correct unit size. To estimate unit size please refer to Oracle Server Administrator's Guide.

OCI-03242: Tablespace migration retried 500 times

Cause: For migration to complete, temporary segments should not be present in the tablespace at the time of migration.

Action: Avoid migrating the tablespace when there is heavy temporary segment creation going on as with object drops.

OCI-03243: destination dba overlaps with existing control information

Cause: Cannot overlap control information during relocation

Action: Please chose another destination address

OCI-03244: No free space found to place the control information

Cause: During migration of tablespace found no place to put the control information. If during bitmaps relocation, found no space at the specified destination.

Action: If during migration, add more space to the tablespace and retry migration. If during bitmaps relocation, specify a destination address where there is enough free space.

OCI-03245: Tablespace has to be dictionary managed, online and permanent to be able to migrate

Cause: Tablespace was not dictionary managed or online or permanent.

Action: Make sure the tablespace is online, permanent and dictionary managed

OCI-03246: Invalid block number specified

Cause: Control information cannot be placed at the specified dba either because the block number specified is beyond the file end or the file is not large enough to accomodate the control information at that location

Action: specify a correct block number

OCI-03247: Invalid block number specified

Cause: Relocation of bitmaps to the said destination will make the tablespace self descriptive

Action: Choose another destination dba.

OCI-03248: Too much of segment creation activity during migration

Cause: Temporary segments were attempted to be created during migration

Action: The error is signalled after retrying migration for 500 times. Run migration when there is less of segment creation activity is going on.

OCI-03249: Uniform size for automatic segment space management tablespace should have at least *string* blocks

Cause: For the given blocksize, uniform size specified is insufficient

Action: Specify larger extent size and retry

OCI-03250: Cannot mark this segment corrupt

Cause: This segment cannot be marked corrupt because it contains data dictionary objects

Action: Check the segment information and reissue the command.

OCI-03251: Cannot issue this command on SYSTEM tablespace

Cause: It is not permitted to migrate SYSTEM tablespace from locally managed format to dictionary managed format or relocate bitmaps.

Action: Check the tablespace name and procedure name

OCI-03252: initial extent size not enough for LOB segment

Cause: Fatblock size of LOB segment is too big to fit into the initial extent.

Action: Specify a smaller fatblock size or create the LOB segment in other tablespaces with bigger initial extent size.

OCI-03254: unable to execute the sql in read only database

Cause: Unable to create a consistent snapshot of the object in a read only database. Transaction recovery must be performed before opening the database read only.

Action: Open the database read write, allow dead transaction recovery to complete and then open the database read only.

OCI-03261: the tablespace *string* has only one file

Cause: Dropping file from ts which has a single file extent.

Action: Cannot make a tablespace fileless

OCI-03262: The data file is not empty.

Cause: An attempt was made to drop a non empty data file. A non empty data file cannot be dropped.

Action: Cannot drop a non empty data file.

OCI-03263: cannot drop the first file of tablespace *string*

Cause: Trying to drop the first datafile with which ts is created

Action: Cannot drop the first datafile with which ts is created

OCI-03264: cannot drop offline datafile of locally managed tablespace

Cause: Trying to drop offline datafile in Imts

Action: Try to drop file after making it online

OCI-03274: both ALLOCATE EXTENT and DEALLOCATE UNUSED options are specified

Cause: The DEALLOCATE option and the ALLOCATE option are specified in the same command.

Action: Choose one of the options or issue two separate commands.

OCI-03275: duplicate DEALLOCATE option specification

Cause: The DEALLOCATE UNUSED option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

OCI-03276: duplicate ALLOCATE EXTENT option specification

Cause: The ALLOCATE EXTENT option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

OCI-03277: invalid SIZE specified

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

OCI-03278: duplicate ALLOCATE EXTENT option specification

Cause: An option (DATAFILE, SIZE or INSTANCE) was specified more than once.

Action: Specify each option at most once.

OCI-03279: invalid INSTANCE specified

Cause: The specified value is not recognized as a valid instance name.

Action: Use a valid name.

OCI-03280: invalid DATAFILE file name specified

Cause: A character string literal is expected, but not found.

Action: Specify file names using character string literals.

OCI-03281: invalid ALLOCATE EXTENT option

Cause: An option other than DATAFILE, SIZE or INSTANCE was specified.

Action: Remove invalid option and retry the command.

OCI-03282: missing ALLOCATE EXTENT option

Cause: No ALLOCATE EXTENT options were specified.

Action: Specified one or more of the following options: DATAFILE, SIZE or INSTANCE.

OCI-03283: specified datafile *string* does not exist

Cause: The datafile does not exist

Action: Retry the option with the correct datafile

OCI-03284: datafile or tempfile *string* is not a member of tablespace *string*

Cause: The specified datafile or tempfile did not belong to the tablespace that the object resides in.

Action: Retry the option with the correct datafile or tempfile.

OCI-03286: ALLOCATE EXTENT not valid for HASH CLUSTERS

Cause: The cluster is a hash cluster, and can not use the allocate extent option.

Action: n/a

OCI-03287: invalid FREELIST GROUP specified

Cause: The specified FREELIST GROUP number is invalid

Action: Choose a number between 1 and # freelist groups for this object

OCI-03288: both FREELIST GROUP and INSTANCE parameters may not be specified

Cause: Both FREELIST GROUP and INSTANCE were specified in clause

Action: Remove one of the two parameters

OCI-03289: partition name and segment type do not match

Cause: Partition name and segment type specified for space analysis do not match

Action: Specify type PARTITION if the object is partitioned, specify SUBPARTITION if the object is composite

OCI-03290: Invalid truncate command - missing CLUSTER or TABLE keyword

Cause: Invalid object specification given.

Action: Either specify TRUNCATE CLUSTER or TRUNCATE TABLE

OCI-03291: Invalid truncate option - missing STORAGE keyword

Cause: Expected STORAGE keyword

Action: Either specify DROP STORAGE or REUSE STORAGE

OCI-03292: Table to be truncated is part of a cluster

Cause: The table being truncated is a member of a cluster.

Action: Either use TRUNCATE CLUSTER or DROP TABLE

OCI-03293: Cluster to be truncated is a HASH CLUSTER

Cause: Only INDEX CLUSTERS can be truncated.

Action: Drop and recreate the HASH CLUSTER instead of using truncate.

OCI-03296: cannot resize datafile - file *string* not found

Cause: The specified datafile is not available for resizing.

Action: Ensure that the datafile name is valid, and if so, ensure the file is accessible.

OCI-03297: File contains used data beyond requested RESIZE value.

Cause: Some portion of the file in the region to be trimmed was currently in use by one or more database objects.

Action: Drop or move segments containing extents in this region prior to resizing the file, or choose a RESIZE value limited to free space in the tail of the file being trimmed.

OCI-03298: cannot shrink datafile - file *string* is under hot backup

Cause: Attempt to shrink a datafile while it is under hot backup. This is not allowed.

Action: Retry shrinking the file after the hot backup completes.

OCI-03299: cannot create dictionary table *string*

Cause: A dictionary table is created upon the first execution of the command 'alter database datafile autoextend on' for a database. This operation did not succeed. The most probable cause for this is insufficient space in the system tablespace.

Action: See action for next error message in error stack.

OCI-03300: invalid setting '*string*' specified in command ALTER SESSION SET "ERROR_MESSAGE_DETAILS": *string*

Cause: The setting for ALTER SESSION "ERROR_MESSAGE_DETAILS" is invalid. ERROR_MESSAGE_DETAILS can be set using ALTER SYSTEM to 'ON' or 'OFF' or 'DISALLOWED'. ERROR_MESSAGE_DETAILS can be set using ALTER SESSION to 'ON' or 'OFF'. The setting 'DISALLOWED' is invalid when using ALTER SESSION. When ERROR_MESSAGE_DETAILS is set to 'DISALLOWED' using ALTER SYSTEM, individual sessions cannot use ALTER SESSION to change their session value of ERROR_MESSAGE_DETAILS.

Action: Use a valid setting for ERROR_MESSAGE_DETAILS. *Params: 1) setting: Invalid setting. 2) explanation: Explanation of why this parameter is invalid.

OCI-03301: (ORA-00001 details) row with column values (*string*) already exists

Cause: The preceding ORA-00001 error on the stack is enhanced to provide additional details when requested. Additional error details are configured using system parameter "ERROR_MESSAGE_DETAILS".

Action: Use these details to understand the preceding ORA-00001 error and take the appropriate action as described in the ORA-00001 Action text. *Params: 1) column_values: Column values which violated the unique constraint.

OCI-03302: (ORA-01722 details) invalid string value: *string*

Cause: The error supplements the preceding ORA-01722 error by providing the character string whose conversion to number failed.

Action: Use the character string to understand the preceding ORA-01722 error and take the action described in the ORA-01722 action text. *Params: 1) string_value: The character string that cannot be converted to a number.

OCI-03500: Parameter must be set when logged in as SYSDBA.

Cause: An attempt was made to set a parameter as a user other than SYSDBA.

Action: Log in as SYSDBA to set this parameter.

OCI-03700: More than one shardspace not allowed with system-managed sharding.

Cause: An attempt to add a shardspace to the catalog was attempted when a shardspace already existed.

Action: Only one shardspace is allowed per system-managed catalog. Use the existing shardspace or re-create the catalog with a different sharding type.

OCI-03701: invalid parameter combination: *string* and *string*

Cause: Mutually exclusive parameters were specified in a command.

Action: Verify the parameters and retry command.

OCI-03702: reserved word used as object name: *string*

Cause: A reserved word was used as the name of an object.

Action: Verify the parameters and retry command.

OCI-03703: no sharded database pools exist

Cause: A command was issued which required a sharded database pool, but none existed.

Action: Add a sharded database pool and retry the command.

OCI-03704: too many sharded database pools exist

Cause: A command was issued which required a sharded database pool, but more than one existed.

Action: Remove a sharded database pool and retry the command.

OCI-03705: must explicitly specify shardgroup name because there could be multiple candidates

Cause: A command was issued without specifying a shardgroup and a default shardgroup could not be determined.

Action: Do not omit '-shardgroup' when multiple shardgroups exist.

OCI-03706: must explicitly specify shardspace name because there could be multiple candidates

Cause: A command was issued without specifying a shardspace and a default shardspace could not be determined.

Action: Do not omit '-shardspace' when multiple shardspaces exist.

OCI-03707: mandatory environment variable not set at destination: *string*

Cause: An environment variable required for the operation was not set at the specified destination.

Action: Provide a value for the variable and retry operation.

OCI-03708: shard '*string*' does not exist

Cause: The requested shard did not exist.

Action: Check the name and try again.

OCI-03709: invalid format for input parameter file

Cause: The input file contained a parameter that was too long or the input file was not in the correct format.

Action: Consult the documentation and confirm that the file contents and parameters being used are valid and retry the operation.

OCI-03710: directory does not exist or is not writeable at destination: *string*

Cause: A directory required for successful operation did not exist or was not writeable at the destination.

Action: Confirm that the directory exists and that permissions allow for the creation of files.

OCI-03711: A shard with the same database identifier is a member of a different shardgroup.

Cause: A shard with the same database identifier was a member of a shardgroup in another shardspace.

Action: All shards with the same database identifier must be members of the same shardgroup. Specify a different shardgroup and retry the operation.

OCI-03712: A shard with the same database identifier is already in the shardgroup.

Cause: A shard with the same database identifier was a member of the specified shardgroup.

Action: All shards in a shardgroup must have unique database identifiers. Specify a different shardgroup and retry the operation.

OCI-03713: Shard '*string*' contained *string* chunks and *string* replication units.

Cause: A shard that contained chunks or replication units was removed from the catalog. Those chunks or replication units are no longer available.

Action: This is an informational message only.

OCI-03714: errors found during chunk recovery

Cause: The chunk recovery procedure was not able to automatically recover corrupted chunks.

Action: Examine the trace files and manually fix the problems by altering shard tablespaces.

OCI-03715: invalid user *string*

Cause: The specified user did not exist on this shard.

Action: Ensure that the shard DDL is up to date and re-try.

OCI-03716: statement too long

Cause: The statement was too long.

Action: Reduce the size of the statement to 3800 bytes or less.

OCI-03717: Shard *string* does not exist in the shard pool.

Cause: A nonexistent shard was provided for execution.

Action: Ensure that the shard exists and try again.

OCI-03718: Service management is not available at this time because broker configuration *string* does not have a registered primary database.

Cause: The primary database was not registered. Service management requires registration of all primary databases.

Action: Wait for new primary database to be registered and try again.

OCI-03719: Shard character set does not match catalog character set.

Cause: The specified shard character set did not match the catalog character set.

Action: Ensure that the character sets match and try again.

OCI-03720: Shard national character set does not match catalog national character set.

Cause: The specified shard national character set did not match the catalog national character set.

Action: Ensure that the national character sets match and try again.

OCI-03736: Database *string* is not a part of the sharded schema.

Cause: The specified database was not in the sharded schema.

Action: Ensure that the name is correct and try again.

OCI-03737: cannot suspend move for chunk number *string*

Cause: The specified chunk move could not be suspended.

Action: Either the move has already started or is no longer in the the queue. Check the status and try again.

OCI-03738: cannot remove chunk number *string* from the move queue

Cause: The specified chunk could not be removed from the queue.

Action: Either the move has already started or is no longer in the queue. Check the status and try again.

OCI-03739: The specified database is not configured to be a catalog.

Cause: The specified database was not configured to be a catalog.

Action: Specify a valid catalog database and retry the operation.

OCI-03740: Deployment failed with error: *string*

Cause: Unable to successfully complete shard deployment.

Action: Check error returned and retry the operation.

OCI-03741: Could not retrieve default template from shard.

Cause: Unable to retrieve default Oracle Database Configuration Assistant (DBCA) template from shard.

Action: Verify that General_Purpose.dbc exists on shard and retry the operation. Alternately, explicitly provide a template using 'create shard' command options.

OCI-03742: Move chunk conditions are not met.

Cause: Chunk migration pre-check failed because one of the transporting tablespaces was either read-only or in hot backup mode.

Action: Alter the tablespace to fulfill chunk migration requirements.

OCI-03743: cannot create service, sharded services must use preferred_all option

Cause: An attempt was made to create a service in a sharded pool that specified preferred and available databases.

Action: Use only preferred_all option for sharded services.

OCI-03744: Shard DDL state is not up-to-date.

Cause: The requested operation required one or more involved shards to be up-to-date with the DDL state of the sharded system.

Action: Recover shards, which are in DDL Error state, wait for DDL execution to finish on every shard, then retry executing the operation.

OCI-03745: global service manager not running

Cause: The master global service manager was no longer connected to the catalog.

Action: Restart the global service manager and retry operation.

OCI-03746: The GSMUSER account does not have SYSDG and SYSBACKUP privileges.

Cause: The GSMUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

OCI-03747: root table already exists

Cause: New shardspaces could not be added because a root table already existed in the sharded database.

Action: Drop the root table and retry operation.

OCI-03748: A deploy operation is already in progress.

Cause: A previous request for deploy operation was still in progress.

Action: Wait for the previous deploy operation to complete and check if another deploy operation is required before resubmitting the request.

OCI-03749: Cross shard chunk operation cannot be performed at this time. Details : *string*

Cause: A database condition that prevents chunk move was detected.

Action: Refer to the following error message for additional information. Correct the error, if possible, and try the move again.

OCI-03750: flashback database not enabled

Cause: The flashback database was not enabled on the database being configured.

Action: Enable flashback database and retry the operation.

OCI-03751: user-defined sharding not supported

Cause: User-defined sharding was not supported on the database being configured.

Action: Use either system-managed or composite sharding.

OCI-03752: specified VNCR in use

Cause: The specified valid node check for registration (VNCR) was in use by at least one database or shard.

Action: Remove any databases or shards that use the VNCR and retry the operation.

OCI-03753: The procedure cannot be propagated.

Cause: SYS.EXEC_SHARD_PLSQL can only execute a limited set of PL/SQL procedures.

Action: Execute a procedure manually on each shard.

OCI-03754: shardgroups not allowed with user-defined sharding or federated database

Cause: An attempt was made to create a shardgroup with user-defined sharding or a federated database.

Action: Use either system-managed or composite sharding in the non-federated database.

OCI-03755: current database role is incorrect: *string*

Cause: An attempt was made to create a primary shard from a standby database or a standby shard from a primary database.

Action: Validate the current database role and confirm that it matches the role of the specified shardgroup (for system-managed or composite sharding) or that it matches the `-deploy_as` parameter specified in the 'add shard' command (for user-defined sharding).

OCI-03756: The chunk *string* is already being split.

Cause: There was an incomplete split operation on the same chunk ID.

Action: Wait until the split finishes and try again.

OCI-03757: cannot skip or ignore shard DDL

Cause: An attempt was made to skip a system DDL request such as SPLITCHUNK.

Action: Fix the error at the shard, which cause the DDL to fail, and then recover.

OCI-03758: cannot schedule split during an ongoing move

Cause: There was an incomplete move operation.

Action: Wait until the move finishes and try again.

OCI-03759: This procedure cannot be used to set database parameter *string*.

Cause: An attempt was made to set a database parameter that cannot be set using this procedure.

Action: Do not set this parameter using this procedure.

OCI-03760: Oracle RAC affinity is supported only on a non-sharded Oracle RAC database.

Cause: An attempt to enable affinity was made on an Oracle database that was either non-RAC, or shard, or shard catalog.

Action: Enable affinity on the Oracle RAC non-sharded database.

OCI-03761: Table is not found.

Cause: The table specification was not correct.

Action: Specify a valid table name in the ALTER SYSTEM ENABLE AFFINITY statement.

OCI-03762: Partitioned table with this name does not exist.

Cause: The specified table was not partitioned.

Action: Enable affinity for a partitioned table.

OCI-03763: Partitioned type '*string*' is not supported.

Cause: The specified table was not partitioned by either RANGE, LIST or HASH.

Action: Enable affinity for a partitioned table.

OCI-03764: Affinity is already enabled for a different table or service.

Cause: A table affinity was already specified. Multiple table affinities are currently not supported.

Action: Disable affinity for existing table.

OCI-03765: Service *string* has already been deleted by another session.

Cause: An attempt was made to delete a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

OCI-03766: Cannot modify service *string* because it is being deleted.

Cause: An attempt was made to modify a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

OCI-03767: The database to be replaced is not deployed: *string*

Cause: An attempt was made to replace a database that was not deployed.

Action: Verify that the database to be replaced is in a deployed state.

OCI-03768: The database to be replaced is still up: *string*

Cause: An attempt was made to replace a database that was still running.

Action: Verify that the database is down and try again.

OCI-03769: job_queue_processes setting must be greater than one

Cause: The job_queue_processes initialization parameter was set to zero or one.

Action: Set job_queue_processes to a larger value and retry the operation.

OCI-03770: incorrect shard is given for replace: *string*

Cause: An attempt was made to replace a shard with another shard that did not have the same data as the original shard.

Action: Copy the data correctly before attempting to replace. The RMAN utility can be used for this purpose.

OCI-03771: parameter parsing failed with error: *string*

Cause: The parameter values passed to SET DATAGUARD_PROPERTY were invalid.

Action: Verify the parameter values and retry the operation.

OCI-03772: attempt to set Oracle Data Guard property failed with error: *string*

Cause: The values passed to SET DATAGUARD_PROPERTY were invalid.

Action: Verify the input values and retry the operation.

OCI-03773: SPLIT CHUNK is not supported on a user-defined sharding environment.

Cause: A SPLIT CHUNK command was attempted on a user-defined sharding environment.

Action: This operation is not supported.

OCI-03774: Cannot replace shard with OGG replication setup: *string*

Cause: An attempt was made to replace a shard with Oracle GoldenGate (OGG) as replication setup.

Action: None. The operation is not supported.

OCI-03775: The new DBID of the standby database does not match the old DBID.

Cause: An attempt was made to replace a standby database shard having a different database identifier (DBID) than the original shard. All members of the Oracle Data Guard configuration must have same DBID.

Action: Ensure that the correct shard is specified and that it has the same DBID.

OCI-03776: maximum number of shards exceeded

Cause: A maximum of three primary shards are supported on this platform.

Action: Do not attempt to use more than three primary shards.

OCI-03777: A move operation is already in progress.

Cause: A move was already in progress. Multiple concurrent user-requested move operations are not permitted.

Action: Wait until the current move operation completes before starting another.

OCI-03778: Chunk *string* was already being moved to or from another location.

Cause: The chunk was already being moved. The current move request cannot be superceded.

Action: Wait until the existing move completes, or cancel it, before trying to move the chunk again.

OCI-03779: failed to update broker configuration with error: *string*

Cause: A request to update the broker configuration failed.

Action: Check the broker logs for details.

OCI-03780: failed to stop fast-start failover observers with error: *string*

Cause: A request to stop observers failed during an attempt to modify the Oracle Data Guard broker configuration.

Action: Ensure that the primary database shard can connect to the observer. Check the broker logs for details.

OCI-03781: error, 'error while executing some of the DDL statements'

Cause: There was an error while executing some of the DDL statements.

Action: Check the status of the DDL execution on shards and fix the problem.

OCI-03782: error, 'time out while waiting for the DDL statement execution'

Cause: The specified timeout was reached while waiting for the completion of the DDL statement execution.

Action: Check the status of the DDL execution on shards and try again.

OCI-03783: no new shard to deploy

Cause: No qualifying shards were available to be deployed.

Action: If undeployed shards exist, ensure that all primary shards have a corresponding standby shard in every standby shardgroup and retry the deployment. If no undeployed shards exist, add shards to the configuration and retry the deployment.

OCI-03784: failed to disable fast-start failover with error: *string*

Cause: A request to disable fast-start failover failed.

Action: Check the broker logs for details.

OCI-03785: database not open

Cause: An operation was attempted that requires the database to be open.

Action: Open the database and retry the operation.

OCI-03786: failed to replace primary database shard: *string*

Cause: An attempt was made to replace a primary database shard when standby databases are alive. This is now allowed.

Action: Do not replace a primary when standbys are alive. Replacing a primary database is only allowed when all the standby databases are down. If this database was the primary before failure, one of the standbys need to transition to a primary role by a failover. This database can then be replaced as a standby database.

OCI-03787: failed to remove standby shard *string* from the broker configuration with error: *string*

Cause: A request to remove the shard from the broker configuration failed.

Action: Check the broker logs for details.

OCI-03788: Shardspace '*string*' does not contain a primary shard group.

Cause: An attempt was made to add a standby shard group or modify an existing shard group resulting in no primary shard groups being present.

Action: Add a primary shard group to the shardspace before adding a standby shard group.

OCI-03789: cannot move chunk when sharded tables are in inconsistent state

Cause: An attempt was made to move chunk when one or more of the sharded tables are in inconsistent state.

Action: Alter the tables that are inconsistent to make them consistent with the root table and then try to move chunk.

OCI-03790: multitenant container database (CDB) already exists: *string*

Cause: The specified multitenant container database (CDB) was already in existence.

Action: Verify the multitenant container database (CDB) name and retry the operation.

OCI-03791: CDB for this PDB is not found

Cause: An attempt was made to add a pluggable database (PDB) shard, but its container database (CDB) was not part of the sharding configuration or did not match the database identifier (DBID).

Action: Add the CDB using ADD CBD command before adding the PDB. Ensure that the PDB and the CDB have the same DBID.

OCI-03792: CDB already has one of the PDBs as a shard

Cause: One of the pluggable databases (PDB) in a container database (CDB) was already added as a shard.

Action: Do not add multiple PDBs of the same CDB as shards.

OCI-03793: CDB name is invalid: *string*

Cause: An invalid multitenant container database (CDB) name was specified.

Action: Verify the multitenant container database (CDB) name and retry the operation.

OCI-03794: CDB does not exist: *string*

Cause: The specified multitenant container database (CDB) did not exist.

Action: Verify the multitenant container database (CDB) name and retry the operation.

OCI-03795: The tablespace set *string* is read-only or offline.

Cause: Chunk operation was requested while the tablespace set was not online.

Action: Ensure that all tablespace sets are online and repeat the operation.

OCI-03796: database already contains sharding metadata

Cause: The specified database already contained sharding metadata and could not be added as a new shard.

Action: Create a new database and retry the operation.

OCI-03797: cannot deploy this shard for user-defined sharding because database version is not compatible

Cause: The database version was older than version 18.0 and did not support user-defined sharding.

Action: Upgrade the database version to deploy the shard in user-defined sharding.

OCI-03798: Source database version is higher than target database version.

Cause: Target database was a lower version than the source database.

Action: Upgrade the target database so that both databases have the same version.

OCI-03799: invalid table family name specified: *string*

Cause: The table family name specified for the service was invalid.

Action: Verify that the table family name is in the format of <schema_name>.<root_table_name> and retry the operation.

OCI-03800: cannot drop values from partitions and subpartitions of a user-defined sharded table

Cause: An attempt was made to modify a partition or a subpartition of a user-defined sharded table to drop one or more values.

Action: Perform a split partition followed by a drop partition to remove the value from the partition.

OCI-03801: incomplete PARTITION or SUBPARTITION maintenance command

Cause: The ALTER TABLE ... SPLIT or MERGE PARTITION or SUBPARTITION command did not contain an UPDATE INDEXES clause for a user-defined sharded table.

Action: Specify the UPDATE INDEXES clause and try again.

OCI-03802: cannot add partitionset to table that is not root sharded table.

Cause: ADD PARTITIONSET was a valid command only for a root sharded table.

Action: Use the MOVE PARTITIONSET command to move the table to a different tablespace set in the shardspace.

OCI-03803: Only REFRESH COMPLETE ON DEMAND USING TRUSTED CONSTRAINTS option is supported for materialized views on sharded tables created on the catalog.

Cause: An attempt was made to create a materialized view on a sharded table on the shard catalog using the unsupported REFRESH options.

Action: Specify the supported option to create such materialized views.

OCI-03804: cannot alter the root table when there are child tables in inconsistent state

Cause: An attempt was made to alter a root table when one or more of its child tables were in inconsistent state.

Action: Alter the child tables that are in the inconsistent state to make them consistent with the root table and then alter the root table.

OCI-03805: missing tablespace clause for LOB column or columns in one or more partitions

Cause: An attempt was made to split a table partition with LOB columns without specifying tablespaces for all LOB columns in each resulting partition after the split.

Action: Use LOB(*column names*) STORE AS clause in each partition to specify tablespaces for all the LOB columns in the table.

OCI-03806: partition set *string* does not exist

Cause: An invalid partition set name was specified in the ALTER TABLE DDL.

Action: Specify a valid partition set name.

OCI-03807: An all shard GRANT command cannot contain any local objects.

Cause: A GRANT command that contained local objects was issued with shard DDL enabled.

Action: Remove the local objects from the command, or issue it with shard DDL disabled.

OCI-03808: shard key or partition set key columns cannot be columns that accept NULL values

Cause: An attempt was made to create a sharded table with shard key or partition set key columns that accept NULL values.

Action: Create the sharded table with shard key or partition set key columns having a NOT NULL constraint.

OCI-03809: invalid database context for CURRENT_SHARD_KEY or CURRENT_PSET_KEY function

Cause: An attempt was made to call either the CURRENT_SHARD_KEY or CURRENT_PSET_KEY function in a non-sharded environment.

Action: Use the CURRENT_SHARD_KEY or CURRENT_PSET_KEY function only on shard databases.

OCI-03810: invalid column position for CURRENT_SHARD_KEY or CURRENT_PSET_KEY function

Cause: An attempt was made to call either the CURRENT_SHARD_KEY or CURRENT_PSET_KEY function with an invalid column position.

Action: Use a valid column position with either the `CURRENT_SHARD_KEY` or `CURRENT_PSET_KEY` function.

OCI-03811: Filtering shard query results based on the `CURRENT_SHARD_KEY` or `CURRENT_PSET_KEY` function is not supported with full outer joins.

Cause: An attempt was made to call either the `CURRENT_SHARD_KEY` or `CURRENT_PSET_KEY` function to filter results of a sharded query with full outer joins.

Action: Disable filtering shard query results for queries with full outer joins.

OCI-03812: cannot specify `NULL` as partition bound or partitionset bound in sharding

Cause: An attempt was made to create a sharded table partition or partitionset with `NULL` value bound.

Action: Create the sharded table partition or partitionset with bound values that is not `NULL`.

OCI-03813: list partition method expects a single partitioning column in user-defined sharding

Cause: An attempt was made to create a sharded table with multiple columns as partitioning key.

Action: Create the sharded table with a single column as the partitioning key.

OCI-03814: cannot set a column of object data type as `UNUSED` in sharded tables

Cause: An attempt was made to alter a sharded table and set a column of object data type as `UNUSED`.

Action: Do not alter the sharded table to set a column of object data type as `UNUSED`.

OCI-03816: cannot drop the parent of a sharded child table

Cause: An attempt was made to drop the parent of a sharded child table.

Action: Drop all sharded child tables before dropping the parent table.

OCI-03817: cannot merge partitions that belong to different shardspaces

Cause: An attempt was made to merge partitions that are created in different shardspaces.

Action: Do not merge partitions that are created in different shardspaces.

OCI-03818: DML operations are not supported on the catalog for federated database tables.

Cause: An attempt was made to perform a data manipulation language (DML) operation on a federated database table in the catalog.

Action: Do not perform any DML operations on tables in a federated database in the catalog.

OCI-03819: DDL operations are not allowed under enabled shard DDL in a federated database setup.

Cause: An attempt was made to perform a DDL (data definition language) operation on a federated database catalog while shard DDL was enabled.

Action: Do not perform any DDL operations other than ALTER TABLE EXTERNALLY on federated database tables in the catalog while shard DDL is enabled.

OCI-03820: ALTER TABLE EXTERNALLY cannot be performed on non-federated database tables.

Cause: An attempt was made to alter a non-federated database table to externally sharded or duplicated.

Action: Do not perform ALTER TABLE EXTERNALLY on non-federated database tables. This operation only applies to tables in a federated database in the catalog.

OCI-03821: Barrier DDL statements cannot be executed across a Sharding Replication Unit in the current execution context.

Cause: A data definition language (DDL) statement was issued across a Sharding Replication Unit, but the execution context does not support this DDL statement. This error occurs when the Oracle Database system's synchronous DDL feature is enabled, but the session is not connected using a dedicated server connection. All subsequent attempts at barrier DDL will also be rejected.

Action: Either connect using a dedicated server connection, or, as SYSDBA, disable synchronous DDL and retry the DDL statement.

OCI-03822: WARNING: DDL failed on *string* shards(offline: *string*, skipped: *string*, errors: *string*)

Cause: DDL was not propagated to offline shards and skipped shards with past DDL errors. DLL errors show the number of shards with errors.

Action: Use the GDSCTL 'config shard' and 'recover shard' to identify and fix DDL-related issues.

OCI-03823: Asynchronous propagation of DDL is timed out.

Cause: DDL statement propagation was not finished within one hour.

Action: Check GDSCTL and shard database server logs to identify the cause of the delay.

OCI-03824: Error on *string* shard(s): *string*

Cause: DDL statement propagation errored out on one or more shards.

Action: Use the GDSCTL 'config shard' command for details on the error and then use the 'recover shard' command.

OCI-03825: DDL statement cannot be executed due to shard unavailability.

Cause: DDL statement could not be executed synchronously because some shards were offline. The DDL STRICT execution mode requires all primary shards to be online.

Action: Start the shards and reexecute the statement.

OCI-03826: while Barrier DDL statement with ID *string* was in progress the number of followers for replication unit *string* changed.

Cause: While a Barrier DDL statement was being executed across the leader and follower shards of a replication unit, the number of followers changed. This could happen if another leader was shut down, or the current shard transitioned from leader to follower for this replication unit. The current DDL statement was rolled back across all shards in the replication unit.

Action: Execute the DDL statement again when the replication unit and shards stabilize.

OCI-03827: deadlock detected between Barrier DDL statement on table *string.string* and a concurrently running DML statement on the same table (root cause is *string, string*)

Cause: While a sharding replication unit Barrier DDL statement was in progress there was a concurrently running DML statement referencing the same table as that referenced in the Barrier DDL statement. Both the DDL and the DML deadlocked while trying to access the same resources and same locks.

Action: To avoid resource contention try to run one statement followed by the other statement.

OCI-03828: cannot operate on externally sharded objects in the catalog

Cause: An attempt was made to create or modify an externally sharded object in the federated database catalog.

Action: Do not operate on externally sharded objects in the federated database catalog. Perform the operation on all shards and run the 'gdsctl sync schema' command to update the catalog.

OCI-03829: sharding key or super sharding key error

Cause: The sharding key or super sharding key provided did not match the key column definitions for the table family.

Action: Double check the sharding key and super sharding key columns for this table family.

OCI-03830: sharding columns must form a subset key of key columns of a foreign key

Cause: An attempt was made to create a foreign key constraint in a sharded table whose sharding key columns do not form a subset of the foreign key columns.

Action: Include all sharding key columns in the list of foreign key columns. This is required because foreign key constraint cannot be enforced across shards.

OCI-03831: Creating network senders (error code *string*) failed.

Cause: Failure while creating the network sender servers.

Action: Contact Oracle Support.

OCI-03832: Logical change record (LCR) producer process for replication unit *string* is unable to communicate with network sender *string* during initialization.

Cause: Network sender could not be started properly.

Action: Fix any errors during network sender creation and restart the logical change record (LCR) producer process.

OCI-03833: Network sender or logical change record (LCR) persister *string* is unable to communicate with logical change record (LCR) producer process for replication unit *string*.

Cause: The logical change record (LCR) producer process was not started properly or was aborted.

Action: Fix any errors during the logical change record (LCR) producer process creation and restart the logical change record (LCR) producer process.

OCI-03834: *string* background process for replication unit *string* might not be started successfully

Cause: An error occurred during creation of a background process for the given replication unit.

Action: Check the trace file for more information.

OCI-03835: Logical change record (LCR) producer process for replication unit *string* received an error from network sender or acknowledgment receiver.

Cause: The network sender or the acknowledgment receiver received an error.

Action: Check the log for error details.

OCI-03836: Network sender for replication unit *string* for shard *string* is active and needs to join logical change record (LCR) producer process.

Cause: The network sender was waiting for the remote follower to catch up.

Action: Logical change record (LCR) producer process needs a restart (done automatically).

OCI-03837: Leader cannot enqueue logical change records (LCRs) for replication unit *string*.

Cause: The queue was not initialized or memory was full.

Action: Retry the user DML operations.

OCI-03838: cannot perform DML operations (*string* on *string.string*) in a follower shard for replication unit *string*, chunk ID *string*

Cause: This shard was a follower of the replication unit.

Action: Retry the user DML operations in the leader shard for this replication unit.

OCI-03839: foreign key constraint must be on a table in the same table family

Cause: A foreign key constraint was specified with the referenced table belonging to a different table family.

Action: Specify foreign key reference on a table in the same table family.

OCI-03840: invalid *string* received for replication unit *string*

Cause: An invalid value was received in network receiver for the specified replication unit.

Action: This is an internal error. Contact Oracle Support.

OCI-03841: unknown replication unit: *string*

Cause: The replication unit was not known to the follower database.

Action: This is an internal error. Contact Oracle Support.

OCI-03842: Raft log record for replication unit *string* and log index *string* does not exist. Last persisted log index *string*.

Cause: The specified raft log record did not exist.

Action: This is an internal error. Contact Oracle Support.

OCI-03843: chunk relocation error

Cause: Chunk relocation between replication units failed.

Action: This is an internal error. Contact Oracle Support.

OCI-03844: Raft log record for replication unit *string* and log index *string* has no more data.

Cause: The specified raft log record had no more data to be read.

Action: This is an internal error. Contact Oracle Support.

OCI-03845: cannot create substitutable columns of object data type on sharded or duplicated tables

Cause: An attempt was made to create a substitutable column of object data type on a sharded or duplicated table.

Action: For sharded table, create this column with the NOT SUBSTITUTABLE option. For duplicated table, do not use non-final object data type.

OCI-03846: Schema on the shard is inconsistent with the schema on the catalog of a federated database.

Cause: Schema was modified on a shard of a federated database and the SYNC SCHEMA operation has not been performed.

Action: Perform SYNC SCHEMA operation to update the catalog database about changes on the shard.

OCI-03847: The following ALTER TYPE statement is not supported for all shard object types: *string*.

Cause: An attempt was made to alter an all shard object type with invalid options.

Action: Do not specify this option in an ALTER TYPE statement.

OCI-03848: cannot drop an all shard object type with FORCE option

Cause: An attempt was made to drop an all shard object type with the FORCE option.

Action: Drop all types and tables depending on the type and then retry the operation without the FORCE option.

OCI-03849: A column cannot be both sharding and partitionset key.

Cause: An attempt was made to create a sharded table with a column defined as both sharding and partitionset key.

Action: Do not create a sharded table with the same column defined as sharding as well as partitionset key.

OCI-03850: The tablespace set *string* is already associated with a table family.

Cause: The specified tablespace set could not be used for this command because it was already associated with another table family.

Action: Specify a different tablespace set for the command.

OCI-03851: operation not supported in federated database

Cause: An attempt was made to perform an operation that was not supported with federated database.

Action: Do not attempt to run this operation.

OCI-03852: user already exists on the catalog: *string*

Cause: A schema name was specified for creation that already exists on the catalog.

Action: Specify schema names that do not exist in the catalog.

OCI-03853: no schema provided

Cause: No schemas were specified for this command.

Action: If specific schemas need to be synchronized, specify a comma-separated list of schemas with the '-schema' parameter of the GDSCTL command. Specify 'all' to synchronize all non-Oracle schemas common to all shards and that do not exist in the catalog.

OCI-03854: A CDB must be specified when adding a PDB shard.

Cause: An attempt was made to add a pluggable database (PDB) shard to the configuration without specifying its multitenant container database (CDB).

Action: Use the -cdb parameter in the 'add shard' command to specify a CDB.

OCI-03855: root container (CDB\$ROOT) cannot be used as a shard

Cause: An attempt was made to add the root container (CDB\$ROOT) to the configuration.

Action: Validate the connect string provided and specify a pluggable database (PDB) instead.

OCI-03856: root container (CDB\$ROOT) must be specified when adding a CDB

Cause: An attempt was made to add a pluggable database (PDB) as a multitenant container database (CDB).

Action: Validate the connect string provided and specify the root container (CDB\$ROOT) instead.

OCI-03857: A listener.ora file already exists in the shard host Oracle home.

Cause: An attempt was made to create a new TNS listener on the shard host, but a listener.ora file already existed in the \$ORACLE_HOME/network/admin directory.

Action: Stop any listeners running from the target Oracle home, delete the listener.ora file and retry the operation.

OCI-03858: The specified CDB already contains a PDB shard from the current sharded database.

Cause: An attempt was made to add a pluggable database (PDB) shard to a multitenant container database (CDB) that already contained a PDB shard from the same sharded database.

Action: Use the -cdb parameter in the 'add shard' command to specify a different CDB.

OCI-03859: Moving all chunks is not allowed in user-defined sharding.

Cause: An attempt was made to move all chunks from a source database. This operation is not allowed for user defined sharding.

Action: Move only numbered chunks from the source database. Do not use the -all flag.

OCI-03860: Creating a shard catalog is not allowed in the root of a multitenant container database (CDB).

Cause: An attempt was made to create a shard catalog in the root of a CDB.

Action: Connect to a pluggable database (PDB) to create the shard catalog.

OCI-03861: Pluggable database (PDB) name cannot be modified for a service.

Cause: An attempt was made to modify the pluggable database (PDB) name for a service.

Action: Do not modify the pluggable database (PDB) name for a service. If necessary, remove the service and re-create it in another pluggable database (PDB).

OCI-03862: A common user cannot run sharded DDL statements.

Cause: An attempt was made to run sharded DDL statements as a common user.

Action: Common users cannot run sharded DDL statements. Connect as a Pluggable Database user and try again.

OCI-03863: There is no deployed database named *string*.

Cause: The named database either did not exist or was not deployed.

Action: Check the database name and deploy the database before attempting to sync it.

OCI-03864: cannot move chunk when there are no partition sets

Cause: Move chunk operation was attempted in a shardspace that did not have any partition set for sharded tables.

Action: Add partition set to sharded tables before running the move chunk operation.

OCI-03866: The GSMROOTUSER account does not have SYSDG and SYSBACKUP privileges.

Cause: The GSMROOTUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

OCI-03867: maximum number of table families reached

Cause: An attempt was made to create a new table family when the maximum supported number of table families was reached.

Action: Do not create more table families than the maximum allowed. /

OCI-03868: shardspace does not contain a primary shard

Cause: The specified shardspace did not contain a primary shard.

Action: Add a primary shard to the shardspace prior to adding any standby shards.

OCI-03869: The specified shard is already configured as a catalog.

Cause: An attempt was made to add a shard that was already configured as a catalog.

Action: Verify the connect string specified and retry the operation.

OCI-03870: Parameter *string* passed to function *string* has invalid value *string*.

Cause: A sharding function was called with an invalid value.

Action: This is an internal error, contact Oracle Support Services.

OCI-03871: Some DDL statements are not applied to the catalog.

Cause: The GDSCTL command 'sync schema' was executed before all of the existing DDL statements were applied.

Action: Execute the GDSCTL command 'sync schema' with the '-apply' parameter before attempting to synchronize with shards and ensure that all of the statements are executed by running 'sync schema -show'.

OCI-03872: unable to create shard wallet at *string* with error *string*

Cause: Oracle was unable to create the shard wallet at the specified location.

Action: Verify that the specified location exists and can be written to or try again using a different wallet location.

OCI-03873: unable to encrypt DDL statement with error *string*

Cause: The system was unable to encrypt the DDL statement.

Action: Contact Oracle Support Services.

OCI-03874: unable to encrypt GSMUSER password with error *string*

Cause: Oracle was unable to encrypt the Global Service Manager GSMUSER password.

Action: Contact Oracle Support Services.

OCI-03875: The database parameter WALLET_ROOT is already set.

Cause: A new WALLET_ROOT value was used to create the catalog, but the database parameter WALLET_ROOT was already set.

Action: Do not pass a WALLET_ROOT value. The catalog uses the existing location stipulated in the WALLET_ROOT parameter.

OCI-03876: error *string* when attempting to generate a temporary key to add new shards

Cause: The system was unable to generate a new key to add shards.

Action: Contact Oracle Support Services.

OCI-03877: Chunk is put online on migration destination shard

Cause: Chunk migration information message.

Action: n/a

OCI-03878: The specified VNCR or VNCR group does not exist.

Cause: The specified valid node check for registration (VNCR) or VNCR group did not exist in the catalog.

Action: Verify that the specified VNCR or VNCR group exists and retry the operation.

OCI-03879: schemas do not exist on all shards: *string*

Cause: The GDSCTL command 'sync schema' was executed with schema names that did not exist on all shards.

Action: Specify schemas that exist on all shards.

OCI-03880: no new DDL (Data Definition Language) statement to apply

Cause: No new DDL statements were found to apply on the catalog.

Action: n/a

OCI-03881: Parallel execution of data import failed.

Cause: A chunk migration error occurred during the parallel execution of the chunk import phase.

Action: Examine the slave process trace files to identify the cause.

OCI-03883: unsupported catalog database character set for federated database

Cause: The database character set of the catalog was not AL32UTF8 which is needed to deploy a federated database.

Action: Change the database character set of catalog to AL32UTF8 and retry the operation.

OCI-03884: Execute synchronize schema operation after reconfiguration of shards completes.

Cause: An operation was executed resulting in reconfiguration of shards, which should be followed by the 'synchronize schema' operation in a federated database in order to see the schema changes in the catalog.

Action: Perform 'synchronize schema' using GDSCTL after the current operation succeeds, and all primary shards are deployed and available.

OCI-03885: some primary shards are undeployed or unavailable

Cause: Some of the primary shards were not deployed or not available when performing this operation.

Action: This operation requires that all of the primary shards are deployed and available. Ensure that they are up and retry the operation. Check the output of 'config shard' command for the status of shards.

OCI-03886: chunk '*string*' in shardspace '*string*' too small to split

Cause: A chunk split was requested for a chunk that only had a range of 1.

Action: Do not split a chunk that only has a range of 1.

OCI-03887: operation not supported in non-federated database

Cause: An operation was attempted which is only supported in a federated database.

Action: Do not execute the operation in a non-federated database.

OCI-03889: Shard DDL cannot be executed as SYS because the following databases are either not available or do not support encryption: *string*.

Cause: An attempt was made to execute shard DDL as user SYS. This is insecure unless it can be encrypted.

Action: Either execute the DDL as another user, or update the listed shards or catalog so that they can support encryption. Shards and the catalog must be secure to make this check.

OCI-03890: invalid duplicated table: *string*

Cause: The table name specified was not a duplicated table.

Action: Specify a valid duplicated table name.

OCI-03891: The specified tag is too long or contains invalid characters.

Cause: The specified length of the tag exceeded 30 characters or contained characters other than letters, numbers, and underscore.

Action: Specify a tag having at most 30 characters; ensure that it contains only letters, numbers, and underscore.

OCI-03892: common users are not allowed: *string*

Cause: A common user was specified with the SYNC SCHEMA command. This is not supported because only pluggable database (PDB) local users can be created on the shard catalog.

Action: Only specify PDB local users with the SYNC SCHEMA command.

OCI-03893: Shard DDL cannot be executed as SYS because the following shards need to be upgraded to at least Oracle Database 21c: *string*.

Cause: An attempt was made to execute shard DDL as user SYS. This is insecure unless it can be encrypted.

Action: Either execute the DDL as another user, or upgrade the listed shards to at least Oracle Database 21c and update them to support encryption.

OCI-03894: Failed to send keys to shard *string* with error *string*.

Cause: Cannot send a shard key to the shard.

Action: Check that the database is up and that the GSMUSER password has been correctly set on the catalog.

OCI-03895: Cannot add shards at versions lower than Oracle Database 21c because there is encrypted DDL in the catalog.

Cause: Some catalog DDL was encrypted, but shards at lower than Oracle Database 21c cannot decrypt DDL.

Action: Upgrade the shard to at least Oracle Database 21c before adding it.

OCI-03896: Unable to load the sharding wallet successfully.

Cause: The sharding wallet was unable to be opened or the required wallet data was not found.

Action: Validate that the sharding wallet is present in WALLET_ROOT. If running a standby database, verify that the wallet has been correctly updated from the corresponding primary database.

OCI-03897: operation is not allowed on a shard with candidate replication unit role

Cause: The role of the replication unit was incompatible with the attempted operation.

Action: Execute the operation on the shard with the required replication unit role.

OCI-03898: replication unit is not empty

Cause: An attempt was made to delete a replication unit that contained chunks.

Action: Relocate the chunks prior to removing the replication unit.

OCI-03899: current user not set correctly

Cause: The variable "curuser" was not set before running internal sharding code.

Action: This is an internal error. Contact Oracle Support Services.

OCI-03900: shard internal database link cannot be altered or dropped

Cause: An attempt was made to directly alter or drop an internal database link for sharding, which is not allowed.

Action: Do not alter or drop shard internal database links.

OCI-03901: shard key or partition set key column cannot be renamed

Cause: An attempt was made to rename a shard key column or a partition set key column of a sharded table, which is not allowed.

Action: Do not rename shard key or partition set key column of a sharded table.

OCI-03902: cannot shrink a system-managed or composite sharded table with primary key or any sharded table with functional index

Cause: An attempt was made to shrink a system-managed or composite sharded table with primary key or a sharded table with functional index, which is not allowed.

Action: Do not perform shrink such tables.

OCI-03903: The Flashback Table operation is not supported on sharded or duplicated tables.

Cause: An attempt was made to perform the Flashback Table operation on a sharded or duplicated table, which is not allowed.

Action: Do not perform a Flashback Table operation on sharded or duplicated tables.

OCI-03904: The sharding virtual column cannot be modified.

Cause: An attempt was made to modify the sharding virtual column, SYS_HASHVAL, which is not allowed.

Action: Do not modify the sharding virtual column.

OCI-03905: cannot use the same tablespace for multiple partitions of a user-defined sharded table

Cause: An attempt was made to use a tablespace for multiple partitions of a user-defined sharded table.

Action: Use different tablespaces for different partitions in a user-defined sharded table.

OCI-03906: invalid tablespace name *string* specified for the partition *string*

Cause: An attempt was made to specify a tablespace name for a partition, subpartition, or LOBs that did not belong to the shardspace.

Action: Specify a tablespace name that belongs to the same shardspace.

OCI-03907: REF data type is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03908: cannot drop duplicated table materialized views on shards

Cause: An attempt was made to manually drop materialized views of a duplicated table on shard databases.

Action: Drop the duplicated table on the catalog database, if required.

OCI-03909: cannot set parameter SHRD_DUPL_TABLE_REFRESH_RATE in SPFILE

Cause: An attempt was made to set parameter SHRD_DUPL_TABLE_REFRESH_RATE in SPFILE.

Action: Set the parameter with SCOPE = MEMORY.

OCI-03910: cannot drop duplicated table materialized view log

Cause: An attempt was made to drop materialized view logs created on duplicated tables.

Action: Drop the duplicated table, if required.

OCI-03911: column *string* is not supported for duplicated tables

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03912: option *string* is not supported for duplicated tables

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03913: A tablespace cannot be referenced at the table level.

Cause: An attempt was made to reference a tablespace at the table level.

Action: Verify the specified option.

OCI-03914: cannot use tablespace *string* for partition *string*

Cause: An attempt was made to specify a tablespace that was used for a different chunk or partition in the tables already created.

Action: Verify the specified option.

OCI-03915: cannot purge an individual chunk tablespace

Cause: An attempt was made to purge an individual chunk tablespace which is a part of a tablespace set.

Action: Verify the specified option.

OCI-03916: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03917: invalid partition set value

Cause: The attempt to update or insert into a partition set column failed.

Action: Ensure that inserted partition set values are within the shard partition set values.

OCI-03918: invalid number of partitions specified for the child table

Cause: An attempt was made to create a child table with a number of partitions not equal to the number of partitions in the parent table.

Action: Create the child table with a number of partitions that equal the number of partitions in the parent table.

OCI-03919: invalid list value or values specified for the partition *string*

Cause: The list values specified for a partition of the table could not exactly be matched with the list values of the corresponding partition of the parent table.

Action: Create the child table with the list values of a partition that matches the list values of the corresponding partition in the parent table.

OCI-03920: invalid range value specified for the partition *string*

Cause: The range value specified for a partition of the table could not be matched with the range value of the corresponding partition of the parent table.

Action: Create the child table with the range values of a partition that match the range values of the corresponding partition in the parent table.

OCI-03921: invalid number of list values specified for the partition *string*

Cause: The number of list values specified for a partition of the table was not equal to the number of list values specified for the corresponding partition of the parent table.

Action: Create the child table with partitions that have the same number of list values as the corresponding partition in the parent table.

OCI-03922: invalid range or list value specified for the partitionset *string*

Cause: The value specified for the range or list of the partitionset did not exactly match the value specified for the partitionset in the parent table.

Action: Create the child table with partitionsets whose values for range or list exactly matches the values specified for the partitionset in the parent table.

OCI-03923: cannot drop a tablespace set used for a composite sharded table

Cause: The tablespace was used for a composite sharded table and cannot be dropped unless the contents are dropped manually.

Action: Drop the contents of the tablespace set first and then drop the tablespace set.

OCI-03924: cannot alter a user-defined sharded table directly in the shard database

Cause: An attempt was made to alter a user-defined sharded table directly on the shard database.

Action: All alter operations on a user-defined sharded table must be executed on the catalog database to maintain consistency in the shards.

OCI-03925: duplicate partitionset name

Cause: Name of a partitionset of a table being created is not unique.

Action: rename partitionset(s) to ensure that their names are unique among partitionsets of the table being created.

OCI-03926: DEFAULT tablespace is not supported for sharded tables or indexes.

Cause: An attempt was made to use DEFAULT tablespaces for sharded tables or indexes.

Action: Use valid tablespace or tablespace set names for sharded tables and indexes on sharded tables.

OCI-03927: invalid use of STORE IN clause for a sharded table or index

Cause: The STORE IN (tablespace list) clause was used to specify tablespaces for partitions of a sharded table or for partitions of an index where the sharded table did not have subpartitions or the subpartition method was not hash.

Action: Use the TABLESPACE SET clause or SUBPARTITION TEMPLATE clause to specify tablespaces for table and index partitions or table subpartitions, respectively.

OCI-03929: CREATE TABLE...AS SELECT statement is not supported for sharded tables.

Cause: An attempt was made to create a sharded table AS SELECT from another table, which is not supported.

Action: Do not create any sharded table AS SELECT from other tables.

OCI-03930: Editions are not supported for sharded tables.

Cause: An attempt was made to create a sharded table using editions, which is not supported.

Action: Do not create any sharded table using editions.

OCI-03931: maximum number of sharding columns for consistent hash is 15.

Cause: The number of columns in a sharding key column list exceeded the legal limit of 15.

Action: Modify the sharding key column list so that it consists of at most 15 columns.

OCI-03932: cannot create the default shard tablespace on the catalog when shard DDL is enabled

Cause: An attempt was made to create a tablespace in the catalog which is created on the shards by default in user-defined sharding.

Action: Disable shard DDL on the catalog if the tablespace has to be created on the catalog.

OCI-03933: An all-shard object cannot depend on any local objects.

Cause: An attempt was made to create or alter an all-shard object to depend on a local user object, which is not allowed.

Action: Do not create or alter an all-shard object to depend on any local user objects.

OCI-03934: An all-shard index cannot be created on local tables.

Cause: An attempt was made to create an all-shard index on a local user table, which is not allowed.

Action: Do not create such indices.

OCI-03935: A sharded table cannot have columns that depend on local objects.

Cause: An attempt was made to create or alter a sharded table to contain columns that depend on local objects, which is not allowed.

Action: Do not create or alter sharded tables to have such columns.

OCI-03936: cannot use a sharded tablespace for non-sharding purposes

Cause: An attempt was made to use a sharded tablespace for non-sharding purposes.

Action: Use a normal tablespace instead of a sharded tablespace.

OCI-03937: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.

Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

OCI-03938: cannot create duplicated tables on a shard database

Cause: An attempt was made to create a duplicated table on a shard database, which is not supported.

Action: Connect to each shard and create the table locally.

OCI-03939: cannot specify a data file name for a tablespace in a sharding setup

Cause: The data file name was specified during creation of the tablespace. Only Oracle Managed Files are supported by a tablespace used in a sharding setup.

Action: Remove the file name from the data file definition.

OCI-03940: A trigger cannot be created on any sharded table.

Cause: An attempt was made to create a trigger on a sharded table, which is not allowed.

Action: Do not create such triggers.

OCI-03941: A shard key or partition set key column cannot be a sequence.

Cause: An attempt was made to create a sharded table having a shard key or a partition set key column based on a sequence, which is not allowed.

Action: Do not use sequences for shard key or partition set key columns.

OCI-03942: cannot create temporary tablespace sets

Cause: An attempt was made to create a temporary tablespace set, which is not allowed.

Action: Do not create temporary tablespace sets.

OCI-03943: zone maps are not supported on sharded tables

Cause: An attempt was made to create a materialized zone map on a sharded table, which is not supported.

Action: Do not create materialized zone maps on sharded tables.

OCI-03944: cannot specify PARENT clause for duplicated tables

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03945: Cannot perform the operation on the child table before performing the same operation on the root table

Cause: An attempt was made to alter the child table to add or drop or split a partition whose root partition has not been added or dropped or split yet.

Action: Alter the root table to add or drop or split the partition before trying to add or drop or split the partition in the child table.

OCI-03946: Operation is not supported on a user-defined sharded table

Cause: An attempt was made to perform an unsupported partition operation on a user-defined sharded table.

Action: Do not perform the operation.

OCI-03947: cannot create an autolist or interval partitioned sharded table

Cause: An attempt was made to create an autolist or interval partitioned sharded table.

Action: Create a sharded table that is not an autolist or interval partitioned.

OCI-03948: A DEFAULT partition or partition set cannot be specified for a sharded table.

Cause: An attempt was made to create a partition or partition set with a DEFAULT high value on a sharded table.

Action: Do not create a partition or partition set with a DEFAULT high value.

OCI-03949: password is required for encrypted columns in a sharded table

Cause: An attempt was made to create a sharded table containing an encrypted column without specifying a password.

Action: Provide a password for the encrypted column(s) in the CREATE

OCI-03950: GoldenGate error: *string*

Cause: An operation failed when performed using Oracle GoldenGate.

Action: Correct the error specified in Oracle GoldenGate output.

OCI-03951: Invalid OGG service descriptor - OGG message: *string*

Cause: One or more components of the Oracle GoldenGate (OGG) service descriptor could not be verified.

Action: Refer to the Oracle GoldenGate message for the required action.

OCI-03952: OGG *string* URI: *string* is not reachable - HTTP message: *string*

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService could not be reached.

Action: Refer to the HTTP message for the required action.

OCI-03953: OGG *string* URI: *string* failed to *string string: string* - OGG message: *string*

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService operation failed.

Action: Refer to the Oracle GoldenGate message for the required action.

OCI-03954: OGG sharding function called in an invalid context: *string* function called in *string*

Cause: Internal error. An Oracle GoldenGate (OGG) sharding functionality was called in an invalid context, for example, catalog function in shard or vice versa.

Action: Contact Oracle Support Services.

OCI-03955: Invalid combination of OGG deployment parameters specified for shardgroup: *string* (S=*string*, C=*string*, R=*string*)

Cause: The values specified for Oracle GoldenGate (OGG) deployment parameters (number of shards - S, number of chunks - C and replication factor - R) for the shardgroup were not compatible with each other.

Action: Ensure that the following invariants hold for the shardgroup: number of chunks >= number of shards number of shards >= replication factor

OCI-03956: Invalid entry in the OGG command payload: *string*

Cause: Internal error. The payload for Oracle GoldenGate (OGG) command sent from the sharding catalog to the shard database contained an invalid entry.

Action: Contact Oracle Support Services.

OCI-03957: Sharding configuration parameter '*string*' is not set in the shard database.

Cause: Internal error. A database initialization parameter required by the shard database was not set during deployment.

Action: Contact Oracle Support Services.

OCI-03958: Failure to remove shard: *string* - *string*

Cause: A request to remove a shard database failed.

Action: Check the shard error message for details.

OCI-03959: chunk allocation error in shardgroup: *string* - *string*

Cause: Internal error. Chunk allocation algorithm for Oracle GoldenGate (OGG) detected inconsistencies in the sharding configuration.

Action: Contact Oracle Support Services.

OCI-03960: Chunk number '*string*' already exists on the target shard.

Cause: An invalid chunk number or target shard name was provided.

Action: Check the chunk number, shard name and try again.

OCI-03961: A move chunk request already exists for chunk number '*string*' from the source shard.

Cause: An invalid chunk number or source shard name was provided.

Action: Check the chunk number, shard name and try again.

OCI-03962: invalid SPLIT PARTITION command for a user-defined sharded object

Cause: Tablespaces for resulting partitions in a SPLIT PARTITION command were either unspecified or in use.

Action: An unused tablespace should be provided for each resulting partition of the SPLIT PARTITION command.

OCI-03963: leadership of replication unit *string* changed while Barrier DDL statement with ID *string* was in progress

Cause: While a Barrier DDL statement was being executed across the leader and follower shards of a replication unit, the leadership transitioned to another shard. The DDL statement was rolled back across all shards in the replication unit.

Action: Wait until the replication unit and shards stabilize and then rerun the Barrier DDL statement.

OCI-03964: updated or deleted row of duplicated table is not synchronized with catalog

Cause: An attempt was made to update or delete the row of a duplicated table that was recently inserted on this shard database. This table did not have primary key; therefore, any modifications of the inserted row cannot be performed until after the next duplicated table refresh (the default timeout is 1 minute).

Action: Wait until the duplicated table is refreshed and repeat the operation.

OCI-03965: updated or deleted row of duplicated table is not found on catalog

Cause: An attempt was made to update or delete the row of a materialized view on a shard database but the materialized view was not synchronized with the catalog and the affected rows were already deleted from the catalog by another shard database.

Action: Wait until the duplicated table is refreshed and repeat the operation.

OCI-03966: cannot alter duplicated table materialized views on shards

Cause: An attempt was made to manually alter materialized views of a duplicated table on shard databases.

Action: Alter the duplicated table on the catalog database, if required.

OCI-03967: failed to rename the materialized view log when renaming duplicated table

Cause: An attempt was made to rename the duplicated table, and the internal statement to rename the materialized view log failed.

Action: Drop the duplicated table, and re-create it.

OCI-03968: Invisible column is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-03969: failed to rename the index on materialized view when renaming duplicated table

Cause: An attempt was made to rename the duplicated table, and the internal statement to rename the index on materialized view failed.

Action: Drop the duplicated table, and re-create it.

OCI-03970: Cannot continue transaction (statement *string*) on leader shard after replication unit *string* term changed from term *string* to term *string*

Cause: A replication unit RAFT term was changed since the transaction started. This can happen if the replication unit leader on the current shard was re-elected sometime during the current transaction.

Action: Retry the full transaction in the leader shard for this replication unit.

OCI-03971: Latch-free queue reached it's peak size

Cause: The size of LFQ buffer needed by foreground process reached maximum.

Action: Increase LFQ buffer size setting.

OCI-03972: The passed DDL with ID *string* is invalid.

Cause: The passed DDL was not valid.

Action: Validate the DDL against the catalog database.

OCI-03973: Sync point for Barrier DDL with ID *string* on *string.string* timed out after waiting *string* seconds for the replication units *string*

Cause: The sync point for DDL statement failed or timed out on a replication unit follower shard that was waiting for a leader shard to send a DDL completion message.

Action: Ensure that all database shards for a given replication unit are running with minimal disruptions when executing DDL.

OCI-03974: cannot perform DML operations during switchover to shard *string* for replication unit *string*

Cause: This shard received a switchover request.

Action: Retry the user DML operations in the leader shard for this replication unit after switchover.

OCI-03975: invalid replication unit specified: *string*

Cause: The specified replication unit did not exist, no shards containing the replication unit were available, or the database specified did not contain the replication unit.

Action: Retry the command with a valid replication unit specified.

OCI-03976: 'move chunk' and 'alter move' commands not supported with Raft replication

Cause: A 'move chunk' or 'alter move' command was issued against a sharding catalog that was configured for Raft replication.

Action: Use 'relocate chunk' instead of 'move chunk' and use 'alter task' instead of 'alter move' for configurations using Raft replication.

OCI-03977: the number of shards in a shardgroup must not be less than its replication factor

Cause: A deployment was attempted where the number of shards in a shardgroup was less than the replication factor for that shardgroup.

Action: Add more shards to the shardgroup or decrease the configured replication factor and retry the deployment.

OCI-03978: command not supported with the current replication configuration

Cause: A command was issued that was incompatible with the current replication configuration in use for the sharded database.

Action: Only run compatible commands applicable to the current replication configuration (DataGuard, Raft replication, GoldenGate).

OCI-03979: shard name parameter values must be unique

Cause: A command was issued that specified the same shard name for multiple parameters.

Action: Validate parameter values and retry command.

OCI-03980: shard *string* is the leader for replication unit *string*

Cause: The specified shard was the leader for the given replication unit.

Action: Validate parameter values and retry command.

OCI-03981: shard *string* is not a follower for replication unit *string*

Cause: The specified shard was not a follower for the given replication unit.

Action: Validate parameter values and retry command.

OCI-03982: invalid number of replicas

Cause: The specified command created more replicas than were allowed by the current replication factor setting.

Action: Remove an existing replica and retry the command.

OCI-03983: shard *string* already contains replication unit *string*

Cause: The specified shard already contained the given replication unit.

Action: Validate parameter values and retry command.

OCI-03984: shard *string* does not contain replication unit *string* when setting parameter *string*

Cause: The specified shard did not contain the given replication unit.

Action: Validate the replication unit exists in this shard and retry command.

OCI-03985: replication units *string* and *string* are not colocated

Cause: The specified replication units were not located on the same set of shards or did not have the same leader.

Action: Validate parameter values and replication topology then retry command.

OCI-03989: no available source replica found in replication unit *string*

Cause: A source replica was not specified in the copy command and a valid replica could not be found to act as the source replica.

Action: Specify a valid follower replica using the `-source` parameter.

OCI-03990: Target shard does not recognize caller *string* as a peer for replication unit *string*.

Cause: Replication unit inter-communication was attempted between non-peer shards.

Action: Contact Oracle Support.

OCI-03991: Sharding capture does not support "*string*".*string*" because of the following reason: *string*

Cause: Sharding capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Do not include this table in a sharding Raft replication configuration. Alternatively, remove the unsupported property.

OCI-03992: background tasks are pending

Cause: Background tasks were pending when the command was issued.

Action: Monitor the completion of the background tasks using the GDSCTL 'config task' command. After all tasks are completed or after cancelling the tasks with the GDSCTL 'alter task' command, retry the original command.

OCI-03993: opaque column type not supported

Cause: A column with opaque column type, such as XMLType or AnyData, exists for the given table.

Action: Remove the relevant column and retry the operation.

OCI-03994: failed to block DML on *string.string* for Barrier DDL with ID *string* (root cause error = *string*)

Cause: Long running DML transactions blocked the DDL execution on shard.

Action: Retry the DDL or recover shard when DML transaction load is less.

OCI-03995: shard *string* is not available

Cause: The specified shard was not available because it was shut down or was unreachable from the catalog database.

Action: Validate the state of the shard and retry the command. Alternately, if attempting an incremental deployment, use the '-no_rebalance' option on the GDCTL 'deploy' command to allow deployment while shards are not available.

OCI-03996: cannot perform DML operations during recovery of the leader for replication unit *string*

Cause: Recovery of the replication log was in progress for this shard.

Action: Retry the user DML operations after the recovery completes.

OCI-03997: DML statement failed because a column or table is currently being used in a Barrier DDL statement with ID *string*.

Cause: Cannot perform DML on the column or table currently being used by Barrier DDL. In sharding replication setup, DMLs affecting the columns involved in a Barrier DDL statement are restricted until the DDL has completed.

Action: Retry the DML operations after the barrier DDL statement completes.

OCI-03999: bad digest when calling an internal procedure

Cause: An internal procedure was passed a bad digest.

Action: This is an internal error. Contact Oracle Support Services.

OCI-04000: the sum of PCTUSED and PCTFREE cannot exceed 100

Cause: the sum of PCTUSED and PCTFREE for a cluster or table exceeds 100

Action: create the table/cluster specifying values whose sum is <= 100

OCI-04001: SEQUENCE parameter *string* must be an integer.

Cause: The specified SEQUENCE parameter was not an integer.

Action: Create the SEQUENCE specifying an integer value for the parameter.

OCI-04002: INCREMENT is not a positive integer.

Cause: The specified increment sequence integer value was zero.

Action: Specify a positive integer value for INCREMENT.

OCI-04003: sequence parameter *string* exceeds maximum size allowed (*string* digits)

Cause: %s (a sequencer parameter) had too many digits

Action: specify the parameter with the allowed number of digits

OCI-04004: The MINVALUE integer value is not less than the MAXVALUE integer value.

Cause: The specified minimum value was greater than or equal to the specified maximum value.

Action: Specify an integer for the MINVALUE that is less than the integer for the MAXVALUE.

OCI-04005: The INCREMENT must be less than the MAXVALUE minus MINVALUE.

Cause: The specified INCREMENT integer value was either greater than or equal to the difference between the MAXVALUE integer value and the MINVALUE integer value.

Action: Specify an INCREMENT integer value that is less than the difference between the MAXVALUE integer value and the MINVALUE integer value.

OCI-04006: START WITH cannot be less than MINVALUE

Cause: the given starting value is less than MINVALUE

Action: make sure that the starting value is \geq MINVALUE

OCI-04007: MINVALUE cannot exceed the current value

Cause: The given MINVALUE was greater than the current value.

Action: Ensure that the MINVALUE is less than or equal to the current value.

OCI-04008: START WITH cannot be greater than MAXVALUE

Cause: The starting value was greater than the MAXVALUE.

Action: Ensure that the starting value is less than the MAXVALUE.

OCI-04009: MAXVALUE cannot be made to be less than the current value

Cause: the current value exceeds the given MAXVALUE

Action: make sure that the new MAXVALUE is larger than the current value

OCI-04010: the number of values to CACHE must be greater than 1

Cause: The value in the CACHE clause was one.

Action: Either specify NOCACHE, or provide a value greater than one.

OCI-04011: Sequence *string* must be in the range of *string* and *string*.

Cause: The value specified for one of the sequence parameters exceeded the limits.

Action: Specify parameters within the indicated range and retry the operation.

OCI-04012: object is not a sequence

Cause: the object specified cannot have sequence ddl's performed on it

Action: re-enter the statement being careful with the spelling of the name

OCI-04013: The CACHE value may not exceed the CYCLE value.

Cause: Specified CACHE value exceeded the CYCLE value.

Action: Reduce the CACHE value, increase the CYCLE value, or do both.

OCI-04014: MINVALUE must be specified for cycling descending sequences

Cause: The wrap value was not specified for the sequences that cycle.

Action: Re-create the sequence, specifying a MINVALUE.

OCI-04015: MAXVALUE must be specified for ascending sequences that cycle.

Cause: The MAXVALUE was not specified for this ascending SEQUENCE that was created with the CYCLE option.

Action: Re-create the SEQUENCE and specify a MAXVALUE for sequences that use the CYCLE option.

OCI-04016: Sequence *string* no longer exists.

Cause: The sequence was dropped while processing its next value.

Action: Re-create the sequence.

OCI-04017: invalid value *string* (length = *string*) for parameter MAX_DUMP_FILE_SIZE

Cause: The string supplied for the parameter MAX_DUMP_FILE_SIZE was not an integer, an integer followed by 'K', 'M', or 'G', nor the special value UNLIMITED.

Action: Provide a proper value for this parameter.

OCI-04018: The '*string*' parameter cannot be altered in Oracle Database Standard Edition or Oracle Database Free version.

Cause: An attempt was made to alter the specified parameter in the Standard Edition or Free version.

Action: Do not attempt to alter the parameter in the Standard Edition or Free version.

OCI-04020: deadlock detected while trying to lock object *stringstringstringstring*

Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

OCI-04021: timeout occurred while waiting to lock object *stringstringstringstring*

Cause: While waiting to lock a library object, a timeout occurred.

Action: Retry the operation later.

OCI-04022: nowait requested, but had to wait to lock dictionary object

Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

OCI-04023: Object *stringstringstringstring* could not be validated or authorized

Cause: A number of attempts were made to validate or authorize an object but failed.

Action: Please report this error to Oracle Support Services.

OCI-04024: self-deadlock detected while trying to mutex pin cursor *string*

Cause: While trying to mutex pin a cursor, a self-deadlock is detected.

Action: Retry the operation later.

OCI-04025: maximum allowed library object lock allocated for *stringstringstringstring*

Cause: Too many active locks for the object has been allocated. This error can be a result of too many cursors kept open per session.

Action: Close cursors, reduce session_cached_cursors value.

OCI-04026: *number* is an invalid library cache namespace

Cause: Passed in namespace value is invalid and violates protocol.

Action: Pass correct namespace value.

OCI-04027: self-deadlock during automatic validation for object *string.string*

Cause: An attempt was made to validate an invalidated object but it failed because of a self-deadlock.

Action: Identify the root cause of the self-deadlock and take corrective action, e.g. compile the invalidated object separately.

OCI-04028: cannot generate diana for object *stringstringstringstringstring*

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

OCI-04029: error *ORA-string* occurred when querying *stringstringstring*

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

OCI-04030: out of process memory

Cause: Operating system memory was exhausted or a per-process limit on private memory usage was reached. The database has an internal limit of 32 GB per Oracle process.

Action: Check the use of memory by other Oracle instances and other applications. Exceeding 32 GB in a single process may indicate a memory leak. Consider reducing the size of shared memory to allow more room for private memory.

OCI-04031: out of shared memory in *string*

Cause: More shared memory was needed than was available.

Action: If using one of the initialization parameters `SGA_TARGET`, `MEMORY_SIZE`, or `MEMORY_TARGET`, increase the value of that parameter. If it is not feasible to increase the parameter, then reduce the value of `DB_CACHE_SIZE` (if set). If you are not using `SGA_TARGET`, `MEMORY_SIZE`, or `MEMORY_TARGET`, increase the size of the pool that is out of memory. For example, increase `SHARED_POOL_SIZE` for the shared pool or `INMEMORY_SIZE` for an IMC heap. *Params: 1) `heap_name`: The top heap name.

OCI-04032: `PGA_AGGREGATE_TARGET` must be non-zero when `WORKAREA_SIZE_POLICY` in auto mode.

Cause: An attempt was made to set `WORKAREA_SIZE_POLICY` to `AUTO` while `PGA_AGGREGATE_TARGET` was not specified or attempt was made to set `PGA_AGGREGATE_TARGET` to zero while `WORKAREA_SIZE_POLICY` was `AUTO`.

Action: Before setting `WORKAREA_SIZE_POLICY`, set `PGA_AGGREGATE_TARGET` to a value representing the total private memory available to the instance. This total is generally the total physical memory available in the system minus what is needed for the system global area (SGA) minus what is needed for the operating system (for example, 500MB).

OCI-04033: Insufficient memory to grow pool

Cause: The system had insufficient memory to grow the pool to the specified size.

Action: Specify a smaller value to grow the pool.

OCI-04034: unable to shrink pool to specified size

Cause: The pool could not shrink to the specified size as it could not free memory.

Action: Specify a larger value to which to shrink the pool to.

OCI-04035: unable to allocate *string* bytes of shared memory in shared object cache "*string*" of size "*string*"

Cause: More shared memory is needed than was allocated in the shared object cache.

Action: n/a

OCI-04036: PGA memory used by the instance or PDB exceeds PGA_AGGREGATE_LIMIT.

Cause: Private memory across the instance or pluggable database (PDB) exceeded the limit specified in the PGA_AGGREGATE_LIMIT parameter. If the limit was reached when allocating from private memory used by more than one Oracle process (MGA or DGA), that process was interrupted. Otherwise, the largest sessions using Program Global Area (PGA) memory were interrupted to get under the limit.

Action: Increase the PGA_AGGREGATE_LIMIT initialization parameter or reduce memory usage.

OCI-04037: unable to allocate memory on another instance in the cluster

Cause: The instance ran out of memory as its allocated memory was less than the required memory.

Action: Refer to the alert log for the instance which ran out of memory.

OCI-04039: insufficient HugePages to grow System Global Area (SGA)

Cause: The number of system configured HugePages was insufficient to grow the database System Global Area (SGA) to the specified size.

Action: Specify a smaller value of System Global Area (SGA) target or increase the size of the HugePages.

OCI-04041: package specification must be created first before creating package body

Cause: Attempt to create a package body before creating its package specification.

Action: Create the package specification first before creating the package body.

OCI-04042: procedure, function, package, or package body does not exist

Cause: An attempt was made to access a procedure, function, package, or package body that did not exist.

Action: Ensure that the name is correct.

OCI-04043: Object *string* does not exist.

Cause: An object name was specified that was not recognized by the system. There are several possible causes: - An invalid name for a table, view, sequence, procedure, function, package, or package body was entered. Since the system could not recognize the invalid name, it responded with the message that the named object did not exist. - An attempt was made to rename an index, cluster, or some other object that cannot be renamed.

Action: Check the spelling of the named object and rerun the code. Valid names of tables, views, functions and other database objects can be listed by querying the data dictionary.

OCI-04044: procedure, function, package, or type is not allowed here

Cause: A procedure, function, or package was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

OCI-04045: errors during recompilation or revalidation of *string.string*

Cause: The errors occurred during implicit recompilation or revalidation of the object. This message indicates the object to which the following errors apply.

Action: Check the following errors for more information and make the necessary corrections to the object.

OCI-04046: results of compilation are too large to support

Cause: Attempt to compile and store a large stored procedure that results in compilation data that is too large for the system to support or store.

Action: Reduce the size of the store procedure by splitting it into smaller stored procedures.

OCI-04047: object specified is incompatible with the flag specified

Cause: The object type implied by the flag did not match the type of object specified.

Action: Specify the correct object, or use the appropriate flag.

OCI-04050: invalid or missing procedure, function, or package name

Cause: The required procedure, function, or package name is invalid or missing.

Action: Specify a valid name.

OCI-04051: user *string* cannot use database link *string.string*

Cause: During forwarding of a remote object access, an attempt was made to use a non-existent database link or one owned by a user other than the logon user or PUBLIC.

Action: Change your database link structure so that all indirect remote accesses are done from the same userid that originates the request.

OCI-04052: error occurred when looking up remote object *stringstringstringstringstring*

Cause: An error occurred when trying to look up a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

OCI-04053: error occurred when validating remote object *stringstringstringstringstring*

Cause: An error occurred when trying to validate a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

OCI-04054: database link *string* does not exist

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

OCI-04055: Aborted: "string" formed a non-REF mutually-dependent cycle with "string".

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. For example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

OCI-04060: insufficient privileges to execute string

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

OCI-04061: existing state of string has been invalidated

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

OCI-04062: string of string has been changed

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp or signature that is different from the current timestamp/signature of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

OCI-04063: string has errors

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table. Can also be a table which has references to non-existent or inaccessible types.

Action: Fix the errors and/or create referenced objects as necessary.

OCI-04064: not executed, invalidated string

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

OCI-04065: not executed, altered or dropped string

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

OCI-04066: non-executable object, string

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

OCI-04067: not executed, *string* does not exist

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

OCI-04068: existing state of packages *stringstringstring* has been discarded

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

OCI-04069: cannot drop or replace a library with table dependents

Cause: An attempt was made to drop or replace a library that has dependents. There could be a table which depends on type which depends on the library being dropped.

Action: Drop all table(s) depending on the type, then retry.

OCI-04070: invalid trigger name

Cause: An invalid trigger name was specified.

Action: Verify that trigger name is not a reserved keyword.

OCI-04071: missing BEFORE, AFTER or INSTEAD OF keyword

Cause: The trigger statement is missing the BEFORE/AFTER/INSTEAD OF clause.

Action: Specify either BEFORE, AFTER or INSTEAD OF.

OCI-04072: invalid trigger type

Cause: An invalid trigger type was given.

Action: Specify either INSERT, UPDATE or DELETE.

OCI-04073: column list not valid for this trigger type

Cause: A column list was specified for a non-update trigger type.

Action: Remove the column list.

OCI-04074: invalid REFERENCING name

Cause: An invalid name was given in the referencing clause.

Action: Verify the referencing name is not a reserved word.

OCI-04075: invalid trigger action

Cause: An statement was given for the trigger action.

Action: Re-specify the trigger action.

OCI-04076: invalid NEW or OLD specification

Cause: An invalid NEW or OLD specification was given for a column.

Action: Re-specify the column using the correct NEW or OLD specification.

OCI-04077: WHEN clause cannot be used with table level triggers

Cause: The when clause can only be specified for row level triggers.

Action: Remove the when clause or specify for each row.

OCI-04078: OLD and NEW values cannot be identical

Cause: The referencing clause specifies identical values for NEW and OLD.

Action: Re-specify either the OLD or NEW referencing value.

OCI-04079: invalid trigger specification

Cause: The create TRIGGER statement is invalid.

Action: Check the statement for correct syntax.

OCI-04080: trigger '*string*' does not exist

Cause: The TRIGGER name is invalid.

Action: Check the trigger name.

OCI-04081: trigger '*string*' already exists

Cause: The TRIGGER name or type already exists.

Action: Use a different trigger name or drop the trigger which is of the same name.

OCI-04082: NEW or OLD references not allowed in table level triggers

Cause: The trigger is accessing "new" or "old" values in a table trigger.

Action: Remove any new or old references.

OCI-04083: invalid trigger variable '*string*'

Cause: The variable referenced in the trigger body is invalid.

Action: See the manual for valid trigger variable types.

OCI-04084: cannot change NEW values for this trigger type

Cause: New trigger variables can only be changed in before row insert or update triggers.

Action: Change the trigger type or remove the variable reference.

OCI-04085: cannot change the value of an OLD reference variable

Cause: Old values can only be read and not changed.

Action: Do not attempt to change an old variable.

OCI-04086: trigger description too long, move comments into triggering code

Cause: The trigger description is limited to 2000 characters (for dictionary storage reasons). The description does not include the text of the "when" clause or the text of the pl/sql code executed for the trigger.

Action: If the trigger description contains a large comment, move that

OCI-04087: cannot change the value of ROWID reference variable

Cause: Rowid's can only be read and not changed.

Action: Do not attempt to change an rowid value.

OCI-04088: error during execution of trigger '*string.string*'

Cause: A runtime error occurred during execution of a trigger.

Action: Check the triggers which were involved in the operation.

OCI-04089: cannot create triggers on objects owned by SYS

Cause: An attempt was made to create a trigger on an object owned by SYS.

Action: Do not create triggers on objects owned by SYS.

OCI-04090: 'string' specifies same table, event and trigger time as 'string'

Cause: Trigger is of duplicate event and trigger time.

Action: Combine the triggering information into one trigger which is fired at the given time.

OCI-04091: table *string.string* is mutating, trigger/function may not see it

Cause: A trigger (or a user defined PL/SQL function that is referenced in this statement) attempted to look at (or modify) a table that was in the middle of being modified by the statement which fired it.

Action: Rewrite the trigger (or function) so it does not read that table.

OCI-04092: cannot *string* in a trigger

Cause: A trigger attempted to commit or rollback.

Action: Rewrite the trigger so it does not commit or rollback.

OCI-04093: references to columns of type LONG are not allowed in triggers

Cause: A trigger attempted to reference a long column in the triggering table.

Action: Do not reference the long column.

OCI-04094: table *string.string* is constraining, trigger may not modify it

Cause: A trigger attempted to modify a table that was constraining for some referential constraint of a parent SQL statement.

Action: n/a

OCI-04095: trigger '*string*' already exists on another table, cannot replace it

Cause: Cannot replace a trigger which already exists on a different table than the one being replaced.

Action: Drop the trigger with the same name and re-create it.

OCI-04096: trigger '*string*' has a WHEN clause which is too large, limit 2K

Cause: A trigger's 'when' clause is limited to 2K for dictionary storage reasons. The trigger being created exceeded that size.

Action: Use a smaller 'when' clause. Note, the trigger body could be used to perform the same limiting action as the 'when' clause.

OCI-04097: DDL conflict while trying to drop or alter a trigger

Cause: An attempt was made to concurrently perform two DDL operations on a trigger or trigger table.

Action: Investigate the new state of the trigger and retry the DDL operation, if still appropriate.

OCI-04098: trigger '*string.string*' is invalid and failed re-validation

Cause: A trigger was attempted to be retrieved for execution and was found to be invalid. This also means that compilation/authorization failed for the trigger.

Action: Options are to resolve the compilation/authorization errors, disable the trigger, or drop the trigger.

OCI-04099: trigger '*string*' is valid but not stored in compiled form

Cause: A trigger was attempted to be retrieved for execution and was found to be valid, but not stored. This may mean the an upgrade was done improperly from a non-stored trigger release.

Action: Alter compile the trigger to create the trigger in stored form. Also, you may want to review that a proper upgrade was done.

OCI-04100: cannot create triggers owned by PUBLIC

Cause: An attempt was made to create a trigger owned by PUBLIC.

Action: Do not create triggers owned by PUBLIC.

OCI-04101 to OCI-07499

OCI-04101: Multilingual Engine does not support the language *string*.

Cause: An attempt was made to use an unsupported language in Multilingual Engine (MLE).

Action: Use a supported language when creating an MLE module or calling `DBMS_MLE.eval()`. A list of supported languages can be obtained by calling `DBMS_MLE.get_available_languages()`.

OCI-04102: An MLE module named *string* already exists.

Cause: An attempt was made to create a Multilingual Engine (MLE) module with the same name as one that already exists. MLE module names must be unique.

Action: Choose a different name for the MLE module. Alternatively, drop the existing MLE module before deploying the new one or replace the existing MLE module using `CREATE OR REPLACE MLE MODULE`.

OCI-04103: MLE module *string* does not exist.

Cause: An attempt was made to use, modify, or drop a nonexistent Multilingual Engine (MLE) module.

Action: Create the named MLE module or use an existing MLE module.

OCI-04104: An environment named *string* already exists.

Cause: An attempt was made to create an environment whose name conflicted with an existing environment.

Action: Choose a different name for your environment. Alternatively, remove the existing environment before deploying the new one or replace the existing environment using `CREATE OR REPLACE MLE ENV`.

OCI-04105: MLE environment *string* does not exist.

Cause: An attempt was made to use, modify, or drop a nonexistent Multilingual Engine (MLE) environment.

Action: Create the named MLE environment or use an existing MLE environment.

OCI-04106: Module *string* referred to by *string* has been modified since the execution context was created.

Cause: An attempt was made to use a function of a module that has been modified since the execution context was created.

Action: Rerun the function. Rerunning the function after encountering this error implicitly creates and uses a new execution context. Alternatively call `DBMS_SESSION.reset_package()` to reset the session.

OCI-04107: Environment *string* or one of the modules imported by it has been modified since it has been loaded.

Cause: The Multilingual Engine (MLE) environment or one of the modules that it imports has changed since the execution context was created.

Action: Create a new dynamic context, or rerun the function. Rerunning the function creates and uses a new execution context. Alternatively call `DBMS_SESSION.reset_package()` to reset the session.

OCI-04108: Effective userid, roles, or container changed since context creation.

Cause: An attempt was made to access an execution context with a different userid or roles or from a different container compared to when it was created.

Action: Use the same userid, roles, and container that you used when creating the execution context when accessing it.

OCI-04109: An import named *string* already exists in the MLE environment.

Cause: An attempt was made to add an import whose name conflicted with an existing import in the Multilingual Engine (MLE) environment.

Action: Use a different import name, alter the existing import using `ALTER IMPORTS`, or drop the existing import before adding the new one. The data dictionary view `ALL_MLE_ENV_IMPORTS` lists the imports for all MLE environments accessible to the current user.

OCI-04110: import *string* does not exist in the MLE environment.

Cause: An attempt was made to `ALTER` or `DROP` a nonexistent import in a Multilingual Engine (MLE) environment.

Action: Use an existing import name. The data dictionary view `ALL_MLE_ENV_IMPORTS` lists the imports for all MLE environments accessible to the current user.

OCI-04112: invalid or missing version string provided to Multilingual Engine (MLE) module *string*

Cause: The value for the `VERSION` clause of the `CREATE MLE MODULE` DDL was either missing, too long, or not a valid string.

Action: Provide a valid string as part of the `VERSION` clause or remove the `VERSION` clause. `VERSION` strings must have 256 or fewer characters.

OCI-04113: invalid or missing language option string provided to Multilingual Engine (MLE) environment *string*

Cause: The value for the `LANGUAGE OPTIONS` clause of the `CREATE` or `alter MLE ENV` statement was either missing, too long, or not a valid string.

Action: Provide a valid string as part of the `LANGUAGE OPTIONS` clause or remove the `LANGUAGE OPTIONS` clause. `LANGUAGE OPTIONS` strings must have 4000 or fewer characters.

OCI-04114: invalid or missing import name specified in MLE environment *string*

Cause: The import name was either missing, too long, or not a valid string.

Action: Provide a valid import name. Import names must have 2048 or fewer characters.

OCI-04115: invalid or missing MLE module name

Cause: The Multilingual Engine (MLE) module name was either missing or not a valid identifier.

Action: Provide a valid MLE module name. MLE module names must be valid database object names.

OCI-04116: invalid or missing MLE environment name

Cause: The Multilingual Engine (MLE) environment name was either missing or not a valid identifier.

Action: Provide a valid MLE environment name. MLE environment names must be valid database object names.

OCI-04117: MLE environment *string* has errors

Cause: The Multilingual Engine (MLE) environment had errors.

Action: Ensure that for each MLE module referenced by the MLE environment the following conditions are met: - The module exists. - The owner of the environment must either own the mapped module or must be granted the EXECUTE privilege on it. For each mapping not satisfying these conditions, perform whichever of the following actions is appropriate: - Create the missing MLE module. - Grant the EXECUTE privilege on the module. - Drop the mapping from the environment. *Params: 1) environment_name: The name of the MLE environment with errors.

OCI-04118: Module import *string* is a synonym for a remote object.

Cause: An attempt was made to specify a synonym for a remote object as an import in a Multilingual Engine (MLE) environment. Synonyms referring to remote objects are not allowed in an MLE environment's import clause. In this context a remote object is any object accessed using a database link.

Action: Replace the synonym of a remote object with a local MLE module.

OCI-04119: MLE module *string* has errors

Cause: The Multilingual Engine (MLE) module had errors.

Action: Resolve any compilation errors on the MLE module.

OCI-04120: insufficient privileges to use MLE module *string*

Cause: An attempt was made to import a Multilingual Engine (MLE) module in an MLE environment, or use the module in an MLE call specification, without sufficient privileges on the module.

Action: Obtain the EXECUTE privilege on MLE modules that you do not own before importing them in MLE environments or using them in call specifications.

OCI-04121: invalid privilege used for an MLE module

Cause: An attempt was made to GRANT or REVOKE a privilege other than EXECUTE or COLLECT DEBUG INFO on a Multilingual Engine (MLE) module.

Action: GRANT or REVOKE only the EXECUTE and COLLECT DEBUG INFO privilege on MLE modules.

OCI-04122: invalid privilege used for an MLE environment

Cause: An attempt was made to GRANT or REVOKE a privilege other than EXECUTE on a Multilingual Engine (MLE) environment.

Action: GRANT or REVOKE only the EXECUTE privilege on MLE environments.

OCI-04123: insufficient privileges to use MLE environment *string*

Cause: An attempt was made to use a Multilingual Engine (MLE) environment without sufficient privileges on the environment itself or on MLE modules that are imported by the environment.

Action: Get the necessary privileges on the MLE environment and all MLE modules that it imports.

OCI-04124: authorization error for MLE module referenced in MLE environment

Cause: The Multilingual Engine (MLE) environment was not authorized to include the MLE module as an import definition.

Action: For each MLE module included as an import in the MLE environment, ensure that the environment owner either owns the module or has the EXECUTE privilege on it.

OCI-04125: Empty MLE modules are not supported.

Cause: An attempt was made to create an empty Multilingual Engine (MLE) module.

Action: Create only non-empty MLE modules.

OCI-04126: invalid or missing MLE language identifier

Cause: The provided Multilingual Engine (MLE) language identifier used to create an MLE schema object was either invalid or missing.

Action: Ensure that a supported language identifier is provided. The list of supported language identifiers can be obtained using `DBMS_MLE.get_available_languages`. Verify that the language identifier does not contain typos or extraneous characters, such as single quotes.

OCI-04127: duplicate import name *string* in drop list

Cause: The specified import list in the DROP IMPORTS statement contained duplicate entries.

Action: Ensure that there are no duplicate entries in the drop list.

OCI-04128: empty import name for MLE module *string*

Cause: The provided import name for the Multilingual Engine (MLE) module was empty.

Action: Provide a non-empty import name.

OCI-04129: insufficient privileges to use MLE language *string*

Cause: An attempt is being made to use the language in a Multilingual Engine (MLE) call specification, without sufficient privileges on the language.

Action: Obtain the EXECUTE privilege on MLE languages before using them in call specifications.

OCI-04130: authorization error for MLE language used in MLE module

Cause: The owner of the Multilingual Engine (MLE) module is not authorized to use the MLE language.

Action: For each MLE language used in the MLE environment, ensure that the module owner has the EXECUTE privilege on it.

OCI-04151: malformed SIGNATURE clause *string* in PL/SQL call specification *string*: *string*

Cause: Invoking Multilingual Engine (MLE) modules requires the definition of call specifications, including a reference to an MLE module, an optional environment, and a signature. The signature clause in the call specification was malformed. The error was triggered by one of the following situations: - The number of parameters in the PL/SQL program unit did not match that of the JavaScript function referenced. - The PL/SQL program unit used OUT or IN OUT parameters not matching those of the JavaScript function referenced. - The signature syntax is invalid. It should be the function name, optionally followed by a comma-separated sequence of types surrounded by parentheses.

Action: Review the error message and determine the exact cause of the error from the list above. Then provide a valid signature clause to the PL/SQL program unit.

OCI-04152: Environment *string* specifies an unrecognized language option *string*

Cause: An attempt was made to use a Multilingual Engine (MLE) environment specifying a language option that was not recognized by MLE.

Action: Update the environment to specify only valid language options.

OCI-04153: An invalid context handle was provided.

Cause: A valid context handle needs to be passed to DBMS_MLE subprograms that perform actions on execution contexts. An invalid context handle was passed to such a subprogram.

Action: Use a valid context handle.

OCI-04154: cannot create a context handle on behalf of user ID *string* because it is invalid

Cause: The `user_id` passed to `DBMS_SYS_MLE.create_context_as_user()` is either NULL or invalid because it does not map to an existing user.

Action: Provide a valid user id. Compare the user ID passed in the code snippet with those found in the data dictionary. Pluggable databases store information about local users and their corresponding numeric user IDs in `DBA_USERS`.

OCI-04155: Unable to convert database *string* value to MLE *string* value. Reason: *string*

Cause: A type conversion from a database value (SQL or PL/SQL) to a Multilingual Engine (MLE) value failed. This can occur if the input database value does not fit the supported range of values for the MLE target type.

Action: Ensure that the database input value fits the supported range of values for the MLE target type.

OCI-04156: Unable to convert MLE value to database *string* value. Reason: *string*.

Cause: The given input Multilingual Engine (MLE) value cannot be converted to the specified database (SQL or PL/SQL) target type. This can occur for the following reasons: - the type of the input value is not supported for conversion to the target type - the type of the input value can be converted to the target type, but the input value is not in the supported range for the target type.

Action: Ensure that the input MLE value is of a type that can be converted to the target database type, and that it fits into the supported value range.

OCI-04157: An attempt was made to exchange an invalid property between Multilingual Engine (MLE) and PL/SQL.

Cause: An attempt was made to use an empty string or a NULL value as `property_name` when importing or exporting values in `DBMS_MLE`.

Action: Pass a valid `property_name` that is neither an empty string nor a NULL value. Review the code for occurrences of - `DBMS_MLE.export_to_mle()` - `DBMS_MLE.import_from_mle()` For each of these, ensure the `property_name` meets the requirements mentioned above.

OCI-04158: Property *string* does not exist in dynamic MLE execution context.

Cause: An attempt was made to import a property from a Multilingual Engine (MLE) execution context into PL/SQL using the `DBMS_MLE` package. The property name that was specified does not exist in the execution context.

Action: Specify the name of a property that has been exported by code in the execution context, or export the property from MLE language code in the execution context before importing into PL/SQL. *Params: 1) property name: The name of the property that was attempted to import.

OCI-04159: Access to `DBMS_MLE` functionality is denied

Cause: Executing code dynamically in Multilingual Engine (MLE) requires the use of execution contexts. An execution context is passed to MLE when evaluating a code snippet. The context handle referring to such an execution context provided previously was invalid. Access to dynamic MLE code execution has been disabled for this session.

Action: Start a new session to use `DBMS_MLE` functionality again.

OCI-04160: *string*

Cause: A syntax error was encountered while parsing a Multilingual Engine (MLE) code snippet or module.

Action: Fix the syntax error in the MLE code snippet or module.

OCI-04161: *string*

Cause: A runtime error occurred while evaluating a Multilingual Engine (MLE) code snippet or call specification.

Action: Fix the MLE language code that causes the runtime error. Use the source location reported in the error message to identify the code that needs to be fixed. Use the `DBMS_MLE.get_error_stack` or `DBMS_MLE.get_ctx_error_stack` functions to retrieve the MLE language stack trace for the error.

OCI-04162: Unsupported type *string* in signature clause of MLE call specification

Cause: A procedure or function was created with a Multilingual Engine (MLE) call specification. The signature clause of the call specification contains a type name that is not supported for the MLE language.

Action: Change the signature clause of the call specification so that it only contains types supported by the corresponding MLE language. *Params: 1) type name: The name of the unsupported type.

OCI-04163: MLE call specification specifies invalid mapping from database type *string* to MLE language type *string*

Cause: The signature clause in a Multilingual Engine (MLE) call specification maps the database type of a procedure argument to an MLE language type that is not supported for the given database type.

Action: Change the signature clause of the MLE call specification to use an MLE language type that is valid for the given type of the procedure argument. *Params: 1) source type: The database type of the procedure argument. 2) target type: The MLE language type specified in the signature clause.

OCI-04164: Missing COLLECT DEBUG INFO privilege on MLE module *string*.

Cause: The user who enabled debugging was missing the COLLECT DEBUG INFO privilege on the specified Multilingual Engine (MLE) module.

Action: Grant the COLLECT DEBUG INFO privilege on the MLE module to the debugging user or disable debugpoints for the MLE module before executing code from the MLE module.

OCI-04165: invalid debug specification - *string*

Cause: The provided debug specification was not valid.

Action: Fix the debug specification error identified in the error message.

OCI-04166: Cannot process the debug output provided.

Cause: The Multilingual Engine (MLE) post-execution debug output provided for processing was not well formed. The debugging information passed to post-processing tools such as DBMS_MLE.parse_debug_output requires the input to be in a specific format.

Action: Ensure that the debug output provided contains MLE post-execution debugging output.

OCI-04169: SIGNATURE clause of call specification *string* specifies a function name *string* that is not exported by module *string*.

Cause: An attempt was made to call a Multilingual Engine (MLE) call specification whose SIGNATURE clause specifies a function name that does not correspond to any exported function of the call specification's MLE module.

Action: Modify the SIGNATURE clause of the call specification or the corresponding function in the MLE module so that the SIGNATURE clause refers to a function that is exported in the MLE module.

OCI-04170: No MLE context found for the specified pair [module = *string*, environment = *string*] for the current user.

Cause: The specified module or environment names did not correspond to a valid MLE context for the current user. Either the specified module or environment do not exist, or no MLE context has been created for them yet.

Action: Specify a valid module or environment name, or make sure that an MLE context has been created for them. MLE module contexts are created lazily upon first calling an MLE module function or procedure.

OCI-04171: at *string*

Cause: Location context for an unhandled error raised during execution of programs by the Multilingual Engine (MLE). The location information points to the code location at which the error occurred.

Action: Fix the problem causing the error, or catch and handle the error.

OCI-04172: error in database callout from MLE at *string*

Cause: An error occurred during execution of a database callout (for example, a SQL statement executed from a JavaScript program) in a program run by the Multilingual Engine (MLE). The location information points to the code location in the program at which the SQL statement was executed.

Action: Inspect the location information to determine the location of the error, and review additional error messages that indicate the nature of the callout error. Fix the problem causing the error, or catch and handle the error in the program. *Params: 1) code_location: The code location in the program at which the database callout was performed.

OCI-04173: *string*

Cause: Error message for an unhandled error that occurred in a database callout from a program executed by the Multilingual Engine (MLE).

Action: Fix the problem causing the error, or catch and handle the error. *Params: 1) error_message: A string representation of the error that occurred during the database callout.

OCI-04254: Multilingual Engine (MLE) does not support Multi Process Multi Threads (MPMT).

Cause: An attempt was made to use the Multilingual Engine (MLE) with Multi Process Multi Threads (MPMT) enabled.

Action: Disable the Multi Process Multi Threads (MPMT) before using the Multilingual Engine (MLE). Retry after MPMT is disabled.

OCI-04255: Multilingual Engine (MLE) does not support shared servers.

Cause: An attempt was made to use the Multilingual Engine (MLE) with a shared server.

Action: Use a dedicated server to use the Multilingual Engine (MLE).

OCI-04256: cannot start the Multilingual Engine (MLE), instance PGA_AGGREGATE_LIMIT too low

Cause: The instance PGA_AGGREGATE_LIMIT prevented from starting the Multilingual Engine (MLE).

Action: Increase the instance PGA_AGGREGATE_LIMIT.

OCI-04257: Cannot start MLE because the amount of available PGA memory in the PDB is insufficient.

Cause: The amount of memory allocated to the Program Global Area (PGA) using PGA_AGGREGATE_LIMIT is too low in this Pluggable Database (PDB), preventing Multilingual Engine (MLE) from starting.

Action: Increase the amount of PGA memory available to the PDB either by raising the PGA_AGGREGATE_LIMIT parameter or by reducing the PGA memory consumption of other workloads in the PDB.

OCI-04258: Cannot start the Multilingual Engine (MLE) because the per-session Program Global Area (PGA) limit is too low.

Cause: Database Resource Manager enforced a limit for this session's use of private memory, referred to as the session's Program Global Area. The Resource Manager limit, `session_pga_limit`, is too low for MLE to start.

Action: Identify the session's resource consumer group and use it to identify the `session_pga_limit`. Increase the consumer group's `session_pga_limit` using Database Resource Manager API, then retry the operation.

OCI-04259: Multilingual Engine (MLE) failed to load

Cause: A severe error prevented Multilingual Engine (MLE) from loading and initializing. This might have been caused by a corrupted software installation.

Action: Please contact Oracle Support for further assistance.

OCI-04260: Multilingual Engine (MLE) does not support Database Resident Connection Pooling (DRCP).

Cause: An attempt was made to use the Multilingual Engine (MLE) with Database Resident Connection Pooling (DRCP) enabled.

Action: Turn off Database Resident Connection Pooling (DRCP) before using the Multilingual Engine (MLE).

OCI-04261: Multilingual Engine (MLE) is not available on this platform

Cause: An attempt was made to use the Multilingual Engine (MLE) on a platform where MLE was not available.

Action: Use the Multilingual Engine (MLE) on a platform where MLE is available.

OCI-04264: Multilingual Engine (MLE) cannot be enabled if disabled at instance or PDB level.

Cause: An attempt was made to enable MLE while it was disabled at instance or PDB level. MLE may only be enabled at instance level, at PDB level if enabled at instance level, and at session level if enabled at PDB level.

Action: Enable MLE at instance or PDB level first.

OCI-04270: Session time zone region *string* is not available in Multilingual Engine (MLE)

Cause: The time zone region currently configured in the session is not available in MLE.

Action: Choose another session time zone. *Params: 1) time zone: The name of the unsupported time zone region.

OCI-05000: cannot create foreign key constraints on columns referencing a sharded table

Cause: An attempt was made to create a foreign key constraint in a duplicate table on a column referencing a sharded table.

Action: Remove the foreign key constraint referencing a column in the sharded table.

OCI-05001: source and target shardspaces have different number of chunks

Cause: ALTER TABLE SPLIT PARTITIONSET operation did not have an equal number of chunks in source and target shardspaces.

Action: Make number of chunks equal on the source and target shardspaces by using the SPLIT CHUNK command and then retry.

OCI-05002: names assigned to resulting partitionsets must be distinct

Cause: Names of the partitionsets resulting from splitting the existing partitionset were not distinct.

Action: Rename the resulting partitionsets to ensure that their names are distinct and different from those of any other existing partitionset.

OCI-05003: tablespaces can be specified for only one of the resulting partitionsets

Cause: Tablespaces for all resulting partitionsets were either specified or not specified at all.

Action: Specify the tablespace for only one resulting partitionset.

OCI-05004: partitionset already exists in target shardspace for the same FAMILY_ID.

Cause: The partitionset already existed in the target shardspace of the SPLIT PARTITIONSET operation.

Action: The target shardspace needs to be empty for the SPLIT PARTITIONSET operation.

OCI-05005: row count mismatch between source and target during the SPLIT PARTITIONSET operation

Cause: The expected rows count on the target side did not match the source row count during the SPLIT PARTITIONSET operation.

Action: Clean up the target shardspace before retrying the SPLIT PARTITIONSET operation.

OCI-05006: sharding key update failed

Cause: One of the steps involved in the sharding key update failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05007: sharding key update failed; transaction automatically rolled back

Cause: One of the steps involved in the sharding key update failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05008: sharding key update failed; roll back transaction manually to return to consistent state

Cause: One of the steps involved in the sharding key update failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05009: Sharding key update is not supported for this table.

Cause: One of the settings for this table was not correct for the sharding key update to be supported.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05010: Updating more than one sharding column at a time is not supported.

Cause: Updating more than one sharding column at a time was not supported.

Action: Update one sharding column at a time.

OCI-05011: cannot enable foreign key constraint

Cause: An attempt was made to enable a foreign key constraint that existed between a sharded table and a duplicated table. Such constraints can only exist in a disabled state because they cannot be enforced on the shard or the catalog.

Action: This operation is not allowed.

OCI-05012: cannot operate on multiple constraints for duplicated table

Cause: An attempt was made to operate on multiple constraints at the same time for a duplicated table.

Action: Operate on only one constraint at a time.

OCI-05013: cannot create unique index on primary key columns of a duplicated table

Cause: An attempt was made to create a unique index on the same columns of a disabled primary key constraint for a duplicated table.

Action: Enable the primary key constraint to create this index automatically.

OCI-05014: invalid specification of a clause in CREATE TABLESPACE statement in sharding environment

Cause: An unsupported clause was specified in the CREATE TABLESPACE statement in a sharding environment.

Action: Drop the unsupported clause and reissue the CREATE TABLESPACE statement.

OCI-05015: cannot set or alter the default tablespace of a sharded table

Cause: An attempt was made to set or alter the default tablespace of a sharded table.

Action: None. A default tablespace cannot be set for sharded tables.

OCI-05016: The sharding key is not found or does not belong to the shard

Cause: A request was made to either the shard catalog with a sharding key that did not belong to any shard, or to a shard with a sharding key that did not belong to this shard.

Action: Check the sharding key value in the request.

OCI-05017: root table required for routing not found

Cause: The shard routing information was not yet available, possibly due to the shard table family being dropped, or delay in loading the new table family information.

Action: Check the presence of sharded table definitions.

OCI-05018: cannot find a matching sharded table family

Cause: There was no matching table family for the request, either because the service was not associated with any table family or no sharded table family existed.

Action: Check the table family associated with the service and the presence of sharded table definitions.

OCI-05019: the super sharding key does not belong to this shard

Cause: An attempt was made to connect to a shard using a super sharding key value that did not belong to the shard.

Action: Check the super sharding key value and the partition set mapping to the shards.

OCI-05020: inconsistent shard routing metadata with request

Cause: The shard routing lookup for the request found inconsistent metadata on the server.

Action: Check the request sharding key and and super sharding key specification and sharding configurations.

OCI-05021: PARTITIONED AS TABLE clause contradicts LOCAL clause

Cause: CREATE INDEX statement contained a PARTITIONED AS TABLE clause together with a LOCAL clause.

Action: Specify either the PARTITIONED AS TABLE clause or the LOCAL clause, but not both.

OCI-05022: Locking rows for sharding key update failed.

Cause: One of steps involved in locking rows for the sharding key update failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05023: chunk id *string* is in the middle of chunk move operation. Retry after chunk move is done.

Cause: chunk id was in the middle of a chunk move operation.

Action: Retry after the chunk move is done.

OCI-05024: cannot update the sharding key when row movement is not enabled.

Cause: cannot update the sharding key when row movement is not enabled.

Action: Enable row movement for all tables in this table's table family.

OCI-05025: cannot update the sharding key when SNR is enabled

Cause: An attempt was made to update the sharding key when sharding Raft replication was enabled.

Action: Do not try to update the sharding key when SNR is enabled.

OCI-05026: cannot delete or update parent key referenced by sharded table

Cause: An attempt was made to delete or update a row from a duplicated table when a foreign key constraint existed in a sharded table referencing this duplicated table and the constraint was ENABLED.

Action: DISABLE NOVALIDATE the constraint before attempting to delete or update rows from the duplicated table. When a sharded table references a duplicated table, deleting a parent row is only allowed when the constraint is in DISABLE state. This means rows from the child sharded table are not looked up for violation. The constraint state can later be changed to ENABLE VALIDATE if there are no rows in sharded table violating the constraint and after duplicated table is refreshed on all shards.

OCI-05027: cannot use ON DELETE clause for this constraint

Cause: A foreign key constraint was being created or altered in a sharded table referencing a duplicated table with ON DELETE clause.

Action: Remove the ON DELETE clause.

OCI-05028: cannot create a sharded index on this table

Cause: Creating sharded indexes is restricted to sharded tables in certain sharding methods.

Action: Do not specify SHARDED keyword in the create index statement.

OCI-05031: PDB SGA usage has exceeded the limit.

Cause: The pluggable database (PDB) was using more system global area (SGA) than the limit set by the SGA_TARGET parameter.

Action: Increase the SGA_TARGET (limit) of the PDB.

OCI-05032: operation only allowed with directory-based sharding

Cause: An attempt was made to perform an operation that is only supported with directory-based sharding.

Action: Check the definition of the sharded root table, if any. Create or re-create the table with the PARTITION BY DIRECTORY clause to enable directory-based sharding.

OCI-05033: error with SHA-256 calculation on the sharding key

Cause: An error was encountered while calculating the SHA-256 encryption value of a sharding key.

Action: Check the sharding key value, ensure that all key columns match the corresponding sharding key column definition and are in the correct order.

OCI-05034: no matching directory-based sharded root table found for *string.string*

Cause: An attempt was made to perform an operation on the directory for a sharded table that did not exist.

Action: Check the schema and root table name provided for the operation and ensure that the table has been created for directory-based sharding.

OCI-05035: no matching partition found for *string* for directory insert

Cause: An attempt was made to insert data into the shard directory with a partition name that did not exist.

Action: Check the partition name specified for the insert statement against the partitions defined for the root table.

OCI-05036: no matching record found for specified key in the directory

Cause: An attempt was made to perform an operation with a sharding key that did not have a matching entry in the directory.

Action: Check the sharding key value and ensure that it has a corresponding entry in the shard directory.

OCI-05037: only the schema owner is allowed to modify the directory

Cause: An attempt was made to modify the directory of a sharded table that belonged to a different schema, which is prohibited.

Action: Connect as the schema owner of the sharded root table to modify the shard directory.

OCI-05038: shard directory can only be modified on the shard catalog

Cause: An attempt was made to execute a PL/SQL procedure that modifies the shard directory from a shard database.

Action: Connect to the shard catalog database to modify the shard directory.

OCI-05039: value list is not allowed in ADD PARTITION in directory-based sharding

Cause: Either a VALUES LESS THAN clause or a VALUES (<values_list>) clause was specified when adding a partition to a directory partitioned table, which is not allowed.

Action: Remove the VALUES LESS THAN clause or VALUES (<values_list>) clause from the partition being added.

OCI-05040: DEFAULT partition is not allowed in a directory partitioned table

Cause: The DEFAULT clause was specified for a partition in a directory partitioned table, which is not allowed.

Action: Remove the DEFAULT clause.

OCI-05041: maximum of two destination partitions is allowed

Cause: More than two destination partitions were specified in split partition command for directory partitioned table.

Action: Specify two destination partitions only.

OCI-05042: Adding a chunk ID to the value list of an existing partition failed.

Cause: Adding a chunk ID to the value list of an existing partition failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05043: Error occurred during phase = *string* of Raft log files for RU *string* rotd_idx *string* curr_blk *string* num_blks *string*

Cause: Sharding Raft log appears to be corrupted or inaccessible.

Action: Reinstantiate the replication unit by copying from another follower or the leader of the replication unit.

OCI-05044: Error occurred during phase = *string* of Raft control file record of RU *string*

Cause: Sharding Raft control file records appears to be corrupted or inaccessible.

Action: Reinstantiate the replication unit by copying from another follower or the leader of the replication unit.

OCI-05045: invalid DIRECTORY clause specified for a non-directory-based sharded root table creation

Cause: DIRECTORY can only be specified for the creation of a directory-based sharded root table and must be followed by TABLESPACE.

Action: Remove the DIRECTORY clause if the statement is not for the creation of a directory-based sharded root table, otherwise, specify the tablespace with DIRECTORY TABLESPACE clause.

OCI-05046: cannot allocate *string* bytes of memory for Sharding Replication Unit *string*

Cause: User session cannot allocate memory from Oracle Streams pool to stage logical change records (LCR).

Action: Increase the initialization parameter STREAMS_POOL_SIZE.

OCI-05049: maximum number of replication units (*string*) reached on shard *string*

Cause: The specified shard already contained the maximum number of replication units allowed.

Action: Decrease the number of replication units on the shard and retry the operation.

OCI-05050: Standby catalog does not support DDL operations.

Cause: Standby catalogs were read only and DDL ALTER queries did not apply.

Action: Perform non-DDL or non-ALTER operations.

OCI-05051: no sharded table found in the setup

Cause: A sharded table was not created in the sharding setup.

Action: Do not query the CURRENT_SHARD_KEY on the shard since there is no sharded table created."

OCI-05052: In a Sharding Replication system Barrier DDL on sharded table *string.string* is not allowed directly on a shard from a session that has enabled shard ddl.

Cause: In a Sharding Replication system, Barrier DDL directly issued on a shard from a session that has enabled shard ddl can lead to data or schema inconsistency and is not allowed.

Action: When running Sharding Replication issue Barrier DDL on a sharded table from the catalog connection if you want to change the table schema or truncate the table.

OCI-05053: target shard name missing

Cause: Target name was not specified as an argument for move chunk command.

Action: Specify the name of the target shard.

OCI-05054: A move chunk operation is not allowed in a shardgroup containing one shard.

Cause: User attempted a move chunk operation in a sharding setup containing a single shard in a shardgroup.

Action: Do not perform the attempted operation in a shardgroup containing a single shard.

OCI-05055: cannot use predicate with specified pseudocolumn along with sharding key column predicates

Cause: Using predicates with pseudocolumns like ORA_SHARD_ID and ORA_SHARDSPACE_NAME are not allowed to be used along with predicates with sharding key columns

Action: Remove predicates with either the pseudocolumn or sharding key columns.

OCI-05056: cannot make direct updates on shard directory.

Cause: A DML was issued on the shard directory table directly, which was not allowed.

Action: Use the PL/SQL procedures defined in the `dbms_sharding_directory` on the catalog to make changes to the directory table.

OCI-05057: shard directory table or view can not be modified.

Cause: An attempt was made to modify the shard directory table or view, which was not allowed. They are managed by Oracle only.

Action: Do not perform such operations.

OCI-05058: shard *string* is at different version than catalog

Cause: A shard database was found to be at different version than the catalog database. Sharding requires catalog and all shard databases to be at the same version when running a sharding DDL statement.

Action: Make sure that versions of all shards and catalog match before executing a sharding DDL statement.

OCI-05060: GSM *string* is at a different version than the catalog.

Cause: A global service manager (GSM) was at a different version than the catalog database. The catalog and GSMs were required to be at the same version.

Action: Ensure all GSM and catalog versions are the same before executing a sharding DDL statement.

OCI-05061: partitionset method of the table is not LIST

Cause: ALTER TABLE ADD|DROP VALUE could only be performed when the partitionset type is list.

Action: Do not attempt to add or drop value from a partitionset when the partitionset method is not list.

OCI-05062: cannot add values to or drop values from a partition of a directory-sharded table.

Cause: An attempt was made to directly add values to or drop values from a partition of a directory-based sharded table, which was not allowed.

Action: Use the PL/SQL procedures defined in the `dbms_sharding_directory` on the catalog to make changes to the list of keys in a partition.

OCI-05063: a directory-sharded table can only be created with user-defined sharding

Cause: An attempt was made to create a directory-sharded table with system or composite sharding, which was not allowed.

Action: Set up user-defined sharding to create sharded tables by directory.

OCI-05064: operation *string* not supported for directory-based sharding

Cause: An attempt was made to perform an operation that was not yet supported for directory-based sharding

Action: Do not perform the operation.

OCI-05065: Cannot change password of sharded user *string* when shard DDL is disabled.

Cause: An attempt was made to change the password of a sharded user on the catalog when shard DDL was disabled.

Action: Enable shard DDL to perform this operation. *Params: 1) shard_user_name: The name of the shard user whose password change is being attempted.

OCI-05066: INSTEAD OF triggers are not supported in sharding.

Cause: An attempt was made to create an all-shard INSTEAD OF trigger in a sharded database.

Action: Create a local INSTEAD OF trigger on the shard.

OCI-05068: cannot perform DML from shards on duplicated tables having *string* type columns

Cause: An attempt is being made to perform a DML operation from the shard on a duplicated table containing user-defined type columns.

Action: Perform DML on duplicated table from the catalog.

OCI-05069: Missing post commit logical change record (LCR) for transaction *string* with commit log index *string* for replication unit *string*.

Cause: This was an internal error.

Action: Contact Oracle Support.

OCI-05070: maximum number of committed transactions exceeded

Cause: An attempt was made to add more than the allowed number of committed transactions.

Action: Clear the current list of committed transactions.

OCI-05071: invalid replication unit ID

Cause: There is an invalid replication unit ID.

Action: Enter a valid replication unit ID available in this pluggable database.

OCI-05072: invalid Raft replication file number

Cause: There is an invalid raft log file number.

Action: Enter a valid value between 1-3 for the raft file number.

OCI-05073: invalid indexes for raft log or file blocks

Cause: There are invalid indexes for the raft log or file blocks.

Action: Enter valid log indexes or block indexes.

OCI-05074: Assignment rule id is not valid

Cause: For directory based sharding, user needs to specify a valid assignment rule id before using automatic partition assignment feature during insertion.

Action: Specify a valid assignment rule id using PL/SQL setAssignmentRule API.

OCI-05077: Cannot commit the transaction due to one or more shards being unavailable.

Cause: An attempt was made to commit a transaction involving synchronous duplicated tables when one or more shards were unavailable.

Action: Retry the transaction when all the shards are available.

OCI-05078: *string* clause is not supported with Synchronous Duplicated Table

Cause: The specified clause is not currently supported with Synchronous Duplicated Table.

Action: Do not specify the unsupported clause with Synchronous Duplicated Table.

OCI-05079: Cannot perform DML operations for replication unit *string* while minority of followers are connected to the leader.

Cause: This shard is still a replication unit leader however DMLs cannot be executed without consensus.

Action: Retry the user DML operations in the leader shard for this replication after follower databases are up.

OCI-05080: maximum number of columns in a sharded table in a system or composite sharding environment is *string*

Cause: An attempt was made to create a sharded table with too many columns, or to add more columns to a sharded table which pushes it over the maximum allowable limit. Note that unused columns in the table are counted toward the total column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

OCI-05081: The shard is not registered with at least one GSM.

Cause: The operation requires that the shard is registered with at least one Global Service Manager (GSM). The shard may not register with a GSM if: a GSM is not up, the shard is not on the valid node checking for registration (VNCR) list, or the shard cannot reach the GSM listener port.

Action: Check if a shard is registered with a GSM using the command 'gdsctl validate'. If the shard is not registered, do the following: - Check that at least one GSM is up. - Use the command 'gdsctl config vncr' to check that the shard's hostname or IP address is added to the VNCR list. - Ensure that the shard can reach the GSM listener port. Use the command 'gdsctl validate -validate_network' to check network connectivity.

OCI-05082: Cannot perform DML operations on synchronous duplicated tables on the shards.

Cause: An attempt was made to perform a DML operation on a synchronous duplicated table on a shard.

Action: All DML operations on a synchronous duplicated table must be performed on the catalog.

OCI-05083: validation of raft file no *string* failed in block *string* logindex *string*

Cause: Sharding Raft log appears to be corrupted.

Action: Check trace files for further information on corrupt blocks

OCI-05084: validate of raft file *string* could not be completed, please try again

Cause: Raft file was overwritten before validation could complete.

Action: Rerun validation again for the same file.

OCI-05085: Cannot build chunk topology due to missing in-memory object for replication unit *string*.

Cause: An attempt is being made to perform a DML operation while there is a replication unit that is in the middle of recovery or move.

Action: Repeat DML operation later.

OCI-05087: Raft replication does not support LOB fragment operations, 'set options', or 'get options'.

Cause: LOB operations on Raft replication include one of the following a. LOB fragment operation b. Set Options c. Get Options

Action: Do not include the above Lob operations.

OCI-05088: Switchover operation could not be completed due to leader recovery errors

Cause: An attempt is being made to perform replication unit switchover, but recovery procedure of the new leader was not successful.

Action: Check the database alert log to find out the exact error message, take the appropriate action.

OCI-05089: unable to find logindex *string* while moving RU *string* during move/copy RU

Cause: Raft logs were overwritten before move could be completed.

Action: Rerun move/copy again for the same RU

OCI-05090: Leader of RU *string* does not contain logindex *string* to send to follower

Cause: Leader RAFT logs were overwritten before follower could catch up

Action: Identify the disabled follower using gdsctl RU command and reinstantiate it.

OCI-05091: cannot modify an Oracle maintained user to an all-shard user

Cause: An attempt is being made to modify an Oracle maintained user to an all-shard user.

Action: Only non Oracle maintained users can be modified to all-shard users.

OCI-05092: cannot modify user on shard database

Cause: An attempt is being made to modify a user on a shard database.

Action: Connect to the catalog and modify the user.

OCI-05093: user is already *string* user

Cause: An attempt is being made to convert an existing user to the same type of user.

Action: Only local user can be converted to all-shard users, and only all-shard users can be converted to local users.

OCI-05100: all-shard user does not exist: *string*

Cause: Username specified was not an all-shard user.

Action: Correct the username and retry the operation.

OCI-05101: Replication unit creation failed. Code *string*. Error: *string*

Cause: Replication unit creation failed and was successfully rolled back.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05102: task cannot be altered: *string*

Cause: The task cannot be altered because of an invalid input or a status that conflicted with a specified parameter.

Action: Read the additional information provided and take appropriate action.

OCI-05103: invalid 'compatible' setting for Raft replication: *string*

Cause: The 'compatible' parameter setting was not supported with Raft replication configurations.

Action: Set the 'compatible' parameter to a version equal to or later than '23.0'.

OCI-05104: unable to decrypt password for *string* shards: *string*

Cause: The system is unable to decrypt the password or password is not available.

Action: To re-create database links to failed shards, run GDSCTL command 'modify shard' for each failed shard, providing password for each shard.

OCI-05105: invalid status for replication unit *string* on shard *string*: *string*

Cause: Validation for the attempted operation failed because the replication unit status is invalid.

Action: Verify the replication unit status and retry operation.

OCI-05106: no leader exists for replication unit *string*

Cause: A leader shard does not currently exist for the specified replication unit.

Action: Initiate a leadership election with 'switchover ru' and retry the operation.

OCI-05107: no shards are available for replication unit *string*

Cause: An attempt is being made to move a replication unit but there are no available deployed shards that do not already contain the replication unit.

Action: Ensure that there is an available deployed shard that does not already contain the replication unit and retry the operation.

OCI-05600: consensus log creation failed

Cause: Creation of the consensus log failed on one or multiple peers.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05601: consensus log *string* not found

Cause: The specified consensus log did not exist in the database.

Action: Use the correct consensus log and retry the operation.

OCI-05603: append to consensus log failed

Cause: The append entry operation on the consensus log failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05604: peer is not the leader of consensus log

Cause: The consensus service operation failed because the current peer was not the leader.

Action: Retry the operation on the leader peer.

OCI-05605: peer *string* is not enabled

Cause: The consensus service operation failed because the specified peer was not enabled.

Action: Enable the peer and retry the operation.

OCI-05606: drop of consensus log failed

Cause: The drop operation on the consensus log failed on one or multiple peers.

Action: Check the error stack and other messages in the trace files for detailed error information.

OCI-05608: current peer is not included

Cause: The consensus service operation failed because the current peer was not included.

Action: Include the current peer and retry the operation.

OCI-05609: schema *string* does not exist at current peer

Cause: The consensus service operation failed because the specified schema did not exist at the peer database.

Action: Ensure that the specified user schema exists at the peer.

OCI-05610: entry at index #*string* does not exist in the log

Cause: The consensus service operation failed because the entry at the specified index did not exist in the consensus log.

Action: Wait and retry the operation.

OCI-05611: consensus service is not running

Cause: The operation failed because the consensus service was not running.

Action: Start the consensus service and retry the operation.

OCI-05612: Consensus service failed to start because database is not open in read/write mode.

Cause: The consensus service failed to start because the database was not open in read/write mode.

Action: Open the database in read/write mode and retry the operation.

OCI-05613: consensus log *string* is not enabled

Cause: The operation failed because the specified consensus log was not enabled.

Action: Enable the log and retry the operation.

OCI-05614: checksum error in consensus entry header

Cause: The consensus entry header contained checksum that did not match the recomputed value at the receiving peer.

Action: Analyze the consensus log and fix any discrepancies.

OCI-05615: previous configuration change is not yet committed

Cause: The operation failed because previous configuration change was not yet committed.

Action: Wait and retry the operation.

OCI-05616: failed to execute consensus log pre-append entry callback

Cause: An error was encountered while executing consensus log pre-append entry callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05617: failed to execute consensus log post-append entry callback

Cause: An error was encountered while executing consensus log post-append entry callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05618: failed to execute consensus log new entry callback

Cause: An error was encountered while executing consensus log new entry callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05619: failed to execute consensus log cache load callback

Cause: An error was encountered while executing consensus log cache load callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05620: failed to execute consensus log varray column read callback

Cause: An error was encountered while executing consensus log varray column read callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05621: failed to execute consensus log varray column write callback

Cause: An error was encountered while executing consensus log varray column write callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

OCI-05622: Accommodating consensus log entry in specified buffer failed.

Cause: Buffer size was not large enough to hold consensus log entry.

Action: Pass in a bigger buffer and retry the command.

OCI-05623: Computing the signature for consensus log entry failed.

Cause: An error was encountered while computing the signature for entry in the consensus log.

Action: Analyze the consensus log and fix the discrepancies.

OCI-05624: Signature verification failed for consensus log entry.

Cause: The originator signature for consensus log entry cannot be verified.

Action: Analyze the consensus log and fix the discrepancies.

OCI-05700: missing or invalid input value

Cause: A valid input value was not specified.

Action: Reissue the statement specifying a valid input value.

OCI-05701: blockchain user *string* did not exist

Cause: The operation failed because the specified user does not exist.

Action: Create the user and retry the operation.

OCI-05702: unable to retrieve the database global name

Cause: The database initialization parameter GLOBAL_NAMES was not set to be TRUE in a blockchain peer database.

Action: Change GLOBAL_NAMES to TRUE, then retry this operation.

OCI-05703: the referenced database link *string* did not exist

Cause: The database link referenced does not exist.

Action: Create the database link first, then retry this operation.

OCI-05704: the referenced user *string* did not exist

Cause: The user referenced does not exist.

Action: Create the user first, then retry this operation.

OCI-05705: Referenced blockchain *string* does not exist.

Cause: The blockchain referenced does not exist.

Action: Create the blockchain first, then retry this operation.

OCI-05706: Blockchain *string* already bootstrapped.

Cause: The specified blockchain has already been bootstrapped.

Action: No action required.

OCI-05707: Initiating database *string* is not included.

Cause: The bootstrap command did not include the initiating database.

Action: Add the initiating database to the bootstrap command.

OCI-05708: Blockchain *string* cannot be altered.

Cause: The referenced blockchain either did not exist or was disabled.

Action: No action needed.

OCI-05709: Peer *string* cannot be added.

Cause: Connection information not found for the referenced peer.

Action: Run the CREATE BLOCKCHAIN statement for the referenced peer first, then retry this operation.

OCI-05710: Block Chain Peer *string* cannot be added.

Cause: The referenced peer exists in the blockchain.

Action: No action required.

OCI-05711: Block Chain Peer *string* cannot be removed.

Cause: The referenced Peer did not exist in the Block Chain.

Action: No action required.

OCI-05712: Blockchain *string* cannot be altered.

Cause: The referenced blockchain's tentative_epoch# was not NULL.

Action: Set the tentative_epoch# changes to NULL and retry.

OCI-05713: One or more blockchain type objects exist that cannot be downgraded

Cause: There were blockchain type objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the blockchain type objects that cannot be downgraded to the selected release.

OCI-05714: The blockchain transaction was aborted due to insufficient quorum.

Cause: The blockchain transaction could not achieve the quorum to commit successfully.

Action: Check the blockchain votes view for details.

OCI-05715: operation not allowed on the blockchain or immutable table

Cause: An attempt was made to perform update, delete, alter, truncate, insert as select, rename, or move operation on a blockchain or immutable table.

Action: No action required.

OCI-05716: unsupported hashing algorithm *string*

Cause: The specified hashing algorithm was not supported by the blockchain.

Action: Choose another hashing algorithm.

OCI-05717: unsupported signature algorithm *string*

Cause: The specified signature algorithm was not supported by the blockchain.

Action: Choose another signature algorithm.

OCI-05718: unsupported consensus algorithm *string*

Cause: The specified consensus algorithm was not supported by the blockchain.

Action: Choose another consensus algorithm.

OCI-05719: Blockchain *string* cannot be created.

Cause: The referenced blockchain already existed.

Action: Specify a unique name for the blockchain.

OCI-05720: *string* is not a blockchain table

Cause: The referenced table was not a type blockchain table.

Action: No action required.

OCI-05721: invalid blockchain table type specified

Cause: The blockchain table type could not be specified for objects other than tables.

Action: Remove the blockchain table option.

OCI-05722: deletes not allowed on blockchain table *string*

Cause: A blockchain table was created without a delete rows option. Delete is not allowed.

Action: No action required.

OCI-05723: dropping *string*, which is a non-empty blockchain or immutable table, is not allowed

Cause: A blockchain or immutable table was created with a NO DROP clause, or its idle period has not yet elapsed.

Action: Do not attempt to drop this blockchain or immutable table, wait until its idle period has elapsed, or wait until all its rows are expired and deleted.

OCI-05724: cannot delete row, not yet expired

Cause: An attempt was made to delete a row from the blockchain table that has not yet expired.

Action: No action required.

OCI-05725: cannot create blockchain table

Cause: An attempt was made to create a blockchain table of a special type that is not supported.

Action: No action required.

OCI-05726: delete row not allowed on this blockchain table

Cause: An attempt was made to delete a row from the blockchain table that does not allow deletion of rows.

Action: No action required.

OCI-05727: low time stamp '*string*' is higher than high time stamp '*string*'

Cause: An attempt was made to verify rows from the blockchain table with an invalid time range.

Action: Retry the operation by specifying a high time stamp higher than the low time stamp.

OCI-05728: COMPATIBLE needs to be *string* or higher to use blockchain or immutable table

Cause: An attempt was made to operate on a blockchain or immutable table with a lower COMPATIBLE parameter value.

Action: Shutdown and startup with the specified compatibility setting.

OCI-05729: blockchain or immutable table cannot be created in root container

Cause: An attempt was made to create a blockchain or immutable table in the root container database.

Action: Create a blockchain or immutable table in a pluggable database.

OCI-05730: data type not supported for blockchain or immutable table

Cause: An attempt was made to create a blockchain or immutable table with an unsupported data type.

Action: No action required.

OCI-05731: blockchain or immutable table *string* cannot be altered

Cause: An attempt was made to alter a blockchain or immutable table that could not be altered.

Action: No action required.

OCI-05732: retention value cannot be lowered

Cause: An attempt was made to alter a blockchain or immutable table to a lower retention value.

Action: Specify a higher retention value.

OCI-05734: signature already exists for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: An attempt was made to sign an already signed row of blockchain table.

Action: No action required.

OCI-05735: invalid instance ID '*string*'

Cause: An attempt was made to verify rows from the blockchain table with an invalid instance ID.

Action: Retry the operation by specifying a valid instance ID.

OCI-05736: invalid chain ID '*string*' for "*string*"."*string*"

Cause: An attempt was made to insert or verify rows of the blockchain table with an invalid chain ID.

Action: Retry the operation by specifying a valid chain ID.

OCI-05737: rows verification failed at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: Rows of blockchain table were corrupted. Verification failed at the row specified by instance ID, chain ID and sequence number.

Action: No action required.

OCI-05738: operation not allowed on the Oracle internal table

Cause: An attempt was made to modify the Oracle internal table.

Action: No action required.

OCI-05739: blockchain or immutable internal column *string* modified

Cause: An attempt was made to modify one or more blockchain or immutable internal columns.

Action: Do not modify Oracle internal blockchain or immutable columns.

OCI-05740: Cannot create a BEFORE ROW UPDATE or compound trigger on a blockchain or immutable table *string.string*

Cause: Attempted to create either a BEFORE ROW UPDATE trigger or compound trigger on a blockchain or immutable table.

Action: Do not create the trigger.

OCI-05741: invalid retention time outside the range of *string* and *string*

Cause: An attempt was made to create a blockchain or immutable table with an invalid retention time outside the allowed range.

Action: Choose an appropriate value for retention time.

OCI-05742: invalid hash for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: An attempt was made to sign a row of blockchain table by specifying an invalid hash.

Action: Retry the operation by specifying a valid row hash.

OCI-05743: owner validation failed for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: An attempt was made to sign a row of blockchain table by an invalid user.

Action: No action required.

OCI-05744: no data found from *string.string* at row specified by rowid '*string*'

Cause: No data was found from the specified table at the specified row.

Action: No action required.

OCI-05745: no data found from *string.string* column *string* at row specified by rowid '*string*'

Cause: No data was found from the specified table column at the specified row.

Action: No action required.

OCI-05746: no data found from *string.string* at row specified by pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: No data was found from the specified table at the specified row.

Action: No action required.

OCI-05747: maximum retention time too high, should be less than or equal to *string* days

Cause: An attempt was made to create a blockchain or immutable table with a retention time specified higher than the maximum allowed.

Action: Decrease the retention time.

OCI-05748: database open in upgrade mode failed due to nonempty *string.string* table

Cause: A database open in upgrade mode required the specified table to be empty.

Action: Truncate the specified table.

OCI-05749: invalid time range specified

Cause: An attempt was made to verify rows from the blockchain table with an invalid begin end timestamp range.

Action: Retry the operation by specifying a valid time range.

OCI-05750: blockchain *string* checksum mismatch at block *number*

Cause: The cryptographic checksum of blockchain data received from the sender did not match the checksum computed by the receiver.

Action: No action required.

OCI-05751: failed to compute the signature for blockchain *string* at block *number*

Cause: An error was encountered while computing the signature for blockchain entry.

Action: No action required.

OCI-05752: Signature verification failed for blockchain *string* at block *number*.

Cause: Signature of blockchain entry originator cannot be verified.

Action: Check that the certificate of the originator is properly installed on the site doing the verification.

OCI-05753: invalid directory for blockchain wallet location

Cause: Directory object for blockchain wallet location does not exist.

Action: Retry the operation with a valid directory object.

OCI-05754: blockchain *string* not found

Cause: The referenced blockchain did not exist in the database.

Action: No action required.

OCI-05755: certificate identified by ID: *string* not found

Cause: The specified certificate did not exist in the database.

Action: Use the correct globally unique identifier of the certificate and retry the operation.

OCI-05756: invalid certificate *string*: start-date *string*, end-date *string*

Cause: The certificate was either expired or was not valid.

Action: Use a valid certificate and retry the operation.

OCI-05757: signature or countersignature verification failed for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*'

Cause: The signature of row-owner or delegate-signer or the countersignature did not match.

Action: No action required.

OCI-05758: illegal character code in column "string"

Cause: The specified blockchain table column contained a byte sequence that could not be interpreted as a valid character code in the column's character set. The character set of the column is either the database or the national (NCHAR) character set. Note that Unicode noncharacters, such as U+FFFE and U+FFFF, are considered illegal in Unicode character sets AL32UTF8, AL16UTF16 and UTF8.

Action: Clean up character data before trying to insert it into the database.

OCI-05763: invalid value for parameter native database blockchain string

Cause: An invalid parameter value was specified. For a pluggable database (PDB), the valid values are 'on', 'off', or a list of comma-separated words from (read, recovery, apply, transaction). For the root container, the valid values are either 'on' or 'off'.

Action: Retry with valid parameter value.

OCI-05764: certificate for user string not found

Cause: The certificate for the specified user did not exist in the database.

Action: Add the certificate for the specified user and then retry the operation.

OCI-05765: failed to access certificate string

Cause: The access to the specified certificate failed.

Action: Check the error stack for more details.

OCI-05766: initialization parameter WALLET_ROOT is not set

Cause: Blockchain table signing required user private keys and certificates to be present in wallet specified by WALLET_ROOT.

Action: Set initialization parameter WALLET_ROOT appropriately and retry the operation.

OCI-05767: invalid input argument string specified for verify_table_blockchain

Cause: An attempt was made to verify blockchain table with one or more invalid arguments

Action: Specify valid arguments and retry the operation.

OCI-05768: mismatch between current epoch 'string' and epoch for row at pluggable database GUID 'string', instance ID 'string', chain ID 'string', sequence number 'string'

Cause: An attempt was made to sign or countersign a row of blockchain table that was created in an older epoch.

Action: None

OCI-05769: operation not allowed on blockchain or immutable table

Cause: An attempt was made to perform an operation that was not allowed on a blockchain or immutable table.

Action: Do not include the disallowed operation on a blockchain or immutable table.

OCI-05770: unsupported version string of blockchain or immutable table string.string

Cause: An attempt was made to perform an operation on the blockchain or immutable table whose version was not supported by the current release.

Action: Correct the input and try again.

OCI-05771: *string* is not an immutable table

Cause: The referenced table was not an immutable table.

Action: No action required.

OCI-05772: *string* is neither a blockchain table nor an immutable table

Cause: The referenced table was not a blockchain or immutable table.

Action: No action required.

OCI-05773: invalid value '*string*' of argument '*string*' specified for signing or countersigning a row

Cause: An attempt was made to sign or countersign a row of blockchain table with one or more invalid arguments.

Action: Specify valid arguments and retry the operation.

OCI-05774: malicious time *string* detected while operating on blockchain or immutable table *string.string*

Cause: An attempt was made to perform an operation on the blockchain or immutable table using a malicious time.

Action: Check the alert log for details.

OCI-05775: cannot create immutable table

Cause: An attempt was made to create an immutable table of a special type that is not supported.

Action: No action required.

OCI-05776: operation not allowed on blockchain table

Cause: An attempt was made to perform an unsupported operation on the blockchain table.

Action: No action required.

OCI-05777: *string* not supported for blockchain or immutable table version *string*

Cause: Specified functionality was not supported on blockchain or immutable table version.

Action: No action required.

OCI-05778: data type for column '*string*' unsupported for row version of blockchain or immutable table

Cause: An attempt was made to create row version on an unsupported data type column in a blockchain or immutable table.

Action: No action required.

OCI-05779: invalid value '*string*' specified for argument '*string*'

Cause: An attempt was made to operate on a blockchain table with one or more invalid arguments.

Action: Specify valid arguments and retry the operation.

OCI-05780: USER CHAIN feature not enabled on blockchain table

Cause: An attempt was made to perform USER CHAIN related operation on a blockchain table with no user chains.

Action: No action required.

OCI-05781: INSERT statement not allowed in an UPDATE trigger on blockchain tables

Cause: An attempt was made to insert a row into a blockchain table inside an UPDATE trigger statement on the same or different blockchain table.

Action: Remove any INSERT statements into blockchain tables in the trigger.

OCI-05782: cannot grant SIGN privilege on this object

Cause: The user tried to grant SIGN privilege on an object that is not blockchain or immutable table.

Action: Ensure that the SIGN privilege is granted on blockchain or immutable table.

OCI-05783: verification of current lifespan failed at RID '*string*' and STARTSCN '*string*' for table *string.string*

Cause: Current lifespan row in SYS_FBA_TCRV table was corrupted. Verification failed for specified RID and STARTSCN.

Action: No action required.

OCI-05784: distributed transaction not supported on blockchain tables

Cause: Rows inserted into a blockchain table are part of a distributed transaction or are part of a transaction that is being promoted to a distributed transaction.

Action: Do not insert rows into a blockchain table in a distributed transaction or in a transaction that may be promoted to a distributed transaction.

OCI-05785: blockchain or immutable table *string.string* is already partitioned

Cause: An attempt was made to partition a blockchain or immutable table that was already partitioned.

Action: No action required.

OCI-05786: unsupported version *string* of blockchain signed digest for table *string.string*

Cause: An attempt was made to operate with the blockchain table signed digest whose version was not supported by the current release.

Action: Correct the input and try again.

OCI-05787: blockchain table's signed digest operation failed for table *string.string*

Cause: An error occurred during the execution of blockchain table's signed digest operation.

Action: Check the stacked errors for more details.

OCI-05788: invalid INSERT attempted on the blockchain table *string* while transaction being committed

Cause: Rows were inserted into blockchain tables while the current transaction is being committed. It might be caused by a trigger that was invoked at the commit time to insert rows into blockchain tables

Action: Remove INSERT statements in the triggers if they can be invoked as part of commit operation to insert rows into blockchain tables.

OCI-05789: countersignature already exists for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*' in table '*string.string*'

Cause: An attempt was made to countersign an already countersigned row of blockchain table.

Action: No action required.

OCI-05790: signature does not exist for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*' in table '*string.string*'

Cause: An attempt was made to countersign an unsigned row of blockchain table.

Action: Sign the specified row and retry.

OCI-05791: data type '*string*' not supported for key-column '*string*' of table '*string.string*'

Cause: An attempt was made to operate on a blockchain or immutable table with one or more invalid key-columns.

Action: Specify valid arguments and retry the operation.

OCI-05792: row version key-column '*string*' cannot be dropped from table '*string.string*'

Cause: An attempt was made to drop row version key-column of blockchain or

Action: No action required.

OCI-05793: missing or invalid option '*string*' for blockchain or immutable table '*string.string*'

Cause: An invalid option was specified in defining a blockchain or immutable table.

Action: Correct the syntax by removing the erroneous option.

OCI-05794: The length of column "*string*" used for row versioning of a blockchain or immutable table cannot exceed *string* bytes.

Cause: An attempt was made to create a row version in a blockchain or immutable table on a column whose length exceeds the maximum allowable for row version columns of the given data type. For VARCHAR2 and CHAR columns with character length semantics, the length compared with the maximum is not the declared length in characters but the implicitly calculated length in bytes, as shown in the DATA_LENGTH column of the ALL_TAB_COLS view.

Action: Decrease the column length and retry the operation.

OCI-05795: All chains are in doubt in blockchain table "*string*"."*string*"

Cause: All available chains for distributed transactions are currently in doubt.

Action: Resolve the in doubt transactions, and try the request again.

OCI-05796: A row version or user chain of table "*string*"."*string*" with (*string*) as its key is locked by another RAC instance.

Cause: An attempt was made from another RAC instance to lock a row version or a user chain that is being used by one RAC instance in the same distributed transaction.

Action: Do not use the same row version or user chain on multiple instances.

OCI-05797: a row version or a user chain of table "*string*"."*string*" locked by in doubt distributed transaction

Cause: An attempt was made to insert a row into a particular row version or user chain that is locked by in doubt distributed transaction.

Action: Resolve the in doubt transactions, and try the request again.

OCI-05798: invalid value *string* outside the range of *string* and *string* passed to parameter *string*

Cause: An invalid value was passed to the initialization parameter.

Action: Check the Oracle documentation and retry the command.

OCI-05799: row does not exist at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*' in table *string.string* for computing previous row hash

Cause: An attempt was made to get bytes for row hash for a table row sequence, for which previous row is already deleted. bytes for row hash can not be generated as previous row hash can not be computed.

Action: No Action required.

OCI-05800: external partitions not supported on blockchain or immutable tables

Cause: An attempt was made to use external partition on a blockchain or immutable table.

Action: None

OCI-05801: logical apply hash validation failed for "*string*"."*string*" at instance ID '*string*', chain ID '*string*', sequence number '*string*', pdb-guid '*string*' with epoch number '*string*'

Cause: An attempt was made to replay blockchain table DML by logical apply for row having inconsistent data or metadata.

Action: Resolve the table data or metadata inconsistency.

OCI-05802: user '*string*' does not have sufficient signature-related privileges on blockchain or immutable table "*string*"."*string*"

Cause: An attempt was made to sign a row in a blockchain or immutable table or to secure a countersignature on such a row.

Action: For a user signature, ensure that the user inserted the row. For a delegate signature, ensure that the user has the SIGN privilege on the table. For a countersignature, ensure either that the user inserted the row, the user has the SIGN privilege on the table, or the table is in the user's schema.

OCI-05803: unable to update the hidden columns of "*string*"."*string*"\n*string*

Cause: The internal UPDATE statement failed. This message normally appears with an ORA-4098 error which indicates an UPDATE trigger on this table cannot be executed.

Action: Check the Oracle error code and the status of triggers on this table.

OCI-05804: invalid system chains limit *string* outside the range of *string* to *string* for "*string*"."*string*"

Cause: An attempt was made to create or alter a blockchain table with an invalid system chains limit outside the allowed range.

Action: Choose an appropriate value for system chains limit.

OCI-05805: A version *string* blockchain or immutable table "*string*".*string* cannot have more than *string* user columns.

Cause: An attempt was made to create or alter a blockchain or immutable table so that it had more than the maximum number of columns.

Action: Reduce the number of columns to the limit or below.

OCI-05806: rows found missing between sequence numbers '*string*' and '*string*' for chain with instance ID '*string*', chain ID '*string*', pdb-guid '*string*'

Cause: Verification failed due to one or more missing rows of blockchain table at the specified sequence numbers for the specified chain.

Action: No action required.

OCI-05807: Blockchain or immutable table "*string*".*string* cannot have idle retention greater than *string* days.

Cause: An attempt was made to create or alter a blockchain or immutable table with idle retention greater than the days allowed by a user with no TABLE RETENTION privilege.

Action: For the table, choose the idle retention that is less than or equal to the allowed days or ask the security administrator to grant the TABLE RETENTION privilege.

OCI-05808: cannot promote the current transaction to a distributed transaction

Cause: An error was raised while the current transaction was being promoted to a distributed transaction.

Action: Check the error and roll back the current transaction.

OCI-05812: Commit is not allowed in the blockchain procedure.

Cause: Commit is not allowed in this blockchain procedure.

Action: Remove commit from blockchain procedure definition.

OCI-05813: Parallel DML cannot be enabled in blockchain

Cause: Parallel DML was enabled in this blockchain procedure or DML statement.

Action: Disable parallel DML in this blockchain procedure or DML statement.

OCI-05814: Error when deallocating memory in blockchain execution context.

Cause: An error occurred when freeing up blockchain execution context memory.

Action: Analyze the trace file, correct any errors, and retry.

OCI-05815: Unsupported abstract Data Type (ADT) argument used in blockchain procedure.

Cause: ADT arguments are not supported in the blockchain procedure.

Action: Remove the unsupported argument from the blockchain procedure.

OCI-05816: Failed to create the blockchain or immutable table.

Cause: An error occurred when creating a blockchain or immutable table.

Action: Retry creating the blockchain or immutable table. If the error persists, contact Oracle Support.

OCI-05817: failed to drop tombstone table for blockchain table

Cause: An error was encountered when dropping the tombstone table for a blockchain table.

Action: Retry dropping the blockchain table. If it fails again, contact Oracle Support.

OCI-05818: cannot drop blockchain internal trigger "*string*"."*string*"

Cause: Dropping the blockchain internal trigger was not allowed.

Action: None required. The internal triggers are placed on these tables by design.

OCI-05819: The follower epoch# *number* is different from the initiator epoch# *number*.

Cause: The blockchain administration DDL statement was executed in the wrong order on the follower database.

Action: Contact Oracle Support Services.

OCI-05820: Cannot promote a blockchain transaction.

Cause: Error encountered when promoting a blockchain transaction.

Action: No action required.

OCI-05821: unsupported data types for column "*string*" in table "*string*"."*string*"

Cause: Unsupported data types was not defined in the blockchain table.

Action: Remove the unsupported data types from the blockchain table.

OCI-05822: table "*string*"."*string*" does not contain a primary key constraint

Cause: The blockchain table did not contain a primary key constraint. A Primary key constraint is required for a blockchain table.

Action: Add a primary key in the blockchain table definition.

OCI-05823: Blockchain EC error occurred in JSON processing *string*

Cause: An error occurred when evaluating the JavaScript Object Notation (JSON) operator for Blockchain Execution Context

Action: None

OCI-05824: operation disallowed on hidden columns

Cause: The attempted operation on a blockchain or immutable table was invalid.

Action: None

OCI-05825: insert during import of table "*string*"."*string*" failed because system-generated column was NULL

Cause: System-generated columns were null during import table.

Action: None

OCI-05826: blockchain or immutable table '*string*'.'*string*' does not support deferrable constraint *string*

Cause: An attempt was made to defer a nondeferrable constraint.

Action: None

OCI-05827: Countersignature does not exist for row at pluggable database GUID '*string*', instance ID '*string*', chain ID '*string*', sequence number '*string*' in table '*string*.'*string*'.

Cause: An attempt was made to get the bytes for countersignature for a row that was not countersigned yet.

Action: Countersign the row and retry.

OCI-05828: cannot set blockchain or immutable table '*string*.'*string*' as a data link or an extended data link

Cause: An attempt was made to set a blockchain or immutable table as a data link or an extended data link.

Action: Set the blockchain or immutable table as a metadata link.

OCI-05829: signature does not exist for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: An attempt was made to countersign an unsigned row of blockchain table.

Action: Sign the specified row and retry.

OCI-05830: no data found at row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: No data was found from the specified table at the specified row.

Action: No action required.

OCI-05831: signature already exists for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: An attempt was made to sign an already signed row of blockchain table.

Action: No action required.

OCI-05832: owner validation failed for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: An attempt was made to sign a row of blockchain table by an invalid user.

Action: No action required.

OCI-05833: invalid hash for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: An attempt was made to sign a row of blockchain table by specifying an invalid hash.

Action: Retry the operation by specifying a valid row hash.

OCI-05834: signature verification failed for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: The signature of row-owner or delegate-signer did not match.

Action: No action required.

OCI-05835: Countersignature does not exist for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'.

Cause: An attempt was made to get the bytes for countersignature for a row that was not countersigned yet.

Action: Countersign the row and retry.

OCI-05836: countersignature already exists for row at pluggable database GUID '*string*', key columns *string* in table '*string*.'*string*'

Cause: An attempt was made to countersign an already countersigned row of blockchain table.

Action: No action required.

OCI-05837: Multiple rows found in table '*string*.'*string*' at pluggable database GUID '*string*' for key column *string*.

Cause: The table holds multiple rows for the specified key column name and value pair.

Action: Retry the above query using the modified key column pair.

OCI-05838: *string string* does not exist.

Cause: An attempt is being made to access a nonexistent schema, table or column.

Action: No action required.

OCI-05839: operation not allowed on empty table '*string*.'*string*'

Cause: The specified table is empty.

Action: No action required.

OCI-05840: Column *string* cannot be added with a default value to the blockchain or immutable table '*string*.'*string*'.

Cause: An attempt is being made to add a column with a DEFAULT clause to an existing blockchain or immutable table.

Action: Add the column without the DEFAULT clause.

OCI-05841: invalid username '*string*'

Cause: The specified username is invalid or does not exist.

Action: Specify a valid username.

OCI-05842: unexpected length of *string* for certificate ID '*string*'

Cause: The specified certificate ID is invalid.

Action: Specify a valid certificate ID.

OCI-05900: Blockchain: Consensus returned NO, abort the prepared transaction.

Cause: The transaction was prepared when a commit was issued. The consensus result was to abort the transaction.

Action: The transaction will be aborted. Blockchain transactions are consensus- based transactions, and the decision of the consensus is enforced.

OCI-06000: NETASY: port open failure

Cause: Autologin unable to open port

Action: Check log file for OS-specific error code

OCI-06001: NETASY: port set-up failure

Cause: Autologin unable to change port attributes

Action: Check log file for OS-specific error code

OCI-06002: NETASY: port read failure

Cause: Autologin unable to read from port

Action: Check log file for OS-specific error code

OCI-06003: NETASY: port write failure

Cause: Autologin unable to write to port

Action: Check log file for OS-specific error code

OCI-06004: NETASY: dialogue file open failure

Cause: Autologin unable to open dialogue file

Action: Check connect string for accuracy/typos

OCI-06005: NETASY: dialogue file read failure

Cause: Autologin unable to read dialogue file

Action: Check log file for OS-specific error code

OCI-06006: NETASY: dialogue execute failure

Cause: Expected response never received

Action: None

OCI-06007: NETASY: bad dialogue format

Cause: Dialogue file contains syntax error

Action: Correct the dialogue file

OCI-06009: NETASY: dialogue filename too long

Cause: Full file spec for dialogue file exceeds 64 bytes

Action: Amend connect string accordingly

OCI-06010: NETASY: dialogue file too long

Cause: Dialogue file exceeds 768 bytes in length

Action: Simplify dialogue (e.g. remove comments, redundant white space), or split into two and link with "more" command

OCI-06011: NETASY: dialogue too long

Cause: One of two: 1. Dialogue contains more than 24 exchange blocks 2. Dialogue send string exceeds 84 bytes in length

Action: Simplify dialogue or split into two and link with "more" command

OCI-06017: NETASY: message receive failure

Cause: Async driver gets I/O error while doing network read operation

Action: Check log file for OS-specific error code and contact your customer support representative.

OCI-06018: NETASY: message send failure

Cause: Async driver gets I/O error while doing network write operation

Action: Check log file for OS-specific error code and contact your customer support representative.

OCI-06019: NETASY: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

OCI-06020: NETASY: initialisation failure

Cause: Async driver unable to complete initialisation

Action: Check log file for OS-specific error code

OCI-06021: NETASY: connect failed

Cause: Async driver unable to establish connection with partner

Action: Check log file for OS-specific error code

OCI-06022: NETASY: channel open failure

Cause: no free channel [should never happen]

Action: Contact your customer support representative.

OCI-06023: NETASY: port open failure

Cause: Async driver unable to open port

Action: Check log file for OS-specific error code

OCI-06024: NETASY: VTM error

Cause: Virtual Terminal Manager unable to read/write to port

Action: Check log file for OS-specific error code

OCI-06025: NETASY: Configuration error

Cause: Async driver genned for server-only, but client service requested

Action: Contact your customer support representative.

OCI-06026: NETASY: port close failure

Cause: Async driver unable to close port

Action: Check log file for OS-specific error code

OCI-06027: NETASY: channel close failure

Cause: Async driver unable to close channel

Action: Check log file for OS-specific error code

OCI-06028: NETASY: unable to initialise for logging

Cause: Async driver unable to initialise for logging I/O

Action: Contact your customer support representative.

OCI-06029: NETASY: port assignment failure

Cause: Async driver unable to assign port to channel [should never happen]

Action: Contact your customer support representative.

OCI-06030: NETDNT: connect failed, unrecognized node name

Cause: Node name specified in host string is unknown (probably misspelled)

Action: Retry with correct node name

OCI-06031: NETDNT: connect failed, unrecognized object name

Cause: Host string contains reference to object (which doesn't exist): @d:node-obj => object is ORDNobj; when node is VMS, the object is ORDNobj.COM when node is UNIX, the object is ORDNobj @d:node::"task=obj" => object is obj; when node is VMS, the object is obj.COM when node is UNIX, the object is obj

Action: Retry with correct object name or create the required object on host node

OCI-06032: NETDNT: connect failed, access control data rejected

Cause: Host string contains invalid username/password

Action: Retry with correct username/password

OCI-06033: NETDNT: connect failed, partner rejected connection

Cause: Connection with partner was made but was rejected.

Action: Contact your network administrator.

OCI-06034: NETDNT: connect failed, partner exited unexpectedly

Cause: Connection with host node was made but partner aborted

Action: Make sure object (see 06031, above) is working (for VMS run the command file and make sure that the ORACLE server process starts up); sometimes happens when the network/node is under stress - in this case a retry often works.

OCI-06035: NETDNT: connect failed, insufficient resources

Cause: Insufficient system resources are available to complete the connection; for example, all DECnet channels are in use.

Action: Contact your network administrator.

OCI-06036: NETDNT: connect failed, no response from object**OCI-06037: NETDNT: connect failed, node unreachable**

Cause: Host node is down.

Action: Contact your network administrator.

OCI-06038: NETDNT: connect failed, network driver not loaded**OCI-06039: NETDNT: connect failed**

Cause: Connect failed for unexpected reason (see OSD error).

Action: Contact your customer support representative.

OCI-06040: NETDNT: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

OCI-06041: NETDNT: disconnect failed

Cause: Driver gets error while doing network close operation

Action: Contact your customer support representative.

OCI-06042: NETDNT: message receive failure

Cause: Driver gets I/O error while doing network read operation

Action: Contact your customer support representative.

OCI-06043: NETDNT: message send failure

Cause: Driver gets I/O error while doing network write operation

Action: Contact your customer support representative.

OCI-06044: NETDNT: connect failed, byte count quota exceeded

Cause: Connect failed because of insufficient byte count quota.

Action: Increase byte count quota.

OCI-06102: NETTCP: cannot allocate context area

Cause: Insufficient dynamic memory available for connection context area.

Action: Contact your customer support representative.

OCI-06105: NETTCP: remote host is unknown

Cause: Host name specified in the login (connect) string is unknown.

Action: Check spelling; make sure name is in the TCP/IP HOST file.

OCI-06106: NETTCP: socket creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

OCI-06107: NETTCP: ORACLE network server not found

Cause: No entry in SERVICES file for ORACLE server.

Action: Add ("orasrv") entry to the TCP/IP SERVICES file.

OCI-06108: NETTCP: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net TCP/IP server on the remote host is not up, or the host itself is not up (check the latter by targeting it with Telnet).

Action: Start the SQL*Net TCP/IP server process on the remote host.

OCI-06109: NETTCP: message receive failure

Cause: I/O error occurred while attempting network read operation.

Action: Contact your customer support representative.

OCI-06110: NETTCP: message send failure

Cause: I/O error occurred while attempting network write operation.

Action: Contact your customer support representative.

OCI-06111: NETTCP: disconnect failure

Cause: Error occurred while closing a socket.

Action: Contact your customer support representative.

OCI-06112: NETTCP: invalid buffer size

Cause: The buffer size specified in the login string exceeds the allowed maximum (of 4096).

Action: Re-submit with valid buffer size.

OCI-06113: NETTCP: Too many connections

Cause: The maximum no. of concurrently open connections has been reached.

Action: Exit an application with an open connection which is no longer required.

OCI-06114: NETTCP: SID lookup failure

Cause: From the remote host's SQL*Net TCP/IP server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net TCP/IP server).

OCI-06115: NETTCP: unable to create ORACLE logicals

Cause: The host's SQL*Net TCP/IP server was unable to create the necessary logicals required by the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

OCI-06116: NETTCP: unable to create ORASRV process

Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

OCI-06117: NETTCP: unable to create ORASRV: quota exceeded

Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process because of quota depletion.

Action: Increase quota allocations to the SQL*Net TCP/IP server process.

OCI-06118: NETTCP: unable to complete handshake with ORASRV

Cause: The ORACLE server process was started but failed to complete its initialization.

Action: Contact your customer support representative.

OCI-06119: NETTCP: spurious client request

Cause: The host's SQL*Net TCP/IP server was unable to recognize this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06120: NETTCP: network driver not loaded

Cause: The TCP/IP network driver is not loaded.

Action: Check that the TCP/IP driver is loaded correctly.

OCI-06121: NETTCP: access failure

Cause: The host's SQL*Net TCP/IP server was unable to test the accessibility of the SID mapping file (specified in CONFIG.ORA) associated with this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06122: NETTCP: setup failure

Cause: The host's SQL*Net TCP/IP server was unable to set up the appropriate environment to service this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06123: NETTCP: cannot set KEEPALIVE

Cause: The host's SQL*Net TCP/IP server was unable to set the socket KEEPLIVE option. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06124: NETTCP: timeout waiting for ORASRV

Cause: The ORACLE server process was started but failed to respond after N secs.

Action: For heavily loaded systems this is not an uncommon occurrence. Increase the value of N (the default is 30) by placing the following entry in the CONFIG.ORA file: SQLNET ORASRV_WAIT = <no. of secs> which will come into effect the next time the SQL*Net TCP/IP server is started.

OCI-06125: NETTCP: ORASRV exited unexpectedly

Cause: The ORACLE server process was started but exited unexpectedly. Possible causes: 1. Insufficient quotas to run ORASRV 2. ORACLE is not installed See the ORASRV output file for more details; the file will be in the ORA_SQLNET directory and will have a name of the form: ORA_SRVTnn_SID.OUT

Action: If appropriate action is not obvious from the ORASRV output file then contact your customer support representative.

OCI-06126: NETTCP: ORASRV unable to open network connection

Cause: The ORACLE server process was started but was unable to open the socket passed to it by TCPSRV.

Action: Contact your customer support representative.

OCI-06127: NETTCP: unable to change username

Cause: The host's SQL*Net TCP/IP server could not establish a PROXY LOGIN connection because the client username is unknown (to the host OS).

Action: Create new user account on host.

OCI-06128: NETTCP: unable to create mailbox

Cause: The host's SQL*Net TCP/IP server was unable to create a mailbox (needed for IPC communication with the ORACLE server process). See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06129: NETTCP: unable to transfer socket ownership to ORASRV

Cause: The host's SQL*Net TCP/IP server was unable to transfer the network communication handle to the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06130: NETTCP: host access denied

Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client node does not have access privilege - as determined by the contents of the Valid Node Table (VNT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's VNT.

OCI-06131: NETTCP: user access denied

Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client user(name) does not have access privilege - as determined by the contents of the Username Mapping Table (UMT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's UMT.

OCI-06132: NETTCP: access denied, wrong password

Cause: The host SQL*Net TCP/IP server rejected this connection request because the client password did not match the host password.

Action: To grant access, get passwords in sync.

OCI-06133: NETTCP: file not found

Cause: The host's SQL*Net TCP/IP server could not find the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Check CONFIG.ORA for spelling; make correct entry.

OCI-06134: NETTCP: file access privilege violation

Cause: The host's SQL*Net TCP/IP server did not have READ/ EXECUTE permission for the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Change protection on SID mapping file.

OCI-06135: NETTCP: connection rejected; server is stopping

Cause: The host's SQL*Net TCP/IP server rejected this connection request because it is in the process of stopping.

Action: Re-start SQL*Net TCP/IP server.

OCI-06136: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06137: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06138: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06140: NETTCP: no such user

Cause: A proxy login connect attempt failed because the client username has no counterpart on the host.

Action: Try again with a user that has a counterpart on the host.

OCI-06141: NETTCP: no privilege for user

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server had insufficient privileges to access the proxy account.

Action: Change account protection; change server privileges.

OCI-06142: NETTCP: error getting user information

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server was unable to access the proxy account. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

OCI-06143: NETTCP: maximum connections exceeded

Cause: The connect failed because the maximum concurrent connections supported by the host's SQL*Net TCP/IP server has already been reached.

Action: Wait for a short period and re-try.

OCI-06144: NETTCP: SID (database) is unavailable

Cause: The database administrator on the host has varied the SID offline.

Action: Wait for it to be varied back on-line.

OCI-06145: NETTCP: unable to start ORASRV: images not installed

Cause: The host's SQL*Net TCP/IP server was unable to start the ORACLE server process because the ORACLE protected images were not installed.

Action: Install the images.

OCI-06200: TWOTASK: connect failed, can't create mailbox

OCI-06201: TWOTASK: connect failed, can't attach to mailbox

OCI-06202: TWOTASK: connect failed, can't spawn ORASRV process

OCI-06203: TWOTASK: connect failed, handshake failure

OCI-06204: TWOTASK: connect failed, can't access ORASRV2.COM

OCI-06205: TWOTASK: connect failed, can't create logical name

OCI-06206: TWOTASK: message receive failure

OCI-06207: TWOTASK: message send failure

OCI-06208: TWOTASK: invalid login (connect) string

OCI-06209: TWOTASK: connect failed, mailbox already exists

OCI-06210: TWOTASK: connect failed, ORASRV exited unexpectedly

OCI-06211: TWOTASK: connect failed, timeout waiting for ORASRV

OCI-06212: TWOTASK: connect failed, logical name table is full

OCI-06213: TWOTASK: connect failed

OCI-06214: TWOTASK: connect failed, insufficient quotas to create ORASRV

OCI-06215: TWOTASK: connect failed, ORASRV protected image not installed

OCI-06216: TWOTASK: connect failed, can't find ORASRV image file

OCI-06250: NETNTT: cannot allocate send and receive buffers

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

OCI-06251: NETNTT: cannot translate address file name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

OCI-06252: NETNTT: cannot open address file

Cause: The NTT two-task driver could not open a file containing address information.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

OCI-06253: NETNTT: cannot read arguments from address file

Cause: The NTT two-task driver could not read addressing information from its addressing file.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

OCI-06254: NETNTT: cannot share connection to cube

Cause: The NTT two-task driver could not share a connection to the cube.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

OCI-06255: NETNTT: cannot read pid of remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

OCI-06256: NETNTT: remote fork failed

Cause: The Oracle listener process on the cube could not fork off a shadow process.

Action: The instance you are trying to connect to probably doesn't have enough memory to run another shadow process. Ask someone else to log off, or connect to a different instance.

OCI-06257: NETNTT: cannot send command line to shadow process

Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

OCI-06258: NETNTT: cannot allocate context area

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

OCI-06259: NETNTT: cannot read from remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

OCI-06260: NETNTT: cannot write to remote process

Cause: An error occurred while writing the NTT communications linke.

Action: Contact your customer support representative.

OCI-06261: NETNTT: nrange() failed

Cause: The call to 'nrange()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

OCI-06262: NETNTT: nfconn() failed

Cause: The call to 'nfconn()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

OCI-06263: NETNTT: out of memory in pi_connect

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

OCI-06264: NETNTT: data protocol error

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

OCI-06265: NETNTT: break protocol error

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

OCI-06266: NETNTT: bad write length

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

OCI-06267: NETNTT: bad state

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

OCI-06268: NETNTT: cannot read /etc/oratab

Cause: The NTT two-task driver could not read configuration information from `/etc/oratab`.

Action: Make sure `/etc/oratab` exists and is readable. This error may occur if the file is incorrectly formatted. It also may occur if the driver has run out of memory.

OCI-06300: IPA: Disconnect failure

Cause: A fatal error occurred during the disconnect from the server. This was probably caused by inaccessible message queues.

Action: If there is no message queue, restart the SQL*Net IPA servers using `ipactl`. Otherwise contact your customer support representative.

OCI-06301: IPA: Cannot allocate driver context

Cause: The memory pool is exhausted.

Action: Check the circumstances and try to allocate less memory in your program or adjust the init parameters in your `INIT.ORA` file and retry.

OCI-06302: IPA: Cannot connect to remote host

Cause: The cause may be one of the following: - there is no ADI server defined to reflect a connection to the specified host. - the remote host is not known by the local system. - the ORACLE kernel on the remote host is not generated with the IPA driver

Action: Check sequentially for the above causes and eliminate the actual cause found.

OCI-06303: IPA: Message send error

Cause: The SQL*Net IPA driver could not write the message into the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun `ipactl`.

OCI-06304: IPA: Message receive error

Cause: The SQL*Net IPA driver could not read a message from the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun `ipactl`.

OCI-06305: IPA: Illegal message type

Cause: The communication between user and ORACLE is out of synchronization. This message should not normally be issued.

Action: Contact your customer support representative.

OCI-06306: IPA: Message write length error

Cause: The IPA driver tried to write a message in the queue that was too big for the queue.

Action: Contact your customer support representative.

OCI-06307: IPA: Cannot reset connection

Cause: A fatal error occurred during the resetting of the connection.

Action: Contact your customer support representative.

OCI-06308: IPA: No more connections available

Cause: You have exhausted all your connections.

Action: Try again when some of the current users have logged off.

OCI-06309: IPA: No message queue available

Cause: The SQL*Net IPA servers have not been started.

Action: Run ipactl.

OCI-06310: IPA: Environment variable(s) not set

Cause: Environment variable(s) not set correctly.

Action: Check and correct.

OCI-06311: IPA: Maximum number of servers reached

Cause: Maximum number of servers reached.

Action: Shutdown and restart with an increased maximum number of servers. Note that database links consume one server per link. Be sure to start up enough servers to support database links.

OCI-06312: IPA: Incorrect outgoing service name supplied

Cause: Incorrect outgoing service name supplied.

Action: Check and correct the service name.

OCI-06313: IPA: Shared memory failed to initialise

Cause: The shared memory has not been set up correctly.

Action: Contact your system manager.

OCI-06314: IPA: Event set up failure

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

OCI-06315: IPA: Invalid connect string

Cause: The connect string is malformed.

Action: Check and correct.

OCI-06316: IPA: Invalid database SID

Cause: The SID is unknown at the remote side.

Action: Either the database does not exist, is not running, or there are no reserved servers for that SID.

OCI-06317: IPA: Local maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

OCI-06318: IPA: Local maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle to different hosts has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

OCI-06319: IPA: Remote maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

OCI-06320: IPA: Remote maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle from different hosts has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

OCI-06321: IPA: Cannot reach the remote side

Cause: There has been a timeout on an attempt to connect to a remote server the reason for which is most likely to be the remote SQL*Net IPA software is not running. An alternative reason could be that the remote initiator service name is incorrect.

Action: Check and start the remote SQL*Net software. Check that it is started with the correct service names supplied.

OCI-06322: IPA: Fatal shared memory error

Cause: An internal error has occurred in the shared memory handling.

Action: Contact customer support.

OCI-06323: IPA: Cause event error

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

OCI-06400: NETCMN: No default host string specified

Cause: There was no default host string specified in the configuration and the user didn't specify any explicit connect string.

Action: Either reconfigure the system specifying a default connect string or use an explicit connect string.

OCI-06401: NETCMN: invalid driver designator

Cause: The login (connect) string contains an invalid driver designator.

Action: Correct the string and re-submit.

OCI-06402: NETCMN: error receiving break message

Cause: Error occurred while attempting to read a break message.

Action: Contact your customer support representative.

OCI-06403: unable to allocate memory

Cause: The system was unable to allocate needed virtual memory.

Action: Contact your database administrator for assistance with this error.

OCI-06404: NETCMN: invalid login (connect) string

Cause: Syntax error in login string.

Action: Correct string and re-submit.

OCI-06405: NETCMN: reset protocol error

Cause: Unable to reset out of break state.

Action: Contact your customer support representative.

OCI-06406: NETCMN: error sending break message

Cause: Error occurred while attempting to send a break message.

Action: Contact your customer support representative.

OCI-06407: NETCMN: unable to set up break handling environment

Cause: Error occurred while attempting to set up asynchronous handlers for in-coming, out-of-band break messages.

Action: Contact your customer support representative.

OCI-06408: NETCMN: incorrect message format

Cause: Message from partner contains bad header.

Action: Contact your customer support representative.

OCI-06413: Connection not open.

Cause: Unable to establish connection.

Action: Use diagnostic procedures to ascertain exact problem.

OCI-06416: NETCMN: error on test

Cause: Error occurred while testing I/O status of the network connection.

Action: Contact your customer support representative.

OCI-06419: NETCMN: server can not start oracle

Cause: The remote server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

OCI-06420: NETCMN: SID lookup failure

Cause: From the remote host's server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA or oratab file on the remote host (restarting the remote server may be needed).

OCI-06421: NETCMN: Error detected in the read-in data

Cause: Error found during recomputation of checksum or CRC.

Action: Possible hardware failures of communication nodes. Contact system administrator immediately.

OCI-06422: NETCMN: Error in sending data

Cause: Unable to transmit data to remote host.

Action: Try reconnect to remote host, and contact your system administrator.

OCI-06423: NETCMN: Error in receiving data

Cause: Unable to receive data from remote host.

Action: Try reconnect to remote host, and contact your system administrator.

OCI-06430: ssaio: Seals do not match

Cause: A function was called with an invalid argument.

Action: Contact your Oracle Customer Support Representative.

OCI-06431: ssaio: Invalid Block number

Cause: The file block number is out of range of the file. The additional information returns the block number.

Action: Verify that the block number is correct. Run dbfsize and check if the block number is in that range. Contact your Oracle Customer Support Representative.

OCI-06432: ssaio: Buffer Not Aligned

Cause: The I/O buffer was not aligned on a 2K boundary.

Action: Contact your Oracle Customer Support Representative.

OCI-06433: ssaio: LSEEK error, unable to seek to requested block.

Cause: The additional information returns the block number

Action: Look up the additional information returned in your operating system reference manual. Verify that the block number is correct.

OCI-06434: ssaio: read error, unable to read requested block from database file.

Cause: The read system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

OCI-06435: ssaio: write error, unable to write requested block to database file.

Cause: The write system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

OCI-06436: ssaio: asynchronous I/O failed due to incorrect parameters.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

OCI-06437: ssaio: the asynchronous write was unable to write to the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

OCI-06438: ssaio: the asynchronous read was unable to read from the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

OCI-06439: ssaio: the asynchronous write returned incorrect number of bytes

Cause: This write call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes written are correct.

OCI-06440: ssaio: the asynchronous read returned incorrect number of bytes

Cause: This read call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes read are correct.

OCI-06441: ssvwatev: Incorrect parameter passed to function call

Cause: Either the ORACLE process id, or wait time or event ID is invalid.

Action: The additional information indicates the process id, time and event id.

OCI-06442: ssvwatev: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

OCI-06443: ssvpstev: Incorrect parameter passed to function call

Cause: An invalid event ID is passed in to this routine.

Action: The additional information indicates the event id.

OCI-06444: ssvpstev: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

OCI-06445: ssvpstevrg: Incorrect parameters passed to function call

Cause: An invalid event id, or the low and high event ID do not exist.

Action: The additional information indicates the error number. It also contains the event id, low boundary and high boundary.

OCI-06446: ssvpstevrg: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

OCI-06447: ssvpstp: Incorrect parameter passed to function call

Cause: Invalid oracle process ID is passed in to this routine.

Action: The additional information indicates the process id.

OCI-06448: ssvpstp: Failed with unexpected error number.

Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

OCI-06449: The list IO or the sysvvendor is not installed.

Cause: ORACLE tries to use the sysvvendor interface (INIT.ORA parameter use_sysvvendor=true) but the UNIX kernel does not have the ORACLE sysvvendor interface linked in.

Action: Set use_sysvvendor=false in INIT.ORA, if you don't want to use this interface or link the UNIX kernel with this interface so that ORACLE can use it.

OCI-06500: PL/SQL: storage error

Cause: PL/SQL was unable to allocate additional storage. This message normally appears with an ORA-4030 or ORA-4031 error which gives additional information. Sometimes this error can be caused by runaway programs.

Action: 1) Ensure there are no issues or bugs in your PL/SQL program which are causing excessive amounts of memory to be used. 2) Programmatically cause unused objects to be freed (e.g. by setting them to NULL). 3) Increase the amount of shared or process memory (as appropriate) available to you.

OCI-06501: PL/SQL: program error

Cause: An error was detected in a PL/SQL program.

Action: This generic message usually is followed-up by other, more detailed errors. Solve the issues in the detailed errors and retry the operation. If the issue persists, contact your DBA or Oracle Support Services.

OCI-06502: PL/SQL: value or conversion errorstring

Cause: An arithmetic, numeric, string, conversion, or constraint error occurred. For example, this error occurs if you attempt to assign the value NULL to a variable declared NOT NULL, or if you attempt to assign an integer greater than 99 to a variable declared NUMBER(2).

Action: To resolve the issue, change the data, the way the data is manipulated, or the data variable declaration. *Params: 1) error_info: A more detailed description of why the error occurred.

OCI-06503: PL/SQL: function returned without value

Cause: A call to PL/SQL function completed, but no RETURN statement was executed.

Action: Rewrite PL/SQL function, making sure that it always returns a value of a proper type.

OCI-06504: PL/SQL: Return types of Result Set variables or query do not match

Cause: Number and/or types of columns in a query does not match declared return type of a result set variable, or declared types of two Result Set variables do not match.

Action: Change the program statement or declaration. Verify what query the variable actually refers to during execution.

OCI-06505: PL/SQL: variable requires more than 32767 bytes

Cause: A value larger than 32767 bytes was returned where this was not supported.

Action: Reduce the size of the returned value. This can be done by reducing the number of characters returned or (in case of multi-byte character sets) by changing the database or national character set to such that requires fewer bytes for the same return value. Note: changing the character set will impact the execution of all PL/SQL code.

OCI-06508: PL/SQL: could not find program unit being called *string*

Cause: An attempt was made to call a stored program that could not be found. The program may have been dropped or incompatibly modified, or have compiled with errors.

Action: Check that all referenced programs, including their package bodies, exist and are compatible.

OCI-06509: PL/SQL: Interface call failed between the PL/SQL package and a binary executable.

Cause: The PL/SQL Interface Control Document (ICD) of the package was incompatible with the binary executable in the Oracle Home.

Action: This is usually the result of a recent upgrade or downgrade where the current PL/SQL package is not compatible with the existing binary executable. If it is unclear which package is causing the issue, contact Oracle Support.

OCI-06510: PL/SQL: unhandled user-defined exception

Cause: A user-defined exception was raised by PL/SQL code, but not handled.

Action: Fix the problem causing the exception, write an exception handler for this condition. Contact your application administrator or DBA.

OCI-06511: PL/SQL: cursor already open

Cause: An attempt was made to open a cursor that was already open.

Action: Close the cursor first before reopening.

OCI-06512: at *stringline string*

Cause: An exception occurred in a PL/SQL code block. This error message provides the name of the code block and the line number where the exception occurred. The cause of the exception can be determined by examining other exceptions in the error stack.

Action: Determine what is causing the exception by examining the other exceptions in the error stack. Fix the problem or write an exception handler for this condition. *Params: 1) `code_block`: Name of the PL/SQL code block where the exception occurred, if available. Otherwise, it is blank. 2) `line_number`: The line number of the PL/SQL code block where the error occurred.

OCI-06513: PL/SQL: index for PL/SQL table out-of-range for host language array

Cause: An attempt was made to copy a PL/SQL table to a host language array. However, the index in the table was either less than one or greater than the maximum size of the host

language array. When copying PL/SQL tables to host language arrays, the table entry at index 1 is placed in the first element of the array, the entry at index 2 is placed in the second element of the array, and so on. If a table entry has not been assigned, then the corresponding element in the host language array is set to null.

Action: Increase the size of host language array, or decrease the size of the PL/SQL table. Ensure that you do not use index values less than 1.

OCI-06514: PL/SQL: The remote call cannot be handled by the server

Cause: The remote call had parameters that were cursor variables or lob variables. These could not be handled by stored procedures on the server.

Action: Avoid using cursor variables or lob variables as parameters for stored procedures on this server or upgrade your server to a version that supports this.

OCI-06515: PL/SQL: unhandled exception *string*

Cause: An exception was raised by PL/SQL code, but not handled. The exception number is outside the legal range of Oracle errors.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

OCI-06516: PL/SQL: the Probe packages do not exist or are invalid

Cause: A Probe operation, probably an attempt to initialize the ORACLE server to debug PL/SQL, could not be completed because the Probe packages were not loaded or have become invalid.

Action: DBA should load the Probe packages. This can be done by running the pload.sql script supplied with the RDBMS.

OCI-06517: PL/SQL: Probe error - *string*

Cause: An error occurred while passing a Probe operation to the server for execution.

Action: Refer to the entry for the embedded error message.

OCI-06518: PL/SQL: Probe version *string* incompatible with version *string*

Cause: The current version of Probe is incompatible with the version on the ORACLE server.

Action: Refer to the documentation to ensure that this degree of compatibility is supported.

OCI-06519: active autonomous transaction detected and rolled back

Cause: Before returning an autonomous PL/SQL block, all autonomous transactions that were started within the block must be completed, either committed or rolled back. If not, then the active autonomous transaction is implicitly rolled back and this error is raised.

Action: Ensure that before returning an autonomous PL/SQL block, any active autonomous transactions are explicitly committed or rolled back.

OCI-06520: PL/SQL: Error loading external library

Cause: An error was detected by PL/SQL trying to load the external library dynamically.

Action: Ensure that the dynamic library exists, that it is installed correctly and that it is not corrupt or otherwise unreadable by the operating system. Also, ensure that the library path in the LIBRARY object is correct, including the values of any environment variables used in the library path and the directory path values of any DIRECTORY objects used by the LIBRARY object.

OCI-06521: PL/SQL: Error mapping function

Cause: An error was detected by PL/SQL trying to map the specified function dynamically.

Action: Ensure that the callout function name exists in the dynamic library and that the name specified in the untrusted callout specification exactly matches the function name in the dynamic library.

OCI-06522: *string*

Cause: ORA-06520 or ORA-065211 could stack this error with a system specific error string. Because this error may reveal sensitive file system information, it is not commonly used.

Action: This error string could give the cause for errors ORA-06520 or ORA-06521.

OCI-06523: maximum number of arguments exceeded

Cause: The upper limit for the number of arguments that can be passed to an external function was exceeded. This upper limit is port-specific.

Action: Check the port-specific Oracle Database documentation on how to calculate the upper limit.

OCI-06524: unsupported option *string* specified in call to the EXTERNAL clause

Cause: An unsupported option for external procedures is specified in the parameters in the EXTERNAL clause.

Action: Provide a valid option using the correct syntax for external procedures.

OCI-06525: Length Mismatch for CHAR or RAW data

Cause: The length specified in the length variable has an illegal value. This can happen if you have requested requested a PL/SQL INOUT, OUT or RETURN raw variable to be passed as a RAW with no corresponding length variable. This error can also happen if there is a mismatch in the length value set in the length variable and the length in the orlvstr or orlraw.

Action: Correct the external procedure code and set the length variable correctly.

OCI-06526: Unable to load PL/SQL library

Cause: PL/SQL was unable to instantiate the library referenced by this referenced in the EXTERNAL syntax. This is a serious error and should normally not happen.

Action: Report this problem to customer support.

OCI-06527: External procedure SQLLIB error: *string*

Cause: An error occurred in sqllib during execution of a Pro* external procedure.

Action: The message text indicates the actual SQLLIB error that occurred. Consult the Oracle Error Messages and Codes manual for a complete description of the error message and follow the appropriate action.

OCI-06528: Error executing PL/SQL profiler

Cause: An error occurred in during execution of a PL/SQL profiler procedure.

Action: Check the stacked errors for more details.

OCI-06529: Version mismatch - PL/SQL profiler

Cause: The PL/SQL profiler package (dbmspb.sql, prvtppb.plb) does not match the version of the code in the server implementing the profiler.

Action: Run the package profload.sql in \$ORACLE_HOME/rdbms/admin to load the correct version of the PL/SQL profiler packages

OCI-06530: Reference to uninitialized composite

Cause: An object, LOB, or other composite was referenced as a left hand side without having been initialized.

Action: Initialize the composite with an appropriate constructor or whole-object assignment.

OCI-06531: Reference to uninitialized collection

Cause: An element or member function of a nested table or varray was referenced (where an initialized collection is needed) without the collection having been initialized.

Action: Initialize the collection with an appropriate constructor or whole-object assignment.

OCI-06532: subscript outside of limit

Cause: A subscript was greater than the limit of a varray or was nonpositive for a varray or nested table.

Action: Check the program logic and increase the varray limit, if necessary.

OCI-06533: Subscript beyond count

Cause: An in-limit subscript was greater than the count of a varray or too large for a nested table.

Action: Check the program logic and explicitly extend if necessary.

OCI-06534: Cannot access Serially Reusable package *string*

Cause: The program attempted to access a Serially Reusable package in PL/SQL called from SQL context (trigger or otherwise). Such an access is currently unsupported.

Action: Check the program logic and remove any references to Serially Reusable packages (procedure, function or variable references) which might happen in PL/SQL called from sql context (trigger or otherwise).

OCI-06535: statement string in *string* is NULL or 0 length

Cause: The program attempted to use a dynamic statement string that was either NULL or 0 length.

Action: Check the program logic and ensure that the dynamic statement string is properly initialized.

OCI-06536: IN bind variable bound to an OUT position

Cause: The program attempted to bind an IN bind variable to a statement that was expecting an OUT bind variable at that position.

Action: Make sure that an OUT or IN OUT bind mode is specified for the bind argument.

OCI-06537: OUT bind variable bound to an IN position

Cause: The program attempted to bind an OUT bind variable to a statement that was expecting an IN bind variable at that position.

Action: Make sure that an IN or IN OUT bind mode is specified for the bind argument.

OCI-06538: statement violates *string* RESTRICT_REFERENCES pragma

Cause: The program attempted to execute a dynamic statement which does not meet the purity level specified (in the pragma RESTRICT_REFERENCES directive) for the module executing the statement.

Action: Ensure that the dynamic statement meets the purity level specified for the module executing the statement.

OCI-06539: target of OPEN must be a query

Cause: The program attempted to perform an OPEN cursor operation on a dynamic statement that was not a query.

Action: Ensure that the OPEN cursor operation is done on a dynamic query statement.

OCI-06540: PL/SQL: compilation error

Cause: A PL/SQL compilation error occurred. However, the user generally does not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

OCI-06541: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted; but the compilation unit was written out to the backing store. However, unlike ora-06545, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

OCI-06542: PL/SQL: execution error

OCI-06543: PL/SQL: execution error - execution aborted

OCI-06544: PL/SQL: internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: A pl/sql internal error occurred.

Action: Report as a bug; the first argument is the internal error number.

OCI-06545: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted completely without the compilation unit being written out to the backing store. Unlike ora-06541, the user will always see this error along with the accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

OCI-06546: DDL statement is executed in an illegal context

Cause: DDL statement is executed dynamically in illegal PL/SQL context. - Dynamic OPEN cursor for a DDL in PL/SQL - Bind variable's used in USING clause to EXECUTE

IMMEDIATE a DDL - Define variable's used in INTO clause to EXECUTE IMMEDIATE a DDL

Action: Use EXECUTE IMMEDIATE without USING and INTO clauses to execute the DDL statement.

OCI-06547: RETURNING clause must be used with INSERT, UPDATE, or DELETE statements

Cause: EXECUTE IMMEDIATE with a RETURNING clause is used to execute dynamic UPDATE, INSERT, or DELETE statements only.

Action: use RETURNING clause in EXECUTE IMMEDIATE for INSERT, UPDATE, or DELETE statements only. For other statements, use USING clause instead.

OCI-06548: no more rows needed

Cause: The caller of a pipelined function did not need more rows to be produced by the pipelined function.

Action: Do not catch the NO_DATA_NEEDED exception in an exception handling block.

OCI-06549: PL/SQL: failed to dynamically open shared object (DLL): *string:string*

Cause: One possible cause might be there are too many DLLs open at the same time.

Action: n/a

OCI-06550: line *string*, column *string*:*lnstring*

Cause: Usually a PL/SQL compilation error.

Action: Refer to the following PL/SQL messages for more information about the error.

OCI-06551: PL/SQL: Unhandled exception

OCI-06552: PL/SQL: *string*

OCI-06553: PLS-*string*: *string*

Cause: SQL compilation failed because of an illegal reference to a PL/SQL unit.

Action: If the PL/SQL error message does not provide a workaround, then try the SQL statement as a top-level call as the appropriate user with the appropriate privileges.

OCI-06554: Package DBMS_STANDARD must be created before using PL/SQL.

Cause: The DBMS specific extensions to the PL/SQL package STANDARD are in package DBMS_STANDARD. This package must be created before using PL/SQL.

Action: Create package DBMS_STANDARD. The source for this PL/SQL stored package is provided with the distribution.

OCI-06555: this name is currently reserved for use by user SYS

Cause: You tried to create a package named "STANDARD", "DBMS_STANDARD" or "DEBUG_IO". These are currently reserved for use by user SYS.

Action: Choose another name for your package.

OCI-06556: the pipe is empty, cannot fulfill the unpack_message request

Cause: There are no more items in the pipe.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

OCI-06557: null values are not allowed for any parameters to pipe icd's

Cause: Internal error from the dbms_pipe package.

Action: Contact Oracle Support Services.

OCI-06558: buffer in dbms_pipe package is full. No more items allowed

Cause: The pipe buffer size has been exceeded.

Action: Inspect the program to analyze the rate of input and output to the pipe. You might need to take items out of the pipe by executing RECEIVE_MESSAGE, or empty the entire pipe by executing PURGE on the pipe.

OCI-06559: wrong datatype requested, string, actual datatype is string

Cause: The sender put different datatype on the pipe than that being requested (package 'dbms_pipe'). The numbers are: 6 - number, 9 - char, 12 - date.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

OCI-06560: pos, string, is negative or larger than the buffer size, string

Cause: Internal error from the dbms_pipe package.

Action: Contact Oracle Support Services.

OCI-06561: statement not supported by the DBMS_SQL package

Cause: An attempt was made to parse an unsupported statement by using the PARSE procedure provided by DBMS_SQL package.

Action: Change the statement to be parsed to a supported type. Supported statements begin with SELECT, DELETE, INSERT, UPDATE, LOCK, BEGIN, DECLARE, or << (PL/SQL label delimiter). Also, re-parsing the cursor with container switch is only supported from a non-recursive PARSE call.

OCI-06562: type of OUT argument must match the column type or bind variable

Cause: An attempt was made to retrieve the value of a column or bind variable by calling the procedures DBMS_SQL.COLUMN_VALUE or DBMS_SQL.VARIABLE_VALUE. The type of the OUT argument was different from the column type or bind variable that the code previously defined by calling the DBMS_SQL.DEFINE_COLUMN or DBMS_SQL.BIND_VARIABLE procedure.

Action: Pass an OUT argument of the correct type when calling the procedures COLUMN_VALUE or VARIABLE_VALUE, and retry the operation.

OCI-06563: The name has too many parts.

Cause: The name to be resolved was specified as one of the following: - With three parts (A.B.C) but the A.B parts resolved to an object that did not expose visible nested procedures and the C part could not be resolved. - With two parts (A.B) and the A part resolved to an object that did not expose visible nested procedures and the B part could not be resolved.

Action: Specify the valid name of an object or of a packaged procedure or function without specifying any additional trailing parts.

OCI-06564: Object *string* does not exist or is not accessible to the user.

Cause: The specified object could not be found. Either it does not exist or the current database user does not have permission to access it.

Action: Check whether the object exists and that there is no typo in the object name in the statement. Create the object if it does not exist or grant permission to the user to access it.

OCI-06565: cannot execute *string* from within stored procedure with definer's rights unit

Cause: The named procedure cannot be executed from within a stored procedure, function or package when definer's rights unit is on call stack. This function can only be used from PL/SQL anonymous blocks.

Action: Remove the procedure from the calling stored procedure and execute from an invoker's rights context.

OCI-06566: invalid number of rows specified

Cause: An invalid number of rows was specified in a call to the procedure DEFINE_COLUMN in the package DBMS_SQL. For a given parsed statement in a given cursor, all columns must be defined to have the same number of rows, so all the calls to DEFINE_COLUMN must specify the same number of rows.

Action: Specify a number that matches that for previously defined columns.

OCI-06567: invalid number of values specified

Cause: An invalid number of values to be bound was specified in a call to the procedure BIND_VARIABLE in the package DBMS_SQL. In order to execute a given parsed statement in a given cursor, the same number of values must have been bound for all bind variables, so when EXECUTE is called, the latest calls to BIND_VARIABLE must have specified the same number of values to be bound for all bind variables.

Action: Make sure that the same number of values have been bound for all of the bind variables.

OCI-06568: obsolete ICD procedure called

Cause: An obsolete ICD procedure was called by a PL/SQL program. The PL/SQL program was probably written for an earlier release of RDBMS.

Action: Make sure that all PL/SQL programs have been upgraded to the latest release of the RDBMS. This can be accomplished by following upgrade instructions in the README file, or by running the catproc.sql script supplied with the RDBMS.

OCI-06569: Collection bound by BIND_ARRAY contains no elements

Cause: A collection with no elements was bound to a bind variable in a call to the BIND_ARRAY procedure in the DBMS_SQL package. To run a bind of a collection, the collection must contain at least one element. If no elements are present, then during runtime there will be no value for this bind and the statement becomes meaningless.

Action: Provide the collection with the elements you want to bind, and rerun the bind call.

OCI-06570: shared pool object does not exist, cannot be pinned/purged

Cause: The specified shared pool shared cursor could not be found, therefore it cannot be pinned/purged.

Action: Make sure that a correct shared cursor name is given. Names are a string of the form 'HHHHHHHH,SDDDDDDDDDD' where the H's are an 8 digit hex number from the 'address' column of v\$sqlarea, and the D's are a 1 to 10 digit decimal number with an optional leading sign (from the 'hash_value' column) Remove the procedure from the calling stored procedure.

OCI-06571: Function *string* does not guarantee not to update database

Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma that prevents the database from being updated. * A SQL statement references a stand-alone, PL/SQL function that contains an instruction to update the database.

Action: If the referenced function is a packaged, PL/SQL function: Recreate the PL/SQL function with the required pragma; be certain to include the 'Write No Database State' (WNDS) argument in the argument list of the pragma. If the referenced function is a stand-alone, PL/SQL function: Do not use the function.

OCI-06572: PL/SQL function *string* has OUT parameter in the argument list.

Cause: PL/SQL functions referenced by SQL statements must not contain the OUT parameter. A SQL statement referenced either a packaged or a standalone PL/SQL function that contained an OUT parameter in its argument list.

Action: Re-create the PL/SQL function without the OUT parameter in the argument list.

OCI-06573: Function *string* modifies package state, cannot be used here

Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma containing the 'Write no Package State' (WNPS). * A SQL statement references a stand-alone, PL/SQL function that modifies a package state. A stand-alone, PL/SQL function referenced by a SQL statement cannot modify a package state.

Action: If the function is a packaged, PL/SQL function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS). If the function is a stand-alone, PL/SQL function: Delete the function from the SQL statement.

OCI-06574: Function *string* references package state, cannot execute remotely

Cause: There are two possible causes for this message: * A remote, packaged function or a remote-mapped, local, packaged function that does not contain a pragma with the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments references a package state. * A remote, stand-alone function or a remote-mapped, local, stand-alone function contains a reference to a package state (reads or writes a package variable). Only local functions that are referenced in a SELECT list, VALUES clause of an INSERT statement, or SET clause of an UPDATE statement can modify a package state.

Action: If the function is a packaged function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments. If the function is a stand-alone function: Do not call the function.

OCI-06575: Package or function *string* is in an invalid state

Cause: A SQL statement references a PL/SQL function that is in an invalid state. Oracle attempted to compile the function, but detected errors.

Action: Check the SQL statement and the PL/SQL function for syntax errors or incorrectly assigned, or missing, privileges for a referenced object.

OCI-06576: not a valid function or procedure name

Cause: Could not find a function (if an INTO clause was present) or a procedure (if the statement did not have an INTO clause) to call.

Action: Change the statement to invoke a function or procedure

OCI-06577: output parameter not a bind variable

Cause: The argument corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement must be a bind variable.

Action: Change the argument to a bind variable

OCI-06578: An output parameter cannot be a duplicate bind variable.

Cause: A bind variable corresponding to an IN/OUT or OUT parameter for a function or a procedure, or for a function return value in a CALL statement was used more than once in the statement.

Action: Change the bind variable to be unique.

OCI-06579: Bind variable not big enough to hold the output value

Cause: The bind variable specified by the user is not large enough to hold the output returned by the function or a procedure.

Action: Specify a bind variable of larger size.

OCI-06580: Hash Join ran out of memory while keeping large rows in memory

Cause: Hash Join reserves 3 slots (each slot size = DB_BLOCK_SIZE * HASH_JOIN_MULTIBLOCK_IO_COUNT) for a row. If a row is larger than that, this error will be raised.

Action: Increase HASH_JOIN_MULTIBLOCK_IO_COUNT so that each joined row fits in a slot. HASH_AREA_SIZE may also need to be increased.

OCI-06591: Oracle7 release 7.3.4 clients are no longer supported for PL/SQL RPC

Cause: Beginning with Oracle Database 21c, Oracle7 release 7.3.4 clients are no longer supported for PL/SQL remote procedure calls (RPCs).

Action: Use an Oracle8 or later client to execute the PL/SQL RPC.

OCI-06592: CASE not found while executing CASE statement

Cause: A CASE statement must either list all possible cases or have an else clause.

Action: Add all missing cases or an else clause.

OCI-06593: *string* is not supported with natively compiled PL/SQL modules

Cause: The specified PL/SQL modules could not be compiled in native mode.

Action: Recompile the relevant PL/SQL modules in non-native mode by setting the parameter PLSQL_COMPILER_FLAGS to INTERPRETED.

OCI-06594: Information only: ICD is unable to compute a result, falling back to retrieval by SQL

Cause: An internal value was required that could be retrieved by a fast call to an internal procedure or a slower retrieval using a SQL statement. The internal call failed, and the value was retrieved using a SQL statement.

Action: No action is needed as the situation is handled internally. If the issue persists, then check any errors following this message, and contact Oracle Support.

OCI-06595: REF CURSOR parameters are not supported in forwarded RPC calls

Cause: An attempt was made to make a forwarded RPC call with a REF CURSOR parameter.

Action: Either call the remote function directly (i.e., not by way of forwarding), or move the remote function to a database where it can be called directly.

OCI-06596: object cannot be purged, object is permanently kept in shared pool

Cause: The specified object was permanently kept, therefore, cannot be purged.

Action: Use DBMS_SHARED_POOL.UNKEEP procedure to unkeep the object and then purge it.

OCI-06597: Failed to increase the session's call stack memory to *string* bytes at a depth of *string* calls. (The current maximum is *string* bytes.)

Cause: PL/SQL program execution used more call stack memory than permitted.

Action: * Ask your DBA to increase the maximum allowed call stack memory. * Decrease the amount of call stack used by the program. This may be accomplished by using fewer, smaller local variables, or by limiting the depth of function call nesting.

OCI-06598: insufficient INHERIT PRIVILEGES privilege

Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, and the owner of that function, procedure, or view lacks INHERIT PRIVILEGES privilege on the calling user.

Action: Either do not call the function or procedure or reference the view, or grant the owner of the function, procedure, or view INHERIT PRIVILEGES privilege on the calling user.

OCI-06599: unsupported LOB operation in RPC call

Cause: An attempt was made to perform certain large object (LOB) date type operations (for example, deep copying of a temporary or abstract LOB on the client side) while performing a remote procedural call (RPC). This is not currently supported.

Action: Perform the LOB operation in question before starting the RPC. Or, perform those LOB operations on the server side instead of the client side.

OCI-06600: LU6.2 Driver: SNA software is not loaded

Cause: The SNA software is not running.

Action: Start the SNA software and try again.

OCI-06601: LU6.2 Driver: Invalid database ID string

Cause: The database string in the connect was invalid.

Action: Provide a valid database string, as defined in documentation.

OCI-06602: LU6.2 Driver: Error allocating context area

Cause: Context area failure.

Action: Contact your local service representative.

OCI-06603: LU6.2 Driver: Error allocating memory

Cause: Operating system refused request for memory.

Action: Contact you local service representative.

OCI-06604: LU6.2 Driver: Unable to allocate session with remote LU

Cause: Allocate system call failed.

Action: Ensure that the SNA software is running and that sessions are free. If this is the case, then check your SNA configuration data for errors. You may have entered an incorrect parameter.

OCI-06605: LU6.2 Driver: Unexpected line turnaround

Cause: SNA software switched from send to receive unexpectedly.

Action: Check the SNA configuration data, particularly parameters associated with a session.

OCI-06606: LU6.2 Driver: Unexpected response from SNA

Cause: A parameter in an SNA call returned an unexpected value.

Action: Attempt to reproduce problem, debug and record the value of the 'what' data parameter at the time of error. Then contact your service representative.

OCI-06607: LU6.2 Driver: Reset occurred in send state

Cause: A reset was issued whilst in send state.

Action: Check the SNA LOG data, if relevent, for further information.

OCI-06608: LU6.2 Driver: Reset occurred in receive state

Cause: A reset was received from the partner whilst in receive state. This may be because the partner deallocated.

Action: Check the SNA LOG data, if relevent, for further information.

OCI-06610: LU6.2 Driver: Failed during deallocation

Cause: LU6.2 driver was unable to deallocate gracefully.

Action: Check the reason for deallocation. Consult the SNA LOG data.

OCI-06611: LU6.2 Driver: Request to send error**OCI-06612: LU6.2 Driver: Send data error****OCI-06613: LU6.2 Driver: Receive and wait error****OCI-06614: LU6.2 Driver: Receive Immediate error****OCI-06615: LU6.2 Driver: Send error**

OCI-06616: LU6.2 Driver: Attach to LU failed

Cause: The SQL*Net LU6.2 driver was unable to attach to the LU specified in the connect string, or was unable to attach to the default LU.

Action: Check that the LU name specified in the connect string, or the default LU name if no LU was specified, is correctly configured and operational.

OCI-06617: LU6.2 Driver: Attach to PU failed**OCI-06618: LU6.2 Driver: Activation of subnetwork failed****OCI-06619: LU6.2 Driver: Unable to activate remote partner****OCI-06620: LU6.2 Driver: Invalid remote partner****OCI-06621: LU6.2 Driver: Allocation error****OCI-06622: LU6.2 Driver: Unable to attach to SNA**

Cause: The SQL*Net LU6.2 driver could not attach to the SNA software on your machine. The most likely cause is that the SNA software is not operational.

Action: Check the status of the SNA software, ensure that it is operational and then try again.

OCI-06700: TLI Driver: incorrect message type from host

Cause: TLI received a message with an unrecognizable message type.

Action: Contact your customer support representative.

OCI-06701: TLI Driver: incorrect number of bytes written

Cause: TLI sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes supplied to the driver.

Action: Contact your customer support representative.

OCI-06702: TLI Driver: cannot allocate context area

Cause: TLI could not allocate heap space for the context area.

Action: Contact your customer support representative.

OCI-06703: TLI Driver: send break message failed

Cause: TLI failed to send a break message across the connection.

Action: Contact your customer support representative.

OCI-06704: TLI Driver: receive break message failed

Cause: TLI failed to receive an expected break message.

Action: Contact your customer support representative.

OCI-06705: TLI Driver: remote node is unknown

Cause: TLI could not find your remote host information.

Action: Make sure you specified the hostname correctly on the command line. (Also, check your capitalization and spelling.)

OCI-06706: TLI Driver: service not found

Cause: TLI could not find service information for the specified service name.

Action: If you specified the service name on the command line or with the environment variable TLI_SERVER, make sure you specified it correctly. If the service name is not in the SERVICES file for your protocol, ask your system administrator to add it.

OCI-06707: TLI Driver: connection failed

Cause: TLI failed to establish the connection to a SQL*Net TCP/IP server due to an error encountered by the remote server, which has supplied a string describing the remote error.

Action: See the SQL*Net TCP/IP User's Guide section "orasrv Messages" for the specific cause and action.

OCI-06708: TLI Driver: message receive failure

Cause: TLI encountered an error receiving a message from the communication channel.

Action: Contact your customer support representative.

OCI-06709: TLI Driver: message send failure

Cause: TLI encountered an error sending a message across the communication channel.

Action: Contact your customer support representative.

OCI-06710: TLI Driver: send interrupt break message failed

Cause: TLI failed to send a break message while handling an interrupt signal from the user.

Action: Contact your customer support representative.

OCI-06711: TLI Driver: error on bind

Cause: TLI failed to assign a network address to the communication channel.

Action: Contact your customer support representative.

OCI-06712: TLI Driver: error on accept

Cause: TLI failed to accept a connection request from the client.

Action: Contact your customer support representative.

OCI-06713: TLI Driver: error on connect

Cause: TLI failed to connect the client to the remote server. The network line to the remote host may be down.

Action: Use other network login programs to make sure that the remote host is accessible.

OCI-06720: TLI Driver: SID lookup failure

Cause: The database SID supplied in the database login string was not recognized by the remote host.

Action: Ask your system administrator to add the appropriate SID entry to oratab on the remote host.

OCI-06721: TLI Driver: spurious client req

Cause: The remote TLI server received an undefined request.

Action: Contact your customer support representative.

OCI-06722: TLI Driver: connection setup failure

Cause: The remote TLI server rejected the connection request, and the client was unable to retrieve an error code or message.

Action: Contact your customer support representative.

OCI-06730: TLI Driver: unable to open clone device

Cause: TLI failed to open the Streams clone device associated with the transport provider.

Action: Contact your customer support representative.

OCI-06731: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the client's connection information.

Action: Contact your customer support representative.

OCI-06732: TLI Driver: cannot alloc t_discon

Cause: TLI cannot allocate space for the client's disconnection information.

Action: Contact your customer support representative.

OCI-06733: TLI Driver: failed to receive disconnect

Cause: TLI failed to receive an expected disconnection message during connection release.

Action: Contact your customer support representative.

OCI-06734: TLI Driver: cannot connect

Cause: TLI failed to connect the client to the remote server.

Action: Check that the remote TLI server is running.

OCI-06735: TLI Driver: client failed to close error conn

Cause: TLI failed to properly close a connection after an error was received.

Action: Contact your customer support representative.

OCI-06736: TLI Driver: server not running

Cause: TLI timed out while attempting to connect to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using. If it is not, ask your system administrator to start it.

OCI-06737: TLI Driver: connection failed

Cause: TLI could not establish a connection to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using.

OCI-06741: TLI Driver: unable to open protocol device

Cause: The TLI server failed to open the Streams device associated with the transport provider.

Action: Contact your customer support representative.

OCI-06742: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its requested network address.

Action: Contact your customer support representative.

OCI-06743: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its actual network address.

Action: Contact your customer support representative.

OCI-06744: TLI Driver: listener cannot bind

Cause: The TLI server failed to assign the correct network address on which to listen for connections.

Action: Contact your customer support representative.

OCI-06745: TLI Driver: listener already running

Cause: The network address on which the TLI server awaits connection requests is in use, possibly because the server is already running.

Action: Ensure that the TLI server is not already running. If it is not running and this error message recurs, contact your customer support representative.

OCI-06746: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the TLI server's connection information.

Action: Contact your customer support representative.

OCI-06747: TLI Driver: error in listen

Cause: The TLI server encountered an error while listening for connection requests.

Action: Contact your customer support representative.

OCI-06748: TLI Driver: cannot allocate t_discon

Cause: TLI cannot allocate space for the TLI server's disconnection information.

Action: Contact your customer support representative.

OCI-06749: TLI Driver: option not allowed across network

Cause: The requested TLI server command must be issued from the same host on which the server is running.

Action: Log in to the remote host and try again.

OCI-06750: TLI Driver: sync failed

Cause: The ORACLE process started by the TLI server was unable to synchronize its inherited connection.

Action: Contact your customer support representative.

OCI-06751: TLI Driver: bound addresses unequal

Cause: The osn check server address failed. The bound server address was not the same as the requested binding address.

Action: Contact your customer support representative.

OCI-06752: TLI: error in signal setup

Cause: A call to sigaction() returned with a system error.

Action: Contact your customer support representative.

OCI-06753: TLI Driver: name-to-address mapping failed

Cause: For SVR4, the netdir_getbyname() call failed for some unknown reason.

Action: Contact your customer service representative.

OCI-06754: TLI Driver: unable to get local host address

Cause: The name of the remote host to connect to was not specified, and the name of the local host cannot be retrieved from the HOSTS file.

Action: Contact your system administrator.

OCI-06755: TLI Driver: cannot close transport endpoint

Cause: The TLI server was unable to close a connection after passing it to an ORACLE process.

Action: Contact your customer support representative.

OCI-06756: TLI Driver: cannot open oratab

Cause: The TLI server could not open the file used to define the locations of remotely accessible databases.

Action: Ask your system administrator to check that the file exists and has the correct permissions.

OCI-06757: TLI Driver: server got bad command

Cause: The TLI server received an invalid command.

Action: Contact your customer support representative.

OCI-06760: TLI Driver: timeout reading orderly release

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

OCI-06761: TLI Driver: error sending orderly release

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

OCI-06762: TLI Driver: error reading orderly release

Cause: TLI encountered an error receiving an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

OCI-06763: TLI Driver: error sending disconnect

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

OCI-06764: TLI Driver: error reading disconnect

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

OCI-06765: TLI Driver: error awaiting orderly release

Cause: TLI encountered an error awaiting a disconnect message while closing the communication channel.

Action: Contact your customer support representative.

OCI-06766: TLI Driver: close failed during release

Cause: TLI failed to close the communication channel after receiving a disconnect message.

Action: Contact your customer support representative.

OCI-06767: TLI Driver: alloc failed during release

Cause: TLI cannot allocate space for disconnection information while closing the communication channel.

Action: Contact your customer support representative.

OCI-06770: TLI Driver: error sending version

Cause: TLI encountered an error while sending its version information during connection establishment.

Action: Contact your customer support representative.

OCI-06771: TLI Driver: error reading version

Cause: TLI encountered an error while awaiting the expected version information during connection establishment.

Action: Contact your customer support representative.

OCI-06772: TLI Driver: error sending command

Cause: TLI encountered an error while sending a command message during connection establishment.

Action: Contact your customer support representative.

OCI-06773: TLI Driver: error reading command

Cause: TLI encountered an error while awaiting the expected command message during connection establishment.

Action: Contact your customer support representative.

OCI-06774: TLI Driver: error sending break mode

Cause: TLI encountered an error while sending break-mode message during connection establishment.

Action: Contact your customer support representative.

OCI-06775: TLI Driver: error reading break mode

Cause: TLI encountered an error while awaiting the expected break-mode message during connection establishment.

Action: Contact your customer support representative.

OCI-06776: TLI Driver: error sending parms

Cause: TLI encountered an error while sending the connection parameters during connection establishment.

Action: Contact your customer support representative.

OCI-06777: TLI Driver: error reading parms

Cause: TLI encountered an error while awaiting the expected connection parameter message during connection establishment.

Action: Contact your customer support representative.

OCI-06778: TLI Driver: error sending ccode

Cause: TLI encountered an error while sending the completion status message during connection establishment.

Action: Contact your customer support representative.

OCI-06779: TLI Driver: error reading ccode

Cause: TLI encountered an error while awaiting the expected completion status message during connection establishment.

Action: Contact your customer support representative.

OCI-06780: TLI Driver: recv error code failed

Cause: TLI encountered an error while awaiting an expected error message during connection establishment.

Action: Contact your customer support representative.

OCI-06781: TLI Driver: error reading negotiation string

Cause: TLI encountered an error while awaiting the expected negotiation message during connection establishment.

Action: Contact your customer support representative.

OCI-06790: TLI Driver: poll failed

Cause: TLI was unable to poll the communication channel for possible incoming messages.

Action: Contact your customer support representative.

OCI-06791: TLI Driver: poll returned error event

Cause: TLI received an unexpected event while polling the communication channel for possible incoming messages.

Action: Contact your customer support representative.

OCI-06792: TLI Driver: server cannot exec oracle

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The permissions on the remote ORACLE program may be set incorrectly.

OCI-06793: TLI Driver: server cannot create new process

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The remote host may be unable to create any new processes due to a full process table.

OCI-06794: TLI Driver: shadow process could not retrieve protocol info

Cause: The ORACLE process either failed to allocate memory to store the protocol information record, or the protocol rejected the request for some unknown reason.

Action: Contact your customer support representative.

OCI-06800: TLI Driver: SQL*Net SPX client went away during reconnect

Cause: The client process was aborted by the system or the user, and was unable to complete the connection establishment with the server listener process.

Action: Determine cause of client exit, and reattempt connection.

OCI-06801: TLI Driver: listen for SPX server reconnect failed

Cause: An unknown event occurred on the client's listening socket.

Action: Contact your customer support representative.

OCI-06802: TLI Driver: could not open the /etc/netware/yellowpages file

Cause: The /etc/netware/yellowpages file does not exist, or is not readable by the TLI listener process.

Action: Insure the file exists and is readable. Make sure that the server machine's node name, network number, ethernet address, and listening socket number are encoded in the file.

OCI-06803: TLI Driver: the IPX device file could not be opened

Cause: The /dev/ipx file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06804: TLI Driver: could not bind an IPX address at initialization

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06805: TLI Driver: could not send datagram SAP packet for SPX

Cause: The socket endpoint for sending SAP packet was corrupted for some unknown reason.

Action: Contact your customer support representative.

OCI-06806: TLI Driver: could not complete protocol initialization for SPX

Cause: A step in the SPX/IPX protocol initialization failed.

Action: Check the previous error reported, and follow corrective action.

OCI-06807: TLI Driver: could not open ethernet device driver file

Cause: The file /dev/eth does not exist, or the driver it references could not be opened.

Action: The system's real ethernet device file, for example /dev/wd, for the Western Digital ethernet driver, should be linked to the file /dev/eth. If this has been done, insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

OCI-06808: TLI Driver: could not link IPX and ethernet streams

Cause: Either the ethernet driver has not been installed in the system correctly, or the ethernet driver is not supported.

Action: Insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

OCI-06809: TLI Driver: could not clear the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06810: TLI Driver: could not set the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06811: TLI Driver: could not set the IPX network number at init

Cause: The IPX driver has not been correctly installed, or the network number encoded in the /etc/netware/yellowpages file is invalid.

Action: The network number in the yellowpages file should match the four-byte network number of your Novell file server. If this is configured correctly, reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06812: TLI Driver: could not read the ethernet driver's node address

Cause: The ethernet driver is not installed correctly, or does not support this operation.

Action: Contact your customer support representative for a list of supported ethernet drivers.

OCI-06813: TLI Driver: the configured ethernet address is incorrect

Cause: The node address read from the ethernet driver does not match the value encoded in the /etc/netware/yellowpages file for this server.

Action: Confirm the correct ethernet node address for your LAN card, and enter this value in the yellowpages file.

OCI-06814: TLI Driver: the SPX device file could not be opened

Cause: The /dev/nspxd file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06815: TLI Driver: could not link SPX and IPX streams

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06816: TLI Driver: could not set the SPX SAP address

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

OCI-06817: TLI Driver: could not read the Novell network address

Cause: The file \$ORACLE_HOME/spx/address could not be opened for reading and writing.

Action: Make sure ORACLE_HOME is set, and the permissions on the ORACLE_HOME are read, write. If this file has been unintentionally deleted, run spxctl (net option) to reset the configured Novell network number for SQL*Net SPX.

OCI-06900: CMX: cannot read tns directory

Cause: CMX is not started on your system.

Action: Install and/or start CMX on your system.

OCI-06901: CMX: no local name assigned to local application

Cause: Local application oracmx has no local name assigned

Action: Enter unique local name for oracmx in the tns directory

OCI-06902: CMX: cannot attach to cmx subsystem

Cause: ccp-xxxx is not started

Action: start your ccp software on the communication controller

OCI-06903: CMX: cannot read transport address of remote application

Cause: remote application not entered in tns directory

Action: enter remote application in tns directory

OCI-06904: CMX: no transport address available for remote application

Cause: no local name assigned to remote application

Action: assign local name to remote application

OCI-06905: CMX: connect error

Cause: remote partner not listening

Action: make sure remote node has CMX installed and running make sure oracmx is running on remote host

OCI-06906: CMX: cannot get maximum packet size from CMX

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06907: CMX: error during connect confirmation

Cause: remote partner aborted

Action: contact your customer support representative

OCI-06908: CMX: error during transfer of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

OCI-06909: CMX: error during acknowledge of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

OCI-06910: CMX: Cannot start oracle process on remote machine

Cause: oracle process not found or wrong mode (should be 4751)

Action: change /etc/oratab or set mode to 4751

OCI-06911: CMX: t_event returns ERROR

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06912: CMX: write error in datarq

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06913: CMX: error during redirection of connection

Cause: oracmx has been stopped, or user process has been aborted

Action: contact your customer support representative

OCI-06914: CMX: unexepected event during start of oracle

Cause: connect sequence out of sync

Action: contact your customer support representative

OCI-06915: CMX: unknown t_event in datarq

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06916: CMX: error in data read (t_datain)

Cause: remote partner aborted

Action: contact your customer support representative

OCI-06917: CMX: error in data read (too many bytes read)

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06918: CMX: T_NOEVENT during wait for read event

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06919: CMX: error during write request (unknown event)

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06920: CMX: getbrkmsg illegal datatype

Cause: received packets are corrupted

Action: contact your customer support representative

OCI-06921: CMX: getdatmsg illegal datatype

Cause: received packets are corrupted

Action: contact your customer support representative

OCI-06922: CMX: bad write length

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06923: CMX: illegal break condition

Cause: break handling out of sync

Action: contact your customer support representative

OCI-06924: CMX: wrong break message length

Cause: received packets are corrupted

Action: contact your customer support representative

OCI-06925: CMX: disconnect during connect request

Cause: partner is not responding

Action: make sure partner is up and running and reachable

OCI-06926: CMX: T_ERROR during read data

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06927: CMX: T_DATAIN received before all data written

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06928: CMX: wrong ORACLE_SID

Cause: ORACLE_SID is not entered in remote oratab

Action: add ORACLE_SID to remote oratab

OCI-06929: CMX: error when sending ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06930: CMX: error when checking ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06931: CMX: error during read_properties for server

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06932: CMX: error in local name

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06933: CMX: error during attach

Cause: internal error in CMX

Action: contact your customer support representative

OCI-06950: No error

Cause: SQL*Net AppleTalk error codes base. This is not an error.

Action: None

OCI-06951: Operating system call error

Cause: AppleTalk API received error in VMS system service.

Action: Contact Oracle Customer Support representative.

OCI-06952: Remote end of the communication issued a forward-reset packet.

Cause: Peer program may have aborted

Action: Investigate network problems and try again.

OCI-06953: Not enough virtual memory

Cause: Not enough memory available.

Action: Check VMS process quotas and/or sysgen parameters

OCI-06954: Illegal file name

Cause: Erroneous file name

Action: Check path name for server output file, or SQL*Net Appletalk Logical names and symbols.

OCI-06955: Number of database servers exceed limit

Cause: Too many database connections.

Action: Check ATKSRV_MAXCONparameter in configuration file.

OCI-06956: Failed to get local host name

Cause: Unable to get Appletalk host name.

Action: Check Appletalk configuration.

OCI-06957: No SID is currently available

Cause: Incoming SQL*Net connection specified invalid SID name.

Action: Specify correct SID in connect string and retry.

OCI-06958: Failed to access configuration file

Cause: Unable to access CONFIG.ATK

Action: Check file protections.

OCI-06959: Buffer I/O quota is too small

Cause: Buffered I/O quota exceeded.

Action: Increase BIOlm using AUTHORIZE utility and retry.

OCI-06960: Failed to access log file

Cause: SQL*Net Appletalk listener could not create log file.

Action: Check directory path and protections.

OCI-06961: insufficient privilege for attempted operation

Cause: The attempted operation failed because of insufficient privileges.

Action: Check the privileges and retry.

OCI-06970: X.25 Driver: remote host is unknown

Cause: Host name specified in the login (connect string) is unknown.

Action: Check spelling; make sure name is in the X.25 HOST file.

OCI-06971: X.25 Driver: error while receiving data**OCI-06972: X.25 Driver: error while sending data****OCI-06973: X.25 Driver: invalid buffer size**

Cause: The buffer size specified in the login string must be between 5 and 4096.

Action: Re-submit with valid buffer size.

OCI-06974: X.25 Driver: SID lookup failure

Cause: From the remote host's SQL*Net X.25 server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net X.25 server).

OCI-06975: X.25 Driver: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net X.25 server on the remote host is not up, or the host itself is not up.

Action: Start the SQL*Net X.25 server process on the remote host.

OCI-06976: X.25 Driver: endpoint creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

OCI-06977: X.25 Driver: X.25 Level 2 failure

Cause: X.25 level 2 is down. X.25 link is not working.

Action: Run system checks to verify functioning of X.25 software. Contact your hardware vendor.

OCI-06978: X.25 Driver: Too many callback tries

Cause: Call back address probably same as called address.

Action: Verify that callback address and called address are different.

OCI-06979: X.25 Driver: server cannot start oracle

Cause: The remote X.25 server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

OCI-07200: slsid: oracle_sid not set.

Cause: The environment variable \$(ORACLE_SID) is not set.

Action: Set ORACLE_SID environment variable.

OCI-07201: slhom: oracle_home variable not set in environment.

Cause: \$(ORACLE_HOME) environment variable not set.

Action: Set ORACLE_HOME.

OCI-07202: sltln: invalid parameter to sltln.

Cause: The sltln name translation routine was called with invalid arguments. The input, or output strings were either NULL or 0 length.

Action: Probable internal oracle error. Contact customer support.

OCI-07203: sltln: attempt to translate a long environment variable.

Cause: A string was passed to sltln containing a long environment variable. sltln accepts environment names of 30 or less characters.

Action: Shorten environment variable name to less than 30 characters.

OCI-07204: sltln: name translation failed due to lack of output buffer space.

Cause: The sltln routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0]. Pathnames are limited to 255 characters.

OCI-07205: slgtd: time error, unable to obtain time.

Cause: Time() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07206: slgtd: gettimeofday error, unable to obtain time.

Cause: Gettimeofday() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07207: sigpidu: process ID string overflows internal buffer.

Cause: The sigpidu routine is given a maximum length buffer to hold process ID string. An overflow of this buffer occurred.

Action: Internal error. Contact customer support.

OCI-07208: sfwfb: failed to flush dirty buffers to disk.

Cause: The fsync system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07209: sfofi: file size limit was exceeded.

Cause: The size of the file to be opened exceeded the OS limit imposed on this process.

Action: Run osh to increase the file size limit.

OCI-07210: slcpu: getrusage error, unable to get cpu time.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07211: slgcs: gettimeofday error, unable to get wall clock.

Cause: Gettimeofday system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

OCI-07212: slcpu: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07213: slgcs: times error, unable to get wall clock.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

OCI-07214: slgunm: uname error, unable to get system information.

Cause: uname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

OCI-07215: slsget: getrusage error.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

OCI-07216: slghst: gethostname error, unable to get name of current host.

Cause: gethostname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

OCI-07217: sltln: environment variable cannot be evaluated.

Cause: getenv call returned a null pointer.

Action: Set the environment variable and try again.

OCI-07218: slkhst: could not perform host operation

Cause: Unix system() call failed

Action: Examine system error message

OCI-07219: slspool: unable to allocate spooler argument buffer.

Cause: Malloc failed to allocate space to hold spooler arguments.

Action: Check additional information returned in OS reference manual. The process may have run out of heap space. Contact customer support.

OCI-07220: slspool: wait error.

Cause: Wait returned an error, when waiting for spool job to complete. Possible spooler program error.

Action: Check additional information returned. Refer to OS reference manual. Contact customer support.

OCI-07221: slspool: exec error, unable to start spooler program.

Cause: Exec failed when starting line printer spooler command. Likely that either the default line printer command, or ORACLE_LPPROG, is incorrectly set.

Action: Verify default line printer command and ORACLE_LPPROG are set correctly. Set ORACLE_LPPROG to working line printer spooler.

OCI-07222: slspool: line printer spooler command exited with an error.

Cause: The line printer spooler exited with a non-zero return value. This probably indicates an error in spooling file.

Action: Verify that line printer spooler is up. Verify that ORACLE_LPPROG, and ORACLE_LPARG are set properly. Check exit value returned as additional informatin.

OCI-07223: slspool: fork error, unable to spawn spool process.

Cause: Fork system call failed to create additional process. Probable resource limit reached.

Action: Check additional information returned. Retry operation. Contact system administrator.

OCI-07224: sfnfy: failed to obtain file size limit; errno = *string*.

Cause: The ulimit system call returned an error.

Action: Check errno and contact customer support.

OCI-07225: sldexst: translation error, unable to expand file name.

Cause: Additional information returned is error returned from sltln.

Action: Check additional information.

OCI-07226: rtneco: unable to get terminal mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

OCI-07227: rtneco: unable to set noecho mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

OCI-07228: rtecho: unable to restore terminal to echo mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

OCI-07229: slcpuc: error in getting number of CPUs.

Cause: error in mpcntl system call

Action: check errno and contact system administrator

OCI-07230: slemcr: fopen error, unable to open error file.

Cause: Fopen failed to open file.

Action: Try to determine which file was not opened. Check that file exists and is accessible.

OCI-07231: slemcc: invalid file handle, seals do not match.

Cause: Function was called with an invalid argument. The file handle used was not obtained by slemcr.

Action: Internal error. Contact customer support.

OCI-07232: slemcc: fclose error.

Cause: An error was encountered when closing the file. Possible OS error.

Action: Contact system administrator.

OCI-07233: slemcw: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. File handle was not obtained by slemcr.

Action: Internal error. Contact customer support.

OCI-07234: slemcw: fseek error.

Cause: Unable to seek to desired position in file. Possible OS error. Possible internal error.

Action: Verify that error message file is intact. Try to regenerate error message file. Contact customer support.

OCI-07235: slemcw: fwrite error.

Cause: Unable to write item to file. Possible OS error. Possible permissions problem.

Action: Retry operation.

OCI-07236: slemop: open error.

Cause: Unable to open error file. Possible permissions problem.

Action: Verify permission on error message file. Check additional information for errno.

OCI-07237: slemcl: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. Handle was not obtained by previous call to slemop.

Action: Internal error.

OCI-07238: slemcl: close error.

Cause: Unable to close file. Possible OS error.

Action: Contact system administrator. Check additional information for errno.

OCI-07239: slemrd: invalid file handle, seals do not match.

Cause: Function was called with invalid file handle. Handle was not obtained by call to slemop.

Action: Internal error. Contact customer support.

OCI-07240: slemrd: seek error.

Cause: Unable to seek to desired position in file. Possible OS error.

Action: Check that error file is still intact. Verify space on device. Contact system administrator. Check additional information for errno.

OCI-07241: slemrd: read error.

Cause: Unable to read file. Possible OS error.

Action: Verify that error file is intact. Regenerate error message file. Contact customer support. Check additional information for errno.

OCI-07242: slembfn: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

OCI-07243: supplied buffer not big enough to hold entire line

Cause: supplied buffer was not big enough

Action: Internal error. Contact customer support. Additional information indicates how big the supplied buffer was.

OCI-07244: ssfccf: create file failed, file size limit reached.

Cause: An attempt was made to create a file that exceeds the process's file size limit.

Action: Run osh to raise the file size limit.

OCI-07245: sfccf: unable to lseek and write the last block.

Cause: An attempt was made to move and write to a bad device address.

Action: Check errno. Possible lack of space on device.

OCI-07246: sfofi: open error, unable to open database file.

Cause: sfofi returns an error.

Action: This is an oracle internal error.

OCI-07247: skgfrfms, skgfrnms: read error, unable to read block from database file

Cause: The ioctl() system call returned an error doing VOL_READ_MIRRORS.

Action: Check errno.

OCI-07248: sfwfb: write error, unable to write database block.

Cause: sfwfb returns an error.

Action: This is an oracle internal error.

OCI-07249: slsget: open error, unable to open /proc/pid.

Cause: The open() system call returned an error.

Action: Check that /proc has the right permissions.

OCI-07250: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

OCI-07251: spcre: semget error, could not allocate any semaphores.

Cause: Semget failed to even allocate a single semaphore. Either they are all in use or the system is not configured to have any semaphores.

Action: Check to see if all semaphores are in use. Check to see if system is configured to have semaphores. Check errno.

OCI-07252: spcre: semget error, could not allocate semaphores.

Cause: Semget system call returned an error. Possible resource limit problem.

Action: Check errno. Verify that enough semaphores are available in system. If additional errors occur in destroying the semaphore sets then sercose[0] will be non-zero. If this occurs, remove the semaphore sets using ipcrm.

OCI-07253: spdes: semctl error, unable to destroy semaphore set.

Cause: Semctl system call returned an error.

Action: Check semaphore sets. May require manual cleanup. Check additional information returned. Consult OS reference manual.

OCI-07254: spdcr: translation error while expanding ?/bin/oracle.

Cause: An error occurred while translating the name of the oracle executable.

Action: Check sercose[0] for error returned from sltln. Perhaps \$(ORACLE_HOME) is not set correctly.

OCI-07255: spini: cannot set up signal handler.

Cause: System failed to set up signal handler.

Action: Check errno and sercose[0] for the signal number that failed.

OCI-07256: sptap: cannot set up signal handler to catch exceptions.

Cause: System failed to set up signal handler to catch exceptions.

Action: Check errno and sercose[0] for the signal number that failed.

OCI-07257: spdcr: translation error expanding program name.

Cause: Error occurred when expanding program name ora_PNAME_@. The result of this translation is put in argv[0] of oracle process.

Action: Check error returned by sltln returned in sercose[0].

OCI-07258: spdcr: fork error, unable to create process.

Cause: An error occurred when creating a new process.

Action: Check errno. Perhaps a system limit on the number of processes has been exceeded.

OCI-07259: spdcr: exec error, detached process failed in startup.

Cause: An oracle detached process died shortly after startup. Wait() indicated that a child process terminated.

Action: Check ?/dbs directory for trace or core files. Check errno.

OCI-07260: spdcr: wait error.

Cause: Wait system call returned an error.

Action: Check errno.

OCI-07261: spdde: kill error, unable to send signal to process.

Cause: Kill system call returned an error. Possibly an attempt to destroy an already gone process.

Action: Check errno.

OCI-07262: sptpa: sptpa called with invalid process id.

Cause: This is an internal error.

Action: This is an oracle internal error.

OCI-07263: sptpa: kill error.

Cause: Kill system call returned an error. Possible OS error.

Action: Check errno. Additional information indicates the process ID tested.

OCI-07264: spwat: semop error, unable to decrement semaphore.

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Verify semaphore set exists. A possible cause for this error is that a "shutdown abort" was done while this process was running.

OCI-07265: sppst: semop error, unable to increment semaphore.

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in `sercose[0]`. Check semaphore set existence. A possible cause for this error is that a "shutdown abort" was done while this process was running.

OCI-07266: sppst: invalid process number passed to sppst.

Cause: Function was passed an invalid oracle process id.

Action: Internal error.

OCI-07267: spwat: invalid process number.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

OCI-07268: szguns: getpwuid error.

Cause: `Getpwuid()` could not find an entry in the `passwd` file for a user.

Action: Add an entry for the user in the `passwd` file.

OCI-07269: spdcr: detached process died after exec.

Cause: Detached process successfully executed, but died shortly thereafter. Additional information indicates exit code, and termination status.

Action: Check termination code for information as to why process exited. Check for core dump or trace file.

OCI-07270: spalck: setitimer error, unable to set interval timer.

Cause: An error occurred while trying to set an interval timer. Probable porting problem.

Action: Check errno.

OCI-07271: spwat: invalid oracle process number.

Cause: Function was called with an invalid oracle process number (0).

Action: Internal oracle error.

OCI-07272: spwat: invalid semaphore set id.

Cause: Semaphore ID fetched from SGA was not initialized to valid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

OCI-07273: sppst: invalid semaphore id.

Cause: Semaphore ID fetched from SGA contained an invalid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

OCI-07274: spdcr: access error, access to oracle denied.

Cause: Unable to access "oracle" program. Verify `?/bin/oracle` or `$ORABCKPRG` exist, and are executable.

Action: Check errno returned.

OCI-07275: unable to send signal to process

Cause: The kill system call returned an error. Possibly an attempt to signal a process which does not exist.

Action: Check errno.

OCI-07276: no dba group in /etc/group.

Cause: A group has not been set up for dba users.

Action: Contact system administrator. Set up dba group in /etc/group.

OCI-07277: spdde: illegal pid passed as argument.

Cause: A 0 pid was passed to spdde.

Action: Internal error. .

OCI-07278: splon: ops\$username exceeds buffer length.

Cause: Splon constructed an ops\$username logon which exceeded the allotted buffer space.

Action: Use a shorter Unix username, or use an oracle username. Contact customer support.

OCI-07279: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

OCI-07280: slsget: unable to get process information.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

OCI-07281: slsget: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

OCI-07282: sksaprd: string overflow.

Cause: The internal buffer is not big enough to hold the archive control string.

Action: Internal restriction. Try a shorter archive control string.

OCI-07283: sksaprd: invalid volume size for archive destination.

Cause: An invalid volume size was specified.

Action: Specify a valid volume size in archive control string.

OCI-07284: sksaprd: volume size specification not terminated properly.

Cause: Some non-numeric text follows the volume size specification.

Action: Enter a correct archive control string.

OCI-07285: sksaprd: volume size should not be specified for a disk file.

Cause: Volume size was specified for a disk file.

Action: If you are archiving to a disk file, do not specify its volume size.

OCI-07286: sksagdi: cannot obtain device information.

Cause: Stat on the log archiving device failed.

Action: Check the returned OSD error for the reason of failure.

OCI-07287: sksagdi: unsupported device for log archiving.

Cause: Log archiving to this device is unsupported.

Action: Try log archiving to a supported device.

OCI-07290: sksagdi: specified directory for archiving does not exist.

Cause: The specified pathname is not a directory.

Action: Verify that the archive destination directory exists.

OCI-07291: sltztinit: invalid parameter to sltztinit.

Cause: The sltztinit routine was called with invalid arguments. The input or output parameters were either NULL or invalid.

Action: Probable internal oracle error. Contact customer support.

OCI-07303: database block size specified in parameter file is invalid

Cause: The database block size must be a multiple of the physical block size, and less than the maximum block size.

Action: Verify that the db_block_size parameter is correct in INIT.ORA and restart the instance. Consult platform specific documentation for supported sizes.

OCI-07304: ksmcsg: illegal redo buffer size.

Cause: The redo buffer size must be a multiple of machine block size.

Action: Verify that the log_buffer INIT.ORA parameter is correctly set.

OCI-07324: smpall: malloc error while allocating pga.

Cause: Malloc library routine returned an error.

Action: Check errno. Possibly out of swap space.

OCI-07327: smpdal: attempt to destroy pga when it was not mapped.

Cause: Smpdal was called when the PGA had not been previously created.

Action: Internal error.

OCI-07339: spcre: maximum number of semaphore sets exceeded.

Cause: The internal buffer is not big enough to hold the number of semaphore set identifiers requested.

Action: Reconfigure OS to have more semaphores per set.

OCI-07345: The datafile name must not contain the string '..'.

Cause: The specified datafile name contains '..'.

Action: Correct the datafile name and retry the operation.

OCI-07346: slnrm: normalized file name is too long

Cause: After normalizing the specified file name, the resulting file name was too long.

Action: Specify the shorter file name and retry the operation.

OCI-07390: sftopn: translate error, unable to translate file name.

Cause: An error occurred while expanding the file name to open. Additional information returns error generated in translation routine.

Action: Lookup additional error code for further information.

OCI-07391: sftopn: fopen error, unable to open text file.

Cause: Fopen library routine returned an error.

Action: Verify existence and permissions.

OCI-07392: sftcls: fclose error, unable to close text file.

Cause: Fclose library routine returned an error.

Action: Possible internal oracle error.

OCI-07393: unable to delete text file

Cause: An error occurred while deleting a text file.

Action: Verify that the file exists and check additional errors.

OCI-07394: unable to append string to text file

Cause: An error occurred while performing a string put operation.

Action: This is an internal error. Check additional information.

OCI-07400: slemtr: translated name for the message file is too long.

Cause: The name for the message file overflows internal buffer.

Action: Try making the complete path-name of the message file shorter by reorganizing the directory hierarchy.

OCI-07401: sprtrap: cannot restore user exception handlers.

Cause: The system failed to restore user exception handlers.

Action: Check errno and sercose[0] for the signal number that failed.

OCI-07402: sprst: cannot restore user signal handler.

Cause: The system failed to restore user signal handlers.

Action: Check errno and sercose[0] for the signal number that failed.

OCI-07403: sfanfy: db_writers parameter not valid.

Cause: The db_writers parameter in INIT.ORA exceeds the system-dependent maximum or is less than 0.

Action: Change the db_writers parameter in INIT.ORA.

OCI-07404: sfareq: Timeout occurred waiting for request to complete.

Cause: The master database writer timed out waiting for a write or close to complete. One of the database writers may have stopped running.

Action: Check all database writer trace files. Shut down the database and try to warm start.

OCI-07405: spttrap: cannot setup alternate signal stack.

Cause: The system failed to setup an alternate signal stack.

Action: Check errno and sercose[0] for the location where it failed.

OCI-07406: slbtpd: invalid number.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

OCI-07407: slbtpd: invalid exponent.

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed.

OCI-07408: slbtpd: overflow while converting to packed decimal.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

OCI-07409: slpdtb: invalid packed decimal nibble.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

OCI-07410: slpdtb: number too large for supplied buffer.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

OCI-07411: slgfn: full path name too big for supplied buffer.

Cause: The supplied buffer is not big enough to hold the full path name.

Action: The construction of the full path name cannot be performed.

OCI-07412: sfaslv: Error getting entry in asynchronous write array.

Cause: One of the database writer processes could not locate its entry in the SGA.

Action: Contact customer support.

OCI-07415: slpath: allocation of memory buffer failed.

Cause: Malloc() failed to allocate buffer for storing ORACLE_PATH.

Action: System has run out of heap space. Additional information indicates errno.

OCI-07416: slpath: pathname construction failed; lack of output buffer space.

Cause: The slpath routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0] and constructed pathname length in sercose[1].

OCI-07417: sfareq: One or more database writers not active.

Cause: One or more of the database writer processes is no longer running.

Action: Check the trace files for the database writers. Shut down the database and try to warm start.

OCI-07418: sfareq: Database writer got error in timing function.

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

OCI-07419: sfareq: Database writer got error in timing function.

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

OCI-07425: sdpri: error *string* in translating dump file location.

Cause: An oracle error occurred when translating the location of the dump file.

Action: Check the oracle error code.

OCI-07426: spstp: cannot obtain the location of dbs directory.

Cause: An oracle error occurred when translating the location of the dbs directory.

Action: Check additional information for the error returned from sltln.

OCI-07427: spstp: cannot change directory to dbs.

Cause: Chdir system call returned an error. Possible permission problems.

Action: Check additional information for the OS error code.

OCI-07431: fork failed

Cause: The server process was unable to fork a child process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-07432: unable to perform nested sleep

Cause: An attempt was made to make a process sleep when it was already sleeping. This platform does not support this capability.

Action: Try the SLEEP command when the process is not sleeping.

OCI-07440: WMON process terminated with error

Cause: The wakeup monitor process died.

Action: Warm start instance.

OCI-07442: function address must be in the range *string* to *string*

Cause: An invalid function address was specified.

Action: Use a valid function address.

OCI-07445: exception encountered: core dump [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An operating system exception occurred which should result in the creation of a core file. This is an internal error.

Action: Visit My Oracle Support to access the ORA-07445 Lookup tool (reference Note 7445.1) for more information regarding the specific ORA-07445 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support

Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

OCI-07446: sdnfy: bad value 'string' for parameter string.

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

OCI-07447: ssarena: usinit failed.

Cause: Oracle failed to create a shared arena file.

Action: Use sercerno field to determine cause of failure.

OCI-07448: ssarena: maximum number of shared arenas exceeded.

Cause: Oracle attempted to create more shared arena files than permitted.

Action: Raise the value for max_arena in INIT.ORA.

OCI-07449: sc: usnewlock failed.

Cause: Oracle failed to acquire a shared arena lock.

Action: Check result code in sercerno to determine the cause of failure.

OCI-07451: slskstat: unable to obtain load information.

Cause: kstat library returned an error. Possible OS failure

Action: Check result code in sercose[0] for more information.

OCI-07452: specified resource manager plan does not exist in the data dictionary

Cause: User tried to load a resource manager plan that does not exist.

Action: Use a resource manager plan that exists in the data dictionary.

OCI-07453: requested resource manager plan schema does not contain OTHER_GROUPS

Cause: User tried to load a resource manager plan schema that does not contain the OTHER_GROUPS group.

Action: Use a resource manager plan schema that contains the OTHER_GROUPS group.

OCI-07454: queue timeout, string second(s), exceeded

Cause: User session queued for longer than maximum specified queue duration time for consumer group.

Action: Re-submit job at a later time or increase queue timeout.

OCI-07455: estimated execution time (*string secs*), exceeds limit (*string secs*)

Cause: User attempted to execute an operation whose estimated execution time exceeds the limit specified for the consumer group.

Action: Execute job on behalf of another group, or increase limit.

OCI-07456: cannot set RESOURCE_MANAGER_PLAN when database is closed

Cause: An attempt was made to turn on the Resource Manager when the database was closed.

Action: Open the database and try again.

OCI-07457: cannot set _INTERNAL_RESOURCE_MANAGER_PLAN because of FORCE

Cause: An attempt was made to set the _INTERNAL_RESOURCE_MANAGER_PLAN parameter, however this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

OCI-07458: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the database was quiesced.

Action: Unquiesce the database.

OCI-07459: cannot restore the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally restore the RESOURCE_MANAGER_PLAN parameter to the value before it was internally set. This failed because the current plan was set by the user and therefore did not need to be restored.

Action: No action needed.

OCI-07460: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

OCI-07461: RESOURCE_MANAGER_PLAN '*string*' is locked and cannot be set

Cause: The resource manager plan was locked for deletion and could not be accessed.

Action: Ensure that the resource manager plan is not in the process of being deleted

OCI-07462: A resource manager cgroup configuration error occurred.

Cause: An error occurred when updating or using the resource manager control group (cgroup) configuration.

Action: Refresh the resource manager plan.

OCI-07463: Initialization for RESOURCE_MANAGER_CPU_SCOPE=SERVER_WIDE failed.

Cause: An error occurred when initializing with RESOURCE_MANAGER_CPU_SCOPE=SERVER_WIDE.

Action: Check incident file for further error messages.

OCI-07464: Cannot clear RESOURCE_MANAGER_PLAN if RESOURCE_MANAGER_CPU_SCOPE=SERVER_WIDE.

Cause: An attempt was made to disable the CDB resource manager plan when the resource manager scope is SYSTEM_WIDE.

Action: To disable RESOURCE_MANAGER_PLAN, set RESOURCE_MANAGER_CPU_SCOPE to INSTANCE_ONLY.

OCI-07468: spwat: mset error, unable to set semaphore.

Cause: The mset routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

OCI-07469: sppst: mclear error, unable to clear semaphore.

Cause: The mclear routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

OCI-07470: snclget: cannot get cluster number.

Cause: The cluster_status system call failed to get status information for the current cluster.

Action: Check result code in sercose[0]. Possible operating system failure.

OCI-07471: snclrd: name translation error of sgadef.dbf file name.

Cause: Unable to expand out ?/dbs/sgadef@.dbf file name.

Action: Verify \$(ORACLE_HOME) and \$(ORACLE_SID) are properly set. Check error number returned from sltn in sercose[0].

OCI-07472: snclrd: open error when opening sgadef.dbf file.

Cause: open failed when opening the file ?/dbs/sgadef@.dbf

Action: Check errno. Possible permission problem. Verify that the file ?/dbs/sgadef@.dbf exists.

OCI-07473: snclrd: read error when trying to read sgadef.dbf file.

Cause: Read had an error when reading sgadef.dbf file.

Action: Check errno. Verify file exists, and is correct size.

OCI-07474: snclrd: close error, unable to close sgadef.dbf file.

Cause: An error occurred in close, while closing the file "?/dbs/sgadef@.dbf"

Action: Check errno. Possible operating system error.

OCI-07475: slsget: cannot get vm statistics.

Cause: The vm_statistics system call failed to get virtual memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

OCI-07476: slsget: cannot get mapped memory statistics.

Cause: The vm_mapmem system call failed to get mapped memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

OCI-07477: scgcmn: lock manager not initialized.

Cause: Lock manager must be initialized before converting locks.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07478: scgcmn: cannot get lock status.

Cause: lm_stat_lock failed.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07479: scgcmn: cannot open or convert lock.

Cause: lm_open or lm_open_convert failed.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07480: snchmod: cannot change permissions on ?/dbs/sgalm.dbf.

Cause: When creating an instance, snlmini could not change the permissions on ?/dbs/sgalm.dbf

Action: Contact your customer support representative.

OCI-07481: snlmatt: cannot attach to lock manager instance.

Cause: lm_attach failed to attach to lock manager instance.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07482: snlmini: cannot create lock manager instance.

Cause: lm_create failed to create lock manager instance.

Action: Check permissions on ?/dbs, and remove ?/dbs/sgalm.dbf if it exists, then retry.

OCI-07483: snlkget: cannot convert(get) lock.

Cause: lm_convert failed to convert(get) lock.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07484: snlkput: cannot convert(put) lock.

Cause: lm_convert failed to put lock value.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07485: scg_get_inst: cannot open instance number lock.

Cause: lm_open failed.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07486: scg_get_inst: cannot convert(get) instance number lock.

Cause: lm_convert failed to get lock value.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07487: scg_init_lm: cannot create lock manager instance.

Cause: lm_create failed.

Action: Check result code in sercerno. Possible lock manager failure.

OCI-07488: scgrcl: lock manager not initialized.

Cause: Lock manager must be initialized before releasing locks.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07489: scgrcl: cannot get lock status.

Cause: `lm_stat_lock` failed during lock release/cancel.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07490: scgrcl: cannot convert lock.

Cause: `lm_convert` failed during lock release/cancel.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07491: scgrcl: cannot cancel lock request.

Cause: `lm_cancel` failed during lock release/cancel.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07492: scgrcl: cannot close lock.

Cause: `lm_close` failed during lock release/cancel.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07493: scgrcl: lock manager error.

Cause: An error was encountered releasing the lock.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07494: scgcm: unexpected error.

Cause: Unknown or unexpected error code.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07495: spwat: lm_wait failed.

Cause: `lm_wait` failed.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07496: sppst: lm_post failed.

Cause: `lm_post` failed.

Action: Check result code in `sercerno`. Possible lock manager failure.

OCI-07497: sdpri: cannot create trace file '*string*'; errno = *string*.

Cause: 1. The trace file could not be created for writing. 2. The trace file is a symbolic link.

Action: 1. Check if the dump directory exists and whether it is writable. 2. Remove the symbolic link.

OCI-07498: spstp: Unable to open /dev/resched.

Cause: The rescheduling driver `/dev/resched` is not found or is not working properly.

Action: Check installation of the ORACLE rescheduling driver in the AIX kernel.

OCI-07499: spgk: Cannot reschedule.

Cause: The rescheduling driver /dev/resched is not open. This is an internal error and should not occur.

Action: Contact your customer support representative.

OCI-07500 to OCI-09857

OCI-07500: scglaa: \$cantim unexpected return

Cause: VMS system service \$CANTIM returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07501: scgtoa: \$deq unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07502: scgcmn: \$enq unexpected return

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07503: scgcmn: \$setimr unexpected return

Cause: VMS system service \$SETIMR returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07504: scgcmn: \$hiber unexpected return

Cause: VMS system service \$HIBER returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07505: scggt: \$enq parent lock unexpected return

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07506: scgri: \$deq unexpected return on lockid *string*

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07507: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to VMS documentation, or contact your customer support representative.

OCI-07508: scgfal: \$deq all unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07509: scgfal: \$deq parent lock unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07510: scgbrm: \$getlki unexpected return on lockid string

Cause: VMS system service \$GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07511: sscggtl: \$enq unexpected return for master termination lock

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07512: sscggtl: \$enq unexpected return for client termination lock

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07513: sscgctl: \$deq unexpected return on cancel of term. lock

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07514: scgcan: \$deq unexpected return while canceling lock

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07534: scgingq: \$getlki unexpected return on lockid string

Cause: VMS system service \$GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

OCI-07548: sftopn: Maximum number of files already open

Cause: Too many test files open

Action: This is an internal error, please report to Oracle

OCI-07549: sftopn: \$OPEN failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

OCI-07550: sftopn: \$CONNECT failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

OCI-07551: sftcls: \$CLOSE failure

Cause: VMS system service \$CLOSE failed

Action: Examine system error message and refer to VMS documentation

OCI-07552: sftget: \$GET failure

Cause: VMS system service \$GET failed

Action: Examine system error message and refer to VMS documentation

OCI-07561: szprv: \$IDTOASC failure

Cause: VMS system service \$IDTOASC failed

Action: Examine system error message and refer to VMS documentation

OCI-07562: sldext: extension must be 3 characters

Cause: An extension was found but it is of improper length

Action: This is an internal error, please report to Oracle

OCI-07563: sldext: \$PARSE failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

OCI-07564: sldext: wildcard in filename or extension

Cause: A wildcard was used in the file name

Action: Reenter the file name completely

OCI-07565: sldext: \$SEARCH failure

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

OCI-07568: slspool: \$OPEN failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

OCI-07569: slspool: \$CLOSE failure

Cause: VMS system service \$CLOSE failed

Action: Examine system error message and refer to VMS documentation

OCI-07570: szrfc: \$IDTOASC failure

Cause: VMS system service \$IDTOASC failed

Action: Examine system error message and refer to VMS documentation

OCI-07571: szrfc: \$FIND_HELD failure

Cause: VMS system service \$FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

OCI-07572: szrfc: insufficient rolename buffer space

Cause: An OS role name was too long.

Action: Re-define the role name to be of correct length.

OCI-07573: slkhst: could not perform host operation

Cause: VMS system service LIB\$SPAWN failed

Action: Examine system error message and refer to VMS documentation

OCI-07574: szrfc: \$GETUAI failure

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

OCI-07576: sspexst: \$GETJPIW failure on process ID string

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07577: no such user in authorization file

Cause: An attempt was made to set an INTERNAL password (for either DBA or OPER privilege), but the corresponding VMS account (either ORA_sid_DBA or ORA_sid_OPER) hasn't been created yet.

Action: Add a VMS account for ORA_sid_DBA and/or ORA_sid_OPER before trying to set a password for them.

OCI-07578: szprv: \$FIND_HELD failure

Cause: VMS system service \$FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

OCI-07579: spini: \$DCLEXH failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

OCI-07580: spstp: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07581: spstp: cannot derive SID from unexpected process name

Cause: A background process did not have name of correct form

Action: If the job name was changed, restore it, otherwise this is an internal error, please report to Oracle.

OCI-07582: spstp: ORA_SID has illegal value

Cause: The ORA_SID must exist and be less than 6 characters

Action: Consult the VMS Installation guide for information on setting the SID.

OCI-07584: spdcr: invalid value for ORA_sid_(proc_)PQL\$_item

Cause: A logical name used to set a detached process quota value has an invalid value (probably non-numeric).

Action: Examine the values of these logical names, correct the one in error, and retry.

OCI-07585: spdcr: \$PARSE failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

OCI-07586: spdcr: \$SEARCH failure

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

OCI-07587: spdcr: \$CREPRC failure

Cause: VMS system service \$CREPRC failed

Action: Examine system error message and refer to VMS documentation

OCI-07588: spdcr: \$GETJPIW get image name failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07589: spdde: system ID not set

Cause: The logical name ORA_SID doesn't translate to a valid value.

Action: Check the value of ORA_SID in the process that gets the error, and correct the installation or command procedures that caused ORA_SID to be set incorrectly.

OCI-07590: spdde: \$DELPRC failure

Cause: VMS system service \$DELPRC failed

Action: Examine system error message and refer to VMS documentation

OCI-07591: spdde: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07592: sspgprv: Error obtaining required privileges

Cause: While obtaining needed privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

OCI-07593: ssprprv: Error release privileges

Cause: While releasing privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

OCI-07594: spiip: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07595: sppid: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07596: sptpa: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07597: spguns: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07598: spwat: \$SETIMR failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07599: spwat: \$SCHDWK failure

Cause: VMS system service \$SCHDWK failed

Action: Examine system error message and refer to VMS documentation

OCI-07600: slkmm: \$GETSYIW failure

Cause: VMS system service \$GETSYIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07601: spguno: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07602: spgto: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07605: szprv: \$ASCTOID failure

Cause: VMS system service \$ASCTOID failed

Action: Examine system error message and refer to VMS documentation

OCI-07606: szprv: \$CHKPRO failure

Cause: VMS system service \$CHKPRO failed

Action: Examine system error message and refer to VMS documentation

OCI-07607: szaud: \$SNDOPR failure

Cause: VMS system service \$SNDOPR failed

Action: Examine system error message and refer to VMS documentation

OCI-07608: szprv: \$GETUAI failure

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

OCI-07609: szprv: \$HASH_PASSWORD failure

Cause: VMS system service \$HASH_PASSWORD failed

Action: Examine system error message and refer to VMS documentation

OCI-07610: \$GETJPIW failed in retrieving the user's MAC privileges

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07612: \$GETUAI failed in retrieving the user's clearance level

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

OCI-07613: \$GETJPIW failed in retrieving the user's process label

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

OCI-07614: \$CHANGE_CLASS failed in retrieving the user's process label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

OCI-07615: \$CHANGE_CLASS failed in retrieving the specified file label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

OCI-07616: \$CHANGE_CLASS failed in retrieving the specified device label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

OCI-07617: \$FORMAT_CLASS failed translating the binary label to a string

Cause: VMS system service \$FORMAT_CLASS failed because the given binary classification was not valid.

Action: Examine system error message and refer to SEVMS documentation

OCI-07618: \$IDTOASC failed translating a secrecy level

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy level.

Action: Define the entry in the rights database which the binary label you specified references.

OCI-07619: \$IDTOASC failed translating an integrity level

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity level.

Action: Define the entry in the rights database which the binary label you specified references.

OCI-07620: smscre: illegal database block size

Cause: An illegal database block size was specified in the parameter file. It must be positive, a multiple of 512, and less than the maximum physical i/o data size.

Action: Change db_block_size in the parameter file to conform to these limits.

OCI-07621: smscre: illegal redo block size

Cause: An illegal redo log buffer size was specified in the parameter file. It must be positive and a multiple of 512.

Action: Change log_buffer in the parameter file to conform to these limits.

OCI-07622: smscre: \$CREATE failure

Cause: While creating the system global area (SGA) backing file, VMS system service \$CREATE failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07623: smscre: \$CRMPSC failure

Cause: While creating the system global area (SGA), VMS system service \$CRMPSC failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07624: smsdes: \$DGBLSC failure

Cause: While deleting the system global area (SGA), VMS system service \$DGBLSC failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07625: smsget: \$MGBLSC failure

Cause: While mapping the system global area (SGA) during logon, VMS system service \$MGBLSC failed. The usual reason is that Oracle has not been started up.

Action: Examine the system error message and refer to VMS documentation. Start up Oracle if it is not already started.

OCI-07626: smsget: sga already mapped

Cause: An attempt to map the SGA during logon failed because it was already mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

OCI-07627: smsfre: \$CRETVA failure

Cause: While unmapping the system global area (SGA) during logoff, VMS system service \$CRETVA failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07628: smsfre: sga not mapped

Cause: An attempt to unmap the SGA during logoff failed because it was not mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

OCI-07629: smpall: \$EXPREG failure

Cause: While extending the program global area (PGA), VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

OCI-07630: smpdal: \$DELTVA failure

Cause: While deleting the program global area (PGA) during logoff, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07631: smcacx: \$EXPREG failure

Cause: While creating or extending a context area, VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

OCI-07632: smsrcx: \$DELTVA failure

Cause: While deleting a context area, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07633: smsdbp: illegal protection value

Cause: The buffer debug function was called with an illegal value. This is an internal error.

Action: Contact your customer support representative.

OCI-07634: smsdbp: \$CRETVA failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$CRETVA failed.

Action: Contact your customer support representative.

OCI-07635: smsdbp: \$SETPRT failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$SETPRT failed.

Action: Contact your customer support representative.

OCI-07636: smsdbp: \$MGBLSC failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$MGBLSC failed.

Action: Contact your customer support representative.

OCI-07637: smsdbp: buffer protect option not specified when sga created

Cause: Trying to change the buffer protect mode when the SGA was not created with buffer protect debug option. This is an internal error.

Action: Contact your customer support representative.

OCI-07638: smsget: SGA pad area not large enough for created SGA

Cause: An attempt was made to map an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

OCI-07639: smscre: SGA pad area not large enough (*string* bytes required)

Cause: An attempt was made to create an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

OCI-07640: SGA not yet valid, initialization is in progress.

Cause: An attempt was made to map to the system global area (SGA) while it was being initialized.

Action: Wait until initialization is complete and try again.

OCI-07641: smscre: Unable to use the system pagefile for the SGA

Cause: The system global area (SGA) backing file could not be allocated using the system pagefile because the system-wide limit on global pages has been exceeded.

Action: Either increase the VMS system parameter GBLPAGFIL or use a disk file as the SGA backing file.

OCI-07642: smprtset: \$CMKRNL failure

Cause: While attempting to set the protection of a region of memory, an error was returned from the \$CMKRNL system service.

Action: Examine the system error message and refer to VMS documentation.

OCI-07643: smsalo: SMSVAR is invalid

Cause: an internal error

Action: Report this error to Oracle Support Services, provide your INIT.ORA file.

OCI-07645: sszfs: \$CHANGE_CLASS failure

Cause: While attempting to set the label on a file, SEVMS service \$CHANGE_CLASS failed.

Action: Examine the system message and refer to SEVMS system documentation.

OCI-07646: sszfck: \$CREATE failure

Cause: While attempting to create a file, VMS system service \$CREATE failed.

Action: Examine the system message and refer to VMS system documentation.

OCI-07647: sszfck: \$OPEN failure

Cause: While attempting to reopen a file, VMS system service \$OPEN failed.

Action: Examine the system message and refer to VMS system documentation.

OCI-07650: sigunc: \$GETJPIW failure

Cause: While attempting to get the user's terminal device name, user name, user program name, or process name during logon, VMS system service \$GETJPIW failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07655: slsprom:\$TRNLOG failure

Cause: While attempting to translate SYS\$INPUT during a prompt for a password, VMS system service \$TRNLOG failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07656: slsprom:\$GETDVI failure

Cause: While attempting to get device characteristics during a prompt for a password, VMS system service \$GETDVI failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07657: slsprom:\$ASSIGN failure

Cause: While prompting for a password, VMS system service \$ASSIGN failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07658: slsprom:\$QIOW read failure

Cause: While prompting for a password, VMS system service \$QIOW failed.

Action: Examine the system error message and refer to VMS documentation.

OCI-07665: ssrexhd: recursive exception encountered *string string string string string*

Cause: A VMS exception occurred while executing in the Oracle exception handler. The message includes the signal number, first and second signal arguments, and exception PC, PSL and R0. This is an internal error.

Action: Contact your customer support representative.

OCI-07670: \$IDTOASC failed translating a secrecy category

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy category.

Action: Define the entry in the rights database which the binary label you specified references.

OCI-07671: \$IDTOASC failed translating an integrity category

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity category.

Action: Define the entry in the rights database which the binary label you specified references.

OCI-07672: \$PARSE_CLASS failed translating the string into a binary label

Cause: SEVMS system service \$PARSE_CLASS failed because the given string did not represent a valid classification.

Action: Examine system error message and refer to SEVMS documentation.

OCI-07680: sou2os: another call to Oracle currently executing

Cause: A call to the Oracle shared image entry point occurred from within the shared image. This is an internal error.

Action: Contact your customer support representative.

OCI-07681: sou2os: An error occurred while initializing Oracle

Cause: While attempting to set up the dispatch vectors for the shared image, an error occurred. This is an internal error.

Action: Contact your customer support representative.

OCI-07682: sou2os: set kernel dispatch fail err

Cause: During Oracle shared image entry, a dispatch to kernel mode failed.

Action: Make sure that your shared image is installed with the CMKRNL privilege, then contact your customer support representative.

OCI-07683: sou2os: \$SETPRV reset error

Cause: During an attempt to restore user privileges at Oracle shared image exit, VMS system service \$SETPRV failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07684: sou2os: supervisor stack reset error

Cause: During an attempt to restore the supervisor-mode stack at Oracle shared image exit, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07685: sou2os: supervisor stack set error

Cause: During an attempt to set the Oracle supervisor-mode stack at Oracle shared image entry, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07700: sksarch: interrupt received

Cause: An interrupt was received while archiving the logs

Action: Retry operation

OCI-07701: sksatln: internal exception: output buffer too small

Cause: Overflow of buffer for parsing archive control text string

Action: This is an internal error, please report to Oracle

OCI-07702: unrecognized device type in archive text

Cause: Unrecognized device type in archive text

Action: This is an internal error, please report to Oracle

OCI-07703: error in archive text: need '/' after device type

Cause: The archive control text in the ARCHIVE command is invalid; the device type (to indicate a file or tape) must be followed by a '/'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

OCI-07704: error in archive text: need ':' after device name

Cause: The archive control text in the ARCHIVE command is invalid; the device name must be followed by a ':'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

OCI-07705: sksaprs: device name buffer too small

Cause: The buffer supplied for the device name is too small. This is an internal error.

Action: Contact your customer support representative.

OCI-07706: error in archive text: need disk file name

Cause: The archive control text in the ARCHIVE command is invalid; the disk file name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

OCI-07707: error in archive text: need tape label name

Cause: The archive control text in the ARCHIVE command is invalid; the tape label name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

OCI-07708: sksaprs: tape label name buffer too small

Cause: The buffer supplied for the tape label is too small. This is an internal error.

Action: Contact your customer support representative.

OCI-07709: sksaprs: archiving to a remote host is not allowed

Cause: The user specified a remote disk for archiving via DECnet.

Action: Archive to a disk on the local host.

OCI-07710: sksaprs: file name buffer too small

Cause: The buffer supplied for the file name is too small. This is an internal error.

Action: Contact your customer support representative.

OCI-07713: sksamtd: could not mount archival device (SYS\$MOUNT failure)

Cause: VMS system service SYS\$MOUNT failed

Action: Examine system error message and refer to VMS documentation

OCI-07715: sksadtd: could not dismount archival device (SYS\$DISMNT failure)

Cause: VMS system service SYS\$DISMNT failed

Action: Examine system error message and refer to VMS documentation

OCI-07716: sksachk: invalid device specification for ARCHIVE

Cause: VMS system service SYS\$GETDVI failed"

Action: Specify a valid device in ARCHIVE control string

OCI-07717: sksaalo: error allocating memory

Cause: VMS system service LIB\$GET_VM failed"

Action: Examine system error message and refer to VMS documentation

OCI-07718: sksafre: error freeing memory

Cause: VMS system service LIB\$FREE_VM failed

Action: Examine system error message and refer to VMS documentation

OCI-07721: scgcm: not enough OS resource to obtain system enqueue

Cause: A call to sys\$enq returned an error indicating that the operating system lacked the resources necessary to create a lock. This is caused by the messages SS\$_EXENQLM or SS\$_INSFMEM.

Action: Free up some of the required resource to allow the creation of the required lock.

OCI-07740: slemop: incorrect handle size (programming error)

Cause: structures used for reading error message files do not match

Action: this is an internal error, please report to Oracle

OCI-07741: slemop: \$OPEN failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

OCI-07742: slemop: \$CONNECT failure

Cause: VMS system service \$CONNECT failed

Action: Examine system error message and refer to VMS documentation

OCI-07743: slemop: incorrect error file attributes

Cause: An error message file is of incorrect format

Action: Unless an error file has been changed, report this to Oracle

OCI-07744: slemcl: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

OCI-07745: slemcl: \$CLOSE failure

Cause: VMS system service \$CLOSE failed

Action: Check system error and refer to VMS documentation

OCI-07746: slemrd: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

OCI-07747: slemrd: \$READ failure

Cause: VMS system service \$READ failed

Action: Check system error and refer to VMS documentation

OCI-07750: slemcr: fopen failure

Cause: An attempt to create a message file failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07751: slemcr: malloc failure

Cause: An attempt to allocate a cache for a newly-created message file failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07753: slemcf: fseek before write failure

Cause: An attempt to seek before writing a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07754: slemcf: fwrite failure

Cause: An attempt to write a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07755: slemcf: fseek before read failure

Cause: An attempt to seek before reading a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07756: slemcf: fread failure

Cause: An attempt to read a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

OCI-07757: slemcc: invalid handle

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

OCI-07758: slemcw: invalid handle

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

OCI-07759: slemtr: invalid destination

Cause: The destination string provided to the function is too short This is an internal error.

Action: Contact your customer support representative.

OCI-07760: slemtr: \$open failure

Cause: the \$open service failed. This is an internal error

Action: Contact your customer support representative.

OCI-07800: slbtpd: invalid number

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

OCI-07801: slbtpd: invalid exponent

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

OCI-07802: slbtpd: overflow while converting to packed decimal

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

OCI-07803: slpdtb: invalid packed decimal nibble

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

OCI-07804: slpdtb: number too large for supplied buffer

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

OCI-07820: sspscn: SYS\$CRELNM failure

Cause: An error was returned from the SYS\$CRELNM function

Action: Check system error and refer to VMS documentation

OCI-07821: sspsdn: SYS\$DELLNM failure

Cause: An error was returned from the SYS\$DELLNM function

Action: Check system error and refer to VMS documentation

OCI-07822: sspscm: SYS\$CREMBX failure

Cause: An error was returned from the SYS\$CREMBX function while trying to create the process dump mailbox.

Action: Check system error and refer to VMS documentation

OCI-07823: sspsq: \$QIO failure

Cause: An error was returned from \$QIO while trying to queue a read to the process dump mailbox.

Action: Check system error and refer to VMS documentation

OCI-07824: sspain: \$SETIMR failure

Cause: An error was returned from SYS\$SETIMR while trying to queue a process spin-watch timer.

Action: Check system error and refer to VMS documentation

OCI-07825: sspsc: \$QIO failure at AST level

Cause: An error was returned from SYS\$QIO while trying to read the process dump mailbox.

Action: Check system error and refer to VMS documentation

OCI-07826: sspscm: SYS\$GETDVIW failure

Cause: An error was returned from SYS\$GETDVIW while trying to get information about the process dump mailbox.

Action: Check system error and refer to VMS documentation

OCI-07840: sllfop: LIB\$GET_VM failure

Cause: An error was returned from LIB\$GET_VM while attempting to allocate memory for an i/o vector.

Action: Check system error and refer to VMS documentation

OCI-07841: sllfop: SYS\$OPEN failure

Cause: An error was returned from SYS\$OPEN while attempting to open the data file for reading

Action: Check system error and refer to VMS documentation

OCI-07842: sllfcl: SYS\$CLOSE failure

Cause: An error was returned from SYS\$CLOSE while attempting to close the input data file

Action: Check system error and refer to VMS documentation

OCI-07843: sllfcl: LIB\$FREE_VM failure

Cause: An error was returned from LIB\$FREE_VM while attempting to free the memory for the i/o vector

Action: Check system error and refer to VMS documentation

OCI-07844: sllfop: LIB\$GET_VM failure

Cause: An error was returned from LIB\$GET_VM while attempting to allocate memory for data and index buffers

Action: Check system error and refer to VMS documentation

OCI-07845: sllfcl: LIB\$FREE_VM failure

Cause: An error was returned from LIB\$FREE_VM while attempting to free memory used by data and index buffers

Action: Check system error and refer to VMS documentation

OCI-07846: sllfop: *string* byte record too big for *string* byte user buffer

Cause: The longest record in the file will not fit into the largest data buffer that can be allocated

Action: Modify the RMS file to have smaller records

OCI-07847: sllfop: \$CONNECT failure

Cause: An error was returned by SYS\$CONNECT while attempting to open the data file

Action: Check system error and refer to VMS documentation

OCI-07848: sllfrb: \$GET failure

Cause: An error was returned by SYS\$GET while attempting to read the data file

Action: Check system error and refer to VMS documentation

OCI-07849: sllfsk: \$GET failure

Cause: An error was returned by SYS\$GET while attempting to skip records in the input file

Action: Check system error and refer to VMS documentation

OCI-07850: sllfop: bad option

Cause: You are using a bad option to loader Fixed= is one legal option. Check documentation for others.

Action: Check documentation

OCI-07860: osnsoi: error setting up interrupt handler

Cause: An error occurred while setting up the control interrupt handler

Action: This is an internal error. Contact your Oracle representative.

OCI-07880: sdopnf: internal error

Cause: A list of all files open by this process could not be obtained.

Action: This is an internal error. Contact your customer support representative.

OCI-08000: Maximum number of session sequence lists exceeded.

Cause: The sequence parent state objects for this session are all used.

Action: Quit this session and begin a new session.

OCI-08002: Sequence *string*.CURRVAL is not yet defined in this session.

Cause: Sequence CURRVAL was selected before sequence NEXTVAL.

Action: Select NEXTVAL from the sequence before selecting CURRVAL.

OCI-08003: Sequence *string*.NEXTVAL exceeds internal limits.

Cause: The sequence was created with invalid values for some of the parameters. The calculation of NEXTVAL cannot be made because it exceeds the maximum allowed size.

Action: Alter or re-create the sequence number within the allowed limits.

OCI-08004: Sequence *string*.NEXTVAL *string* *string*VALUE and cannot be instantiated.

Cause: Instantiating NEXTVAL violates either the MINVALUE or the MAXVALUE.

Action: Alter the sequence so that a new value can be requested.

OCI-08005: specified row does not exist

Cause: A row with the given rowid does not exist in any of the tables given

Action: check the query for misspellings of table names and the rowid

OCI-08006: specified row no longer exists

Cause: the row has been deleted by another user since the operation began

Action: re-try the operation

OCI-08007: Further changes to this block by this transaction not allowed

Cause: Max locks have been reached for this transaction in this block

Action: Commit changes

OCI-08008: another instance is mounted with USE_ROW_ENQUEUES = *string*

Cause: the shared instance being started does not have the same value for use_row_enqueues as already running instances

Action: ensure that all instances' INIT.ORA files specify the same value for the parameter 'use_row_enqueues'

OCI-08100: index is not valid - see trace file for diagnostics

Cause: Validate Index detected an inconsistency in its argument index

Action: Send trace file to your customer support representative

OCI-08101: index key does not exist file *string*: (root *string*, node *string*) blocks (*string*)

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

OCI-08102: index key not found, obj# *string*, file *string*, block *string* (*string*)

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

OCI-08103: object no longer exists

Cause: The object has been deleted by another user since the operation began, or a prior incomplete recovery restored the database to a point in time during the deletion of the object.

Action: Delete the object if this is the result of an incomplete recovery.

OCI-08104: this index object *string* is being online built or rebuilt

Cause: the index is being created or rebuild or waited for recovering from the online (re)build

Action: wait the online index build or recovery to complete

OCI-08105: Oracle event to turn off smon cleanup for online index build

Cause: set this event only under the supervision of Oracle development

Action: debugging only

OCI-08106: cannot create journal table *string.string*

Cause: The online index builder could not create its journal table

Action: Rename the conflicting table or rerun the SQL statement. There may be a concurrent online index rebuild on the same object.

OCI-08107: cannot perform DDL on an internal journal table *string.string*

Cause: DDL is not allowed on an internal journal table created for online index build.

Action: Wait for SMON to drop the internal journal table that is not being used, or try the function `ONLINE_INDEX_CLEAN` in PL/SQL package `DBMS_REPAIR` to clean it on demand.

OCI-08108: may not build or rebuild this type of index online

Cause: only support normal index or IOT top-level index

Action: change your index type

OCI-08109: nosort is not a supported option for online index build

Cause: may not specify nosort for online index build

Action: get rid of nosort in the index creation command

OCI-08110: Oracle event to test SMON cleanup for online index build

Cause: Oracle Kernel test only

Action: Donot set this event(for test only)

OCI-08111: a partitioned index may not be coalesced as a whole

Cause: User attempted to coalesce a partitioned index using `ALTER INDEX COALESCE` statement, which is illegal

Action: Coalesce the index a (sub)partition at a time (using `ALTER INDEX MODIFY (sub)PARTITION COALESCE`)

OCI-08112: a composite partition may not be coalesced as a whole

Cause: User attempted to coalesce a composite partition

Action: Coalesce the index a subpartition at a time (using ALTER INDEX MODIFY SUBPARTITION COALESCE)

OCI-08113: composite partition index may not be compressed

Cause: User attempted to compress a composite partition index

Action: create uncompressed composite partition index

OCI-08114: can not alter a fake index

Cause: User attempted to alter a fake index

Action: drop fake index

OCI-08115: can not online create/rebuild this index type

Cause: User attempted to create index type that online doesnot support

Action: use offline index create/rebuild command

OCI-08116: can not acquire dml enough lock(S mode) for online index build

Cause: User attempted to create index online without allowing DML Share lock

Action: allow DML share lock on the base table

OCI-08117: Index Organized Table operation released its block pin

Cause: Block maintenance forced the release of a block pin

Action: Contact your customer support representative

OCI-08118: Deferred FK constraints cannot be enforced, index too big (*string*)

Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB_BLOCK_SIZE.

Action: First try to drop the Foreign Key and then the primary key.

OCI-08119: The new initrans will make the index too big

Cause: Specifying the initrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller initrans value

OCI-08120: Need to create SYS.IND_ONLINE\$ table in order to (re)build index

Cause: Alter index Build/Rebuild online require existing of SYS.IND_ONLINE\$ table.

Action: User/DBA needs to create sys.ind_online\$ before alter the index /rdbms/admin/catcio.sql contains script to create ind_online\$.

OCI-08121: Too many offline indexes need to be maintained.

Cause: The limit is 65,536 offline indexes for each statement.

Action: Change the index maintenance to online. If indexes need to be maintained offline, drop some indexes.

OCI-08122: Online (re)build of index rolled back due to DML conflict

Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

OCI-08175: discrete transaction restriction violated (*string*)

Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

OCI-08176: consistent read failure; rollback data not available

Cause: Encountered data changed by an operation that did not generate rollback data: create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Restart the read-only transactions.

OCI-08177: can't serialize access for this transaction

Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

OCI-08178: illegal SERIALIZABLE clause specified for user INTERNAL

Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

OCI-08179: concurrency check failed

Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

OCI-08180: no snapshot found based on specified time

Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

OCI-08181: specified number is not a valid system change number

Cause: supplied scn was beyond the bounds of a valid scn.

Action: use a valid scn.

OCI-08182: operation not supported while in Flashback mode

Cause: user tried to do dml or ddl while in Flashback mode

Action: disable Flashback and re-attempt the operation

OCI-08183: Flashback cannot be enabled in the middle of a transaction

Cause: user tried to do Flashback in the middle of a transaction

Action: do a commit

OCI-08184: attempting to re-enable Flashback while in Flashback mode

Cause: as stated above

Action: disable first before re-enabling

OCI-08185: flashback not supported for user SYS

Cause: The user was logged in as SYS.

Action: Log on as a different (non-SYS) user.

OCI-08186: invalid timestamp specified

Cause: as stated above

Action: enter a valid timestamp

OCI-08187: snapshot expression not allowed here

Cause: A snapshot expression using AS OF was specified when not allowed.

Action: Do not use the AS OF clause

OCI-08189: cannot flashback the table because row movement is not enabled

Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.

Action: Enable row movement on the table

OCI-08190: restore point *string* is from a different incarnation of the database

Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database

Action: Provide a restore point from the current database incarnation

OCI-08191: Flashback Table operation is not supported on remote tables.

Cause: An attempt was made to perform Flashback Table operation on a remote table. This was not supported.

Action: Do not perform a Flashback Table operation on remote tables.

OCI-08192: Flashback Table operation is not allowed on fixed tables, external tables, and hybrid partitioned tables.

Cause: An attempt was made to perform Flashback Table operation on a fixed table, external table, or a hybrid partitioned table. This was not supported.

Action: Do not perform a Flashback Table operation on fixed tables, external tables, or hybrid partitioned tables.

OCI-08193: Flashback Table operation is not allowed on temporary tables.

Cause: An attempt was made to perform Flashback Table operation on a temporary table. This was not supported.

Action: Do not perform a Flashback Table operation on temporary tables.

OCI-08194: Flashback Table operation is not allowed on materialized views.

Cause: An attempt was made to perform Flashback Table operation on a materialized view. This was not supported.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

OCI-08195: Flashback Table operation is not supported on partitions.

Cause: An attempt was made to perform Flashback Table operation on a partition. This was not supported.

Action: Do not perform a Flashback Table operation on partitions.

OCI-08196: Flashback Table operation is not allowed on Advanced Queue tables.

Cause: An attempt was made to perform Flashback Table operation on Advanced Queue tables. This was not supported.

Action: Do not perform a Flashback Table operation on Advanced Queue tables.

OCI-08197: Flashback Table operation is not supported on clustered tables.

Cause: An attempt was made to perform Flashback Table operation on a clustered table. This was not supported.

Action: Do not perform a Flashback Table operation on clustered tables.

OCI-08198: Flashback Table is not supported on object tables, nested tables.

Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This was not supported.

Action: Do not perform a Flashback Table operation on such tables.

OCI-08199: Flashback Table operation is not supported on this object.

Cause: An attempt was made to perform Flashback Table operation on an object on which the operation was not supported.

Action: Do not perform a Flashback Table operation on such objects.

OCI-08205: ora_addr: \$ORACLE_SID not set in environment

Cause: The environment variable ORACLE_SID is not set.

Action: Set the ORACLE_SID environment variable.

OCI-08206: ora_addr: cannot translate address file name

Cause: Cannot translate \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf.

Action: Ensure that ORACLE_HOME and ORACLE_SID are properly set.

OCI-08207: ora_addr: cannot open address file

Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and has correct permissions.

OCI-08208: ora_addr: cannot read from address file

Cause: The address file could not be read.

Action: Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and contains a single line of text.

OCI-08209: scngrs: SCN not yet initialized

Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

OCI-08210: Requested I/O error

Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

OCI-08230: smscre: failed to allocate SGA

Cause: The `n_core` system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check `INIT.ORA` parameters.

OCI-08231: smscre: unable to attach to SGA

Cause: The process cannot attach to the SGA. This can happen if either the listener can't attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

OCI-08232: smsdes: cannot detach from SGA

Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

OCI-08233: smsdes: cannot unmap SGA

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Note `nCX` error returned; contact your customer support representative.

OCI-08234: smsget: cannot get instance listener address

Cause: The instance listener address cannot be read from the `sgadef` file.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Additional information gives error return from `ora_addr`.

OCI-08235: smsget: listener not on this node

Cause: A process wishing to attach to the SGA is on a different node from its instance's listener.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Contact your customer support representative.

OCI-08236: smsget: cannot share subcube with listener

Cause: The `n_share` call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

OCI-08237: smsget: SGA region not yet created

Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

OCI-08238: smsfre: cannot detach from SGA

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Check `nCX` error, and contact your customer support representative.

OCI-08243: recursive audit operation attempted

Cause: A recursive operation subject to an enabled audit policy was attempted during an auditing operation or an audit table movement operation. The most likely reasons are: (1) Space management operations were running to free up space in the audit tablespace. (2) A SQL operation was being performed on dictionary tables (either directly or using database triggers) that produced more audit records.

Action: Check the space in the tablespace for SYS.AUD\$ or SYS.FGA_LOG\$ and extend the tablespace, if necessary. Or, if the problem was caused by recursively auditing SQL operations, change or remove the audit policy on such objects or statements.

OCI-08260: ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

OCI-08261: ora_addr: cannot find name in nameserver

Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

OCI-08263: ora_addr: cannot free listener address

Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

OCI-08264: ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

OCI-08265: create_ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

OCI-08266: create_ora_addr: cannot register name in nameserver

Cause: The listener's addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

OCI-08267: destroy_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

OCI-08268: create_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

OCI-08269: destroy_ora_addr: cannot destroy name

Cause: The listener's addressing information could not be removed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

OCI-08270: sksachk: Illegal archival control string

Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

OCI-08271: sksabln: Buffer size not large enough for archive control string

Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

OCI-08274: Out of memory for environment variable

Cause: There is insufficient memory to return the requested value

Action: Reduce memory usage and retry.

OCI-08275: Environment variable unset

Cause: The requested environment variable is not set

Action: Ensure that the variable name requested is correct.

OCI-08276: No room in nameserver for pid

Cause: There is no room to record the pid for a background process

Action: Shutdown abort and restart the database.

OCI-08277: Cannot set environment variable

Cause: There is insufficient memory to expand the environment.

Action: Reduce memory usage and retry.

OCI-08278: Cannot get CPU statistics

Cause: Could not retrieve CPU times because n_stat failed.

Action: Contact customer support.

OCI-08308: sllfop: Cannot open file

Cause: Oracle could not open a file.

Action: Check the Unix errno returned as additional information.

OCI-08309: sllfop: Cannot fstat file

Cause: Oracle could not obtain information about an open file.

Action: Check the Unix errno returned as additional information.

OCI-08310: sllfop: Bad value for reccsize

Cause: An illegal value for the record size was specified.

Action: Specify a value for the `resize` option that is greater than 0.

OCI-08311: `sllfop`: bad value for `maxrecsize`

Cause: An illegal value for the maximum record size was specified.

Action: Specify a value for the `maxrecsize` option that is greater than 0.

OCI-08312: `sllfop`: unrecognized processing option

Cause: An unrecognized processing option was specified.

Action: Check the Oracle for nCUBE 2 User's Guide for valid options.

OCI-08313: `sllfop`: could not allocate buffers

Cause: Memory for the load buffers could not be allocated.

Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL*Loader again.

OCI-08314: `sllfcf`: Error closing file

Cause: An error occurred trying to close a file.

Action: Check the Unix `errno` returned as additional information.

OCI-08315: `sllfrb`: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix `errno` returned as additional information.

OCI-08316: `sllfsk`: Error seeking in file.

Cause: The `lseek` system call returned an error.

Action: Check the Unix `errno` returned as additional information.

OCI-08317: `sllfsk`: Error seeking in file.

Cause: The `lseek` system call returned an error.

Action: Check the Unix `errno` returned as additional information.

OCI-08318: `sllfsk`: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix `errno` returned as additional information.

OCI-08319: `sllfsk`: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix `errno` returned as additional information.

OCI-08320: `scnget`: Call to `scnget` before `scnset` or `scnfnd`.

Cause: An internal error

Action: Contact your customer support representative.

OCI-08321: `scnmin`: NOT IMPLEMENTED YET

Cause: An internal error

Action: Contact your customer support representative.

OCI-08322: scnmin: open/convert of bias lock failed

Cause: A call to the lkmgr failed to open and convert the bias lock

Action: Check to make sure the lkmgr is up.

OCI-08323: scnmin: close of bias lock failed

Cause: A call to the lkmgr failed to close the bias lock

Action: Check to make sure the lkmgr is up.

OCI-08330: Printing not supported

Cause: An attempt was made to automatically spool a file to the printer

Action: None

OCI-08331: Wait operation timed out

Cause: Oracle timed out waiting for an event

Action: Contact your Oracle support representative

OCI-08332: rollback segment #string specified not available

Cause: (same as 1545)

Action: (same as 1545). Also, make sure you have created enough rollback segments for the number of instances you are trying to start.

OCI-08340: This command not allowed on nCUBE, only one thread is ever used.

Cause: An illegal command was executed for the nCUBE platform.

Action: There is no need to issue this command.

OCI-08341: On nCUBE, this command can only be executed from instance 1.

Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

OCI-08342: sropen: failed to open a redo server connection

Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

OCI-08343: srclose: failed to close a redo server connection

Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

OCI-08344: srapp: failed to send redo data to the redo server

Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

OCI-08401: invalid compiler name: string

Cause: An invalid compiler name *compname* was passed to a UTL_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

OCI-08402: error executing PL/SQL code coverage

Cause: An error occurred during execution of a PL/SQL code coverage procedure.

Action: Check the error stack for more details.

OCI-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message

Cause: The WMSGBSIZ is the maximum size for warning message block, it is recommended to be 1024 bytes to 8 kbytes.

Action: Defined WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

OCI-08413: invalid compiler type in FORMAT parameter at string

Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

OCI-08414: error encountered in string

Cause: The function *routine* returned an error. Where *routine* may be: RAW_TO_NUMBER NUMBER_TO_RAW RAW_TO_NUMBER_FORMAT NUMBER_TO_RAW_FORMAT MAKE_NUMBER_TO_RAW_FORMAT MAKE_RAW_TO_NUMBER_FORMAT

Action: This message will be preceded by messages providing details about the error. Check those messages to determine what action to take.

OCI-08429: raw data has invalid digit in display type data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

OCI-08430: raw data missing leading sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

OCI-08431: raw data missing zero as defined in picture

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

OCI-08432: raw data has invalid floating point data

Cause: The input raw data passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

OCI-08433: invalid picture type in convert raw to number

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

OCI-08434: raw data has invalid trailing sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

OCI-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified

Cause: The input MASK passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

OCI-08436: raw data has invalid sign digit

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

OCI-08437: invalid picture type in picture mask

Cause: The picture mask parameter passed to a UTL_PG NUMBER_TO_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

OCI-08440: raw buffer is too short to hold converted data

Cause: The output raw buffer passed to a UTL_PG NUMBER_TO_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

OCI-08441: closed parenthesis missing in picture mask

Cause: A closed parenthesis was missing from the picture mask passed to a UTL_PG conversion routine.

Action: Correct the picture mask.

OCI-08443: syntax error in BLANK WHEN ZERO clause in mask options

Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

OCI-08444: syntax error in JUSTIFIED clause in mask options

Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

OCI-08445: syntax error in SIGN clause in mask options

Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

OCI-08446: syntax error in SYNCHRONIZED clause in mask options

Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

OCI-08447: syntax error in USAGE clause in mask options

Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

OCI-08448: syntax error in DECIMAL-POINT environment clause

Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

OCI-08449: invalid numeric symbol found in picture mask

Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL_PG conversion routine.

Action: Correct the picture mask parameter.

OCI-08450: invalid specification of CR in picture mask

Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

OCI-08451: invalid specification of DB in picture mask

Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

OCI-08452: specification of E in picture mask is unsupported

Cause: The floating point exponent symbol 'E' was specified in the picture mask parameter passed to a UTL_PG conversion routine. The floating point data type is currently not supported by the UTL_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

OCI-08453: more than one V symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one decimal point indicator ('V'). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

OCI-08454: more than one S symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one operational sign indicator ('S'). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

OCI-08455: syntax error in CURRENCY SIGN environment clause

Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

OCI-08456: no sign in picture mask but SIGN clause in mask options

Cause: The picture mask parameter passed to a UTL_PG conversion routine contained no sign symbol ('S', '+', or '-'), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

OCI-08457: syntax error in SEPARATE CHARACTER option of SIGN clause

Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

OCI-08458: invalid format parameter

Cause: The format parameter passed to a UTL_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

OCI-08459: invalid format parameter length

Cause: The format parameter passed to a UTL_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

OCI-08460: invalid environment clause in environment parameter

Cause: The environment parameter passed to a UTL_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

OCI-08462: raw buffer contains invalid decimal data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

OCI-08463: overflow converting decimal number to Oracle number

Cause: The output variable passed to a UTL_PG RAW_TO_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and be sure that the output variable is large enough to hold the Oracle number value.

OCI-08464: input raw decimal data contains more than 42 digits

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

OCI-08465: input mask contains more than 32 characters

Cause: The input mask passed to UTL_PG numeric conversion routine contained more than 32 characters.

Action: Correct the mask input buffer.

OCI-08466: raw buffer length *string* is too short for *string*

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

OCI-08467: error converting Oracle number to *string*

Cause: An error occurred when converting an Oracle number to a COBOL *type* of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

OCI-08468: mask option *string* is not supported

Cause: The mask option *clause* was passed to a UTL_PG conversion routine, but is not supported by UTL_PG. The *clause* can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the *clause* from the mask options parameter in the PL/SQL call to UTL_PG.

OCI-08469: must use the SIGN IS SEPARATE clause in mask options

Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don't specify an S in the PICTURE character-string.

OCI-08498: Warning: picture mask '*string*' overrides picture mask option 'USAGE IS *string*' to 'USAGE IS DISPLAY'

Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

OCI-08499: Warning: picture mask options '*string*' ignored by UTL_PG

Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL_PG routine.

OCI-08500: session tag does not exist

Cause: There was no tagged session with the specified session tag.

Action: Check the specified session tag and resubmit the BEIRUT action.

OCI-08501: session tag is already used

Cause: The session tag was already used by another tagged session.

Action: Use another session tag.

OCI-08502: current session is already tagged

Cause: The current session was already tagged. A session could only be tagged once.

Action: To change a session tag, untag the session, then tag it again with the new tag.

OCI-08503: current session is not tagged

Cause: The current session was not tagged before the BEIRUT action.

Action: Tag the current session using the BEIRUT_TAG action before executing your action.

OCI-08504: session tag string is too long: greater than *string* character(s)

Cause: The specified session tag was too long.

Action: Use a shorter session tag string.

OCI-08505: session tag string is too short: less than *string* character(s)

Cause: The specified session tag was too short.

Action: Use a longer session tag string.

OCI-08506: invalid BEIRUT action.

Cause: The specified action to the BEIRUT event was invalid

Action: Ensure that the specified BEIRUT action is valid.

OCI-08507: A session cannot terminate itself.

Cause: Tried to make a tagged session kill itself.

Action: Try to terminate the tagged session using another session.

OCI-08508: An attempt to terminate a critical background process *string* failed.

Cause: Tried to terminate a critical background process.

Action: Try to terminate the critical background process using the operating system KILL command.

OCI-08509: background process name does not exist

Cause: An attempt to tag a named background process failed because there was no background process name matching the specified tag.

Action: Check the background process name and resubmit the tag action.

OCI-08510: process does not have a session state object

Cause: An attempt to tag a process failed because the process did not have a session state object.

Action: Ensure that the process has a session state object and resubmit the tag action.

OCI-08511: session tag is reserved for background process name.

Cause: An attempt was made to tag a database session with a reserved background process name.

Action: Use another session tag that differs from the reserved names of background processes.

OCI-08512: breakpoint is not enabled

Cause: An attempt was made to process a BEIRUT action assuming a breakpoint is enabled but it is not.

Action: Enable the breakpoint before processing the BEIRUT action.

OCI-08513: breakpoint is explicitly disabled

Cause: An attempted was made to process a BEIRUT action assuming a breakpoint was enabled but it was explicitly disabled.

Action: Enable the breakpoint again before processing the BEIRUT action.

OCI-08514: breakpoint name is too long: greater than *string* character(s)

Cause: The specified breakpoint name was too long.

Action: Check the breakpoint length upper limit in the error message and update the breakpoint name accordingly.

OCI-08515: breakpoint list length is too long: greater than *string* character(s)

Cause: The specified breakpoint list was too long.

Action: Check the the breakpoint list length upper limit in the error message and update the breakpoint list accordingly.

OCI-08516: deadlock detected: current session waits on breakpoint *string* while test session waits on breakpoint *string*.

Cause: Faulty test scenarios led to a deadlock. The current session waited on a breakpoint while test session waited for current session on another breakpoint.

Action: Check your test script to ensure that the test session WAIT_FOR is on the same breakpoint that the current session hits first.

OCI-08517: current session waiting on breakpoint *string* timed out after waiting for *string* seconds

Cause: The current session waited on a breakpoint until timeout.

Action: Fix the test script to post the database session out of its waiting using the BEIRUT_CONTINUE action.

OCI-08518: test session timed out waiting for database session *string* on breakpoint *string* after *string* seconds

Cause: The database session did not hit the breakpoint that the test session is waiting on.

Action: Fix the code to hit the specified breakpoint or the test script to wait on the correct breakpoint name.

OCI-09200: sfccf: error creating file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

OCI-09201: sfcopy: error copying file

Cause: Block sizes may not match

Action: See OSD error accompanying this message

OCI-09202: sfifi: error identifying file

Cause: db_block_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

OCI-09203: sfofi: error opening file

Cause: File attributes may have changed

Action: See OSD error accompanying this message

OCI-09204: sftof: error opening temporary file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

OCI-09205: sfqio: error reading or writing to disk

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09206: sfrfb: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09207: sfsrd: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09208: sftcls: error closing file

Cause: File may have been corrupted

Action: See OSD error accompanying this message

OCI-09209: sftget: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09210: sftopn: error opening file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

OCI-09211: sfwfb: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09212: sfwbmt: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09213: slgfn: error fabricating file name

Cause: Filename may be too long

Action: See OSD error accompanying this message

OCI-09214: sfdone: I/O error detected

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09215: sfqio: error detected in IOCompletionRoutine

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

OCI-09216: sdnfy: bad value '*string*' for parameter *string*

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

OCI-09217: sfsfs: failed to resize file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

OCI-09218: sfrfs: failed to refresh file size

Cause: File may be corrupted or truncated

Action: See OSD error accompanying this message

OCI-09240: smpalo: error allocating PGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

OCI-09241: smsalo: error allocating SGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

OCI-09242: smscre: error creating SGA

Cause: An error occurred while creating SGA.

Action: See OSD error accompanying this message

OCI-09243: smsget: error attaching to SGA

Cause: SGA may not have been created (database not started)

Action: See OSD error accompanying this message

OCI-09244: smpreset: error setting memory protections

Cause: An error occurred while setting memory protections.

Action: See OSD error accompanying this message

OCI-09245: smcstk: error switching stacks

Cause: An error occurred while switching stacks.

Action: See OSD error accompanying this message

OCI-09246: sfsmap: unable to map SGA

Cause: Unable to map SGA.

Action: See OSD error accompanying this message

OCI-09247: smsdes: error destroying the SGA

Cause: An error occurred while destroying the SGA.

Action: See OSD error accompanying this message

OCI-09260: sigpidu: error obtaining process id

Cause: May be out of resources

Action: See OSD error accompanying this message

OCI-09261: spdcr: error creating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

OCI-09262: spdde: error terminating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

OCI-09263: spini: error initializing process

Cause: Could be out of memory

Action: See OSD error accompanying this message

OCI-09264: sptpa: error flagging process

Cause: Could be out of resources

Action: See OSD error accompanying this message

OCI-09265: spwat: error temporarily suspending process

Cause: Could be out of resources

Action: See OSD error accompanying this message

OCI-09266: spawn: error starting an Oracle process

Cause: Could be out memory

Action: See OSD error accompanying this message

OCI-09270: szalloc: error allocating memory for security

Cause: Could be out of memory

Action: See OSD error accompanying this message

OCI-09271: szlon: error verifying user name

Cause: Username may be too long

Action: See OSD error accompanying this message

OCI-09272: remote os logon is not allowed

Cause: Remote os login attempted when not allowed.

Action: See OSD error accompanying this message

OCI-09273: szrfc: error verifying role name

Cause: An OS error was returned when verifying the role name.

Action: See OSD error accompanying this message

OCI-09274: szrfc: insufficient role name buffer space

Cause: An OS role name was too long.

Action: See OSD error accompanying this message

OCI-09275: CONNECT INTERNAL is not a valid DBA connection.

Cause: The unsupported CONNECT INTERNAL syntax was used.

Action: To make an administrative connection, either the AS SYSDBA database administrator clause or one of the separation-of-duty clauses (AS SYSOPER, AS SYSASM, AS SYSBACKUP, AS SYSDG, AS SYSKM, or AS SYSRAC) is required. For example, "sqlplus SYS AS SYSOPER".

OCI-09276: All bequeath database links must be loopback database links

Cause: A non-loopback bequeath connect string was supplied for a database link.

Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance's ORACLE_HOME>/bin/oracle)" and, optionally, "(ENVS="ORACLE_SID=<this instance's ORACLE_SID>")".

OCI-09280: sllfcf: error closing file

Cause: File may be corrupted

Action: See OSD error accompanying this message

OCI-09281: sllfop: error opening file

Cause: Possibly incorrect path specified to the file

Action: See OSD error accompanying this message

OCI-09282: sllfrb: error reading records

Cause: File could be corrupted

Action: See OSD error accompanying this message

OCI-09283: sllfsk: error skipping records

Cause: File could be corrupted

Action: See OSD error accompanying this message

OCI-09284: sllfop: cannot allocate read buffer

Cause: malloc() system call returned an error. The system might have run out of heap space

Action: Check additional information for the OS error.

OCI-09285: sllfop: unrecognizable processing option, incorrect format

Cause: Processing option passed is of incorrect format

Action: Consult your IUG for permissible formats

OCI-09290: sksaalo: error allocating memory for archival

Cause: Could be out of memory

Action: See OSD error accompanying this message

OCI-09291: sksachk: invalid device specified for archive destination

Cause: Unable to access directory

Action: Specify a valid device in ARCHIVE control string

OCI-09292: sksabln: unable to build archive file name

Cause: Bad directory or format specified

Action: Specify a valid directory in 'log_archive_format' and a valid format string in 'log_archive_format' in init.ora

OCI-09293: sksasm: unable to send message to console

Cause: An error was returned while attempting to send a message to the console operator

Action: See OSD error accompanying this message

OCI-09300: osncon: unable to connect, DPML not available

Cause: Unable to detect the presence of DPML

Action: Restart Windows and retry

OCI-09301: osncon: local kernel only supported in standard mode

Cause: An attempt was made to connect to S: while in enhanced mode

Action: Restart Windows in standard mode

OCI-09310: sclgt: error freeing latch

Cause: Internal error

Action: See OSD error accompanying this message

OCI-09311: slsleep: error temporarily suspending process

Cause: May be out of resources

Action: See OSD error accompanying this message

OCI-09312: slspool: error spooling file to printer

Cause: Could be out of resources

Action: See OSD error accompanying this message

OCI-09313: slsprom: error prompting user

Cause: May be out of resources

Action: See OSD error accompanying this message

OCI-09314: sltln: error translating logical name

Cause: Internal buffer may have overflowed

Action: See OSD error accompanying this message

OCI-09315: sql2tt: two-task error translating ORACLE_EXECUTABLE

Cause: Internal error

Action: See OSD error accompanying this message

OCI-09316: szrpc: unable to verify password for role

Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

OCI-09317: szprv: insufficient privileges

Cause: The password specified is invalid

Action: See OSD error accompanying this message

OCI-09318: slkhst: unable to host out to operating system

Cause: There might not be enough memory for the command or hosting out may not be supported on this platform

Action: See OSD error accompanying this message

OCI-09319: slgtd: unable to obtain the current date and time

Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

OCI-09320: szrfc: unable to obtain the list of valid OS roles

Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

OCI-09321: slzdtb: unable to convert zoned decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

OCI-09322: slpdtb: unable to convert packed decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

OCI-09330: Session terminated internally by Oracle or by an Oracle DBA

Cause: A client workstation that is abnormally disconnected would cause Oracle to terminate that session after about a minute. This message also appears in the trace file if a shutdown abort is performed.

Action: No action required.

OCI-09336: Dropping the *string.string* table is not permitted.

Cause: This table cannot be dropped because it is critical to the normal functioning of the database.

Action: Do not drop the table. *Params: 1) schema_name: Schema that owns the table being dropped. 2) table_name: Name of the table being dropped.

OCI-09340: Specified ORACLE_SID is either invalid or too long

Cause: ORACLE_SID must be at the most 4 alphanumeric characters.

Action: Specify an ORACLE_SID with the correct format.

OCI-09341: scumnt: unable to mount database

Cause: Another instance is currently mounting the database

Action: Try again later.

OCI-09342: Detached process terminated by Oracle during shutdown abort

Cause: The user performed a shutdown abort.

Action: No action required.

OCI-09344: spsig: error signalling thread

Cause: This function may not be implemented.

Action: No action required.

OCI-09350: Windows 32-bit Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09351: Windows 32-bit Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09353: Windows 32-bit Two-Task driver unable to open event semaphore

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09360: Windows 3.1 Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09361: Windows 3.1 Two-Task driver unable to lock context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09362: Windows 3.1 Two-Task driver unable to deallocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09363: Windows 3.1 Two-Task driver invalid context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09364: Windows 3.1 Two-Task driver unable to create hidden window

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09365: Windows 3.1 Two-Task driver unable to destroy hidden window

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09366: Windows 3.1 Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09369: Windows 3.1 Two-Task driver bad instance handle

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09370: Windows 3.1 Two-Task driver ORACLE task timed out

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

OCI-09700: sclin: maximum number of latches exceeded

Cause: ORACLE wants to use more latches than available.

Action: increase INIT.ORA parameter latch_pages or decrease the amount of shared memory you are using.

OCI-09701: scnfy: maximum number of processes exceeded

Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

OCI-09702: sem_acquire: cannot acquire latch semaphore

Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

OCI-09703: sem_release: cannot release latch semaphore

Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

OCI-09704: sstascre: ftok error in creating test and set pages.

Cause: the ftok() library call failed in sstascre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

OCI-09705: spcre: cannot initialize latch semaphore

Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

OCI-09706: slsget: get_process_stats error.

Cause: get_process_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

OCI-09708: soacon: failed to bind socket to port.

Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

OCI-09709: soacon: failed to accept a connection.

Cause: The accept system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

OCI-09710: soarcv: buffer overflow.

Cause: The internal buffer is not big enough to hold the message read.

Action: Internal error. Contact customer support representative.

OCI-09711: orasrv: archmon already connected.

Cause: An existing connection has already been made from archmon to orasrv.

Action: Stop trying to connect.

OCI-09712: orasrv: log archiver already connected.

Cause: An existing connection has already been made from log archiver to orasrv.

Action: Stop trying to connect.

OCI-09714: Two Task interface: cannot obtain puname

Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

OCI-09715: orasrv: cannot obtain puname

Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

OCI-09716: kslcll: Unable to fix in-flux lampport latch.

Cause: One Oracle process died while still holding a lampport latch.

Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

OCI-09717: osnsui: maximum number of user interrupt handlers exceeded.

Cause: The internal limit on the number of user interrupt handlers has been exceeded.

Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

OCI-09718: osnsui: cannot set up user interrupt handler.

Cause: Malloc() failed to allocate space to hold user interrupt handler.

Action: Possible memory resource shortage.

OCI-09719: osncui: invalid handle.

Cause: The handle passed to osncui is out of the valid range.

Action: Use a valid handle.

OCI-09740: slsget: cannot get virtual memory region statistics.

Cause: The vm_region system call failed to get virtual memory region statistics.

Action: Check return code in sercerno. Possible operating system failure.

OCI-09741: spwat: error waiting for a post.

Cause: Msg_receive system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

OCI-09742: sppst: error during a post.

Cause: Msg_send system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

OCI-09743: smscre: could not attach shared memory.

Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

OCI-09744: smsget: mmap returned an error.

Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

OCI-09745: smscre: vm_allocate error, unable to create shared memory.

Cause: Error in system call vm_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerno. Verify that the SGA attach address is valid.

OCI-09746: smscre: shared memory attach address incorrect.

Cause: The vm_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

OCI-09747: pw_detachPorts: server call pws_detach failed.

Cause: The call pws_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

OCI-09748: pws_look_up: fork failed

Cause: The pws_look_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-09749: pws_look_up: port lookup failure

Cause: The pws_look_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by pws_look_up, and that the network name server is still running.

OCI-09750: pw_attachPorts: port_rename failed.

Cause: The port_rename system call failed; possible internal error.

Action: Check return code in sercerno, report to Oracle customer support.

OCI-09751: pw_attachPorts: server call pws_attach failed.

Cause: The call pws_attach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

OCI-09752: pw_attachPorts: port_allocate failed.

Cause: The port_allocate system call failed; possible resource exhaustion.

Action: Check return code in sercerno, report to Oracle customer support.

OCI-09753: spwat: invalid process number.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

OCI-09754: sppst: invalid process number passed to sppst.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Contact Oracle support.

OCI-09755: osngpn: port allocation failure.

Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerno.

OCI-09756: osnpns: no port in the name server.

Cause: osnpns could not find the given named port in the name server.

Action: Check the error code in sercerno. Make sure the shadow process and network name server are still running.

OCI-09757: osnipn: port allocation failure.

Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerno.

OCI-09758: osnipn: could not check port in name server.

Cause: The netname_check_in call failed.

Action: Check the error code in sercerno. Make sure the network name server is running.

OCI-09759: osnsbt: bad message received.

Cause: The msg_receive system call failed, or received a bad message.

Action: Internal error. Report the error code returned in sercerno.

OCI-09760: osnpui: cannot send break message

Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Contact your customer support representative.

OCI-09761: pw_destroyPorts: server call pws_stop_instance failed.

Cause: The call pws_stop_instance to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

OCI-09762: sNeXT_instanceName: translation error.

Cause: A failure was detected while translating the value of ORACLE_SID.

Action: Make sure ORACLE_SID is defined, and that it is of legal length.

OCI-09763: osnmpx: send/receive error exchanging Mach ports.

Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg_send (sercose[0] == 1) or msg_receive (sercose[0] == 2) failed.

Action: Check return code in sercerno. Make sure both sides of the connection are still running.

OCI-09764: osnmop: access error on oracle executable

Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

OCI-09765: osnmop: fork failed

Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-09766: osnmop: buffer allocation failure.

Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer_size parameter in the Two-Task driver hoststring.

OCI-09767: osnmfs: bad return code from msg_send.

Cause: The msg_send system call failed while flushing the Mach driver's send buffer.

Action: Internal error. Contact your customer support representative.

OCI-09768: osnmgetmsg: could not read a message

Cause: The msg_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

OCI-09769: osnbr: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

OCI-09770: pws_look_up: translation failure.

Cause: The pws_look_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE_SID and ORACLE_HOME are set and correct. Additional information gives the translation error code.

OCI-09771: osnmwrtbrkmsg: bad return code from msg_send.

Cause: The msg_send system call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

OCI-09772: osnmetbrkmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

OCI-09773: osnmgetdatmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

OCI-09774: osnmui: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

OCI-09775: osnmrs: reset protocol error

Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

OCI-09776: pws_look_up: access error on (Oracle helper) executable

Cause: The pws_look_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE_HOME/bin path.

OCI-09777: osnpbr: cannot send break message

Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

OCI-09778: snyfyport: failure allocating the notify port.

Cause: The routine failed to allocate or set the task's notify port.

Action: Possible operating system error. Contact Oracle support.

OCI-09779: snyGetPort: failure to allocate a port.

Cause: The port_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

OCI-09786: sllfop: open error, unable to open file.

Cause: Open system call returned an error.

Action: Check errno.

OCI-09787: sllfop: unrecognizable processing option, incorrect format.

Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

OCI-09788: sllfrb: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

OCI-09789: sllfsk: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

OCI-09790: sllfcf: unable to close file.

Cause: Close system call returned an error.

Action: Check errno.

OCI-09791: slembdf: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

OCI-09792: sllfop: cannot allocate read buffer.

Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

OCI-09793: szguns: length of user name is greater than buffer.

Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09794: Length of role name is greater than the provided memory buffer.

Cause: The name of the role being looked up was longer than the size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09795: allocation of memory for role object failed

Cause: The allocation of memory for an internal object that is used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

OCI-09796: Memory allocation of role name object failed.

Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

OCI-09797: Failed to get O/S MAC privileges.

Cause: The operating system would not allow the retrieval of this process' privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09798: Label comparison failed.

Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09799: File label retrieval failed.

Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09800: Process sensitivity label retrieval failed.

Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09801: Unable to get user ID from connection

Cause: ORACLE was unable to retrieve the user's ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

OCI-09802: Conversion of binary label to string failed.

Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09803: Allocation of string buffer failed.

Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

OCI-09804: Class conversion from binary to ORACLE failed.

Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09805: conversion of category number to string failed.

Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

OCI-09806: Allocation of label string buffer failed.

Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

OCI-09807: Conversion of label from string to binary failed.

Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

OCI-09808: Could not obtain user clearance.

Cause: ORACLE was unable to get a user's clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

OCI-09809: Unable to get user's group ID from connection

Cause: ORACLE was unable to retrieve the user's group ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

OCI-09810: Unable to get process ID from connection

Cause: ORACLE was unable to retrieve the user's process ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

OCI-09811: Unable to initialize package.

Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09812: Unable to get user clearance from connection

Cause: ORACLE was unable to retrieve the user's operating system session clearance from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

OCI-09813: Unable to get directory status

Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

OCI-09814: Unable to expand file name

Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

OCI-09816: Unable to set effective privileges

Cause: This is an internal error.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09817: Write to audit file failed.

Cause: A failure occurred while writing an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

OCI-09818: Number is too large

Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

OCI-09819: Number exceeds maximum legal value

Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

OCI-09820: Conversion of class string to numeric representation failed.

Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

OCI-09821: Numeric label is not valid

Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system's encodings for valid numeric component values.

OCI-09822: Translation of audit file name failed.

Cause: Oracle was unable to translate the value of the AUDIT_FILE_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

OCI-09823: device name is too long

Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09824: Unable to enable allowmacaccess privilege.

Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of \$ORACLE_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

OCI-09825: Unable to disable allowmacaccess privilege.

Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

OCI-09826: SCLIN: cannot initialize atomic latch.

Cause: System call atomic_op() return error.

Action: Check additional information in the trace file.

OCI-09827: SCLGT: atomic latch return unknown error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

OCI-09828: SCLFR: atomic latch return error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

OCI-09829: pw_createPorts: server call pws_start_instance failed.

Cause: The call pws_start_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

OCI-09830: snyAddPort: failed to perform a remote procedure call.

Cause: The msg_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

OCI-09831: snyStartThread: failed to build the server port set.

Cause: The routine failed to build a port set on which to listen for requests.

Action: Possible operating system failure. Contact Oracle support.

OCI-09832: infoCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

OCI-09833: addCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

OCI-09834: snyGetPortSet: failed to collect info on a port.

Cause: The port_status system called failed.

Action: Possible operating system error. Contact Oracle support.

OCI-09835: addCallback: callback port is already in a set.

Cause: The port to be added to the callback list is already in a port set.

Action: Internal error. Contact Oracle support.

OCI-09836: addCallback: could not add a port to the callback set.

Cause: The port_set_add system called failed.

Action: Possible operating system error. Contact Oracle support.

OCI-09837: addCallback: could not add allocate a callback link.

Cause: The malloc library call failed to allocate space for a callback link.

Action: Possible operating system error. Contact Oracle support.

OCI-09838: removeCallback: failure removing the callback port.

Cause: The port port_set_remove system call failed.

Action: Possible operating system error. Contact Oracle support.

OCI-09839: removeCallback: callback port is not in the callback set.

Cause: The port to be removed to the callback list is not in the callback port set.

Action: Internal error. Contact Oracle support.

OCI-09840: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/mon2arch_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

OCI-09841: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/arch2mon_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

OCI-09842: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/mon2arch_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only usersids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

OCI-09843: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/arch2mon_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only usersids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

OCI-09844: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

OCI-09845: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

OCI-09846: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

OCI-09847: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

OCI-09848: soawrt: Unable to write to named pipe.**OCI-09849: soarcv: Unable to read from named pipe.****OCI-09850: soacon: Archmon unable to lock named pipe.**

Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

OCI-09851: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

OCI-09853: snyRemovePort: bad return code from request.

Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

OCI-09854: snyPortInfo: bad return code from request.

Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

OCI-09855: removeCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

OCI-09856: smpalo: vm_allocate error while allocating pga.

Cause: The vm_allocate system call returned an error.

Action: Check returned error. Possibly out of system resources.

OCI-09857: smprset: vm_protect error while protecting pga.

Cause: The vm_protect system call returned an error.

Action: Internal error. Contact Oracle support.

OCI-09858 to OCI-12101

OCI-09858: sfngat: the input file name is not in the OMF format

Cause: The function sfngat() received a filename which is not an OMF file name.

Action: Further diagnostic information should be in the error stack.

OCI-09859: sfngat: the input file name is not in the autobackup OMF format

Cause: The function sfngat() received a filename which is not an autobackup OMF file name.

Action: Further diagnostic information should be in the error stack.

OCI-09870: spini: failure initializing maximum number of open files.

Cause: ulimit system call returned an error.

Action: Check errno.

OCI-09871: TASDEF_NAME: translation error while expanding ?/dbs/tasdef@.dbf.

Cause: Failure of stln(?/tasdef@.dbf) while creating test and set pages.

Action: Check additional return error for more information.

OCI-09872: TASDEF_CREATE: create failure in creating ?/dbs/tasdef@.dbf.

Cause: Create() failed when trying to create the tasdef file.

Action: Verify permissions on \$(ORACLE_HOME)/dbs directory.

OCI-09873: TASDEF_OPEN: open error when opening tasdef@.dbf file.

Cause: Unable to open tasdef@.dbf file.

Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

OCI-09874: TASDEF_READ: read error, unable to read tasdef@.dbf file.

Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.

Action: Check errno returned. Sgadf file may be corrupted or incompatible with oracle version.

OCI-09875: TASDEF_WRITE: write error when writing ?/dbs/tasdef@.dbf file.

Cause: Write call failed.

Action: Check errno returned. Possibly out of space on device.

OCI-09876: TASDEF_CLOSE: unable to close ?/dbs/tasdef@.dbf file.

Cause: Close system call returned an error.

Action: Check errno returned. Possible operating system failure.

OCI-09877: sstascre: shmget error, unable to get a shared memory segment.

Cause: Error in shmget.

Action: Check errno returned. Verify that enough shared memory is available on the system.

OCI-09878: sstascre/sstasat: shmat error, unable to attach tas write page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

OCI-09879: sstascre/sstasat: shmat error, unable to attach tas read page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

OCI-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page

Cause: Error in shmdt.

Action: Check errno returned.

OCI-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page

Cause: Error in shmdt.

Action: Check errno returned.

OCI-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page

Cause: Error in shmctl.

Action: Check errno returned.

OCI-09883: Two Task interface: oratab file does not exist

Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

OCI-09884: Two Task interface: SID doesn't match current PU

Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

OCI-09885: osnTXtt: cannot create TXIPC channel

Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

OCI-09886: osnTXtt: translation error while expanding txipc@.trc.

Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

OCI-09887: osnTXtt: Failed to create/open debug channel.

OCI-09888: osnTXtt: txipc channel creation failed

Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

OCI-09889: osnTXtt: access error on oracle executable

Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

OCI-09890: osnTXtt: malloc failed

Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

OCI-09908: slkmnm: gethostname returned error code.

Cause: The system call gethostname returned an error.

Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

OCI-09909: Malloc of scratch buffer failed.

Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

OCI-09910: Unable to find ORACLE password file entry for user.

Cause: No entry exists for the user in the ORACLE password file.

Action: Have the database administrator install a password entry by running orapasswd.

OCI-09911: Incorrect user password.

Cause: The password entered by the user was incorrect.

Action: Enter the correct password.

OCI-09912: Malloc of name buffer(s) failed.

Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

OCI-09913: Malloc of dummy name failed.

Cause: ORACLE was unable to allocate memory for the user name that is to be used in the encryption of the user's password.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

OCI-09914: Unable to open the ORACLE password file.

Cause: ORACLE could not open the password file for reading.

Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running orapasswd. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

OCI-09915: Password encryption failed.

Cause: ORACLE was unable to encrypt a password.

Action: This is an internal error - contact ORACLE customer support.

OCI-09916: Required password was not specified.

Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

OCI-09918: Unable to get user privileges from SQL*Net

Cause: ORACLE was unable to retrieve the user's privilege set from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

OCI-09919: Unable to set label of dedicated server

Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

OCI-09920: Unable to get sensitivity label from connection

Cause: ORACLE was unable to retrieve the user's sensitivity label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

OCI-09921: Unable to get information label from connection

Cause: ORACLE was unable to retrieve the user's information label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

OCI-09922: Can't spawn process - background log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

OCI-09923: Can't spawn process - user log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

OCI-09924: Can't spawn process - core dump directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

OCI-09925: unable to create audit trail file

Cause: A failure occurred while creating the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

OCI-09926: Unable to set effective privilege set of the server

Cause: A dedicated server was unable to set its own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacaccess" privilege.

OCI-09927: Unable to set label of server

Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on \$ORACLE_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

OCI-09928: Unable to restore the label of server

Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

OCI-09929: GLB of two labels is invalid

Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

OCI-09930: LUB of two labels is invalid

Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

OCI-09931: Unable to open ORACLE password file for reading

Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

OCI-09932: Close of ORACLE password file failed.

Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

OCI-09933: Deletion of old password file failed.

Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

OCI-09934: Link of current password file to old failed.

Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

OCI-09935: Unlink of current password file failed.

Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

OCI-09936: Open of ORACLE password file for write failed.

Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

OCI-09937: Chmod of ORACLE password file failed.

Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

OCI-09938: Save of signal handlers failed.

Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

OCI-09939: Restoration of signal handlers failed.

Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

OCI-09940: ORACLE password file header is corrupt

Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N.N EXECUTABLE VERSION: N.N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

OCI-09941: Version of orapasswd or installer is older than file.

Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

OCI-09942: Write of ORACLE password file header failed.

Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

OCI-09943: Allocation of memory for password list component failed.

Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

OCI-09944: Password entry is corrupt.

Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

OCI-09945: unable to initialize the audit trail file

Cause: A failure occurred while writing header information to the audit trail file. This is relevant in traditional audit.

Action: Check the UNIX error number for a possible operating system error. If there is no error, then contact Oracle Support.

OCI-09946: File name too long for buffer

Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

OCI-09947: Unable to allocate connection attributes structure

Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

OCI-09948: Process information label retrieval failed.

Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

OCI-09949: Unable to get client operating system privileges

Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

OCI-09950: Unable to get server operating system privileges

Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

OCI-09951: Unable to create file

Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

OCI-09952: scgcmn: lk_open_convert unexpected return: open failed

Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

OCI-09953: scggc: unexpected return of a lock convert

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

OCI-09954: scgcc: unexpected return status to callback of lock close

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

OCI-09955: scgcan: unexpected return status when canceling a lock

Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

OCI-09956: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

OCI-09957: Unable to send termination request to IMON

Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

OCI-09958: IMON: two processes with the same ORACLE pid are active

Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

OCI-09959: IMON: deletion of a process failed.

Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

OCI-09960: Unable to establish signal handler for termination signal

Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

OCI-09961: Unable to restore termination signal handler

Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

OCI-09962: lk_group_create error in scggrc**OCI-09963: lk_group_attach error in scggra****OCI-09964: lk_group_detach error in scggrd****OCI-09966: failure in translation while expanding ?/dbs/lk for lock file**

Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

Action: Check additional return errors for more information.

OCI-09967: unable to create or open lock file

Cause: Oracle failed, when making an open system call, in order to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

OCI-09968: unable to lock file

Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

OCI-09969: unable to close or remove locked file by the database

Cause: The operating system call to close or unlink a file that was currently locked by the database failed.

Action: Review the included operating system error message for more information and take corrective action. For example, if the operating system error indicates that the permissions on the file are incorrect, use the operating system command to change the permissions. If you cannot resolve the operating system error, contact Oracle Support.

OCI-09974: skxfidini: Error Initializing SDI Channel

Cause: The process was unable to initialize the SDI channel properly.

Action: Correct the operating system error and retry the operation.

OCI-09975: kxfspini: Error Initializing SDI Process

Cause: The process was unable to attach to the SDI channel.

Action: Verify that the SDI process specific limits correctly configured. Correct the operating system error and retry the operation.

OCI-09976: skxfqini: Error Creating Port

Cause: The process was unable to create a communications endpoint.

Action: Verify that the SDI port specific limits correctly configured. Correct the operating system error and retry the operation.

OCI-09977: skxfqhini: Error Connecting

Cause: The process was unable to connect to another endpoint.

Action: Verify that the SDI port specific limits correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

OCI-09978: skxfqhdel: Error Disconnecting from another endpoint.

Cause: The process was unable to disconnect cleanly from another endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

OCI-09979: skxfqhsnd: Error Sending a message to another endpoint

Cause: The process was unable to send a message to an existing endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

OCI-09980: skxfqdrvcv: Error Receiving a message from another endpoint

Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

OCI-09981: skxfqdreg: Error Adding a page to the SDI buffer pool

Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

OCI-09982: skxfqddrg: Error Removing a page from the SDI buffer pool

Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

OCI-09983: skxfidsht: Error shutting down SDI channel

Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

OCI-09984: SGA file \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf does not exist

Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

OCI-09985: SGA definition file could not be read

Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

OCI-09986: wrong number of bytes read from SGA definition file

Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

OCI-09987: unable to attach to SGA in READ-ONLY mode

Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

OCI-09988: error while detaching SGA

Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

OCI-09989: attempt to use invalid skgmsdef struct pointer

Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

OCI-10887: An Oracle Active Data Guard license is required to open a pluggable database while standby recovery is applying changes.

Cause: An attempt was made to open a pluggable database without the Oracle Active Data Guard license.

Action: Do not open a pluggable database or acquire the Oracle Active Data Guard license.

OCI-10889: minimum number of instances needed for redo apply unavailable

Cause: An attempt was made to start multi-instance redo apply with fewer than two instances in either a mounted or open state.

Action: Mount or open at least two instances.

OCI-10892: multi-instance redo apply encountered nonlogged operation

Cause: Multi-instance Redo Apply did not support applying invalidation redo. Invalidation redo is created as part of performing a nonlogged operation. Details of the first data block affected by the nonlogged operation can be found in the alert log.

Action: Restart recovery using single instance Redo Apply. Do not specify the INSTANCE keyword in the command to start recovery.

OCI-11400: Control file has changed between fetches

Cause: The pseudo control file used by a per-Pluggable Database Data Guard (DGPDB) changed while a SQL query was fetching rows from it and those rows needed to correctly reflect the state of the data files.

Action: Execute the query again.

OCI-11401: Cached Control file data is not available

Cause: The instance wide cache for the pseudo control file used by a per-Pluggable Database Data Guard (DGPDB) was found to be invalid when an attempt was made to read from it.

Action: Retry the operation.

OCI-11402: Data Guard site entry not found

Cause: The SYS.DATA_GUARD_SITE\$ table in ROOT did not contain the requested site details.

Action: If it is not obvious from the context of the error then the site name or database ID used to lookup up the site can be found in the trace file of the process originally reporting the error. Data Guard Broker is the preferred method to maintain the site configuration data. Try removing and adding the site again.

OCI-11403: Data Guard site data invalid or incomplete

Cause: The SYS.DATA_GUARD_SITE\$ row contained incorrect or incomplete details used to form a connection to the site. The previous error on the error stack should give more insight into what is incorrect or incomplete. For example, an ORA-27476 indicates the defined or defaulted credential could not be accessed.

Action: If it is not obvious from the context of the error which site site entry is causing the problem or which piece of data from the entry is incorrect or incomplete then more details can be found in the trace file of the process that originally reported the error. Data Guard Broker is the preferred method to maintain the site configuration data. Try removing and adding the site again.

OCI-11404: User has no privilege to create a standby from the source

Cause: The Oracle user used to connect to the source CDB was not granted SYSDG privilege in the source PDB.

Action: Either grant the user the privilege, use a different user by modifying the Data Guard site configuration data, or modify the command being used to create the standby.

OCI-11405: Remote Data Guard site is not ready

Cause: Contact was made with the remote Data Guard site, but the following error was raised when an attempt was made to use the site.

Action: Examine the error following this one and attempt to rectify the issue. For example, ORA-03150 likely means the remote site is mounted but not open, and therefore attempt the operation again once the site open.

OCI-11406: The standby pluggable database "*string*" cannot be a source.

Cause: The SQL statement named a source pluggable database that was a per-Pluggable Database Data Guard (DGPDB). A DGPDB cannot be used in this context.

Action: Do not use a DGPDB as the source for this statement.

OCI-11407: Other Oracle RAC instances are not ready for the role change.

Cause: An attempt to change Oracle RAC instances to a primary role of the per-Pluggable Database Data Guard (DGPDB) failed.

Action: See the following error for more details, resolve the issue, and try again.

OCI-11408: Other Oracle RAC instances are not ready for the drop operation.

Cause: An attempt to change Oracle RAC instances to drop the per-Pluggable Database Data Guard (DGPDB) failed.

Action: See the following error for more details, resolve the issue, and try again.

OCI-11409: Instance *string* failed to respond within *string* centiseconds.

Cause: One or more Oracle RAC instances failed to respond to the per-Pluggable Database Data Guard (DGPDB) request as indicated in the previous error.

Action: The GEN2 process, on the specified Oracle RAC instance, is busy with a long running task. Try again later.

OCI-11410: Instance *string* returned error status *string*.

Cause: The per-Pluggable Database Data Guard (DGPDB) request failed on the specified Oracle RAC instance.

Action: The Oracle RAC instance was either shutting down or starting up or the GEN2 process was not ready. Try again later.

OCI-11411: This operation is not allowed in a standby container database.

Cause: The use of a per-Pluggable Database Data Guard (DGPDB) was not allowed in a standby container database.

Action: Do not use or change a DGPDB in a standby container database.

OCI-11412: Operation not allowed while the root container is open for upgrade or downgrade.

Cause: The attempted operation could not start because it needed to use dictionary tables in the root container, but the root container was being upgraded or downgraded.

Action: Try the operation again after the upgrade or downgrade task is complete.

OCI-11413: cannot save or discard open mode for *string*

Cause: An attempt is being made to save or discard the open mode for a per-Pluggable Database Data Guard (DGPDB).

Action: Do not use ALTER PLUGGABLE DATABASE ... SAVE STATE or DISCARD STATE for a DGPDB. *Params: 1) pdb_name: The name of the DGPDB.

OCI-11414: An active per PDB Data Guard is running on another instance.

Cause: The PDB could not be opened because another instance in the Oracle RAC has the same PDB open with recovery running. Only one Oracle RAC instance may have a standby PDB open with managed recovery running.

Action: If managed recovery needs to be running and the PDB needs to be open on this instance then cancel managed recovery, close the PDB on the other instance and then open it on this instance and start managed recovery. If the PDB needs to be open on more than one instance then cancel managed recovery and open it.

OCI-11415: A per PDB Data Guard standby is open on more than one instance.

Cause: Media recovery could not be started because another instance in the Oracle RAC has the same PDB open. Only one Oracle RAC instance may have a standby PDB open when managed recovery is running.

Action: Close the PDB on all other instances.

OCI-11416: System too busy. Try again later

Cause: The request to open, close, start recovery or cancel recovery for the standby PDB failed because the background process DBW0 was too busy. This is never expected to happen and an incident report has been created to capture why the DBW0 process failed to process the request in time.

Action: Try the action again later or use a different instance in the Oracle RAC.

OCI-11417: cannot run more than *string* active per PDB Data Guard

Cause: The operation could not start because it exceeded the resources available for per PDB Data Guard.

Action: Either cancel recovery for a running active per PDB Data Guard, start recovery for the active per PDB Data Guard from a different instance, or close the per PDB Data Guard before starting recovery.

OCI-11418: the source CDB has purged its copy of the control file

Cause: Recovery attempted to move into the next lifespan for a per PDB Data Guard (DGPDB) but the source container database (CDB) had purged the copy of the control file that it created at the time it became the source for this DGPDB.

Action: Recovery can not proceed. The DGPDB must be dropped and if required a new one instantiated from the current source. This situation only happens when recovery is stopped for a long period of time. Ensure recovery is run regularly to prevent there becoming such a long lag between where apply has got to and when a switchover is performed.

OCI-11419: The source PDB "*string*" must be re-instated as a standby

Cause: An operation was attempted on a pluggable database that was no longer a valid PDB because it was a source for one or more per PDB Data Guard standbys, one of which had been activated as the new primary.

Action: The PDB must be dropped. If a standby is required then create the PDB as a standby using Data Guard Broker. If the PDB is needed to continue as a regular PDB, no longer as part of a Data Guard configuration then it may be unplugged before being dropped and then plugged back in again.

OCI-11420: *string* requires the COMPATIBLE parameter to be *string* or higher.

Cause: The target CDB does not have a high enough setting for the COMPATIBLE initialization parameter to support the use of the DGPDB feature.

Action: Choose another container database (CDB) to host the DGPDB, or increase the setting of the COMPATIBLE parameter in the current host CDB. *Params: 1) *feature_name*: The formal name of the DGPDB feature. 2) *version_string*: The current value of the COMPATIBLE parameter.

OCI-11421: *string* requires Oracle Enterprise Edition.

Cause: The DGPDB feature can only be used on Oracle Enterprise Edition.

Action: Only attempt to use the DGPDB feature on an Oracle Enterprise Edition Database. *Params: 1) *feature_name*: The formal name of the DGPDB feature.

OCI-11422: *string* is unavailable in Non-Oracle Public Cloud Environments.

Cause: The DGPDB feature can only be used on-premises or in an Oracle Cloud environment, or a hybrid of the two.

Action: Only attempt to use the DGPDB feature on-premises or in an Oracle Cloud environment. *Params: 1) *feature_name*: The formal name of the DGPDB feature.

OCI-11423: *string* can not be used with Autonomous Database Service.

Cause: An attempt was made to use the DGPDB feature in a session that is connected to an Autonomous Database service.

Action: Choose a non Autonomous Database service to participate in the DGPDB feature. *Params: 1) *feature_name*: The formal name of the DGPDB feature.

OCI-11424: DGPDB creation is not allowed in this database

Cause: An attempt was made to create a per-Pluggable Database Data Guard (DGPDB) on a primary database that has a Logical Standby.

Action: Only attempt to use the DGPDB feature when there are no Logical Standby databases.

OCI-11425: Use of a DGPDB is prevented for this type of container database

Cause: An attempt was made to use a per-Pluggable Database Data Guard (DGPDB) on a container database that is not capable of participating in a Data Guard per Pluggable Database configuration, such as a logical or snapshot standby.

Action: Only attempt to use the DGPDB feature on a container database that is a regular primary database.

OCI-11500: A domain constraint cannot be modified or dropped.

Cause: An attempt was made to modify or drop a constraint on a table that is inherited from a SQL domain.

Action: Do not attempt to modify or drop a constraint inherited from a domain. Alter the table and drop the domain from the columns as an alternative.

OCI-11501: The column default does not match the domain default of the column.

Cause: A default was specified for a column that was different than the default of the domain with which the column was associated.

Action: Correct the default to match the domain default of the column or disassociate the column from the domain.

OCI-11502: The domain *string* to be dropped has dependent objects.

Cause: An attempt is made to drop a domain with dependent objects.

Action: Drop the domain using the FORCE mode DROP DOMAIN <domain_name> FORCE; or disassociate the domain from all tables dependent on the domain. This query lists the objects the current user has access to that depend on the given domain: SELECT OWNER, NAME, TYPE FROM ALL_DEPENDENCIES WHERE REFERENCED_NAME=<domain_name> AND REFERENCED_OWNER=<domain_schema> AND REFERENCED_TYPE='DOMAIN'; A domain can be dropped from a table with ALTER TABLE <original_table_name> MODIFY DROP DOMAIN <domain_name>; Domains can have tables as well as domains as dependents. Dependent domains need to be dropped as well. There can be objects in other schemas that depend on the domain that are not accessible to the current user.

OCI-11503: The column collation does not match the domain collation of the column.

Cause: The specified or default column collation was different than the domain collation with which the column was associated.

Action: The column collation associated with the domain cannot be modified. Set the domain collation on a column associated with the domain only.

OCI-11504: The domain specified does not exist or the user does not have privileges on the domain for the operation.

Cause: A domain was specified that did not exist or for which the user had no required privileges.

Action: Specify a valid domain or grant the required privileges on the domain.

OCI-11505: The domain already has an expression.

Cause: The specified ALTER DOMAIN statement attempted to add an expression that the domain already had.

Action: Use the ALTER DOMAIN MODIFY statement instead.

OCI-11506: The domain expression does not exist.

Cause: The ALTER DOMAIN statement tried to drop or modify an expression that the domain did not have.

Action: Use the ALTER DOMAIN ADD statement instead.

OCI-11507: The argument to DOMAIN_DISPLAY or DOMAIN_ORDER is not associated with a domain.

Cause: DOMAIN_DISPLAY or DOMAIN_ORDER was called with an argument that was not associated with a domain.

Action: Associate the argument with a domain or do not use DOMAIN operators.

OCI-11508: Casting to a domain using the MULTiset keyword is not allowed.

Cause: An attempt was made to cast to a domain using the MULTiset keyword.

Action: The DOMAIN and MULTISET keywords are mutually exclusive. User either the DOMAIN or the MULTISET keyword but not both.

OCI-11509: Casting to a multi-column domain is not allowed.

Cause: A multi-column domain was specified with a CAST operator.

Action: Use a single column domain with the CAST operator.

OCI-11510: Casting to a polymorphic or multi-column domain as specified is not allowed.

Cause: Either a polymorphic or a multi-cast domain was specified with the CAST operator; or the data type or collation for the CAST operator did not match the domain attributes.

Action: Use a non-polymorphic single column domain and match the data type and collation with those of the domain.

OCI-11511: Alter table modify drop domain cannot be combined with other options.

Cause: An attempt was made to modify column properties in addition to disassociating the column from the domain.

Action: Use separate ALTER TABLE statements; one to modify the column properties and one to disassociate the column from the domain.

OCI-11512: The column already has an associated domain.

Cause: An attempt was made to associate a domain to a column that was already associated with a domain, which is not allowed.

Action: Disassociate the column from the current domain and try the operation again.

OCI-11513: CAST AS DOMAIN has failed due to domain constraints.

Cause: The expression to be casted as domain did not satisfy one of the constraints of the domain.

Action: Ensure that the expression satisfies all of the enabled domain constraints.

OCI-11514: Creating a domain with the same name as an Oracle supplied type, or user defined data type, package or function is not allowed.

Cause: An attempt was made to create a domain with the same name as an Oracle supplied data type, or user defined data type, package, or function in the same schema.

Action: Ensure that the domain name does not coincide with that an Oracle supplied data type or a user defined type, package or function in the same schema.

OCI-11515: incorrect number of columns in domain association list

Cause: The number of columns associated with a domain did not match the domain column count.

Action: Associate a column with each domain column.

OCI-11517: the column data type does not match the domain column

Cause: The column data type did not match the domain column with which it was associated.

Action: Do not associate the column with the domain if the data types do not match.

OCI-11518: cannot drop domain from only a subset of the columns

Cause: The number of columns disassociated from a domain did not match the domain column count.

Action: Specify the full list of columns associated with the domain, one for each domain column.

OCI-11519: column is associated with a multi-column domain

Cause: An attempt was made to drop a column associated with a multi-column domain, without dropping all other columns.

Action: Drop all columns associated with a multi-column domain or drop domain from all such columns.

OCI-11520: sub-domain *string* not found

Cause: The specified sub-domain was missing.

Action: Ensure that the sub-domain exists and is accessible.

OCI-11521: Sub-domain *string* is *string* domain.

Cause: The specified sub-domain is a flexible or enumerated domain.

Action: Ensure that the sub-domain is a regular domain.

OCI-11522: domain column *string* data type is not the same in all sub-domains

Cause: The data type of the sub-domains was inconsistent.

Action: Ensure that the sub-domain column data types are the same.

OCI-11523: domain column *string* not referenced

Cause: Some domain column was not passed to a sub-domain.

Action: Ensure that all domain columns are referenced.

OCI-11524: sub-domain or its argument is an expression

Cause: The sub-domain or its argument was an expression.

Action: Ensure that all sub-domain arguments are domain columns.

OCI-11525: column *string* used in selector-expression is not a discriminant column

Cause: Some column was not in the discriminant column list.

Action: Ensure that only discriminant columns are used in the selector-expression.

OCI-11526: number of columns in sub-domain *string* do not match

Cause: The number of columns passed to the sub-domain do not match definition.

Action: Ensure that actual columns match the defined columns.

OCI-11527: duplicate domain or discriminant column

Cause: The specified column names were not unique.

Action: Ensure that there are no duplicate column names.

OCI-11528: missing discriminant column

Cause: A discriminant column was not specified.

Action: Specify discriminant columns when associating columns to a flexible domain.

OCI-11529: cannot modify the display or order of a domain used by a flexible domain

Cause: An attempt was made to add, drop or modify the display or order expression of a domain with flexible domain dependents.

Action: Drop all flexible domains depending on a domain before adding, dropping or modifying the domain display or order expression.

OCI-11530: cannot alter the display or order of a flexible domain

Cause: An attempt was made to alter a domain affecting its display or order expression.

Action: Drop the flexible domain, alter the domains it depended on and recreate the flexible domain.

OCI-11531: unsupported domain column feature

Cause: An attempt was made to specify an unsupported domain column feature.

Action: Only data type, default, collation and NULL or check constraints can be specified for domain columns. Domain columns cannot be of REF or user-defined data types.

OCI-11532: unsupported domain selector expression

Cause: An attempt was made to specify a domain selector expression not supported.

Action: Rewrite the domain selector expression using CASE or DECODE.

OCI-11533: One or more table columns exist with a domain that cannot be downgraded

Cause: There were table columns in the database with a domain associated.

Action: Prior to downgrade, drop the domains from table columns

OCI-11534: check constraint (*string.string*) involving *string* due to domain constraint *string.string* of domain *string.string* violated

Cause: The values being inserted did not satisfy the named check constraint inherited from the named domain constraint.

Action: Do not insert values that violate the constraint or disassociate the columns from the named domain. *Params: 1) constraint_schema: The schema name where the constraint resides. 2) constraint_name: The name of the constraint. 3) column_names: The column names involved in the constraint. A subset of the column names if the list is too long. 4) domain_constraint_schema: The schema name where the domain constraint resides. 5) domain_constraint_name: The name of the domain constraint the constraint is inherited from. 6) domain_schema: The schema name where the domain resides. 7) domain_name: The name of the domain.

OCI-11535: No insert, update, delete on table with constraint (*string.string*) involving *string* due to domain constraint *string.string* of domain *string.string* disabled and validated

Cause: An attempt was made to insert, update, delete on table with DISABLE VALIDATE constraint.

Action: Disassociate the columns from the named domain. *Params: 1) constraint_schema: The schema name where the constraint resides. 2) constraint_name: The name of the constraint. 3) column_names: The column names involved in the constraint. A subset of the column names if the list is too long. 4) domain_constraint_schema: The schema name where the domain constraint resides. 5) domain_constraint_name: The name of the domain

constraint the constraint is inherited from. 6) domain_schema: The schema name where the domain resides. 7) domain_name: The name of the domain.

OCI-11536: cannot validate (*string.string*) involving *string* due to domain constraint *string.string* of domain *string.string* - check constraint violated

Cause: An alter table operation tried to validate a check constraint inherited from a domain to a populated table that had non-complying values.

Action: Do not insert values that violate the constraint or disassociate the columns from the named domain. *Params: 1) constraint_schema: The schema name where the constraint resides. 2) constraint_name: The name of the constraint. 3) column_names: The column names involved in the constraint. A subset of the column names if the list is too long. 4) domain_constraint_schema: The schema name where the domain constraint resides. 5) domain_constraint_name: The name of the domain constraint the constraint is inherited from. 6) domain_schema: The schema name where the domain resides. 7) domain_name: The name of the domain.

OCI-11537: Casting to a data type is not allowed to specify a domain.

Cause: An attempt was made to cast to a data type followed by the DOMAIN keyword.

Action: The DOMAIN keyword and data type are mutually exclusive. User either the DOMAIN or the data type but not both.

OCI-11538: The domain *string* to be dropped has dependent objects in the recycle bin.

Cause: An attempt is made to drop a domain with dependent objects in the recycle bin.

Action: Drop the domain using the FORCE mode DROP DOMAIN <domain_name> FORCE; or purge the recycle bin PURGE RECYCLEBIN; or purge each table in the recycle bin that depends on the domain, or restore tables in the recycle bin and disassociate them from the domain. This query lists tables owner by the current user that are in the recycle bin and that depend on the given domain: SELECT d.OWNER, d.NAME, r.ORIGINAL_NAME FROM ALL_DEPENDENCIES d, USER_RECYCLEBIN r WHERE d.REFERENCED_NAME=<domain_name> AND d.REFERENCED_OWNER=<domain_schema> AND d.REFERENCED_TYPE='DOMAIN' AND d.TYPE='TABLE' AND r.OBJECT_NAME = d.NAME; You can restore such tables with FLASHBACK TABLE <table_name> TO BEFORE DROP; and either purge them with DROP TABLE <original_table_name> PURGE; or drop domain from them ALTER TABLE <original_table_name> MODIFY DROP DOMAIN <domain_name>; There can be tables in other schemas that depend on the domain and are in the recycle bin of their owner schema.

OCI-11539: CAST AS DOMAIN feature is not supported.

Cause: CAST AS DOMAIN operation is tried from Pro*C or Pro*COBOL.

Action: Do not use CAST AS DOMAIN operation from Pro*C or Pro*COBOL.

OCI-11540: Domain operators are not allowed in domain expressions.

Cause: DOMAIN_DISPLAY, DOMAIN_ORDER, DOMAIN_NAME, DOMAIN_CHECK or CAST AS DOMAIN are part of domain expressions.

Action: Do not use domain operators in domain expressions.

OCI-11541: REPLACE and IF NOT EXISTS cannot coexist in the same DDL statement

Cause: REPLACE and IF NOT EXISTS have been used both in a DDL statement.

Action: Use only one of the two terms in the DDL statement.

OCI-11543: Incorrect IF NOT EXISTS clause for CREATE statement.

Cause: Missing or incorrect tokens for IF NOT EXISTS clause.

Action: Correct the tokens and retry the statement.

OCI-11544: Incorrect IF EXISTS clause for ALTER/DROP statement.

Cause: Missing or incorrect tokens for IF EXISTS clause.

Action: Correct the tokens and retry the statement.

OCI-11545: annotation value *string...string...* exceeds 4000 bytes limit

Cause: A string literal with more than 4000 bytes was specified.

Action: Specify at most 4000 bytes for the annotation value. *Params: 1) `first_10_chars`: The leading 10 characters of the annotation value that is too long. 2) `expected_last_10_chars`: The expected trailing 10 characters of the annotation value. The value cannot go beyond that.

OCI-11546: missing left parenthesis when specifying ANNOTATIONS

Cause: A required left parenthesis has been omitted. ANNOTATIONS require a list of items enclosed in parentheses, i.e., ANNOTATIONS (name1 'value1', ...)

Action: Correct the syntax, inserting a left parenthesis where required, and retry the statement.

OCI-11547: missing right parenthesis when specifying ANNOTATIONS

Cause: A required right parenthesis has been omitted. ANNOTATIONS require a list of items enclosed in parentheses, i.e., ANNOTATIONS (name1 'value1', ...)

Action: Correct the syntax, inserting a right parenthesis where required, and retry the statement.

OCI-11548: missing or invalid annotation name '*string*' in the ANNOTATIONS sequence

Cause: One of the annotation in the ANNOTATIONS sequence has an invalid name. A valid annotation name identifier must begin with a letter, be less than or equal to 1024 bytes, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation. It must not be a reserved word, unless it is enclosed in double quotation marks. When enclosed in double quotation marks an annotation name cannot have only white characters.

Action: Correct the annotation name with a valid identifier, and retry the statement. *Params: 1) `annotation_name`: The annotation name.

OCI-11549: invalid annotation value '*string*' in the ANNOTATIONS sequence

Cause: One of the annotation in the ANNOTATIONS sequence has an invalid value. The value should be a valid string literal that is enclosed in single quotation marks, with at least one character and a maximum length of 4000 bytes.

Action: Correct the annotation value with a valid string, and retry the statement. *Params: 1) `annotation_value`: The annotation value.

OCI-11550: missing comma between consecutive annotations within ANNOTATIONS

Cause: Consecutive annotations in the ANNOTATIONS sequence were not separated by comma.

Action: Separate consecutive annotations by comma, and retry the statement.

OCI-11551: missing annotations sequence within the ANNOTATIONS clause

Cause: No annotations have been specified within the ANNOTATIONS clause.

Action: Add at least one annotation to the ANNOTATIONS clause, and retry the statement.

OCI-11552: Annotation name '*string*' already exists for the object '*string*'.

Cause: The annotation name already exists for the object.

Action: Use a different annotation name and retry the statement. *Params: 1) annotation_name: The annotation name. 2) object_name: The object name corresponding to the annotation.

OCI-11553: Annotation name '*string*' does not exist for the object '*string*'.

Cause: The annotation name does not exist for the object.

Action: Use a different annotation name and retry the statement. *Params: 1) annotation_name: The annotation name. 2) object_name: The object name corresponding to the annotation.

OCI-11554: Annotations are not allowed on private temporary tables.

Cause: Annotations are not allowed on private temporary tables.

Action: Use a different table type and retry the statement.

OCI-11555: DROP annotation is not allowed in a CREATE statement.

Cause: DROP clause is not allowed in a CREATE statement.

Action: DROP annotation is allowed only in ALTER statements.

OCI-11556: REPLACE annotation is not allowed in a CREATE statement.

Cause: REPLACE clause is not allowed in a CREATE statement.

Action: REPLACE annotation is allowed only in ALTER statements.

OCI-11557: IF EXISTS clause cannot be used with the current DDL

Cause: IF EXISTS clause cannot be used with DDL statements that may move data, DDLs that recompile a materialized view, DDLs that alter an index or DDLs that drop a private temporary table. Examples: ALTER TABLE *table* ADD|DROP PARTITION ... ALTER TABLE *table* COALESCE PARTITION ... ALTER TABLE *table* MOVE ... ALTER MATERIALIZED VIEW <mat_view> MERGE PARTITIONS ... ALTER MATERIALIZED VIEW <mat_view> COMPILE ... ALTER INDEX *index* ... DROP TEMPORARY TABLE ... Please check the documentation for a list of DDL statements that are not supported.

Action: Do not use IF EXISTS clause for this DDL statement.

OCI-11558: IF NOT EXISTS clause cannot be used with the current DDL

Cause: IF NOT EXISTS clause cannot be used with DDL statements that create private temporary tables. Examples: CREATE TEMPORARY TABLE ... Please check the documentation for a list of DDL statements that are not supported.

Action: Do not use IF NOT EXISTS clause for this DDL statement.

OCI-11559: Column level annotations not allowed in CREATE TABLE AS SELECT statements.

Cause: Column level annotations are not allowed in CREATE TABLE AS SELECT statements.

Action: You can add or modify column level annotations after the table has been created.

OCI-11560: Annotation name '*string*' already exists for the column '*string*'.

Cause: The annotation name already exists for the column.

Action: Use a different annotation name and retry the statement. *Params: 1) annotation_name: The annotation name. 2) object_name: The column name corresponding to the annotation.

OCI-11561: Annotation name '*string*' does not exist for the column '*string*'.

Cause: The annotation name does not exist for the column.

Action: Use a different annotation name and retry the statement. *Params: 1) annotation_name: The annotation name. 2) object_name: The column name corresponding to the annotation.

OCI-11562: Duplicate annotation name '*string*' in the ANNOTATIONS clause.

Cause: The annotation name exists multiple times in the ANNOTATIONS clause.

Action: Remove the duplicate annotation name and retry the statement. *Params: 1) annotation_name: The annotation name.

OCI-11563: Domain is not allowed here

Cause: A SQL domain is specified in an invalid place in the statement.

Action: Ensure that the name is correct in the statement and that the statement is applicable to SQL domains. For instance, DML cannot be issued on a domain.

OCI-12000: a materialized view log already exists on table '*string*'

Cause: An attempt was made to create a materialized view log on a table that already had a materialized view log. Each master table had only one materialized view log.

Action: All materialized views on a table can use the same materialized view log for that table. To make changes to the existing log, use the ALTER MATERIALIZED VIEW LOG command or drop the materialized view log and create it again.

OCI-12001: cannot create log: table '*string*' already has a trigger

Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

Action: To create a materialized view log, drop the current trigger on the master.

OCI-12002: there is no materialized view log on table "*string*". "*string*"

Cause: There was no materialized view log on the master table.

Action: Create a materialized view log on the master table.

OCI-12003: materialized view or zonemap "string"."string" does not exist

Cause: The database object with the given owner and name was not found.

Action: Verify input and retry.

OCI-12004: REFRESH FAST cannot be used for materialized view "string"."string"

Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

Action: Use just REFRESH, which will reinitialize the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

OCI-12005: may not schedule automatic refresh for times in the past

Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

Action: Choose a time in the future instead.

OCI-12007: materialized view reuse parameters are inconsistent

Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

Action: Examine the other messages on the stack to find the problem.

OCI-12008: error in materialized view or zonemap refresh path

Cause: Table SNAP\$_<mview_name> reads rows from the view MVIEW\$_<mview_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master_owner>.MLOG\$_master is also referenced.

Action: Examine the other messages on the stack to find the problem. See if the objects SNAP\$_<mview_name>, MVIEW\$_<mview_name>, *mowner.master@dblink*, *mowner.MLOG\$_master@dblink* still exist.

OCI-12009: materialized views may not contain long columns

Cause: An attempt was made to create a materialized view with a long column.

Action: Do not attempt to create materialized view logs with long columns.

OCI-12010: cannot create materialized view log on table owned by SYS

Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

Action: Do not create a materialized view log on SYS tables.

OCI-12011: execution of string jobs failed

Cause: An error was caught in dbms_job.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

OCI-12012: error on auto execute of job *string*

Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

OCI-12013: updatable materialized view must be simple enough and have a materialized view log on its master table to do fast refresh

Cause: The updatable materialized view query contained a JOIN, SUBQUERY, UNION, CONNECT BY, ORDER BY, or GROUP BY clause, or the master table did not have a materialized view log.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them. Make sure a materialized view log is created for the master table.

OCI-12014: table '*string*' does not contain a primary key constraint

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

OCI-12015: cannot create a fast refresh materialized view from a complex query

Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

OCI-12016: materialized view does not include all primary key columns

Cause: The query that instantiates the materialized view did not include all of the columns in the master's primary key constraint.

Action: Include all of the master's primary key columns in the materialized view query or create a ROWID materialized view.

OCI-12017: cannot alter primary key mview '*string*' to a rowid mview

Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

OCI-12018: following error encountered during code generation for "*string*"."*string*"

Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

OCI-12019: master table is a synonym to a remote object

Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

OCI-12020: materialized view *string* is not registered

Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

OCI-12021: materialized view "*string*".*string* is corrupt

Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

OCI-12022: materialized view log on "*string*".*string* already has rowid

Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

OCI-12023: missing index on materialized view "*string*".*string*

Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

OCI-12024: materialized view log on "*string*".*string* does not have primary key columns

Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

OCI-12025: materialized view log on "*string*".*string* already has primary keys

Cause: Materialized view log on the indicated table already has primary key columns.

Action: No action required.

OCI-12026: invalid filter column detected

Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.

Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

OCI-12027: duplicate filter column

Cause: One or more of the specified filter columns were already being recorded in the materialized view log.

Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

OCI-12028: materialized view type is not supported by master site *string*

Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.

Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

OCI-12029: LOB columns may not be used as filter columns

Cause: An attempt was made to use LOB columns as filter columns.

Action: Remove LOB columns from the filter columns list and retry command.

OCI-12030: cannot create a fast refresh materialized view

Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.

Action: Ensure that the materialized view log exists and logs the necessary information. - For ROWID materialized views, the master table's ROWID must be logged. - For primary key materialized views, the master table's primary key columns must be logged. - For subquery materialized views, the filter columns, primary key, and ROWID values must be logged. - For object materialized views, object id must be logged.

OCI-12031: cannot use primary key columns from materialized view log on "string"."string"

Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

OCI-12032: cannot use rowid column from materialized view log on "string"."string"

Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

OCI-12033: cannot use filter columns from materialized view log on "string"."string"

Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

OCI-12034: materialized view log on "string"."string" younger than last refresh

Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

OCI-12035: could not use materialized view log on "string"."string"

Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will reinitialize the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

OCI-12036: updatable materialized view log is not empty, refresh materialized view

Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

OCI-12037: unknown export format

Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

OCI-12038: string literal has unexpected length

OCI-12039: unable to use local rollback segment "*string*"

Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can't be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

OCI-12040: master rollback segment option not support by master site *string*

Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

OCI-12041: cannot record ROWIDs for index-organized table "*string*".*string*"

Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

OCI-12042: cannot alter job_queue_processes in single process mode

Cause: An attempt was made to alter job_queue_processes in single process mode.

Action: Do not attempt to set job_queue_processes in single process mode.

OCI-12043: invalid CREATE MATERIALIZED VIEW option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

OCI-12044: invalid CREATE MATERIALIZED VIEW LOG option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

OCI-12045: invalid ALTER MATERIALIZED VIEW LOG option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

OCI-12046: cannot use trusted constraints for refreshing remote MV

Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

OCI-12047: PCT FAST REFRESH cannot be used for materialized view "string"."string"

Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinitialize the entire table and try to pick the best refresh method on the materialized view Do explain_mv to look at the cause why PCT refresh is not possible on this materialized view

OCI-12048: error encountered while refreshing materialized view "string"."string"

Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

OCI-12051: ON COMMIT attribute is incompatible with other options

Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

OCI-12052: cannot fast refresh materialized view string.string

Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

OCI-12053: this is not a valid nested materialized view

Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

OCI-12054: cannot set the ON COMMIT refresh attribute for the materialized view

Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

OCI-12055: materialized view definition contains cyclic dependencies with existing materialized views

Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

OCI-12056: invalid REFRESH method

Cause: The NEVER REFRESH option may not be used under the following conditions: * The materialized view is updatable * The materialized view refreshes ON COMMIT * Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

OCI-12057: materialized view or zonemap "*string*"."*string*" is invalid and must use complete refresh

Cause: The status of the materialized view or zonemap was invalid and an attempt was made to fast refresh it.

Action: Perform a complete refresh of the materialized view or zonemap.

OCI-12058: materialized view cannot use prebuilt table

Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

OCI-12059: prebuilt table "*string*"."*string*" does not exist

Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

OCI-12060: shape of prebuilt table does not match definition query

Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

OCI-12061: invalid ALTER MATERIALIZED VIEW option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

OCI-12062: transaction *string* received out of sequence from site *string*

Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

OCI-12063: unable to apply transaction from site *string*

Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

OCI-12064: invalid refresh sequence number: *string*

Cause: The client site was attempting to perform a refresh with an invalid refresh sequence.

Action: Perform a complete refresh to synchronize the refresh sequence number.

OCI-12065: unknown refresh group identifier *string*

Cause: The specified refresh group did not exist at the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

OCI-12066: invalid CREATE MATERIALIZED VIEW command

Cause: The Replication API does not support the following options and types of materialized view: o ROWID materialized views o REFRESH ON COMMIT o ON PREBUILT TABLE o BUILD DEFERRED o NEVER REFRESH o ENABLE QUERY REWRITE

Action: Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

OCI-12067: empty refresh groups are not allowed

Cause: The refresh group being instantiated did not contain any materialized views.

Action: Modify the template to include at least one materialized view.

OCI-12068: updatable mview log for mview "*string*"."*string*" does not exist

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create the updatable materialized view log.

OCI-12069: invalid object for offline instantiation

Cause: Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.

Action: Remove the object from the template or replace the object with a valid materialized view.

OCI-12070: cannot offline instantiate materialized view "*string*"."*string*"

Cause: Offline instantiation does not support materialized views using the following options: o ON PREBUILT TABLE o BUILD DEFERRED

Action: Remove the invalid options.

OCI-12071: definition query of "*string*"."*string*" is invalid for offline instantiation

Cause: Offline instantiation requires materialized view definition queries to observe the following constraints: o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query. o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

OCI-12072: updatable materialized view log data for "*string*"."*string*" cannot be created

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create an updatable materialized view log.

OCI-12073: request cannot be processed

Cause: An out-of-sequence request was made and it cannot be processed.

Action: Try again with a valid request.

OCI-12074: invalid memory address

Cause: An attempt was made to access an invalid memory region.

Action: Reconnect and try the command again.

OCI-12075: invalid object or field

Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.

Action: Retry the request.

OCI-12076: invalid threshold value

Cause: The result set threshold or LOB threshold value is not supported.

Action: Specify a threshold value below 64K.

OCI-12077: temporary updatable materialized view log does not exist

Cause: Temporary updatable materialized view log was not created or was dropped.

Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

OCI-12078: fast refresh of refresh group ID *string* failed

Cause: Refresh result set sent through client method REFRESH_REQ_RESULT returned an unknown value.

Action: Re-issue the refresh request.

OCI-12079: do not invalidate result cache created during materialized view refresh

Cause: Result cache created during materialized view refresh was not invalidated at end.

Action: Do not set this as an event.

OCI-12080: Buffer cache miss for IOQ batching**OCI-12081: update operation not allowed on table "*string*".*string*"**

Cause: An attempt was made to update a read-only materialized view.

Action: No action required. Only Oracle is allowed to update a read-only materialized view.

OCI-12082: "*string*".*string*" cannot be index organized

Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.

Action: Try to create the materialized view without the index organization clause.

OCI-12083: must use DROP MATERIALIZED VIEW to drop "string"."string"

Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

OCI-12084: must use ALTER MATERIALIZED VIEW to alter "string"."string"

Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

OCI-12085: materialized view log on "string"."string" already has object id

Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

OCI-12086: table "string"."string" is not an object table

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

OCI-12087: online redefinition not allowed on tables owned by "string"

Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

OCI-12088: cannot online redefine table "string"."string" with unsupported datatype

Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

OCI-12089: cannot online redefine table "string"."string" with no primary key

Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

OCI-12090: cannot online redefine table "string"."string"

Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

OCI-12091: cannot online redefine table "string"."string" with materialized views

Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

OCI-12092: cannot online redefine replicated table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

OCI-12093: invalid interim table "*string*"."*string*"

Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

OCI-12094: error during online redefinition

Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

OCI-12096: error in materialized view log on "*string*"."*string*"

Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

OCI-12097: changes in the master tables during refresh, try refresh again

Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

OCI-12098: cannot comment on the materialized view

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

OCI-12099: Don't go into fast table scan (kdst) mode**OCI-12100: materialized view log on "*string*"."*string*" already has sequence**

Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.

OCI-12101: shape of materialized view does not match the base table

Cause: The number of columns or the type or the length semantics of a column in the materialized view did not match the materialized view base table.

Action: Ensure that the materialized view column list matches with the base table.

OCI-12150 to OCI-12270

OCI-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

OCI-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

OCI-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

OCI-12154: Cannot connect to database. Cannot find alias string in string.

Cause: A connection to a database or other service is being requested using a connection alias but the alias specified cannot be resolved into a connect descriptor using one of the configured naming methods.

Action: Do the following: - Check for mistakes in the connection string that you used. - If you have a sqlnet.ora file containing a NAMES.DIRECTORY_PATH parameter, then ensure that the parameter contains valid values. - If you are using an alias from a tnsnames.ora file: * Verify that the tnsnames.ora file exists, is in the proper directory, and is accessible. * Ensure that the alias exists in one of the tnsnames.ora files. * Ensure that there are no syntax errors anywhere in the tnsnames.ora file or files. Look for unmatched parentheses or stray characters. Ensure that magic quotes are not used. - If you are using LDAP directory naming: * Verify that the net service name or database name used as the connect identifier is configured in the directory. * Verify that the LDAP directory server is up and that it is accessible. * Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier. - If the error is for a dblink connection, check all of the above for Database Server process making connection to remote database. *Params: 1) alias_value: The alias or connect identifier that is used. 2) repository_loc: The naming method repository or the repository that cannot be located or reached.

OCI-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, is readable and contains valid values.

OCI-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

OCI-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE_SID, please check if ORACLE_SID is set.

OCI-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

OCI-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE_HOME/network/admin or turn off tracing in your ORA file.

OCI-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

OCI-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

OCI-12168: Cannot connect to database. LDAP string failed

Cause: A connection to a database or other service was requested using LDAP directory naming method but it could not be resolved because of LDAP initialization failure or connection to LDAP directory server failure.

Action: The message indicates whether there was a LDAP initialization failure, connect failure, auth failure, or permission failure. - Check for mistakes in the LDAP configuration that you used. - Make sure the directory_servers specified is correct. - Verify that the LDAP directory server is up and that it is accessible. - Make sure the read/write permissions exist for OracleContext Object and its subtree. *Params: 1) LDAP_operation: The LDAP operation which has failed.

OCI-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

OCI-12170: Cannot connect. string timeout of string for string. (CONNECTION_ID=string)

Cause: The connection request could not be completed within the allotted time interval. This may be a result of network or system delays, or it may indicate a denial of service attack on the database server.

Action: The message indicates whether there was a transmission control protocol (TCP) connect timeout, an Outbound connect timeout, or a Receive timeout. - If the error occurred in your application, then: * Set CONNECT_TIMEOUT or TRANSPORT_CONNECT_TIMEOUT to a larger value if they are used in an Easy Connect or tnsnames.ora connection string. Or, set one or all of the parameters SQLNET.OUTBOUND_CONNECT_TIMEOUT, SQLNET.RECV_TIMEOUT, or TCP.CONNECT_TIMEOUT in the client sqlnet.ora file to a larger value. The connection string parameters have higher precedence than the corresponding sqlnet.ora parameters. * In languages that support programmatic driver settings, adjust the settings equivalent to the previously mentioned timeouts. For example, with JDBC, adjust

oracle.net.OUTBOUND_CONNECT_TIMEOUT, oracle.net.CONNECT_TIMEOUT, or use setLoginTimeout(). With Python python-oracledb, adjust the TcpConnectTimeout parameter when calling connect() or create_pool(). - If the error occurred in the database alert log file, then set one or both of the parameters, SQLNET.INBOUND_CONNECT_TIMEOUT or SQLNET.RECV_TIMEOUT, in the database sqlnet.ora file to a larger value. - If a malicious client is suspected, then use the database alert log to identify the source address and then restrict access. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. *Params: 1) timeout_type: The timeout type (i.e. TCP, OUTBOUND_CONNECT, RECEIVE). 2) timeout: The timeout value. 3) host_port: The host and port that could not be connected to. 4) connection_id: The connection ID.

OCI-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

OCI-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

OCI-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

OCI-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a

protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

OCI-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

OCI-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

OCI-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

OCI-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

OCI-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

OCI-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

OCI-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

OCI-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

OCI-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

OCI-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

OCI-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

OCI-12211: TNS:needs PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANGERS defined.

Action: Add a PREFERRED_CMANGERS entry to the TNSNAV.ORA file.

OCI-12212: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have a CMANGER_NAME specified.

Action: Define the CMANGER_NAME as part of the PREFERRED_CMANGERS binding. Use of the Oracle Network Manager should eliminate this error.

OCI-12213: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

OCI-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

OCI-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

OCI-12216: TNS:poorly formed PREFERRED_CMANGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

OCI-12217: TNS:could not contact PREFERRED_CMANGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

OCI-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANGERS entry may have an incorrect CMANGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

OCI-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSes in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSes have a COMMUNITY component or all do not.

OCI-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

OCI-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

OCI-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

OCI-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

OCI-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

OCI-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

OCI-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

OCI-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

OCI-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

OCI-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

OCI-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

OCI-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

OCI-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

OCI-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

OCI-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

OCI-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

OCI-12238: TNS: NT Operaion is aborted

Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

OCI-12241: Windows service *string* is either not available or not running

Cause: The operation could not be completed because requested service is not available or running.

Action: Create and start the windows service before the operation to be performed. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Support Services.

OCI-12261: Cannot connect to database. Syntax error in Easy Connect connection *string string*

Cause: A connection to a database or other service was requested using an incorrect Easy Connect connection string.

Action: - Check for mistakes in the connection string that you used. - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks.

OCI-12262: Cannot connect to database. Could not resolve hostname *string* in Easy Connect connection string *string*

Cause: A connection to a database or other service was requested using a hostname or Easy Connect connection string but the hostname is invalid and could not be resolved.

Action: - Check for mistakes in the connection string that you used. - Make sure the hostname specified is correct. - Try enclosing the connect identifier in quote marks.

OCI-12263: Failed to resolve the connect descriptor. (*string*).

Cause: The connect descriptor reading from Azure App Configuration or OCI Objectstore or Webserver or Local File failed.

Action: - Ensure that the connect descriptor contains all parameters needed. - Ensure that the parameter names are valid and their values are specified correctly.

OCI-12268: server uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by server is not supported by client configuration.

Action: Upgrade the server to use strong version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak servers: sqlnet.allow_weak_crypto = true
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the server cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

OCI-12269: client uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by client is not supported by server configuration.

Action: Upgrade the client to use stronger version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak clients: sqlnet.allow_weak_crypto_clients = true
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the client cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

OCI-12270: Client NOT using TCPS protocol to connect to server

Cause: This error is specific to RADIUS authentication. Any connection other than TCPS between DB Client and DB Server cannot use RADIUS authentication.

Action: Use TCPS between DB Client and DB Server to use RADIUS authentication.

OCI-12315 to OCI-12354

OCI-12315: database link type is invalid for the ALTER DATABASE statement

Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

OCI-12316: syntax error in database link's connect string

Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

OCI-12317: logon to database (link name *string*) denied

Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

OCI-12318: database (link name *string*) is already mounted

Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: The database is already mounted, so you need not take additional action to mount it. To establish access, use the ALTER DATABASE *linkname* OPEN command to open the database.

OCI-12319: database (link name *string*) is already open

Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

OCI-12321: database (link name *string*) is not open and AUTO_MOUNTING=FALSE

Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE *linkname* with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO_MOUNTING parameter in the parameter file to TRUE.

OCI-12322: unable to mount database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

OCI-12323: unable to open database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

OCI-12324: cannot use the ROM: link type on a private database link

Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

OCI-12326: database *string* is closing immediately; no operations are permitted

Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database administrator.

OCI-12329: database *string* is closed; no operations are permitted

Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

OCI-12333: database (link name *string*) is not mounted

Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE *linkname* MOUNT command, then re-attempt to open the database.

OCI-12334: database (link name *string*) is still open

Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE *linkname* CLOSE command, then re-attempt to dismount the database.

OCI-12335: database (link name *string*) is not open

Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

OCI-12336: cannot login to database (link name *string*)

Cause: You are trying to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

OCI-12341: maximum number of open mounts exceeded

Cause: The number specified on the OPEN_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

OCI-12342: open mounts exceeds limit set on the OPEN_MOUNTS parameter

Cause: The number of currently open mounts exceeds the value you specified on the OPEN_MOUNTS parameter.

Action: Increase the value of the OPEN_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

OCI-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)

Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

OCI-12350: database link being dropped is still mounted

Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

OCI-12351: cannot create view using a remote object which has a remote object reference

Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

OCI-12352: object *string.string@string* is invalid

Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

OCI-12353: secondary stored object cannot reference remote object

Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

OCI-12354: secondary object being dropped

Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

OCI-12400 to OCI-12497

OCI-12400: invalid argument to facility error handling

Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product or facility.

Action: Specify a valid facility error handling parameter value.

OCI-12401: invalid label string: *string*

Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the label string used.

OCI-12402: invalid format string: *string*

Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

OCI-12403: invalid internal label

Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

OCI-12404: invalid privilege string: *string*

Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

OCI-12405: invalid label list

Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

OCI-12406: This SQL statement is not authorized for this session by OLS policy *string*.

Cause: The Oracle Label Security (OLS) policy did not authorize the database session to perform the requested SQL statement. The OLS policy reviewed the label associated with this session and the label did not have sufficient privileges to authorize the SQL statement. The session label is a combination of the user along with any session connection factors.

Action: You may not be authorized to execute this SQL statement. If you believe you are authorized, work with your DBA or security team and review the label associated with your user account. Ensure that your session environment does not adversely affect your session label (for example, accessing the system from a less secure network). Have the DBA or security officer grant your user account or program unit the necessary policy privilege or additional authorizations. *Params: 1) policy_name: Name of the Oracle Label Security policy.

OCI-12407: unauthorized operation for policy *string*

Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

OCI-12408: unsupported operation: *string*

Cause: The specified policy did not support the requested operation.

Action: Read the policy documentation to determine the supported access mediation operations.

OCI-12409: policy startup failure for OLS *string* policy

Cause: The Oracle Label Security (OLS) policy encountered an error during startup processing. Access to the data protected by the policy will be restricted until the error is resolved.

Action: Check the alert log for additional information, correct the OLS policy error, and restart the instance. *Params: 1) *policy_name*: The name of the Oracle Label Security policy.

OCI-12410: internal policy error for policy: *string*\n Error: *string*

Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

OCI-12411: The specified OLS label value *string* does not exist.

Cause: The specified Oracle Label Security (OLS) label value used in the OLS dominance check operation did not exist.

Action: Check the data dictionary view *DBA_SA_LABELS* for the policy to identify valid labels. *Params: 1) *label_value*: The label value used.

OCI-12412: policy package *string* is not installed

Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

OCI-12413: The labels with tags *string* and *string* do not belong to the same OLS policy.

Cause: The labels being compared belong to different Oracle Label Security (OLS) policies. Only labels that belong to the same OLS policy can be compared.

Action: Review labels associated with the OLS policy in *DBA_SA_LABELS*. Compare labels that belong to the same OLS policy. *Params: 1) *label_1*: The tag for the first label. 2) *label_2*: The tag for the second label.

OCI-12414: An internal OLS error has occurred: *string*\n Error: *string*.

Cause: An internal Oracle Label Security (OLS) label policy framework error occurred.

Action: Contact Oracle Support. *Params: 1) *error_function*: The internal function that caused the error. 2) *error_message*: The label security error message.

OCI-12415: The SYS_ACLOID column was created with a data type different from NUMBER.

Cause: The hidden SYS_ACLOID column used by Oracle Real Application Security (RAS) lists application user-managed ACL identifiers and must be of data type NUMBER.

Action: Drop the SYS_ACLOID column on the table or change the data type of the column to NUMBER.

OCI-12416: Oracle Label Security policy *string* is not found.

Cause: The specified Oracle Label Security policy did not exist in the database.

Action: Enter a valid Oracle Label Security policy name. *Params: 1) policy_name: The name of the Oracle Label Security policy.

OCI-12417: *string "string"* not found in the database

Cause: The specified object was not in the database.

Action: Enter the correct name for the database object. *Params: 1) object_type: The type of object. One out of table, schema or program unit. 2) object_name: Name of the table, schema or program unit.

OCI-12418: user *string* not found

Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

OCI-12419: null binary label value

Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

OCI-12420: required procedures and functions not in policy package "*string*"

Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

OCI-12421: different size binary labels

Cause: The label sizes for the binary label operation were not equal.

Action: Provide binary labels with the same lengths for the operation.

OCI-12422: max policies exceeded

Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

Action: Increase the size of the MAX_LABEL_POLICIES initialization parameter and restart the server.

OCI-12423: invalid position specified

Cause: The position specified for a binary label operation was invalid.

Action: Provide a position that is within the label size limits.

OCI-12424: length exceeds binary label size

Cause: The length specified for a binary label operation exceeded the the size of the binary label.

Action: Provide a bit or byte length that is within the label size limits.

OCI-12425: cannot apply policies or set authorizations for system schemas

Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

Action: Apply policies and set authorizations only for non-system users.

OCI-12426: invalid audit option

Cause: The option specified was not a valid audit option for the specified policy.

Action: Enter a correct audit option.

OCI-12427: invalid input value for *string* parameter

Cause: An input parameter was specified incorrectly.

Action: Correct the parameter value.

OCI-12428:**OCI-12431: invalid audit action**

Cause: The specified audit action was not a valid audit action.

Action: Correct the audit action number.

OCI-12433: cannot apply the OLS policy using the specified value for the label function

Cause: The Oracle Label Security (OLS) policy could not be applied on the table since there were errors during the creation of DML triggers using the specified label function. The OLS DML triggers are an integral part of how OLS functions are used with an OLS policy.

Action: Review the Oracle Database documentation for label functions and the PL/SQL command SA_POLICY_ADMIN.APPLY_TABLE_POLICY or SA_POLICY_ADMIN.APPLY_SCHEMA_POLICY. Ensure the following: - The specified label function value is a valid expression. - The label function does not have any compilation errors. - Ensure the EXECUTE privilege on the label function is granted to LBAC_TRIGGER.

OCI-12434: invalid audit type: *string*

Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

OCI-12435: invalid audit success: *string*

Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

OCI-12436: no policy options specified

Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

OCI-12437: invalid policy option: *string*

Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

OCI-12438: repeated policy option: *string*

Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

OCI-12439: invalid combination of policy options

Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

OCI-12440: insufficient authorization for the SYSDBA package

Cause: The use of the SYSDBA package requires the LBAC_DBA role.

Action: Grant the LBAC_DBA role to the database user.

OCI-12441: policy *string* already exists

Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

OCI-12442: policy column "*string*" already used by an existing policy

Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

OCI-12443: policy not applied to some tables in schema

Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

OCI-12444: policy already applied to table

Cause: You tried to apply a policy to a table that was already protected by the policy.

Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

OCI-12445: cannot change HIDDEN property of column

Cause: You tried to specify a different HIDE option for a table with an existing policy column.

Action: Drop the column from the table and reapply the policy with the new HIDE option.

OCI-12446: Administration of OLS policy *string* failed due to insufficient authorization.

Cause: Administrative function for an Oracle Label Security (OLS) policy was performed by a user not granted the '*policy_DBA*' role.

Action: Grant the '*policy_DBA*' role for the specified OLS policy. *Params: 1) *policy_name*: The name of the policy to be administered.

OCI-12447: policy role already exists for policy string

Cause: The role named *policy_DBA* already exists.

Action: Correct the policy name or delete the existing policy.

OCI-12448: The OLS policy string has not been applied on schema or table string.

Cause: An attempt was made to alter, enable or disable an Oracle Label Security (OLS) policy on a schema or table. This attempt failed since the OLS policy was not applied to the table.

Action: Review the list of policies applied to tables or schemas in LBACSYS.DBA_SA_SCHEMA_POLICIES or LBACSYS.DBA_SA_TABLE_POLICIES. Select a different policy, table or schema and ensure the policy is already applied to the table or schema. *Params: 1) *policy_name*: The name of the policy applied on the schema or table. 2) *name*: The name of the schema or table for which the policy is being altered, enabled or disabled.

OCI-12449: Labels specified for user must be of type USER.

Cause: An attempt was made to set labels for a user, but the labels in the list were not designated as USER labels.

Action: Alter the labels to be USER labels.

OCI-12450: use of LOB not allowed

Cause: An attempt was made to use a binary or character large object (BLOB or CLOB) in a column or an Abstract Data Type (ADT) attribute where the use of LOBs is not allowed based on label security policies.

Action: Contact Oracle Support.

OCI-12452: The OLS label tag string is already mapped to another label.

Cause: The Oracle Label Security (OLS) label tag value entered was already in use by another OLS label.

Action: Review the existing labels and label tags for the OLS policy in DBA_SA_LABELS view. Use an unused label tag for your new label. *Params: 1) *label_tag*: The label tag provided to create a new OLS label.

OCI-12453: The proposed label string already exists for this policy.

Cause: The label value entered already exists for the policy.

Action: Use the existing label instead of creating a duplicate. If you intended to create a different label, change the label tag or type before creating the label so it is not a duplicate. *Params: 1) *label_value*: The proposed label value.

OCI-12454: A label tag or label value string does not exist for Oracle Label Security (OLS) policy string.

Cause: The label tag or the label value provided did not match a label for the provided OLS policy.

Action: Enter a label value or a label tag that is defined for the provided policy. Query the database view DBA_SA_LABELS to find labels for OLS policies. *Params: 1) *label_tag*: The label tag number or the label value string. 2) *policy_name*: The OLS policy name.

OCI-12457: The OLS label exceeded the maximum allowed length of 4,000 characters.

Cause: An operation attempted to create or alter an Oracle Label Security (OLS) label greater than 4,000 bytes in length.

Action: Consult the Oracle Database documentation for OLS information on how the length of a security label is calculated. Resubmit the operation once the problem has been corrected.

OCI-12458: Oracle Label Security is not enabled.

Cause: An Oracle Label Security operation was attempted without enabling Oracle Label Security.

Action: Consult the Oracle Database documentation for information on how to enable Oracle Label Security.

OCI-12459: Oracle Label Security not configured

Cause: An administrative operation was attempted without configuring Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to configure Oracle Label Security.

OCI-12460: cannot disable Oracle Label Security when Database Vault is enabled

Cause: An attempt was made to disable Oracle Label Security when Database Vault was enabled.

Action: Disable Database Vault and bounce the database before attempting to disable Oracle Label Security.

OCI-12461: The specified level number or name *string* does not exist for the specified OLS policy *string*.

Cause: The specified level number or name was not defined for the specified Oracle Label Security (OLS) policy.

Action: Review the valid level numbers and names for OLS policies in DBA_SA_COMPARTMENTS. Provide a valid level number or name for the OLS policy. *Params: 1) level_identifier: The name or the number of the level. 2) policy_name: The name of the policy.

OCI-12462: The specified compartment number or name *string* does not exist for the specified OLS policy *string*.

Cause: The specified compartment number or name was not defined for the specified Oracle Label Security (OLS) policy.

Action: Review the valid compartment numbers and names for the OLS policies in DBA_SA_COMPARTMENTS. Provide a valid compartment number or name for the OLS policy. *Params: 1) compartment_identifier: The short name or the number of the compartment. 2) policy_name: The name of the policy.

OCI-12463: The specified group number *string* does not exist for the specified OLS policy *string*.

Cause: The group number was not defined for the specified Oracle Label Security (OLS) policy.

Action: Review the valid group numbers for OLS policies in DBA_SA_GROUPS. Provide a valid group number for the OLS policy. *Params: 1) group_number: The group number associated with the OLS policy. 2) policy_name: The name of the OLS policy.

OCI-12464: invalid characters in label component *string*

Cause: Label components can contain only alphanumeric characters, blanks, and underscores.

Action: Correct syntax of the label component.

OCI-12465: not authorized for read or write on specified groups or compartments

Cause: Groups or compartments were included that were not in the user's list of groups and compartments authorized for read or write access.

Action: Include groups or compartments authorized for read or write access in the user's list of groups and compartments.

OCI-12466: default level is greater than the user's maximum

Cause: The default level cannot be greater than the user's maximum.

Action: Enter an authorized level.

OCI-12467: minimum label can contain a level only

Cause: You included compartments or groups in the minimum label.

Action: Enter only an authorized minimum level as the label.

OCI-12468: max write level does not equal max read level

Cause: The level in the max write label must equal the level in the max read label.

Action: Enter max read and max write labels with the same level component.

OCI-12469: no user levels found for user *string* and policy *string*

Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

OCI-12470: NULL or invalid user label: *string*

Cause: The label entered is NULL or not within the user's authorizations.

Action: Enter the authorized labels for the user.

OCI-12471: Specified compartment or group is not authorized for user

Cause: The specified compartment or group is not in user's authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

OCI-12472: policy *string* is being used

Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

OCI-12473: The procedure is disabled when Label Security is used with OID.

Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

OCI-12474: cannot change column name for a policy in use

Cause: An attempt was made to change a column name for a policy that was applied on user schemas or tables.

Action: Disable the policy for all user schemas and tables before changing the column name.

OCI-12476: least upper bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

OCI-12477: greatest lower bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

OCI-12479: file label *string* must equal DBHIGH *string*

Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

OCI-12480: specified clearance labels not within the effective clearance

Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

OCI-12481: effective label not within program unit clearance range

Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

OCI-12482: internal MLS error: *string*\n Error: *string*

Cause: An internal MLS policy error occurred.

Action: Contact Oracle Customer Support.

OCI-12483: label not in OS system accreditation range

Cause: The specified label is above the OS maximum label or below the OS minimum label.

Action: Use a label that is within the accreditation range for the host OS.

OCI-12484: invalid OS label

Cause: The specified label does not exist in the OS host's label definition file.

Action: Use the OS label management tools to define the label.

OCI-12485: new effective label not within effective clearance

Cause: You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

Action: Enter a value between the min and the max labels.

OCI-12486: effective max labels and min labels cannot be changed

Cause: You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

Action: Enter NULL values for the effective minimum and maximum labels.

OCI-12487: clearance labels not between DBHIGH and DBLOW

Cause: You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

Action: Enter clearance label values between DBHIGH and DBLOW.

OCI-12488: maximum label does not dominate minimum label

Cause: You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

Action: Enter label values that preserves the dominance relationship between the minimum and maximum.

OCI-12489: default label not within clearance range

Cause: You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

Action: Enter a default label value within the clearance range.

OCI-12490: DBHIGH cannot be lowered

Cause: You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

Action: Enter a value for DBHIGH that dominates the old value.

OCI-12491: DBHIGH value does not dominate DBLOW

Cause: You attempted to enter a value for DBHIGH that did not dominate DBLOW.

Action: Enter a value for DBHIGH that dominates DBLOW.

OCI-12492: DBLOW cannot be changed

Cause: You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

OCI-12493: invalid MLS binary label

Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA_MLS_LABELS view for the valid MLS labels.

OCI-12494: cannot insert or delete a level, category, or release category

Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

OCI-12495: cannot disable an enabled level, category, or release category

Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

OCI-12496: cannot change existing level, category, or release numbers

Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

OCI-12497: maximum combined categories exceeds *string*

Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

OCI-12500 to OCI-12699

OCI-12500: TNS:listener failed to start a dedicated server process

Cause: Starting a dedicated server process failed. Either the executable could not be found or the environment was set up incorrectly.

Action: Turn on tracing at the administrator level and re-execute the operation. Verify that the Oracle Database server executable is present and has execute permissions enabled. Ensure that the Oracle environment is specified correctly in the LISTENER.ORA configuration file. The Oracle protocol adapter that is being called may not be installed on the local hard drive. Ensure that the correct protocol adapter is successfully linked. If this error persists, contact Oracle Support Services.

OCI-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

OCI-12503: TNS:listener received an invalid REGION from client

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

OCI-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

OCI-12505: Cannot connect to database. SID string is not registered with the listener at string. (CONNECTION_ID=string)

Cause: A listener process initially handles all connections to Oracle Database. The connection request received by the listener specified a system identifier (SID) for an instance (usually a database instance) that either was not dynamically registered with the listener or was not statically configured in the listener's listener.ora configuration file. This error may be a temporary condition that occurs after the listener has started but before the database instance registers with the listener.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the SID parameter in the connection string or that the tnsnames.ora file connect descriptor specifies an instance known by the listener. - Wait a moment and try to connect again. The database instance registration may not yet be complete. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which instances are currently known by the listener: - Ask the Database Administrator. - Review the

connection string shown in the cloud service console. - If you have access to the machine where the listener is running, run one of the following: * Isnrctl services * When a listener is named in the listener.ora file, run: Isnrctl services <listener_name> * If an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name> *Params: 1) SID_value: Name of the Oracle Database instance on the host computer. 2) host_port: The host and port that the Oracle Database listener process is on. 3) connection_id: The connection ID.

OCI-12506: TNS:listener rejected connection based on service ACL filtering

Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

OCI-12508: TNS:listener could not resolve the COMMAND given

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

OCI-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

OCI-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

OCI-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

OCI-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

OCI-12514: Cannot connect to database. Service *string* is not registered with the listener at *string*. (CONNECTION_ID=*string*)

Cause: A listener process initially handles all connections to Oracle Database. The connection request received by the listener specified a service name (usually for a database service) that either has not been dynamically registered with the listener or that has not been statically configured in the listener's listener.ora configuration file. This error may be a temporary condition that occurs after the listener has started but before the database instance registers with the listener.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the database or pluggable database (PDB) is running. If you are using a cloud service, ensure that the database service is running. - Ensure that the SERVICE_NAME parameter in the connection string or the tnsnames.ora file connect descriptor specifies a service known by the listener. - If using an Easy Connect connection string, then check that the service name specified is known by the listener. - Wait a moment and try to connect again. The database instance registration may not be complete. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which services are currently known by the listener: - Ask your database administrator. - Review the connection string shown in the cloud service console. - If you have access to the machine where the listener is running, you can execute one of the following: * Isnrctl services * When a listener is named in listener.ora file, run: Isnrctl services <listener_name> * If an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name> * If an Oracle Global Service Manager (Oracle GSM) listener is named in the gsm.ora file, run: gdsctl services -raw -gsm <gsm_name> *Params: 1) service_name: The name of the database service. 2) host_port: The host and port that the Oracle Database listener process is on. 3) connection_id: The connection ID.

OCI-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

OCI-12516: Cannot connect to database. Listener at *string* does not have a protocol handler for *string* ready or registered for service *string*. (CONNECTION_ID=*string*)

Cause: The connection was refused by the Oracle Database listener process. None of the known and available service handlers for the specified service name support the client's requested protocol stack.

Action: Do the following: - Check for mistakes in the specified connection string. - If you are using a cloud service, review the connection string shown in the service console. - Wait a moment and try to connect again. The service handler may be in a blocked state and not accepting new connections. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which handlers are currently known by the listener and are accepting connections, do the following: - Ask your Database Administrator. - Review the connection string shown in the cloud service console. - If you have access to the machine where the listener is running, you can run one of the following: * Isnrctl services * When a listener is named in the listener.ora file, run: Isnrctl services <listener_name> * If an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name> * If an Oracle Global Service Manager (Oracle GSM) listener is named in the gsm.ora file, run: gdsctl services -raw -gsm <gsm_name> - Ensure that the registered handlers are configured to support the desired protocol stack, for example, to match the protocol, session, and presentation used in the connection string. *Params: 1) host_port: The host and port that the Oracle Database listener process is on. 2) protocol_stack: The requested protocol stack. 3) service_name: The name of the database service. 4) connection_id: The connection ID.

OCI-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

OCI-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

OCI-12520: Cannot connect to database. Listener at *string* does not have handler for *string* server type ready or registered for service *string*. (CONNECTION_ID=*string*)

Cause: The connection was refused by the Oracle Database listener process. None of the known and available handlers for the requested server type (dedicated, shared, or pooled) was appropriate for the client connection.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the SERVER parameter in the connection string or your tnsnames.ora file connect descriptor specifies a server type (dedicated, shared, or pooled) that is supported by handlers known by the listener. - If using an Easy Connect connection string, then check that the server type specified is supported by handlers known by the listener. - Wait a moment and try to connect again. The service handler may be in a blocked state and not accepting new connections. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which handlers are currently known by the listener and are accepting connections, you can: - Ask your Database Administrator. - Review the connection string shown in the cloud service console. - If you have access to the machine where the listener is running, you can execute one of the following: * lsnrctl services * Or, when a listener is named in the listener.ora file, run: lsnrctl services <listener_name> * Or, if an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name> * Or, if an Oracle Global Service Manager (Oracle GSM) listener is named in the gsm.ora file, run: gdsctl services -raw -gsm <gsm_name>

OCI-12521: Cannot connect to database. Instance *string* for service *string* is not registered with the listener at *string*. (CONNECTION_ID=*string*)

Cause: A listener process initially handles all connections to Oracle Database. The connection request received by the listener specified, in addition to the service name, an instance name for an instance (usually a database instance) that either has not been dynamically registered with the listener or has not been statically configured in the listener's listener.ora configuration file. This error may be a temporary condition that occurs after the listener has started but before the database instance registers with the listener.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the INSTANCE_NAME parameter in the connection string or your tnsnames.ora file connect descriptor specifies an instance known by the listener. - If using an Easy Connect connection string, then check that the instance name specified is known by the listener. - Wait a moment and try to connect again. The database instance registration may not yet be complete. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which instances are currently known by the listener: - Ask your Database Administrator. - Review the connection string shown in your cloud service console. - If you have access to the machine where the listener is running, you can execute one of the following: * lsnrctl services * Or, when a listener is named in the listener.ora file, run: lsnrctl services <listener_name> * Or, if an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c

<cman_name> * Or, if an Oracle Global Service Manager (Oracle GSM) listener is named in the gsm.ora file, run: gdsctl services -raw -gsm <gsm_name>

OCI-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

OCI-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

OCI-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

OCI-12525: TNS:listener has not received client's request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

OCI-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

OCI-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

OCI-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

OCI-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

OCI-12530: TNS:listener: rate limit reached

Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

OCI-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

OCI-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

OCI-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

OCI-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

OCI-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

OCI-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

OCI-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

OCI-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

OCI-12541: Cannot connect. No listener at *string*.

Cause: The connection request could not be completed because either the database listener process was not running on the specified host and port, or an Interprocess Communication (IPC) protocol connection was attempted but there was no listener for the specified key running on the local machine. PL/SQL applications using UTL packages can also get this error if the external server process is not listening on the specified address.

Action: If the error shows the host and port that the connection tried to use, then ensure that a listener process is running on that host and is listening on that port. If the message indicates that there was no listener at the specified key, then ensure that the listener is running on the local machine and listening for the specified key. The listener process is used to initially handle all connections to Oracle Database. - Check for mistakes in the specified connection string. - If you are using an alias from a tnsnames.ora file, then verify the correctness of the host and port. Alternatively, verify the correctness of the key if you are using an IPC connection. - If using an Easy Connect connection string, then ensure that the host and port are correct. - Use lsnrctl to check that the listener is running and to verify the port or key it listens to. Run one of the following: * lsnrctl status * Or, when a listener is named in the listener.ora file, run: lsnrctl status <listener_name> * Or, if an Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl

show status -c <cman_name> *Params: 1) host_port: The host and port that the Oracle Database listener process is on.

OCI-12542: The endpoint specified in the listener address is already in use.

Cause: The endpoint specified in the listener address was already being used.

Action: Start the listener with a unique endpoint.

OCI-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

OCI-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

OCI-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

OCI-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

OCI-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

OCI-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

OCI-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

OCI-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

OCI-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

OCI-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

OCI-12560: Database communication protocol error.

Cause: A lower level communication protocol adapter error occurred.

Action: Do the following: - Check for lower level network transport errors in the error stack for additional information. - Ensure that the protocol specification used in the address for the connection is correct. - For further details, turn on network tracing and rerun the operation. Turn off tracing when the operation is complete. - Contact Oracle Support.

OCI-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

OCI-12562: TNS:bad global handle

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

OCI-12563: TNS:operation was aborted

Cause: NT operation was interrupted by the upper layer.

Action: None

OCI-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

OCI-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

OCI-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12574: TNS:Application generated error

Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

OCI-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

OCI-12578: A wallet file was not found or failed to open.

Cause: An error was encountered while trying to open the specified wallet.

Action: Ensure that the entry in the SQLNET.ORA file is correct, points to a wallet location with a valid wallet, and with the Oracle process having access to the file. Optionally, turn on tracing by setting the TRACE_LEVEL_CLIENT parameter in the SQLNET.ORA file to SUPPORT, reexecute the operation, and then review the trace file for more information.

OCI-12579: TNS:transport connection failed

Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

OCI-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

OCI-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

OCI-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

OCI-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

OCI-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

OCI-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

OCI-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

OCI-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

OCI-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

OCI-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

OCI-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

OCI-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

OCI-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

OCI-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

OCI-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

OCI-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

OCI-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

OCI-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

OCI-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

OCI-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

OCI-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

OCI-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

OCI-12638: Client failed to retrieve the Kerberos credential.

Cause: The Kerberos authentication service failed to retrieve the credentials of a user. This could be due to: - The database client was not able to reach the Kerberos Key Distribution Center (KDC). - The client was not configured correctly to get a ticket from the KDC. - The KDC was not configured correctly.

Action: Check the Kerberos authentication service configuration in the SQLNET.ORA file and verify that the Kerberos tickets are valid.

OCI-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

OCI-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

OCI-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

OCI-12642: There is no session key.

Cause: A process had no session key associated with it because the authentication service used did not require a session key.

Action: If a session key is required, use another authentication service.

OCI-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

OCI-12644: Kerberos ticket has expired.

Cause: An expired Kerberos ticket was used in an authentication attempt.

Action: Run "okinit" to renew the ticket.

OCI-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

OCI-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

OCI-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

OCI-12648: Encryption or data integrity algorithm list empty

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

OCI-12649: Unknown encryption or data integrity algorithm

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

OCI-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

OCI-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

OCI-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

OCI-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

OCI-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

OCI-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

OCI-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

OCI-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

OCI-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

OCI-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

OCI-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

OCI-12661: Protocol authentication to be used

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

OCI-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

OCI-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

OCI-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

OCI-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

OCI-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

OCI-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

OCI-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

OCI-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in

Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

OCI-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

OCI-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

OCI-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

OCI-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

OCI-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

OCI-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

OCI-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

OCI-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

OCI-12678: Authentication disabled but required

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

OCI-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

OCI-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

OCI-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

OCI-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

OCI-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

OCI-12684: unsupported encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by remote is not supported by this configuration.

Action: Upgrade the remote client/server to use higher version of encryption/crypto-checksumming adapter. If the support for lower version is needed, add the following to sqlnet.ora file: CLIENT: (to allow connections to weak servers) sqlnet.allow_weak_crypto = true SERVER: (to allow connections from weak clients) sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the remote endpoint cannot be updated to run the higher version of the encryption adapter. User is strongly advised to carefully consider the implications of this parameter before configuring it to allow weak connections.

OCI-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

OCI-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

OCI-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

OCI-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

OCI-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

OCI-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

OCI-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

OCI-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

OCI-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

OCI-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

OCI-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled

Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

OCI-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Take one of the following actions: - Turn off ANO encryption. - Set the SQLNET.IGNORE_ANO_ENCRYPTION_FOR_TCPS parameter to TRUE. - Set IGNORE_ANO_ENCRYPTION_FOR_TCPS to TRUE in the SECURITY clause of the client's TNS connect string. Refer to the Database Net Services Reference for more details.

OCI-12697: Internal error occurred in Oracle Connection Manager in Traffic Director Mode. Reason code: *string*\n

Cause: Internal error occurred in Oracle Connection Manager in Traffic Director Mode processing

Action: Enable tracing for Oracle Connection Manager in Traffic Director Mode to get more information.

OCI-12699: Native service internal error occurred.

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Support.

OCI-12700 to OCI-19400

OCI-12700: invalid NLS parameter value (*string*)

Cause: An invalid or unknown NLS configuration parameter was specified.

Action: Check the syntax and spelling of the parameter. Enter the correct parameter into the initialization parameter file.

OCI-12701: CREATE DATABASE character set is not known

Cause: The character set specified when creating the database is unknown.

Action: Refer to your Oracle operating system-specific documentation for more information about character sets on the system. Use a valid character set in the CREATE DATABASE command.

OCI-12702: invalid NLS parameter string used in SQL function

Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

Action: Check the syntax of the function and the parameters. Enter the command again using the correct syntax and valid values.

OCI-12703: this character set conversion is not supported

Cause: The requested conversion between two character sets in the CONVERT function is not implemented

Action: Use character sets available on the system in the CONVERT function.

OCI-12704: character set mismatch

Cause: One of the following: - The string operands (other than an nlsparms argument) to an operator or built-in function do not have the same character set. - An nlsparms operand is not in the database character set. - String data with character set other than the database character set is passed to a built-in function not expecting it. - The second argument to CHR() or CSCONVERT() is not CHAR_CS or NCHAR_CS. - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted. - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column. - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

Action: Strings declared with NCHAR or NCHAR VARYING do not interoperate with strings declared with CHAR or VARCHAR2. Use TRANSLATE() function to explicitly convert one to the other.

OCI-12705: Cannot access NLS data files or invalid environment specified

Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS_LANG, ORA_NLSxx, or ORACLE_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

OCI-12706: this CREATE DATABASE character set is not allowed

Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the database using either ASCII-based or EBCDIC-based character sets, depending on what is supported by the hardware. Refer to your Oracle operating system-specific documentation for more information about the type of character set supported.

OCI-12707: error while getting create database NLS parameter *string*

Cause: Internal error

Action: Contact Oracle Support Services.

OCI-12708: error while loading create database NLS parameter *string*

Cause: Internal error

Action: Contact Oracle Support Services.

OCI-12709: error while loading create database character set

Cause: Internal error

Action: Contact Oracle Support Services.

OCI-12710: CREATE CONTROLFILE character set is not known

Cause: The character set specified when creating the control file is unknown.

Action: Specify a known character set.

OCI-12711: this CREATE CONTROLFILE character set is not allowed

Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the correct control file for machine and character set.

OCI-12712: new character set must be a superset of old character set

Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

OCI-12713: Character data loss in NCHAR/CHAR conversion

Cause: When character set conversion happened between CHAR and NCHAR either implicitly or explicitly, some characters were lost due to no mapping characters in the destination character set.

Action: Ensure that all the characters can be mapped to characters in the destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE.

OCI-12714: invalid national character set specified

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

OCI-12715: invalid character set specified

Cause: The character set specified is not allowed for this operation or is invalid

Action: Ensure that the specified character set is valid

OCI-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists

Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

OCI-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists

Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

OCI-12718: operation requires connection as SYS

Cause: This command can only be run when connecting as SYS

Action: Connect as SYS to run this command

OCI-12719: operation requires database is in RESTRICTED mode

Cause: This command can only be run when the database is in RESTRICTED mode

Action: Ensure that the system is in RESTRICTED mode

OCI-12720: operation requires database is in EXCLUSIVE mode

Cause: This command can only be run when the database is in EXCLUSIVE mode

Action: Ensure that the system is in EXCLUSIVE mode

OCI-12721: operation cannot execute when other sessions are active

Cause: This command can only be run when there are no other sessions active

Action: Ensure there are no other connections to the database

OCI-12722: regular expression internal error

Cause: A regular expression internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

OCI-12723: regular expression too complex

Cause: The regular expression was too complex and could not be parsed.

Action: This is an internal error. Contact Oracle Support Services.

OCI-12724: regular expression corrupt

Cause: The regular expression contained an incorrect sequence of metacharacters.

Action: Ensure the metacharacters are correctly positioned.

OCI-12725: unmatched parentheses in regular expression

Cause: The regular expression did not have balanced parentheses.

Action: Ensure the parentheses are correctly balanced.

OCI-12726: unmatched bracket in regular expression

Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

OCI-12727: invalid back reference in regular expression

Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

OCI-12728: invalid range in regular expression

Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

OCI-12729: invalid character class in regular expression

Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

OCI-12730: invalid equivalence class in regular expression

Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

OCI-12731: invalid collation class in regular expression

Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

OCI-12732: invalid interval value in regular expression

Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

OCI-12733: regular expression too long

Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

OCI-12734: Instant Client Light: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

OCI-12735: Instant Client Light: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

OCI-12736: Database national character set *string* is not supported by Oracle Instant Client Basic Light.

Cause: The specified Oracle Database national character set was not allowed for the operation or was invalid. Only UTF8 and AL16UTF16 are allowed as the national character set when using the Oracle Instant Client Basic Light package.

Action: Use the Oracle Instant Client Basic package instead of the Oracle Instant Client Basic Light package. Alternatively, use a database that has a national character set of UTF8 or AL16UTF16. The national character set is an alternative character set that enables you to store Unicode character data in a database that does not have a Unicode database character set.

OCI-12737: Database server character set *string* is not supported by Oracle Instant Client Basic Light.

Cause: The specified server character set was not allowed for the operation or was invalid.

Action: Use the Oracle Instant Client Basic package instead of the Oracle Instant Client Basic Light package.

OCI-12738: Express Instant Client: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

OCI-12739: Express Instant Client: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

OCI-12740: Express Instant Client: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

OCI-12741: Express Instant Client: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

OCI-12742: Collation key creation failed.

Cause: The character argument of the collation-sensitive operator was too long or had too many decomposable characters to create a collation key in the available buffer space.

Action: Shorten the argument value if it was too long. The maximum allowed argument length depends on the collation, character set, and particular characters comprising the value but is at least 1500 bytes. To avoid the error due to decomposable characters, do not use collations based on UCA 6.2 (with a name starting with UCA0620) nor UCA collations DUCET or ROOT. Use collations based on a higher UCA version. Use ORADUCET in place of DUCET and ORAROOT in place of ROOT.

OCI-12743: An internal error occurred with the arguments *string*, *string*, and *string*.

Cause: An internal error in a globalization support function occurred.

Action: Contact Oracle Support Services.

OCI-12744: Character set *string* is not allowed as a database character set.

Cause: An attempt was made to create or alter a database using a client-only or conversion-only character set.

Action: Specify a supported database character set.

OCI-12746: unrecognized collation name "*string*"

Cause: The name of the collation that you specified was not recognized by the Oracle Database, because the name was misspelled, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to \$ORACLE_HOME/nls/data (%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation name or fix your database software configuration.

OCI-12747: unrecognized collation ID (*string*)

Cause: The ID of the collation that you specified was not recognized by the Oracle Database, because it was incorrect, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to \$ORACLE_HOME/nls/data(%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation ID or fix your database software configuration.

OCI-12752: An instance-critical process has terminated.

Cause: An unexpected error was encountered by an instance-critical process that caused it to terminate.

Action: The trace file and alert log will indicate which process terminated. See that process's trace file for additional details.

OCI-12753: The Oracle home user ID does not match the effective user ID of the local client which connected to the Oracle instance.

Cause: The user ID that is the owner of the Oracle home directory was not the same as the effective user ID of the local client that connected to the Oracle instance.

Action: Run the local client that connects to Oracle instance with the same user ID as the owner of the Oracle home.

OCI-12755: Feature *string* is disabled.

Cause: The feature required specific capabilities that were not enabled in the specified database instance.

Action: Contact Oracle Support to enable this feature. *Params: 1) feature_name: The name of the feature.

OCI-12757: instance does not currently know of requested service

Cause: The instance received a request to create a session. The request specified a service not currently associated with the instance. If an existing connection to the instance used this service, the service may have relocated to a different instance or may no longer exist.

Action: Ensure that the specified service is valid and reconnect.

OCI-12758: invalid options specified with ALTER SYSTEM KILL or ALTER SYSTEM DISCONNECT

Cause: DRAIN and POST_TRANSACTION were incompatible options.

Action: Use either DRAIN or POST_TRANSACTION or refer to the user manual for more options.

OCI-12774: error entering CDB sandbox *string*: *string*

Cause: An attempt to enter the sandbox for a multitenant container database (CDB) failed.

Action: Check the definition of the sandbox for the CDB.

OCI-12775: error entering PDB sandbox *string*: *string*

Cause: An attempt to enter the sandbox for a pluggable database (PDB) failed.

Action: Check the definition of the sandbox for the PDB.

OCI-12776: error exiting PDB sandbox *string*: *string*

Cause: An attempt to exit the sandbox for a pluggable database (PDB) failed.

Action: Resolve the problem indicated by the particular error.

OCI-12777: A non-continuable error encountered. Check the error stack for additional information [*string*], [*string*], [*string*], [*string*].

Cause: The error recorded before this error should not be cleared and should be re-signaled to the top-level error handler.

Action: See the previously recorded error. Contact DBA.

OCI-12778: path mismatch for *string* expected '*string*' but found '*string*'

Cause: The path recorded in the SGA did not match the current value.

Action: Clear the SGA by shutting down the instance and then restart.

OCI-12781: Oracle Scheduler group private handle is not valid.

Cause: The Oracle Scheduler group private handle was not valid.

Action: This is an internal error.

OCI-12782: Oracle Scheduler group thread spawn failed.

Cause: The Oracle Scheduler group could not spawn new threads.

Action: This is an internal error.

OCI-12783: Oracle Scheduler group post for action (*string*) in (*string*) failed.

Cause: The Oracle Scheduler group could not post an action to a process.

Action: This is an internal error.

OCI-12784: Oracle Scheduler group post for action (*string*) failed due to invalid action group.

Cause: The specified action post failed as there is no action group instance.

Action: This is an internal error.

OCI-12785: Oracle Scheduler group start for action group (*string*) failed during (*string*) operation.

Cause: The specified action group start failed during the specified operation.

Action: This is an internal error.

OCI-12791: The oradism utility does not have proper permissions.

Cause: The oradism utility was not root owned and did not have proper permissions.

Action: Change oradism to root owned binary with permission 4750.

OCI-12792: Network transfer operation aborted due to TTC error *string*.

Cause: A Two-Task Common (TTC) error occurred during the network transfer operation.

Action: Check connectivity to the remote database and check the alert log for problems reported by TTC.

OCI-12793: comment with length *string* exceeds maximum allowed length of *string*

Cause: The specified comment exceeded the maximum allowed length.

Action: Retry the operation with a shorter comment that will fit within the maximum limit.

OCI-12794: comment is mandatory when setting an underscore parameter (*string*) in SPFILE

Cause: A mandatory comment was missing while updating an underscore parameter using the ALTER SYSTEM SET ... SCOPE=[BOTH|SPFILE] clause.

Action: Provide a comment indicating the reason for the parameter update. Oracle recommends adding 'user:' and 'date:' information to the

OCI-12795: comment is missing '*string*' tag

Cause: A mandatory tag was missing from the comment used with the ALTER SYSTEM SET .. SCOPE=[BOTH|SPFILE] clause.

Action: Add the tag indicated by the error message to the comment. Examples of tags are 'user:', 'date:', 'reason:' eg: ALTER SYSTEM SET "_gc_policy_minimum"=15000

OCI-12796: The '*string*' parameter cannot be greater than '*string*' in Oracle Database Standard Edition.

Cause: An attempt was made to alter the parameter beyond the limit supported by Oracle Database Standard Edition.

Action: Alter the parameter to a value within the limit supported by Oracle Database Standard Edition.

OCI-12797: The '*string*' parameter cannot be greater than '*string*' in Oracle Database Free version.

Cause: An attempt was made to alter the parameter beyond the limit supported by Oracle Database Express Edition.

Action: Alter the parameter to a value within the limit supported by Oracle Database Express Edition.

OCI-12798: Mathematical expression for parameter *string* has an invalid value.

Cause: The specified value was not a valid mathematical expression.

Action: Check that the expression value is correct. Oracle supports the '+', '-', '%', '/', '*' and MAX(), MIN() functions in expression values. *Params: 1) parameter name : user specified parameter

OCI-12800: system appears too busy for parallel query execution

Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

OCI-12801: error signaled in parallel query server *string*

Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

OCI-12802: parallel query server lost contact with coordinator

Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

OCI-12803: parallel query server lost contact with another server

Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

OCI-12804: parallel query server appears to have died

Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

OCI-12805: parallel query server died unexpectedly

Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

OCI-12806: could not get background process to hold enqueue

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

OCI-12807: process queue could not receive parallel query message

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

OCI-12808: cannot set *string*_INSTANCES greater than number of instances *string*

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

Action: See the accompanying message for the current allowable maximum value, or set SCAN_INSTANCES / CACHE_INSTANCES to ALL.

OCI-12809: cannot set *string*_INSTANCES when mounted in exclusive mode

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

Action: SCAN_INSTANCES / CACHE_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER_DATABASE mode.

OCI-12810: PARALLEL_MAX_SERVERS must be less than or equal to *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value higher than the maximum allowed by the system.

Action: Set PARALLEL_MAX_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

OCI-12811: PARALLEL_MIN_SERVERS must be less than or equal to PARALLEL_MAX_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PARALLEL_MAX_SERVERS.

Action: Set PARALLEL_MIN_SERVERS to a value less than or equal to PARALLEL_MAX_SERVERS (indicated in the accompanying message) and retry.

OCI-12812: only one PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

OCI-12813: value for PARALLEL or DEGREE must be greater than 0

Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

OCI-12814: only one CACHE or NOCACHE clause may be specified

Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

OCI-12815: value for INSTANCES must be greater than 0

Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

OCI-12816: parallel create index fastpath operation

Cause: The parallel create index fastpath operation event has been set.

Action: set this event only under the supervision Oracle development

OCI-12817: parallel query option must be enabled

Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

OCI-12818: invalid option in PARALLEL clause

Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

OCI-12819: missing options in PARALLEL clause

Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

OCI-12820: invalid value for DEGREE

Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

OCI-12821: invalid value for INSTANCES

Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

OCI-12822: duplicate option in PARALLEL clause

Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

OCI-12823: default degree of parallelism may not be specified here

Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

OCI-12824: INSTANCES DEFAULT may not be specified here

Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

OCI-12825: explicit degree of parallelism must be specified here

Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

OCI-12826: hung parallel query server was killed

Cause: parallel query server was hung and subsequently killed.

Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

OCI-12827: insufficient parallel query slaves (requested *string*, available *string*, parallel_min_percent *string*)

Cause: PARALLEL_MIN_PERCENT parameter was specified and fewer than the minimum number of slaves were acquired

Action: Either reexecute the query with a lower PARALLEL_MIN_PERCENT or wait until some running queries are completed, thus freeing up slaves

OCI-12828: Can't start parallel transaction at a remote site

Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

Action: Do not use PDML at remote sites.

OCI-12829: Deadlock - itls occupied by siblings at block *string* of file *string*

Cause: parallel statement failed because all itls in the current block are occupied by siblings of the same transaction.

Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

OCI-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE

Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

OCI-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint

Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

OCI-12832: Could not allocate slaves on all specified instances

Cause: After executing a query on a global v\$ fixed view, one or more instances failed to allocate a slave to process query

Action: To allow results to be returned by successfully allocated slaves, execute ALTER SESSION SET ALLOW_PARTIAL_SN_RESULTS=TRUE statement, or check parameters of instances

OCI-12833: Coordinator's instance not a member of parallel_instance_group

Cause: The coordinator's instance must be a member of the parallel_instance_group in which this operation will be run.

Action: Either add the coordinator's instance to the current parallel_instance_group or change parallel_instance_group.

OCI-12834: Instance group name, 'string', too long, must be less than string characters

Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

OCI-12835: No instances are active in the GLOBAL_VIEW_ADMIN_GROUP

Cause: There must be at least one instance in the GLOBAL_VIEW_ADMIN_GROUP in order to execute a query on global views

Action: Change the value of GLOBAL_VIEW_ADMIN_GROUP

OCI-12838: cannot read/modify an object after modifying it in parallel

Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

OCI-12839: cannot modify an object in parallel after modifying it

Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions, one containing the parallel modification and the second containing the initial modification operation.

OCI-12840: cannot access a remote table after parallel/insert direct load txn

Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

OCI-12841: Cannot alter the session parallel DML state within a transaction

Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

OCI-12842: Cursor invalidated during parallel execution

Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

OCI-12843: pdml lock not held properly on the table

Cause: The coordinator crashed or released the lock on the partition which the slave is trying to acquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

OCI-12845: Failed to receive an inter-instance parallel execution message.

Cause: Operating system or interconnect problem receiving inter-instance message.

Action: Check the operating system-specific diagnostics.

OCI-12850: could not allocate parallel execution servers on all specified instances: *string* needed, *string* allocated

Cause: When executing a statement on a GV\$ fixed view, one or more instances failed to allocate a parallel execution server to process the statement.

Action: Check trace output for instances on which parallel execution servers failed to start. GV\$ query can only proceed if parallel execution servers can be allocated on all instances. *Params: 1) desired_num: The desired number of parallel execution servers. 2) actual_num: The actual number of parallel execution servers.

OCI-12851: PARALLEL_MAX_SERVERS must be greater than or equal to PARALLEL_MIN_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value less than PARALLEL_MIN_SERVERS.

Action: Set PARALLEL_MAX_SERVERS to a value greater than or equal to PARALLEL_MIN_SERVERS value specified in the accompanying message and retry.

OCI-12852: PARALLEL_MIN_SERVERS must be less than PROCESSES minus the number of reserved processes, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PROCESSES minus the number of reserved processes.

Action: Set PARALLEL_MIN_SERVERS to a value less than PROCESSES minus the number of reserved processes specified in the accompanying message and retry.

OCI-12853: insufficient memory for PX buffers: current *string*K, max needed *string*K

Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

OCI-12854: Parallel query is not supported on temporary LOBs

Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

OCI-12855: cannot run parallel or insert direct load in a loopback

Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

OCI-12856: cannot run parallel query on a loopback connection

Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

OCI-12860: deadlock detected while waiting for a sibling row lock

Cause: Two Parallel Data Manipulation Language (PDML) sibling transactions deadlocked one another while waiting for a row lock.

Action: Look at the trace file to see the transactions and resources involved. Commit the open transactions and retry if necessary. If parallel operation retry fails, retry the operation serially.

OCI-12874: parallel execution monitor terminated with error

Cause: The parallel execution monitor process died.

Action: Wait for the process to restart.

OCI-12875: PARALLEL_MAX_SERVERS cannot be set to 0 in a container database (CDB) system.

Cause: Attempted to set the PARALLEL_MAX_SERVERS parameter to 0 in the multi-tenant container database system.

Action: Set the PARALLEL_MAX_SERVERS parameter to non-zero value to ensure CDB system performance.

OCI-12894: source should be a sparse file

Cause: The 'setspareparent' command specified a source file that was not sparse.

Action: Use a sparse file as the source file.

OCI-12895: destination should be sparse

Cause: The 'setspareparent' command specified a destination that was not backed by a sparse disk group.

Action: Use a destination backed by a sparse disk group.

OCI-12896: child *string* should be a sparse file

Cause: The 'setspareparent' command specified a child file that was not sparse.

Action: Use a sparse file as the child file.

OCI-12897: failure to set parent to '%0!s' for a sparse file '%1!s'

Cause: The 'setspareparent' command was not successful.

Action: Examine the accompanying error messages for details.

OCI-12898: failure to set parent for the destination file

Cause: The parent information was not copied to the destination file.

Action: The 'setspareparent' command can be used to set the parent.

OCI-12899: value too large for column *string* (actual: *string*, maximum: *string*)

Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes. Also, when the actual value was the same as the maximum, there wasn't enough space for the entire converted value. The actual was the amount placed in the output buffer, but there was more to be stored.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

OCI-12900: must specify a default temporary tablespace for a locally managed database

Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

OCI-12901: default temporary tablespace must be of TEMPORARY type

Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: n/a

OCI-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type

Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: n/a

OCI-12903: default temporary tablespace must be an ONLINE tablespace**OCI-12904: default temporary tablespace cannot be altered to PERMANENT type****OCI-12905: default temporary tablespace cannot be brought OFFLINE****OCI-12906: cannot drop default temporary tablespace****OCI-12907: tablespace *string* is already the default temporary tablespace****OCI-12908: cannot specify SYSTEM as default temporary tablespace when creating database****OCI-12909: TEMPORARY keyword expected****OCI-12910: cannot specify temporary tablespace as default tablespace**

Cause: attempt to assign a temporary tablespace to be a user's default tablespace

Action: assign a permanent tablespace to be the default tablespace

OCI-12911: permanent tablespace cannot be temporary tablespace

Cause: attempt to assign a permanent tablespace to be a user's temporary tablespace

Action: assign a temporary tablespace to be user's temporary tablespace

OCI-12912: Dictionary managed tablespace specified as temporary tablespace

Cause: attempt to assign a dictionary managed tablespace to be a user's temporary tablespace

Action: Assign a locally managed temporary tablespace to be user's temporary tablespace

OCI-12913: Cannot create dictionary managed tablespace

Cause: Attempt to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

OCI-12914: Cannot migrate tablespace to dictionary managed type

Cause: Attempt to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

OCI-12915: Cannot alter dictionary managed tablespace to read write

Cause: Attempt to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

OCI-12916: cannot shrink permanent or dictionary-managed tablespace

Cause: An attempt was made to shrink a permanent tablespace or a dictionary-managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

OCI-12917: Invalid option specified for default permanent tablespace**OCI-12918: Invalid tablespace type for default permanent tablespace**

Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

OCI-12919: Can not drop the default permanent tablespace

Cause: An attempt was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

OCI-12920: database is already in force logging mode

Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: No action required.

OCI-12921: database is not in force logging mode

Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: No action required.

OCI-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running

Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

OCI-12923: tablespace *string* is in force logging mode

Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

OCI-12924: tablespace *string* is already in force logging mode

Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: No action required.

OCI-12925: tablespace *string* is not in force logging mode

Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: No action required.

OCI-12926: FORCE LOGGING option already specified

Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

OCI-12927: RETENTION option already specified

Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

OCI-12928: ENCRYPTION option already specified

Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

OCI-12931: FORCE LOGGING or SET STANDBY NOLOGGING already specified

Cause: FORCE LOGGING or SET STANDBY NOLOGGING options were specified more than once.

Action: Remove all but one of the FORCE LOGGING or SET STANDBY NOLOGGING options.

OCI-12932: sending data for a nonlogged block fetch request failed

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations failed. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

OCI-12933: failed to connect while serving a nonlogged block fetch request

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations could not connect to the requesting database. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

OCI-12934: replace of nonlogged blocks in file *string* failed

Cause: The process performing replacement of nonlogged blocks failed to replace one or more blocks of the file indicated due to unexpected reasons such as a write failure reported by the operating system.

Action: Inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

OCI-12935: operation [*string*] to database (service '*string*') failed (error *string*)

Cause: The process performing replacement of nonlogged blocks received an error when attempting to connect (CONNECT) or make a fetch request (REQUEST) against the database identified by the given service. The database was expected to act as a source of replacement blocks.

Action: Use the reported error to identify the issue or inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

OCI-12936: timeout waiting for data blocks from database (service '*string*')

Cause: The process performing replacement of nonlogged blocks waited too long for a request sent to the remote database for a range of blocks to be completed.

Action: Check connectivity to the remote database or check the alert log at the remote database for problems reported by a transport task process (TTnn).

OCI-12937: data blocks received for earlier recovery session (RCVID *string*)

Cause: A database received data blocks requested by a recovery session that has now terminated. This error signals to the sending database that no more transfer requests should be made for the same RCVID.

Action: None required.

OCI-12938: out of memory for the data transfer cache

Cause: A request to use space in the data transfer cache was rejected because there was no free space left in the cache and space could not be freed up.

Action: Ensure that automatic SGA tuning is enabled using either MEMORY_TARGET or SGA_TARGET system parameters or specify a larger size for the system parameter DATA_TRANSFER_CACHE_SIZE.

OCI-12939: The Data Guard environment is incomplete.

Cause: A request to perform Nonlogged Block Replacement (NBR) recovery could not identify any other database in the Data Guard environment from which to request replacement blocks.

Action: Ensure there is a LOG_ARCHIVE_DEST_n parameter configured that identifies the primary or standby database from which requests for replacement blocks can be made.

OCI-12940: Not enough space in DBVerify text buffer

Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

OCI-12941: DBVerify exception

Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

OCI-12942: database incarnation at source does not match

Cause: A request to send data blocks to a recovery process failed because the source of the blocks is not on the same database incarnation as the site where the recovery is being performed.

Action: Use standard Oracle Data Guard procedures to synchronize the primary and standby databases. Standby media recovery automatically tries to resolve many of the remaining nonlogged blocks on the standby database. To resolve any remaining nonlogged blocks, use the RMAN RECOVER ... NONLOGGED BLOCK command.

OCI-12950: SYSTEM tablespace specified as default permanent tablespace

Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified, then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

OCI-12951: Attempt to change default permanent tablespace to temporary

Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: n/a

OCI-12952: Control space growth in automatic segment space management segment under concurrency**OCI-12953: enable space scan optimization for clusters****OCI-12954: The request exceeds the maximum allowed database size of 12 GB.**

Cause: The 12 GB space limit of Oracle Database Free version was reached.

Action: Delete some files to create space or upgrade the database to the full edition.

OCI-12955: unable to acquire *string* extents from other instances of the cluster for temporary tablespace *string*

Cause: The current instance was out of space in the temporary segment belonging to the specified temporary tablespace and was unable to acquire unused extents from other instances of the cluster. This might happen when the system monitor process (SMON) on an instance was busy and was unable to cleanup unused extents from the temporary tablespace.

Action: 1) Check if the system monitor process (SMON) is busy or in a hung state on other instances of the cluster. 2) Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-12961: cannot open database in read/write mode on a read-only instance

Cause: An attempt was made to open the database on a read-only instance under the following two cases: 1) User explicitly specified read/write option in the SQL command. 2) User forgot to explicitly specify read-only in which case, read/write mode was assumed by default.

Action: Specify the open mode as read-only.

OCI-12962: cannot create database on a read-only instance

Cause: An attempt was made to create a database on a read-only instance.

Action: Create database should only be attempted from a read/write instance.

OCI-12963: A read-only instance cannot be the first instance to open a database.

Cause: A read-only instance was the first instance to try to open a database.

Action: A database must have been opened by at least one read/write instance for a read-only instance to be able to open it.

OCI-12964: All existing read/write instances have closed the database.

Cause: The last read/write instance holding the database open closed it.

Action: There has to be at least one read/write instance holding the database open for a read-only instance to hold it open.

OCI-12965: cannot mount an enabled thread on a read-only instance

Cause: An attempt was made to mount an enabled redo thread obtained as a user specified parameter.

Action: The parameter value should be changed to the thread number of a disabled thread.

OCI-12966: could not find a disabled redo thread to mount

Cause: There were no available disabled redo threads which could be used to mount on the current read-only instance.

Action: None

OCI-12967: read-only instance cannot mount a standby database

Cause: An attempt was made to mount a standby database on a read-only instance.

Action: This action is not allowed.

OCI-12968: delayed log flush should not be enabled in a read-only instance

Cause: The system parameter for ping with no log force feature was set to true.

Action: The parameter should be set to false on a read-only instance.

OCI-12969: invalid alter database option for read-only instance

Cause: An attempt was made to execute a disallowed ALTER DATABASE statement on a read-only instance.

Action: Only OPEN, CLOSE and CREATE TEMPFILE options are allowed for ALTER DATABASE statement on a read-only instance.

OCI-12970: cannot close PDB on all read/write instances while read-only instances exist

Cause: An attempt was made to close a pluggable database (PDB) on the last read/write instance while a read-only instance was holding it open.

Action: A PDB should be closed on all of the read-only instances before it can be closed on the last read/write instance.

OCI-12971: PDB is already online and enabled for ADG recovery.

Cause: An attempt was made to recover an online pluggable database (PDB) on an Active Data Guard (ADG).

Action: None

OCI-12972: cannot start PDB recovery on ADG

Cause: An attempt was made to recover a pluggable database (PDB) on an Active Data Guard (ADG) before the PDB creation was complete on the ADG, or while PDB side recovery was being canceled.

Action: Try later.

OCI-12973: PDB recovery in progress on ADG instance *string*

Cause: An attempt was made to recover a pluggable database (PDB) which is being recovered.

Action: None

OCI-12974: PDB recovery not detected on ADG instance *string*

Cause: An attempt was made to cancel the recovery of a pluggable database (PDB) on an Active Data Guard (ADG) which did not have any recovery session in progress. There is nothing to cancel.

Action: None

OCI-12975: cannot start recovery while pluggable database (PDB) recovery in progress

Cause: An attempt was made to start an Active Data Guard (ADG) recovery while PDB recovery session in progress.

Action: Try again when PDB recovery session is finished.

OCI-12976: incorrect pluggable database name

Cause: A pluggable database name is incorrectly specified. There are two cases that this may occur: - Multiple pluggable database names were specified. - None or wrong pluggable database name was specified.

Action: Specify only one and correct pluggable database name.

OCI-12977: pluggable database (PDB) recovery was not active

Cause: An attempt was made to cancel a pluggable database level managed recovery but it was not active at the time. The pluggable database was online and was part of CDB-level Active Data Guard (ADG) recovery.

Action: None

OCI-12980: checkpoint option not allowed with SET UNUSED

Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

OCI-12981: cannot drop column from an object type table

Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

OCI-12982: cannot drop column from a nested table

Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

OCI-12983: cannot drop all columns in a table

Cause: An attempt was made to drop all columns in a table. A table must have at least one column. If you want to remove the entire table, use the DROP TABLE command instead.

Action: Ensure that at least one column remains in the table after the DROP COLUMN operation.

OCI-12984: cannot drop partitioning column

Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

OCI-12985: tablespace '*string*' is read only, cannot drop column

Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

OCI-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE

Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

OCI-12987: cannot combine drop column with other operations

Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

OCI-12988: cannot drop column from table owned by SYS

Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

OCI-12989: invalid value for checkpoint interval

Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and $(2^{31}-1)$.

Action: Correct checkpoint interval and resubmit statement

OCI-12990: duplicate option specified

Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

OCI-12991: column is referenced in a multi-column constraint

Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

OCI-12992: cannot drop parent key column

Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

OCI-12993: tablespace '*string*' is offline, cannot drop column

Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

OCI-12994: drop column option only allowed once in statement

Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

OCI-12995: no columns in partially dropped state

Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

OCI-12996: cannot drop system-generated virtual column

Cause: An attempt was made to drop a virtual column generated by the system.

Action: This action is not allowed.

OCI-12997: cannot drop primary key column from an index-organized table

Cause: An attempt was made to drop a primary key column from an index-organized table.

Action: This action is not allowed.

OCI-12998: Ignore errors during drop column from atb.c**OCI-12999: cannot DROP or SET UNUSED a column that has been set unused**

Cause: An attempt was made to DROP or SET UNUSED a column that has already been 'set unused'.

Action: Use the DROP UNUSED COLUMNS option to remove the column.

OCI-13000: dimension number is out of range

Cause: The specified dimension was either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Ensure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

OCI-13001: dimensions mismatch error

Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation did not match.

Action: Ensure that the number of dimensions in the HHCODEs match.

OCI-13002: specified level is out of range

Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

OCI-13003: the specified range for a dimension is invalid

Cause: The specified range for a dimension was invalid.

Action: Ensure that the lower bound (lb) is less than the upper bound (ub).

OCI-13004: The specified buffer size is invalid.

Cause: The specified buffer size for a function was invalid.

Action: This is an internal error. Contact Oracle Support.

OCI-13005: recursive HHCODE function error

Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

OCI-13006: the specified cell number is invalid

Cause: The cell identifier was either less than 0 or greater than $(2^{\text{ndim}} - 1)$.

Action: Ensure that the cell identifier is between 0 and $(2^{\text{ndim}} - 1)$.

OCI-13007: an invalid HEX character was detected

Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

OCI-13008: the specified date format has an invalid component

Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

OCI-13009: the specified date string is invalid

Cause: The specified date string had a bad component or did not match the specified format string.

Action: Ensure that the components of the date string are valid and that the date and format strings match.

OCI-13010: an invalid number of arguments has been specified

Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

OCI-13011: value is out of range

Cause: A specified dimension value was outside the range defined for that dimension.

Action: Ensure that all values to be encoded are within the defined dimension range.

OCI-13012: an invalid window type was specified

Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

OCI-13013: the specified topology was not INTERIOR or BOUNDARY

Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Ensure that INTERIOR or BOUNDARY is used to describe the topology of the HHCODE.

OCI-13014: a topology identifier outside the range of 1 to 8 was specified

Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

OCI-13015: the window definition is not valid

Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

OCI-13016: specified topology [*string*] is invalid

Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO_TOPO.validate_topology function.

OCI-13017: unrecognized line partition shape

Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

OCI-13018: bad distance type

Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

OCI-13019: coordinates out of bounds

Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

OCI-13020: coordinate is NULL

Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

OCI-13021: element not continuous

Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

OCI-13022: polygon crosses itself

Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

OCI-13023: interior element interacts with exterior element

Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

OCI-13024: polygon has less than three segments

Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

OCI-13025: polygon does not close

Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

OCI-13026: unknown element type for element *string.string.string*

Cause: The SDO_ETYPE column in the *layer_SDOGEOM* table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the *layer_SDOGEOM* table for the specified geometric element using one of the supported SDO_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO_ETYPE and its possible values.

OCI-13027: unable to read dimension definition from *string*

Cause: There was a problem reading the dimension definition from the *layer_SDODIM* table.

Action: Verify that the *layer_SDODIM* table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

OCI-13028: Invalid Gtype in the SDO_GEOMETRY object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

OCI-13029: Invalid SRID in the SDO_GEOMETRY object

Cause: There is an invalid SDO_SRID in the SDO_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

OCI-13030: Invalid dimension for the SDO_GEOMETRY object

Cause: There is a mismatch between the dimension in the SDO_GTYPE and dimension in the SDO_GEOM_METADATA for the SDO_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

OCI-13031: Invalid Gtype in the SDO_GEOMETRY object for point object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object where the VARRAYs are NULL but the SDO_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

OCI-13032: Invalid NULL SDO_GEOMETRY object

Cause: There are invalid SDO_POINT_TYPE or SDO_ELEM_INFO_ARRAY or SDO_ORDINATE_ARRAY fields in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO_GEOMETRY as NULL instead of setting each field to NULL.

OCI-13033: Invalid data in the SDO_ELEM_INFO_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

OCI-13034: Invalid data in the SDO_ORDINATE_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ORDINATE_ARRAY field of the SDO_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

OCI-13035: Invalid data (arcs in geodetic data) in the SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

OCI-13036: Operation [*string*] not supported for Point Data

Cause: The specified geometry function was not supported for point data.

Action: Ensure that the specified geometry function is not called on point data.

OCI-13037: SRIDs do not match for the two geometries

Cause: A spatial operation was invoked with two geometries where one geometry had an SRID and the other geometry did not have an SRID.

Action: Ensure that the spatial operations are invoked between two geometries with compatible SRIDs.

OCI-13038: Cannot enable parallel query after performing spatial DML.

Cause: An attempt was made to enable a parallel query after performing a spatial DML operation.

Action: Commit the spatial DML transaction before attempting to enable parallel query operations.

OCI-13039: failed to update spatial index for element *string.string.string*

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

OCI-13040: failed to subdivide tile

Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

OCI-13041: failed to compare tile with element *string.string.string*

Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any errors that accompany `ORA-13041` and contact Oracle Support Services.

OCI-13042: invalid `SDO_LEVEL` and `SDO_NUMTILES` combination

Cause: An invalid combination of `SDO_LEVEL` and `SDO_NUMTILES` values was read from the `layer_SDOLAYER` table. The most likely cause is that the columns are `NULL`.

Action: Verify that the `SDO_LEVEL` and `SDO_NUMTILES` columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

OCI-13043: failed to read metadata from the `layer_SDOLAYER` table

Cause: An error was encountered reading the layer metadata from the `layer_SDOLAYER` table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

OCI-13044: the specified tile size is smaller than the tolerance

Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

OCI-13046: invalid number of arguments

Cause: An invalid number of arguments were specified for an `SDO_GEOM` function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant `SDO_GEOM` function.

OCI-13047: unable to determine ordinate count from table *layer_SDOLAYER*

Cause: An SDO_GEOM function was unable to determine the number of ordinates for the SDO layer *layer*.

Action: Verify that the *layer_SDOLAYER* table has a valid value for the column SDO_ORDCNT. Then retry the operation.

OCI-13048: recursive SQL fetch error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13049: unable to determine tolerance value from table *layer_SDODIM*

Cause: An SDO_GEOM function was unable to determine the tolerance value for the SDO layer *layer*.

Action: Verify that the *layer_SDODIM* table has a valid value for the column SDO_TOLERANCE.

OCI-13050: unable to construct spatial object

Cause: There was an internal error.

Action: Contact Oracle Support.

OCI-13051: failed to initialize spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13052: unsupported geometric type for geometry *string.string*

Cause: The geometry type for a specific instance in a *layer_SDOGEOM* table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

OCI-13053: maximum number of geometric elements in argument list exceeded

Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO_GEOM function.

OCI-13054: recursive SQL parse error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13055: Oracle object *string* does not exist in specified table

Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

OCI-13056: Spatial Reference ID (SRID) does not exist: NULL.

Cause: The operation required a valid SRID but none was specified.

Action: Contact Oracle Support Services.

OCI-13057: Spatial Reference ID (SRID) *number* does not exist.

Cause: The specified SRID is not known.

Action: Ensure that the specified SRID was valid.

OCI-13058: Spatial Reference ID (SRID) does not exist.

Cause: The SRID for the operation could not be determined.

Action: Ensure that the SRID for the operation is valid.

OCI-13059: invalid WRK_TBLSPC parameter

Cause: An invalid "WRK_TBLSPC" parameter value was specified.

Action: Ensure that the specified "WRK_TBLSPC" exists and is accessible to the current user.

OCI-13060: topology with the name *string* already exists

Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

OCI-13061: topology with the name *string* does not exist

Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

OCI-13062: topology IDs do not match in the feature table and the topology

Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

OCI-13063: relationship information table is missing data for feature table [*string*]

Cause: The topology relationship information table (xxx_RELATION\$) did not have the matching partition corresponding to the feature table.

Action: Ensure the correct topology IDs and names are specified in the call to register the feature table with the topology.

OCI-13064: relationship information table has inconsistent data for feature table [*string*]

Cause: The topology_id and tg_layer_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx_RELATION\$).

Action: Ensure that the correct feature tables are specified in the call to register the feature table with the topology.

OCI-13065: cannot delete a child layer with a parent layer

Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Ensure that all dependent feature layers are deleted before deleting the current feature layer.

OCI-13066: wrong feature geometry or element type

Cause: The SDO_TOPO_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO_TOPO_GEOMETRY object.

OCI-13067: operator requires both parameters from the same topology

Cause: Both SDO_TOPO_GEOMETRY parameters did not come from the same topology.

Action: Ensure that both of the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO_TOPO_GEOMETRY parameters.

OCI-13068: wrong table or column name in SDO_TOPO_GEOMETRY constructor

Cause: An SDO_TOPO_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

OCI-13069: incorrect degree value for SDO_GEOMETRY object

Cause: An incorrect degree value ≤ 1 was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the degree value for the Non-Uniform Rational B-Spline curve.

OCI-13070: incorrect number of control points for SDO_GEOMETRY object

Cause: An incorrect number of control points was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of control points for the Non-Uniform Rational B-Spline curve.

OCI-13071: incorrect control points, degree for SDO_GEOMETRY object

Cause: An incorrect number of control points and degree was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure that the number of control points is greater than the degree for a Non-Uniform Rational B-Spline curve.

OCI-13072: incorrect number of knots for SDO_GEOMETRY object

Cause: An incorrect number of knot values was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of knot values passed for the Non-Uniform Rational B-Spline curve.

OCI-13073: incorrect control point weight value for a SDO_GEOMETRY object

Cause: An incorrect value was passed for the weight of a control point of a Non-Uniform Rational B-Spline curve.

Action: Ensure all weight values for control points are positive.

OCI-13074: incorrect knot value for SDO_GEOMETRY object

Cause: An incorrect knot value was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve are in non-decreasing order.

OCI-13075: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve have no more than a sequence of 'k' consecutive identical values or no more than 'k + 1' consecutive same values at the beginning or end of Non-Uniform Rational B-Spline curve.

OCI-13076: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot value sequence passed for the Non-Uniform Rational B-Spline curve is a normalized vector beginning at zero and ending at one.

OCI-13077: incorrect start or end point for subelement of a compound curve

Cause: The end point of a subelement for a compound curve was not equal to the start point of the next subelement, or the start point of a subelement was not equal to the end point of the previous subelement and one of the subelements was a NURBS curve.

Action: Ensure that the end point of each subelement is equal to the start point of the next subelement and that the start point of each subelement is equal to the end point of the previous subelement when one of the subelements is a NURBS curve.

OCI-13078: cannot commit a distributed transaction involving spatial index

Cause: An attempt was made to commit changes to a spatial table in a distributed transaction, but spatial indexes are not supported in distributed transactions.

Action: Perform all transactional changes to spatial tables (tables containing spatial geometry columns) in a local non-distributed transaction. For more information about this restriction, refer to the Oracle Spatial Data and Graph documentation.

OCI-13079: invalid schema name

Cause: The specified schema name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the schema name is valid.

OCI-13080: invalid index name

Cause: The specified spatial index name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the spatial index name is valid.

OCI-13081: invalid index table name

Cause: The specified index table name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index table name is valid. The index table name typically starts with "MDRT_" prefix.

OCI-13082: invalid index partition name

Cause: The specified index partition name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index partition name was valid.

OCI-13083: invalid index parameters

Cause: The specified index parameter or parameter combination was invalid.

Action: Check the list of index parameters to ensure that they are correctly specified and valid for the corresponding index operation.

OCI-13084: invalid table type: index organization not supported

Cause: An attempt was made to create the spatial index on an index-organized table (IOT).

Action: Spatial indexes cannot be created on index-organized tables.

OCI-13085: invalid column name

Cause: The specified column name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index column name is valid. If the column name is a function, ensure the function name is properly spelled and case-sensitive.

OCI-13086: geometry cannot be an optimized geodetic MBR

Cause: An attempt was made to use optimized geodetic minimum bounding rectangles (MBR).

Action: The object tracker cannot be used on objects that are composed of optimized MBRs.

OCI-13087: incorrect number of query columns

Cause: The number of table columns specified for the PointInPolygon() function was incorrect.

Action: Ensure that there are at least two columns specified, and that the first two columns are of the NUMBER type, representing the X and Y coordinates.

OCI-13088: SQL cursor rows have been pre-fetched

Cause: It has been detected that 1 or more rows have been pre-fetched from the specified query cursor.

Action: One or more rows were pre-fetched from the specified query cursor.

OCI-13089: invalid tolerance

Cause: The specified tolerance value was invalid.

Action: The tolerance value must be greater than 0.0.

OCI-13090: geometry must be 2D

Cause: The specified geometry is not two-dimensional.

Action: Ensure the geometry is two-dimensional.

OCI-13091: unable to process query on geodetic MBR

Cause: The operation is not valid using geodetic MBRs.

Action: Ensure the geometry is not using geodetic MBRs.

OCI-13092: unable to process query

Cause: The operation failed.

Action: Contact Oracle Support Services.

OCI-13093: polygon Rings exceeded half the area of earth

Cause: The polygon ring size exceeded half the area of the earth.

Action: Contact Oracle Support Services.

OCI-13094: invalid cursor

Cause: The specified query cursor was invalid.

Action: Contact Oracle Support Services.

OCI-13095: Element number is wrong

Cause: The specified element number is incorrect.

Action: Ensure the specified element number is valid for the geometry.

OCI-13096: Wrong geometry type

Cause: The specified geometry type is incorrect.

Action: Ensure the specified geometry type (GTYPE) is valid for the geometry.

OCI-13097: wrong element type

Cause: The specified element type is incorrect.

Action: Ensure the specified element type (GTYPE) is valid for the geometry.

OCI-13098: more elements than specified

Cause: There are more elements than were specified.

Action: Ensure the specified number of elements is valid for the geometry.

OCI-13099: wrong RING topology

Cause: The geometry ring topology (inner or outer) is wrong.

Action: Contact Oracle Support Services.

OCI-13100: feature does not exist

Cause: The feature does not exist.

Action: Contact Oracle Support.

OCI-13101: invalid ptn_type parameter

Cause: An incorrect ptn_type parameter was specified.

Action: Ensure the ptn_type parameter value is correct.

OCI-13102: invalid ptn_capacity parameter

Cause: An incorrect ptn_capacity parameter was specified.

Action: Ensure the ptn_capacity parameter value is correct.

OCI-13103: invalid numdim parameter

Cause: An incorrect numdim parameter was specified.

Action: Ensure the numdim parameter value is correct.

OCI-13104: null values not allowed in input data

Cause: Null values cannot be specified in the supplied input data.

Action: Ensure that all null-values have been removed from the data.

OCI-13105: invalid Parameters for Partition_Table

Cause: One or more parameters for the Partition_Table() function are invalid.

Action: Ensure that the identified parameters are correctly specified.

OCI-13106: invalid MASK parameter

Cause: The specified MASK parameter was invalid.

Action: Ensure that the MASK parameter values are correctly specified.

OCI-13107: operation not supported for Non-Uniform Rational B-Spline type

Cause: This operation cannot be executed for Non-Uniform Rational B-Spline curves.

Action: Specify a geometry that does not contain a Non-Uniform Rational B-Spline curve type.

OCI-13108: spatial table *string* not found

Cause: The specified spatial table did not exist.

Action: Check the spatial data dictionary to ensure that the table is registered.

OCI-13109: spatial table *string* exists

Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

OCI-13110: cannot drop topology with associated topo_geometry tables

Cause: The drop_topology procedure was invoked for a topology that has associated topo_geometry layers with it.

Action: Delete the topo_geometry layers from the topology before dropping the topology. Use SDO_TOPO.delete_topo_geometry_layer to delete topo_geometry layers from the topology.

OCI-13111: cannot add topo_geometry layer [*string*] to topology

Cause: It was not possible to add the specified TOPO_GEOMETRY layer to the topology.

Action: Ensure that the TOPO_GEOMETRY layer table exists in the database.

OCI-13112: cannot delete topo_geometry layer [string] from topology

Cause: It was not possible to delete the specified topo_geometry layer from the topology.

Action: Check USER_SDO_TOPO_METADATA to see if the specified topo_geometry layer is part of the topology. Only those topo_geometry layers which are part of the topology can be deleted from it.

OCI-13113: invalid tg_layer_id in sdo_topo_geometry constructor

Cause: An invalid layer_id was passed to the SDO_TOPO_GEOMETRY constructor.

Action: Valid layer_ids are obtained by adding a topo_geometry layer to the topology. Check USER_SDO_TOPO_METADATA to find out the layer_id for an existing topo_geometry layer.

OCI-13114: [string]_NODE\$ table does not exist

Cause: The NODE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

OCI-13115: [string]_EDGE\$ table does not exist

Cause: The EDGE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

OCI-13116: [string]_FACE\$ table does not exist

Cause: The FACE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

OCI-13117: [string]_RELATION\$ table does not exist

Cause: The RELATION\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

OCI-13118: invalid node_id [string]

Cause: A topology node operation was invoked with an invalid node_id.

Action: Check the topology node\$ table to see if the specified node_id exists in the topology.

OCI-13119: invalid edge_id [string]

Cause: A topology edge operation was invoked with an invalid edge_id.

Action: Check the topology edge\$ table to see if the specified edge_id exists in the topology.

OCI-13120: invalid face_id [string]

Cause: A topology face operation was invoked with an invalid face_id.

Action: Check the topology face\$ table to see if the specified face_id exists in the topology.

OCI-13121: layer type type mismatch with topo_geometry layer type

Cause: The tg_type in SDO_TOPO_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER_SDO_TOPO_METADATA view to see the layer type for the layer and use it in the constructor.

OCI-13122: invalid topo_geometry specified

Cause: The SDO_TOPO_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO_TOPO_GEOMETRY object and verify that it is a valid topo_geometry object.

OCI-13123: invalid TOPOLOGY name specified

Cause: The create_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER_SDO_TOPO_METADATA (or the MDSYS.SDO_TOPO_METADATA_TABLE) with this topology name.

OCI-13124: unable to determine column id for column *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13125: partition key is already set

Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

OCI-13126: unable to determine class for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13127: failed to generate target partition

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13128: current tiling level exceeds user specified tiling level

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13129: HHCODE column *string* not found

Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

OCI-13135: failed to alter spatial table

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13136: null common code generated

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13137: failed to generate tablespace sequence number

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13138: could not determine name of object *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13139: could not obtain column definition for *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13140: invalid target type

Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

OCI-13141: invalid RANGE window definition

Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.: lower_bound1,upper_bound1,lower_bound2,upper_bound2,...). There should be an even number of values.

OCI-13142: invalid PROXIMITY window definition

Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

OCI-13143: invalid POLYGON window definition

Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

OCI-13144: target table *string* not found

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13145: failed to generate range list

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13146: could not find table substitution variable *string*

Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

OCI-13147: failed to generate MBR

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13148: failed to generate SQL filter

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13149: failed to generate next sequence number for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13150: failed to insert exception record

Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

OCI-13151: failed to remove exception record

Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

OCI-13152: invalid HHCODE type

Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

OCI-13153: invalid high water mark specified

Cause: The high water mark was not greater than or equal to zero.

Action: Ensure that the high water mark is an integer greater than or equal to zero.

OCI-13154: invalid precision specified

Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

OCI-13155: invalid number of dimensions specified

Cause: The number of dimensions specified is out of range.

Action: The number of dimension must be between 1 and 32.

OCI-13156: table to be registered *string.string* is not empty

Cause: The specified table contained rows.

Action: Ensure that the table to be registered is empty.

OCI-13157: Oracle error *ORAstring* encountered while *string*

Cause: The specified Oracle error was encountered.

Action: Correct the Oracle error.

OCI-13158: Oracle object *string* does not exist.

Cause: The specified object did not exist.

Action: Verify that the specified object exists.

OCI-13159: Oracle table *string* already exists

Cause: The specified table already exists.

Action: Drop the specified table.

OCI-13181: unable to determine length of column *string_SDOINDEX.SDO_CODE*

Cause: The length of the SDO_CODE column in the *layer_SDOINDEX* table could not be determined.

Action: Ensure that the *layer_SDOINDEX* table exists with the SDO_CODE column. Verify that the appropriate privileges exist on the table. Then retry the operation.

OCI-13182: failed to read element *string.string.string*

Cause: The specified element could not be read from the *layer_SDOGEOM* table.

Action: Verify that the specified element exists in the table. Then retry the operation.

OCI-13183: unsupported geometric type for geometry *string.string*

Cause: The geometry type in the *layer_SDOGEOM* table is unsupported.

Action: Modify the geometry type to be one of the supported types.

OCI-13184: failed to initialize tessellation package

Cause: Initialization of the tessellation package failed.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13185: failed to generate initial HHCODE

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13186: fixed tile size tessellation failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13187: subdivision failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13188: cell decode failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13189: recursive SQL parse failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13190: recursive SQL fetch failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13191: failed to read SDO_ORDCNT value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13192: failed to read number of element rows

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13193: failed to allocate space for geometry

Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

OCI-13194: failed to decode supercell

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13195: failed to generate maximum tile value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

OCI-13196: failed to compute supercell for element *string.string.string*

Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

OCI-13197: element *string.string.string* is out of range

Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the *layer_SDODIM* table.

Action: Verify that the geometry is valid and within the defined domain.

OCI-13198: Spatial error: *string*

Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

OCI-13199: *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-13200: internal error [*string*] in spatial indexing.

Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

OCI-13201: invalid parameters supplied in CREATE INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

OCI-13202: failed to create or insert into the SDO_INDEX_METADATA table

Cause: An error was encountered while trying to create the SDO_INDEX_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

OCI-13203: failed to read USER_SDO_GEOM_METADATA view

Cause: An error encountered while trying to read the USER_SDO_GEOM_METADATA view.

Action: Check that USER_SDO_GEOM_METADATA has an entry for the current geometry table.

OCI-13204: failed to create spatial index table

Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

OCI-13205: internal error while parsing spatial parameters

Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

OCI-13206: internal error [*string*] while creating the spatial index

Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

OCI-13207: incorrect use of the [*string*] operator

Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

OCI-13208: internal error while evaluating [*string*] operator

Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

OCI-13209: internal error while reading SDO_INDEX_METADATA table

Cause: An internal error was encountered while trying to read the SDO_INDEX_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

OCI-13210: error inserting data into the index table

Cause: An error was encountered while trying to insert data into the index table. Likely causes are: - Insufficient quota in the current tablespace - User does not appropriate privileges

Action: Check the accompanying error messages.

OCI-13211: failed to tessellate the window object

Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure.

OCI-13212: failed to compare tile with the window object

Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

OCI-13213: failed to generate spatial index for window object

Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

OCI-13214: failed to compute supercell for window object

Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

OCI-13215: window object is out of range

Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the `USER_SDO_GEOM_METADATA` view.

Action: Verify that the geometry is valid and within the defined domain.

OCI-13216: failed to update spatial index

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

OCI-13217: invalid parameters supplied in ALTER INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial `ALTER INDEX` statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial ALTER INDEX statement.

OCI-13218: max number of supported index tables reached for [string] index

Cause: An add_index parameter was passed to ALTER INDEX when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

OCI-13219: failed to create spatial index table [string]

Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index's schema with the specified name. The CREATE INDEX statement will try to create an index table with this name. Either rename this table or change the name of the index.

OCI-13220: failed to compare tile with the geometry

Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

OCI-13221: unknown geometry type in the geometry object

Cause: The SDO_GTYPE attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported SDO_GTYPE values. See the Oracle Spatial documentation for an explanation of SDO_GTYPE and its possible values.

OCI-13222: failed to compute supercell for geometry in string

Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

OCI-13223: duplicate entry for string in SDO_GEOM_METADATA

Cause: There are duplicate entries for the given table and column value pair in the USER_SDO_GEOM_METADATA view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the USER_SDO_GEOM_METADATA view.

OCI-13224: zero tolerance specified for layer in USER_SDO_GEOM_METADATA

Cause: A tolerance of zero or NULL was supplied for a layer in the USER_SDO_GEOM_METADATA view.

Action: Check the tolerance specified to ensure that it is a positive value.

OCI-13225: specified index table name is too long for a spatial index

Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

Action: Check the supported size of the index table name and reduce the size of the index name.

OCI-13226: interface not supported without a spatial index

Cause: The geometry table does not have a spatial index.

Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

OCI-13227: SDO_LEVEL values for the two index tables do not match

Cause: The SDO_LEVEL values for the two index tables used in the spatial join operator do not match.

Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same SDO_LEVEL and SDO_NUMTILES values

OCI-13228: spatial index create failed due to invalid type

Cause: An attempt was made to create a spatial index on a column of type other than SDO_GEOMETRY.

Action: Ensure that the index is created on a column of type SDO_GEOMETRY.

OCI-13230: failed to create temporary table [*string*] during R-tree creation

Cause: The specified temporary table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

OCI-13231: failed to create index table [*string*] during R-tree creation

Cause: The specified index table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

OCI-13232: failed to allocate memory during R-tree creation

Cause: This feature assumes a minimum of 64K memory for bulk creation.

Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

OCI-13233: failed to create sequence number [*string*] for R-tree

Cause: The specified sequence number exists.

Action: Delete the sequence object, or contact Oracle Support Services.

OCI-13234: failed to access R-tree-index table [*string*]

Cause: The index table is either deleted or corrupted.

Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

OCI-13236: internal error in R-tree processing: [string]

Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

OCI-13237: internal error during R-tree concurrent updates: [string]

Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

OCI-13238: spatial journal cache enabled; query requires transaction commit

Cause: The spatial transaction journal cache was enabled. When enabled, spatial functions that require use of the spatial index could not be used when uncommitted transaction data existed.

Action: Commit or roll back the current transaction, or flush the spatial transaction journal cache using the PL/SQL "SDO_UTIL.INVALIDATE_GTT_CACHE" procedure.

OCI-13239: sdo_dimensionality not specified during n-d R-tree creation

Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

OCI-13240: specified dimensionality greater than that of the query mbr

Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

OCI-13241: specified dimensionality does not match that of the data

Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

OCI-13243: specified operator is not supported for 3- or higher-dimensional R-tree

Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO_FILTER operator.

Action: Use the SDO_FILTER operator, and check the documentation for the querytype parameter for SDO_FILTER; or contact Oracle Support Services.

OCI-13249: string

Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

OCI-13250: insufficient privileges to modify metadata table entries

Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

OCI-13251: duplicate entry *string* in metadata table

Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

OCI-13260: layer table *string* does not exist

Cause: Data migration source table *layer_SDOGEOM* does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

OCI-13261: geometry table *string* does not exist

Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO_GEOMETRY and a column of type NUMBER for the GID values.

OCI-13262: geometry column *string* does not exist in table *string*

Cause: The specified table does not have a column of type SDO_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO_GEOMETRY and a column of type NUMBER.

OCI-13263: column *string* in table *string* is not of type SDO_GEOMETRY

Cause: The column intended for storing the geometry is not of type SDO_GEOMETRY.

Action: Alter the column definition to be of type SDO_GEOMETRY.

OCI-13264: geometry identifier column *string* does not exist in table *string*

Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

OCI-13265: geometry identifier column *string* in table *string* is not of type NUMBER

Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

OCI-13266: error inserting data into table *string*

Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

OCI-13267: error reading data from layer table *string*

Cause: There was an error reading the geometry data from the *layer_SDOGEOM* table.

Action: Verify that *layer_SDOGEOM* and *layer_SDODIM* exist. If they do exist, run `VALIDATE_LAYER_WITH_CONTEXT` on the specified layer.

OCI-13268: error obtaining dimension from USER_SDO_GEOM_METADATA

Cause: There is no entry in the `USER_SDO_GEOM_METADATA` view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

OCI-13269: internal error [string] encountered when processing geometry table

Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13270: OCI error \nstring

Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

OCI-13271: error allocating memory for geometry object

Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

OCI-13272: geometric object string in table string is invalid

Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by `VALIDATE_GEOMETRY_WITH_CONTEXT` and correct the geometry definition if required.

OCI-13273: dimension metadata table string does not exist

Cause: The *layer_SDODIM* table does not exist.

Action: Verify that the specified layer name is correct and that the *layer_SDODIM* table exists in the current schema.

OCI-13274: operator invoked with non-compatible SRIDs

Cause: A spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Ensure that the layer and window both have an SRID or that they both do not have an SRID.

OCI-13275: spatial index creation failure on unsupported type

Cause: An attempt was made to create a spatial index on a column that was not of type `SDO_GEOMETRY`.

Action: A spatial index can only be created on a column of type `SDO_GEOMETRY`. Ensure that the indexed column is of type `SDO_GEOMETRY`.

OCI-13276: internal error [string] in coordinate transformation

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13278: failure to convert SRID to native format

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13281: failure in execution of SQL statement to retrieve WKT

Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

OCI-13282: failure on initialization of coordinate transformation

Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

OCI-13283: failure to get new geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13284: failure to copy geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13285: Geometry coordinate transformation error

Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

OCI-13287: can't transform unknown gtype

Cause: A geometry with a gtype of ≤ 0 was specified for transformation. Only a gtype ≥ 1 is allowed.

Action: Check the Oracle Spatial documentation for SDO_GTYPE values, and specify a value whose last digit is 1 or higher.

OCI-13288: point coordinate transformation error

Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

OCI-13290: the specified unit is not supported

Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

OCI-13291: conversion error between the specified unit and standard unit

Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

OCI-13292: incorrect ARC_TOLERANCE specification

Cause: When a SDO_BUFFER or SDO_AGGR_BUFFER function is called on a geodetic geometry, or SDO_ARC_DENSIFY is called, ARC_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check the ARC_TOLERANCE specification and ensure that it is correct.

OCI-13293: cannot specify unit for geometry without a georeferenced SRID

Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Ensure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

OCI-13294: cannot transform geometry containing circular arcs

Cause: An attempt was made to transform a 3-point representation of a circular arc without distortion.

Action: Ensure that a geometry does not contain circular arcs.

OCI-13295: geometry objects are in different coordinate systems

Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

OCI-13296: incorrect coordinate system specification

Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS_SRS table for Earth radius and inverse flattening.

OCI-13300: single point transform error

Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

OCI-13303: failure to retrieve a geometry object from a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13304: failure to insert a transformed geometry object in a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

OCI-13330: invalid MASK

Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

OCI-13331: invalid LRS segment

Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

OCI-13332: invalid LRS point

Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

OCI-13333: invalid LRS measure

Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

OCI-13334: LRS segments not connected

Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

OCI-13335: LRS measure information not defined

Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

OCI-13336: failure in converting standard diminfo/geometry to LRS dim/geom

Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

OCI-13337: failure in concatenating LRS polygons

Cause: Referencing system (LRS) concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to ensure that the concatenate operation is not called with a polygon type.

OCI-13338: failure in reversing LRS polygon/collection geometry

Cause: Reversing a referencing system (LRS) polygon or collection geometry produced an invalid geometry.

Action: Check the geometry type to ensure that this operation is called on non-polygon geometries.

OCI-13339: LRS polygon clipping across multiple rings

Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

OCI-13340: a point geometry has more than one coordinate

Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO_GTYPE or SDO_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

OCI-13341: a line geometry has fewer than two coordinates

Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

OCI-13342: an arc geometry has fewer than three coordinates

Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

OCI-13343: a polygon geometry has fewer than four coordinates

Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

OCI-13344: an arcpolygon geometry has fewer than five coordinates

Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

OCI-13345: a compound polygon geometry has fewer than five coordinates

Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

OCI-13346: the coordinates defining an arc are collinear

Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO_ETYPE or SDO_GTYPE to the line type.

OCI-13347: the coordinates defining an arc are not distinct

Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

OCI-13348: polygon boundary is not closed

Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO_GTYPE or SDO_ETYPE attribute of the geometry.

OCI-13349: polygon boundary crosses itself

Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

OCI-13350: two or more rings of a complex polygon touch

Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

OCI-13351: two or more rings of a complex polygon overlap

Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

OCI-13352: the coordinates do not describe a circle

Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

OCI-13353: ELEM_INFO_ARRAY not grouped in threes

Cause: The ELEM_INFO_ARRAY in an SDO_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM_INFO_ARRAY is divisible by 3.

OCI-13354: incorrect offset in ELEM_INFO_ARRAY

Cause: The offset field in ELEM_INFO_ARRAY of an SDO_GEOMETRY definition references an invalid array subscript in SDO_ORDINATE_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO_ORDINATE_ARRAY.

OCI-13355: SDO_ORDINATE_ARRAY not grouped by number of dimensions specified

Cause: The number of elements in SDO_ORDINATE_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO_ORDINATE_ARRAY.

OCI-13356: adjacent points in a geometry are redundant

Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

OCI-13357: extent type does not contain 2 points

Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

OCI-13358: circle type does not contain 3 points

Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

OCI-13359: extent does not have an area

Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

OCI-13360: invalid subtype in a compound type

Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

OCI-13361: not enough sub-elements within a compound ETYPE

Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

OCI-13362: disjoint sub-element in a compound polygon

Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

OCI-13363: no valid ETYPE in the geometry

Cause: None of the ETYPES within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

OCI-13364: layer dimensionality does not match geometry dimensions

Cause: The spatial layer had a geometry with a different dimensions than the dimensions specified for the layer.

Action: Ensure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO_DIM_ARRAY object for the layer in the USER_SDO_GEOM_METADATA view.

OCI-13365: layer SRID does not match geometry SRID

Cause: The spatial layer had a geometry with a different SRID than the SRID specified for the layer.

Action: Ensure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER_SDO_GEOM_METADATA view.

OCI-13366: invalid combination of interior exterior rings

Cause: In an Oracle Spatial geometry, interior and exterior rings were not used consistently.

Action: Ensure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

OCI-13367: wrong orientation for interior/exterior rings

Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

OCI-13368: simple polygon type has more than one exterior ring

Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

OCI-13369: invalid value for etype in the 4-digit format

Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

OCI-13370: failure in applying 3D LRS functions

Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

OCI-13371: invalid position of measure dimension

Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim_info_array.

Action: Check the geometry's gtype and its position in the dim_info_array.

OCI-13372: failure in modifying metadata for a table with spatial index

Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry's gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO_GEOMETRY column.

OCI-13373: invalid line segment in geodetic data

Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

OCI-13374: SDO_MBR not supported for geodetic data

Cause: The SDO_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

OCI-13375: the layer is of type [*string*] while geometry inserted has type [*string*]

Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

OCI-13376: invalid type name specified for layer_gtype parameter

Cause: An invalid type name is specified for the layer_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer_gtype constraint.

OCI-13377: invalid combination of elements with orientation

Cause: An element of the geometry had orientation specified while some other element had no orientation specified (4-digit etype).

Action: Ensure that all of the polygon elements have orientation specified using the 4-digit etype notation.

OCI-13378: invalid index for element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

OCI-13379: invalid index for sub-element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

OCI-13380: network not found

Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER_SDO_NETWORK_METADATA view.

OCI-13381: table:string not found in network:string

Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER_SDO_NETWORK_METADATA view.

OCI-13382: geometry metadata (table:string column:string) not found in spatial network:string

Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER_SDO_NETWORK_METADATA view.

OCI-13383: inconsistent network metadata: string

Cause: There was an inconsistency between the network metadata and the node/link information.

Action: Check the network metadata and the node/link information.

OCI-13384: error in network schema: string

Cause: The network table(s) did not have required column(s)

Action: Check the network schema.

OCI-13385: error in network manager: [string]

Cause: There was an internal error in network manager.

Action: Contact Oracle Customer Support for more help.

OCI-13386: commit/rollback operation error: [string]

Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

Action: Correct the specified error and use the following statement: ALTER INDEX *index-name* PARAMETERS ('index_status=synchronize');

OCI-13387: sdo_batch_size for array inserts should be in the range [number,number]

Cause: The specified value for sdo_batch_size was too high or too low.

Action: Change the value to be in the specified range.

OCI-13388: invalid value for dst_spec parameter

Cause: The dst_spec parameter was specified in the wrong format.

Action: Check the documentation for this parameter.

OCI-13389: unable to compute buffers or intersections in analysis function

Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

Action: Modify the tolerance value in the USER_SDO_GEOM_METADATA view before invoking the spatial analysis function.

OCI-13390: error in spatial analysis and mining function: [string]

Cause: There was an internal error in the specified analysis function.

Action: Contact Oracle Customer Support for more help.

OCI-13391: string

Cause: An attempt was made to violate GeoRaster management restrictions.

Action: Check the documentation for more detailed information.

OCI-13392: status report error: string

Cause: There was an error on status report related operation.

Action: Check the error message for details.

OCI-13393: invalid %0!s parameter%1!s

Cause: The operation failed because the input parameter was invalid.

Action: Correct the parameter and try again.

OCI-13394: Parameter string is NULL or empty.

Cause: The operation failed because the input parameter was NULL or was an empty array.

Action: Correct the parameter and try again.

OCI-13395: Parameter %0!s has NULL or empty element at index %1!s.

Cause: The operation failed because one of the array elements was NULL or was an empty string.

Action: Correct the parameter and try again.

OCI-13396: Parameter %0!s has invalid element at index %1!s.

Cause: The operation failed because one of the array elements was invalid.

Action: Correct the parameter and try again.

OCI-13397: inconsistent dimension sizes in the input GeoRaster objects

Cause: The input GeoRaster objects had different spatial or band dimension sizes.

Action: Check the dimension sizes of the input GeoRaster objects and ensure that they have the same dimension size.

OCI-13398: invalid expression parameter: *string*

Cause: The expression parameter did not conform to the raster algebra expression definition.

Action: Check the raster algebra language definition in the documentation and ensure that the expression parameter conforms to the definition.

OCI-13399: invalid condition parameter: *string*

Cause: The condition parameter did not conform to the raster algebra boolean expression definition.

Action: Check the raster algebra language definition in the documentation and ensure that the condition parameter conforms to the definition.

OCI-13400: invalid elevationParam parameter: *string*

Cause: The elevationParam parameter had an invalid specification.

Action: Check the documentation and ensure that the elevationParam parameter is correct.

OCI-13401: GeoRaster object (RDT=%0!s, RID=%1!s) already exists.

Cause: There were duplicate entries of RASTER_DATA_TABLE (RDT) and RASTER_ID (RID) columns in the USER_SDO_GEOR_SYSDATA view, or the operation was inserting a duplicate entry of (RASTER_DATA_TABLE, RASTER_ID) into USER_SDO_GEOR_SYSDATA view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID pairs are unique in the USER_SDO_GEOR_SYSDATA view, or insert a GeoRaster object with a unique (RASTER_DATA_TABLE, RASTER_ID) value.

OCI-13402: The rasterType is NULL or not supported.

Cause: The specified rasterType was NULL or not supported.

Action: Check the documentation for the rasterType number and the rasterType formats supported by GeoRaster.

OCI-13403: invalid rasterDataTable specification: *string*

Cause: The raster data table (RDT) name specified for a GeoRaster object was invalid because of one of the following reasons: - RDT name was not a simple SQL name or was longer than 128 bytes. - RDT name was not unique among RDT names in the database. - RDT did not exist or was not visible from the current schema. - RDT was not defined in the same schema as the GeoRaster object table. - RDT was not an object table of SDO_RASTER type or a relational table with the same columns as the attributes of the SDO_RASTER type.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

OCI-13404: invalid ultCoord parameter specification

Cause: The specified array for the ultCoord parameter had the wrong length or had an invalid value.

Action: Check the documentation and ensure that the `ultCoord` parameter is correct.

OCI-13405: invalid *string* parameter

Cause: The input array for the dimension size had NULL or invalid value, or the array length was not equal to the number of dimensions of the GeoRaster object.

Action: Check the documentation and ensure that the parameter is correct.

OCI-13406: NULL or invalid GeoRaster object for output

Cause: The GeoRaster object for output was NULL or had NULL `rasterDataTable` or `rasterID` attribute.

Action: Ensure that the GeoRaster object for output has been initialized properly.

OCI-13407: invalid storage parameter: *string*

Cause: The storage parameter contained an invalid keyword or value.

Action: Check the documentation and ensure that the storage parameter is correct.

OCI-13408: invalid `blockSize` storage parameter

Cause: The `blockSize` storage parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the `blockSize` storage parameter is correct.

OCI-13409: invalid `pyramidLevel` parameter

Cause: The specified `pyramidLevel` parameter value was either less than 0 or greater than the maximum pyramid level of the corresponding GeoRaster object.

Action: Ensure that the `pyramidLevel` parameter specifies a valid pyramid level value for the GeoRaster object.

OCI-13410: invalid `layerNumbers` or `bandNumbers`: *string*

Cause: The `layerNumbers` or `bandNumbers` parameter was in the wrong format or had the wrong values.

Action: Check the documentation and ensure that the `layerNumbers` or `bandNumbers` parameter is valid.

OCI-13411: The specified *string* is outside the source GeoRaster object.

Cause: The minimal bounding rectangle (MBR) of the specified area had no intersection with the MBR of the source GeoRaster object.

Action: Check the coordinates of the specified area to ensure that it overlaps with the source GeoRaster object.

OCI-13412: invalid `scale` parameter: *string*

Cause: The `scale` parameter contained an invalid specification.

Action: Check the documentation and ensure that the `scale` parameter is correct.

OCI-13413: invalid `resampling` parameter

Cause: The specified `resampling` method or the `NODATA` option was invalid.

Action: Check the documentation for the correct `resampling` parameter options.

OCI-13414: invalid pyramid parameter: *string*

Cause: The specified pyramid parameter was invalid.

Action: Check the documentation and ensure that the pyramid parameter is correct.

OCI-13415: invalid or out of scope point specification *string*

Cause: The point position specified by the ptGeom or <rowNumber, colNumber> parameter combination was invalid or out of scope.

Action: Ensure that the parameters specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

OCI-13416: invalid single-point geometry parameter

Cause: The geometry parameter did not specify a valid single-point geometry.

Action: Specify a valid single-point geometry.

OCI-13417: invalid layerNumber or bandNumber parameter

Cause: The layerNumber or the bandNumber parameter was either less than 0 or greater than the number of bands in the GeoRaster object.

Action: Specify a valid layerNumber or bandNumber parameter.

OCI-13418: cannot set GeoRaster metadata *string*

Cause: A parameter for set metadata operations had an invalid value.

Action: Check the documentation for information about the parameters.

OCI-13419: cannot perform mosaic or append operation: *string*

Cause: An attempt to perform a mosaic or append operation failed due to one of the following reasons: - The input GeoRaster object had no spatial extent. - The cropArea or outResolutions was out of scope. - The mosaicParam parameter had invalid keyword or value. - The table and column specification did not match or was invalid.

Action: Check the error message for details.

OCI-13420: The SRID of the geometry parameter is not NULL.

Cause: The input geometry was not in the GeoRaster cell space, which required a NULL Spatial Reference ID (SRID) value.

Action: Ensure that the geometry parameter has a NULL SRID.

OCI-13421: invalid cell value: *string*

Cause: The cell value was out of range.

Action: Ensure that the cell value is in the range as designated by the cellDepth definition of the specified GeoRaster object.

OCI-13422: invalid cursor *string*

Cause: The GeoRaster cursor did not return GeoRaster object, or was empty, or returned a NULL GeoRaster object.

Action: Ensure that the GeoRaster cursor returns non-NULL GeoRaster objects.

OCI-13423: invalid cell coordinate parameter

Cause: The cell coordinate array parameter had the wrong length or had NULL ordinate elements.

Action: Ensure that the cell coordinate parameter is valid.

OCI-13424: The GeoRaster object is not spatially referenced.

Cause: The GeoRaster object was not spatially referenced, or the model space Spatial Reference ID (SRID) was NULL.

Action: Check the GeoRaster object metadata to ensure it is spatially referenced and its model space SRID is set. Refer to the documentation for more details on Georeferencing.

OCI-13425: invalid background filling value parameter

Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Ensure that the parameter that specifies the background filling value is valid. The size of the array must equal either 1 (the value is for all bands) or the exact band dimension size in the output GeoRaster object. The element values must be valid cell values as determined by the cell depth.

OCI-13426: invalid window or cropArea parameter

Cause: The specified cell space coordinate array length was not 4, or had NULL or an invalid element.

Action: Specify the parameter using the cell space coordinate of the two corners of the window. Check the documentation for details.

OCI-13427: invalid bitmap mask

Cause: The bitmap mask was invalid due to one of the following reasons: - The bitmap mask cell depth was not 1-bit. - The bitmap mask had more than one band. - The bitmap mask was a blank GeoRaster object.

Action: Check the documentation and ensure that the bitmap mask is valid.

OCI-13428: invalid modelCoordinateLocation

Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

OCI-13429: invalid xCoefficients or yCoefficients parameter(s)

Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

OCI-13430: The input or output GeoRaster object has NULL attribute.

Cause: The metadata, rasterType, or rasterID attribute of the GeoRaster object was NULL.

Action: Ensure that the GeoRaster object has non-NULL attributes.

OCI-13431: GeoRaster metadata error: invalid rasterType

Cause: The rasterType metadata of the GeoRaster object was inconsistent with the rasterType attribute of the GeoRaster object.

Action: Ensure that the rasterType metadata and the rasterType attribute of the GeoRaster object have the same value.

OCI-13432: GeoRaster metadata error: NULL or invalid blankCellValue

Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid in the GeoRaster metadata.

Action: Call `SDO_GEOR.setBlankCellValue` to add blankCellValue to the metadata whenever the isBlank element value is TRUE. Also, ensure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

OCI-13433: GeoRaster metadata error: invalid defaultRed, defaultGreen or defaultBlue value

Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

OCI-13434: GeoRaster metadata error: invalid cellRepresentation

Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

OCI-13435: GeoRaster metadata error: invalid defaultPyramidLevel

Cause: The defaultPyramidLevel in the GeoRaster object metadata was either less than 0 or greater than the maximum pyramid level.

Action: Use `SDO_GEOR.setDefaultPyramidLevel` function to set the proper default pyramid level.

OCI-13436: GeoRaster metadata error: invalid dimensionSize

Cause: The dimensionSize in the GeoRaster object metadata was missing or had more values than required.

Action: Ensure that the dimensionSize is set in the GeoRaster metadata and has a value for each dimension.

OCI-13437: GeoRaster metadata error: invalid blocking metadata

Cause: One of the elements in the blocking metadata was missing or had an invalid value.

Action: Check the documentation for details.

OCI-13438: GeoRaster metadata error: invalid pyramidType value

Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

OCI-13439: GeoRaster metadata error: invalid pyramid maxLevel

Cause: The specified maxLevel was 0 or exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

OCI-13440: GeoRaster metadata error: invalid compressionType

Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

OCI-13441: GeoRaster metadata SRS error: *string*

Cause: There were NULL or invalid values in the polynomialModel element in the spatial reference system (SRS) metadata.

Action: Check the documentation and ensure that a valid polynomialModel element is specified.

OCI-13442: GeoRaster object not registered: *string*

Cause: There was no entry for the specified GeoRaster object in the ALL_SDO_GEOR_SYSDATA view.

Action: Check if the GeoRaster object has been inserted into a GeoRaster table: 1. If not inserted, insert it into the GeoRaster table and try again. 2. If inserted, check if the GeoRaster DML trigger has been created on the GeoRaster table: a. If not created, use SDO_GEOR_UTL.createDMLTrigger to create the DML trigger, then register the GeoRaster object using SDO_GEOR_ADMIN.registerGeoRasterObjects. b. If created, register the GeoRaster object using SDO_GEOR_ADMIN.registerGeoRasterObjects.

OCI-13443: GeoRaster metadata error: NULL or invalid values in layerInfo

Cause: There were NULL or invalid component values in the statisticsDataset, histogram, colorMap, or grayScale metadata.

Action: Check the documentation and ensure that all of the component values are valid.

OCI-13444: cannot perform mergeLayers operation: *string*

Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Ensure that the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

OCI-13445: GeoRaster metadata error: NULL or invalid NODATA value

Cause: There was an invalid NODATA value or value range in the metadata.

Action: Ensure that the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

OCI-13446: GeoRaster metadata error: invalid TRS

Cause: The GeoRaster Temporal Reference System (TRS) was not supported.

Action: Set isReferenced to FALSE.

OCI-13447: GeoRaster metadata error: invalid BRS

Cause: The GeoRaster Band Reference System (BRS) was not supported.

Action: Set `isReferenced` to `FALSE`.

OCI-13448: GeoRaster metadata error: invalid spectralExtent

Cause: The GeoRaster spectral extent specification was incorrect.

Action: The `MIN` value must be less than the `MAX` value in the `spectralExtent` element.

OCI-13449: GeoRaster metadata error: invalid ULTCordinate value

Cause: The GeoRaster metadata `ULTCordinate` on band dimension was not 0.

Action: Check the documentation for restrictions.

OCI-13450: GeoRaster metadata error: invalid layerInfo

Cause: The GeoRaster metadata had more than one `layerInfo` element, or the `layerDimension` value was not supported.

Action: The current release only supports one `layerInfo` element; layer can only be defined along one dimension, and this dimension must be `BAND`.

OCI-13451: GeoRaster metadata error: invalid scaling function

Cause: The scaling function had a zero denominator.

Action: Ensure that the scaling function denominator is not zero.

OCI-13452: GeoRaster metadata error: invalid bin function

Cause: The bin function data did not match its type.

Action: For `EXPLICIT` type, provide a `binTableName` element; otherwise, provide a `binFunctionData` element.

OCI-13453: GeoRaster metadata error: invalid number of layers or invalid layerNumber

Cause: Too many `subLayers` were defined for the GeoRaster object, or `layerNumber` or `layerDimensionOrdinate` was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

OCI-13454: GeoRaster metadata *string* is invalid against its XML schema.

Cause: The GeoRaster metadata was invalid against its XML schema.

Action: Run the `schemaValidate` routine to find the errors.

OCI-13455: GeoRaster metadata error: invalid beginDateTime or endDateTime

Cause: The `beginDateTime` value was later than the `endDateTime` value in the GeoRaster metadata.

Action: Ensure that the `beginDateTime` value is not later than the `endDateTime` value.

OCI-13456: GeoRaster cell data error: *string*

Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

OCI-13457: bitmap mask cell data error at *string*

Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

OCI-13458: GeoRaster metadata SRS error: not rectified

Cause: The polynomial model specified by the Spatial Reference System (SRS) did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set `isRectified` to be `FALSE`.

OCI-13459: GeoRaster metadata SRS error: not affine transform

Cause: The polynomial model specified by the Spatial Reference System (SRS) was not a six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and ensure that the polynomial model is a valid six-parameter affine transformation.

OCI-13460: GeoRaster metadata SRS error: SRID=0

Cause: The referenced GeoRaster object had a zero model space Spatial Reference ID (SRID).

Action: Set or specify the model space SRID to be a nonzero number.

OCI-13461: GeoRaster metadata SRS error: invalid rational polynomial model

Cause: One of the polynomial definitions in the Spatial Reference System (SRS) of the GeoRaster object had invalid `pType`, `nVars`, or `order`.

Action: Check the documentation and ensure the polynomial definition is correct.

OCI-13462: invalid GeoRaster object (RDT=%0!s, RID=%1!s): %2!s

Cause: The GeoRaster object with the specified `rasterDataTable` (RDT) and `rasterID` (RID) attributes had invalid band dimension size.

Action: Check the documentation for the requirements of the band dimension size in the input GeoRaster object.

OCI-13463: error exporting GeoRaster data: *string*

Cause: An error occurred while exporting GeoRaster data from the database.

Action: Check the error message for details.

OCI-13464: error loading GeoRaster data: *string*

Cause: An error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

OCI-13465: NULL or invalid table or column specification: *string*

Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Ensure that the specified table exists and the specified column is a GeoRaster column.

OCI-13466: compression or decompression error: *string*

Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: For compression, ensure that the GeoRaster object is valid, and also its metadata is valid for the specified compression format. Use `SDO_GEOR.changeFormatCopy` to transform the GeoRaster object to an appropriate format, or apply another compression method.

OCI-13467: GeoRaster metadata error: unsupported cellDepth *string*

Cause: The cellDepth specified in the GeoRaster metadata was not supported.

Action: Check the documentation for the supported cellDepth in the GeoRaster object.

OCI-13468: invalid blockMBR

Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Ensure that the blockMBR geometries stored in the raster data table are valid, or call the `SDO_GEOR.generateBlockMBR()` package to regenerate the blockMBR geometries.

OCI-13469: cannot perform updateRaster operation: *string*

Cause: The data of the source GeoRaster object had different cell depth, or different spatial reference system, or different number of bands from that of the target GeoRaster object.

Action: Ensure that the source and the target GeoRaster objects have the same cell depth, same number of bands and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

OCI-13470: parameter %0!s not in format of %1!s

Cause: The specified parameter was not in the proper format.

Action: Check the documentation for the proper format of the parameter.

OCI-13471: *string* not coordinate referenced

Cause: The GeoRaster object was not georeferenced or had NULL Spatial Reference ID (SRID).

Action: Ensure that the GeoRaster object is georeferenced.

OCI-13472: invalid geometry parameter *string*

Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model Spatial Reference ID (SRID) is NULL or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

OCI-13473: invalid rasterSpec parameter: *string*

Cause: The specified rasterSpec parameter was missing or contained an invalid value.

Action: Check the documentation and ensure that the rasterSpec parameter contains only valid keywords and values.

OCI-13474: invalid rasterDataTable attribute: *string*

Cause: The rasterDataTable attribute of the GeoRaster object was not valid due to one of the following reasons: - It contained a period separator. - Some of the alphanumeric characters were not uppercase.

Action: Ensure that the rasterDataTable attribute meets the above requirements.

OCI-13475: invalid GeoRaster object for output

Cause: The output GeoRaster object had the same RASTER_DATA_TABLE and RASTER_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

OCI-13476: Parameter %0!s and %1!s did not match.

Cause: The lengths of the two arrays were not the same or did not meet the length requirement.

Action: Check the documentation and ensure the two parameters meet the length requirement.

OCI-13477: invalid GCP georeferencing specification: *string*

Cause: The Ground Control Point (GCP) georeferencing failed due to one of the following reasons: - The specified functional fitting method was not supported. - The number of GCPs was insufficient. - Some GCPs were invalid. - The distribution of the GCPs led to no solution or an unstable solution.

Action: Check the GeoRaster documentation for the supported functional fitting methods and the requirements of GCPs.

OCI-13479: reprojection infeasible

Cause: Reprojection from source to destination projection produced a large distortion.

Action: Check the destination projection and ensure that it is suitable for the area covered by the source GeoRaster object. Check the GeoRaster documentation for more information about reprojection.

OCI-13480: invalid bitmap mask parameter

Cause: The input bitmap mask parameter did not meet the requirements for the operation due to one of the following reasons: - The bitmap mask had invalid pyramid type or max pyramid level. - The spatial dimension sizes of the bitmap mask was different from that of the input GeoRaster object. - The spatial resolution of the bitmap mask was different from that of the input GeoRaster object. - The model coordinate location of the bitmap mask was different from that of the input GeoRaster object.

Action: Check the documentation for the requirements on bitmap mask.

OCI-13483: insufficient memory for the specified GeoRaster data

Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

OCI-13485: invalid compressParam parameter: *string*

Cause: The compressParam parameter contained an invalid keyword or value.

Action: Check the documentation and ensure that the compressParam parameter is correct.

OCI-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string*

Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

OCI-13487: SRID *string* not defined in the database

Cause: The specified Spatial Reference ID (SRID) was not found in the Oracle Spatial CS_SRS table.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

OCI-13488: cannot perform transformation: *string*

Cause: An attempt to perform a transformation operation failed.

Action: Check the error message for details.

OCI-13489: cannot process the image: *string*

Cause: There was an error when processing the image in the GeoRaster object.

Action: Check the error message and take the appropriate action or contact Oracle Support Services for further assistance.

OCI-13490: cannot enable GeoRaster: *string*

Cause: The session user did not have the CREATE TRIGGER privilege or did not own the current schema.

Action: Ensure that the current session user has the required privileges and the session user name is the same as the current schema name.

OCI-13496: cannot handle 4G+ data

Cause: The size of data to read is greater than 4G.

Action: Check the error message and take the appropriate action or contact Oracle Support Services for further assistance.

OCI-13497: *string*

Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to ensure that the GeoRaster object is valid before you do so.

OCI-13498: *string*

Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

OCI-13499: *string*

Cause: This is an internal Oracle Spatial error.

Action: Contact Oracle Support Services.

OCI-13500: SYSAUX DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

OCI-13501: Cannot drop SYSAUX tablespace

Cause: Tried to drop SYSAUX tablespace

Action: None

OCI-13502: Cannot rename SYSAUX tablespace

Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

OCI-13503: Creating SYSAUX tablespace with invalid attributes

Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

OCI-13504: The SYSAUX DATAFILE clause is not specified.

Cause: If the DATAFILE clause was specified, then a data file for SYSAUX must be specified, unless using Oracle Managed Files (OMF).

Action: Specify the SYSAUX DATAFILE clause.

OCI-13505: SYSAUX tablespace can not be made read only

Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

OCI-13506: operation failed due to invalid snapshot range (*string, string*)

Cause: An attempt was made to perform an operation with an invalid start and end snapshot pair.

Action: Choose a valid start and end snapshot pair: - Ensure end snapshot is greater than start snapshot. - Ensure start and end snapshots exist.

OCI-13509: error encountered during processing an AWR table

Cause: Error occurred when processing an AWR table due to an underlying error.

Action: Check the full error stack for root cause. Correct problem and retry the operation.

OCI-13510: Retention number *string* is outside valid range of *string* to *string*.

Cause: The specified RETENTION setting was outside supported range.

Action: Specify a valid RETENTION value and retry the operation.

OCI-13511: Interval number *string* is outside valid range of *string* to *string*.

Cause: The specified a INTERVAL setting was outside the supported range.

Action: Specify a valid INTERVAL value and retry.

OCI-13514: Metric Capture too close to last capture, group *string*

Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

OCI-13515: Error encountered during Database Usage Statistics capture

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

OCI-13516: AWR Operation failed: *string*

Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

OCI-13517: Baseline (id = *string*) does not exist

Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

OCI-13518: database ID *string* does not exist in AWR

Cause: The operation failed because the specified database ID did not exist in the Automatic Workload Repository (AWR).

Action: Specify a valid database ID and retry the operation.

OCI-13519: Database ID (*string*) exists in the workload repository.

Cause: The operation failed because the specified database ID already existed in the Automatic Workload Repository.

Action: Check the database ID and retry the operation.

OCI-13520: Database id (*string*) not registered, Status = *string*

Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

OCI-13521: Unregister operation on local Database id (*string*) not allowed

Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

OCI-13523: unable to allocate required space for return type

Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

OCI-13524: error encountered while retrieving baseline information

Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

OCI-13525: error with computing space usage for sysaux occupant

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

OCI-13526: Baseline *string* does not exist.

Cause: The operation failed because the specified baseline name does not exist in the Automatic Workload Repository.

Action: Check the baseline name and retry the operation.

OCI-13527: invalid baseline name

Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

OCI-13528: Name (*string*) is already used by an existing baseline.

Cause: The operation failed because the specified baseline name already exists in the Automatic Workload Repository.

Action: Check the baseline name and retry the operation.

OCI-13529: Error occurred when flushing AWR table group

Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

OCI-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

OCI-13531: SQL Text was purged from AWR before the operation completed

Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

OCI-13532: SQL ID [*string*] already exists

Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

OCI-13533: invalid SQL ID

Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

OCI-13534: Current SQL count(*string*) reached maximum allowed (*string*)

Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

OCI-13535: name (*string*) is already used by an existing baseline template

Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

OCI-13536: baseline template (*string*) does not exist

Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

OCI-13537: invalid input for create baseline template (*string*, *string*)

Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

OCI-13538: invalid value for baseline expiration (*string*)

Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

OCI-13539: invalid input specified to modify baseline window size (*string*, *string*)

Cause: Invalid input was specified to the routine modifying the the baseline window size.

Action: Check the arguments displayed in the error message text.

OCI-13540: operation not allowed on system moving window baseline (*string*)

Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

OCI-13541: system moving window baseline size (*string*) greater than retention (*string*)

Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

OCI-13542: baseline ID (*string*) does not exist

Cause: The operation failed because the specified baseline ID did not exist in the Automatic Workload Repository.

Action: Check the baseline ID and retry the operation.

OCI-13543: error encountered while retrieving baseline template information

Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

OCI-13544: error encountered while automatically generating a baseline

Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

OCI-13545: invalid baseline template name

Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

OCI-13546: Error encountered during maintenance of Adaptive Thresholds

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

OCI-13547: Unable to drop baseline since it is in use by *string*

Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

OCI-13548: Unable to find valid snapshot IDs for the inputted baseline time range

Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The `dba_hist_snapshot` displays the snapshot id and time information.

OCI-13549: invalid input for create baseline with time range (*string*)

Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

OCI-13550: value "*string*" of length (*string*) exceeded maximum length (*string*) for parameter [*string*]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) registration routine.

Action: Check the argument displayed in the error message text.

OCI-13551: source database name [*string*] not found in AWR

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

OCI-13552: parameter [string] of value [string] mismatched with AWR registered value [string]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

OCI-13553: operation failed - missing parameter [string]

Cause: The required parameter was missing for the Automatic Workload Repository (AWR) operation.

Action: Check the parameter name displayed in the error message text.

OCI-13554: baseline template (string) is a directory

Cause: The operation failed because the specified baseline template name was a directory.

Action: Check the baseline template name and retry the operation.

OCI-13555: purge operation failed - [string]

Cause: The purge operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

OCI-13556: snapshot on remote sources not enabled

Cause: The current database was not set up for snapshots on remote databases. See the description in the error message.

Action: Correct the system settings and retry the operation.

OCI-13557: reset operation failed - [string]

Cause: The Automatic Workload Repository (AWR) reset operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

OCI-13558: remote database registration mismatch; database ID (string)

Cause: The remote Automatic Workload Repository (AWR) operation failed because the remote database did not match the local registration data. The operation was aborted because it was meant for another database ID. Either the database or the remote database ID changed and needs to be updated or registered in the repository.

Action: Ensure that the database links for the affected database are still valid and point to the registered database. Use any additional errors reported to identify and rectify the underlying issue. Correct the mismatch or unregister and register the affected database ID.

OCI-13559: CPU time or run time policy violation - string

Cause: The operation ran longer than the expected time.

Action: If this error persists, contact Oracle Support Services.

OCI-13560: SYSAUX tablespace cannot be brought offline; shut down if necessary

Cause: An attempt was made to bring a SYSAUX tablespace offline.

Action: Shut down the database if necessary and do a recovery.

OCI-13561: cannot drop SYSAUX tablespace

Cause: An attempt was made to drop a SYSAUX tablespace.

Action: None

OCI-13562: AWR operation failed because tablespace (*string*) is invalid.

Cause: The operation failed because the tablespace was invalid for the Automatic Workload Repository (AWR) or was not available.

Action: Provide a valid tablespace, ensure that the tablespace is available and retry the operation.

OCI-13563: AWRHub functionality is disabled.

Cause: The operation failed because the Automatic Workload Repository (AWR) Hub feature was disabled.

Action: Enable AWRHub functionality and retry the operation.

OCI-13564: The database is already registered as a *string*.

Cause: The operation failed because the database was already registered as a hub server or a source database.

Action: Reconfigure the existing Automatic Workload Repository Hub (AWRHub) setting and retry the operation.

OCI-13565: The database is not registered as a *string*.

Cause: The operation failed because the database was not registered as a hub server or a source database.

Action: Configure the database as a hub server or source database and retry the operation.

OCI-13566: failure to create a subdirectory under directory [*string*]

Cause: The operation failed because the system could not create a subdirectory under the specified mailbox directory.

Action: Check the operating system privileges to allow the database system to create subdirectories under the specified mailbox directory.

OCI-13567: DBID (%0!s) of source (%1!s) or the server DBID (%2!s) were already registered in AWRHub.

Cause: The operation failed because either the DBID of the specified source or the specified server DBID was already registered in Automatic Workload Repository Hub (AWRHub).

Action: Unregister the existing DBID and retry the operation.

OCI-13568: DBID (%0!s) of source (%1!s) is not registered in AWRHub

Cause: The database identifier (DBID) of the source was not registered in the Automatic Workload Repository Hub (AWRHub).

Action: Register the source and retry the operation.

OCI-13570: unable to read label file (%0!s) in the directory (%1!s)

Cause: The operation failed because the database could not read the label file in the specified directory.

Action: Check the operating system privileges or the presence of the file or both.

OCI-13571: AWR import or export operation failed: *string*

Cause: The Automatic Workload Repository (AWR) import or export operation failed due to some errors. The possible causes were: - The specified database directory object was invalid. - The specified dump file existed in the specified directory. - The specified dump file did not exist in the specified directory. - Data Pump job encountered some errors. - The operation exceeded the maximum number of retries.

Action: In the log file, check the conditions and errors mentioned in the Cause, correct the problem, and retry the command.

OCI-13572: input parameters to AWRHub operation are invalid: *string*

Cause: The input parameters to the Automatic Workload Repository (AWR) Hub were invalid.

Action: Correct the input parameters and retry the operation.

OCI-13573: Package (*string*) is being processed by AWRHub.

Cause: The specified package was reported to Automatic Workload Repository Hub (AWRHub) previously. It was already being processed by AWRHub.

Action: None

OCI-13574: Parameter [*string*] is invalid: *string*.

Cause: The value specified for the input parameter to the Automatic Workload Repository (AWR) operation was invalid.

Action: Provide a valid value for the parameter. Refer to the Oracle Database documentation for a list of supported values for the parameter.

OCI-13575: Import operation failed. Version *string* is outside the supported range [*string*, *string*].

Cause: The Automatic Workload Repository (AWR) version that exported the data was out of the range of the supported versions that could be imported in the local AWR.

Action: None

OCI-13576: The AWRHub creation operation failed: The specified mailbox is not dedicated for AWRHub

Cause: The Automatic Workload Repository Hub (AWRHub) creation operation failed because the specified mailbox is not empty.

Action: Cleanup the specified mailbox and retry the command.

OCI-13577: The operation at the AWRHub source database failed because the registration is not active

Cause: The registration of the Automatic Workload Repository Hub (AWRHub) source database was not active.

Action: Wait until the registration is active and retry the command.

OCI-13578: parameter [*string*] does not allow NULL values

Cause: A NULL value was provided for the specified parameter but the parameter only allows non-NULL values.

Action: Provide a non-NULL value for the specified parameter.

OCI-13579: Source database registration failed: *string*

Cause: The Automatic Workload Repository Hub (AWRHub) source registration failed due to some errors. Possible causes are: - The specified mailbox was not associated with an existing AWRHub server. - The specified source name contained characters that were not allowed by the host operating system or the hub mailbox.

Action: Ensure the specified mailbox location is valid and is associated with an existing AWRHub Server. If no AWRHub server is using that mailbox location, create a new one and retry the operation. Ensure the specified [src_name] parameter only contains characters accepted by both the operating system and the specified hub mailbox. Check for additional errors reported to identify and rectify the underlying issue. Then, retry the operation. Contact Oracle Support if the issue persists.

OCI-13580: Source database unregistration failed: *string*

Cause: The Automatic Workload Repository Hub (AWRHub) source unregistration failed due to some errors. A possible cause was that a registration request for this source was still pending.

Action: Retry the operation when AWRHub server has no pending registration requests from this source.

OCI-13581: Request timed out: AWRHub Server did not respond after *number* seconds.

Cause: The request failed due to a timeout error. A possible cause is the unavailability of the Automatic Workload Repository Hub (AWRHub) server to complete the request at this time.

Action: Retry the operation after the AWRHub server is available.

OCI-13582: DBID cannot be unregistered from AWR. Snapshots exist for this DBID

Cause: The specified DBID could not be unregistered from the Automatic Workload Repository (AWR) because snapshots currently exist for this database identifier (DBID).

Action: Take one of the following actions: - Ensure the provided DBID is correct. - Remove all snapshots for this DBID and retry the operation. - Use the FORCE parameter to remove existing snapshots during unregistration.

OCI-13583: Snapshot service [*string*][*string*] cannot be enabled for DBID (*string*): *string*.

Cause: The specified database identifier (DBID) was not a valid DBID for specified snapshot service. A possible cause was that only local DBID is allowed for this snapshot service.

Action: Ensure that the provided DBID is valid for provided snapshot service.

OCI-13584: Filename *string* is invalid.

Cause: The specified filename was not valid. A possible cause was that the filename contained characters that are not allowed by the underlying operating system.

Action: Ensure that the provided filename only contains characters that are considered acceptable for the underlying operating system.

OCI-13585: cannot communicate with Object Storage: URI [*string*] using credential "*string.string*"

Cause: The Automated Workload Repository Hub (AWRHub) operation failed due an error for the specified Object Storage.

Action: Check Object Storage and Object Name compatability with database character set. Ensure the provided Object Storage URI and credentials are correct. Check the network connectivity for the specified Object Storage and this database. Check for additional errors reported to identify and rectify the the underlying issue.

OCI-13586: failed to enable snapshot service: *string*

Cause: The operation to enable the Automatic Workload Repository (AWR) snapshot service failed due to one or more of the following conditions: - Failed to find a location to store the AHub data files or the user specified location is invalid. - Failed to establish communication with the Active Data Guard (ADG) Primary database.

Action: If the default location cannot be used, specify a valid location to store the AWR snapshot files.

OCI-13587: AWR operation failed because the service *string* is disabled.

Cause: The operation failed because the service described in the error message is disabled for the Automatic Workload Repository (AWR).

Action: Enable the service described in the error message and retry the operation.

OCI-13588: failed to define an application in the AWR - [*string*]

Cause: The Automatic Workload Repository (AWR) operation failed due to the reason described in the error message.

Action: Correct the stated problem by the following actions and retry the operation. - Choose an application name which is not already being used. - To replace an existing application name, delete the previous application and create it again.

OCI-13589: failed to add a colored application in the AWR - [*string*]

Cause: The Automatic Workload Repository (AWR) operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

OCI-13590: failed to get AWR ID - [*string*]

Cause: The Automatic Workload Repository (AWR) operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

OCI-13600: error encountered in Advisor*string*

Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

OCI-13601: The specified Advisor *string* does not exist.

Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

OCI-13602: The specified parameter *string* is not valid for task or object *string*.

Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

OCI-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.

Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

OCI-13604: The specified parameter *string* cannot be fetched as a SQL table.

Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

OCI-13605: The specified task or object *string* does not exist for the current user.

Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

OCI-13606: the specified task parameter element *string* is out of range for parameter *string*.

Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

OCI-13607: The specified task or object *string* already exists

Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

OCI-13608: The specified name *string* is invalid.

Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

OCI-13609: The specified task *string* must be executing to be cancelled or interrupted.

Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

OCI-13610: The directive *string* does not exist for task *string*.

Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

OCI-13611: The command *string* is not a valid advisor command.

Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

OCI-13612: The recommendation action *string*,*string* is not valid for task *string*.

Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

OCI-13613: The requested operation is not supported for this advisor object.

Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

OCI-13614: The template *string* is not compatible with the current advisor.

Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

OCI-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.

Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

OCI-13616: The current user *string* has not been granted the ADVISOR privilege.

Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user's privileges and retry the operation.

OCI-13617: The specified task *string* already executing

Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

OCI-13618: The specified value is not a valid value for procedure argument *string*.

Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

OCI-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.

Cause: You attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

OCI-13620: The task or object *string* is read-only and cannot be deleted or modified.

Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ_ONLY property for the object and retry the operation.

OCI-13621: The task_or object *string* is marked as a template and cannot perform the requested operation.

Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

OCI-13622: invalid recommendation annotation

Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

OCI-13623: The recommendation *string* is not valid for task *string*.

Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

OCI-13624: The task *string* is executing and cannot be deleted or modified.

Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

OCI-13625: *string* is an invalid advisor object type.

Cause: The user has specified an invalid object type.

Action: Refer to `dba_advisor_object_types` for all valid object types

OCI-13626: The specified object *string* is not valid for task *string*.

Cause: The user specified a non-existent object for the task

Action: Choose a different object and retry the operation.

OCI-13627: Setting of parameter *string* is disallowed until the task is reset.

Cause: The user attempted to set the value of a parameter before the task was reset. This parameter cannot be changed until the task is reset.

Action: Reset the task and retry the operation.

OCI-13628: Insufficient privileges to access the task belonging to the specified user

Cause: The user could not access `dba_*` views.

Action: Retry operation as owner of the task or after granting new privileges.

OCI-13629: The task or object *string* is being used by another operation.

Cause: The user attempted to access a task or object that is locked by another session.

Action: Wait for the task or object activity to complete and retry the operation.

OCI-13630: The task *string* contains execution results and cannot be executed.

Cause: The user attempted to execute a task that already contains execution results.

Action: Reset the task to its initial state and retry the operation.

OCI-13631: The most recent execution of task *string* contains no results.

Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.

Action: Execute the task and then retry the operation

OCI-13632: The user cancelled the current operation.

Cause: The user signaled a cancel during a task or object operation.

Action: None

OCI-13633: The task *string* was interrupted and needs to be resumed.

Cause: The user attempted to execute a task that was interrupted.

Action: Resume the execution of the task via the RESUME_TASK API.

OCI-13634: The task *string* needs to be reset before being re-executed.

Cause: The task must be in an initial state to be executed.

Action: Reset the task to its initial state and retry the operation.

OCI-13635: The value provided for parameter *string* cannot be converted to a number.

Cause: A numeric parameter was incorrectly supplied in string form.

Action: Retry by supplying valid numeric value.

OCI-13636: The specified value provided for parameter *string* is not valid for this advisor.

Cause: The user supplied an invalid parameter value.

Action: Retry by supplying valid value.

OCI-13637: Executing or modifying task *string* is disallowed until the task is reset to its initial state.

Cause: The user attempted to execute or modify the task that is in not in its INITIAL state.

Action: Reset the task and retry the operation.

OCI-13638: The user interrupted the current operation.

Cause: The user signaled an interrupt during a task or object operation.

Action: None

OCI-13639: The current operation was interrupted because it timed out.

Cause: The task or object operation timed out.

Action: None

OCI-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.

Cause: The task or object operation timed out.

Action: None

OCI-13641: Task cannot be interrupted yet. You may cancel it instead.

Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

OCI-13642: The specified string *string* provided for *string* cannot be converted to a date. The acceptable date format is *string*.

Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

OCI-13643: The task can not be interrupted or cancelled.

Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

OCI-13644: The user "*string*" is invalid.

Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

OCI-13645: The specified execution *string* does not exist for this task.

Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

OCI-13646: The specified execution *string* already exists

Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

OCI-13647: Setting of parameter *string* is disallowed during task execution.

Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

OCI-13648: The specified execution type does not exist for this advisor.

Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

OCI-13649: The type of execution is not specified for this advisor or task.

Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

OCI-13650: The specified object does not exist for this execution.

Cause: You attempted to associate an object to a task execution that id not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

OCI-13651: The specified list of execution parameters is invalid.

Cause: The list did not include pairs of (parameter_name, parameter_value) where every parameter is a valide task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

OCI-13652: Cannot set execution parameters for this advisor

Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

OCI-13653: The directive with definition id *string* was not found.

Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

OCI-13654: The directive with instance id of *string* was not found.

Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

OCI-13655: The directive document contains a syntax error and cannot be loaded.

Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according the documented DTD.

OCI-13656: The parameter was not found in directive *string*.

Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

OCI-13657: The filter Xpath specification has invalid syntax.

Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

OCI-13658: The specified directive already has an instance

Cause: An attempt was made to create multiple instances of a directive when not permitted

Action: Verify the parent directive identifier and the instance name.

OCI-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.

Cause: The specified directive is not unique among the directives.

Action: Choose a directive name and domain that is distinct for the associated advisor.

OCI-13660: A directive instance with the name "*string*" already exists.

Cause: The specified directive instance is not unique among instances for this directive.

Action: Choose an instance name that is distinct for the associated directive.

OCI-13661: A directive instance with the name "*string*" was not found.

Cause: An attempt was made to update or delete a non-existent directive instance.

Action: Verify the parent directive identifier and the instance name.

OCI-13662: The specified value provided for parameter *string* is not valid for this task.

Cause: The supplied parameter value was not valid for the current task configuration.

Action: Retry by supplying valid value. Check the current task configuration.

OCI-13663: The task *string* contains no results for execution *string*.

Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

Action: Run a new execution and then retry the operation.

OCI-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".

Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

Action: Create a new task to use a different SQL Tuning Set.

OCI-13665: Execution names are not correctly ordered.

Cause: The supplied execution names were not properly ordered by execution start date.

Action: Retry by supplying a valid order.

OCI-13666: Task ID *string* does not exist.

Cause: The supplied task ID was invalid.

Action: Check the task ID and try again.

OCI-13667: Execution ID *string* does not exist.

Cause: The supplied execution ID was invalid.

Action: Check the execution ID and try again.

OCI-13668: The current operation was aborted because it was blocking another session.

Cause: The task or object operation interrupted itself when it detected that it was blocking some other session.

Action: Retry the operation when the conflicting operations are not running.

OCI-13669: Execution provided has type "*string*", expected "*string*".

Cause: An execution was provided whose type did not match the one expected by the API.

Action: Check the execution name, and try again.

OCI-13670: No execution of type *string* exists for task provided.

Cause: No execution of the required type existed for the given advisor task.

Action: Check the task, and try again.

OCI-13699: Advisor feature is not currently implemented.

Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

OCI-13701: Snapshot pair [*string*, *string*] seems to be specified in reverse order.

Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

OCI-13702: Snapshot IDs specified by the range [*string*, *string*] are equal.

Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

OCI-13703: The snapshot pair [*string*, *string*] for database_id *string* and instance_id *string* are not found in the current repository.

Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

OCI-13704: Invalid value "*string*" specified for parameter "*string*".

Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

OCI-13705: There was a instance shutdown/startup between the snapshots in the range [*string*, *string*].

Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

OCI-13706: Invalid value "*string*" specified for parameter "*string*" in "*string*" analysis mode.

Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

OCI-13707: Either the start snapshot *string* or the end snapshot *string* is incomplete or missing key statistics.

Cause: Either the start or the end snapshots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the start/end snapshots. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

OCI-13708: Some snapshots in the range [*string*, *string*] were purged before the analysis was complete.

Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

OCI-13709: Required parameter "*string*" must be set before execution.

Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

OCI-13710: Parameter "*string*" must have a higher value than parameter "*string*". The values supplied were "*string*" and "*string*" respectively.

Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

OCI-13711: Some snapshots in the range [*string*, *string*] are missing key statistics.

Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the given snapshot range. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

OCI-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "*string*" do not match the database version "*string*".

Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using ?/rdbms/admin/awrrpt and ?/rdbms/admin/ashrpt on these snapshots to analyze the data in them.

OCI-13713: Finding name "*string*" does not exist. Look in DBA_ADVISOR_FINDING_NAMES for all valid values

Cause: Attempt to refer to an advisor's finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA_ADVISOR_FINDING_NAMES

OCI-13714: "*string*" is not a valid SQL_ID value

Cause: The specified value of SQL_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from '0' to '9' and from 'a' to 'z'.

OCI-13715: "*string*" is not recognized by ADDM as a parameter name

Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V\$PARAMETER.

OCI-13716: Diagnostic Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

OCI-13717: Tuning Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

OCI-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.

Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL_MANAGEMENT_PACK_ACCESS.

OCI-13719: Imported AWR snapshots are from a database with an incompatible character set.

Cause: ADDM analysis was attempted on imported Automatic Workload Repository (AWR) snapshots with incompatible character set.

Action: Perform ADDM analysis using a database with the same version and character set as the original database.

OCI-13720: dimension name provided is too long

Cause: Active Session History (ASH) dimension name provided was longer than the limit of 30 characters.

Action: Correct the dimension name and retry the operation.

OCI-13721: dimension name provided is invalid

Cause: Active Session History (ASH) dimension name provided was invalid.

Action: Correct the dimension name and retry the operation.

OCI-13722: invalid input value for procedure argument *string*

Cause: An invalid value was passed an input for a procedure argument.

Action: Pass a valid value to the procedure.

OCI-13723: input value for procedure argument *string* exceeds maximum allowed length of *string*

Cause: The string input value was too long for the specific procedure argument.

Action: Pass a valid value to the procedure.

OCI-13724: Operation is not allowed due to missing *string* permissions.

Cause: The current user does not have privileges to perform this operation.

Action: Acquire the specified permissions to perform operation.

OCI-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.

Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user's privileges and retry the operation.

OCI-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".

Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does not have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user's privileges and retry the operation.

OCI-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.

Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user's privilege and retry the operation.

OCI-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".

Cause: The user attempted to create a "\SQL Tuning\" Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

OCI-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".

Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the spelling of the SQL Tuning Set name and retry the operation.

OCI-13755: invalid "SQL Tuning Set" name

Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

OCI-13756: Cannot update attribute "*string*".

Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING_SCHEMA_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

OCI-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.

Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

OCI-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.

Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

OCI-13759: User "*string*" cannot remove reference "*string*".

Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

OCI-13760: This operation is not supported from a physical standby database.

Cause: An attempt was made to run an operation that is not supported from a physical standby database.

Action: Run this operation from a primary database.

OCI-13761: invalid filter

Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

OCI-13762: The *string* ranking measure is invalid.

Cause: The user attempted to select data from a data source using an invalid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

OCI-13763: illegal ranking attribute "*string*"

Cause: The user attempted to use an attribute element that is not allowed in a ranking measure.

Action: Check the attribute in the ranking measure and retry the operation.

OCI-13764: Value "*string*" is illegal as a result percentage.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

OCI-13765: Value "*string*" is illegal for a result limit.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive integer.

Action: Correct the result limit value and retry the operation.

OCI-13766: A ranking measure is required.

Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

OCI-13767: End snapshot ID must be greater than begin snapshot ID.

Cause: The user attempted to select data from the workload repository using an invalid snapshot ID range.

Action: Adjust the snapshot ID range and retry the operation.

OCI-13768: Snapshot ID must be between *string* and *string*.

Cause: The user attempted to select data from the workload repository using a snapshot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

OCI-13769: Snapshots *string* and *string* do not exist.

Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

OCI-13770: Baseline "*string*" does not exist.

Cause: The user attempted to access a baseline that does not exist.

Action: Check the spelling of the baseline name and retry the operation.

OCI-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "*string*" owned by user "*string*"

Cause: Unexpected error from DBMS_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

OCI-13772: unexpected deadlock on "SQL Tuning Set" "*string*" owned by user "*string*"

Cause: Unexpected error from DBMS_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

OCI-13773: insufficient privileges to select data from the cursor cache

Cause: The user attempted to perform an operation without having the appropriate privileges on V\$SQL and V\$SQL_BIND_CAPTURE.

Action: Adjust the user's privileges and retry the operation.

OCI-13774: insufficient privileges to select data from the workload repository

Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA_HIST_BASELINE, DBA_HIST_SQLTEXT, DBA_HIST_SQLSTAT, DBA_HIST_SQLBIND, DBA_HIST_OPTIMIZER_ENV, and DBA_HIST_SNAPSHOT.

Action: Adjust the user's privileges and retry the operation.

OCI-13775: inconsistent datatype in input cursor

Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET_ROW.

Action: Check the rows type in the cursor and retry the operation.

OCI-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.

Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

OCI-13777: invalid list of attribute names

Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION_STATISTICS, OBJECT_LIST, BIND_LIST and SQL_PLAN.

Action: Adjust the attribute list and retry the operation.

OCI-13778: no new name or owner specified for "SQL Tuning Set"

Cause: The user attempted to call remap_stgtab_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

OCI-13779: invalid load option

Cause: The user attempted to call `load_sqlset` with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

OCI-13780: SQL statement does not exist.

Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the `sql_id` and the plan hash value of the statement and retry the operation.

OCI-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task

Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

OCI-13782: The argument *string* to this API is only allowed for tasks created in a physical standby database.

Cause: "An attempt was made to pass an argument that is valid only for a physical standby database. "

Action: Remove the invalid argument and re-run the API.

OCI-13783: invalid tuning scope

Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

OCI-13784: cannot accept SQL profiles for all statements in the "*string*"

Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

OCI-13785: missing target object for tuning task "*string*"

Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

OCI-13786: missing SQL text of statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

OCI-13787: missing SQL profile for statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

OCI-13788: invalid recommendation type

Cause: The user passed an invalid recommendation type in the `rec_type` argument to `script_tuning_task`. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the `rec_type` arg and retry the operation.

OCI-13789: invalid process action

Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-separated list of EXECUTE and EXPLAIN_PLAN.

Action: Check the action argument and retry the operation.

OCI-13790: invalid value for time limit

Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

OCI-13791: cannot resume a task created to process a single statement

Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

OCI-13792: This operation requires a database link.

Cause: An attempt was made to execute an operation from a physical standby database that requires a valid database link to access a primary database.

Action: Provide a valid database link to access a primary database.

OCI-13793: invalid comparison metric

Cause: An invalid metric to compare SQL performance was specified.

Action: Use execution statistics to compare the result of two executions and `optimizer_cost` to analyze performance of two explain plan actions.

OCI-13794: execution type mismatch

Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different actions.

Action: check the name and type of task executions to analyze and retry the operation.

OCI-13795: missing task execution

Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

OCI-13796: invalid value *string* specified for problem type

Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the `PROBLEM_TYPE_*` defined in 'admin/dbmsdiag.sql'.

Action: Specify valid problem type.

OCI-13797: invalid SQL Id specified, *string*

Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

OCI-13798: Parameter *string* cannot be NULL.

Cause: A call to GET_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

OCI-13799: threshold not found

Cause: No threshold was found with the specified threshold key.

Action: No action required.

OCI-13800: concurrent DDL failure on SQL repository objects

Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

OCI-13801: invalid value for SQLTUNE_CATEGORY parameter

Cause: An invalid Oracle identifier was used as the value of the parameter.

Action: Specify the parameter conforming to the rules for Oracle identifiers.

OCI-13802: failed to purge SQL Tuning Base entry from sql\$

Cause: An error occurred while try to delete a SQL Tuning Base object.

Action: Look at the underlying error(s) on the error stack.

OCI-13803: invalid SQL workload snapshot short interval

Cause: An invalid value was passed for the parameter.

Action: Short snapshot interval should be less than the long snapshot interval.

OCI-13804: invalid SQL workload snapshot long interval

Cause: An invalid value was passed for the parameter.

Action: Snapshot long interval should be greater than the snapshot short interval.

OCI-13810: The FORCED_TRACKING parameter can only have values of N or Y.

Cause: An invalid value was passed for the parameter.

Action: Check the value and input the correct value.

OCI-13811: A database operation is already monitoring this session.

Cause: An attempt was made to start a database operation in a session that was already being monitored.

Action: No action required.

OCI-13812: current session does not have database operation monitored

Cause: An attempt was made to end a database operation that did not exist.

Action: Check if the database operation is being monitored.

OCI-13813: database operation name or execution ID does not match

Cause: The database operation name or execution ID did not match.

Action: Call the interface with the right database operation name and execution ID.

OCI-13814: database operation name is invalid

Cause: The database operation name provided was invalid.

Action: Supply a database operation name not exceeding 30 characters.

OCI-13815: database operation execution ID is invalid

Cause: The database operation execution ID provided was invalid.

Action: Supply a database operation execution ID greater than 0.

OCI-13825: missing SQL statement text

Cause: No SQL text was provided to the create SQL profile or patch operation.

Action: Retry with properly specified SQL text.

OCI-13826: empty SQL profile or patch not allowed

Cause: No attributes were specified to the create SQL profile or patch operation.

Action: Retry with at least one hint specified.

OCI-13827: null or zero length attribute not allowed

Cause: One of the attributes within the SQL profile or patch was not properly specified.

Action: Retry with a fully specified SQL profile or patch.

OCI-13828: generated SQL profile or patch name *string* already exists

Cause: A SQL profile or patch already exists with the name generated by the system.

Action: Retry the operation as the generated name is time sensitive.

OCI-13829: SQL profile or patch named *string* already exists

Cause: A SQL profile or patch already exists with the name specified.

Action: Specify a different name or drop the existing SQL profile or patch.

OCI-13830: SQL profile or patch with category *string* already exists for this SQL statement

Cause: A SQL profile or patch already exists for the given SQL statement and category.

Action: Drop or update the existing SQL profile or patch.

OCI-13831: SQL profile or patch name specified is invalid

Cause: An invalid SQL profile or patch name was specified.

Action: Supply a name not exceeding 30 characters or look for the underlying error on the error message stack.

OCI-13832: category name specified is invalid

Cause: An invalid category name was specified.

Action: Supply a category name not exceeding 30 characters or look for the underlying error on the error message stack.

OCI-13833: SQL profile or patch named *string* doesn't exist

Cause: A SQL profile or patch name was specified that doesn't exist.

Action: Verify the name of the SQL profile or patch.

OCI-13834: name of SQL profile or patch to be cloned must be provided

Cause: A SQL profile or patch name was not provided as the from target of a clone SQL profile or patch operation.

Action: Provide the name of the SQL profile or patch being cloned.

OCI-13835: invalid attribute name specified

Cause: An invalid attribute name was specified for an alter SQL profile or patch operation.

Action: Verify the name of the attribute.

OCI-13836: invalid attribute value specified

Cause: An invalid attribute value was specified for an alter SQL profile or patch operation.

Action: Verify the attribute value.

OCI-13837: invalid HASH_VALUE

Cause: An invalid HASH_VALUE was passed to a create SQL profile operation

Action: Verify the HASH_VALUE.

OCI-13838: invalid ADDRESS value

Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

OCI-13839: V\$SQL row doesn't exist with given HASH_VALUE and ADDRESS.

Cause: A HASH_VALUE and ADDRESS combination passed to the create SQL profile operation doesn't correspond to an existing V\$SQL entry.

Action: Verify the HASH_VALUE and ADDRESS in V\$SQL.

OCI-13840: Concurrent DDL Error in create SQL profile operation.

Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

OCI-13841: SQL profile named *string* already exists for a different signature/category pair

Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

OCI-13842: no SELECT privilege on DBA_SQL_PROFILES

Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA_SQL_PROFILES view.

Action: Either perform the operation as another user or get the privilege

OCI-13843: no SQL profile with name like "string" exists for category like "string"

Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

OCI-13844: no new SQL profile name or category specified.

Cause: A user called `remap_stgtab_sqlprof` without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

OCI-13845: invalid SQL profile XML specification provided

Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

OCI-13846: Cannot create SQL plan baseline on the given plan

Cause: There are either multiple plans exist for the given value or the plan is not reproducible.

Action: Call Oracle Support.

OCI-13847: The plan with plan hash value string does not exist

Cause: The give plan does not exist.

Action: Check the available plans.

OCI-13848: Database link provided for the task operation was different than the one used with task creation API.

Cause: All SQL tuning advisor APIs executed from a physical standby database are required to use the same database link.

Action: Retry the operation by providing the database link used for task creation.

OCI-13850: Tracing for client identifier string is not enabled

Cause: Attempt to disable a client identifier tracing which was never enabled

Action: Supply correct client identifier

OCI-13851: Tracing for client identifier string is already enabled

Cause: Attempt to enable a client identifier tracing which has been already enabled

Action: Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

OCI-13852: Tracing for service(module/action) string is not enabled

Cause: Attempt to disable a service-level tracing which was never enabled

Action: Supply correct service(module/action) name

OCI-13853: Tracing for service (module/action) string is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

OCI-13854: Tracing for service(module/action) *string* on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: Supply correct service(module/action) name

OCI-13855: Tracing for service (module/action) *string* on instance *string* is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled on a specific instance

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

OCI-13856: Service name must be specified

Cause: Omitting service name while enabling/disabling tracing or aggregation

Action: Supply the service name

OCI-13857: Invalid module name

Cause: Module name is too long (exceeding 48 characters)

Action: Supply correct name

OCI-13858: Invalid action name

Cause: Action name is too long (exceeding 32 characters)

Action: Supply correct name

OCI-13859: Action cannot be specified without the module specification

Cause: Action name is specified, but the module name is not

Action: Supply the module name

OCI-13860: Invalid service name

Cause: Service name is too long (exceeding 64 characters)

Action: Supply correct name

OCI-13861: Statistics aggregation for client identifier *string* is already enabled

Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

OCI-13862: Statistics aggregation for client identifier *string* is not enabled

Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

OCI-13863: Statistics aggregation for service(module/action) *string* is not enabled

Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

OCI-13864: Statistics aggregation for service (module/action) *string* is already enabled

Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

OCI-13865: Module name must be specified

Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

OCI-13866: Client identifier must be specified

Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

OCI-13867: Database-wide SQL tracing is already enabled

Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

OCI-13868: Instance-wide SQL tracing on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

OCI-13869: Instance-wide SQL tracing on instance *string* is already enabled

Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

OCI-13870: Database-wide SQL tracing is not enabled

Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

OCI-13871: Invalid instance name

Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

OCI-13900: missing or invalid parameter *string*

Cause: A call to SET_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

Action: Specify a valid value for this parameter.

OCI-13901: Object *string* was not found.

Cause: An object name was passed to SET_THRESHOLD procedure that did not map to a valid object.

Action: Specify a valid object name.

OCI-13902: The specified file *string* is not a data file.

Cause: The object name was passed to a SET_THRESHOLD procedure that did not map to a valid data file.

Action: Specify a valid data file name.

OCI-13903: Invalid combination of *string* threshold value and operator.

Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

Action: Use a positive number for the threshold value or use "greater than" operator.

OCI-13904: The file has been dropped and recreated during the procedure call.

Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

Action: Retry this operation.

OCI-13905: Critical or warning threshold have incorrect values

Cause: The tablespace threshold values can be in the range 0 to 100 only.

Action: Check the threshold values

OCI-13906: The tablespace is not of the right type.

Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

Action: Check the tablespace type and reissue the command.

OCI-13907: Threshold value is invalid.

Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

Action: Use non-negative integers only for threshold values.

OCI-13908: Invalid combination of metrics id and object type parameters.

Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

Action: Specify a valid combination of metrics id and object type parameters.

OCI-13909: Invalid combination of threshold value and operator.

Cause: An attempt was made to specify an invalid combination of threshold value and operator.

Action: Check the operator and threshold values and reissue statement.

OCI-13910: Parameter *string* cannot be NULL.

Cause: An attempt was made to call GET_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

OCI-13911: Threshold not found

Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

OCI-13912: Critical threshold value is less than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

OCI-13913: The threshold cannot be set when SYSAUX is offline.

Cause: SET_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET_THRESHOLD procedure when SYSAUX is online.

OCI-13914: Threshold notification failed.

Cause: An error occurred when sending notification for this threshold.

Action: Ensure that you have enough space on SYSAUX tablespace and retry this operation.

OCI-13915: Critical byte based free space threshold value is greater than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

OCI-13916: Invalid value "%0!s" used for parameter "%1!s".

Cause: An invalid value was used for the specified parameter.

Action: Correct the value specified for the parameter and retry.

OCI-13917: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

OCI-13918: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$_ALERT_OUTSTANDING.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

OCI-13919: Cannot specify values for parameter "*string*" and for parameter "*string*"

Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

OCI-13920: Threshold cannot be set when database is in read-only mode.

Cause: SET_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET_THRESHOLD procedure when database is open in read/write mode.

OCI-13921: Value for parameter "*string*" exceeds maximum length of *number* characters.

Cause: Parameter exceeds maximum length.

Action: Provide a value for the parameter that does not exceed the specified limit.

OCI-13951: MMON sub-action time limit exceeded

Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

OCI-13970: Invalid name of "*string*" given

Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore (`_`) character.

Action: Try again with a valid name

OCI-13971: Unknown *string*

Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

OCI-13972: Unknown *string* for this *string*

Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

OCI-13973: Unknown *string* for this *string*

Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

OCI-13974: *string* with name "*string*" already exists

Cause: An object with the given name already exists

Action: Give a different name

OCI-13975: *string* with name "*string*" already exists for *string* "*string*"

Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

OCI-13976: Improperly-formed report tag

Cause: The top-level report tag was not built properly.

Action: Ensure that the report tag is built using the common tag library function.

OCI-13977: Invalid content type

Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in `dbmsrep.sql`

OCI-13978: Invalid reference string parameter or value

Cause: An invalid parameter/value was passed to a `dbms_report` API

Action: Ensure that the parameter names and values are alphanumeric.

OCI-13979: Filename too long

Cause: An invalid file name was passed to STORE_FILE

Action: Ensure that the filename is less than 500 bytes

OCI-13980: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or via an XML IMPORT or INCLUDE.

Action: Check the URL.

OCI-13981: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL

OCI-13982: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

OCI-13983: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

OCI-13984: Invalid reference string

Cause: The given reference string could not be parsed.

Action: Check the reference string syntax.

OCI-13985: Invalid URL provided to servlet

Cause: An invalid URL was provided to the servlet.

Action: Check the URL.

OCI-13986: Error *string* received from XPath engine

Cause: An error was received from the xpath library during an xpath operation.

Action: Check xmlerr.h to understand the cause of the error.

OCI-13987: Invalid input to build common *<string>* tag

Cause: Invalid input was given when attempting to build a common tag.

Action: Check the function input to ensure that all necessary information is given.

OCI-13988: Invalid input given to variable argument list report function.

Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

Action: Check the function input and try again.

OCI-13989: Invalid input given to structured argument list report function.

Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

Action: Check the function input and try again.

OCI-13990: Invalid tag name given to common tag callout function.

Cause: An invalid tag name was provided to the report framework common tag callout function.

Action: Check the function input and try again.

OCI-13991: failed to stop report capture on all instances

Cause: This is an internal Server Manageability Error

Action: Contact Oracle Support Services

OCI-14000: only one LOCAL clause may be specified

Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

OCI-14001: LOCAL clause contradicts previously specified GLOBAL clause

Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

OCI-14002: only one GLOBAL clause may be specified

Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

OCI-14003: GLOBAL clause contradicts previously specified LOCAL clause

Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

OCI-14004: missing PARTITION keyword

Cause: keyword PARTITION missing

Action: supply missing keyword

OCI-14005: missing RANGE keyword

Cause: keyword RANGE missing

Action: supply missing keyword

OCI-14006: invalid partition name

Cause: a partition name of the form *identifier* is expected but not present.

Action: enter an appropriate partition name.

OCI-14007: missing LESS keyword

Cause: keyword LESS missing

Action: supply missing keyword

OCI-14008: missing THAN keyword

Cause: keyword THAN missing

Action: supply missing keyword

OCI-14009: partition bound may not be specified for a LOCAL index partition

Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, *partition-description* of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

OCI-14010: this physical attribute may not be specified for an index partition

Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

OCI-14011: names assigned to resulting partitions must be distinct

Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

OCI-14012: resulting partition name conflicts with that of an existing partition

Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

OCI-14013: duplicate partition name

Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

OCI-14014: maximum number of partitioning columns is 16

Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

OCI-14015: too many partition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

OCI-14016: underlying table of a LOCAL partitioned index must be partitioned

Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

OCI-14017: partition bound list contains too many elements

Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

OCI-14018: partition bound list contains too few elements

Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

OCI-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

OCI-14020: this physical attribute may not be specified for a table partition

Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

OCI-14021: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

OCI-14022: creation of LOCAL partitioned cluster indices is not supported

Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with *partition descriptions*, if any, from the CREATE INDEX statement.

OCI-14023: creation of GLOBAL partitioned cluster indices is not supported

Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with *partition descriptions* from the CREATE INDEX statement.

OCI-14024: number of partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

OCI-14025: PARTITION may not be specified for a materialized view or a materialized view log

Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

OCI-14026: PARTITION and CLUSTER clauses are mutually exclusive

Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

OCI-14027: only one PARTITION clause may be specified

Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

OCI-14028: missing AT or VALUES keyword

Cause: keyword AT or VALUES missing

Action: supply missing keyword

OCI-14029: GLOBAL partitioned index must be prefixed

Cause: partitioning columns of a global partitioned index must form a prefix of the index' key columns

Action: Ensure that the GLOBAL partitioned index being created is prefixed

OCI-14030: non-existent partitioning column in CREATE TABLE statement

Cause: Partitioning column specified in CREATE TABLE statement is not one of columns of the table being created.

Action: Ensure that all columns in the partitioning column list are columns of the table being created.

OCI-14031: partitioning column may not be of type LONG or LONG RAW

Cause: Partitioning column specified by the user was of type LONG or LONG RAW, which is illegal.

Action: Ensure that no partitioning column is of type LONG or LONG RAW.

OCI-14032: partition bound of partition number *string* is too high

Cause: High bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

OCI-14036: partition bound value too large for column

Cause: Length of partition bound value is longer than that of the corresponding partitioning column.

Action: Ensure that lengths of high bound values do not exceed those of corresponding partitioning columns

OCI-14037: partition bound of partition "string" is too high

Cause: High bound of the partition whose name (explicitly specified by the user) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

OCI-14038: GLOBAL partitioned index must be prefixed

Cause: User attempted to create a GLOBAL non-prefixed partitioned index which is illegal

Action: If the user, indeed, desired to create a non-prefixed index, it must be created as LOCAL; otherwise, correct the list of key and/or partitioning columns to ensure that the index is prefixed

OCI-14039: partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose partitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or partitioning columns to ensure that the index' partitioning columns form a subset of its key columns

OCI-14041: partition bound may not be specified for resulting partitions

Cause: while parsing an ALTER {TABLE|INDEX} SPLIT PARTITION statement, *partition-description* of a resulting partition was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description(s) of partitions resulting from splitting an existing table or index partition

OCI-14042: partition bound may not be specified for a partition being moved, modified or rebuilt

Cause: while parsing an ALTER {TABLE|INDEX} MODIFY PARTITION, ALTER TABLE MOVE PARTITION, or ALTER INDEX REBUILD PARTITION statement, description of new physical attributes of the partition being moved, modified, or rebuilt was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description of new attributes of the partition being moved, modified, or rebuilt

OCI-14043: only one partition may be added

Cause: ALTER TABLE ADD PARTITION contained descriptions of more than one partition to be added

Action: Ensure that the statement contains exactly one partition definition and that it does not contain any commas

OCI-14044: only one partition may be moved

Cause: ALTER TABLE MOVE PARTITION contained descriptions of more than one partition to be moved

Action: Ensure that the statement describes exactly one partition to be moved and that it does not contain any commas

OCI-14045: only one partition may be modified

Cause: ALTER TABLE|INDEX MODIFY PARTITION contained descriptions of more than one partition to be modified

Action: Ensure that the statement describes exactly one partition to be modified and that it does not contain any commas

OCI-14046: a partition may be split into exactly two new partitions

Cause: ALTER TABLE|INDEX SPLIT PARTITION did not contain descriptions of exactly two new partitions into which an existing table or index partition was to be split

Action: Ensure that the statement describes exactly two partition into which an existing partition is to be split

OCI-14047: ALTER TABLE|INDEX RENAME may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a RENAME operation with some other operation which is illegal

Action: Ensure that RENAME operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement;

OCI-14048: a partition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a partition maintenance operation (e.g. MOVE PARTITION) with some other operation (e.g. ADD PARTITION or PCTFREE which is illegal

Action: Ensure that a partition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

OCI-14049: invalid ALTER TABLE MODIFY PARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, BACKUP, ALLOCATE EXTENT, or DEALLOCATE UNUSED was specified in an ALTER TABLE MODIFY PARTITION statement for a Range or Composite Range partition.

Action: Specify only legal options.

OCI-14050: invalid ALTER INDEX MODIFY PARTITION option

Cause: An option other than INITRANS, MAXTRANS, STORAGE, or DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY PARTITION statement.

Action: Specify only legal options.

OCI-14051: invalid ALTER MATERIALIZED VIEW option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or BACKUP was specified in an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

OCI-14052: partition-extended table name syntax is disallowed in this context

Cause: User attempted to use partition-extended table name syntax in illegal context (i.e. not in FROM-clause or INSERT, DELETE, or UPDATE statement)

Action: Avoid use of partition-extended table name in contexts other those mentioned above.

OCI-14053: illegal attempt to modify *string* in *string* statement

Cause: Certain attributes of objects (e.g. tables) may be specified at creation time, but may not be modified using ALTER statement. Unfortunately, user specified one of such attributes.

Action: Ensure that ALTER statement specifies new values only for attributes which may be changed once an object has been created

OCI-14054: invalid ALTER TABLE TRUNCATE PARTITION option

Cause: Name of the partition to be truncated may be followed by DROP STORAGE or REUSE STORAGE

Action: Ensure that no options besides DROP STORAGE or REUSE STORAGE are specified with ALTER TABLE TRUNCATE PARTITION

OCI-14055: keyword REBUILD in ALTER INDEX REBUILD must immediately follow *index name*

Cause: ALTER INDEX statement contained REBUILD keyword following some index attributes (e.g. INITRANS.)

Action: Ensure that keyword REBUILD immediately follows the name of the index being altered

OCI-14056: partition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose number (partitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

OCI-14057: partition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

OCI-14058: partition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose number (partitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

OCI-14059: partition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

OCI-14060: data type or length of a table partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table partitioning column(s)

OCI-14061: data type or length of an index partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index partitioning column(s)

OCI-14062: one or more of table's partitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more partitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more partitions of which reside in read-only tablespaces

OCI-14063: Unusable index exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index marked Index Unusable.

Action: Drop the existing index or rebuild it using ALTER INDEX REBUILD

OCI-14064: Index with Unusable partition exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index one or more partitions of which are marked Index Unusable.

Action: Drop the existing index or rebuild unusable partitions it using ALTER INDEX REBUILD PARTITION

OCI-14065: ALLOCATE STORAGE may not be specified for a partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION statement.

OCI-14066: illegal option for a non-partitioned index-organized table

Cause: An attempt was made to issue a CREATE or ALTER TABLE command on a non-partitioned IOT, but the command contains an option that is legal only for partitioned index-organized tables. Such options are: ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT.

Action: Remove the illegal option(s) from the command.

OCI-14067: duplicate TABLESPACE_NUMBER specification

Cause: TABLESPACE_NUMBER clause was specified more than once for an table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

OCI-14068: TABLESPACE and TABLESPACE_NUMBER may not be both specified

Cause: Both TABLESPACE and TABLESPACE_NUMBER clauses were specified for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

OCI-14069: invalid TABLESPACE_NUMBER value

Cause: The TABLESPACE_NUMBER value is not an integer between 0 and 0x7FFFFFFF

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

OCI-14070: option may be specified only for partitioned indices or with REBUILD

Cause: User issued ALTER INDEX statement containing an option which is legal only for partitioned indices or in conjunction with REBUILD against a non-partitioned index. Such options are: PCTFREE, TABLESPACE, [NO]PARALLEL and INITIAL, FREELISTS, and FREELIST GROUPS inside STORAGE clause

Action: Remove illegal option(s).

OCI-14071: invalid option for an index used to enforce a constraint

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified for an index used to enforce a constraint.

Action: Choose one of the valid index options.

OCI-14072: fixed table cannot be truncated

Cause: You tried to truncate a fixed table, which is not permitted.

Action: Ensure that the table that is being truncated is not a fixed table.

OCI-14073: bootstrap table or cluster may not be truncated

Cause: You attempted to truncate a bootstrap table or cluster, which is not permitted.

Action: Ensure that the table (or cluster) being truncated is not a bootstrap table (or cluster).

OCI-14074: partition bound must collate higher than that of the last partition

Cause: Partition bound specified in ALTER TABLE ADD PARTITION statement did not collate higher than that of the table's last partition, which is illegal.

Action: Ensure that the partition bound of the partition to be added collates higher than that of the table's last partition.

OCI-14075: partition maintenance operations may only be performed on partitioned indices

Cause: Index named in ALTER INDEX partition maintenance operation is not partitioned, making a partition maintenance operation, at best, meaningless

Action: Ensure that the index named in ALTER INDEX statement specifying a partition maintenance operation is, indeed, partitioned

OCI-14076: submitted alter index partition/subpartition operation is not valid for local partitioned index

Cause: User attempted to either drop, split, add or coalesce a partition or a subpartition of a local index which is illegal.

Action: Ensure that the index named in such statement is a global partitioned index.

OCI-14078: you may not drop the highest partition of a GLOBAL index

Cause: User attempted to drop highest partition of a GLOBAL index, which is illegal.

Action: Ensure that the partition specified in ALTER INDEX DROP PARTITION statement is not the highest partition of the index.

OCI-14079: illegal option for a partition marked Index Unusable

Cause: ALTER INDEX MODIFY PARTITION statement against an index partition marked Index Unusable contained STORAGE and/or DEALLOCATE SPACE clauses which is illegal

Action: Ensure that only valid options are specified

OCI-14080: partition cannot be split along the specified high bound

Cause: User attempted to split a partition along a bound which either collates higher than that of the partition to be split or lower than that of a partition immediately preceding the one to be split

Action: Ensure that the bound along which a partition is to be split collates lower than that of the partition to be split and higher than that of a partition immediately preceding the one to be split

OCI-14081: new partition name must differ from the old partition name

Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying *new-partition-name* which is identical to the name of the partition being renamed

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

OCI-14082: New partition name must differ from that of any other partition or subpartition of the object.

Cause: ALTER TABLE RENAME PARTITION or ALTER INDEX RENAME PARTITION specifying a *new-partition-name* which is identical to the name of an existing partition or subpartition of the object was specified.

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition or subpartition of a given table or index.

OCI-14083: cannot drop the only partition of a partitioned table

Cause: A drop partition command is being executed when there is only one partition in the table

Action: Ensure that there is at least one partition. Drop table to remove all partitions

OCI-14084: you may specify TABLESPACE DEFAULT only for a LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for an object other than a LOCAL index, which is illegal.

Action: Reenter the statement without TABLESPACE DEFAULT clause.

OCI-14085: partitioned table cannot have column with LONG datatype

Cause: User tried to create a partitioned table with a LONG datatype or tried to add a LONG datatype column to a partitioned table.

Action: LONG data types are not supported with partitioned tables. Create table without LONG column or change table to not partitioned. If adding column, do not use LONG datatype. If modifying attributes of a column to change data type to LONG, it has to be a non partitioned table.

OCI-14086: a partitioned index may not be rebuilt as a whole

Cause: User attempted to rebuild a partitioned index using ALTER INDEX REBUILD statement, which is illegal

Action: Rebuild the index a partition at a time (using ALTER INDEX REBUILD PARTITION) or drop and recreate the entire index

OCI-14094: invalid ALTER TABLE EXCHANGE PARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING| EXCLUDING} INDEX][{WITH|WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE PARTITION

OCI-14095: ALTER TABLE EXCHANGE requires a non-partitioned, non-clustered table

Cause: The table in the EXCHANGE operation is either clustered or partitioned

Action: Ensure that the table with which the partition is being exchanged for is not partitioned or clustered.

OCI-14096: tables in ALTER TABLE EXCHANGE PARTITION must have the same number of columns

Cause: The two tables specified in the EXCHANGE have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

OCI-14097: column type or size mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

OCI-14098: index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

OCI-14099: all rows in table do not qualify for specified partition

Cause: There is at least one row in the non partitioned table which does not qualify for the partition specified in the ALTER TABLE EXCHANGE PARTITION

Action: Ensure that all the rows in the segment qualify for the partition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that partition to find out the invalid rows and delete them.

OCI-14100: partition extended table name cannot refer to a remote object

Cause: User attempted to use partition-extended table name syntax in conjunction with remote object name which is illegal

Action: Correct the statement and reenter

OCI-14101: partition extended table name cannot refer to a synonym

Cause: User attempted to use partition-extended table name syntax in conjunction with synonym name which is illegal

Action: Correct the statement and reenter

OCI-14102: only one LOGGING or NOLOGGING clause may be specified

Cause: LOGGING was specified more than once, NOLOGGING was specified more than once, or both LOGGING and NOLOGGING were specified.

Action: Remove all but one of the LOGGING or NOLOGGING clauses and reissue the statement.

OCI-14103: LOGGING/NOLOGGING may not be combined with RECOVERABLE/ UNRECOVERABLE

Cause: A statement contained both [NO]LOGGING and [UN]RECOVERABLE clauses which is disallowed.

Action: Remove one of the offending clauses. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

OCI-14104: RECOVERABLE/UNRECOVERABLE may not be specified for partitioned tables/indices

Cause: CREATE TABLE/INDEX statement used to create a partitioned table/index contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

OCI-14105: RECOVERABLE/UNRECOVERABLE may not be specified in this context

Cause: RECOVERABLE/UNRECOVERABLE clause is not allowed in this context.

Action: Remove offending clause. RECOVERABLE/UNRECOVERABLE may only be specified in CREATE TABLE/INDEX statement describing a non-partitioned table or index and ALTER INDEX REBUILD statement. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

OCI-14106: LOGGING/NOLOGGING may not be specified for a clustered table

Cause: User attempted to specify LOGGING or NOLOGGING clause in CREATE TABLE or ALTER TABLE statement involving a clustered table

Action: Remove offending clause.

OCI-14107: partition specification is required for a partitioned object

Cause: parameter which supplies partition name is missing. This parameter is optional for non-partitioned objects, but is required for partitioned objects.

Action: supply missing parameter

OCI-14108: illegal partition-extended table name syntax

Cause: Partition to be accessed may only be specified using its name. User attempted to use a partition number or a bind variable.

Action: Modify statement to refer to a partition using its name

OCI-14109: partition-extended object names may only be used with tables and editioning views

Cause: An attempt was made to use a partition-extended object name with an object which was not a table or an editioning view.

Action: Avoid using partition-extended name syntax with objects which are not tables or editioning views

OCI-14110: partitioning column may not be of type ROWID

Cause: Partitioning column specified by the user was of type ROWID, which is illegal.

Action: Ensure that no partitioning column is of type ROWID.

OCI-14111: creation of a GLOBAL partitioned index on clustered tables is not supported

Cause: An attempt was made to create a GLOBAL partitioned index on a clustered table which is currently illegal.

Action: Remove PARTITION BY RANGE/HASH clause along with any partition descriptions to create a GLOBAL non-partitioned index on a clustered table

OCI-14112: RECOVERABLE/UNRECOVERABLE may not be specified for a partition or subpartition

Cause: Description of a partition or subpartition found in CREATE TABLE/INDEX statement contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. Use LOGGING or NOLOGGING instead.

OCI-14113: partitioned table cannot have column with LOB datatype

Cause: User tried to create a partitioned table with a LOB datatype or tried to add a LOB datatype column to a partitioned table.

Action: LOB data types are not supported with partitioned tables. Create table without LOB column or change table to not partitioned. If adding column, do not use LOB datatype. If modifying attributes of a column to change data type to LOB, it has to be a non partitioned table.

OCI-14114: partitioned table cannot have column with object, REF, nested table, array datatype

Cause: User tried to create a partitioned table with a object datatype (object, REF, nested table, array) or tried to add a object datatype column to a partitioned table.

Action: object data types are not supported with partitioned tables. Create table without object column or change table to not partitioned. If adding column, do not use object datatypes. If modifying attributes of a column to change data type to object, it has to be a non partitioned table.

OCI-14115: partition bound of partition number *string* is too long

Cause: Length of linear key representation of a high bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

OCI-14116: partition bound of partition "*string*" is too long

Cause: Length of linear key representation of a high bound of the partition whose name (explicitly specified by the user) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

OCI-14117: partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a partition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

OCI-14118: CHECK constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

OCI-14119: specified partition bound is too long

Cause: Length of a linear key representation of a high bound of a table partition being added or along which an existing table or index partition is being split exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

OCI-14120: incompletely specified partition bound for a DATE column

Cause: An attempt was made to use a date expression whose format does not fully (i.e. day, month, and year (including century)) specify a date as a partition bound for a DATE column. The format may have been specified explicitly (using TO_DATE() function) or implicitly (NLS_DATE_FORMAT).

Action: Ensure that date format used in a partition bound for a DATE column supports complete specification of a date (i.e. day, month, and year (including century)). If NLS_DATE_FORMAT does not support complete (i.e. including the century) specification of the year, use TO_DATE() (e.g. TO_DATE('01-01-1999', 'MM-DD-YYYY') to fully express the desired date.

OCI-14121: MODIFY DEFAULT ATTRIBUTES may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

OCI-14122: only one REVERSE or NOREVERSE clause may be specified

Cause: Both REVERSE and NOREVERSE were specified in CREATE INDEX statement.

Action: Remove all but one of the REVERSE or NOREVERSE clauses and reissue the statement.

OCI-14123: duplicate NOREVERSE clause

Cause: NOREVERSE was specified more than once in ALTER INDEX statement.

Action: Remove all but one of the NOREVERSE clauses and reissue the statement.

OCI-14124: duplicate REVERSE clause

Cause: REVERSE was specified more than once in ALTER INDEX or CREATE INDEX statements.

Action: Remove all but one of the REVERSE clauses and reissue the statement.

OCI-14125: REVERSE/NOREVERSE may not be specified in this context

Cause: REVERSE/NOREVERSE clause is not allowed in this context.

Action: Remove offending clause. REVERSE may be specified as an attribute of an index (not of an individual partition, if creating a partitioned index) in CREATE INDEX statement and ALTER INDEX REBUILD statement. NOREVERSE may be specified only in ALTER INDEX REBUILD statement.

OCI-14126: only a *parallel clause* may follow description(s) of resulting partitions

Cause: Descriptions of partition(s) resulting from splitting of a table or index partition may be followed by an optional *parallel clause* which applies to the entire statement and which, in turn, may not be followed by any other clause.

Action: Ensure that all partition attributes appear within the parenthesized list of descriptions of resulting partitions in ALTER TABLE/INDEX SPLIT PARTITION statement.

OCI-14128: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

OCI-14129: INCLUDING INDEXES must be specified as tables have enabled UNIQUE constraints

Cause: Matching UNIQUE constraints in both table are enabled and validated but INCLUDING INDEXES is not specified in ALTER TABLE EXCHANGE PARTITION|SUBPARTITION command.

Action: Disable currently enabled matching UNIQUE constraints on both tables or ensure that INCLUDING INDEXES option is used.

OCI-14130: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE PARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE PARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

OCI-14131: enabled UNIQUE constraint exists on one of the tables

Cause: One of the tables referenced in the ALTER TABLE EXCHANGE PARTITION|SUBPARTITION statement has enabled UNIQUE constraint(s) defined on it, which prevents EXCHANGE from proceeding.

Action: Disable constraints defined on tables referenced in the ALTER TABLE EXCHANGE PARTITION|SUBPARTITION statement and retry the statement.

OCI-14132: table cannot be used in EXCHANGE

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement, but the non-partitioned table cannot be used in the EXCHANGE because one or more of the following apply: - it is a typed table - it is a temporary table - it contains ADT columns - it contains nested-table columns - it contains REF columns - it contains array columns - it is an index-organized table - it contains LOB columns - it is a nested table - it is created with row dependency and the partitioned table is not - it is created without row dependency and the partitioned table is

Action: Ensure that the non-partitioned table does not violate any of the above restrictions for the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement.

OCI-14133: ALTER TABLE MOVE cannot be combined with other operations

Cause: An attempt was made to combine an ALTER TABLE MOVE statement with another operation, such as MODIFY.

Action: Ensure that MOVE is the only operation specified in ALTER TABLE statement.

OCI-14134: indexes cannot use both DESC and REVERSE

Cause: An attempt was made to make a reverse index with some index columns marked DESC.

Action: Do not use DESC in reverse indexes. The rule-based optimizer can scan indexes backwards, which allows a normal reverse index to simulate a reverse index with columns marked DESC.

OCI-14135: a LOB column cannot serve as a partitioning column

Cause: An attempt was made to specify a column of type BLOB or CLOB as a partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type BLOB or CLOB.

OCI-14136: ALTER TABLE EXCHANGE restricted by row level security policy

Cause: The user doing the ALTER TABLE EXCHANGE does not have full table access due to row level security policy applied on the table.

Action: Review and grant EXEMPT ACCESS POLICY privilege to this user.

OCI-14137: Table in partially dropped state, submit DROP TABLE PURGE

Cause: An attempt was made to access a partitioned table in a partially dropped state.

Action: Submit DROP TABLE *table* PURGE to drop the table.

OCI-14138: An unexpected error encountered during drop table operation

Cause: Drop table encountered an unexpected error.

Action: a. Submit drop table *table* purge, or b. If the situation described in the next error on the stack can be corrected, do so. c. Contact Oracle Support.

OCI-14139: table *string.string* is already in read-only mode

Cause: an attempt was made to set a read-only table in read-only mode

Action: this DDL can only be executed on a read/write table

OCI-14140: table *string.string* is already in read/write mode

Cause: an attempt was made to set a read/write table in read/write mode

Action: this DDL can only be executed on a read-only table

OCI-14141: ALTER INDEX VISIBLE|INVISIBLE may not be combined with other operations

Cause: ALTER INDEX statement attempted to combine a VISIBLE|INVISIBLE operation with some other operation which is illegal

Action: Ensure that VISIBLE|INVISIBLE operation is the sole operation specified in ALTER INDEX statement

OCI-14142: ALTER INDEX VISIBLE|INVISIBLE may not be used with certain types of index

Cause: Using the ALTER INDEX VISIBLE|INVISIBLE statement on certain types of indexes (IOT-TOP, Cluster indexes) is illegal.

Action: Remove the option VISIBLE|INVISIBLE.

OCI-14143: CREATE INDEX INVISIBLE may not be used with this type of index

Cause: Certain types of indexes (IOT-TOP, Cluster indexes) cannot be created invisible.

Action: Remove the option INVISIBLE

OCI-14145: only one UNUSABLE clause may be specified

Cause: UNUSABLE was specified more than once.

Action: Remove all but one of the UNUSABLE clauses and reissue the statement.

OCI-14146: Older version of CONNECT BY does not support partitioned tables.

Cause: Attempted to use the CONNECT BY clause on a partitioned table, but the version of the CONNECT BY feature used by the parameter settings does not support partitioned tables.

Action: Modify the statement to avoid using CONNECT BY on a partitioned table, or modify the parameter settings to use the default, newer version of CONNECT BY which supports partitioned tables.

OCI-14147: There is an existing VISIBLE index defined on the same set of columns.

Cause: An attempt was made to define more than one VISIBLE index on the same set of columns. There can be only one VISIBLE index on the same set of columns. Hence ALTER INDEX VISIBLE was not supported on this index.

Action: Make all the indexes defined on the same set of columns as INVISIBLE and then reexecute this DDL.

OCI-14148: DML and DDL operations are not directly allowed on the guard-column.

Cause: An attempt was made to execute a DML or a DDL directly on the guard-column.

Action: This is not supported.

OCI-14150: missing SUBPARTITION keyword

Cause: keyword SUBPARTITION missing

Action: supply missing keyword

OCI-14151: invalid table partitioning method

Cause: Invalid partitioning method was specified in CREATE TABLE statement. A table may be partitioned by RANGE, HASH, LIST, SYSTEM, or Composite Range-Hash/List/Range (R+H/L/R).

Action: Specify one of valid partitioning methods

OCI-14152: invalid number of partitions specified in PARTITIONS clause

Cause: number-of-partitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of partitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-partitions clause

OCI-14153: only one of STORE IN or *partition-description* clause may be specified

Cause: both STORE IN and *partition-description* clauses were specified in a CREATE TABLE|INDEX command

Action: Remove one of offending clauses

OCI-14154: only one of STORE IN or *subpartition-description* clause may be specified

Cause: both STORE IN and *subpartition-description* clauses were specified in a CREATE TABLE|INDEX, or ALTER TABLE ADD|SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS command for a Composite Range partitioned object

Action: Remove one of offending clauses

OCI-14155: missing PARTITION, PARTITIONS, SUBPARTITION, or SUBPARTITIONS keyword

Cause: The keyword PARTITION, PARTITIONS, SUBPARTITION, or SUBPARTITIONS was expected but none were supplied.

Action: Supply the missing keyword.

OCI-14156: invalid number of subpartitions specified in [SUBPARTITIONS | SUBPARTITION TEMPLATE] clause

Cause: number-of-subpartitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of subpartitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-subpartitions clause

OCI-14157: invalid subpartition name

Cause: a subpartition name of the form *identifier* is expected but not present.

Action: enter an appropriate subpartition name.

OCI-14158: too many subpartition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many subpartition descriptions; maximum number of subpartitions is 1048575.

Action: Reduce number of subpartitions to not exceed 1024K-1.

OCI-14159: duplicate subpartition name

Cause: Name of a subpartition of a table or index being created is not unique

Action: rename subpartition(s) to ensure that their names are unique among subpartitions of the table or index being created

OCI-14160: this physical attribute may not be specified for a table subpartition

Cause: unexpected option was encountered while parsing physical attributes of a table subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

OCI-14161: subpartition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

OCI-14162: subpartition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

OCI-14163: subpartition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

OCI-14164: subpartition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

OCI-14165: MODIFY DEFAULT ATTRIBUTES FOR PARTITION may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES OF PARTITION with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

OCI-14166: missing INTO keyword

Cause: keyword INTO missing

Action: supply missing keyword

OCI-14167: only one subpartition may be moved

Cause: ALTER TABLE MOVE SUBPARTITION contained descriptions of more than one subpartition to be moved

Action: Ensure that the statement describes exactly one subpartition to be moved and that it does not contain any commas

OCI-14168: only one subpartition may be modified

Cause: ALTER TABLE|INDEX MODIFY SUBPARTITION contained descriptions of more than one subpartition to be modified

Action: Ensure that the statement describes exactly one subpartition to be modified and that it does not contain any commas

OCI-14169: invalid ALTER TABLE MODIFY SUBPARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, was specified in an ALTER TABLE MODIFY SUBPARTITION statement.

Action: Specify only legal options.

OCI-14170: cannot specify <(sub)partition-description> clause in CREATE TABLE or CREATE INDEX

Cause: A request was made to generate default partition description(s) (possibly via PARTITIONS *number-of-partitions*) while at the same time specified <(sub)partition-description> clause which is illegal.

Action: Remove one of offending clauses.

OCI-14171: cannot specify *subpartition-description* clause in CREATE|ALTER TABLE

Cause: User requested to generate default subpartition description(s) (possibly via SUBPARTITIONS) while at the same time specified *subpartition-description* clause which is illegal

Action: Remove one of offending clauses.

OCI-14172: invalid ALTER TABLE EXCHANGE SUBPARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING| EXCLUDING} INDEX][{WITH|WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE SUBPARTITION

OCI-14173: illegal subpartition-extended table name syntax

Cause: Subpartition to be accessed may only be specified using its name. User attempted to use a subpartition number or a bind variable.

Action: Modify statement to refer to a subpartition using its name

OCI-14174: only a *parallel clause* may follow COALESCE PARTITION| SUBPARTITION

Cause: ALTER TABLE COALESCE PARTITION|SUBPARTITION may be followed by an optional *parallel clause*. No partition/subpartition attributes may be specified

Action: Ensure that no partition/subpartition attribute was specified.

OCI-14175: a subpartition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a subpartition maintenance operation (e.g. MOVE SUBPARTITION) with some other operation (e.g. MODIFY PARTITION ADD SUBPARTITION or PCTFREE) which is illegal

Action: Ensure that a subpartition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with subpartitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

OCI-14176: this attribute may not be specified for a hash partition

Cause: An invalid option was encountered while parsing physical attributes of a partition of an object partitioned using the HASH method. The TABLESPACE option is the only valid option for such partitions.

Action: Remove the invalid option(s).

OCI-14177: STORE-IN (Tablespace list) can only be specified for a LOCAL index on a Hash or Composite Range Hash table

Cause: STORE-IN (Tablespace list) clause was used while creating a local index on a range/list/composite range list partitioned table

Action: Do not use the STORE_IN (Tablespace list) clause while creating a local index on range/list/composite range list partitioned table

OCI-14178: STORE IN (DEFAULT) clause is not supported for hash partitioned global indexes

Cause: STORE IN (DEFAULT) is valid only for local indexes.

Action: a) Specify a tablespace list in place of DEFAULT, or b) Remove STORE IN clause and specify tablespaces individually for each index partition.

OCI-14179: An unsupported partitioning method was specified in this context.

Cause: An attempt was made to specify an unsupported partitioning method in this context.

Action: Remove the invalid option.

OCI-14183: TABLESPACE DEFAULT can be specified only for Composite LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for a partition of a Range/System/Hash partitioned LOCAL index object, which is illegal.

Action: Replace TABLESPACE DEFAULT with TABLESPACE <ts_name> or remove it.

OCI-14185: incorrect physical attribute specified for this index partition

Cause: An unexpected option was encountered while parsing physical attributes of a local index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, PCTUSED, LOGGING and TABLESPACE; but only TABLESPACE may be specified for Hash partitions STORE IN () is also disallowed for all but Hash, Interval, Autolist, Composite Range Hash, Composite Interval, Composite Autolist partition.

Action: Remove the invalid options from the list of physical attributes of an index partition.

OCI-14186: number of sub-partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of sub-partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of sub-partitions

OCI-14187: partitioning method for LOCAL index is inconsistent with that of the underlying table

Cause: User attempted to create a LOCAL partitioned index that is not equi-partitioned with the underlying table. The partitioning types are mismatched.

Action: Correct the CREATE INDEX statement to ensure that the index partitioning method is consistent with that of the base table

OCI-14188: sub-partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose sub-partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose subpartitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or subpartitioning columns to ensure that the index' subpartitioning columns form a subset of its key columns

OCI-14189: this physical attribute may not be specified for an index subpartition

Cause: unexpected option was encountered while parsing physical attributes of an index subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

OCI-14190: only one ENABLE/DISABLE ROW MOVEMENT clause can be specified

Cause: One of three possible actions caused the error: 1) ENABLE ROW MOVEMENT was specified more than once. 2) DISABLE ROW MOVEMENT was specified more than once. 3) Both ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT were specified.

Action: Remove all but one of the ENABLE ROW MOVEMENT or DISABLE ROW MOVEMENT clauses; then, reissue the command.

OCI-14191: ALLOCATE EXTENT may not be specified for composite partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a composite partitioned index which is illegal.

Action: Remove the illegal option. If you want to add storage to individual [sub]partitions, the ALLOCATE EXTENT clause may be specified with ALTER TABLE OR INDEX MODIFY [SUB]PARTITION statement.

OCI-14192: cannot modify physical index attributes of a Hash index partition

Cause: User attempted to modify one of INITRANS/MAXTRANS/LOGGING/STORAGE clause for an index partition of a Hash partitioned index

Action: Remove the physical attributes one is trying to modify

OCI-14193: invalid ALTER INDEX MODIFY SUBPARTITION option

Cause: An option other than UNUSABLE, ALLOCATE EXTENT, DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY SUBPARTITION statement.

Action: Specify only legal options.

OCI-14194: only one subpartition may be rebuilt

Cause: ALTER INDEX REBUILD SUBPARTITION contained descriptions of more than one subpartition to be rebuilt

Action: Ensure that the statement describes exactly one subpartition to be rebuilt and that it does not contain any commas

OCI-14195: ALLOCATE STORAGE may not be specified for RANGE or LIST partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a range-partitioned index which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE/INDEX MODIFY PARTITION statement.

OCI-14196: Specified index cannot be used to enforce the constraint.

Cause: The index specified to enforce the constraint is unsuitable for the purpose.

Action: Specify a suitable index or allow one to be built automatically.

OCI-14201: specified subpartition bound is too long

Cause: Length of a linear key representation of a high bound of a table subpartition being added or along which an existing table or index subpartition is being split exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

OCI-14202: subpartition bound of subpartition "string" is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

OCI-14203: subpartition bound of subpartition "string" is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

OCI-14204: subpartition bound of subpartition number string is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

OCI-14205: subpartition bound of subpartition number string is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

OCI-14206: table is not subpartitioned by List or Range methods

Cause: A subpartition maintenance operation such as ALTER TABLE DROP|SPLIT|MERGE SUBPARTITION can only be performed on List or Range subpartitioned objects

Action: Issue the command only against a List or Range subpartitioned object.

OCI-14207: maximum number of subpartitioning columns is 16

Cause: number of columns in a subpartitioning column list exceeded the legal limit of 16

Action: modify subpartitioning column list so that it consists of at most 16 columns

OCI-14208: lower-bound subpartition must be specified first

Cause: A higher-bound subpartition was specified before the lower-bound subpartition in ALTER TABLE MERGE SUBPARTITIONS statement.

Action: Specify lower-bound subpartition first and then higher-bound subpartition

OCI-14209: subpartitions being merged are not adjacent

Cause: Attempted to merge two subpartitions that are not adjacent to each other.

Action: Specify two subpartitions that are adjacent

OCI-14210: cannot reuse lower-bound subpartition as resulting subpartition

Cause: Attempted to reuse the lower-bound subpartition of the subpartitions being merged.

Action: Specify new resulting subpartition name or reuse the higher-bound subpartition only

OCI-14211: subpartition bound must collate higher than that of the last subpartition

Cause: Subpartition bound specified in ALTER TABLE MODIFY PARTITION ADD SUBPARTITION statement did not collate higher than that of the partition's last subpartition.

Action: Ensure that the subpartition bound of the subpartition to be added collates higher than that of the table partition's last subpartition.

OCI-14212: subpartition cannot be split along the specified high bound

Cause: Attempted to split a subpartition along a bound which either collates higher than that of the subpartition to be split or lower than that of a subpartition immediately preceding the one to be split

Action: Ensure that the bound along which a subpartition is to be split collates lower than that of the subpartition to be split and higher than that of a subpartition immediately preceding the one to be split

OCI-14213: VALUES LESS THAN or AT clause cannot be used for List subpartitioned tables

Cause: VALUES LESS THAN or AT clause was used for List subpartitioned tables

Action: Use VALUES (*value list*) clause for List subpartitioned tables

OCI-14214: VALUES (*value list*) cannot be used for Range subpartitioned tables

Cause: VALUES (*value list*) clause was used for Range subpartitioned tables

Action: Use VALUES LESS THAN or AT clause with Range subpartitioned tables

OCI-14215: subpartition bound list contains too many elements

Cause: Subpartition bound list contained more elements than there are subpartitioning columns

Action: Ensure that the number of elements in subpartition bound list is equal to the number of subpartitioning columns of the table or index

OCI-14216: subpartition bound list contains too few elements

Cause: Subpartition bound list contained fewer elements than there are subpartitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

OCI-14217: VALUES (*value list*) clause expected

Cause: VALUES (*value list*) clause was not specified for the list subpartition being added

Action: Specify a VALUES (*value list*) clause

OCI-14218: Invalid operation for object without a segment

Cause: The object (table or index or lob) did not have a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

OCI-14220: Invalid operation for object without a segment

Cause: Attempted to modify storage or allocate an extent for an object (table or LOB or index) without a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

OCI-14221: A dictionary managed tablespace cannot be used for this operation.

Cause: Attempted to create an index or add a LOB column in a dictionary managed tablespace to a table without a segment.

Action: Specify a locally managed tablespace, or create segments for the table with the ALTER TABLE ALLOCATE EXTENT command.

OCI-14223: Deferred segment creation is not supported for this table

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

OCI-14224: Deferred segment creation is not supported for this schema

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

OCI-14225: The INDEXING clause is not supported for this table.

Cause: The INDEXING clause was specified for an unsupported table type.

Action: Remove the INDEXING clause from the statement.

OCI-14226: unique index may not be PARTIAL

Cause: INDEXING PARTIAL was specified during creation or modification of a unique index.

Action: Remove the INDEXING PARTIAL clause from the statement.

OCI-14227: INDEXING may be specified only when the underlying table is partitioned

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX when the base table was not partitioned.

Action: Remove the INDEXING clause from the statement.

OCI-14228: INDEXING may not be specified for this index

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX for an unsupported index type.

Action: Remove the INDEXING clause from the statement.

OCI-14229: cannot modify the indexing attribute of a composite partition

Cause: An attempt was made to perform ALTER TABLE MODIFY PARTITION INDEXING [ON|OFF] on a composite table partition.

Action: Run ALTER TABLE MODIFY SUBPARTITION INDEXING [ON|OFF] on each subpartition individually.

OCI-14251: Specified subpartition does not exist

Cause: Subpartition not found for the object.

Action: Retry with correct subpartition name.

OCI-14252: invalid ALTER TABLE MODIFY PARTITION option for a Hash partition

Cause: Only ALLOCATE EXTENT and DEALLOCATE UNUSED may be specified in ALTER TABLE MODIFY PARTITION for a Hash partition.

Action: Specify only legal options.

OCI-14253: table is not partitioned by composite partition method

Cause: One of the following occurred: - The table in a subpartition maintenance operation (ALTER TABLE [EXCHANGE | MODIFY | MOVE | TRUNCATE] SUBPARTITION or ALTER TABLE MODIFY PARTITION [ADD | COALESCE] SUBPARTITION) was not partitioned by the composite partition method. - The table in the MODIFY DEFAULT ATTRIBUTES FOR PARTITION operation was partitioned by a method other than the composite method. - The table in the ALTER TABLE MODIFY SUBPARTITION [UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES] statement was not partitioned by the composite partition method which is illegal.

Action: Ensure that the table is partitioned by composite partition method.

OCI-14254: cannot specify ALLOCATE STORAGE for a (Composite) Range or List partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a Range or Composite Range partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions/subpartitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION/SUBPARTITION statement. If it is desired to add storage to all subpartitions of a Composite partition, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION.

OCI-14255: table is not partitioned by range, list, composite range, or composite list method

Cause: The table was not partitioned by the range, list, composite range, or composite list method.

Action: The ALTER TABLE [SPLIT | DROP] PARTITION or ALTER TABLE MERGE PARTITIONS command is only valid for a table partitioned by range, list, composite range, or composite list methods. Ensure that the table is partitioned appropriately.

OCI-14256: invalid resulting partition description(s)

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in partition description(s) in ALTER TABLE SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS statement but the table in the maintenance operation is not a Composite Range partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range method

OCI-14257: cannot move a partition which is a composite partition

Cause: An attempt was made to move a partition that was a composite partition.

Action: Move the subpartitions one-by-one to move the composite partition.

OCI-14258: invalid partition description

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in ALTER TABLE ADD PARTITION statement but the table in the maintenance operation is not a Composite Range/Hash partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range/Hash method

OCI-14259: table is not partitioned by Hash method

Cause: ALTER TABLE COALESCE PARTITION is only valid for table partitioned by Hash method

Action: Specify valid ALTER TABLE option for the table, or ensure that the table is partitioned by Hash method

OCI-14260: incorrect physical attribute specified for this partition

Cause: User specified INITRANS, MAXTRANS, STORAGE, PCTFREE, PCTUSED, and/or [NO]LOGGING option to a Hash partition via ALTER TABLE ADD/MOVE PARTITION command which is illegal. Only TABLESPACE may be specified.

Action: Remove invalid option(s)

OCI-14261: partition bound may not be specified when adding this Hash partition

Cause: User specified VALUES LESS THAN clause when adding a partition (via ALTER TABLE ADD PARTITION) to a Hash partitioned table which is illegal

Action: Remove VALUES LESS THAN clause from the description of partition being added

OCI-14262: new subpartition name must differ from the old subpartition name

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of the subpartition being renamed

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

OCI-14263: New subpartition name must differ from that of any other partition or subpartition of the object.

Cause: ALTER TABLE RENAME SUBPARTITION or ALTER INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of an existing partition or subpartition of the object was specified.

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing partition or subpartition of a given table or index.

OCI-14265: data type or length of a table subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table subpartitioning column(s)

OCI-14266: data type or length of an index subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index subpartitioning column(s)

OCI-14267: cannot specify PARALLEL clause when adding a (composite) partition

Cause: The ALTER TABLE ADD PARTITION statement with PARALLEL clause for a partition or composite partition method other than HASH was issued.

Action: Remove the PARALLEL clause.

OCI-14268: subpartition 'string' of the partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

OCI-14269: cannot exchange partition other than a Range,List,System, or Hash partition

Cause: User attempt to exchange a partition with a non-partitioned table but the specified partition is not a Range,List,System, or Hash partition which is illegal

Action: Specify EXCHANGE PARTITION for a Range,List,System, or Hash partition only

OCI-14270: table is not partitioned by Range, System, Hash or List method

Cause: The table in ALTER TABLE MODIFY PARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Range,List,System, or Hash method which is illegal.

Action: Ensure that the table is partitioned by Range,List,System, or Hash method 14271, 00000, "free error number"

OCI-14272: only a partition with higher bound can be reused

Cause: User attempt to reuse a lower-bound partition in ALTER TABLE MERGE PARTITIONS statement as the resulting partition which is illegal.

Action: Use the higher-bound partition to be the resulting partition or specify a new partition name

OCI-14273: lower-bound partition must be specified first

Cause: User specified higher-bound partition before lower-bound partition in ALTER TABLE MERGE PARTITIONS statement which is illegal

Action: Specify lower-bound partition then higher-bound partition

OCI-14274: partitions being merged are not adjacent

Cause: User attempt to merge two partitions that are not adjacent to each other which is illegal

Action: Specify two partitions that are adjacent

OCI-14275: cannot reuse lower-bound partition as resulting partition

Cause: User attempt to reuse lower-bound partition of the partitions being merged which is illegal

Action: Specify new resulting partition name or reuse the higher-bound partition only

OCI-14276: EXCHANGE SUBPARTITION requires a non-partitioned, non-clustered table

Cause: The table in the ALTER TABLE EXCHANGE SUBPARTITION operation is either clustered or partitioned

Action: Ensure that the table with which the subpartition is being exchanged for is not partitioned or clustered.

OCI-14277: tables in EXCHANGE SUBPARTITION must have the same number of columns

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

OCI-14278: column type or size mismatch in EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

OCI-14279: index mismatch for tables in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

OCI-14280: all rows in table do not qualify for specified subpartition

Cause: There is at least one row in the non partitioned table which does not qualify for the subpartition specified in the ALTER TABLE EXCHANGE SUBPARTITION

Action: Ensure that all the rows in the segment qualify for the subpartition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that subpartition to find out the invalid rows and delete them.

OCI-14281: CHECK constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

OCI-14282: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

OCI-14283: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table.

If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

OCI-14284: one or more of table's subpartitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more subpartitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more subpartitions of which reside in read-only tablespaces

OCI-14285: cannot COALESCE the only partition of this hash partitioned table or index

Cause: A COALESCE PARTITION command was issued when there is only one partition in the table or index, which is illegal

Action: Ensure that there is at least one partition. Drop the table or index to remove all partitions.

OCI-14286: cannot COALESCE the only subpartition of this table partition

Cause: A COALESCE SUBPARTITION command was issued when there is only one subpartition in the partition which is illegal

Action: Ensure that there is at least one subpartition. Drop partition to remove all subpartitions.

OCI-14287: cannot REBUILD a partition of a composite partitioned index

Cause: An attempt was made to rebuild a partition of a composite partitioned index which is illegal.

Action: REBUILD the index partition one subpartition at a time.

OCI-14288: index is not partitioned by composite partition method

Cause: The index in a partition or subpartition maintenance operation (ALTER INDEX MODIFY [SUBPARTITION]DEFAULT ATTRIBUTES FOR PARTITION] or ALTER INDEX REBUILD SUBPARTITION command was not partitioned by the composite partition method.

Action: REBUILD the index partition one at a time.

OCI-14289: cannot make local index partition of composite partitioned table unusable

Cause: An attempt was made to rebuild a partition of a composite partitioned index which is illegal.

Action: REBUILD the index partition one subpartition at a time.

OCI-14290: PRIMARY KEY constraint mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement have different PRIMARY KEY constraints.

Action: Ensure that the two tables do not have PRIMARY KEY constraints defined on any column or disable all PRIMARY KEY constraints on both tables. Then retry the operation.

OCI-14291: cannot EXCHANGE a composite partition with a non-partitioned table

Cause: A composite partition can only be exchanged with a partitioned table.

Action: Ensure that the table being exchanged is partitioned or that that the partition being exchanged is non-composite.

OCI-14292: Partitioning type of table must match subpartitioning type of composite partition

Cause: When exchanging a partitioned table with a composite partition the partitioning type of the table must match the subpartitioning type of the composite partition.

Action: Ensure that the partitioning type of partitioned table is the same as the subpartitioning type of the composite partition.

OCI-14293: Number of partitioning columns does not match number of subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the number of partitioning columns of the table must match the number of subpartitioning columns of the composite partition.

Action: Ensure that the number of partitioning columns in the partitioned table is the same as the number of subpartitioning columns in the the composite partition.

OCI-14294: Number of partitions does not match number of subpartitions

Cause: When exchanging a partitioned table with a composite partition the number of partitions of the table must match the number of subpartitions of the composite partition.

Action: Ensure that the number of partitions in the partitioned table is the same as the number of subpartitions in the the composite partition.

OCI-14295: column type or size mismatch between partitioning columns and subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the type and size of the partitioning columns of the table must match the type and size of the subpartitioning columns of the composite partition.

Action: Ensure that the type and size of the partitioning columns of the partitioned is the same as the type and size of the subpartitioning columns of the composite partition.

OCI-14296: Table block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different. For index organized tables, either the block sizes of the index or the overflow (or both) do not match.

Action: Ensure that the block sizes of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same. For index organized tables, ensure that the block sizes of both the index and the overflow of the two tables match.

OCI-14297: Index block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of indexes being exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of the corresponding pairs of indexes that need to be exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

OCI-14298: LOB column block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of corresponding LOB columns of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of corresponding pairs of LOB columns of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

OCI-14299: total number of partitions/subpartitions exceeds the maximum limit

Cause: The total number of combined fragments specified in partitions /subpartitions exceeds 1048575.

Action: Reissue the statement with fewer number of fragments

OCI-14300: partitioning *keysting* is beyond the calculated exclusive upper interval *boundstring* for *tablestring*

Cause: The row inserted had a partitioning key that maps to a partition number greater than 1048575

Action: Ensure that the partitioning key falls within 1048575 partitions or subpartitions.

OCI-14301: table-level attributes must be specified before partition-level attributes

Cause: While processing an ALTER TABLE ADD COLUMN statement, table-level attributes of LOB columns were encountered after processing partition-level attributes of LOB columns or while processing CREATE TABLE statement, table-level attributes of LOB columns were encountered after processing partition descriptions.

Action: Modify the SQL statement to specify table-level attributes prior to partition-level attributes or partition descriptions; then retry the statement.

OCI-14302: only one list of added-LOB-storage-clauses can be specified in a statement

Cause: While parsing an ALTER TABLE ADD COLUMN statement, one list of added-LOB-storage-clauses was parsed when another list of added-LOB-storage-clauses was encountered. There cannot be more than one list of added-LOB-storage-clauses in a statement; all added-LOB-storage-clauses must be combined into one list.

Action: Combine all of the lists of added-LOB-storage-clauses into one list and retry the statement.

OCI-14303: partitions or subpartitions are not in the right order

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: Re-order the partitions or subpartitions in the added LOB storage clause by partition or subpartition DDL order, and retry the statement.

OCI-14304: List partitioning method expects a single partitioning column

Cause: number of columns in a partitioning column list exceeded the legal limit of 1 for List partitioned objects

Action: modify partitioning column list so that it consists of at most 1 column

OCI-14305: List value '*string*' specified twice in partition '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

OCI-14306: List value '*string*' specified twice in partitions '*string*', '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

OCI-14307: partition contains too many list values

Cause: Partition list contains more than 524288 list values

Action: Reduce the number of values to not exceed 524288 values

OCI-14308: partition bound element must be one of: string, datetime or interval literal, number, or NULL

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or NULL)

Action: Ensure that all elements of partition bound list are of valid type

OCI-14309: Total count of list values exceeds maximum allowed

Cause: Partitioned object contains more than 524288 list values

Action: Reduce number of values to less than 524288.

OCI-14310: VALUES LESS THAN or AT clause cannot be used with List partitioned tables

Cause: VALUES LESS THAN or AT clause can be used only with Range partitioned tables

Action: Use VALUES (*value list*) clause with List partitioned tables

OCI-14311: Expecting VALUES LESS THAN or AT clause

Cause: VALUES (*value list*) clause can be used only with List partitioned tables

Action: Use VALUES LESS THAN clause with Range partitioned tables

OCI-14312: Duplicate key specified: a value of *string* already exists in partition *string*.

Cause: One of the literal values in the ALTER TABLE ... ADD PARTITION or ALTER TABLE ... ADD VALUES clause already exists in another list partition or list sub-partition.

Action: Remove the duplicate value from the statement and try again. If you are unsure which values have been specified in the current schema's list-partitions, you can find more information in the following data dictionary views: - USER_TAB_PARTITIONS - USER_TAB_SUBPARTITIONS

OCI-14313: Value *string* does not exist in partition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the partition

Action: Remove the value from the statement and try again

OCI-14314: resulting List partition(s) must contain atleast 1 value

Cause: After a SPLIT/DROP VALUE of a list partition, each resulting partition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting partitions contains atleast 1 value

OCI-14315: cannot merge a partition with itself

Cause: The same partition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct partition names

OCI-14316: table is not partitioned by List method

Cause: ALTER TABLE ADD|DROP VALUES can only be performed on List partitioned objects

Action: Re-issue the command against a List partitioned object.

OCI-14317: cannot drop the last value of partition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the partition

Action: Cannot execute the command, unless two or more values exist for partition

OCI-14318: DEFAULT partition must be last partition specified

Cause: A partition description follows the one describing the default partition

Action: Ensure that the DEFAULT partition is the last partition description

OCI-14319: DEFAULT cannot be specified with other values

Cause: DEFAULT keyword has been specified along with other values when specifying the values for a list partition

Action: Ensure that if DEFAULT is specified, it is the only value specified

OCI-14320: DEFAULT cannot be specified for ADD/DROP VALUES or SPLIT

Cause: DEFAULT keyword has been specified when doing a ADD VALUES or DROP VALUES or SPLIT partition or subpartition.

Action: Ensure that DEFAULT is not specified for ADD/DROP VALUES or SPLIT partition/subpartition operation.

OCI-14321: cannot add/drop values to DEFAULT partition

Cause: A ADD/DROP VALUES operation is being done on the default partition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT partition

OCI-14322: DEFAULT partition already exists

Cause: A partition already exists with DEFAULT value

Action: n/a

OCI-14323: cannot add partition when DEFAULT partition exists

Cause: An ADD PARTITION operation cannot be executed when a partition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT partition instead

OCI-14324: values being added already exist in DEFAULT partition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT partition

Action: Issue a SPLIT of the DEFAULT partition and then MERGE the split partition into the partition to which values need to be added

OCI-14325: only LOCAL indexes may be specified in this clause

Cause: A global index has been specified in the UPDATE INDEXES (..) clause

Action: Only specify local indexes when using this clause

OCI-14326: Primary index on an IOT, DOMAIN and LOB indexes may not be specified in the UPDATE INDEXES clause

Cause: A Primary index on an IOT, DOMAIN or LOB index has been specified in the UPDATE INDEXES (..) clause

Action: Do not specify any of these indexes when using this clause

OCI-14327: Some index [sub]partitions could not be rebuilt

Cause: The first phase (partition DDL and index [sub]partition placement) completed successfully. During the second phase, some of the index [sub]partitions could not be rebuilt.

Action: Search the alert log for the string DBMS_INDEX_UTL. Check the error associated with each of the [sub]partitions that could not be rebuilt and take the appropriate corrective action.

OCI-14329: domain index [sub]partitions cannot be renamed in this clause

Cause: The user tried to rename a domain index [sub]partition in the UPDATE INDEXES clause of a ALTER TABLE MOVE [SUB]PARTITION operation. This is not allowed.

Action: Leave the name blank or use the same name.

OCI-14330: Cannot drop a partition of a global hash-partitioned index

Cause: An attempt was made to drop a partition of a hash-partitioned global index.

Action: Try COALESCE PARTITION instead.

OCI-14331: cannot drop all [sub]partitions of a partitioned table

Cause: An attempt was made to drop all partitions of a partitioned table.

Action: Try DROP TABLE instead.

OCI-14332: duplicate partition or subpartition names specified

Cause: The list of partitions contained duplicate partition or subpartition names.

Action: Ensure that list of partition or subpartition names are distinct.

OCI-14333: subpartition names specified are across multiple partitions

Cause: The specified subpartitions did not belong to the same partition.

Action: Ensure that all subpartitions specified belong to the same partition.

OCI-14334: guard column expected

Cause: There was no guard column or the NOT NULL constraint was not specified for this column.

Action: Add a guard column or NOT NULL constraint for column.

OCI-14335: number of new fragments for adding partitions or creating partitioned table exceeds the maximum limit

Cause: The total number of new fragments for adding partitions or for creating a partitioned table exceeded 125000.

Action: Reissue the statement with a fewer number of new fragments.

OCI-14337: index is not partitioned by range, list, composite range, or composite list method

Cause: The index was not partitioned by the range, list, composite range, or composite list method.

Action: The ALTER INDEX [SPLIT | DROP] PARTITION or ALTER INDEX MERGE PARTITIONS command is only valid for an index partitioned by range, list, composite range, or composite list methods. Ensure that the index is partitioned appropriately.

OCI-14339: JavaScript Object Notation (JSON) LOB column can only be used to partition a table with JSON_VALUE operator

Cause: An attempt was made to create a partitioned table using a virtual column as a partitioning key column that references a JavaScript Object Notation (JSON) LOB column but does not contain a JSON_VALUE operator.

Action: Ensure that the virtual column used as a partition key column contains a JSON_VALUE operator if it references a JSON LOB column.

OCI-14340: online DDL rolled back due to DML conflict

Cause: The online build journal became inconsistent with ongoing DML and could not be used successfully to complete the online DDL.

Action: Reissue the online DDL.

OCI-14341: cannot exchange a composite partition with a composite partitioned table

Cause: A composite partition can only be exchanged with a single-level partitioned table.

Action: Ensure that the table that is exchanged is a single-level partitioned table.

OCI-14342: JavaScript Object Notation (JSON) type column can only be used to partition a table with JSON_VALUE operator

Cause: An attempt was made to create a partitioned table using a virtual column as a partitioning key column that references a JavaScript Object Notation (JSON) type column but does not contain a JSON_VALUE operator.

Action: Ensure that the virtual column used as a partition key column contains a JSON_VALUE operator if it references a JSON type column.

OCI-14350: check constraint condition has an invalid reference

Cause: An attempt was made to construct a check constraint condition with an invalid reference, such as a hidden column created for a virtual column, or a guard column.

Action: Remove the invalid reference from the check constraint condition.

OCI-14351: expression edition column is not supported for a hybrid table

Cause: An attempt was made to create or alter a hybrid table with an edition expression column.

Action: Do not specify an edition expression column in the statement.

OCI-14352: must contain at least one internal partition

Cause: An attempt was made to create a hybrid partitioned table containing external partitions only, or, to drop the last internal partition in a hybrid partitioned table, or, to convert a non partitioned table into a hybrid partitioned table.

Action: Ensure that the statement contains at least one internal partition when creating a hybrid partitioned table, and after dropping a partition in the table. When converting a table into a hybrid partitioned table, the table should contain at least one internal partition.

OCI-14353: operation not supported for an external partition in a hybrid-partitioned table

Cause: An attempt was made to perform an operation on an external partition in a hybrid-partitioned table, that was not supported.

Action: Do not perform the unsupported operation.

OCI-14354: operation not supported for a hybrid-partitioned table

Cause: An attempt was made to perform an operation on a hybrid-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

OCI-14355: cannot use bind variables in the access parameters clause

Cause: An attempt was made to use a bind variable in the access parameters clause of an inline external table query.

Action: Remove the bind variable or surround the access parameters clause in single quotes.

OCI-14356: cannot update a join view using UPDATE FROM clause

Cause: An UPDATE statement with a FROM clause was specified, where the update target was a join view.

Action: Provide an update target that is a table, single-table view, or a materialized view.

OCI-14357: updated column must come from the target table

Cause: An UPDATE statement with a FROM clause was specified where a column on the left side of the SET clause was not a column of the table to be updated.

Action: Specify a column from the table to be updated.

OCI-14358: cannot delete a join view using DELETE FROM clause

Cause: A DELETE statement with a FROM clause was specified, where the delete target was a join view.

Action: Provide a delete target that is a table, single-table view, or a materialized view.

OCI-14359: The operation was unable to obtain a consistent set of rows that needed to be modified.

Cause: A consistent set of rows needing modifications could not be obtained as the WHERE clause was non-deterministic and also, large concurrent DML possibly modified WHERE clause columns. The WHERE clause was non-deterministic because it contained an operand that, when given the same input parameters, did not always return the same output value.

Action: Remove any non-deterministic operand in the WHERE clause and reissue the DML.

OCI-14360: Only a partial index is allowed on a hybrid partitioned table.

Cause: An attempt was made to create a full index on a hybrid partitioned table, or, to convert an internal partitioned table containing a full index into a hybrid partitioned table.

Action: You can index the internal partitions of a hybrid partitioned table, but not the external partitions. Ensure that the table only has partial indexes.

OCI-14400: no partition found in tablestring for inserted partition keystring

Cause: An attempt was made to insert a record into, a Range or Composite Range object, with a concatenated partition key that is beyond the concatenated partition bound list of the last partition -OR- An attempt was made to insert a record into a List object with a partition key that did not match the literal values specified for any of the partitions.

Action: Do not insert the key. Or, add a partition capable of accepting the key, Or add values matching the key to a partition specification

OCI-14401: inserted partition keystring does not map to the specified partition ofstring

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated partition bound lists that delimit the partition named in the INSERT statement

Action: do not insert the key or insert it in another partition

OCI-14402: updating partition key column would cause a partition change

Cause: An UPDATE statement attempted to change the value of a partition key column causing migration of the row to another partition.

Action: Do not attempt to update a partition key column or ensure that the new partition key is within the range containing the old partition key.

OCI-14404: partitioned table contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose partitions are not completely contained in this tablespace

Action: find tables with partitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move partitions to a different tablespace

OCI-14405: partitioned index contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose partitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with partitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

OCI-14406: no partition found in tablestring for updated partition keystring

Cause: An attempt was made to update a record with a concatenated partition key that is beyond the concatenated partition bound list of the last partition.

Action: Do not update the key. Or, add a partition capable of accepting the key.

OCI-14407: partitioned table contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose subpartitions are not completely contained in this tablespace

Action: find tables with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move subpartitions to a different tablespace

OCI-14408: partitioned index contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose subpartitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

OCI-14409: inserted partition key is outside specified subpartition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated subpartition bound lists that delimit the subpartition named in the INSERT statement

Action: do not insert the key or insert it in another subpartition

OCI-14411: The DDL cannot be run concurrently with other DDLs

Cause: Another conflicting DDL was already running.

Action: Retry after the conflicting DDL has finished.

OCI-14413: ALTER INDEX UNUSABLE ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the ALTER INDEX UNUSABLE ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the ALTER INDEX UNUSABLE ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

OCI-14414: DROP INDEX ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the DROP INDEX ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the DROP INDEX ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

OCI-14415: index in partially dropped state, submit DROP INDEX

Cause: An attempt was made to access an index in a partially dropped state.

Action: Submit the DROP INDEX *index* statement to drop the index.

OCI-14416: Online DDL's cannot be used *string*

Cause: An attempt was made to use the DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on a table type (for example, cluster, temporary, index-organized table (IOT), external tables) that was not allowed.

Action: Using online DDL's like DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on certain types of tables (for example, cluster, temporary, indexed-organized table (IOT), external tables) is illegal. Remove the ONLINE keyword from the statement.

OCI-14417: Online DDL's cannot be used with deferrable constraints.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraint states (for example, deferrable, deferred) that was not allowed.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraints that are deferrable or deferred is illegal. Remove the ONLINE keyword from the statement.

OCI-14418: Online DDL's cannot be used with this constraint type.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on a constraint type other than check, primary key, unique, referential, or not null constraint.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on any other constraint types excluding check, primary key, unique, referential, or not null constraints is illegal. Remove the ONLINE keyword from the DDL.

OCI-14419: DROP CONSTRAINT ONLINE does not support the CASCADE option.

Cause: An attempt was made to use the CASCADE option with DROP CONSTRAINT ONLINE statement.

Action: Using the CASCADE option with the DROP CONSTRAINT ONLINE statement is illegal. Remove the CASCADE keyword from the statement. Drop the child key constraint in a separate DROP CONSTRAINT ONLINE statement on the child table.

OCI-14424: CREATE TABLE FOR EXCHANGE cannot be used with certain types of tables.

Cause: An attempt was made to use the CREATE TABLE FOR EXCHANGE statement on a table type (for example, cluster, temporary, index-organized table (IOT), external tables) that was not allowed.

Action: Do not specify the FOR EXCHANGE clause with certain types of tables (for example, cluster, temporary, indexed-organized table (IOT), external tables).

OCI-14425: CREATE TABLE AS SELECT disallowed along with the CREATE TABLE FOR EXCHANGE clause.

Cause: An attempt was made to combine the CREATE TABLE FOR EXCHANGE clause with a CREATE TABLE AS SELECT.

Action: Execute a CREATE TABLE FOR EXCHANGE followed by an INSERT AS SELECT into the table.

OCI-14426: Online DDL's cannot be used inside an autonomous transaction.

Cause: An attempt was made to use online DDL's inside an autonomous transaction.

Action: Using online DDL's inside an autonomous transaction is not allowed. Remove the ONLINE keyword from the statement.

OCI-14427: table does not support modification to a partitioned state DDL *string*

Cause: An alter table modification to a partitioned state DDL was issued on a table that was either not a heap table or had an object type, domain index or bitmap join index defined on it. This DDL is only supported for heap tables that are non-partitioned.

Action: Do not use the modification to a partitioned state DDL on a partitioned table.

OCI-14428: TBL\$OR\$IDX\$PART\$NUM query on remote object not supported

Cause: A TBL\$OR\$IDX\$PART\$NUM query on a remote object was attempted.

Action: Do not use TBL\$OR\$IDX\$PART\$NUM query on remote objects.

OCI-14429: System partitioning is not allowed in modification to a partitioned state DDL.

Cause: An attempt was made to convert a non-partitioned table to system partitioned table, which is illegal.

Action: Specify a different partitioning method in the modification to a partitioned state DDL.

OCI-14430: An alter table modification to a partitioned state DDL cannot be combined with other operations.

Cause: An attempt was made to combine an alter table modification to partitioned state DDL with another operation, which is illegal.

Action: Ensure that the modification to partitioned state operation is the only one specified in the alter table DDL.

OCI-14431: A system-generated column is not allowed as a partitioning column.

Cause: The partitioning column specified by the user was a system-generated column, which is illegal.

Action: Ensure that the partitioning column is not a system-generated column.

OCI-14432: System partitioning is not allowed in the CREATE TABLE FOR EXCHANGE DDL statement.

Cause: An attempt was made to create a system partitioned table using the CREATE TABLE FOR EXCHANGE DDL statement, which is illegal.

Action: Specify a different partitioning method in the CREATE TABLE FOR EXCHANGE DDL statement.

OCI-14433: Reference partitioning is not allowed in the online version of modification to a partitioned state DDL.

Cause: An attempt was made to convert a non-partitioned table to a reference partitioned table using the online version of the DDL, which is not allowed.

Action: Remove the ONLINE keyword from the statement.

OCI-14434: non-existent partitioning column in ALTER TABLE statement

Cause: The partitioning column specified in the ALTER TABLE statement was not one of the columns of the table being altered.

Action: Ensure that all columns in the partitioning column list are columns of the table being altered.

OCI-14435: partition bound specified when adding this system partition

Cause: The user specified either a VALUES LESS THAN clause or a VALUES (<values_list>) clause when adding a partition to a system partitioned table, which is not allowed.

Action: Remove the VALUES LESS THAN clause and VALUES (<values_list>) clause from the partition being added.

OCI-14436: During the modification to a partitioned state DDL, it is illegal to specify SUBPARTITIONS or STORE IN clause once a SUBPARTITION TEMPLATE has been specified.

Cause: The user specified either a SUBPARTITIONS or a STORE IN clause along with a subpartition template when modifying a table to partitioned state, which is not allowed.

Action: Remove either the SUBPARTITIONS | STORE IN clause or remove the SUBPARTITION TEMPLATE clause.

OCI-14437: Multiple DEFAULT partitions are not allowed in a system partitioned table.

Cause: The SET DEFAULT clause was specified for multiple partitions in a system partitioned table, which is not allowed.

Action: Remove all but one of the SET DEFAULT clauses.

OCI-14438: no subpartition found in tablestring for inserted partition keystring

Cause: An attempt was made to insert a record into, a Range or Composite Range object, with a concatenated partition key that is beyond the concatenated partition bound list of the last partition -OR- An attempt was made to insert a record into a List object with a partition key that did not match the literal values specified for any of the partitions.

Action: Do not insert the key. Or, add a partition capable of accepting the key, Or add values matching the key to a partition specification

OCI-14439: no subpartition found in tablestring for updated partition keystring

Cause: At attempt was made to update a record with a concatenated partition key that is beyond the concatenated partition bound list of the last partition.

Action: Do not update the key. Or, add a partition capable of accepting the key.

OCI-14450: attempt to access a transactional temp table already in use

Cause: An attempt was made to access a transactional temporary table that has been already populated by a concurrent transaction of the same session.

Action: do not attempt to access the temporary table until the concurrent transaction has committed or aborted.

OCI-14451: unsupported feature with temporary table

Cause: An attempt was made to create an IOT, specify physical attributes, specify partition or parallel clause.

Action: do not do that.

OCI-14452: attempt to create, alter or drop an index on temporary table already in use

Cause: An attempt was made to create, alter or drop an index on temporary table which is already in use.

Action: All the sessions using the session-specific temporary table have to truncate table and all the transactions using transaction specific temporary table have to end their transactions.

OCI-14453: cannot use LOB from purged temporary table

Cause: An attempt was made to use a LOB from a temporary table whose data has been purged because: 1.The table was transaction-specific and the transaction was COMMITTED or ABORTED. 2.The table was truncated or the session that created the LOB ended.

Action: Select a LOB locator with valid data.

OCI-14454: attempt to reference temporary table in a referential integrity constraint

Cause: An attempt was made to reference temporary table in a referential integrity constraint. This is not supported.

Action: Use triggers.

OCI-14455: attempt to create referential integrity constraint on temporary table

Cause: An attempt was made to create a referential integrity constraint on a temporary table. This is not supported.

Action: Use triggers.

OCI-14456: cannot rebuild index on a temporary table

Cause: An attempt was made to rebuild an index on a temp table.

Action: The index data is anyway lost at end of session/transaction.

OCI-14457: Temporary tables cannot contain nested table columns.

Cause: An attempt made to create a nested table column in a temporary table. This is not supported.

Action: Do not specify these data types for temporary tables.

OCI-14458: attempt was made to create a temporary table with INDEX organization

Cause: An attempt was made to create an Index Organized Temporary table. This is not supported.

Action: Create the table with HEAP organization and the primary key.

OCI-14459: missing GLOBAL keyword

Cause: keyword GLOBAL is missing while creating temporary table.

Action: supply keyword.

OCI-14460: only one COMPRESS or NOCOMPRESS clause may be specified

Cause: COMPRESS was specified more than once, NOCOMPRESS was specified more than once, or both COMPRESS and NOCOMPRESS were specified.

Action: specify each desired COMPRESS or NOCOMPRESS clause option only once.

OCI-14461: cannot REUSE STORAGE on a temporary table TRUNCATE

Cause: REUSE STORAGE was specified with TRUNCATE on a temporary table. This is unsupported as it is meaningless.

Action: Specify DROP STORAGE instead (which is the default).

OCI-14462: cannot TRUNCATE temporary table in an autonomous transaction which is already in use by the parent transaction

Cause: An attempt was made to TRUNCATE a temporary table in an autonomous transaction which was already in use by the parent transaction.

Action: Ensure that the temporary table is not being used by the parent transaction before trying to TRUNCATE in an autonomous transaction.

OCI-14463: OPERATIONS keyword not specified

Cause: OPERATIONS keyword was not specified in the Compression Clause.

Action: specify OPERATIONS in the Compression Clause.

OCI-14464: compression type not specified

Cause: Compression type was not specified in the COMPRESS clause.

Action: Specify compression type in the COMPRESS clause after COMPRESS.

OCI-14465: Fast-Split is not possible on these partitions

Cause: The Fast-Split event was forced in this session.

Action: Disable the event that forces Fast-Split.

OCI-14466: Data in a read-only partition or subpartition cannot be modified.

Cause: An attempt was made to modify data residing in a read-only partition or subpartition.

Action: Modify this partition or subpartition to read/write or do not make the modification.

OCI-14467: This option cannot be issued with the READ ONLY or READ WRITE clause.

Cause: An attempt was made to issue a READ ONLY or READ WRITE clause combined with the ONLINE or the INCLUDING ROWS clause.

Action: Issue the READ ONLY or READ WRITE clause with the ONLINE or the INCLUDING ROWS clause in separate statements.

OCI-14468: invalid INCLUDING ROWS WHERE ... clause

Cause: An invalid INCLUDING ROWS WHERE ... clause was specified. The INCLUDING ROWS WHERE ... clause has the following restrictions: - It can only refer to the target table of the DDL. - It cannot have subselect queries. - It cannot refer to the SYSDATE function. - It cannot refer to the ROWNUM pseudo column or the ROWID column.

Action: Rewrite the WHERE clause so that it does not have the restrictions previously listed.

OCI-14469: ALTER TABLE MOVE INCLUDING ALL LOBS cannot be used with certain types of tables.

Cause: An attempt was made to use the ALTER TABLE MOVE INCLUDING ALL LOBS statement on a table type (for example, cluster, temporary, index-organized table (IOT) or external tables) that was not allowed.

Action: Do not specify the INCLUDING ALL LOBS clause with certain types of tables (for example, cluster, temporary, indexed-organized table (IOT) or external tables).

OCI-14473: Mapping table or the journal table cannot be dropped while there are failed online partition maintenance operations that must be cleaned up.

Cause: An attempt is being made to directly drop the mapping table or the journal table while there are failed online partition maintenance operations for cleanup.

Action: Clean up failed online partition maintenance operations using the PL/SQL package CLEANUP_ONLINE_OP. The clean up procedure will internally take care of dropping the mapping table and the journal table.

OCI-14474: invalid usage of the modification to nonpartitioned state DDL

Cause: An attempt was made to use the modification to nonpartitioned state DDL with an unsupported condition. The ALTER TABLE MODIFY NONPARTITIONED DDL has the following restrictions: - A table must be partitioned. - Only heap tables are supported. - Tables cannot be reference partitioned or have any reference partitioned children. - A table cannot have any domain indexes or bitmap join indexes.

Action: Ensure that all of the conditions for the modification to nonpartitioned state DDL are satisfied.

OCI-14500: LOCAL option not valid without partition name

Cause: Incorrect syntax specified

Action: Retry the command

OCI-14501: object is not partitioned

Cause: Table or index is not partitioned. Invalid syntax.

Action: Retry the command with correct syntax.

OCI-14503: only one partition name can be specified

Cause: More than one partition name has been specified for analyze

Action: Specify one partition name.

OCI-14504: syntax not supported for analyze

Cause: A partition/subpartition number or bind variable has been used

Action: Specify a valid partition/subpartition name.

OCI-14505: LOCAL option valid only for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

OCI-14506: LOCAL option required for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

OCI-14507: The table partition is corrupt. All rows do not fall within the partition bounds.

Cause: The partition contained some rows that should belong to some other partition. This could occur because an EXCHANGE PARTITION operation was done without validation.

Action: Delete the rows that do not qualify being in this partition.

OCI-14508: specified VALIDATE INTO table not found

Cause: The specified table either does not exist or user does not have the proper privileges.

Action: Specify the correct table to use.

OCI-14509: specified VALIDATE INTO table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use. See utlvalid.sql for more information.

OCI-14510: can specify VALIDATE INTO clause only for partitioned tables

Cause: The VALIDATE INTO has been specified for a non partitioned table or cluster or index.

Action: Use syntax correctly

OCI-14511: cannot perform operation on a partitioned object

Cause: An attempt was made to perform an operation that is not allowed on partitioned tables or indexes.

Action: Retry the command with correct syntax.

OCI-14512: cannot perform operation on a clustered object

Cause: An attempt was made to perform an operation that is not allowed on clustered tables or indexes.

Action: Retry the command with correct syntax.

OCI-14513: partitioning column may not be of object datatype

Cause: Partitioning column specified by the user was an object datatype (object, REF, nested table, array) which is illegal.

Action: Ensure that no partitioning column is an object datatype.

OCI-14514: LOCAL option not valid without subpartition name

Cause: Incorrect syntax specified

Action: Retry the command

OCI-14515: only one subpartition name can be specified

Cause: More than one subpartition name has been specified for analyze

Action: Specify one subpartition name.

OCI-14516: subpartition corrupt. all rows do not fall within subpartition bounds

Cause: The subpartition contains rows which should really be in some other subpartition. Possibly due to an exchange subpartition without validation

Action: Delete rows in subpartition which do not qualify

OCI-14517: subpartition of index '*string.string*' is in unusable state

Cause: An attempt has been made to access an index subpartition that has been marked unusable by a direct load or by a DDL operation

Action: REBUILD the unusable index subpartition

OCI-14518: partition contains rows corresponding to values being dropped

Cause: table partition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

OCI-14519: Conflicting tablespace block sizes for *string string*: Tablespace *string* block size *string* [*string*] conflicts with previously specified/implicit tablespace *string* block size *string* [*string*]

Cause: An attempt has been made to create a partitioned object in a manner that would require the partitioned object to span tablespaces of more than one block size.

Action: Ensure that all tablespaces specified in the DDL command for the given object as well as any tablespaces implicitly assigned to partitions or subpartitions of the object being created are all of the same block size.

OCI-14520: Tablespace *string* block size [*string*] does not match existing object block size [*string*]

Cause: A DDL statement was issued that would require a tablespace of a block size different from the block size of the specified partitioned object to be assigned either: (1) As the object's default tablespace (or one of the object's partition-level default tablespaces, if composite partitioning is being used) OR (2) To one of the object's partitions/subpartitions.

Action: Specify a tablespace of the same block size as the partitioned object.

OCI-14521: Default tablespace *string* block size [*string*] for *string string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new partition/subpartition in the object-level default tablespace of an existing partitioned object. However, the object-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the default tablespace of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created.

OCI-14522: Partition-level default tablespace *string* block size [*string*] for *string string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new subpartition in one of the partition-level default tablespaces of an existing composite partitioned object.

However, the partition-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the partition-level default tablespace of the appropriate partition of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new subpartitions being created.

OCI-14523: Cannot co-locate [sub]partition of *string string* with table [sub]partition because *string* block size [string] does not match table block size [string]

Cause: A DDL statement was issued that would require a partition/subpartition of a local index/LOB column to be co-located with the corresponding partition/subpartition of the base table. However, this is not possible because the block sizes of the table and the LOB column/local index are different.

Action: Either (1) Specify an object-level default tablespace (or partition-level default tablespace for the appropriate partition, if composite partitioning is used) for the partitioned local index/LOB column and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created. Also ensure that neither of TABLESPACE DEFAULT and STORE IN (DEFAULT) is specified for a local index whose block size does not match that of the base table.

OCI-14530: Rows in table *string.string* do not match entries in index *string.string*.

Cause: The table and the index that the operation tried to use had inconsistent information about the rows.

Action: The inconsistency needs to be resolved in order to continue using the table with the index. An inconsistency can occur due to different reasons. Run the ANALYZE command with the CASCADE option on the table to determine the inconsistent object and rows. If the corrupt rows are in the table, fix the data corruption. If the index is corrupt, an index REBUILD may resolve the corruption. Also consider dropping the index or marking it UNUSABLE. *Params: 1) table_schema_name: The schema in which the table resides. 2) table_name: The table name. 3) index_schema_name: The schema in which the index resides. 4) index_name: The index name.

OCI-14540: An Online DDL or a DDL with the UPDATE INDEXES clause cannot be used with auto-commit turned off for the DDL.

Cause: An attempt was made to use an online DDL or a DDL with the UPDATE INDEXES clause when auto-commit was turned off for the DDL.

Action: Enable auto-commit and then retry the DDL.

OCI-14541: A JSON column cannot serve as a partitioning column.

Cause: An attempt was made to specify a column of JavaScript Object Notation (JSON) type partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type JSON.

OCI-14551: cannot perform a DML operation inside a query

Cause: DML operation like insert, update, delete or select-for-update cannot be performed inside a query or under a PDML process.

Action: Ensure that the offending DML operation is not performed or use an autonomous transaction to perform the DML operation within the query or PDML process.

OCI-14552: cannot perform a DDL, commit or rollback inside a query or DML

Cause: DDL operations like creation tables, views etc. and transaction control statements such as commit/rollback cannot be performed inside a query or a DML statement.

Action: Ensure that the offending operation is not performed or use autonomous transactions to perform the operation within the query/DML operation.

OCI-14553: cannot perform a lob write operation inside a query

Cause: A write operation on a LOB inside a query or PDML process failed.

Action: Use an autonomous transaction to perform the write operation within the query or PDML process.

OCI-14554: cannot perform requested operation during database startup

Cause: Requested operation requires the Cost Based Optimizer(CBO) which is not available during database startup. Features like partitioning, IOTs, grouping sets, and flashback cursor require the CBO.

Action: Retry the query after the database is open.

OCI-14555: LOB from *string.string.string* cannot be written inside a query

Cause: A write operation on a LOB inside a query or PDML process failed.

Action: Use an autonomous transaction to perform the write operation within the query or PDML process.

OCI-14570: unable to extend the log for use on persistent memory storage

Cause: A log that was stored on disk and moved to persistent memory storage must be increased in size by a block. The attempt to extend the file has failed.

Action: Migrate the log by recreating the log on persistent memory and not by copying it from disk to persistent memory.

OCI-14571: The control file cache must either be enabled on all instances or disabled on all instances.

Cause: The control file cache must be either enabled or disabled in all instances.

Action: Contact Oracle Customer Support.

OCI-14572: failed to resilver the redo log using the persistent memory direct commit file

Cause: The persistent memory (PMEM) direct commit file was required for recovery but it could not be used to resilver the redo log because it could not be read.

Action: Check that all persistent memory grid disks used to store the direct commit file are accessible and that they can be read.

OCI-14601: Illegal to specify SUBPARTITIONS or STORE-IN while specifying a subpartition template

Cause: Cannot specify these clauses while specifying a template

Action: Correct the subpartition template clause.

OCI-14602: SUBPARTITION TEMPLATE is legal only for a composite partitioned table

Cause: SUBPARTITION TEMPLATE can be specified only for composite partitioned tables

Action: Do not use SUBPARTITION TEMPLATE on non-partitioned or non-composite partitioned tables.

OCI-14603: [SUBPARTITIONS | SUBPARTITION TEMPLATE] subpartition_count syntax is valid only for range-hash tables

Cause: This syntax is valid only if subpartitioning dimension is hash

Action: n/a

OCI-14604: During CREATE TABLE time it is illegal to specify SUBPARTITIONS or STORE IN once a SUBPARTITION TEMPLATE has been specified

Cause: Once a subpartition template has been specified during a CREATE TABLE it is illegal to specify SUBPARTITIONS or STORE IN anywhere else

Action: Remove either the SUBPARTITIONS | STORE IN or remove the SUBPARTITION TEMPLATE clause

OCI-14605: Name missing for subpartition / lob segment in template

Cause: A subpartition / lob segment was not specified a name in the template descriptions

Action: All subpartitions / lob segments must have names specified in the template

OCI-14607: Tablespace was not specified for previous subpartitions in template but is specified for *string*

Cause: Tablespaces may either be specified for all subpartitions or must not be specified for any subpartitions

Action: Either specify tablespaces for all or for none of the subpartitions

OCI-14610: Lob attributes not specified for lob column *string* for subpartition *string*

Cause: Lob attributes of a column must be specified for all subpartitions or must not be specified at all

Action: Ensure lob attributes of a column are specified for all subpartitions or not specified at all

OCI-14611: Duplicate subpartition name *string* in template

Cause: A subpartition name cannot be duplicated within the template

Action: Rename one of the subpartitions.

OCI-14612: Duplicate lob segment name *string* for lob column *string* in template

Cause: Two lob segments of the same column were given the same name in the template

Action: Rename one of the lob segments

OCI-14613: Attempt to generate name from parent name *string* and template name *string* failed as the combine named would have been longer than allowed

Cause: Any name generated from a partition name and template name must be less than the maximum permissible name for an identifier

Action: Shorten either partition or template name.

OCI-14614: List value '*string*' specified twice in subpartition '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

OCI-14615: List value '*string*' specified twice in subpartitions '*string*', '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

OCI-14616: table is not subpartitioned by List method

Cause: A subpartition maintenance operation, such as ALTER TABLE MODIFY SUBPARTITION ADD|DROP VALUES, was performed on a non-List subpartitioned object.

Action: Reissue the command against a List subpartitioned object.

OCI-14617: cannot add/drop values to DEFAULT subpartition

Cause: A ADD/DROP VALUES operation is being done on the default subpartition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT subpartition

OCI-14618: cannot drop the last value of subpartition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the subpartition

Action: Cannot execute the command, unless two or more values exist for subpartition

OCI-14619: resulting List subpartition(s) must contain at least 1 value

Cause: After a SPLIT/DROP VALUE of a list subpartition, each resulting subpartition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting subpartitions contains at least 1 value

OCI-14620: DEFAULT subpartition already exists

Cause: A subpartition already exists with DEFAULT value

Action: Remove the DEFAULT value from the list specified

OCI-14621: cannot add subpartition when DEFAULT subpartition exists

Cause: An ADD SUBPARTITION operation cannot be executed when a subpartition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT subpartition instead

OCI-14622: Value *string* already exists in subpartition *string*

Cause: One of the list values in the ADD SUBPARTITION or ADD VALUES statement already exists in another subpartition

Action: Remove the duplicate value from the statement and try again

OCI-14623: Value *string* does not exist in subpartition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the subpartition

Action: Remove the value from the statement and try again

OCI-14624: DEFAULT subpartition must be last subpartition specified

Cause: A subpartition description follows the one describing the default subpartition

Action: Ensure that the DEFAULT subpartition is the last subpartition description

OCI-14625: subpartition contains rows corresponding to values being dropped

Cause: table subpartition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

OCI-14626: values being added already exist in DEFAULT subpartition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT subpartition

Action: Issue a SPLIT of the DEFAULT subpartition and then MERGE the split subpartition into the subpartition to which values need to be added

OCI-14627: Invalid operation was specified on a GLOBAL partitioned index

Cause: An invalid operation such as ALTER INDEX DROP|SPLIT SUBPARTITION was specified on the global index

Action: Ensure that subpartition level operations are not specified on a GLOBAL index, since these are only RANGE partitioned

OCI-14628: specification of bounds is inconsistent with LIST method

Cause: An operation such as ALTER TABLE SPLIT|ADD SUBPARTITION specified bounds that were inconsistent with List subpartitioning method

Action: Specify VALUES/subpartition descriptions correctly for SPLIT/ADD of List subpartitions

OCI-14629: cannot drop the only subpartition of a partition

Cause: A drop subpartition command is being executed when there is only one subpartition in the partition

Action: n/a

OCI-14630: subpartition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

OCI-14631: the partition bounds do not match the subpartition bounds of the partition

Cause: When exchanging a partitioned table with a composite partition the bounds that describe the partitions of the table must match the bounds that describe the subpartitions of the composite partition.

Action: Ensure that the bounds describing partitions in the partitioned table is the same as the bounds of the subpartitions in the the composite partition.

OCI-14632: cannot specify PARALLEL clause when adding a List subpartition

Cause: User issued ALTER TABLE ADD SUBPARTITION statement with PARALLEL clause for a List subpartition of a Range/List partitioned object which is illegal

Action: Remove the PARALLEL clause.

OCI-14633: Index maintenance clause not allowed for ADD list subpartition to a Composite partitioned table

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD hash subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

OCI-14634: Subpartition descriptions cannot be specified during the SPLIT/MERGE of a partition of a Range-List partitioned table

Cause: During a split or a merge of a partition of a range list partitioned table you cannot specify any subpartitioning information for the resulting partition (s)

Action: Remove all subpartitioning information from the DDL.

OCI-14635: only one resulting subpartition can be specified for MERGE SUBPARTITIONS

Cause: ALTER TABLE MERGE SUBPARTITIONS contained more than one resulting subpartition for the MERGE

Action: Ensure that the statement describes exactly one subpartition as the target that need to be MERGEed

OCI-14636: only 2 resulting subpartition can be specified for SPLIT SUBPARTITION

Cause: ALTER TABLE SPLIT SUBPARTITION contained more than 2 resulting subpartition for the SPLIT

Action: Ensure that the statement describes exactly 2 subpartitions as the target of the SPLIT operation

OCI-14637: cannot merge a subpartition with itself

Cause: The same subpartition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct subpartition names within the same composite partition

OCI-14638: cannot MERGE subpartitions in different Range Composite partitions

Cause: Attempted to MERGE subpartitions in different Range Composite partitions

Action: Reissue the command after ensuring that the 2 subpartitions being merged lie in the same composite partition

OCI-14639: SUBPARTITIONS clause can be specified only for Hash, Composite Range Hash table/partition

Cause: Attempted to specify SUBPARTITIONS clause on table that is not partitioned by the Composite Range-Hash method

Action: Reissue the command after ensuring that the SUBPARTITIONS clause is not specified, to specify a template for a Composite Range List object use the SUBPARTITION TEMPLATE clause

OCI-14640: add/coalesce index partition operation is valid only for hash partitioned global indexes

Cause: User attempted to add or coalesce an index partition of a global index not partitioned by hash method.

Action: Issue the statement on a global index partitioned by hash method. or if the index is partitioned by range method consider using split/drop instead of add/coalesce.

OCI-14641: STORE-IN clause can be specified only for a Hash, Interval, Autolist, Composite Range Hash, Composite Interval, Composite Autolist table or partition

Cause: Specifying a STORE-IN clause during creation or altering of a Range, Composite Range List partitioned table was not allowed.

Action: Re-issue the statement after removing the STORE-IN clause.

OCI-14642: Bitmap index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables in the EXCHANGE have usable bitmap indexes, and the INCLUDING INDEXES option has been specified and the tables have different hakan factors.

Action: Perform the exchange with the EXCLUDING INDEXES option or alter the bitmap indexes to be unusable.

OCI-14643: Hakan factor mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: Either records_per_block has been minimized for one of the tables to be exchanged, but not the other, or the hakan factors for the tables to be exchanged are not equal.

Action: If records_per_block has been minimized for one of the tables, but not the other, either perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables, or perform alter table with the MINIMIZE RECORDS_PER_BLOCK for both tables. If the hakan factors do not match perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables.

OCI-14644: table is not subpartitioned by Hash method

Cause: A subpartition maintenance operation such as ALTER TABLE MODIFY PARTITION COALESCE SUBPARTITION can only be performed on Hash subpartitioned objects

Action: Re-issue the command against a Hash subpartitioned object.

OCI-14645: STORE IN clause cannot be specified for Range List objects

Cause: A STORE IN clause was specified for Range List partitioned object

Action: Re-issue the command after removing the STORE IN clause

OCI-14646: Specified alter table operation involving compression cannot be performed in the presence of usable bitmap indexes

Cause: The first time a table is altered to include compression, it cannot have a usable bitmap index (partition). Subsequent alter table statements involving compression do not have this same restriction.

Action: A) Drop any bitmap indexes defined on the table, and re-create them once the operation is complete or, B) Mark all index fragments of all bitmap indexes defined on the table UNUSABLE and rebuild them once the operation is complete.

OCI-14647: cannot MERGE subpartitions in different list composite partitions

Cause: An attempt was made to MERGE subpartitions in different list composite partitions.

Action: Reissue the command after ensuring that the two subpartitions being merged lie in the same composite partition.

OCI-14650: operation not supported for reference-partitioned tables

Cause: Attempted to perform an operation on a reference-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

OCI-14651: reference partitioning constraint is not supported

Cause: The specified partitioning constraint was not supported for reference-partitioned tables. The partitioning constraint must be enabled, validated, and not deferrable. The partitioning constraint must not have ON DELETE SET NULL semantics.

Action: Correct the statement to specify a supported partitioning constraint.

OCI-14652: reference partitioning foreign key is not supported

Cause: The specified partitioning foreign key was not supported for reference-partitioned tables. All columns of the partitioning foreign key must be constrained NOT NULL with enabled, validated, and not deferrable constraints. Furthermore, a virtual column cannot be part of the partitioning foreign key.

Action: Correct the statement to specify a supported partitioning foreign key.

OCI-14653: parent table of a reference-partitioned table must be partitioned

Cause: Attempted to create a reference-partitioned table with a non-partitioned parent table.

Action: Correct the statement and reenter.

OCI-14654: number of partitions of reference-partitioned table must equal that of the parent table

Cause: Attempted to create a reference-partitioned table with a number of partitions which was different from that of the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

OCI-14655: reference partitioning constraint not found

Cause: Partitioning constraint specified in CREATE TABLE ... PARTITION BY REFERENCE was not one of the referential constraints on the table being created.

Action: Ensure that the specified partitioning constraint is one of the referential constraints on the table being created.

OCI-14656: cannot drop the parent of a reference-partitioned table

Cause: Attempted to drop the parent of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the parent table.

OCI-14657: cannot cascade row migration to reference-partitioned child table

Cause: Update of a parent key may require migration of rows in reference-partitioned child tables, however this is not supported because the parent key was not suitably indexed.

Action: Replace the existing index on the parent key with a unique index that does not contain any columns in addition to the parent key.

OCI-14658: specified dependent table is not affected by this operation

Cause: A table has been specified in the DEPENDENT TABLES clause that is not a reference-partitioned table affected by the operation.

Action: Correct the statement and reenter.

OCI-14659: Partitioning method of the parent table is not supported

Cause: An attempt was made to create a reference-partitioned table with an interval partitioned parent table.

Action: Do not create a reference-partitioned table with an interval partitioned parent table.

OCI-14660: parent table of a reference-partitioned table cannot be index-organized

Cause: Attempted to create a reference-partitioned table with a index-organized parent table.

Action: Correct the statement and reenter.

OCI-14661: row movement must be enabled

Cause: Attempted to disable row movement for a reference-partitioned table, although row movement was enabled for its parent table.

Action: Disable row movement for parent table before disabling row movement for the reference-partitioned table.

OCI-14662: row movement cannot be enabled

Cause: Attempted to enable row movement for a partitioned table, although row movement was disabled for a reference-partitioned child table.

Action: Enable row movement for reference-partitioned child tables before enabling row movement for the parent table.

OCI-14663: reference partitioning parent key is not supported

Cause: Parent key of the reference-partitioned table's partitioning constraint contained virtual columns.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

OCI-14664: Cannot use PL/SQL expressions in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that referenced a PL/SQL expression.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

OCI-14665: Cannot use expressions involving ROWID data type in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved the ROWID data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

OCI-14666: Cannot use expressions involving BLOB or CLOB data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved a BLOB or CLOB data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

OCI-14667: Cannot use expressions involving object data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved an object data type (object, REF, nested table, array).

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

OCI-14668: Cannot drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Cause: An attempt was made to drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the unique or primary key of the parent table.

OCI-14669: interval partition of reference-partitioned table must correspond to interval partition of the parent table

Cause: An attempt was made to create a reference-partitioned table with an interval partition that does not pair with an interval partition in the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

OCI-14670: there is no usable index on the reference partitioning parent key

Cause: An attempt was made to run an operation on a reference partitioned table that requires a usable index on the reference partitioning parent key, but no such index exists.

Action: Create a usable index on the reference partitioning parent key, or rebuild the existing unusable index on the reference partitioning parent key.

OCI-14690: value too long for string aggregate

Cause: An attempt was made to use the aggregate with a value that was too long.

Action: Limit the size of the aggregate inputs to 32763 bytes.

OCI-14691: Extended character types are not allowed in this table.

Cause: An attempt was made to create VARCHAR2 or NVARCHAR2 columns larger than 4000 bytes, or a RAW column larger than 2000 bytes, in a cluster, clustered table or index-organized table.

Action: Correct the statement and reenter.

OCI-14692: STORE AS clause is not allowed for extended character type column

Cause: An attempt was made to use the STORE AS clause to specify storage attributes for an extended character type column.

Action: Correct the statement and reenter.

OCI-14693: The MAX_STRING_SIZE parameter must be EXTENDED.

Cause: An attempt was made to set the MAX_STRING_SIZE parameter to STANDARD in a database that has been created with, or migrated to, the EXTENDED setting.

Action: Set MAX_STRING_SIZE to EXTENDED and retry.

OCI-14694: database must in UPGRADE mode to begin MAX_STRING_SIZE migration

Cause: An attempt was made to update the MAX_STRING_SIZE parameter to EXTENDED when the database was not in UPGRADE mode.

Action: Restart the database in UPGRADE mode, modify the parameter, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

OCI-14695: MAX_STRING_SIZE migration is incomplete

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

OCI-14696: MAX_STRING_SIZE migration is incomplete for pluggable database string

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed for the specified pluggable database.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin in the specified pluggable database, and restart the database in normal mode.

OCI-14697: This connection does not support bind variables larger than 4000 bytes for SQL statements.

Cause: An attempt was made to use a bind variable larger than 4000 bytes for a SQL statement when the client initially connected to a container with STANDARD MAX_STRING_SIZE, and then within the same session switched to a container with EXTENDED MAX_STRING_SIZE.

Action: Initialize a new connection for the container with EXTENDED MAX_STRING_SIZE and retry.

OCI-14698: MAX_STRING_SIZE migration to STANDARD is not allowed due to column string in object string.string.

Cause: An attempt was made to use a bind variable larger than 4000 bytes for a SQL statement when the client initially connected to a container with STANDARD MAX_STRING_SIZE, and then within the same session switched to a container with EXTENDED MAX_STRING_SIZE.

Action: Initialize a new connection for the container with EXTENDED MAX_STRING_SIZE and retry.

OCI-14699: long bind value is too large for column

Cause: An attempt was made to bind a value larger than 4000 bytes for insert or update of a VARCHAR2, NVARCHAR2, or RAW column, and the value was too large for the destination column.

Action: Either make the destination column larger, or reduce the size of the bind value.

OCI-14700: Object(s) owned by SYS cannot be locked by non-SYS user

Cause: Attempt to issue a LOCK TABLE statement on SYS owned object(s) by a non-SYS user, user should minimally have DML privileges

Action: Re-issue LOCK TABLE statement for non-SYS user after granting DML privileges on object, or non-SYS user should connect as SYS

OCI-14701: partition-extended name or bind variable must be used for DMLs on tables partitioned by the System method

Cause: User attempted not to use partition-extended syntax for a table partitioned by the System method

Action: Must use of partition-extended syntax in contexts mentioned above.

OCI-14702: The partition number is invalid or out-of-range

Cause: Attempted to use nonnumerical value or the number was out of range of the partitions.

Action: Use a valid partition number.

OCI-14703: The AFTER clause can be used to ADD PARTITION only to a System Partitioned table.

Cause: The table is not partitioned by the System method

Action: Skip the AFTER clause.

OCI-14704: Create table as select disallowed for SYSTEM patitioned tables

Cause: User attempted to create a SYSTEM partitioned table by doing a create table as select.

Action: Do a create table followed by an insert as select into each partition.

OCI-14705: unique or primary keys referenced by enabled foreign keys in table "string"."string"

Cause: An attempt was made to truncate a table with unique or primary keys referenced by enabled foreign keys in another table.

Action: Before performing the TRUNCATE operation on the table, disable the foreign key constraints in other tables. You can see what constraints exist in a table by issuing the following command: SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = :1;

OCI-14706: multiple child tables reference constraint "*string*" in table "*string*". "*string*"

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command found that the specified parent key in the specified table was referenced by partitioning constraints in multiple reference partitioned child tables.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option. The CASCADE option is not supported if a parent key in the reference partitioned table hierarchy is referenced by multiple partitioning constraints.

OCI-14707: no match found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There was no table matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

OCI-14708: multiple matches found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There were multiple tables matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

OCI-14709: index mismatch for table "*string*". "*string*" in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION command was attempted for the specified table, however, the exchange table did not have equivalent indexes.

Action: Ensure that the indexes for the two tables have indexes which follow this rule: For every nonpartitioned index for the nonpartitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. To be identical, the column position type and size have to be the same.

OCI-14710: domain index "*string*" found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command was attempted for the specified table. However, there was a domain index on the specified table.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that there is no domain index on the specified table.

OCI-14750: Range partitioned table with INTERVAL clause has more than one column

Cause: You attempted to create an interval partitioned table with more than one partitioning column.

Action: Use a single partitioning column.

OCI-14751: Invalid data type for partitioning column of an interval partitioned table

Cause: You attempted to use interval partitioning on a table partitioned on a column of data type other than number or date/time.

Action: Use only number or date/time columns as partitioning columns for interval partitioned tables.

OCI-14752: Interval expression is not a constant of the correct type

Cause: You attempted to use either a nonconstant interval or an interval whose data type does not correspond to the partitioning column

Action: Use only constant expressions for the interval. If the data type of partitioning column is numeric, the interval must be a numeric constant. If the data type is of type date/time, the interval must be a constant of interval type

OCI-14753: Interval cannot be zero

Cause: The interval mapped to zero.

Action: You must use a nonzero interval.

OCI-14754: Interval string is too long

Cause: The interval string was too long

Action: Specify interval using a shorter string

OCI-14755: Invalid partition specification for FOR VALUES clause.

Cause: The [SUB]PARTITION FOR VALUES (...) clause can only take constants. In addition it takes as many arguments as there are partitioning columns and the values must be coercible to the partitioning columns.

Action: Specify a valid FOR VALUES clause.

OCI-14756: Table is not partitioned by the interval or by the autolist method.

Cause: The table was not partitioned by the interval or by the autolist method.

Action: ALTER TABLE SET STORE IN is only valid for interval or autolist partitioned tables. Ensure that the table is partitioned by an interval or by an autolist method.

OCI-14757: Table is already a range partitioned table

Cause: SET INTERVAL () is used to convert an interval partitioned table to a range partitioned table. It is not legal on a range partitioned table

Action: Use SET INTERVAL () only on an interval partitioned table.

OCI-14759: SET INTERVAL is not legal on this table.

Cause: SET INTERVAL clause was specified. ALTER TABLE SET INTERVAL is only legal on a range partitioned table with a single partitioning column. Additionally, this table cannot have a MAXVALUE partition.

Action: Use SET INTERVAL only on a valid table.

OCI-14760: ADD PARTITION is not permitted on Interval partitioned objects

Cause: ALTER TABLE ADD PARTITION was attempted on an Interval partitioned object.

Action: Do not perform the operation on an Interval partitioned object. Insert a row to create the new partition.

OCI-14761: MAXVALUE [sub]partition cannot be specified for INTERVAL [sub]partitioned objects.

Cause: An attempt was made to create a [sub]partition with a MAXVALUE highbound on an INTERVAL [sub]partitioned object.

Action: Do not create a [sub]partition with a MAXVALUE highbound.

OCI-14762: Domain index creation on interval partitioned tables is not permitted

Cause: An attempt was made to create a domain index on an interval partitioned table.

Action: Do not create a domain index on an interval partitioned table.

OCI-14763: Unable to resolve FOR VALUES clause to a partition number

Cause: Could not determine the partition corresponding to the FOR VALUES clause.

Action: Remove bind variables and dependencies on session parameters from the values specified in the FOR VALUES clause.

OCI-14764: Partitions cannot be truncated, dropped or merged with mixed syntax.

Cause: An attempt was made to truncate, drop or merge partitions with mixed syntax.

Action: Do not use mixed syntax to truncate, drop or merge partitions.

OCI-14765: Cannot create a partition while doing a create index

Cause: An attempt was made to create a partition concurrently with index creation.

Action: Retry the statement after the index build is finished.

OCI-14766: Unable to obtain a stable metadata snapshot

Cause: This operation was not able to obtain a stable snapshot of the interval partitioning metadata.

Action: Retry the statement.

OCI-14767: Cannot specify this interval with existing high bounds

Cause: The interval specified conflicts with the existing high bound for the last partition. The combination might lead to invalid dates for high bounds in the future.

Action: If this is a CREATE TABLE, try specifying a different high bound value for the last partition, or a different interval. If this is an ALTER TABLE SET INTERVAL, please choose either a different interval, or, modify the table to change the high bound for the last partition.

OCI-14769: cannot interval [sub]partition or autolist [sub]partition nested table or XMLType with object-relational storage

Cause: Interval [sub]partition or autolist [sub]partition is not supported for nested table and XMLType with object-relational storage.

Action: Use a list or range partition instead.

OCI-14770: An XML virtual column whose expression includes EXTRACTVALUE operator cannot be used for the partitioning key during interval [sub]partition.

Cause: Interval [sub]partition was not supported with an XML virtual column whose expression includes the EXTRACTVALUE operator.

Action: Use XMLCAST and XMLQUERY operators to define the virtual column expression for the partitioning key during interval [sub]partition.

OCI-14801: Hash composite partitioning is not supported

Cause: An attempt was made to partition a table using a Hash composite method.

Action: Do not partition the table by a Hash composite method.

OCI-14802: Specified operation is not permitted on Hash composite partitioned objects

Cause: An unsupported operation was attempted on a Hash composite partitioned object.

Action: Do not perform the operation on a Hash composite partitioned object.

OCI-14803: partition bound may not be specified for hash subpartitioned tables

Cause: A VALUES LESS THAN or VALUES clause was specified with a subpartition description.

Action: Remove the VALUES LESS THAN or VALUES clause from the subpartition description.

OCI-14804: A partition must be split into two or more partitions

Cause: An ALTER TABLE SPLIT PARTITION contained a description for only one resulting partition.

Action: Specify at least 2 resulting partitions.

OCI-14805: last resulting partition cannot contain bounds

Cause: An ALTER TABLE SPLIT PARTITION contained a description for the last partition which included the bounds.

Action: Do not specify bounds for the last resulting partition.

OCI-14806: merging more than two partitions or subpartitions is only supported for heap tables

Cause: An ALTER TABLE MERGE PARTITIONS or MERGE SUBPARTITIONS with more than two source partitions or subpartitions was issued. Merging more than two partitions or subpartitions is only supported for heap tables.

Action: Specify exactly two partitions or subpartitions to merge.

OCI-14807: merging partitions or subpartitions using *name TO name* syntax is only supported for range partitioned tables

Cause: An ALTER TABLE MERGE PARTITIONS *pname TO pname* or an ALTER TABLE MERGE SUBPARTITIONS *subpname TO subpname* was issued. This is only supported for range partitions or subpartitions.

Action: Specify all the partitions or subpartitions to be merged.

OCI-14808: table does not support *string string*

Cause: An ALTER TABLE MOVE PARTITION ONLINE or ALTER TABLE MODIFY PARTITION INDEXING or ALTER TABLE SPLIT PARTITION ONLINE statement was issued on a table that was either not a heap-organized table or had an object type, domain index or bitmap join index defined on it. Or, the source table of the split online has reference partitioned child tables. This operation is only supported for heap-organized tables.

Action: Do not use the ONLINE keyword or the INDEXING clause.

OCI-14809: schema does not support *string*

Cause: An ALTER TABLE MOVE PARTITION ONLINE or an ALTER TABLE MODIFY PARTITION INDEXING statement was issued on a table owned by SYS, SYSTEM, PUBLIC, OUTLN, or XDB.

Action: Do not use the ONLINE keyword or the INDEXING clause.

OCI-14810: ONLINE MOVE PARTITION not supported while database is not open or in migrate mode

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table while the database was not open or was in migrate mode.

Action: Do not use the ONLINE keyword.

OCI-14811: Online DDL with the INCLUDING ROWS clause is not supported under supplemental logging.

Cause: An online DDL with an INCLUDING ROWS clause was issued on a table while supplemental logging was enabled.

Action: Do not use the ONLINE keyword.

OCI-14812: Operations on partitions through DBMS_LOB package are not permitted during a concurrent online move of the partition.

Cause: A DBMS_LOB operation was issued on a Large Object (LOB) while an ALTER TABLE MOVE PARTITION ONLINE was executing concurrently on the partition containing the LOB.

Action: Reissue the DBMS_LOB operation after MOVE PARTITION ONLINE has completed.

OCI-14813: ONLINE MOVE OR SPLIT PARTITION not supported while there are too many table segments and index segments

Cause: An ALTER TABLE MOVE or SPLIT PARTITION ONLINE command was issued on a table while the number of table segments multiplied by the number of index segments exceeded the maximum allowed.

Action: Do not use the ONLINE keyword.

OCI-14850: Adding a partition with DEFAULT high value is not permitted on Autolist partitioned objects.

Cause: An attempt was made to add a DEFAULT partition to an Autolist partitioned object.

Action: Do not perform the operation on an Autolist partitioned object. Insert a row to create the new partition.

OCI-14851: DEFAULT [sub]partition cannot be specified for AUTOLIST [sub]partitioned objects.

Cause: An attempt was made to create a [sub]partition with a DEFAULT high value on an AUTOLIST [sub]partitioned object.

Action: Do not create a [sub]partition with a DEFAULT high value.

OCI-14852: SET [SUB]PARTITIONING AUTOMATIC is not legal on this table.

Cause: SET [SUB]PARTITIONING AUTOMATIC clause was specified. ALTER TABLE SET [SUB]PARTITIONING AUTOMATIC is only legal on a list partitioned table. Additionally, this table cannot have a DEFAULT partition.

Action: Use SET [SUB]PARTITIONING AUTOMATIC only on a valid table.

OCI-14853: An invalid option was specified for the SET [SUB]PARTITIONING clause.

Cause: SET [SUB]PARTITIONING clause was used with an invalid option. The only valid options are AUTOMATIC and MANUAL.

Action: Use valid options.

OCI-14854: SET [SUB]PARTITIONING MANUAL is not legal on this table.

Cause: SET [SUB]PARTITIONING MANUAL clause was specified. ALTER TABLE SET [SUB]PARTITIONING MANUAL is only legal on a list partitioned table. Additionally, this table cannot have a DEFAULT partition.

Action: Use SET [SUB]PARTITIONING MANUAL only on a valid table.

OCI-14855: Table is already a list partitioned table and not an automatic list partitioned table.

Cause: An attempt was made to unset automatic list partitioning on a table that was already a manual list partitioned table. A conversion from auto list partitioning to (manual) list partitioning using SET PARTITIONING MANUAL will only succeed for auto list partitioned tables.

Action: Do not use SET PARTITIONING MANUAL for manual list partitioned tables. There is no need to unset auto list partitioning for such a table. The table already has the desired list partitioning setup.

OCI-14856: Table is already an autolist partitioned table.

Cause: An attempt to specify SET [SUB]PARTITIONING AUTOLIST on an autolist (sub)partitioned table failed. SET [SUB]PARTITIONING AUTOLIST is used to convert a list (sub)partitioned table to an autolist (sub)partitioned table.

Action: Use SET [SUB]PARTITIONING AUTOLIST on an autolist (sub)partitioned table.

OCI-14857: Subpartition template is expected when creating an autolist subpartitioned table.

Cause: An attempt was made to create an autolist subpartitioned table without a subpartition template.

Action: Use a subpartition template when creating an autolist subpartitioned table.

OCI-14858: Set empty template is not legal on an autolist subpartitioned table.

Cause: An attempt was made to set an empty subpartition template for an autolist subpartitioned table.

Action: Convert this table to a list subpartitioned table before set empty template.

OCI-14870: Range subpartitioned table with INTERVAL clause has more than one column.

Cause: An attempt was made to create an interval subpartitioned table with more than one subpartitioning column.

Action: Use a single subpartitioning column.

OCI-14871: Subpartition template is expected when creating an interval subpartitioned table.

Cause: An attempt was made to create an interval subpartitioned table without a subpartition template.

Action: Use a subpartition template when creating an interval subpartitioned table.

OCI-14872: ADD SUBPARTITION is not permitted on interval subpartitioned objects.

Cause: ALTER TABLE ADD SUBPARTITION was attempted on an interval subpartitioned object.

Action: Do not add a subpartition on an interval subpartitioned object. Insert a row to create the new subpartition.

OCI-14900: The logical transaction ID is no longer valid.

Cause: The logical transaction ID has been purged and the commit failed.

Action: Reconnect and re-run the transaction.

OCI-14901: Commits during replay are not permitted.

Cause: The transaction tried to commit during replay.

Action: Contact Oracle Support Services.

OCI-14902: Instance has not been configured for Transaction Guard.

Cause: The partition of the transaction history table had not been created.

Action: Contact Oracle Support Services.

OCI-14903: Corrupt logical transaction detected.

Cause: The logical transaction was corrupt. The size was incorrect.

Action: Verify your network configuration.

OCI-14904: Logical transaction identifier (LTXID) not acceptable.

Cause: This problem happened due to database ID mismatch, or temporary LTXID version mismatch in RAC rolling upgrade, or the LTXID is malformed.

Action: Verify your network configuration.

OCI-14905: Serializable transactions cannot be replayed.

Cause: The transaction tried to replay a serializable transaction.

Action: This is not supported.

OCI-14906: Get LTXID outcome operation is not permitted on the current session.

Cause: The transaction tried to execute get LTXID outcome on the current session.

Action: Check the parameters used to invoke get LTXID outcome.

OCI-14907: Cannot execute get LTXID outcome for the transaction of another user.

Cause: The transaction tried to execute get LTXID outcome for a different user session.

Action: Check the parameters used to invoke get LTXID outcome.

OCI-14908: Cannot invoke get LTXID outcome while a transaction is open.

Cause: Get LTXID outcome could not be executed because a transaction was open.

Action: Invoke get LTXID outcome after the transaction has been completed.

OCI-14909: Current session has been blocked by another user with the same user name using GET_LTXID_OUTCOME.

Cause: Could not commit after GET_LTXID_OUTCOME was invoked.

Action: Contact Oracle Support Services.

OCI-14910: Sessions with SYSDBA privilege are not allowed to connect to a service that has commit outcome enabled.

Cause: A session with SYSDBA privilege tried to connect to a service that has commit outcome enabled.

Action: Connect without the SYSDBA privilege.

OCI-14913: Invalid logical transaction ID detected.

Cause: The logical transaction was marked invalid.

Action: Verify your configuration. Transaction Guard does not support XA transactions that use the two-phase commit protocol.

OCI-14914: cannot invoke set failpoint

Cause: An invalid parameter was specified.

Action: Specify a valid parameter.

OCI-14915: cannot invoke set failpoint

Cause: An invalid database session was specified.

Action: Specify a valid database session.

OCI-14916: Switch service by DRCP clients is not supported by Transaction Guard.

Cause: The Database Resident Connection Pooling (DRCP) client tried to switch services while Transaction Guard was enabled.

Action: None

OCI-14950: Force outcome failed. Client transaction is too old.

Cause: The client transaction had been committed or forced earlier.

Action: None

OCI-14951: Force outcome failed. Client transaction is ahead of server logical transaction ID.

Cause: The client transaction had not been seen by the server and could not be forced. This can happen if the server is restored or a flashback operation has been executed.

Action: None

OCI-14952: Force outcome failed. General error occurred.

Cause: The force outcome operation failed. See previous error for the reason.

Action: None

OCI-14953: Invalid partition ID specified.

Cause: The partition IDs of the transaction history table were not consecutive.

Action: Specify the next higher partition ID.

OCI-14954: Invalid tablespace name specified.

Cause: The tablespace did not exist.

Action: Specify an existing tablespace.

OCI-14955: Transaction Guard has detected that committed transactions are lost.

Cause: Committed transactions could be lost if: i) COMMIT options were changed from the default to non-durable settings: NOLOGGING was in use, COMMIT_WAIT=nowait or COMMIT_LOGGING=batch. ii) Accessing an Oracle Data Guard secondary site before redo apply completed. iii) Flashback of the database. iv) Incomplete media recovery.

Action: i) If committed transactions cannot be lost, do not change the settings COMMIT_WAIT, or COMMIT_LOGGING from their defaults (these parameters have no default values but behave as FORCE_WAIT and IMMEDIATE, respectively, if not set). ii) Allow media recovery or redo apply to complete before opening a database to users. iii) Do not use NOLOGGING in high availability environments. Media recovery is not possible through the NOLOGGING operation. Data could be lost unless recovered from other sources. iv) Ensure media recovery runs to completion.

OCI-15000: command disallowed by current instance type

Cause: The user has issued a command to a conventional RDBMS instance that is only appropriate for an ASM instance. Alternatively, the user has issued a command to an ASM instance that is only appropriate for an RDBMS instance.

Action: Connect to the correct instance type and re-issue the command.

OCI-15001: disk group "*string*" does not exist or is not mounted

Cause: An operation failed because the specified disk group did not exist or was not mounted by the current Oracle ASM instance.

Action: Verify the following: * That the disk group name used is valid * That the disk group exists, and * That the disk group is mounted by the current Oracle ASM instance.

OCI-15002: parameter LOCK_NAME_SPACE exceeds limit of *string* characters

Cause: The LOCK_NAME_SPACE initialization parameter contained a value that is too long.

Action: Correct the LOCK_NAME_SPACE initialization parameter.

OCI-15003: Disk group "*string*" is already mounted in another lock name space.

Cause: The disk group could not be mounted by the Oracle Automatic Storage Management (Oracle ASM) instance because it was operating in a lockspace that is different from another existing Oracle ASM instance that had already mounted the disk group.

Action: Check the LOCK_NAME_SPACE initialization parameter value, or dismount the disk group from the other Oracle ASM instances.

OCI-15004: alias "*string*" does not exist

Cause: The specified alias did not exist within the diskgroup.

Action: Check the alias name and diskgroup name.

OCI-15005: alias "*string*" already exists

Cause: The requested alias already existed in the disk group.

Action: Select another alias name, or drop the existing alias.

OCI-15006: template "*string*" does not exist

Cause: The specified template did not exist within the disk group.

Action: Check the template name and disk group name.

OCI-15007: name is already used by an existing template

Cause: A template with the same name already exists.

Action: Select another template name, or drop the existing template.

OCI-15008: system template cannot be dropped

Cause: An attempt was made to drop the system template.

Action: Ensure that the template to be dropped is not the system template because it is required for proper operation. Select a non-system template and retry the operation.

OCI-15009: ASM disk "*string*" does not exist

Cause: The specified ASM disk was not found.

Action: Check the ASM disk name.

OCI-15010: Name '*string*' is already used by an existing Oracle Automatic Storage Management (ASM) disk.

Cause: The specified ASM disk name was already used in this disk group.

Action: Specify a different ASM disk name and retry.

OCI-15011: failure group "*string*" does not exist in diskgroup "*string*"

Cause: The specified name did not match the failure group of any disks in the disk group. This usually indicates that the failure group name was specified incorrectly.

Action: Check the failure group name and then retry the operation.

OCI-15012: ASM file *string* cannot be found.

Cause: The Oracle ASM instance could not locate the specified file.

Action: Check that the file name is correct, the file exists in the specified location, and proper privileges are granted to the user. Retry the operation.

OCI-15013: diskgroup "*string*" is already mounted

Cause: An ALTER DISKGROUP MOUNT command specified the name of a diskgroup which is already mounted by the current ASM instance.

Action: Check the name of the diskgroup.

OCI-15014: path '*string*' is not in the discovery set

Cause: The operating system path specified was outside the set of disks that are discovered by the instance.

Action: Specify a operating system path within the set of disks that are discovered based upon the ASM_DISKSTRING parameter. Alternatively, check the setting of the ASM_DISKSTRING parameter.

OCI-15015: Specified path '*string*' conflicts with path '*string*'

Cause: The ASM instance previously discovered specified disk with an ASM library using a different path.

Action: Use the discovery string of the ASM library to add the disk.

OCI-15016: inconsistent respecification of path '*string*'

Cause: The specified path was provided more than once with different properties.

Action: Do not provide a path more than once. Alternatively, provide consistent properties.

OCI-15017: Disk group "*string*" cannot be mounted.

Cause: The disk group could not be mounted by the Oracle ASM instance because of an I/O error or due to other reasons explained in the alert log or trace files.

Action: Check for additional errors reported. Correct the error and retry the operation.

OCI-15018: Disk group cannot be created.

Cause: The disk group could not be created.

Action: Check the Oracle Automatic Storage Management (ASM) alert log and additional reported errors.

OCI-15019: discovered duplicate path '*string*' for '*string*'

Cause: The discovery encountered multiple paths to the same disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk. *Params: 1) disk_path_1: Disk path of first duplicated disk. 2) disk_path_2: Disk path of second duplicated disk.

OCI-15020: discovered duplicate Oracle ASM disk "*string*"

Cause: The discovery encountered two disks claiming to be the same named Oracle Automatic Storage Management (Oracle ASM) disk.

Action: Ensure that the ASM_DISKSTRING parameter specifies only a single path for each disk. Check ORA-59066 error to find the paths that are discovering duplicate Oracle ASM disks.

OCI-15021: Parameter "*string*" is not valid in *string* instance.

Cause: The specified parameter was not valid or not supported when starting an instance of this type.

Action: Remove the specified parameter from the initialization parameter file and reissue the command. *Params: 1) parameter_name: The user-supplied value. 2) instance_name: The current instance being started.

OCI-15022: unable to load an Oracle ASM library

Cause: An Oracle instance attempted to load an Oracle Automatic Storage Management (Oracle ASM) library that could not be discovered.

Action: Check alert log error message "WARNING: FAILED to load library" to determine which library path Oracle is unable to retrieve from the Oracle ASM instance.

OCI-15023: reached maximum allowable number of disks *string*

Cause: An attempt was made to add another disk to a diskgroup which already contains the maximum number of disks allowed.

Action: Consider dropping existing disks from the diskgroup before adding additional ones, or create a new diskgroup.

OCI-15024: discovered duplicately numbered ASM disk *string*

Cause: ASM discovered two disks claiming to have the same ASM disk number in the same disk group.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

OCI-15025: could not open disk "*string*"

Cause: The specified disk could not be opened. If the database instance is running as an Operating System (OS) user different from that of the ASM instance, then the permissions on the database oracle binary may be incorrect.

Action: Check the additional error messages, if any. If the database instance is running as an OS user different from that of the ASM instance, use the "srvctl" command to stop and restart the database to fix the permissions.

OCI-15026: disk '*string*' is not an ASM disk

Cause: The disk did not contain a valid ASM disk header.

Action: Check to see if the data on the disk has been changed by some system administrator action.

OCI-15027: active use of diskgroup "*string*" precludes its dismount

Cause: An ALTER DISKGROUP ... DISMOUNT command specified a diskgroup which had clients with open files in the diskgroup. Diskgroups cannot be dismounted until all open files in the diskgroup are closed.

Action: Stop all clients that are using this diskgroup and retry the ALTER DISKGROUP ... DISMOUNT command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

OCI-15028: Oracle Automatic Storage Management (Oracle ASM) file '*string*' not dropped; currently being accessed

Cause: An attempt was made to drop an Oracle ASM file. The file was being accessed by one or more clients and therefore could not be dropped.

Action: Stop all clients that are using this file and retry the drop command. To list all active clients query the GV\$ASM_CLIENT fixed view in an Oracle ASM instance. An alternative option is to simultaneously use ASMCMD LSOFF in each Oracle ASM instance.

OCI-15029: disk '*string*' is already mounted by this instance

Cause: An attempt was made to add to a diskgroup a disk that was already mounted by the current instance as part of some (possibly other) diskgroup.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to correct the situation until the diskgroup containing the disk becomes dismounted by this instance.

OCI-15030: diskgroup name "*string*" is in use by another diskgroup

Cause: A CREATE DISKGROUP command specified a diskgroup name that was already assigned to another diskgroup.

Action: Select a different name for the diskgroup.

OCI-15031: The disk specification '*string*' matches no disks.

Cause: The instance was unable to discover any disks in the mentioned device specification path.

Action: Ensure that the disk specification string matches a disk on the system.

OCI-15032: not all alterations performed

Cause: At least one ALTER DISKGROUP action failed.

Action: Check the other messages issued along with this summary error as well as the alert log.

OCI-15033: disk '*string*' belongs to diskgroup "*string*"

Cause: An attempt was made to ADD to a diskgroup (or REPLACE with) a disk that was already part of another diskgroup, or an attempt was made to DROP / OFFLINE / ONLINE / CHECK a disk that was not part of the specified diskgroup.

Action: For ADD and REPLACE, check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check. For the other commands, check the name of the specified disk.

OCI-15034: disk '*string*' does not require the FORCE option

Cause: An attempt was made to add the disk to the diskgroup using the FORCE option. The disk was not found to be in use at the present time, so the FORCE option was not permitted.

Action: Avoid gratuitous use of the FORCE option.

OCI-15035: no disks belong to diskgroup "*string*"

Cause: An attempt was made to mount a diskgroup for which no member disks were discovered.

Action: Specify a valid diskgroup name that contains disks.

OCI-15036: Disk '*string*' is truncated to *string* MB from *string* MB.

Cause: The size of the disk, as reported by the operating system, was smaller than the size of the disk as recorded in the disk header block on the disk.

Action: Check if the system configuration has changed.

OCI-15037: disk '*string*' size *string* MB is smaller than minimum of *string* MB

Cause: The size of the disk, as reported by the operating system, was too small to allow the disk to become part of the diskgroup.

Action: Check if the system configuration is correct.

OCI-15038: disk '*string*' mismatch on '*string*' with target disk group [*string*] [*string*]

Cause: An attempt was made to mount into a disk group a disk whose recorded allocation unit size, metadata block size, physical sector size, logical sector size or creation time stamp was inconsistent with the other disk group members.

Action: Check if the system configuration has changed. Verify disk discovery string.

OCI-15039: diskgroup not dropped

Cause: An attempt to drop a diskgroup failed.

Action: See the associated messages for details about why the drop was not successful.

OCI-15040: diskgroup is incomplete

Cause: Some of the disks comprising a diskgroup were not present.

Action: Check the hardware to ensure that all disks are functional. Also check that the setting of the ASM_DISKSTRING initialization parameter has not changed. Alternatively, for normal or high redundancy diskgroups, use MOUNT FORCE to offline missing disks as part of mounting the diskgroup.

OCI-15041: diskgroup "*string*" space exhausted

Cause: At least one disk in the diskgroup is out of space.

Action: If all disks are evenly balanced, add more disks to the diskgroup,

OCI-15042: ASM disk *string* is missing from group number *string*

Cause: The specified disk, which is a necessary part of a disk group, could not be found on the system.

Action: Check the hardware configuration.

OCI-15043: ASM disk "*string*" is not a disk group member

Cause: The specified disk was removed from the disk group, but a disk with the same name already existed.

Action: Check the hardware configuration.

OCI-15044: ASM disk '*string*' is incorrectly named

Cause: Either the specified disk had its contents changed such that it no longer contained an ASM disk name in its header that matches the diskgroup information or its FAILGROUP information may have become inconsistent.

Action: Drop the disk from the diskgroup.

OCI-15045: ASM file name '*string*' has an invalid reference format

Cause: The format of the Oracle Automatic Storage Management (Oracle ASM) file name did not reference an existing file.

Action: The file name should contain a file and incarnation number, or an alias name should be used; the alias name should not include a template name. Correct the specified Oracle ASM file name and retry the operation.

OCI-15046: Oracle ASM file name '*string*' cannot include multiple file creation form

Cause: The Oracle Automatic Storage Management (Oracle ASM) file name was not in a form that can be used to create a single file because a file or incarnation number was present.

Action: Correct the specified Oracle ASM file name and retry the operation.

OCI-15047: Oracle ASM file name '*string*' is not in multiple file creation form

Cause: The Oracle Automatic Storage Management (Oracle ASM) file name was not in a form that could be used to create multiple files because either a fully qualified file name or an alias name was specified.

Action: Correct the specified Oracle ASM file name.

OCI-15048: Oracle ASM internal files cannot be deleted.

Cause: An attempt was made to delete a metadata file used by Oracle ASM to manage the disk group.

Action: Check the specified Oracle ASM file name.

OCI-15049: disk group "*string*" contains *string* error(s)

Cause: The ALTER DISKGROUP CHECK command was used to check the internal consistency of disk group metadata. During this check, errors were discovered.

Action: The discovered errors were written to the alert log for the Oracle Automatic Storage Management (ASM) instance. See the alert log for details of the errors.

OCI-15050: disk "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK DISK command.

Action: See the alert log for details of the errors.

OCI-15051: file '*string*' contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK FILE command.

Action: See the alert log for details of the errors.

OCI-15052: Oracle ASM file name *string* is not in disk group *string*.

Cause: The Oracle Automatic Storage Management (Oracle ASM) file name did not contain a disk group name that specified the correct disk group as implied by the other arguments to the command.

Action: Correct the specified Oracle ASM file name or disk group name. *Params: 1) ASM_file: The name of the Oracle ASM file. 2) ASM_disk_group: The name of the Oracle ASM disk group.

OCI-15053: diskgroup "*string*" contains existing files

Cause: An attempt was made to drop a diskgroup that still contains existing files.

Action: Specify the INCLUDING CONTENTS option to drop the diskgroup and all of its existing files.

OCI-15054: disk "*string*" does not exist in diskgroup "*string*"

Cause: An attempt was made to alter a disk that is not part of the specified diskgroup.

Action: Check the name of the specified disk and the specified diskgroup.

OCI-15055: unable to connect to the Oracle ASM instance

Cause: The client instance was unable to connect to the Oracle Automatic Storage Management (Oracle ASM) instance.

Action: Check the alert log, trace files, and any additional error messages for information regarding the connect error. Contact Oracle Support if the error persists.

OCI-15056: additional error message

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

OCI-15057: specified size of *string* MB is larger than actual size of *string* MB

Cause: A disk size expression exceeded the amount of storage actually available, as reported by the operating system.

Action: Specify a valid size.

OCI-15058: disk '*string*' belongs to an incompatible diskgroup

Cause: An attempt was made to ADD to a diskgroup a disk which was already part of another diskgroup. The other diskgroup was written by a more recent software release.

Action: Check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check.

OCI-15059: invalid device type for ASM disk

Cause: The device type of the discovered disk was not valid for use as an ASM disk.

Action: Check the file path and retry or exclude it from the discovery set. See the accompanying operating system error for additional information.

OCI-15060: template "*string*" does not exist

Cause: A command specified a template name, either directly or as part of an ASM file name, which did not exist.

Action: Check the template specifier in the command.

OCI-15061: ASM operation not supported [*string*]

Cause: An ASM operation was attempted that was invalid or not supported by the current version of the ASM instance.

Action: This is an internal error code that is used for maintaining compatibility between software versions. It should never be visible to the user. Contact Oracle Support Services.

OCI-15062: ASM disk is globally closed

Cause: The disk to which the I/O request was issued has gone offline or has been globally closed by the background process. Check other messages in the trace files for more information.

Action: Bring the disk online for I/Os to get through.

OCI-15063: ASM discovered an insufficient number of disks for diskgroup "*string*"

Cause: ASM was unable to find a sufficient number of disks belonging to the diskgroup to continue the operation.

Action: Check that the disks in the diskgroup are present and functioning, that the owner of the ORACLE binary has read/write permission to the disks, and that the ASM_DISKSTRING initialization parameter has been set correctly. Verify that ASM discovers the appropriate disks by querying V\$ASM_DISK from the ASM instance.

OCI-15064: communication failure with ASM instance

Cause: There was a failure to communicate with the Oracle ASM instance. This occurred because the connection between the database instance and the Oracle ASM instance was lost.

Action: Check the accompanying error messages for more information on the failure. Note that database instances will always return this error when the ASM instance is terminated.

OCI-15065: hash collision for diskgroup names '*string*' and '*string*'

Cause: There was a collision in the group name used for the diskgroup. The diskgroup(s) cannot be mounted using colliding names.

Action: Use a different diskgroup name and also report to Oracle Support Services the two diskgroup names which collided.

OCI-15066: offlining disk "*string*" in group "*string*" may result in a data loss

Cause: Following I/O failures, the disks holding all copies of a data block were attempted to be taken offline.

Action: Check the accompanying error messages for more information on the reason for the disk I/O failures.

OCI-15067: command or option incompatible with diskgroup redundancy

Cause: An attempt was made to use a feature which is not permitted by the disk group's redundancy policy. Common examples are forcibly dropping a disk from an EXTERNAL REDUNDANCY disk group, using the FAILGROUP clause with an EXTERNAL REDUNDANCY disk group, using invalid template attributes, or mounting a HIGH or EXTERNAL redundancy disk group for recovery. An attempt (without force option) was made to drop disks or fail groups that leads to fewer number fail groups than the minimal requirement (3 for NORMAL and FLEX and 5 for HIGH redundancy disk group).

Action: Omit the option from the command. Check if the disk group has minimum number of fail groups including quorum fail group after the successful execution of the SQL.

OCI-15068: maximum number of diskgroups *string* already mounted

Cause: An attempt was made to mount more diskgroups than the instance is capable of mounting at one time.

Action: Dismount a mounted diskgroup and retry the command.

OCI-15069: Time-out waiting for lock on ASM file '*string*'

Cause: An attempt was made to access an Oracle ASM file. But the file could not be accessed because the file was either being created, resized, or deleted.

Action: No action required. Try accessing the file after the create or resize has completed.

OCI-15070: The maximum number of files *string* exceeded in disk group "*string*".

Cause: More files than allowed were added to the disk group.

Action: Remove (smaller) files from the disk group to free entries or create files in a new disk group.

OCI-15071: ASM disk "*string*" is already being dropped

Cause: An attempt was made to drop or replace a disk that was already in the process of being dropped from the diskgroup. Alternatively, an attempt was made to forcibly drop a disk from a diskgroup using the FORCE option that was already being forcibly dropped from the diskgroup.

Action: Check the ASM disk name and FORCE option as specified in the command.

OCI-15072: This command requires at least %0!s regular failure groups, discovered only %1!s.

Cause: An attempt was made to create either a NORMAL REDUNDANCY disk group for which fewer than two regular failure groups were both specified and discovered, or a HIGH REDUNDANCY disk group for which fewer than three regular failure groups were both specified and discovered, or an EXTERNAL REDUNDANCY disk group for which only quorum disks were both specified and discovered.

Action: Check that the command does specify the required number of failure groups, and that all of the specified disks are discovered by Oracle ASM. A query of the V\$ASM_DISK view will show which disks are discovered by Oracle ASM. Note that a quorum failure group will not be used as a regular failure group. An EXTERNAL REDUNDANCY disk group requires at least one regular disk.

OCI-15073: diskgroup *string* is mounted by another ASM instance

Cause: An attempt was made to drop a diskgroup that is still mounted somewhere in the cluster by another instance.

Action: dismount the diskgroup from all nodes except the one performing the drop diskgroup command.

OCI-15074: diskgroup *string* requires rebalance completion

Cause: An attempt was made to repeatedly add or drop disks from a diskgroup. ASM could not perform the operation given the current state of the diskgroup.

Action: Manually invoke the ALTER DISKGROUP REBALANCE command and allow the rebalance to run to completion. Alternatively, invoke the ALTER DISKGROUP UNDROP DISKS command and allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

OCI-15075: disk *string* is not visible on instance number *string*

Cause: An ALTER DISKGROUP ADD DISK command specified a disk that could not be discovered.

Action: Check operating system permissions for the device and the storage subsystem configuration on the specified node.

OCI-15076: Emulating I/O errors on the OSM disk

Cause: The disk to which the I/O request was issued is in an error emulation mode.

Action: Bring the disk online for I/Os to get through.

OCI-15077: could not locate ASM instance serving required disk group

Cause: The instance failed to perform the specified operation because it could not locate the ASM instance that was serving a required disk group.

Action: If you want to start the database instance, ensure that there is a local or remote Oracle Automatic Storage Management (Oracle ASM) instance available, that has the

required disk group mounted. The Oracle ASM must be accessible through the Oracle ASM listeners. Examine any accompanying errors in the stack to understand the possible reasons for this failure. Fix the errors and restart the database instance.

OCI-15078: Oracle ASM disk group was forcibly dismounted

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk group was dismounted (with the ALTER DISKGROUP DISMOUNT FORCE statement), and therefore it could not be accessed.

Action: Mount the disk group using the ALTER DISKGROUP MOUNT statement to allow access to the disk group again.

OCI-15079: Oracle ASM file is closed

Cause: The Oracle Automatic Storage Management (Oracle ASM) file, to which the I/O request was issued, was closed. This could have been a consequence of the disk group being dismounted.

Action: Ensure that the disk group that contains the file is mounted.

OCI-15080: synchronous I/O operation failed to *string* block *string* of disk *string* in disk group *string*

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Ensure that all of the disks are operational.

OCI-15081: failed to submit an I/O operation to a disk

Cause: The instance failed to submit an I/O operation to a disk. As a result, the instance was terminated.

Action: Ensure that the relevant disk group is mounted, restart the instance, and retry the operation. If the issue persists, contact Oracle Support Services.

OCI-15082: Oracle ASM instance failed to communicate with client instance.

Cause: There was a failure or timeout when the Oracle Automatic Storage Management (ASM) instance tried to communicate with a connected Oracle RDBMS or Oracle ASM Dynamic Volume Manager (ADVM) client.

Action: Check the accompanying error messages and alert logs for more information about the failure. Check system specific logs (/var/log/messages on Linux, Event Log on Windows) for Oracle ADVM messages.

OCI-15083: Time-out during communication with ASMB background process

Cause: The database instance failed to communicate with the ASMB background process.

Action: Check the alert log and trace files for more information on a possible reason for the failure. If assistance is needed, contact Oracle Support Services.

OCI-15084: Oracle ASM disk "*string*" is offline and cannot be dropped.

Cause: An attempt was made to drop a disk that was offline.

Action: Check the Oracle Automatic Storage Management (Oracle ASM) disk name as specified in the command. Or, if needed, use the DROP DISK FORCE option.

OCI-15085: disk "*string*" has inconsistent sector size (expected *string*, actual *string*) with disk group "*string*"

Cause: An attempt to mount a disk group failed because a disk reported an inconsistent sector size value.

Action: Use disks with a sector size consistent with disk group sector size, or ensure that the operating system can accurately report the disk sector size.

OCI-15086: Diskgroup sector size must be specified.

Cause: The `_disk_sector_size_override` parameter was used but the sector disk value was not specified in the command.

Action: Specify the sector size value, or do not set (or do not set to TRUE) the `_disk_sector_size_override` parameter.

OCI-15087: disk '*string*' is formatted as an ext2/ext3 or OCFS2 file system.

Cause: A signature was found on the specified disk indicating that it is in use by an existing ext2/ext3 or OCFS2 file system.

Action: Adjust discovery string and device permissions to exclude previously formatted disks from discovery.

OCI-15088: disk group creation incomplete

Cause: A previous failure during disk group creation left the disk group in an inconsistent state.

Action: Issue `DROP DISKGROUP ... FORCE INCLUDING CONTENTS` to clean up the failed creation, then re-create the disk group.

OCI-15090: handle *string* is not a valid descriptor

Cause: The file handle was not valid in this session.

Action: Submit a handle obtained from a successful call to `DBMS_DISKGROUP.OPEN()`.

OCI-15091: operation incompatible with open handle in this session

Cause: The current session contained an open handle from the `DBMS_DISKGROUP` PL/SQL package which precluded performing the command.

Action: Execute the command in a different session.

OCI-15092: I/O request size *string* is not a multiple of logical block size *string*

Cause: The length of the request was not a multiple of logical block size.

Action: Correct the error and retry the operation.

OCI-15093: buffer only contains *string* bytes, I/O requested is *string* bytes

Cause: The buffer supplied for write was too small to satisfy the request.

Action: Correct the error and retry the operation.

OCI-15094: attempted to write to file opened in read only mode

Cause: The file handle passed to `DBMS_DISKGROUP.WRITE()` did not have write privileges.

Action: Obtain a file handle in read-write mode and retry the write operation.

OCI-15095: reached maximum Oracle ASM file size (*string* GB) for this disk group

Cause: An Oracle Automatic Storage Management (Oracle ASM) file create or file resize operation exceeded the maximum file size that is permitted by Oracle ASM for this disk group.

Action: Use smaller files. Optionally, to enable the use of larger files and if not already defined, set the disk group attribute COMPATIBLE.RDBMS to greater than or equal to 11.1.

OCI-15096: lost disk write detected

Cause: A failure either by disk hardware or disk software caused a disk write to be lost, even though ASM received acknowledgement that the write completed. Alternatively, a clustering hardware failure or a clustering software failure resulted in an ASM instance believing that another ASM instance had crashed, when in fact it was still active.

Action: The disk group is corrupt and cannot be recovered. The disk group must be recreated, and its contents restored from backups.

OCI-15097: cannot SHUTDOWN Oracle ASM instance with connected client (*process string*)

Cause: A SHUTDOWN command was issued to an Oracle ASM instance that had one or more connected clients.

Action: Stop all clients that are connected to this Oracle ASM instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command. One of the active clients has been listed in the error message. Query the V\$ASM_CLIENT fixed view in an Oracle ASM instance or use ASMCMD LSCT to list all active clients.

OCI-15098: file type not recognized by ASM instance

Cause: An attempt was made by DB instance to create a file for a file type that is not recognized by current version of ASM instance.

Action: Upgrade ASM to higher version that recognizes this file type.

OCI-15099: disk '*string*' is larger than maximum size of *string* MBs

Cause: The specified size of the disk was too big to allow the disk to become part of the diskgroup.

Action: Specify a smaller disk size than the maximum allowed size. Alternatively, set the compatible.rdbms attribute of the disk group to a value greater than or equal to 12.1 to allow for larger disk sizes.

OCI-15100: invalid or missing disk group name

Cause: The command did not specify a valid disk group name. Disk group names should start with a letter, and can only contain alphanumeric characters and the underscore character.

Action: Specify a valid disk group name.

OCI-15101: no action specified

Cause: The ALTER DISKGROUP command did not specify any alterations.

Action: Specify at least one operation clause.

OCI-15102: invalid POWER expression

Cause: The syntax of the POWER expression was invalid.

Action: Specify a valid POWER expression.

OCI-15103: conflicting or duplicate REPAIR options

Cause: The command specified conflicting or duplicate REPAIR keywords.

Action: Specify only one REPAIR action.

OCI-15104: conflicting CONTENTS options

Cause: The command specified conflicting or duplicate INCLUDING CONTENTS or EXCLUDING CONTENTS options.

Action: Specify only one option.

OCI-15105: missing or invalid FAILGROUP name

Cause: The command did not specify a valid failure group name.

Action: Specify a valid failure group name.

OCI-15106: missing or invalid operating system disk locator string

Cause: The command did not specify a valid operating system path for the device as a string.

Action: Specify a valid operating system path for the device.

OCI-15107: missing or invalid ASM disk name

Cause: The command did not specify a valid ASM disk name identifier.

Action: Specify a valid ASM disk name identifier.

OCI-15108: missing or invalid template name

Cause: The command did not specify a valid template name identifier.

Action: Specify a valid template name identifier.

OCI-15109: conflicting protection attributes specified

Cause: The command contained an invalid combination of the UNPROTECTED, MIRROR, or PARITY keywords.

Action: Specify only one keyword.

OCI-15110: no diskgroups mounted

Cause: No diskgroups were specified in the ASM_DISKGROUPS parameter, so instance startup or the ALTER DISKGROUP ALL MOUNT command did not mount any diskgroups.

Action: Specify valid diskgroups in the ASM_DISKGROUPS parameter or ignore the error.

OCI-15111: conflicting or duplicate STRIPE options

Cause: The command contained both a FINE and COARSE keyword, or contained the FINE keyword more than once, or contained the COARSE keyword more than once.

Action: Specify only one keyword.

OCI-15112: no diskgroups currently mounted

Cause: An ALTER DISKGROUP ALL command did not find any mounted diskgroups upon which to operate. Either instance shutdown or an ALTER DISKGROUP ALL DISMOUNT command did not dismount any diskgroups, or an ALTER DISKGROUP ALL UNDROP DISKS command did not undrop any disks.

Action: Mount the diskgroups on which you wish to operate or ignore the error.

OCI-15113: The alias name '*string*' refers to a directory.

Cause: The name specified referred to a directory in the alias directory and not to a valid alias entry.

Action: Check the alias name and then retry the operation.

OCI-15114: missing or invalid ASM file name

Cause: The command did not specify a valid ASM file name identifier.

Action: Specify a valid ASM file name identifier.

OCI-15115: missing or invalid ASM disk size specifier

Cause: The command did not specify a valid ASM disk size.

Action: Specify a valid ASM disk size.

OCI-15116: invalid combination of ALTER DISKGROUP options

Cause: The ALTER DISKGROUP options may not be combined in this manner.

Action: Issue separate ALTER DISKGROUP commands to accomplish the desired action.

OCI-15117: command only operates on one diskgroup

Cause: An ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP command specified a list of diskgroups or the keyword ALL in a context where only a single diskgroup was permitted.

Action: Issue separate ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP commands to accomplish the desired action.

OCI-15118: Oracle ASM disk group *string* was forcibly dismounted.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk group to which the I/O request was issued was forcibly dismounted (with the ALTER DISKGROUP DISMOUNT FORCE statement) so that it could not be accessed.

Action: Mount the disk group using the ALTER DISKGROUP MOUNT statement to allow access to the disk group again.

OCI-15119: too many disk groups (*string*); maximum allowed *string*

Cause: An attempt was made to mount more than the maximum allowed number of disk groups.

Action: Do not attempt to mount more than the maximum allowed number of disk groups. Check ASM instance parameters.

OCI-15120: Oracle ASM file name '*string*' does not begin with the Oracle ASM prefix character

Cause: An Oracle Automatic Storage Management (Oracle ASM) file name was specified that did not begin with the Oracle ASM prefix character (currently '+'). Oracle ASM uses the prefix to determine that a file specification is in fact an Oracle ASM file.

Action: Correct the file name specification.

OCI-15121: Oracle ASM file name '*string*' contains an invalid disk group name.

Cause: A file name was specified that did not contain a valid disk group name. The disk group name follows immediately after the Oracle Automatic Storage Management (Oracle ASM) prefix character. It must start with an alphabetic character and consist of up to 30 characters which are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

OCI-15122: Oracle ASM file name '*string*' contains an invalid file number

Cause: A numeric file name was specified that did not contain a valid Oracle Automatic Storage Management (Oracle ASM) file number. The Oracle ASM file number followed immediately after the disk group name. It must be preceded by a '.' character and contain only numeric characters.

Action: Correct the file name specification.

OCI-15123: Oracle ASM file name '*string*' contains an invalid incarnation number

Cause: A numeric file name was specified that did not contain a valid Oracle Automatic Storage Management (Oracle ASM) incarnation number. The Oracle ASM incarnation number followed immediately after the Oracle ASM file number. It must be preceded by a '.' character and contain only numeric characters.

Action: Correct the file name specification.

OCI-15124: ASM file name '*string*' contains an invalid alias name

Cause: A file name was specified which did not contain a valid ASM alias name. The ASM alias name, if present, follows immediately after the diskgroup name, in place of the ASM file number. It must be preceded by a slash, start with an alphabetic character, and consist of up to 48 characters which are alphabetic, numeric, or the characters '\$', '_', '-', or '#'. A space can separate two parts of an alias name.

Action: Correct the file name specification.

OCI-15125: Oracle ASM file name '*string*' contains an invalid template name

Cause: A file name was specified to Oracle Automatic Storage Management (Oracle ASM) that did not contain a valid template name. The template name, if present, follows immediately after the Oracle ASM incarnation number or the Oracle ASM alias name, if such is used in place of the Oracle ASM file number. It must be enclosed in parenthesis, start with an alphabetic character, and consist of up to 30 characters that are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

OCI-15126: component in Oracle ASM file name '*string*' exceeds maximum length

Cause: The disk group name, template name, or alias name fields in the Oracle Automatic Storage Management (Oracle ASM) file name exceeded the maximum identifier length of 48 characters.

Action: Correct the file name specification.

OCI-15127: Oracle ASM file name '*string*' cannot use templates.

Cause: A fully qualified Oracle Automatic Storage Management (Oracle ASM) file name was specified. This specification did not permit the inclusion of a template name in the Oracle ASM file name.

Action: Correct the file name specification.

OCI-15128: Oracle ASM file name '*string*' exceeds maximum length *string*.

Cause: The maximum Oracle Automatic Storage Management (Oracle ASM) file name length of 256 characters was exceeded for the combination of disk group name, file number, template name, alias name, plus punctuation within the Oracle ASM file name.

Action: Correct the file name specification.

OCI-15129: entry '*string*' does not refer to a valid directory

Cause: The entry indicated did not refer to a directory. Attempt was made to access the contents of this directory.

Action: Correct the error and try again.

OCI-15130: diskgroup "*string*" is being dismounted

Cause: The diskgroup is being dismounted by request or because an I/O error was encountered that could not be handled by taking the disks offline. A disk cannot be offlined whenever doing so could result in all copies of a redundant extent being unavailable.

Action: Repair the hardware problem and re-mount the diskgroup. Refer to the alert log to determine which disks have failed.

OCI-15131: block *string* of file *string* in diskgroup *string* could not be read

Cause: A block could not be read because the disk containing the block is either offline or an I/O error occurred while reading the block. If this is mirrored file, then all disks that contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

OCI-15132: block *string* of file *string* in diskgroup *string* could not be written

Cause: A block could not be written because the disk containing the block is either offline or an I/O error occurred while writing the block. If this is mirrored file, then insufficient disks which contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

OCI-15133: instance recovery required for diskgroup *string*

Cause: An instance in the cluster crashed making instance recovery necessary.

Action: None. This error should not normally be seen by an ASM client. ASM will trap this error and retry the operation after doing instance recovery automatically.

OCI-15134: mirror resilvering not supported for *string*

Cause: The specified device requires oracle to take mirror resilvering responsibility. ASM does not resilver logical volume manager (lvm) based mirrors.

Action: Disable lvm-based mirroring or set the parameter `_asm_allow_lvm_resilvering` to TRUE. One might experience performance degradation when lvm-based resilvering is enabled with ASM.

OCI-15135: The *string* cluster is not in rolling patch state. The patch level [*string*] of instance *string* is not the same as the current cluster patch level [*string*].

Cause: During startup, this instance found one or more other instances running at a different patch level, and the cluster was not in rolling patch state. Startup of this instance failed.

Action: The patch level of this instance differs from the cluster patch level. If the intention is to patch the cluster using the rolling option, then set the cluster in rolling patch state using the 'crsctl start rollingpatch' command from an active node, and restart Oracle Clusterware on this node. If the intention is to patch the cluster in a non-rolling manner, and the patch has been applied on the local node, then stop all of the active nodes in the cluster that have a patch level that does not match the patch level of the current node. Use the 'crsctl query crs softwarepatch *host*' command to retrieve the configured patch level of a node. If the intention is to patch the cluster in a non-rolling manner, and the patch has not been applied on the local node, then apply the requisite patch, and restart Oracle Clusterware on this node. Patches applied on a node can be obtained by issuing the the 'crsctl query crs releasepatch' command.

OCI-15136: cluster in rolling patch from patch level [*string*] to [*string*]

Cause: The current patch level of the instance was incompatible with the rolling patch operation of the cluster.

Action: The patch level of the new member instance must be one of the two patch levels involved in the rolling patch operation.

OCI-15137: The *string* cluster is in rolling patch state.

Cause: The cluster was already in the middle of rolling patch.

Action: Rolling patch needs to be stopped before attempting to start again.

OCI-15138: cluster rolling patch incomplete

Cause: The cluster was still performing rolling patch.

Action: Ensure that all of the instances in the cluster are patched before retrying the command.

OCI-15139: patch level of *string* instances differ in cluster

Cause: Not all of the instances in the cluster had the same set of patches.

Action: Ensure that all of the instances in the cluster have the same patches before retrying the command. Find the configured patch level on a node using the 'crsctl query crs softwarepatch' command.

OCI-15140: rolling patch prevented by *string*

Cause: One or more instances were blocking the rolling patch.

Action: Terminate or wait until the reported operation is complete before attempting the rolling patch to the cluster.

OCI-15141: The *string* cluster is not in either rolling upgrade or rolling patch state.

Cause: The ALTER SYSTEM STOP ROLLING MIGRATION or ALTER SYSTEM STOP ROLLING PATCH command was executed when the cluster was not in either the rolling upgrade or rolling patch state.

Action: The system has to be set to rolling upgrade or rolling patch state before attempting to execute the command.

OCI-15142: either MIGRATION or PATCH keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

OCI-15143: either APPLY or ROLLBACK keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

OCI-15144: disk '*string*' is about to fail

Cause: An attempt was made to ADD (or REPLACE) a failing disk to a disk group.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to add the disk to the disk group.

OCI-15145: Oracle ASM disk '*string*' is online and cannot be replaced.

Cause: The REPLACE DISK operation specified an Oracle Automatic Storage Management (ASM) disk that was offline.

Action: Check to confirm that the Oracle Automatic Storage Management (ASM) disk is offline. Online disks can be replaced while maintaining redundancy by issuing ADD and DROP disk commands in a single SQL statement.

OCI-15146: Rolling migration or patching operation failed

Cause: Operation failed due to temporary issue.

Action: Retry the command.

OCI-15147: failed to start the instance

Cause: The instance could not be started during rolling upgrade from ASM instance versions prior to 12.1.0.0.0

Action: Complete the rolling upgrade process and start the instance.

OCI-15148: too many CRS users created

Cause: The operation failed because the number Cluster Ready Services (CRS) users reached the limit of 999 users.

Action: Creating a high number of CRS users is not usual. Make sure all existing CRS users are valid and required. Remove CRS users that are not valid or needed and retry the operation.

OCI-15149: another ASM instance found running on the host

Cause: Another ASM instance found on the host. Only one ASM instance is supported on a host.

Action: Shut down the other instance before starting this ASM instance.

OCI-15150: instance lock mode '*string*' conflicts with other ASM instance(s)

Cause: Some other ASM instance used the lock name space in a conflicting mode.

Action: Shut down the other instance or start up in compatible mode. Alternatively, set the DB_UNIQUE_NAME initialization parameter to avoid the conflict.

OCI-15151: missing or invalid version number for rolling migration

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form v#. #. #. #. # or other forms with fewer numbers delimited by a period. The version number must be different from the current software version of the instance.

OCI-15152: The *string* cluster is in rolling upgrade state.

Cause: The cluster was already in the middle of rolling upgrade.

Action: Rolling upgrade needs to be stopped before attempting to start again.

OCI-15153: The *string* cluster is not in rolling upgrade state. The version [*string*] of instance *string* is not the same as the current cluster version [*string*].

Cause: During startup, this instance found one or more other instances running at a different version, and the cluster was not in rolling upgrade state. Startup of this instance failed.

Action: The version of this instance differs from the cluster version. If the intention is to upgrade the cluster using the rolling option, then set the cluster in rolling upgrade state using the 'crsctl start rollingupgrade' command from an active node, and restart Oracle Clusterware on this node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has already been upgraded, then stop all of the active nodes in the cluster that have an older version than the current node. Use the 'crsctl query crs softwareversion *host*' command to retrieve the configured version of a node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has not been upgraded yet, then upgrade the node by running the rootupgrade.sh script.

OCI-15154: cluster rolling upgrade incomplete

Cause: The cluster was still performing rolling upgrade.

Action: Ensure that all the instances in the cluster are upgraded before retrying the command.

OCI-15155: version incompatible with the cluster

Cause: The current software version of the instance was incompatible with the other members of the cluster.

Action: Ensure that all of the members of the cluster are at the same version. If you are attempting to perform a rolling upgrade, execute the ALTER SYSTEM START ROLLING statement. Ensure that the version being upgraded to is compatible with the existing version of the cluster.

OCI-15156: cluster in rolling upgrade from version [*string*] to [*string*]

Cause: The current software version of the instance was incompatible with the rolling upgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling upgrade.

OCI-15157: rolling migration is not allowed

Cause: The cluster was not capable of handling ASM rolling migration.

Action: The Oracle Cluster Services is using vendor clusterware. Oracle cannot perform rolling upgrade or downgrade using vendor cluster ware. Restart ASM instances using Oracle cluster ware and retry the operation.

OCI-15158: rolling upgrade prevented by *string*

Cause: One or more instances were blocking the rolling upgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling upgrade to the cluster.

OCI-15160: rolling migration internal fatal error in module *string,string*

Cause: Rolling migration experienced a fatal error.

Action: Please contact Oracle support services.

OCI-15161: missing SYS_CLUSTER_PROPERTIES attribute

Cause: An attribute was not specified for the SYS_CLUSTER_PROPERTIES namespace.

Action: Specify a valid attribute name.

OCI-15162: cluster in rolling downgrade

Cause: The cluster was already in the middle of rolling downgrade.

Action: Rolling downgrade needs to be stopped before attempting to start again.

OCI-15163: cluster is not in the rolling downgrade to *string*

Cause: The cluster was not in the rolling downgrade.

Action: Start the rolling downgrade using the ALTER SYSTEM START ROLLING MIGRATION command from another ASM instance and restart this instance.

OCI-15164: cluster rolling downgrade incomplete

Cause: The cluster was still performing rolling downgrade.

Action: Ensure that all the instances in the cluster are downgraded before retrying the command.

OCI-15165: rolling migration not allowed with the versions specified

Cause: One of the following requirements were not met: - The From version is not compatible. - The To version is less than or equal to the From version. - Neither the From nor the To version matches the current version. - The From version is less than 12.1.0.2.0.

Action: Ensure that the From and the To versions specified are legitimate.

OCI-15166: cluster in rolling downgrade from version [*string*] to [*string*]

Cause: The current software version of the instance was incompatible with the rolling downgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling downgrade.

OCI-15167: command requires at least *string* failure groups; found only *string*

Cause: An attempt to convert disk group redundancy failed because of insufficient failure groups.

Action: Add enough failure groups to the disk group and then retry converting the disk group redundancy to flex.

OCI-15168: rolling downgrade prevented by *string*

Cause: One or more instances were blocking the rolling downgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling downgrade to the cluster.

OCI-15169: destination '*string*' is a subdirectory of '*string*'

Cause: The attempt to rename the directory failed because the new directory name was a subdirectory of the original directory.

Action: Correct the path of the destination and then try again.

OCI-15170: cannot add entry '*string*' in directory '*string*'

Cause: An unknown error occurred which prevented the directory or alias creation.

Action: Check the errors following this error. If needed, check the log file for this instance. Correct the errors and then try again. If the error persists, contact Oracle Support.

OCI-15171: invalid syntax in the alias path after '*string*'

Cause: An invalid alias/directory name syntax was specified.

Action: Correct the alias path and try again.

OCI-15173: Entry '*string*' does not exist in directory '*string*'.

Cause: The specified alias did not exist in the given directory.

Action: Correct the alias path and try again.

OCI-15174: unable to create alias name

Cause: An attempt to create an alias name for an ASM file failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the failure, as well as checking the accompanying error messages.

OCI-15175: cannot create alias for diskgroup metadata file '*string*'

Cause: An attempt was made to create an alias for a diskgroup metadata file.

Action: Correct the alias path and try again.

OCI-15176: file '*string*' already has an alias associated with it

Cause: An attempt was made to create an alias for a file that already had an existing alias.

Action: Correct the file name or drop the existing alias, and then retry the operation.

OCI-15177: The system alias cannot be modified or deleted.

Cause: An attempt was made to modify or delete a system alias.

Action: Correct the alias name and try again.

OCI-15178: cannot drop non-empty directory '*string*'

Cause: An attempt was made to drop a directory that contained valid entries without the FORCE option specified.

Action: Correct the directory path or specify the FORCE option to drop a directory that is not empty.

OCI-15179: missing or invalid alias name

Cause: The command did not specify a valid alias identifier.

Action: Specify a valid alias identifier.

OCI-15180: could not open dynamic library *string*, error [*string*]

Cause: The library was not accessible

Action: Correct the permissions of the library and try again.

OCI-15181: symbol [*string*] not found in library *string*, error [*string*]

Cause: An error was encountered while loading the specified ASMLIB symbol.

Action: Correct the error reported and try again.

OCI-15182: ASMLIB [*string*] version mismatch, ORACLE version [*string*]

Cause: The ASMLIB version reported is not supported by the ORACLE binary.

Action: Install the correct library and try again.

OCI-15183: ASMLIB initialization error [*string*]

Cause: Unable to initialize the ASMLIB in ORACLE.

Action: Check the configuration of ASMLIB or deinstall ASMLIB if not used.

OCI-15184: ASMLIB error could not be determined [*string*] [*string*]

Cause: An error was encountered which cannot be diagnosed further.

Action: Contact ASMLIB library vendor for support.

OCI-15185: could not close dynamic library *string*, error [*string*]

Cause: Could not close the dynamic library.

Action: Contact ASMLIB library vendor for support.

OCI-15186: ASMLIB error function = [*string*], error = [*string*], mesg = [*string*]

Cause: An error occurred during a call to function listed in the error.

Action: The detailed message associated with the error is listed along with the error. Correct the error and try again or contact ASMLIB library vendor for support.

OCI-15187: Incompatible RDBMS operation [*string*] pushed to storage

Cause: RDBMS to storage version mismatched with incompatibility operation.

Action: Upgrade RDBMS to match storage version.

OCI-15188: process terminated due to an ASMLIB error

Cause: A process was terminated as a result of an ASMLIB error.

Action: See the alert log for more information. Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

OCI-15192: invalid ASM disk header [string] [string] [string] [string] [string]

Cause: ASM encountered an invalid disk header.

Action: Contact Oracle Support Services.

OCI-15196: invalid ASM block header [string:string] [string] [string] [string] [string != string]

Cause: ASM encountered an invalid metadata block.

Action: Contact Oracle Support Services.

OCI-15197: suppressing string additional ASM messages

Cause: The ASM command generated so many errors that this summary message was reported in place of many individual messages.

Action: If the command contained multiple actions, try separating each action into its own command and executing each command by itself. Otherwise, try not to generate so many errors.

OCI-15198: operation string not yet available in this version

Cause: An unimplemented operation was attempted.

Action: If this operation is required, then upgrade to a release where the operation is supported.

OCI-15200: initialization parameter string (string) is not a power of two

Cause: The value specified for this initialization parameter was not a power of two.

Action: Correct the initialization parameter value and restart the instance.

OCI-15201: disk string contains a valid RDBMS file or foreign volume

Cause: A disk specified in a CREATE DISKGROUP or ALTER DISKGROUP ... ADD DISK command appeared to contain a file from an existing database or a foreign volume. By default, as a safeguard against damaging an existing database or foreign volume, ASM does not allow a disk group to be created using this disk.

Action: Check that the ASM disk specification is correct. Otherwise, when storage from a defunct database or unmounted foreign volume is reused as part of an ASM disk group, specify the FORCE option to the ASM SQL command. See the alert log for more information.

OCI-15202: cannot create additional ASM internal change segment

Cause: The mount of a diskgroup by an additional instance in a RAC cluster required more space for internal use by ASM than was available in the diskgroup.

Action: Delete unused files from the diskgroup or add additional disks to the diskgroup and retry the operation.

OCI-15203: diskgroup string contains disks from an incompatible version of ASM

Cause: Diskgroup was created by an ASM instance with a higher compatibility setting.

Action: Use an ASM instance with the appropriate software version to mount the diskgroup.

OCI-15204: Client version %0!s is incompatible with disk group %1!s.

Cause: The COMPATIBLE parameter for the RDBMS instance was less than the value of the COMPATIBLE.RDBMS attribute for the disk group.

Action: Update the COMPATIBLE parameter for the RDBMS instance to a version higher than or equal to COMPATIBLE.RDBMS version. The compatible attributes for disk groups cannot be lowered.

OCI-15205: requested block mirror side unavailable

Cause: The requested mirror side of a block was either unallocated or was allocated on a disk that had been dropped from the disk group.

Action: Bring all offline disks online, wait for any on-going rebalance to complete, and retry the operation.

OCI-15206: duplicate diskgroup *string* specified

Cause: A command specified the same diskgroup twice.

Action: Specify each diskgroup only once.

OCI-15210: conflicting or duplicate PERMISSION options

Cause: The PERMISSION clause contained the USER, GROUP, or OTHER keyword more than once.

Action: Specify each keyword, at most, once.

OCI-15211: conflicting or duplicate OWNERSHIP options

Cause: The OWNERSHIP clause contained either the OWNER or the GROUP keyword more than once.

Action: Specify each keyword, at most, once.

OCI-15212: missing or invalid OWNER or GROUP name

Cause: The command did not specify a valid name for either the OWNER or the GROUP keyword.

Action: Specify a valid name for either the OWNER or the GROUP keyword.

OCI-15213: command operates on only one attribute

Cause: More than one disk group attribute was specified in the ALTER DISKGROUP statement.

Action: Specify only one disk group attribute per ALTER DISKGROUP statement.

OCI-15214: missing or invalid attribute specification

Cause: The command did not specify a valid attribute name or a valid attribute value.

Action: Specify a valid attribute name and value pair.

OCI-15215: missing or invalid user name

Cause: The command did not specify a valid user name.

Action: Specify a valid user name.

OCI-15216: missing or invalid user group name

Cause: The command did not specify a valid user group name.

Action: Specify a valid user group name.

OCI-15217: missing or invalid timeout value after DROP AFTER

Cause: The command did not specify a valid timeout value after the DROP AFTER clause.

Action: Specify a valid timeout value after the DROP AFTER clause.

OCI-15218: timeout value exceeded range

Cause: The OFFLINE timeout value exceeded the range of 0-136 years, inclusive. 136 years are 49674 days, 1192176 hours, and 71530560 minutes.

Action: Specify a timeout value within the range of 0-136 years, inclusive.

OCI-15219: conflicting or duplicate disk region options

Cause: The command contained one or more of the following: - both the HOT and the COLD keywords - both the MIRRORHOT and the MIRRORCOLD keywords - the HOT keyword more than once - the COLD keyword more than once - the MIRRORHOT keyword more than once - the MIRRORCOLD keyword more than once

Action: Specify either the HOT or the COLD keyword and either the MIRRORHOT or the MIRRORCOLD keyword, at most, once.

OCI-15220: invalid file attribute specification

Cause: The keyword UNPROTECTED, MIRROR, HIGH, FINE, or COARSE was specified in a MODIFY FILE clause. These file attributes are immutable once a file is created.

Action: Specify a disk region keyword; for example, HOT, COLD, MIRRORHOT, or MIRRORCOLD.

OCI-15221: ASM operation requires compatible.asm of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.asm.

Action: Set the disk group attribute compatible.asm to or above the requested version.

OCI-15222: ASM disk "*string*" is offline and cannot be renamed.

Cause: An attempt was made to rename a disk that is offline.

Action: Check the ASM disk name as specified in the command.

OCI-15223: conflicting disk operations for *string*

Cause: An attempt was made to ADD and DROP the specified ASM disk in the same statement.

Action: Revise the statement to specify distinct ASM disks in the ADD disk and DROP disk clauses.

OCI-15224: Disk "*string*" is already provisioned for Oracle ASM.

Cause: An attempt was made to label a disk that was already provisioned for Oracle Automatic Storage Management (Oracle ASM).

Action: Check the Oracle ASM disk name as specified in the command. *Params: 1) disk_name: The path name of disk to be labeled.

OCI-15225: The label name '*string*' is already in use.

Cause: A LABEL SET command specified a label name that was already used by another Oracle Automatic Storage Management (Oracle ASM) disk.

Action: Select a different name for the label. *Params: 1) label_name: The name of the label specified for the labeling disk.

OCI-15226: label name '*string*' is not used by Oracle ASM

Cause: A LABEL CLEAR command specified a label name that was not used by Oracle Automatic Storage Management (ASM).

Action: Select a different name for the label, and retry the operation. *Params: 1) label name: The label name to be cleared from the disk.

OCI-15227: could not perform label set or clear operation

Cause: An error occurred while setting or clearing the Oracle Automatic Storage Management (Oracle ASM) label.

Action: Examine the underlying error(s) on the error stack. Check other messages in the trace files for more information.

OCI-15230: diskgroup '*string*' does not require the FORCE option

Cause: An attempt was made to MOUNT or DROP a disk group with the FORCE option.

Action: MOUNT and DROP diskgroup with the FORCE option are only permitted if the diskgroup cannot be mounted normally.

OCI-15231: Advancing disk group compatibility would exclude connected clients.

Cause: Disk group compatibility could not be advanced because connected clients were at a lower compatibility than the target value.

Action: Ensure that all connected clients are at the target compatibility level or higher.

OCI-15232: Command requires all disks in disk group *string* to be online.

Cause: Disk group compatibility could not be advanced because some disks are offline.

Action: Retry the command after all offline disks are either set to online or dropped from the disk group.

OCI-15233: Cannot advance disk group compatibility due to [*string*].

Cause: Disk group compatibility could not be advanced because of errors.

Action: Check the alert log for more information on the reason for the error.

OCI-15234: Diskgroup COMPATIBLE.RDBMS parameter value (*string*) exceeds COMPATIBLE.ASM parameter value (*string*).

Cause: Attempted to advance the COMPATIBLE.RDBMS parameter value for the diskgroup beyond the COMPATIBLE.ASM parameter.

Action: Make sure the COMPATIBLE.ASM parameter setting is at the same or higher compared to the COMPATIBLE.RDBMS parameter for the diskgroup.

OCI-15235: diskgroup *string* mount mode conflicts with existing mount

Cause: The mode specified in the diskgroup mount command conflicted with the mode in which it was mounted on some other instance.

Action: Specify a compatible mode in the diskgroup mount command.

OCI-15236: diskgroup *string* mounted in restricted mode

Cause: The specified diskgroup was mounted in restricted mode prohibiting client access.

Action: Dismount the diskgroup and remount it in appropriate mode.

OCI-15237: invalid attribute *string* to CREATE DISKGROUP command

Cause: An invalid attribute was specified with the CREATE DISKGROUP command.

Action: Check the valid attributes for CREATE DISKGROUP command and specify a valid one.

OCI-15238: *string* is not a valid value for attribute *string*

Cause: The specified value was not valid for the attribute.

Action: Check the attribute name and value.

OCI-15239: allocation unit size higher than *string* requires RDBMS compatibility *string*

Cause: The allocation unit size requested exceeded the limit imposed by the RDBMS compatibility setting.

Action: Use a smaller allocation unit size or specify a higher RDBMS compatibility setting.

OCI-15240: Attribute name *string* is invalid.

Cause: The attribute name was not valid or was not recognized.

Action: Check the attribute name and retry the operation.

OCI-15241: attribute *string* is read-only

Cause: The attribute value was read-only and could not be changed.

Action: None. The attribute value cannot be changed.

OCI-15242: Could not set attribute *string*.

Cause: Attempts to set the specified attribute failed with an error.

Action: Examine the underlying error(s) on the error stack. If necessary, contact Oracle Support Services.

OCI-15243: *string* is not a valid version number

Cause: The given version number was invalid, or not valid in this context.

Action: Verify that the version number is valid and is appropriate for this command. Check for additional errors reported.

OCI-15244: new compatibility setting less than current [*string*]

Cause: The compatibility setting was invalid. The compatibility setting can only be advanced.

Action: Check the version number.

OCI-15245: ASM disk *string* is already online or being brought online.

Cause: An attempt was made to bring a disk online that was either already online or was being brought online.

Action: Change the ONLINE statement to exclude the disk.

OCI-15246: cannot bring ASM disk *string* both online and then offline in the same statement

Cause: An attempt was made to bring the specified disk both online and offline in the same statement.

Action: Revise the statement to either bring the disk online or take the disk offline.

OCI-15247: cannot specify both WAIT and NOWAIT options in the same statement

Cause: An attempt was made to specify both WAIT and NOWAIT options in the same statement.

Action: Revise the statement and include at most one option.

OCI-15248: ASM attributes feature not enabled

Cause: The ASM attributes feature was not enabled.

Action: Advance disk group ASM compatibility to version 11.1.0 or newer.

OCI-15249: could not locate ASM attribute *string*

Cause: The specified attribute could not be accessed.

Action: Check the attribute name and examine underlying error(s) on the error stack.

OCI-15250: insufficient diskgroup space for rebalance completion

Cause: The command attempted to reduce the available diskgroup space below the current space used.

Action: Consult V\$ASM_DISK to determine the space requirements for the diskgroup contents, and repeat the command after making the required storage available.

OCI-15251: only restricted mount is allowed in the ASM instance

Cause: The ASM instance was started in restricted mode, and an attempt was made to mount a diskgroup in non-restricted mode.

Action: Start the ASM instance in non-restricted mode and mount the diskgroup again, or mount the diskgroup in restricted mode.

OCI-15252: user name '*string*' does not exist in OS user dictionary

Cause: The specified user name was not a valid operating system user.

Action: Specify a valid operating system user.

OCI-15253: user group name '*string*' exceeds limit of *string* characters

Cause: The length of the specified user group name exceeded the maximum limit.

Action: Reduce the length of the user group name to a value within the limit.

OCI-15254: user group '*string*' already exists in disk group

Cause: The specified user group name was already defined in the disk group.

Action: Specify a different user group name.

OCI-15255: user group '*string*' does not exist in disk group '*string*'

Cause: The specified user group name did not exist in the disk group.

Action: Specify a valid user group name.

OCI-15256: user '*string*' is already a member of user group '*string*'

Cause: The user that was provided was already a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

OCI-15257: exceeded *string* number of members per user group

Cause: The maximum number of members per user group was exceeded.

Action: Delete existing members of the user group to create space.

OCI-15258: user group entry number must be between *string* and *string*, inclusive

Cause: The specified user group entry number was beyond the acceptable range.

Action: Specify a valid value for the user group entry number.

OCI-15259: user '*string*' is not a member of user group '*string*'

Cause: The specified user was not a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

OCI-15260: permission denied on ASM disk group

Cause: An attempt was made to perform an operation on an ASM disk group without the appropriate privileges.

Action: Ask the ASM administrator to perform the operation or grant the required privileges.

OCI-15261: user '*string*' already exists in disk group '*string*'

Cause: The specified UID already existed in the disk group.

Action: Specify a different UID.

OCI-15262: user '*string*' does not exist in disk group '*string*'

Cause: The specified UID did not exist in the disk group.

Action: Specify a user with a valid UID.

OCI-15263: The length of the user name '*string*' exceeds the limit of *string* characters.

Cause: The length of the specified user name exceeded the maximum limit.

Action: Reduce the length of the user name to a value within the limit.

OCI-15264: operating system function returned error *string*

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

OCI-15265: user identification number not in range of [*string*,*string*]

Cause: The operating system user identification number exceeded the maximum value.

Action: Change the user identification number to a value within the accepted range.

OCI-15266: user identification number '*string*' already in use

Cause: This user identification number was already in use internally by Oracle Automatic Storage Management (Oracle ASM).

Action: Choose a different user identification number and retry the operation.

OCI-15268: Internal Oracle Automatic Storage Management (ASM) file *string* already exists.

Cause: The specified Oracle ASM internal file already existed and was not automatically overwritten.

Action: This is an internal error. Contact Oracle Support.

OCI-15269: group identification number not in range of [*string*,*string*]

Cause: The operating system group identification number exceeded the maximum value.

Action: Change the group identification number to a value within the accepted range.

OCI-15270: disk *string* is not a quorum disk

Cause: The specified disk was not a quorum disk.

Action: Retry the operation without the quorum attribute for the disk.

OCI-15271: failgroup *string* is a quorum failgroup

Cause: The specified failgroup was a quorum failgroup.

Action: Retry the operation with the quorum attribute for the failgroup.

OCI-15272: failgroup *string* is not a quorum failgroup

Cause: The specified failgroup was not a quorum failgroup.

Action: Retry the operation without the quorum attribute for the failgroup.

OCI-15273: Could not create the required number of voting files.

Cause: The required number of voting files could not be created. See accompanying messages for possible causes.

Action: See accompanying messages for possible actions.

OCI-15274: Not enough failgroups (*string*) to create voting files

Cause: The number of failgroups required for this redundancy were not present in the diskgroup to create voting files.

Action: Retry the operation after creating new failgroup(s).

OCI-15275: not enough space (*string* allocation units) in disk *string* to allocate voting file

Cause: The specified disk did not have enough (contiguous) space to allocate a voting file on it.

Action: Ensure that there is at least 1 disk with the required space in the minimum required number of failure groups for the disk group and retry the operation.

OCI-15276: ASM diskgroup *string* has cluster voting files

Cause: An attempt was made to drop a diskgroup that contained cluster voting files.

Action: Move the cluster voting files out of the diskgroup and retry the operation.

OCI-15277: disk *string* is a quorum disk

Cause: The specified disk was a quorum disk.

Action: Retry the operation with the quorum attribute for the disk.

OCI-15278: External redundancy disk group requires at least one regular disk.

Cause: Attempted to create an external redundancy disk group with only quorum disks.

Action: Specify at least one regular disk to create an external redundancy disk group.

OCI-15279: user '*string*' is currently being deleted

Cause: The specified user was in the process of being deleted and could not be used.

Action: Either abandon this operation or specify a different user.

OCI-15280: user '*string*' owns existing files

Cause: An attempt was made to drop a user that still owns existing files.

Action: Specify the CASCADE option to drop the user and all of the owned files.

OCI-15281: not all specified disks were brought ONLINE

Cause: Some of the disks specified either experienced I/O errors while being brought ONLINE, or were simultaneously brought OFFLINE or dropped in another session, or were full.

Action: Query V\$ASM_DISK or use ASMCMD LSDSK to determine which disks were not brought ONLINE. Inspect any additional error messages and the alert log to determine the exact cause. If some of the disks failed, either fix the cause of the failures or drop the disks. If some of the disks are full, either free space in the disk group or add new disks to the diskgroup.

OCI-15282: Cluster Synchronization Services operation '*string*' failed with error '*string*'.

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

OCI-15283: ASM operation requires compatible.rdbms of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.rdbms.

Action: Set the disk group attribute compatible.rdbms to or above the requested version.

OCI-15284: ASM terminated ALTER DISKGROUP ONLINE

Cause: None of the disks specified by ALTER DISKGROUP ONLINE could be brought ONLINE.

Action: Inspect additional error messages and the alert log to determine why the specified disks cannot be brought ONLINE.

OCI-15285: disk '*string*' violates disk group attribute *string*

Cause: Including the specified disk would violate a restriction imposed by the specified disk group attribute.

Action: Retry the operation while omitting the offending disk or change the attribute.

OCI-15286: failed to set attribute *string* for the Oracle ASM disk group due to offline disks

Cause: The specified attribute could not be set for the Oracle Automatic Storage Management (Oracle ASM) disk group because some disks in the disk group were offline.

Action: Drop the offline disks and wait for the rebalance operations to complete, or online the offline disks and wait for the online to complete. Then retry the operation.

OCI-15287: could not set disk group attribute *string* due to incompatible disks

Cause: The specified disk group attribute could not be set because the disk group includes disks that conflict with the new value.

Action: Retry the operation after dropping the conflicting disks in this disk group.

OCI-15288: disk(s) require disk group attribute *string* clause

Cause: Some of the disks specified by the command also require the specified disk group attribute to be stated.

Action: Retry the command including an ATTRIBUTE clause for the required disk group attribute. Alternatively, omit the disks that require setting the disk group attribute. See the alert log for additional information on the disks that require setting the disk group attribute.

OCI-15289: disk *string* is limited to *string* MB on instance *string*

Cause: An ALTER DISKGROUP ADD DISK or RESIZE DISK command specified a disk with a size greater than the specified instance could use.

Action: Check the storage subsystem configuration on the specified node.

OCI-15290: operation not permitted on offline disk *string*

Cause: An attempt was made to specify an operation that is only permitted on disks that are online. The specified disk was not online.

Action: Online the disk or wait for online to complete before retrying the operation.

OCI-15291: ASM could not add disk "*string*" to disk group "*string*"

Cause: An attempt was made to add a disk to a disk group while the distribution of disks in failure groups was too uneven.

Action: Add or drop disks to or from failure groups to balance their distribution in all failure groups and retry the operation.

OCI-15292: Disk name *string* is being used by another disk

Cause: The specified disk name could not be reused because an 11.1.0.6.0 or earlier database instance had it cached in memory.

Action: Do one of the following - Specify a different name for the disk. - Wait for the rebalance to complete successfully. - Identify the database instance with the problem and shut it down before retrying the command.

OCI-15293: operation disallowed by ASM_POWER_LIMIT

Cause: This operation required data movement in order to complete successfully. However, ASM_POWER_LIMIT was set to zero, thereby preventing this operation.

Action: Repeat the operation after setting ASM_POWER_LIMIT to a non-zero value.

OCI-15294: cannot grant or revoke SYSASM privilege on database instances

Cause: The SYSASM privilege could not be granted or revoked on database instances. This privilege can only be used to authenticate on Oracle Automatic Storage Management instances.

Action: Ensure that there is a connection to an Oracle Automatic Storage Management instance, and grant or revoke the SYSASM privilege.

OCI-15295: Oracle ASM instance software version *string* less than client version *string*

Cause: The Oracle ASM instance software version was less than the client version.

Action: Upgrade the Oracle ASM instance software or use a client version that matches the Oracle ASM version. Check the alert log for more information regarding the failure.

OCI-15298: possible lost disk write detected during crash recovery

Cause: ASM crash recovery read a block whose version was older than expected.

Action: None. End users will not see this error. ASM automatically traps this error and attempts a fallback recovery.

OCI-15299: FINE striping not allowed for the Staleness Registry

Cause: An SQL command attempted to set the striping attribute of the ASM_STALE template to FINE striping.

Action: Do not modify the striping attribute of the ASM_STALE template.

OCI-15300: File *string* is incompatible with this operation

Cause: The file type was incompatible with the operation.

Action: Use another file of the correct type.

OCI-15301: cannot change %0!s of the open file '%1!s'

Cause: A SET OWNERSHIP or SET PERMISSION command was attempted on an open file. These commands require the file to be closed.

Action: Close the file and then retry the operation.

OCI-15302: active use of files owned by user '*string*' precludes its drop

Cause: A DROP USER command specified a user owning files that were in use.

Action: Close all files owned by this user.

OCI-15303: Voting files could not be created in diskgroup *string* due to small Allocation Unit size

Cause: An attempt was made to create voting files in a diskgroup with a small Allocation Unit size.

Action: Create voting files in a different diskgroup whose Allocation Unit size is at least 1 mega byte.

OCI-15304: operation requires ACCESS_CONTROL.ENABLED attribute to be TRUE

Cause: An attempt was made to run an operation that required the ACCESS_CONTROL.ENABLED attribute to be set to TRUE, but its existing state was FALSE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE and retry the operation.

OCI-15305: cannot update Oracle ASM internal files

Cause: An attempt was made to change Oracle Automatic Storage Management (Oracle ASM) metadata used to manage the disk group. This was not allowed.

Action: Check the specified Oracle ASM file name to ensure a file name with a file number greater than or equal to 256 is selected.

OCI-15306: ASM password file update failed on node *string*

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on the specified node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

OCI-15307: disk *string* not discoverable by CSS; diskgroup *string* has CSS voting files

Cause: An attempt was made to add a disk which cannot be discovered by Cluster Synchronization Services (CSS). CSS has voting files in the disk group and will not be able to use the new disk if CSS cannot discover the disks.

Action: Update the Automatic Storage Management (ASM) disk string in the Grid Plug and Play (GPNP) profile to include the specified disk and retry the operation. Alternatively, migrate the CSS voting files out of the diskgroup and retry the operation

OCI-15308: cannot access Oracle ASM SPFILE in RDBMS instance

Cause: An attempt to open an Oracle Automatic Storage Management (Oracle ASM) server parameter file (SPFILE) from a relational database management system (RDBMS) instance was disallowed.

Action: Connect to an Oracle ASM instance and reissue the command. Alternatively, specify an RDBMS SPFILE.

OCI-15309: could not access database SPFILE in ASM instance

Cause: An Automatic Storage Management (ASM) instance attempted to access a relational database management system (RDBMS) SPFILE.

Action: Connect to an RDBMS instance and reissue the command. Alternatively, specify an ASM SPFILE.

OCI-15310: process terminated due to signal

Cause: A process was terminated as a result of a signal in the I/O path.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

OCI-15311: process terminated due to fenced I/O

Cause: A process was terminated because it was fenced from doing any more I/Os.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

OCI-15312: invalid file type

Cause: Automatic Storage Management (ASM) could not determine the type of file.

Action: The file specified is not supported with Automatic Storage Management (ASM). Specify a supported file type for the operation.

OCI-15313: Oracle ASM disk *string* cannot be resized under *string M*

Cause: An Oracle ASM disk resize command specified a size that was less than the size required to support the voting file present on the disk.

Action: Increase the size specified for the disk.

OCI-15315: Write errors in disk group *string* could lead to inconsistent Oracle ASM metadata.

Cause: One or more failures occurred while writing Oracle Automatic Storage Management (Oracle ASM) metadata to the disk.

Action: Repair the hardware problem and remount the disk group. Check the accompanying errors and alert log for the disks which reported the error.

OCI-15316: Previous client instance *string* has not fully exited.

Cause: A process from a prior instantiation of this client was not fenced.

Action: Ensure that all processes belonging to the client instance have exited. Check the client alert log and the trace file of the process that terminated the instance.

OCI-15317: user identification number '*string*' does not exist in operating system user dictionary

Cause: The specified user identification number did not belong to a valid operating system user.

Action: Specify a valid operating system user.

OCI-15318: disks in disk group *string* cannot be resized

Cause: Execution of ASM Storage Reclamation Utility script was incomplete on the specified disk group.

Action: Execute ASM Storage Reclamation utility on the disk group to complete the operation.

OCI-15319: ownership assignment of files to user '*string*' precludes its drop

Cause: A DROP USER command specified a user currently being assigned as the owner of one or more files with a SET OWNERSHIP command.

Action: Wait for the SET OWNERSHIP command to complete and then retry the DROP USER command

OCI-15320: cannot drop user '*string*' that has been assigned as the owner of one or more open files

Cause: A SET OWNERSHIP command assigned this user as the owner of one or more files which were open at the time of assignment, and hence this user cannot be dropped due to possible inconsistencies in file ownerships.

Action: Restart all ASM client instances of the cluster in a rolling manner.

OCI-15321: failed to set attribute *string* for the Oracle ASM disk group due to connected clients

Cause: The specified attribute could not be set for the Oracle Automatic Storage Management (Oracle ASM) disk group because it was being used by one or more databases.

Action: Query the V\$ASM_CLIENT view in an Oracle ASM instance or use the ASMCMD LSOF command to identify databases using the Oracle ASM disk group. Shut down

connected clients and then retry the operation. *Params: 1) attribute_name: The name of the Oracle ASM disk group attribute.

OCI-15322: cannot drop the owner '*string*' of user group '*string*' in disk group '*string*'

Cause: An attempt was made to drop the owner of a user group from the group's member list.

Action: Specify a user group member who is not the owner of the user group.

OCI-15323: ASM password update has failed on local node

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on the local node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

OCI-15324: Requested operation is not allowed on password file *string*.

Cause: Attempted to run an unsupported operation on password files.

Action: Specify a new file name or a file with the correct file type, and retry the operation.

OCI-15325: File *string* is not a valid password file.

Cause: An attempt was made to open a file that had a type different from the password file.

Action: Specify a valid password file name and retry the operation.

OCI-15326: specified input *string* is not an ASM file

Cause: The attributes could not be obtained because the specified input was either a disk group or a directory.

Action: Specify a valid Automatic Storage Management (ASM) file name.

OCI-15327: remote ASM is not enabled

Cause: An operation was requested that requires remote ASM to be enabled.

Action: Enable remote ASM.

OCI-15328: user identification string '*string*' exceeds limit of *string* characters

Cause: The user identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a user identification string of shorter length.

OCI-15329: cluster identification string '*string*' exceeds limit of *string* characters

Cause: The cluster identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a cluster identification string of shorter length.

OCI-15330: ASM user name format requires COMPATIBLE.ASM of *string* or higher

Cause: The ASM user name format specified requires a higher disk group attribute value for COMPATIBLE.ASM.

Action: Set the disk group attribute COMPATIBLE.ASM to or above the requested version.

OCI-15331: Oracle ASM proxy instance ORACLE_SID *string* does not start with *string*.

Cause: The Oracle ASM proxy instance was started with an invalid ORACLE_SID prefix.

Action: Start the Oracle ASM proxy instance with an ORACLE_SID that begins with the correct prefix.

OCI-15332: ASM proxy instance cannot connect to an ASM server

Cause: The ASM proxy instance could not find an ASM server to connect to during startup.

Action: Verify that an ASM server instance is running and accessible in the cluster and restart the proxy instance.

OCI-15333: disk is not available on all client instances

Cause: An ALTER DISKGROUP ADD DISK statement specified a disk that could not be discovered by all client instances.

Action: Check the Oracle ASM and client alert logs for more information. Check operating system permissions for the device and the storage subsystem configuration on all instances.

OCI-15334: volume background process terminated with error

Cause: A volume background process terminated with an error.

Action: Restart the Oracle Automatic Storage Management (Oracle ASM) instance where the issue occurred. If the issue persists, contact Oracle Support Services.

OCI-15335: ASM metadata corruption detected in disk group '*string*'

Cause: A corruption was detected reading a block. It may be recoverable.

Action: The corruption could be the result of a storage problem, a configuration issue, or a software bug. Check the alert log for the result of the recovery attempt. If unsuccessful, contact Oracle Support Services with the incident information.

OCI-15336: STRIPE_WIDTH cannot be set when STRIPE_COLUMNS equals 1

Cause: An ADD VOLUME command specified a value of 1 in STRIPE_COLUMNS and specified the STRIPE_WIDTH argument.

Action: If striping is required, then set STRIPE_COLUMNS to a value greater than 1. If striping is not required, then do not set STRIPE_WIDTH.

OCI-15337: invalid or missing database name

Cause: You did not specify a valid database name for this command.

Action: Specify a valid database name.

OCI-15338: Oracle ASM client instance *string* reconnection refused

Cause: The client was not an orphaned client and is not a legitimate candidate to reconnect to Oracle ASM.

Action: Shut down and restart the remote client so that it is considered a new client in the cluster.

OCI-15339: client instance *string* has been fenced by Oracle ASM

Cause: Oracle ASM had already fenced this client.

Action: Shutdown and restart the remote client instance to be registered as a new client in the cluster.

OCI-15340: unable to create member cluster '*string*'

Cause: Creation of the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

OCI-15341: unable to delete member cluster '*string*'

Cause: Deletion of the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

OCI-15343: Feature *string* ASM is not enabled

Cause: An operation was requested that requires Oracle Flex ASM to be enabled.

Action: Enable Oracle Flex ASM.

OCI-15344: client *string* not found

Cause: The specified Oracle Automatic Storage Management (Oracle ASM) client was not registered with this instance.

Action: Check the Oracle ASM instance alert log, the client alert log and trace files, and any accompanying error messages for more information on the reason for the failure.

OCI-15345: disconnected client instance(s) detected

Cause: One or more ASM client instances were not connected to an ASM instance.

Action: Check that all of the ASM client instances are connected to an ASM instance and retry the operation.

OCI-15346: Process attempting to identify or create the Oracle Automatic Storage Management (Oracle ASM) file *string* was aborted.

Cause: The client process attempting to create or open the Oracle ASM file was terminated or interrupted.

Action: Use the alert log to identify any issues encountered. Correct the cause of the issue and retry. If the issue persists, contact Oracle Support.

OCI-15347: The logical block size %0!s of the Oracle Automatic Storage Management (Oracle ASM) file '%1!s' is too small for disk group sector size %2!s.

Cause: You attempted to create a file on Oracle ASM whose logical block size was less than the sector size of the disk group.

Action: Check if the system configuration has changed. Correct the error and retry.

OCI-15348: ASMLIB misconfiguration error [*string*]

Cause: ASMLIB was found in more than one location.

Action: Check the configuration of ASMLIB and ensure that only one library is configured.

OCI-15349: failed to set or get AFD_DISKSTRING parameter

Cause: The operation failed because either Oracle Local Repository (OLR) was not available or AFD disk string attribute did not exist.

Action: Check that Oracle Clusterware is properly configured using 'ocrcheck -local' command.

OCI-15350: invalid SYS_ASMFD_PROPERTIES parameter

Cause: The parameter passed in for SYS_ASMFD_PROPERTIES was invalid.

Action: Pass in the correct parameter. Refer to the product documentation for a list of allowed parameter values.

OCI-15351: I/O request issued to a sparse grid disk failed because the disk was out of space.

Cause: The sparse grid disk was out of space.

Action: Add more space to the disk group by adding more disks or add more space to existing disks by resizing them.

OCI-15352: invalid client name *string* specified

Cause: The client name specified in the command was invalid.

Action: Specify a valid client name. A valid client name must have one of the following formats: *instance name:database unique name:cluster name* or *instance name:database unique name*

OCI-15353: disk '*string*' cannot be added to disk group '*string*'

Cause: The disk type did not match the disk group sparse type.

Action: Ensure that the disk type matches the disk group sparse type.

OCI-15354: failed to format grid disk "*string*"

Cause: The grid disk format command failed.

Action: Check the grid disk logs and take corrective actions.

OCI-15357: File "*string*" can not be created on a sparse disk group.

Cause: An attempt was made to create a fine-grained striping file on a sparse disk group. Fine-grained striping files cannot be created on sparse disk groups.

Action: Create the file on a regular disk group, or create a coarse-grained striping file on a sparse disk group.

OCI-15358: query for materialized space to sparse grid disk "*string*" of disk group "*string*" has failed

Cause: The query for materialized space to the cell server has failed.

Action: Check the ASM and cell alert logs and take corrective actions.

OCI-15359: could not perform label scan operation

Cause: An error occurred while scanning for ASM label.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

OCI-15360: could not perform label filter operation

Cause: An error occurred while setting AFD filter status.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

OCI-15361: unable to find member cluster '*string*'

Cause: Looking up of the member cluster failed.

Action: Execute the 'asmcmd lscc' command to list all of the configured member clusters. If the member cluster listed in the message is not present, it might have been forcibly deleted. Refer to the product documentation for more information. If the member cluster listed in the message was present, contact Oracle Support Services.

OCI-15362: invalid cluster name '*string*' specified

Cause: An invalid cluster name was supplied.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

OCI-15363: invalid version number '*string*' specified

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form `###.###` or other forms with fewer numbers delimited by a period.

OCI-15364: member cluster version *string* is incompatible with storage server version *string*

Cause: The specified member cluster version was not supported by the Storage Server.

Action: Upgrade or downgrade the storage server to a version that is compatible with member cluster and retry the operation. Install a member cluster using a supported version. Refer to product documentation for a complete list of supported releases.

OCI-15365: member cluster '*string*' already configured

Cause: The specified member cluster was already configured.

Action: Execute the 'asmcmd lscc' command to list all of the configured member clusters. Reexecute the command with a member cluster name that has not already been configured.

OCI-15366: unable to delete configuration for member cluster '*string*' because the directory '*string*' was not empty

Cause: Deleting the member cluster configuration failed because some files were present.

Action: Deinstall the member cluster and rerun the command. If the command fails again, execute the 'asmcmd rmcc <member_cluster_name> -f' command to force deletion of the configuration for the member cluster.

OCI-15367: member cluster '*string*' not configured

Cause: The specified member cluster was not configured.

Action: Execute the 'asmcmd lsc' command to list all of the configured member clusters. Reexecute the command with a member cluster name that is configured.

OCI-15368: Oracle Cluster Registry operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-15369: Oracle Call Interface (OCI) call returned invalid handle *string*.

Cause: An Oracle Call Interface (OCI) call returned the OCI_INVALID_HANDLE return code and did not store the error on the stack.

Action: Check the alert log and trace file for more information on this failure. Solve any issues and retry the operation. If the issue persists, contact Oracle Support Services.

OCI-15370: database version needs to be 12.1 or higher to access a disk group number higher than 63

Cause: An attempt was made to access a disk group number greater than 63 with a database version lower than 12.1.

Action: Upgrade the database to version 12.1 or higher and retry the operation.

OCI-15371: The command is not supported on a member cluster.

Cause: An attempt was made to run a command that is not supported on a member cluster.

Action: Rerun the command on the storage server.

OCI-15372: Client version *string* not supported by the Oracle ASM instance.

Cause: The software version of the client instance was not supported by the release of the Oracle ASM instance.

Action: Upgrade the client instance to a later release that is compatible with the Oracle ASM instance and retry the operation. Refer to product documentation for a complete list of supported releases.

OCI-15373: SYSDBG, SYSKM, SYSRAC, and SYSBACKUP administrative privileges cannot be granted on an ASM instance.

Cause: An attempt was made to grant or revoke SYSDBG, SYSKM, SYSRAC, or SYSBACKUP administrative privileges to a user on an ASM instance.

Action: Do not attempt to grant SYSDBG, SYSKM, SYSRAC, or SYSBACKUP administrative privileges on an ASM instance.

OCI-15374: invalid cluster configuration

Cause: The client instance detected an invalid configuration.

Action: Install and configure Oracle Grid Infrastructure and retry the operation. Refer to product documentation for more information.

OCI-15375: Physical sector size (*string*) cannot be smaller than the logical sector size (*string*).

Cause: An attempt was made to create or modify a disk group with a physical sector size value smaller than its logical sector size value.

Action: Review the SQL statement and fix any discrepancies.

OCI-15376: The existence of native disk '*string*' does not allow disk group *string* from changing sector sizes. Sector size of native disk is *string*.

Cause: An attempt was made to change the physical or logical sector size value. Changing the sector size value is not allowed when there are native disks (physical sector equal to logical sector size) in the disk group, because this could cause invalid I/O operations.

Action: Drop the native disks or replace them for disks that support sector size emulation.

OCI-15377: Block size (*string*) for file '*string*' is incompatible with the selected sector size (*string*).

Cause: The operation could not be completed because the sector size was incompatible for the specified file.

Action: Re-create or migrate the file to a block size that is compatible with the desired sector size, and redo the operation.

OCI-15378: Grid Naming Service operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

OCI-15379: Cluster Credentials operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

OCI-15380: invalid file group name specifier

Cause: The file group name specified was invalid.

Action: Specify a valid file group name.

OCI-15381: missing or invalid file group client specifier

Cause: The command did not specify a valid file group client string.

Action: Specify a valid file group client string with alphanumeric characters.

OCI-15382: invalid file group client name specifier

Cause: The file group name specified was invalid.

Action: Specify a valid file group name.

OCI-15383: invalid file group property '*string*'

Cause: An invalid property was specified for the Oracle Automatic Storage Management (Oracle ASM) file group.

Action: Check the Oracle documentation for valid Oracle ASM file group properties. The correct format of a valid Oracle ASM file group property is either file '*type.property_name*' or '*property_name*'.

OCI-15384: invalid file type '*string*'

Cause: An invalid file type was specified for the Oracle Automatic Storage Management (Oracle ASM) file group property.

Action: Check the documentation for valid Oracle ASM file types.

OCI-15385: file group '*string*' does not exist

Cause: The specified file group did not exist within the disk group.

Action: Specify a file group that exists within the disk group.

OCI-15386: file group '*string*' already exists in disk group '*string*'

Cause: A file group with the same name was already defined.

Action: Select another file group name or drop the existing file group. While creating non multitenant container database (CDB) or pluggable database (PDB), manually create a file group for the non-CDB or PDB.

OCI-15387: existing files are associated with file group '*string*'

Cause: An attempt was made to drop a file group that contained existing files.

Action: Specify the CASCADE option to drop the file group and all of the associated files.

OCI-15388: A file type cannot be specified for file group property '*string*'.

Cause: The specified file group property affects the file group itself or all files in the file group. It is not specific to a type of file.

Action: Remove the file type from the property name.

OCI-15389: missing or invalid file group property specification

Cause: The command did not specify a valid file group property name or a valid file group property value.

Action: Specify a valid file group property name and value pair.

OCI-15390: invalid value for file group property '*string*'

Cause: An invalid value was specified for the Oracle Automatic Storage Management (Oracle ASM) file group property.

Action: Check the documentation for acceptable values for this Oracle ASM file group property.

OCI-15391: cannot drop the default file group

Cause: The specified file group was created by the system and must always exist for proper operation.

Action: Specify another file group name.

OCI-15392: cannot alter the default file group

Cause: The specified file group was created by the system and must remain set to the default values for proper operation.

Action: Specify another file group name.

OCI-15393: File number '*number*' does not exist in file group '*string*'.

Cause: The specified file did not exist within the file group.

Action: Check the file number and the file group number.

OCI-15394: duplicate file group property '*string*' specified

Cause: A command specified the same file group property more than once for the same file type.

Action: Specify only one file group property for each file type.

OCI-15395: file group redundancy incompatible with file type

Cause: An attempt was made to move a file to a file group with an incompatible redundancy specification, or to change the redundancy specification of a file group in a way that was incompatible with existing files in that file group.

Action: Specify a valid redundancy property for the file group. Only write-once files, such as the offline archive log and backup set, support parity protection. Other types of files must be configured with as unprotected, mirror or high redundancy. The file group redundancy can be changed from a parity protection scheme to unprotected, mirror, or high, and conversely, as long as the file group does not contain any files.

OCI-15396: command operates on only one file group property

Cause: More than one file group property was specified in the ADD FILEGROUP or MODIFY FILEGROUP statement.

Action: Specify only one file group property per statement.

OCI-15397: command requires all disks in disk group *string* to be online

Cause: The file group redundancy could not be changed to UNPROTECTED because some disks were offline.

Action: Retry the command after the offline disks are dropped.

OCI-15398: file group property '*string*' is read-only

Cause: The specified file group property could not be changed.

Action: Retry the command providing a nonread-only file group property.

OCI-15399: New RDBMS compatibility '%0!s' exceeds client COMPATIBLE setting '%1!s'.

Cause: The specified value for the COMPATIBLE.RDBMS attribute exceeded the database COMPATIBLE setting for one or more clients.

Action: Verify the COMPATIBLE setting for each client of this disk group.

OCI-15400: not running on supported Oracle Automatic Storage Management (Oracle ASM) appliance

Cause: An attempt was made to initialize the server code as an appliance when it was not running a supported appliance configuration.

Action: Check the appliance configuration and retry the operation.

OCI-15401: command not supported on ASM appliance '*string*'

Cause: An attempt was made to run an operation that is not supported by the specified appliance.

Action: Check the documentation to see which operations are allowed or disallowed for the specified appliance.

OCI-15402: insufficient number of disks to support ASM appliance '*string*'

Cause: An attempt was made to do an operation that resulted in insufficient number of disks required for the specified appliance.

Action: Check the appliance configuration and retry the operation after inserting disks in the appropriate slots.

OCI-15403: unable to read an ASM appliance configuration file

Cause: Oracle ASM was unable to read an appliance configuration file.

Action: Check the operating system error messages to determine the identity of the configuration file. Then, fix the configuration file.

OCI-15404: Oracle ASM could not add disk "*string*" to disk group "*string*" on appliance *string*

Cause: There were too many dropping or offline disks in the specified disk group.

Action: Wait for the drop and rebalance operations to complete, or online the offline disks and wait for the online to complete. Then, retry the operation.

OCI-15405: Slot *string* partition *string* in Oracle ASM appliance '*string*' contains more than one disk.

Cause: An attempt was made to add a disk to a slot and a partition number in the Oracle ASM appliance that already had a disk (possibly OFFLINE) associated with it.

Action: Use FORCE to drop the disk that exists in the specified slot and the partition number. Then, retry the operation.

OCI-15406: ASM disk *string* is being replaced.

Cause: An attempt was made to either online or replace a disk that was already being replaced, probably by another instance.

Action: Change the ONLINE statement to exclude the disk.

OCI-15407: Disk specification '*string*' matches multiple disks.

Cause: More than one disk is discovered matching the specified disk string.

Action: Change the disk string to specify one and only one disk.

OCI-15408: Replacement disk '*string*' for '*string*' must be at least *string* MB.

Cause: The replacement disk must be at least of the same size of the old disk.

Action: Use a larger physical disk to replace.

OCI-15409: All disks in disk group *string* are not of the same type.

Cause: An attempt was made to add disks of a different type to the disk group under appliance mode.

Action: Check if all the disks in the disk group are of the same type. Do not add flash and hard disks to the same disk group.

OCI-15410: Disks in disk group *string* do not have equal size.

Cause: The disks in the disk group were not of equal size.

Action: Ensure that all disks in the disk group are of equal size. If adding new disks to the disk group, their size must be equal to the size of the existing disks in the disk group. If resizing, all disks in the disk group must be resized to the same size.

OCI-15411: Failure groups in disk group *string* have different number of disks.

Cause: An attempt was made to enable appliance mode with a different number of disks in each failure group.

Action: Check if all failure groups have an equal number of disks and try again.

OCI-15412: Operation on disk group *string* is incompatible under appliance mode.

Cause: An attempt was made to do an operation that resulted in dropping all disks in a failure group or creating a new failure group.

Action: Disable appliance mode, perform the operation and reenable appliance mode.
WARNING: To reenable appliance mode, ensure the following constraints are met: * There are a sufficient number of disks in each failure group. * All failure groups have an equal number of disks. * There are no offline disks in the disk group. * Every disk in the disk group is of the same type (flash or hard disk). * All disks in the disk group have an equal size.

OCI-15413: Appliance mode is disabled.

Cause: Appliance mode cannot be set because it was explicitly disabled.

Action: Enable appliance mode and appliance partnering parameters.

OCI-15414: Appliance mode requires either *string* or *string* disks in all failure groups.

Cause: Appliance mode cannot be enabled because it does not meet the minimum requirements.

Action: Check if there are sufficient number of disks in each failure group.

OCI-15415: could not retrieve appliance properties for disk group *string*

Cause: Some of the appliance properties were invalid. This could be due to a cell software downgrade after setting the 'appliance.mode' attribute.

Action: Check the cell software on all of the cells or disable appliance mode.

OCI-15416: ASM disk *string* in disk group *string* is offline.

Cause: An offline disk prevented the current ADD or DROP operation.

Action: Drop the offline disk or online the offline disk or disable appliance mode.

OCI-15418: Appliance mode is not supported for compatible.asm *string*.

Cause: Appliance mode could not be enabled for the current value of the compatible.asm attribute.

Action: Disable appliance mode if it is enabled or advance compatible.asm to a version that supports appliance mode.

OCI-15419: disk group *string* is not mounted in restricted mode

Cause: The specified disk group was not mounted in restricted mode which prohibited the requested operation.

Action: Dismount the disk group, mount it in restricted mode, and then retry the operation.

OCI-15420: Operation on disk group *string* is disabled.

Cause: The current operation could not be completed because the disk group is in the middle of an appliance migration.

Action: Wait for the migration to complete and then retry the command.

OCI-15421: *string* is not supported when the disk group is mounted for recovery.

Cause: The disk group was mounted for recovery preventing the requested operation.

Action: Dismount the disk group, remount it in normal mode and retry the operation.

OCI-15422: Disks '*string*' and '*string*', in failure group '*string*' of disk group '*string*', do not belong to the same cell

Cause: It was detected that disks from different cells belong to the same failure group.

Action: Make the necessary disk swaps so only disks from the same cell belong to the same failure group.

OCI-15423: Disk '*string*' in failure group '*string*' and disk '*string*' in failure group '*string*' of disk group '*string*' belong to the same cell

Cause: It was detected that disks from the same cell belong to different failure groups.

Action: Make the necessary disk swaps so disks from the same cell are not shared between different failure groups.

OCI-15425: DB_UNIQUE_NAME conflict across clusters

Cause: The DB_UNIQUE_NAME parameter was specified with duplicate, conflicting or invalid attributes.

Action: Specify a different DB_UNIQUE_NAME.

OCI-15426: Slot *string* partition *string* in Oracle ASM appliance '*string*' contains more than one disk.

Cause: An attempt was made to add a disk to a slot and a partition number in the Oracle ASM appliance that already had a disk (possibly OFFLINE) associated with it.

Action: Check the appliance configuration and retry the operation after inserting disks in the appropriate slots. If the disk that exists in the specified slot and the partition is dropping, then wait for the rebalance operation to finish before retrying the operation, or use FORCE to drop the existing disk and then retry the operation. Note that with FORCE drop, the redundancy of the diskgroup may be compromised until the rebalance operation completes. If the disk that exists in the specified slot and the partition is OFFLINE, then use REPLACE disk to replace the disk.

OCI-15427: Appliance mode requires at least *string* failure groups.

Cause: Appliance mode cannot be enabled because it does not meet the minimum requirements.

Action: Check if there are sufficient failure groups in the disk group.

OCI-15428: Invalid disk slots to enable appliance mode.

Cause: Appliance mode requires that the set of disk slots in every regular (non-quorum) failure group is the same and also, the disk slots are consecutive.

Action: Use cellcli and check the celldisk attribute 'virtualslot' for every disk that belongs to the Oracle Automatic Storage Management (Oracle ASM) disk group. Ensure the slot requirements are met before enabling appliance mode for the disk group. If this is CREATE DISKGROUP operation, ensure that the correct set of disks are used. Otherwise, use the ALTER DISKGROUP SQL to ADD the correct disks to the disk group or DROP the incorrect disks from the disk group.

OCI-15429: Appliance mode requires at least *string* disks in each failure group.

Cause: Appliance mode cannot be enabled because it does not meet the minimum requirements.

Action: Check if there are sufficient disks in each regular (non-quorum) failure group in the disk group.

OCI-15430: missing or invalid quota group name

Cause: The command did not specify a valid quota group name.

Action: Specify a valid quota group name.

OCI-15431: missing or invalid quota group property

Cause: The command did not specify a valid quota group property.

Action: Specify a valid quota group property.

OCI-15432: missing or invalid quota

Cause: The command did not specify a valid quota limit for the quota group.

Action: Specify a valid quota limit.

OCI-15433: missing or invalid file group name

Cause: The command did not specify a valid file group name.

Action: Specify a valid file group name.

OCI-15434: quota group *string* already exists in disk group *string*

Cause: The specified quota group already existed in the disk group.

Action: Specify a different quota group name.

OCI-15435: quota group *string* does not exist in disk group *string*

Cause: The specified quota group did not exist in the disk group.

Action: Specify a valid quota group name.

OCI-15436: invalid operation on quota group *string*

Cause: The specified operation was not permitted on the quota group.

Action: Check the quota group specified in the command.

OCI-15437: insufficient quota available in quota group *string*

Cause: The specified quota group did not have sufficient quota available to permit the operation.

Action: Specify a quota group with enough available quota or increase the quota limit of the specified quota group.

OCI-15438: Quota group *string* has one or more file groups associated.

Cause: One or more file groups were associated with the specified quota group and, therefore, the operation was not permitted.

Action: Drop the file groups or move the file groups to a different quota group.

OCI-15440: VIO0 process terminated with an error

Cause: A volume I/O background (VIO0) process terminated with an error.

Action: No action is required since the process will restart automatically. If the issue persists, check the log files for the cause. If you need additional assistance, contact Oracle Support.

OCI-15442: The ASM rebalance phase *string* does not exist.

Cause: The specified ASM rebalance phase did not exist.

Action: Specify a valid rebalance phase.

OCI-15443: The ASM rebalance phase *string* cannot be skipped.

Cause: The specified ASM rebalance phase cannot be skipped.

Action: Specify a valid rebalance phase to skip.

OCI-15444: Volume *string* must be online and mounted to complete the operation.

Cause: The operation could not be completed with the volume offline or dismounted.

Action: Ensure that the volume is online or mounted, and retry the operation.

OCI-15445: Volume *string* does not allow sector size migration.

Cause: Sector size migration was not allowed because either of the following existed in the disk group: * Oracle ACFS accelerator volumes, or * Volumes associated with an Oracle ACFS accelerator, or * Non-Oracle ACFS volumes

Action: Move the volume to a different disk group, and retry the operation.

OCI-15449: volume creation on a sparse disk group is not supported

Cause: Volume creation failed because a sparse disk group is specified.

Action: Specify a different disk group that is not sparse.

OCI-15450: invalid volume name specifier

Cause: The volume name specified was invalid

Action: Specify a valid volume name.

OCI-15451: missing or invalid volume size specifier

Cause: The volume size specified was invalid.

Action: Specify a valid volume size.

OCI-15452: missing or invalid stripe width specifier

Cause: The volume stripe width specified was invalid.

Action: Specify a valid volume stripe width.

OCI-15453: invalid STRIPE_COLUMNS specifier

Cause: An ADD VOLUME command did not specify a valid number of stripe columns.

Action: Specify a valid number of stripe columns.

OCI-15454: ALTER DISKGROUP ALL cannot use single volume names

Cause: An ALTER DISKGROUP ALL command specified a single volume or a list of volumes

Action: Use the ALL keyword when specifying volumes on multiple diskgroups.

OCI-15455: FORCE option cannot be used when specifying ALL volumes

Cause: The FORCE option was used to disable ALL volumes.

Action: Use FORCE option to disable one volume at a time.

OCI-15456: missing or invalid volume usage specifier

Cause: The command did not specify a valid volume usage string.

Action: Specify a valid volume usage string with alphanumeric characters.

OCI-15457: first letter of the volume name is not an alphabet

Cause: The first letter of the volume name was not an alphabetic character.

Action: Specify an alphabetic character as the first letter of the volume name.

OCI-15458: invalid character '*string*' in volume name

Cause: A volume name was specified with an invalid character.

Action: Use a volume name with alphanumeric characters only. *Params: 1)
character: The invalid character in the volume name.

OCI-15459: STRIPE_WIDTH of *string* is not a power of two.

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was not a power of two.

Action: Select a STRIPE_WIDTH that is a power of two; for example, 4K and 8K.

OCI-15460: volume name '*string*' is already in use

Cause: An ADD VOLUME command specified a volume name that was already used by another volume.

Action: Select a different name for the volume.

OCI-15461: STRIPE_WIDTH of *string* bytes is less than the minimum of *string* bytes.

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too small.

Action: Select a larger STRIPE_WIDTH value and retry the operation.

OCI-15462: STRIPE_WIDTH of *string* bytes is greater than the maximum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too large.

Action: Specify a smaller STRIPE_WIDTH.

OCI-15463: volume size of *string*K is less than the minimum of *string*M

Cause: The volume size specified was too small.

Action: Specify a larger volume size.

OCI-15464: STRIPE_COLUMNS of *string* is greater than the maximum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was too large.

Action: Specify a smaller STRIPE_COLUMNS value.

OCI-15465: STRIPE_COLUMNS of *string* is less than the minimum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS value that was too small.

Action: Specify a larger value for STRIPE_COLUMNS.

OCI-15466: volume '*string*' in disk group '*string*' does not exist

Cause: The command specified a volume name that did not exist.

Action: Ensure that a valid volume name is used.

OCI-15467: volume operation is already in progress

Cause: Another command was currently operating on a volume.

Action: Retry the command after a short time.

OCI-15468: Volume *string* in disk group *string* is currently being accessed.

Cause: An attempt was made to change a volume that was being accessed by another application and therefore could not be changed.

Action: Shut down all applications that might be accessing this volume and then retry the command.

OCI-15469: VBG process terminated with error.

Cause: A volume background (VBG) process terminated with an error.

Action: VBG process %s terminated. The process will try to automatically restart.

OCI-15470: VDBG process terminated with error

Cause: The volume driver background (VDBG) process terminated with an error.

Action: Warm start the instance.

OCI-15471: volume redundancy incompatible with disk group redundancy

Cause: An ADD VOLUME command specified a volume redundancy that was incompatible with the redundancy of the disk group.

Action: Specify a valid volume redundancy. The following restrictions apply: - An unprotected redundancy volume cannot be added to a normal or high redundancy disk group. - A mirror or high redundancy volume cannot be added to an external redundancy disk group. - A mirror volume cannot be added to a high redundancy disk group.

OCI-15472: Volume library cannot be loaded. Platform may not support volume creation.

Cause: The volume library could not be loaded. The possible causes are: - The platform does not support volume operations. - There is a problem with the library.

Action: Ensure that the platform supports volumes. If the platform does support volumes, then check the alert log for library loading failure information.

OCI-15473: failure to access a volume's storage using an unsupported command

Cause: An attempt was made to access or modify a volume's storage through an unsupported SQL or ASMCMD command.

Action: Use supported commands to access volume devices.

OCI-15474: The volume name is greater than *string* characters.

Cause: An ADD VOLUME command specified a volume name that was too long.

Action: Enter a smaller volume name.

OCI-15475: USAGESTRING is greater than *string* characters

Cause: The optional attribute --USAGESTRING specified while updating Oracle ADVM attributes was too long.

Action: Select a smaller value for the --USAGESTRING attribute and retry the operation.

OCI-15476: Oracle ACFS volumes must be resized with the 'acfsutil size' operating system command.

Cause: An attempt was made to resize an Oracle ASM Dynamic Volume Manager (Oracle ADVM) volume that contained an Oracle Advanced Cluster File System (Oracle ACFS) file system using SQL statements.

Action: Use the 'acfsutil size' operating system command to resize the volume.

OCI-15477: cannot communicate with the volume driver

Cause: An attempt was made to communicate with the volume driver.

Action: Verify if the Oracle Automatic Storage Management (ASM) volume driver is loaded. If the Oracle ASM volume driver is loaded, then check the alert log to identify the reason for failure and perform the necessary action to prevent such failures in the future.

OCI-15478: The Oracle ACFS background process terminated with an error.

Cause: The Oracle Advanced Cluster File System (Oracle ACFS) background process terminated with an error.

Action: Wait for process restart. If the error persists, contact Oracle Support Services.

OCI-15479: Oracle Automatic Storage Management (Oracle ASM) disk group does not support volumes.

Cause: Volumes were not supported. A typical example was having disks, such as Network File System (NFS) in the disk group that was not supported by volumes.

Action: Remove unsupported disks in the disk group.

OCI-15480: Error reported by the Oracle Automatic Storage Management (ASM) volume driver.

Cause: An error was reported by the Oracle ASM volume driver.

Action: Check the operating system log files to identify the reason for the error. Perform the action or actions to prevent future errors.

OCI-15481: missing or invalid volume mountpath specifier

Cause: A invalid volume mountpath string was specified.

Action: Specify a valid volume mountpath string with alphanumeric characters.

OCI-15482: failed to create or remove device file for volume *string* on diskgroup *string*

Cause: The driver was improperly installed.

Action: Check the alert log for information on the failure of device file creation. Reload the driver using the supported installation method.

OCI-15483: volume driver version is not compatible with the Oracle ASM instance

Cause: The version of the Oracle Automatic Storage Management (Oracle ASM) volume driver was not supported by Oracle ASM.

Action: Ensure that the volume driver version is compatible with the Oracle ASM instance. In case of a downgrade, make sure Oracle Advanced Cluster File System (Oracle ACFS) is properly downgraded (see note 1634684.1).

OCI-15484: volume '*string*' contains *string* error(s)

Cause: Errors were returned by the ALTER DISKGROUP CHECK VOLUME command.

Action: See the alert log for details of the errors.

OCI-15485: Number of volumes in the disk group exceeds the maximum of *string*.

Cause: A volume was added on a disk group that already contained the maximum number allowed.

Action: Remove one or more volumes from the disk group. *Params: 1) number_of_volumes: The maximum number of volumes allowed per disk group.

OCI-15486: internal error while altering volume

Cause: An internal Oracle Automatic Storage Management (Oracle ASM) error occurred while altering a volume.

Action: See the alert log for details of the error.

OCI-15487: cannot shutdown the ASM instance with an open ASM volume

Cause: One or more ASM volumes were found to be open during shutdown.

Action: Close the ASM volume and retry the shutdown.

OCI-15488: Oracle Automatic Storage Management (ASM) volume *string* is open on node *string*.

Cause: The ASM volume was not closed prior to instance termination on the specified node.

Action: Close the ASM volume either via unmount or node restart and retry.

OCI-15489: conflicting volume already open on this node

Cause: An Oracle Automatic Storage Management (Oracle ASM) volume was not closed prior to an instance shutdown on the specified node. There was a conflict with the volume that was to be enabled.

Action: Close the Oracle ASM volume either using UNMOUNT or node restart and retry the operation.

OCI-15490: not all instances could add or drop the volume

Cause: The Oracle Automatic Storage Management (Oracle ASM) volume could not be added or dropped on all instances.

Action: See the alert log for the reason the volume could not be added or dropped.

OCI-15491: volume redundancy conflicts with disk region options

Cause: Non-mirrored volumes erroneously contained the MIRRORHOT or MIRRORCOLD keyword.

Action: Remove the MIRRORHOT or MIRRORCOLD keywords from non-mirrored volumes.

OCI-15492: command or option incompatible with ASM volumes

Cause: An attempt was made to use a feature which is not compatible with existing ASM volumes. A common example is adding a disk to the diskgroup that is unsupported by ASM volumes.

Action: Omit the option from the command.

OCI-15493: target ADVM compatibility (*string*) exceeds ASM compatibility (*string*)

Cause: An attempt was made to advance the Advanced Dynamic Volume Manager (ADVM) compatibility beyond the disk group's Oracle Automatic Storage Management (Oracle ASM) compatibility.

Action: Make sure the requested Advanced Dynamic Volume Manager (ADVM) value for compatibility is never higher than the Oracle ASM compatibility setting.

OCI-15494: compatible.advm must be *string* or higher

Cause: An attempt was made to set the Oracle ASM Dynamic Volume Manager (Oracle ADVM) compatibility to a version that was lower than the minimum supported version.

Action: Set Oracle ADVM compatibility to at least the minimum supported version.

OCI-15495: ASM operation requires compatible.advm of *string* or higher

Cause: The ASM operation specified required a higher disk group attribute value for compatible.advm.

Action: Set the disk group attribute compatible.advm to or above the requested version.

OCI-15496: volume size is greater than the maximum of *stringT*

Cause: The volume size specified was too large.

Action: Specify a smaller volume size and retry the operation.

OCI-15497: Volume *string* uses a metadata block size (*string*) smaller than the specified sector size (*string*).

Cause: The Oracle Advanced Cluster File System (Oracle ACFS) volume had a metadata block size that was incompatible with the specified sector size.

Action: Migrate Oracle ACFS to a larger metadata block size before changing the sector size.

OCI-15498: Volume name *string* collides with existing volume(s) *string string*.

Cause: The operation attempted to create a block device and a raw device with the volume name <vol_name>-<dg_num>, which conflicted with an existing volume name.

Action: Choose another name for the volume (no leading 'r' is recommended).

OCI-15499: VMB process terminated with error

Cause: The volume membership (VMB) process terminated with an error.

Action: Warm start the instance.

OCI-15501: cannot start workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to start the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

OCI-15502: cannot stop workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to stop the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

OCI-15503: cannot startup instance when procedures in "DBMS_WORKLOAD_CAPTURE" or "DBMS_WORKLOAD_REPLAY" are in the middle of their execution

Cause: The new instance could not be started because the database was executing a procedure in either the DBMS_WORKLOAD_CAPTURE or DBMS_WORKLOAD_REPLAY package.

Action: Start the new instance after such procedures in the given packages have finished execution.

OCI-15504: cannot start workload capture because instance *string* not present in RESTRICTED SESSION mode

Cause: The NO_RESTART_MODE option in DBMS_WORKLOAD_CAPTURE.START_CAPTURE was FALSE, therefore all the active instances were expected to be in the RESTRICTED SESSION mode.

Action: Start all instances using STARTUP RESTRICT or execute ALTER SYSTEM ENABLE RESTRICTED SESSION on all active instances before issuing DBMS_WORKLOAD_CAPTURE.START_CAPTURE.

OCI-15505: cannot start workload capture because instance *string* encountered errors while accessing directory "*string*"

Cause: Given instance could not access the specified CAPTURE directory or the specified CAPTURE directory already had a workload capture in it.

Action: Provide a directory object that is valid, empty and accessible from all the instances in the database cluster.

OCI-15506: cannot prepare instance *string* for replay

Cause: Given instance encountered unexpected errors while trying to prepare for a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

OCI-15507: cannot start workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to start a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

OCI-15508: cannot cancel workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to cancel a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

OCI-15509: workload replay has been cancelled

Cause: Workload replay was cancelled.

Action: Restart the workload replay.

OCI-15510: cannot perform operation when "STATISTICS_LEVEL" is "BASIC"

Cause: The STATISTICS_LEVEL initialization parameter was set to BASIC.

Action: Change the STATISTICS_LEVEL initialization parameter setting to either TYPICAL or ALL.

OCI-15511: cannot process workload capture because no user sessions were recorded

Cause: No user sessions were recorded in the given workload capture. Processing this capture failed because no user workload was captured.

Action: Capture a workload in which at least one user session connects and performs some operations.

OCI-15512: directory "*string*" does not contain a valid processed workload capture

Cause: One or more files created by DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE were missing.

Action: Process the workload capture using DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE and then retry the command.

OCI-15513: cannot access the input directory

Cause: Given input directory is either invalid or inaccessible.

Action: Verify that the input directory is valid and accessible and then retry the command.

OCI-15514: cannot find a match for the remote procedure call during replay

Cause: The corresponding PL/SQL program was either dropped or modified.

Action: Verify that the corresponding PL/SQL program is defined the same way during replay as it was defined during workload capture.

OCI-15515: error while replaying remote procedure call: "*string.string.string*"

Cause: Error encountered during the replay of a remote procedure call.

Action: Correct the cause of the preceding error and restart workload replay.

OCI-15516: Parallel preprocessing worker encountered ORA-*string* error.

Cause: One of the parallel preprocessing workers ended unexpectedly while processing the workload.

Action: Find the root cause or preprocess the workload using a single process.

OCI-15517: Cannot start parallel preprocessing worker.

Cause: One of the parallel preprocessing workers could not be started.

Action: Find the root cause or preprocess the workload using only a single process.

OCI-15518: Parallel preprocessing encountered an error.

Cause: An error occurred during parallel preprocessing.

Action: Find the root cause or preprocess the workload using a single process.

OCI-15519: cannot access database link "*string*" because it is disabled

Cause: For security considerations, access to external databases via database links were disabled during workload replay.

Action: Use advanced parameter for Database Replay to enable database links during workload replay.

OCI-15520: Directory is corrupted. Two WMD files are found at "*string*" and "*string*"

Cause: Two WMD files were found in the directory.

Action: Check that the WMD files in capture directory were not modified, moved, duplicated or deleted.

OCI-15521: file creation failed for "*string*" during workload processing

Cause: Attempted to create a file during workload processing. The directory does not have the proper permissions.

Action: Correct the file permissions and retry.

OCI-15522: failed to generate a workload capture subset: "*string*"

Cause: An attempt to generate a workload capture subset failed. Possible reasons are included in the error message.

Action: Correct the issue and try again.

OCI-15523: Failed to create subpath *string* under path *string*.

Cause: Either the path does not exist, is inaccessible, or the subpath specification is invalid.

Action: Verify that the path exists and is accessible, the subpath specification is valid, and retry the command.

OCI-15525: a user call cannot be replayed because not enough information was captured; extra details: *string*

Cause: An attempt to replay a user call failed because the workload was captured with an old version of Oracle. The information needed for replay was not recorded.

Action: Capture the workload using a newer version of Oracle or use the replay filters to skip the user call.

OCI-15526: failed to validate user password for capture

Cause: One of the following occurred: 1- The password was not specified for the encrypted capture. 2- The password did not match the one used for the encrypted capture. 3- The specified password was for an unencrypted capture.

Action: For scenario 1 or 2 stated in the Cause, provide the correct password for the encrypted capture. For scenario 3, do not specify the client single sign-on (SSO) wallet path.

OCI-15527: failed to retrieve password for Database Replay from Oracle Wallet

Cause: Either the Database Replay identifier was not found in the Oracle Wallet or the password was not set.

Action: Set the password for the Database Replay identifier in the Oracle Wallet.

OCI-15528: failed to encrypt a workload capture: "string"

Cause: An attempt to encrypt a workload capture failed. Possible reasons are included in the error message.

Action: Fix the issue and retry.

OCI-15529: failed to decrypt a workload capture: "string"

Cause: An attempt to decrypt a workload capture failed. Possible reasons are included in the error message.

Action: Fix the issue and retry.

OCI-15530: Directory contains a capture recorded with a newer Oracle release.

Cause: The capture was recorded with a newer Oracle release.

Action: Retry with a newer release of Oracle.

OCI-15531: workload capture encountered unexpected error: string

Cause: Workload capture encountered an unexpected error.

Action: Check the server trace files to address the reported error.

OCI-15532: workload replay encountered unexpected error: string

Cause: Workload replay encountered an unexpected error.

Action: Check the server trace files to address the reported error.

OCI-15551: workload replay client cannot connect to database server

Cause: The server connection identifier was invalid.

Action: Restart the client with correct server connection identifier.

OCI-15552: workload replay client cannot login to database server

Cause: 1) the replay client used an invalid username or password; 2) the replay user does not have the privilege to switch user; 3) the recorded username does not exist in the replay database.

Action: 1) restart replay client with correct username and password 2) grant user switching privilege to the replay user 3) verify whether the replay database was restored properly

OCI-15553: workload replay client cannot execute the DBMS_WORKLOAD_REPLAY package

Cause: Workload Replay Client's replay user did not have EXECUTE permission on the DBMS_WORKLOAD_REPLAY package.

Action: Grant execute permission on the DBMS_WORKLOAD_REPLAY package to replay user and restart the Workload Replay Client.

OCI-15554: cannot start workload replay client because the database server is not in PREPARE mode

Cause: The Workload Replay Client could not connect to the database server because the database server was not in the PREPARE mode.

Action: Put the database in PREPARE mode by using DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY, and restart the Workload Replay Client.

OCI-15555: workload replay client encountered unexpected error: "*string*"

Cause: Workload Replay Client encountered an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

OCI-15556: invalid input specified to the workload replay client; type 'wrc HELP=Y' for help

Cause: Invalid input was specified.

Action: Use the Workload Replay Client's HELP=Y option to know more about valid input options.

OCI-15557: workload replay client cannot access the replay directory or the database version do not match the preprocessing one

Cause: The Workload Replay Client could not access the directory that contained the workload to be replayed, or the workload was preprocessed by a different version of the database.

Action: Restart the workload replay after specifying the correct replay directory, or preprocess it with the correct database.

OCI-15558: replay thread encountered unexpected error

Cause: A single replay thread got disconnected from the server due to an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

OCI-15559: workload replay client cannot open workload capture file

Cause: The Workload Replay Client could not access one or more workload capture files from the replay directory.

Action: Restart the workload replay after copying all the workload capture files to the replay directory.

OCI-15560: Workload replay client cannot access the work directory.

Cause: The workload replay client could not access the work directory to write log files for debug information.

Action: Restart the workload replay client after specifying an existing work directory, or ensure that the user has access privileges.

OCI-15561: workload replay client cannot connect to the remapped connection with conn_id : *string*

Cause: The specified connection is invalid or the specified host is inaccessible.

Action: Test the specified connection using other methods and redefine the connection remapping, if necessary. Consult the view `DBA_WORKLOAD_CONNECTION_MAP` to inspect connection remappings.

OCI-15562: workload replay client cannot read the `DBA_WORKLOAD_CONNECTION_MAP` view

Cause: The `DBA_WORKLOAD_CONNECTION_MAP` view did not exist or was not accessible.

Action: Re-create the workload capture and replay views. For additional information, see the documentation.

OCI-15563: workload replay client cannot spawn new threads

Cause: The Workload Replay Client does not have enough resource (CPU or memory) to spawn new threads.

Action: Restart the workload replay after allocating more resource (CPU and memory) to the Workload Replay Client or use more hosts as replay clients to drive the workload.

OCI-15564: contents of the replay directory provided to the workload replay client do not match with the replay directory provided to the database server

Cause: The processed workload capture files given to the workload replay client directory did not match the contents of the replay directory given as input to `DBMS_WORKLOAD_REPLAY.INITIALIZE_REPLAY`.

Action: Provide the same processed workload capture files to both the database server and all the workload replay clients and restart the replay. If the same workload capture files were processed more than once, provide a copy of the latest processed workload capture files to all the workload replay clients and the database server.

OCI-15566: workload replay client cannot replay user call in the current version

Cause: The workload replay client encountered a user call in the captured workload that was not supported for replay in the current version.

Action: Look in the `DBA_WORKLOAD_REPLAY_DIVERGENCE` view for details about the call that encountered this error. Refer to the documentation for more details on the types of workload that are not supported in the current version.

OCI-15567: replay user *string* encountered an error during a sanity check

Cause: The replay user encountered an error when accessing internal objects for Database Replay or switching user.

Action: Set up the replay user appropriately at the replay database. Ensure that the replay user can access SYS-owned objects and has been granted the `BECOME USER` privilege.

OCI-15568: login of user *string* during workload replay failed with `ORA-string`

Cause: The recorded user did not exist in the replay database or encountered other problems during log in.

Action: Check the returned error number and set up the recorded user appropriately at the replay database.

OCI-15569: timeout encountered during the replay of a recorded user call

Cause: The replay of a recorded user call was terminated since it was significantly slower than the workload capture.

Action: Find the root cause for the performance issue. Or, use DBMS_WORKLOAD_REPLAY API to disable the timeout check if the replay is expected to be slower.

OCI-15570: Directory object "*string*" does not exist.

Cause: The directory object did not exist.

Action: Ensure that the specified directory object exists.

OCI-15590: encountered incomplete workload capture files

Cause: The captured workload contained one or more incomplete recording files. This can happen when the original workload capture's FINISH_CAPTURE command timed out while waiting for all the active sessions to close their workload capture files.

Action: Incomplete capture files will not interfere with the processing and replaying of the captured workload. This is simply a warning message to point out that some database calls might not have been recorded due to FINISH_CAPTURE command timing out. For a list of the incomplete files, check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing.

OCI-15591: corrupt workload capture files

Cause: The captured workload contained one or more corrupt recording files.

Action: Check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing. The files will be replayed up to the point of the corruption. You could also remove the corrupt files and run DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE again. In this case, no workload from the corrupt files is replayed.

OCI-15601: Invalid value specified for parameter "*string*"

Cause: An invalid value was specified for the given parameter.

Action: Correct the value being specified for the parameter.

OCI-15602: Parameter "*string*" cannot be NULL.

Cause: An attempt was made to call a procedure without a required parameter.

Action: Specify a valid value for this parameter.

OCI-15603: Action cannot be performed when database is in read-only mode.

Cause: A procedure in DBMS_AUTO_TASK_ADMIN package was invoked when database was open in read-only mode.

Action: Retry when database is open in read/write mode.

OCI-15604: Initialization parameters prevent client from being enabled.

Cause: An attempt was made to enable a client that was disabled for automatic execution by an initialization parameter.

Action: Check the related client parameters and try again.

OCI-15605: "string" is not a Maintenance Window

Cause: Window name passed to DBMS_AUTO_TASK_ADMIN.ENABLE procedure must be a member of the MAINTENANCE_WINDOW_GROUP.

Action: Make the window a member of the MAINTENANCE_WINDOW_GROUP and retry the call.

OCI-15606: Reserved autotask operations only allowed in root.

Cause: An attempt was made to issue a reserved autotask operation in a pluggable database.

Action: Switch to CDB\$ROOT and issue the operation.

OCI-15607: Autonomous task could not be scheduled. Reason: "string".

Cause: An attempt was made to schedule a manual Autonomous task but the operation failed. The possible causes were: - The task was disabled. - The task was currently running in another process. - The number of concurrently running autonomous tasks exceeded max limit.

Action: Check the task status in adb_task views. Ensure that: - The task is enabled. - The task is not currently running in another process. - The number of concurrently running autonomous tasks is within max limit. Then, retry the operation.

OCI-15700: SQL limit already reached by prior task execution

Cause: An attempt was made to resume the execution of a task when the prior execution already reached the SQL limit.

Action: Task execution is complete. Examine the report to review Advisor's recommendations.

OCI-15701: All "SQL Tuning Set(s)" with name like "string" and owner like "string" are empty

Cause: An attempt was made to pack one or more SQL Tuning Sets, none * of which contained any statements.

Action: Check the input and try again.

OCI-15702: duplicate values for plan line ID in input collection

Cause: An invalid input was provided containing duplicate values for plan line IDs causing the load of the statement to fail.

Action: Check the input and try again.

OCI-15703: invalid version number "number" for SQL tuning set staging table

Cause: An invalid version number was provided for a staging table used to pack a SQL tuning set.

Action: Check the input and try again.

OCI-15704: This operation is not supported for Oracle RAS users.

Cause: An attempt was made to execute an unsupported operation. This operation is not supported for Oracle Real Application Security (Oracle RAS) users.

Action: Retry the operation as a non-Oracle RAS user.

OCI-15705: staging table does not exist

Cause: An attempt was made to use a staging table that did not exist.

Action: Verify the name of the staging table and retry the operation.

OCI-15706: concurrent execution of the task terminated unexpectedly

Cause: Parallel slaves have died unexpectedly.

Action: Check your system for anomalies and resume the executing task.

OCI-15738: Default parameters for SPA Quick Check are not set.

Cause: The required default parameters for SQL Performance Analyzer Quick Check (SPA Quick Check) were not set.

Action: Set default values for all of the required SPA Quick Check parameters and try again.

OCI-15739: invalid name "*string*" for SQL Performance Analyzer task

Cause: An invalid SQL Performance Analyzer task name was used.

Action: Check the name of the SQL Performance Analyzer task to ensure that it is correct.

OCI-15740: parameter "*string*" not set for SQL Performance Analyzer task "*string*"

Cause: Could not find the specified parameter name for the SQL Performance Analyzer task.

Action: Check that the specified parameter exists for the SQL Performance Analyzer task so that the parameter is set.

OCI-15741: no COMPARE_PERFORMANCE execution exists for SQL Performance Analyzer task "*string*"

Cause: Could not find an execution of type COMPARE_PERFORMANCE for specified SQL Performance Analyzer task.

Action: Ensure that the given SQL Performance Analyzer task has at least one execution of type COMPARE_PERFORMANCE.

OCI-15742: specified execution name "*string*" is not a valid COMPARE_PERFORMANCE execution for SQL Performance Analyzer task "*string*".

Cause: The specified execution name was not a valid execution of type COMPARE_PERFORMANCE for the SQL Performance Analyzer task.

Action: Ensure that a valid COMPARE_PERFORMANCE execution name is used for the SQL Performance Analyzer task.

OCI-15743: need to specify the object ID if the tuning task is on a SQL set.

Cause: There could be multiple objects in the SQL tuning task. Specify which one.

Action: Add object ID to the interface.

OCI-15744: The directory name is null.

Cause: The directory name for finding the SQL traces was null.

Action: Create the directory.

OCI-15745: The plan type is not valid.

Cause: The specified plan type was not valid

Action: Check the existing plan types and specify the right one.

OCI-15746: Missing EXECUTE privilege on DBMS_AUTO_SQLTUNE.

Cause: The current user was missing the necessary privileges to execute the API.

Action: Grant the privilege and try again.

OCI-15747: The previous Oracle Data Masking job is unfinished. "string" table is not empty.

Cause: The previously executed Oracle Data masking job was not successfully completed.

Action: Execute Oracle Data masking cleanup.

OCI-15748: invalid container name specified

Cause: The container name specified for this API was invalid. When this API is run at the multitenant container database (CDB) root, the acceptable container names are any valid containers in that CDB. When it is run in a pluggable database, the only acceptable container name is its own name.

Action: Specify a valid container name.

OCI-15750: The current node is not configured for remote operations.

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the node attempting to perform the operation was not configured for remote operations.

Action: Configure the node and retry the operation.

OCI-15751: The Remote Management Framework (RMF) operation failed.

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed due to an unexpected error condition.

Action: Retry the operation. Contact Oracle Support Services, if the operation continues to fail.

OCI-15755: Current node is already configured for remote operations.

Cause: An attempt to configure a node failed because the node was already configured for Remote Management Framework (RMF) operations.

Action: Remove the node from the configuration and retry.

OCI-15761: The node is not registered in an Remote Management Framework (RMF) topology.

Cause: Attempt to perform a Remote Management Framework (RMF) operation failed because the node attempting to perform the operation was not registered in a topology.

Action: Register the node in a topology, or create a new topology and retry.

OCI-15764: A concurrent Remote Management Framework (RMF) operation is in progress.

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because a concurrent RMF operation was already running.

Action: Retry after the other operation has finished.

OCI-15766: already registered in an RMF topology

Cause: An attempt to register the specified node failed because the node was already registered in a Remote Management Framework (RMF) topology.

Action: Ensure that the specified node name matches the node to be registered and that the database link connects to the intended node. Unregister the specified node before registering it into another topology.

OCI-15767: RMF topology [*string*] does not exist.

Cause: A topology with the specified topology name was not created in the Remote Management Framework (RMF).

Action: Verify that the topology name is valid and retry the operation.

OCI-15768: RMF topology [*string*] already exists.

Cause: A topology with the specified topology name was already created in the Remote Management Framework (RMF).

Action: Verify that the topology name is valid and retry the operation. Specify a different topology name that has not been used yet.

OCI-15769: Node [*string*] is not registered in Remote Management Framework (RMF) topology [*string*].

Cause: A node with the specified node name was not registered in the specified Remote Management Framework (RMF) topology.

Action: Ensure that the specified node name and topology name is correct, and that the specified node is currently registered in the specified topology.

OCI-15770: Node [*string*] is already registered in Remote Management Framework (RMF) topology [*string*].

Cause: A node with the specified node name was already registered in the specified Remote Management Framework (RMF) topology.

Action: Ensure that the specified node is not currently registered in the specified topology, and ensure that the node to be registered in the specified topology is configured with a unique name.

OCI-15771: parameter [*string*] is invalid: *string*

Cause: The value for the specified parameter was invalid.

Action: Provide a value that fulfills the requirements specified in the error message.

OCI-15772: parameter [*string*] exceeds *string* characters

Cause: The value for the specified string parameter was too long.

Action: Provide a value for the specified parameter that has a length below the character limit specified in the error message.

OCI-15773: parameter [*string*] does not allow NULL values

Cause: A NULL value was provided for the specified parameter but the parameter only allows non-NULL values.

Action: Provide a non-NULL value for the specified parameter.

OCI-15774: parameter [*string*] conflicts with the value in the remote node [*string*]

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the specified parameter was different from the actual value stored in the node performing the operation.

Action: Ensure that the database link connects to the intended node and that the specified parameter matches the value configured in the node that will perform the operation.

OCI-15775: database not open in read/write mode

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the node was not open in read/write mode.

Action: Ensure that the node performing the operation is open in the correct mode and retry the operation.

OCI-15776: candidate target missing links to source nodes

Cause: An attempt to perform a Remote Management Framework (RMF) destination switch failed because the candidate target could not find a link to one or more nodes in the topology.

Action: Ensure the candidate target has an RMF link to every node participating in the topology and retry the operation. If the current RMF destination node is no longer available or the missing links cannot be created at this moment, retry the operation with FORCE_SWITCH to bypass this check.

OCI-15777: remote node registration could not be completed

Cause: An attempt to register a node in a Remote Management Framework (RMF) topology failed because the remote node could not obtain the registration information from the RMF destination node.

Action: Ensure that the provided database links are valid and correspond to the intended nodes. Check for additional error messages, if any, to determine the exact cause of the problem and correct the error. Unregister the node from the topology and retry the operation.

OCI-15778: link from *string* to *string* does not exist in topology *string*

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because a link between the specified nodes could not be found in the topology.

Action: Verify the topology and nodes are correct. Create a link between the nodes in the specified direction using DBMS_UMF.CREATE_LINK and retry the operation.

OCI-15779: RMF operation failed: *string*

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because an unexpected condition was encountered.

Action: Check the exact error message and accompanying error messages, if any, for more information. If the situation described can be corrected, take appropriate action and retry the operation. Otherwise, contact Oracle Support Services for assistance.

OCI-15900: AWR Analytics operation failed: *string*

Cause: An attempt to perform an Automated Workload Repository (AWR) Analytics Framework operation failed because an unexpected error condition happened.

Action: Correct the indicated problem and retry the operation. Contact Oracle Support Services if the condition persists.

OCI-15901: error encountered during SQL execution

Cause: An error occurred when performing an Automated Workload Repository (AWR) Application Framework operation due to an underlying SQL execution error.

Action: Retry the operation and contact Oracle Support Services if the condition persists.

OCI-15902: parameter [*string*] is invalid: *string*

Cause: The value for the specified parameter was invalid.

Action: Provide a value that fulfills the requirements specified in the error message.

OCI-15903: AWR Application Report is disabled

Cause: The operation failed because the Automatic Workload Repository (AWR) Application Report feature was disabled..

Action: Enable AWR Application Report and retry the operation.

OCI-16000: Attempting to modify database or pluggable database that is open for read-only access.

Cause: This database or pluggable database was open for read-only access. Attempts to modify the database using DML or DDL statements generated this error.

Action: In order to modify the database or pluggable database, it must first be shut down and reopened with read/write access.

OCI-16001: database already open for read-only access by another instance

Cause: The database has been opened for read-only access by another instance, and cannot be opened for read/write access by this instance.

Action: This instance must be opened for read/write access, or all other instances must first be shut down and reopened for read-only access.

OCI-16002: database or pluggable database already open for read/write access by another instance

Cause: The database or pluggable database has been opened for read/write access by another instance, and cannot be opened for read-only access by this instance.

Action: This instance must be opened for read-only access, or all other instances must first be shut down and reopened for read/write access.

OCI-16003: standby database is restricted to read-only access

Cause: An attempt was made to open a physical standby database in read/write mode.

Action: Reissue the ALTER DATABASE OPEN specifying READ ONLY.

OCI-16004: backup database required recovery

Cause: The database could not be opened for read-only access by this instance because it requires recovery.

Action: Perform the necessary recovery and reopen for read-only access.

OCI-16005: database requires recovery

Cause: The database required recovery, and therefore could not be opened for read-only access by this instance.

Action: If the database was terminated abnormally (possibly using a shutdown abort), the database first needs to be opened in read/write mode. Otherwise, perform the necessary recovery and reopen for read-only access.

OCI-16006: The remote archival request was canceled due to a database shutdown operation.

Cause: When opening or closing a database instance, the database may wait for pending remote archival requests to complete before proceeding with the operation. This error was reported because a shutdown was detected.

Action: This is an informational message so no action is required.

OCI-16007: invalid backup control file checkpoint

Cause: The database could not be opened for read-only access because its control file did not contain a valid control file checkpoint.

Action: Open the database for read/write access to create a valid control file checkpoint. The database can then be opened for read-only access.

OCI-16008: indeterminate control file checkpoint

Cause: The control file for the database being opened for read-only access was created using the CREATE CONTROLFILE statement. Therefore, a control file checkpoint could not be calculated and the database could not be opened for read-only access.

Action: First, open the database for read/write access. This creates a valid control file checkpoint. Then, reopen the database for read-only access.

OCI-16009: invalid redo transport destination

Cause: Either the redo transport destination could not accept redo data because it was not a valid redo transport destination type, or the connection was SYNC for Zero Data Loss Recovery Appliance (ZDLRA) destination.

Action: Verify that all redo transport destinations are either standby databases or downstream capture databases, or change the ZDLRA destination to not use SYNC.

OCI-16011: Remote File Server (RFS) process is in an error state.

Cause: The Remote File Server (RFS) process at the specified redo transport destination experienced an unrecoverable error and was unable to receive further redo data. There may be additional information in the alert log and trace file.

Action: Correct the problem at the redo transport destination.

OCI-16012: database identifier mismatch

Cause: The database identifier of a target physical standby, snapshot standby, or far sync did not match that of the primary database. See the alert log file for additional information.

Action: Ensure that the database identifier of each physical standby, snapshot standby, and far sync matches that of the primary database.

OCI-16013: log *string* sequence# *string* does not need archiving

Cause: An attempt was made to archive the named file manually, but the file did not require archiving. The file had previously been successfully archived.

Action: No action is required.

OCI-16014: Log *string* sequence# *string* could not be archived successfully, there are no destinations available.

Cause: You tried to archive the named log file, but the operation was unsuccessful. The archival of the log file failed because of one of the following reasons: - No archive log destinations were specified in the initialization file. - All destinations were found to be in an error state.

Action: Verify that the archive log destinations are specified correctly. Review additional error messages provided in addition to this one to learn more about the cause. Common issues include running out of space on the file system/Oracle Automatic Storage Management (Oracle ASM) disk group, or misspelled paths. In Oracle Data Guard environments, consider file name conversion parameters, database roles, and the database unique name.

OCI-16015: log *string* sequence# *string* was not archived since destination is in no ARCHIVELOG mode

Cause: An attempt was made to archive the named log to a destination, but the operation failed because the destination was not in ARCHIVELOG mode.

Action: Enable ARCHIVELOG mode for all destinations and retry the operation.

OCI-16016: archived log for thread *string* sequence# *string* unavailable

Cause: Redo apply timed out waiting for the requested archived log file.

Action: Verify that the primary database is still archiving redo data to the standby database and reissue the RECOVER STANDBY DATABASE command.

OCI-16017: cannot use LOG_ARCHIVE_DUPLEX_DEST without a primary archive destination

Cause: The parameter LOG_ARCHIVE_DUPLEX_DEST was set to a non-NULL value when LOG_ARCHIVE_DEST was set to NULL explicitly.

Action: Set LOG_ARCHIVE_DEST to a valid non-NULL value.

OCI-16018: Cannot use *string* with LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST.

Cause: One of the following events caused an incompatibility: LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter was in use when a LOG_ARCHIVE_DEST_n (n = 1...31) parameter was encountered while fetching initialization parameters. An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when a LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. A LOG_ARCHIVE_DEST_n parameter was in use when an ALTER SYSTEM command was used to define a value for either the LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter. DB_RECOVERY_FILE_DEST parameter was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST.

Action: Identify and remove any incompatible parameter definitions.

OCI-16019: Cannot use *string* with LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST.

Cause: One of the following events caused an incompatibility: The LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter was in use when the specified LOG_ARCHIVE_DEST_n (n = 1...31) or DB_RECOVERY_FILE_DEST parameter was encountered while fetching initialization parameters. The LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified

LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST parameter. An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when the specified LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n parameter.

Action: Identify and remove any incompatible parameter definition.

OCI-16020: fewer destinations available than specified by LOG_ARCHIVE_MIN_SUCCEED_DEST

Cause: The number of archive log destinations that could be used was less than the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value.

Action: Either adjust the log archive destination parameters, or lower the value of LOG_ARCHIVE_MIN_SUCCEED_DEST.

OCI-16021: session *string* destination cannot be the same as session *string* destination

Cause: An attempt was made to change the first specified log archive destination parameter using ALTER SESSION to have a value that duplicates the session-level value of the second specified log archive destination parameter.

Action: Specify a different session value for one of the LOG_ARCHIVE_DEST_n parameters.

OCI-16022: LOG_ARCHIVE_DEST cannot be NULL because LOG_ARCHIVE_DUPLEX_DEST is non-NULL

Cause: An attempt was made to change parameter LOG_ARCHIVE_DEST to NULL when parameter LOG_ARCHIVE_DUPLEX_DEST was non-NULL.

Action: Either set parameter LOG_ARCHIVE_DEST to a non-NULL value, or set parameter LOG_ARCHIVE_DUPLEX_DEST to a NULL value.

OCI-16023: system *string* destination cannot be the same as session *string* destination

Cause: An attempt to change the first specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter produced a destination that duplicated the session destination value of the second specified LOG_ARCHIVE_DEST_n parameter. This error occurred when setting a non-NULL value with the ALTER SYSTEM command. Or, this error can occur when setting a NULL value with ALTER SESSION command, because then the associated system destination value may appear as a duplicate.

Action: Specify a different destination value for the first specified LOG_ARCHIVE_DEST_n parameter.

OCI-16024: parameter *string* cannot be parsed

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...31) parameter could not be parsed. Common causes for this error are a misplaced equal sign, an unrecognized attribute, or an attribute that is missing a required value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

OCI-16025: parameter *string* contains repeated or conflicting attributes

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained either repeated attributes or attributes that conflicted with each other. If

LOG_ARCHIVE_DEST_n role attribute is TRUE_CACHE, the database unique name cannot be in DG_CONFIG.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

OCI-16026: parameter *string* contains an invalid attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained an attribute with an invalid value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

OCI-16027: parameter *string* is missing a destination option

Cause: The value of the specified parameter LOG_ARCHIVE_DEST_n (n = 1...31) did not include a destination option. A destination option can be specified using either the LOCATION or SERVICE attribute.

Action: Correct the value of the specified parameter LOG_ARCHIVE_DEST_n to include either the LOCATION or SERVICE attribute.

OCI-16028: new *string* causes fewer destinations to be selected than LOG_ARCHIVE_MIN_SUCCEED_DEST requires

Cause: An attempt was made to change the indicated LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameters (n = 1...31) to a value that reduces the number of archive log destinations to less than the value specified in the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter.

Action: Either select different options for the LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameters, or reduce the value for the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter.

OCI-16029: cannot change LOG_ARCHIVE_MIN_SUCCEED_DEST, no archive log destinations defined

Cause: An attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter when there were no archive log destinations.

Action: Define one or more archive log destinations using parameters LOG_ARCHIVE_DEST, LOG_ARCHIVE_DUPLEX_DEST, or LOG_ARCHIVE_DEST_n (n = 1...31). Then, change the value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST.

OCI-16030: session specific change to the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter requires a LOG_ARCHIVE_DEST_n destination

Cause: The following event caused an incompatibility: The parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter with an ALTER SESSION command.

Action: Replace any LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST parameters with LOG_ARCHIVE_DEST_n (n = 1...31) parameters.

OCI-16031: parameter *string* destination string exceeds *string* character limit

Cause: The value for the specified parameter contained a destination string that exceeded the character limit.

Action: Replace the destination value for the specified parameter with a character string that has a length less than or equal to the limit specified in the error message.

OCI-16032: parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

OCI-16033: parameter *string* destination cannot be the same as parameter *string* destination

Cause: An attempt was made to change the first specified archive log parameter to have a destination value that duplicates the system-level destination value of the second specified archive log parameter.

Action: Specify a different value for one of the archive log parameters.

OCI-16034: Recovery could not be started.

Cause: Database recovery could not be started because the FROM and MANAGED STANDBY DATABASE clauses were both specified when attempting to start recovery.

Action: Retry the command with either the FROM or MANAGED STANDBY DATABASE clause, but not both.

OCI-16035: missing required keyword *string*

Cause: The indicated keyword is required but was not specified.

Action: Correct the syntax and retry the command.

OCI-16036: invalid CANCEL option

Cause: A mode other than IMMEDIATE followed the CANCEL keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or IMMEDIATE following CANCEL.

OCI-16037: user requested cancel of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user request.

Action: No action is required.

OCI-16038: log *string* sequence# *string* cannot be archived

Cause: An attempt was made to archive the named file, but the file could not be archived.

Action: Check the secondary error messages in the trace file to determine the cause of the error.

OCI-16039: RFS request version mismatch

Cause: A request to archive a redo log to a redo transport destination failed because of an Oracle software version mismatch at the destination.

Action: Verify that a compatible version of Oracle software is running at the redo transport destination.

OCI-16040: The destination archive log file is locked.

Cause: The target archive log file was locked. This indicates that the file is being archived to another Remote File Server (RFS) process.

Action: Ensure that each remote redo transport destination uses a unique network service name.

OCI-16041: remote file server (RFS) unrecoverable error

Cause: The Remote File Server (RFS) process at a redo transport destination encountered an error and was no longer available. Further redo transmission to this destination may not be possible.

Action: Refer to the appropriate RFS trace file located at the redo transport destination for details regarding the error encountered and take corrective action.

OCI-16042: user requested cancel immediate of redo apply

Cause: Redo apply was canceled immediately per user request. Processing of the current archive log file has been interrupted and, therefore, the database is in an inconsistent state.

Action: No action is required.

OCI-16043: Redo apply has been canceled.

Cause: Redo apply was canceled per user request or operation timeout.

Action: More specific messages will accompany this message.

OCI-16044: Destination *string* attribute cannot be specified at session level.

Cause: An attempt was made to modify a redo transport destination attribute using the ALTER SESSION command instead of the ALTER SYSTEM command.

Action: Use the ALTER SYSTEM command to modify the destination attribute.

OCI-16045: circular redo transport destination dependency chain

Cause: An attempt was made to make a redo transport destination dependent on a redo transport destination that was already dependent on it.

Action: Ensure that no redo transport destination is dependent on any destination that is already dependent on it.

OCI-16046: The redo transport destination failed due to failed dependent destination.

Cause: The redo transport destination was dependent on another destination, which failed. Therefore, this destination failed.

Action: No action required.

OCI-16047: DGID mismatch between destination setting and target database

Cause: The DB_UNIQUE_NAME specified for the destination does not match the DB_UNIQUE_NAME in the target database.

Action: Ensure that the DB_UNIQUE_NAME specified in the LOG_ARCHIVE_DEST_n parameter matches with the DB_UNIQUE_NAME parameter defined at the destination.

OCI-16051: parameter *string* contains an invalid delay time

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained a DELAY attribute with an invalid numeric value. The valid range is 0-5760 (in minutes).

Action: Correct the value for the specified LOG_ARCHIVE_DEST_n parameter.

OCI-16052: DB_UNIQUE_NAME attribute is required

Cause: The DB_UNIQUE_NAME attribute was not specified. The value of the LOG_ARCHIVE_DEST_n parameter for each remote redo transport destination must contain the DB_UNIQUE_NAME attribute if the LOG_ARCHIVE_CONFIG parameter value contains the DG_CONFIG attribute.

Action: Use the DB_UNIQUE_NAME attribute to specify the DB_UNIQUE_NAME for the destination.

OCI-16053: DB_UNIQUE_NAME string is not in the Data Guard Configuration

Cause: The specified DB_UNIQUE_NAME was not in the Data Guard Configuration. Also, this problem could occur if a non-standby destination was specified with a DB_UNIQUE_NAME attribute that did not match the DB_UNIQUE_NAME initialization parameter for the current instance.

Action: Specify a valid DB_UNIQUE_NAME if the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter is enabled. The list of valid DB_UNIQUE_NAMES can be seen with the V\$DATAGUARD_CONFIG view.

OCI-16055: fetch archive log FAL request rejected

Cause: Fetch archive log (FAL) server rejected a redo gap fetch request from the client. This may have various causes.

Action: Check the alert log on the primary or cascading database. Take the appropriate action to solve the problem. Note that a snapshot standby database is not allowed to cascade redo, even through the FAL server.

OCI-16056: Backup control file archival requires proper syntax.

Cause: Attempted to perform an online log file archival using a backup control file. The USING BACKUP CONTROLFILE syntax was not specified.

Action: Use the USING BACKUP CONTROLFILE clause to perform an online log file archival using a backup control file.

OCI-16057: server not in Data Guard configuration

Cause: The primary database or fetch archive log (FAL) server was not found in the Data Guard configuration of the standby database.

Action: Add the database unique name of the primary database or FAL server to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

OCI-16058: standby database instance not ready to receive redo log

Cause: The Remote File Server (RFS) process on the standby database was not ready to receive the redo log. To receive the redo log, the physical standby, snapshot standby, and far sync databases must be mounted to receive the redo log. There could also be a role change or some other activity on the target database that requested for non-receipt of the redo log during that operation.

Action: Check the standby alert log and RFS trace files for more information. Ensure that the database is mounted.

OCI-16059: Cannot archive an empty or invalid log file.

Cause: Attempted to archive an empty or invalid log file. See trace file or alert log file for additional information.

Action: No action needed.

OCI-16060: Log file is current.

Cause: Attempted to archive current log file.

Action: No action is required.

OCI-16061: log file status has changed

Cause: The online log file was reclaimed as a new log file either before the archival operation started or during this operation.

Action: None

OCI-16062: standby database not in Data Guard configuration

Cause: The standby database was not found in the Data Guard configuration of the server.

Action: Add the database unique name of the standby database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

OCI-16063: A destination was evicted from multi-destination ASYNC process.

Cause: The LOG_ARCHIVE_DEST_n initialization parameter was unsuitable for the multi-destination ASYNC process.

Action: No action is required. The destination can be managed by a single destination ASYNC process.

OCI-16064: redo decompression failed

Cause: The incoming network buffer containing compressed redo could not be decompressed. See the alert log for additional information.

Action: As a workaround, disable compression on the database that is sending this redo.

OCI-16065: remote archival disabled at standby destination

Cause: The receipt of remote archived redo log files was disabled at the associated standby destination host database.

Action: Perform one of the following actions to resolve this issue: - Change the associated archive log parameter to specify a local destination with the LOCATION keyword, if appropriate. - Defer the associated archive log destination, if appropriate. - Set the standby REMOTE_ARCHIVE_ENABLE parameter to TRUE, if possible. - Enable the RECEIVE attribute of the LOG_ARCHIVE_CONFIG parameter. After performing one of these actions, restart the standby database instance before further attempts are made to archive redo log files.

OCI-16066: remote archival disabled

Cause: The remote archival of redo log files was disabled for this database. The associated archive log destination had been disabled. An archive log destination parameter had specified a remote destination with the SERVICE keyword.

Action: Perform one of the following actions to correct the issue: - Change the archive log parameter to specify a local destination with the LOCATION keyword, if appropriate - Set the REMOTE_ARCHIVE_ENABLE parameter to TRUE, if appropriate - Enable the SEND attribute of the LOG_ARCHIVE_CONFIG parameter After performing one of these actions, restart the database instance before further attempts are made to archive redo log files.

OCI-16067: activation identifier mismatch in archive log *string*

Cause: The activation identifier in the archive log file header did not match with the activation identifier of the database that was being recovered. The indicated archive log cannot be applied to the database.

Action: Locate the appropriate archive log for the database.

OCI-16068: redo log file activation identifier mismatch

Cause: The activation identifier of the indicated redo log file does not match the activation identifier of the database.

Action: n/a

OCI-16069: activation identifier mismatch

Cause: Redo transport failed because the activation identifier of the primary and physical standby databases did not match. This could happen if the physical standby database was not created from a backup of the primary database.

Action: Create a valid configuration and re-try the failed operation.

OCI-16070: Parameter *string* contains an invalid REGISTER attribute value.

Cause: The specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter value contained a REGISTER attribute that specified an invalid file name template string. If specified, the REGISTER file name template must indicate an operating system-specific file path name including thread and log sequence number substitution directives (%t, %T, %s, %S).

Action: Correct the value for the LOG_ARCHIVE_DEST_n parameter.

OCI-16071: archive log file *string* was not found at dependency destination

Cause: The specified archive log file was not found at a redo transport destination that was dependent on another destination.

Action: Verify that all redo transport destinations that are dependent upon another destination or upon which other destinations are dependent are configured correctly.

OCI-16072: A minimum of one SYNC standby database destination is required.

Cause: No SYNC standby database archive log destinations were specified, and the protection mode requires at least one.

Action: Specify a SYNC standby archive log destination in the initialization parameter file or change the protection mode to not require a SYNC standby archive log destination.

OCI-16073: archiving must be enabled

Cause: Online log file archiving is disabled.

Action: Enable log file archiving.

OCI-16074: No ARCH processes are active.

Cause: All ARCH processes have stopped.

Action: Restart the instance.

OCI-16075: standby database destination mismatch

Cause: Another instance had access to a standby database destination that this instance did not. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, then this may be due to a standby database becoming unavailable recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameter is the same and defines a DG_CONFIG at each instance to identify those databases explicitly. See the alert log file for more information.

OCI-16076: unknown standby database destination

Cause: A standby database destination was specified that was not accessed by another instance. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, then this mismatch may be due to a standby database having been restarted recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameter is the same and defines a DG_CONFIG at each instance to identify those databases explicitly. See the alert log file for more information.

OCI-16078: media recovery disabled

Cause: The database was not in ARCHIVELOG mode, but ARCHIVELOG mode was required for the media recovery.

Action: Place the database in ARCHIVELOG mode and retry the operation.

OCI-16079: standby archival not enabled

Cause: The standby database did not have archival enabled.

Action: In order to allow the standby database to access the standby log files, the standby database must be in ARCHIVELOG mode.

OCI-16080: invalid LogMiner session *string* for APPLY

Cause: Logical standby apply engine was started with an invalid LogMiner session identifier.

Action: Fix the problem with the LogMiner session or create a new session.

OCI-16081: insufficient number of processes for APPLY

Cause: Logical standby apply engine was started with fewer processes available than needed.

Action: Increase the values of the initialization parameters PROCESSES and or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view.

OCI-16082: logical standby is not initialized correctly

Cause: Logical standby apply engine was started but it found inconsistencies in its metadata.

Action: Look in the trace file for more information.

OCI-16083: LogMiner session has not been created

Cause: Logical standby apply engine was started without creating a LogMiner session.

Action: Create a LogMiner session and restart the apply engine.

OCI-16084: an apply engine is already running

Cause: A logical standby apply engine was running when another was created.

Action: Shut down the previous apply engine before starting a new one.

OCI-16086: redo cannot be written to the standby redo log

Cause: The primary database was in MAXIMUM PROTECTION or MAXIMUM AVAILABILITY mode, but redo could not be written to the standby redo log at the standby database or databases.

Action: Check the Remote File Server (RFS) trace file for specific errors and reconfigure the standby redo log as appropriate.

OCI-16087: Switchover requires standby or current control file.

Cause: An attempt was made to perform a switchover operation using a backup or clone control file.

Action: Convert the backup control file into a current control file prior to attempting a switchover operation. A clone control file cannot be used for a switchover operation.

OCI-16088: archive log has not been completely archived

Cause: An attempt was made to register an archive log that has not been completely archived. The specified archive log may be a current log file.

Action: Specify a completed archive log.

OCI-16089: Archive log was already registered.

Cause: Attempted to register an archive log that matched a branch, thread, and sequence entry in the control file.

Action: Use V\$ARCHIVED_LOG fixed view to verify the archive log information.

OCI-16090: archive log to be replaced not created by managed standby process

Cause: An attempt was made to replace an archive log entry that was not originally created by the managed standby process.

Action: No user action required.

OCI-16091: dependent archive log destination already archived

Cause: An archive log destination contains a dependency to another archive log destination that has previously been archived.

Action: The parent archive log destination cannot be dependent on another archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

OCI-16092: dependent archive log destination is not active

Cause: An archive log destination contained a dependency with another archive log destination that was not active. The child archive log destination cannot be dependent on another inactive archive log destination.

Action: Use the ALTER SYSTEM command to remove one of the dependent attributes.

OCI-16093: dependent archive log destination is not LGWR-enabled

Cause: An archive log destination contained a dependency with another archive log destination that was not enabled for the Log Writer (LGWR) process. The child archive log destination cannot be dependent on another archive log destination that is not archived by the LGWR process.

Action: Use the ALTER SYSTEM command to change the parent archive log to specify the LGWR process.

OCI-16094: Database shut down during archival operation.

Cause: The database was shut down while an online log file archival was active.

Action: None required.

OCI-16095: dependent destination removal for inactivation

Cause: A dependent archive log destination was inactive because the parent archive log destination became ineligible for archival. This may be because the parent destination was manually deferred by an application user.

Action: None

OCI-16096: ALTER DATABASE COMMIT TO SWITCHOVER TO PHYSICAL STANDBY

Cause: None

Action: Specify this command to switch the primary database to the physical standby role.

OCI-16097: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY

Cause: None

Action: Specify this command to switch the physical standby database to the primary role.

OCI-16098: The primary database has been shut down to prevent data loss.

Cause: The primary database was shut down because it was operating in maximum protection mode and no suitable standby databases were available to protect the primary database from data loss.

Action: Diagnose and correct any errors that exist in the configuration or configure the primary database for maximum availability or maximum performance mode.

OCI-16099: an internal error occurred at standby database

Cause: The Remote File Server (RFS) process on the standby database received // an internal error.

Action: Check the standby alert log and RFS trace files for more information.

OCI-16100: not a valid Logical Standby database

Cause: This database has not been completely configured as a Logical Standby database.

Action: Verify that the database is the intended Logical Standby database. Ensure that you already started logical standby apply with the ALTER DATABASE START LOGICAL APPLY INITIAL statement. See the Oracle8i SQL Reference manual for the statement syntax.

OCI-16101: a valid start SCN could not be found

Cause: An SCN from which to start could not be found.

Action: Register the first log file following the backup from which this database was generated. Using the ALTER DATABASE REGISTER LOGFILE statement to register the database is recommended. Alternatively, you can provide a starting SCN value with this statement.

OCI-16102: remote information is not available on the specified primary

Cause: The new primary has not completed generating the necessary information for the standby to begin consuming its log stream.

Action: Verify that the database link provided references a system that is about to become a new primary. Wait a short time before retrying the command to allow the primary some time to generate the necessary information.

OCI-16103: Logical Standby apply must be stopped to allow this operation

Cause: Logical Standby is currently applying changes. The apply must complete or be stopped to allow the requested operation.

Action: Execute the ALTER DATABASE STOP LOGICAL STANDBY APPLY statement, then re-enter or respecify the operation.

OCI-16104: Invalid Logical Standby parameter

Cause: The specified parameter is not valid.

Action: Check spelling or refer to the DBMS_LOGSTDBY PL/SQL package documentation for the correct statement syntax.

OCI-16105: Logical Standby is already running in background

Cause: A Logical Standby apply operation is already running.

Action: None

OCI-16106: loading previously applied transaction information

Cause: Logical Standby coordinator was performing a scan to identify previously applied transactions.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16107: all log data from primary has been processed

Cause: On the primary system, the log stream has been ended by the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY command.

Action: Issue one of the following commands to make this standby a primary or resume applying changes from a new primary. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL PRIMARY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

OCI-16108: database is no longer a standby database

Cause: The current database has already been made a primary database.

Action: Issue the following commands to make this primary a standby. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

OCI-16109: failed to apply log data from previous primary

Cause: Log data from previous primary could not be completely applied.

Action: Check DBA_LOGSTDBY_EVENTS for failures and take corrective action. Then, reissue command.

OCI-16110: user procedure processing of logical standby apply DDL

Cause: A user provided stored procedure has been called to inspect a DDL statement prior to it being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

OCI-16111: log mining and apply setting up

Cause: This logical standby process is setting up to begin processing changes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16112: Log mining and apply is stopping.

Cause: The logical standby process is cleaning up and stopping logical standby apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16113: applying change to table or sequence *string*

Cause: The process is applying changes to a specific schema object.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16114: applying DDL transaction with commit SCN *string*

Cause: The process is applying a DDL change that's committed at the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16115: *string*% of LogMiner dictionary loading is done

Cause: The process is loading dictionary information from the redo stream. This activity may take a few minutes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16116: no work available

Cause: The process is idle waiting for additional changes to be made available.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16117: processing

Cause: The process is performing its primary function and is not waiting on any significant event.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16119: building transaction at SCN *string*

Cause: The transaction being committed at the given SCN is being prepared for apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16120: dependencies being computed for transaction at SCN *string*

Cause: The transaction committed at the given SCN is being analyzed for dependencies.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16121: applying transaction with commit SCN *string*

Cause: The transaction committed at the given SCN is being applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16122: applying large dml transaction at SCN *string*

Cause: A large transaction is being applied before the commit has been seen. The current redo being applied ends as the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16123: transaction *string string string* is waiting for commit approval

Cause: The apply process is waiting for approval to commit a transaction. This transaction may depend on another or other synchronization activity may delay the committing of a transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16124: transaction *string string string* is waiting on another transaction

Cause: The apply process is waiting to apply additional changes. This transaction likely depends on another.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16125: large transaction *string string string* is waiting for more data

Cause: The apply process is waiting until additional changes for a large transaction are retrieved from the log stream.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16126: loading table or sequence *string*

Cause: Information on the given table or sequence is being loaded into an in memory cache for future use.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16127: stalled waiting for additional transactions to be applied

Cause: This process is waiting for additional memory before continuing. Additional log information cannot be read into memory until more transactions have been applied to the database, thus freeing up additional memory.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes. If this message occurs often and changes are not being applied quickly, increase available SGA or the number of apply processes.

OCI-16128: User initiated stop apply successfully completed

Cause: Logical standby was shutdown in an orderly fashion.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16129: unsupported DML encountered

Cause: One or more DMLs to an unsupported table were encountered and skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. Optionally, check the DBA_LOGSTDBY_EVENTS view for more information including the impacted table owner and name.

OCI-16130: supplemental log information is missing from log stream

Cause: Supplemental logging is not enabled at the primary database.

Action: Issue the following command to enable supplemental logging. ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS;

OCI-16131: An error occurred during a terminal recovery of the standby database.

Cause: An error occurred during a terminal recovery operation of the standby database.

Action: Check the standby alert log for additional information.

OCI-16132: An error occurred during activation of the standby.

Cause: An error occurred during activation of the standby database following a Terminal Recovery.

Action: Check the standby alert log additional information.

OCI-16133: Datafile *string* has incorrect terminal recovery stamp.

Cause: After activation of a standby database following a terminal recovery (recovery of standby using current logs), recovery of a datafile from before the activation must have completed the same terminal recovery to avoid corruption.

Action: A backup of the datafile taken after the terminal recovery and before activating the standby must be used for recovery.

OCI-16134: invalid MANAGED recovery FINISH option

Cause: A mode other than NOWAIT follows the FINISH keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or NOWAIT following FINISH.

OCI-16135: invalid LOG_ARCHIVE_CONFIG modification while in protected mode

Cause: The LOG_ARCHIVE_CONFIG parameter could not be modified if any of the Oracle Real Application Clusters (Oracle RAC) instances were opened in either the maximum

protection or maximum availability mode. Also, this parameter could not be modified because it caused all destinations to fail while in maximum protection mode.

Action: Modify the LOG_ARCHIVE_CONFIG parameter before opening the database in any instance.

OCI-16136: Managed recovery is not active.

Cause: There was an attempt to cancel a managed recovery session; but no managed recovery session was active.

Action: No action needed.

OCI-16137: invalid state change to a managed alternate destination

Cause: An attempt was made to explicitly change the state of a destination participating in an internally managed set of alternate destinations. For example, a destination in the ALTERNATE state was explicitly changed to the ENABLED state. This change prevents the internal mechanisms from managing these cooperating destinations.

Action: Reset the destination before changing the state of the destination.

OCI-16138: end of log stream not received from primary

Cause: The standby system has not received notification that the primary system log stream has been terminated. A graceful switchover is not possible.

Action: Verify that the primary log stream has been terminated. Ensure that the standby has applied all necessary redo from the primary system and, if appropriate, reissue the graceful switchover command.

OCI-16139: media recovery required

Cause: An error has occurred while performing a switchover.

Action: If you were switching a primary database to the standby role, the conversion was successful, but one or more errors occurred after the conversion completed. See the alert log for more information. You can proceed with switching the target standby database to the primary role, but you must address the errors reported at the old primary database before it can protect the new primary database. If you encountered this error while switching a physical standby database to the primary role, the switchover did not succeed because additional redo must be applied. Verify that redo apply is active and wait until the SWITCHOVER_STATUS column of the V\$DATABASE dynamic performance view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying the switchover.

OCI-16140: standby online logs have not been recovered

Cause: The standby database has online logs containing redo that has not been recovered. Activating the standby would lose redo contained in the online logs.

Action: To recover the standby online logs issue the following command: ALTER DATABASE RECOVER MANAGED STANDBY DATABASE FINISH. Then reissue the ALTER DATABASE ACTIVATE STANDBY DATABASE command. To activate the standby without recovering the online logs, issue the following command: ALTER DATABASE ACTIVATE STANDBY DATABASE SKIP STANDBY LOGFILE.

OCI-16143: Connections to the remote file server (RFS) are not allowed during or after terminal recovery.

Cause: An attempt was made, by a source database, to access a physical standby database during or after terminal recovery.

Action: The primary database must not attempt to archive to a physical standby database during or after terminal recovery.

OCI-16145: archival for thread# *string* sequence# *string* in progress

Cause: The indicated archived log file is not available for recovery due to the fact that it is still being archived.

Action: Verify that archival of the indicated log file has completed and reissue the RECOVER STANDBY DATABASE command.

OCI-16146: *string* control file enqueue unavailable

Cause: The control file enqueue was currently unavailable.

Action: No Action is required. The operation will be attempted at a later time.

OCI-16147: standby database referenced by multiple archive log destinations

Cause: Multiple archive log destinations referenced the same standby database using different service names. This is not allowed.

Action: Remove one of the duplicate archive log destinations. See the alert log file for more information.

OCI-16148: user requested expiration of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user specified EXPIRE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

OCI-16150: FINISH recovery was performed on another, older standby database.

Cause: An archive log containing a FINISH recovery indicator was received by a standby database that received archive logs in the future of the received archive log. Because of the possibility that these future archive logs have been applied to this standby database, the received archive log must be rejected. See the remote file server (RFS) trace file for additional information.

Action: No action required, but you may want to check the remote file server (RFS) trace file.

OCI-16151: managed standby recovery not available

Cause: The attempted operation failed because of a pending CANCEL of the managed standby recovery operation.

Action: Wait for the managed standby recovery session to end. Then retry the operation.

OCI-16152: standby database is in 'no-data-loss' protected mode

Cause: The attempted database operation is not allowed while the standby database is in 'no-data-loss' protected mode.

Action: Verify that the attempted database operation is warranted, ALTER DATABASE SET STANDBY DATABASE UNPROTECTED and reissue the statement.

OCI-16154: suspect attribute: *string*

Cause: Use of the specified attribute was invalid in the given context.

Action: Make the appropriate changes and run the statement again.

OCI-16156: LGWR archive log dependency not allowed if database is standby protected

Cause: The use of a log writer (LGWR) archive log dependency was not allowed when the primary was protected by a standby database because this required the use of the standby redo log files.

Action: Remove the LGWR archive log dependency and use non-dependent LGWR archival.

OCI-16157: media recovery not allowed following successful FINISH recovery

Cause: A RECOVER MANAGED STANDBY DATABASE FINISH command has previously completed successfully. Another media recovery is not allowed.

Action: Issue one of these operations following a FINISH recovery: ALTER DATABASE OPEN READ ONLY or ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

OCI-16159: cannot change protected standby destination attributes

Cause: An attempt was made to change the Log Writer (LGWR) or synchronous (SYNC)/asynchronous (ASYNC) attributes for a destination that was participating in the standby protection mode of the database.

Action: None

OCI-16160: cannot change protected standby database configuration

Cause: An attempt was made to change the standby database configuration when the primary database is in standby protected mode.

Action: Add the standby database to the configuration before opening the primary database.

OCI-16161: Cannot mix standby and online redo log file members for group *string*

Cause: An attempt was made to add a log file member that did not match the other member types. This problem typically occurs when adding a standby log file member to an online redo log file group, or adding an online redo log file member to a standby redo log file group.

Action: Verify the log file group type using the TYPE column of the V\$LOG fixed view.

OCI-16162: cannot add new standby databases to protected configuration

Cause: An attempt was made to enable a new standby database destination when the primary database was in standby protected mode.

Action: Add the standby database to the configuration before opening the primary database.

OCI-16163: LGWR network server host attach error

Cause: The Log Writer (LGWR) network server could not attach to remote host.

Action: Check the trace file for more information.

OCI-16164: LGWR network server host detach error

Cause: The Log Writer (LGWR) network server could not detach from remote host.

Action: Check the trace file for more information.

OCI-16165: LGWR failed to hear from the network server process

Cause: The log writer (LGWR) process lost its connection to the network server process.

Action: The LGWR trace file contains more problem-specific information. Based on the LOG_ARCHIVE_DEST_n setting, the LGWR may retry accessing the network server process at a later time.

OCI-16166: LGWR network server failed to send remote message

Cause: The log writer process (LGWR) and the network server process could not communicate with the remote host.

Action: Check the trace file for more information. Based on the LOG_ARCHIVE_DEST_n setting, the LGWR may retry accessing the network server process at a later time.

OCI-16167: LGWR network server could not switch to non-blocking mode

Cause: The Log Writer (LGWR) network server could not switch to the non-blocking mode.

Action: Check the trace file for more information.

OCI-16168: LGWR network server could not switch to non-blocking mode

Cause: The Log Writer (LGWR) network server could not switch to non-blocking mode.

Action: Check the trace file for more information.

OCI-16169: A LGWR process SYNC destination is no longer connected.

Cause: A log writer (LGWR) process's SYNC destination became disconnected.

Action: See the alert log and the LGWR trace file for more information regarding the reason the LGWR SYNC destination became disconnected. Possible reasons include network problems, target database shutdown, and the SYNC process died.

OCI-16170: Terminal recovery may have left the database in an inconsistent state

Cause: When terminal recovery is invoked in a standby database without synchronous log shipping, in the rare case of the recovery session being in an unrecoverable state, terminal recovery cannot bring the standby database to a consistent SCN boundary if the primary database continues to have redo thread(s) open.

Action: Continue standby recovery with additional log shipping from primary.

OCI-16171: The RECOVER...FINISH request is not allowed due to gap in thread *string*, sequences *string-string*.

Cause: The specified RECOVER...FINISH request is not allowed due to a gap in redo. See the alert log for additional information.

Action: Copy missing archived logs from primary or another standby. Register the logs and reissue the RECOVER...FINISH command. If the logs are not available, issue the ALTER DATABASE RECOVER MANAGED STANDBY SKIP command to ignore the redo log files missing on the standby.

OCI-16172: archive logs detected beyond terminal end-of-redo

Cause: An attempt to archive a terminal end-of-redo (EOR) archive log to a remote destination failed due to the existence, at the remote site, of archive logs containing REDO in the future of the terminal EOR log being archived.

Action: No action is required.

OCI-16173: incompatible archival network connections active

Cause: One of two situations can cause this error: 1) An attempt to start a Terminal Incomplete Recovery operation failed due to an active Remote File Server process detected. 2) An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due to an active Remote File Server process at the remote site. An active Remote File Server (RFS) process implies connectivity with the primary database which may indicate that a Terminal Incomplete Recovery operation is not warranted.

Action: Verify the Managed Standby environment and re-evaluate the necessity of a Terminal Incomplete Recovery operation.

OCI-16174: user requested thread/sequence termination of managed recovery

Cause: The managed standby database recovery operation has been terminated per user specified THROUGH THREAD/SEQUENCE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

OCI-16175: cannot shut down database when media recovery is active

Cause: An attempt was made to shut down a standby database while media recovery was active.

Action: Cancel media recovery to proceed with the shutdown.

OCI-16176: background dictionary build cannot be running

Cause: The background process dedicated to dictionary build is active.

Action: wait and try it later.

OCI-16177: media recovery is not required

Cause: The THROUGH LAST SWITCHOVER clause of the ALTER DATABASE RECOVER MANAGED STANDBY DATABASE was specified and the database has been recovered to the most recent End-Of-Redo marker. All known archived logs have been applied. Managed recovery is not required.

Action: No action is necessary. The standby database may be activated as a new primary or may continue as a standby.

OCI-16178: Cannot specify remote destinations in manual archiving mode.

Cause: Database is operating in manual archiving mode. Remote ARCHIVELOG destinations are not allowed in this mode.

Action: Use the ALTER DATABASE ARCHIVELOG command to place the database in automatic ARCHIVELOG mode, or defer the archivelog destinations that specify the SERVICE= attribute.

OCI-16179: incremental changes to "string" not allowed with SPFILE

Cause: Incremental changes to a log_archive_dest_n parameter cannot be made when using an SPFILE.

Action: Specify either LOCATION or SERVICE plus all other attributes to be set in one ALTER SYSTEM/SESSION SET command.

OCI-16180: number of processes specified is too large

Cause: The number of server processes available for Logical Standby is currently limited to 1024 LogMiner processes and 1024 apply processes or a total of 2048.

Action: Retry with a lower value.

OCI-16181: SGA specified for Logical Standby is too large

Cause: MAX_SGA is larger than 75% of the larger of initialization parameters SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

Action: Specify the value of MAX_SGA to be less than 75% of the maximum of SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

OCI-16182: internal error on internal channel during remote archival

Cause: An internal error was encountered on the internal channel between the log writer process (LGWR) and the network server processes.

Action: No action is required. Another attempt will be made to archive the file that had this failure during archival.

OCI-16184: DB_UNIQUE_NAME string hashes to the same value as DB_UNIQUE_NAME string

Cause: The internal hash value generated for one DB_UNIQUE_NAME collided with the hash value of another DB_UNIQUE_NAME.

Action: Slightly modify one of the DB_UNIQUE_NAMES so it hashes to a different value.

OCI-16185: REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG mutually exclusive

Cause: Both the REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG parameters are defined in the initialization file and they are mutually exclusive.

Action: The REMOTE_ARCHIVE_ENABLE parameter has been made obsolete. Use only the LOG_ARCHIVE_CONFIG parameter.

OCI-16186: Modifying LOG_ARCHIVE_CONFIG requires the SID='*' qualifier.

Cause: The setting for the LOG_ARCHIVE_CONFIG parameter must be exactly the same on all Oracle Real Application (Oracle RAC) instances, so the SID='*' qualifier is required.

Action: Reenter the command using the SID='*' qualifier.

OCI-16187: LOG_ARCHIVE_CONFIG contains duplicate, conflicting, or invalid attributes.

Cause: The LOG_ARCHIVE_CONFIG parameter was specified with duplicate, conflicting, or invalid attributes.

Action: Check the documentation regarding the correct specification of the LOG_ARCHIVE_CONFIG parameter and fix the value specified for this parameter.

OCI-16188: LOG_ARCHIVE_CONFIG settings are inconsistent with the previously started instance.

Cause: The settings for the LOG_ARCHIVE_CONFIG parameter were inconsistent with the settings of a previously started instance. The settings for this parameter must be exactly the same for all instances.

Action: Ensure that all instances use the exact same LOG_ARCHIVE_CONFIG settings.

OCI-16191: log shipping client unable to log onto target database

Cause: An attempt was made to ship redo to a target database without logging on to standby or with invalid user credentials.

Action: Ensure that the primary and target databases are using password files and that both the primary and target databases have the same SYS password. After ensuring that the password file is accessible and the REMOTE_LOGIN_PASSWORDFILE initialization parameter is set to either SHARED or EXCLUSIVE, restart the primary or target database or both.

OCI-16192: Primary and standby network integrity mismatch

Cause: Standby wants sqlnet network integrity for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network integrity and set it up identically on both primary and standby. Restart primary and/or standby.

OCI-16193: Primary and standby network encryption mismatch

Cause: Standby wants sqlnet network encryption for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network encryption and set it up identically on both primary and standby. Restart primary and/or standby.

OCI-16194: Modifying DB_UNIQUE_NAME requires SID='*' qualifier

Cause: The setting for the DB_UNIQUE_NAME parameter must be exactly the same on all RAC instances so the SID='*' qualifier is required.

Action: Re-enter the command using the SID='*' qualifier.

OCI-16195: DG_CONFIG requires DB_UNIQUE_NAME be explicitly defined

Cause: The DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter can only be used if the DB_UNIQUE_NAME parameter has been explicitly defined.

Action: Explicitly define a valid DB_UNIQUE_NAME.

OCI-16196: database has been previously opened and closed

Cause: The instance has already opened and closed the database, which is allowed only once in its lifetime.

Action: Shut down the instance.

OCI-16197: Invalid DB_UNIQUE_NAME parameter specification

Cause: The DB_UNIQUE_NAME parameter has an invalid specification. The DB_UNIQUE_NAME parameter has a maximum length of 30 characters and the only characters allowed are alpha-numeric characters and "_", "\$" and "#".

Action: Check the documentation and re-enter the parameter.

OCI-16198: timeout or a delayed response incurred by redo transport process

Cause: A timeout was incurred during remote archival or a redo transport process was found to be not responding.

Action: No action is required. An attempt will be made to re-archive the file that had this failure during archival. The processes that have stopped responding will be terminated and new processes will be started.

OCI-16199: Terminal recovery failed to recover to a consistent point

Cause: See alert log for more details

Action: Try to resolve the problem. Retry terminal recovery. If the problem occurs repeatedly and cannot be resolved, call Oracle support.

OCI-16200: Skip procedure requested to skip statement

Cause: Logical standby called a skip procedure that requested for a particular statement not to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16201: Skip procedure requested to apply statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16202: Skip procedure requested to replace statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be replaced with a new statement.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16203: Unable to interpret skip procedure return values

Cause: The skip procedure returned conflicting or invalid values.

Action: Ensure that the new_statement output parameter is non-NULL when returning DBMS_LOGSTDBY.SKIP_ACTION_REPLACE and NULL otherwise. Also ensure SKIP_ACTION is specified correctly.

OCI-16204: DDL successfully applied

Cause: A DDL statement has successfully committed on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16205: DDL skipped due to skip setting

Cause: A setting in the logical standby skip table indicates that this type of DDL should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16206: database already configured as Logical Standby database

Cause: This database has been previously configured as a Logical Standby database. A Logical Standby database is not capable of processing the requested operation.

Action: Ensure that you entered the command on the correct database as this database is a Logical Standby and is not capable of servicing the request.

OCI-16207: Logical standby dictionary build not permitted.

Cause: A dictionary build is currently in progress. Only one build can be active at a time.

Action: Wait for the active build to complete before invoking a new build.

OCI-16208: Logical standby dictionary build failed to start.

Cause: Failure to start the logical standby dictionary build process (LSP1)

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

OCI-16209: Logical standby dictionary build failed to complete.

Cause: The logical standby dictionary build process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

OCI-16210: Logical standby coordinator process terminated with error

Cause: The logical standby coordinator process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

OCI-16211: unsupported record found in the archived redo log

Cause: Log apply services encountered a record in the archived redo log that could not be interpreted.

Action: 1. Use `DBMS_LOGSTDBY.INSTANTIATE_TABLE` to re-create the table on the standby database or simply drop the table if it's unimportant. 2. `ALTER DATABASE START LOGICAL STANDBY APPLY`; 3. Examine the `current_scn` column in the `DBA_LOGSTDBY_EVENTS` view to determine which log file contains the unsupported record. 4. Provide the log file to Oracle Support Services.

OCI-16212: number of processes specified for SQL Apply is too great

Cause: Logical standby apply engine was started with more processes requested than are available.

Action: Adjust the values of the initialization parameters `PROCESSES` or the `MAX_SERVERS` parameter seen in the `DBA_LOGSTDBY_PARAMETERS` view. If you did not specify `MAX_SERVERS`, but instead specified `PREPARE_SERVERS` and `APPLY_SERVERS` through the `dbms_logstdby.apply_set` procedure, you will need to decrease either one or both of them.

OCI-16213: ddl encountered, stopping apply engine

Cause: stop_on_ddl callout specified and DDL was encountered.

Action: Either disable stop_on_ddl callout or remove DDL.

OCI-16214: apply stalled for apply delay

Cause: A delay has been specified on the primary database for this destination.

Action: Either turn off the delay on the primary or use DBMS_LOGSTDBY.APPLY_UNSET('APPLY_DELAY'); to override.

OCI-16215: history metadata inconsistency

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

OCI-16216: Log stream sequence error

Cause: The log stream being processed did not follow the last processed stream.

Action: If the database is in an active configuration, issue an ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY command to synchronize log stream data with the current primary database. If the database is not in an active configuration, manually add the next dictionary-begin log file that followed the previous log stream.

OCI-16217: prepare to switchover has not completed

Cause: An ALTER DATABASE PREPARE TO SWITCHOVER command was issued, but the prepare activity did not complete.

Action: Verify that the standby was prepared properly. You may cancel the prepare and perform an unprepared switchover which requires a database link to complete. Or reissue the prepare operation on the standby.

OCI-16218: This database is already preparing to switch over.

Cause: The database was already preparing to switch over and was not able to accommodate another prepare attempt.

Action: Cancel the current prepare attempt with the ALTER DATABASE PREPARE TO SWITCHOVER CANCEL command, then reissue the prepare request.

OCI-16219: This database is not preparing to switch over.

Cause: The database was not preparing to switch over. Therefore, it was not possible to cancel the SWITCHOVER command.

Action: Preparing for the SWITCHOVER command can be accomplished with the ALTER DATABASE PREPARE TO SWITCHOVER command.

OCI-16220: no failed transaction found

Cause: No failed transaction was found.

Action: Retry the ALTER DATABASE START LOGICAL STANDBY APPLY command without the SKIP FAILED TRANSACTION option.

OCI-16221: history table synchronization error

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

OCI-16222: automatic Logical Standby retry of last action

Cause: A failure occurred while running Logical Standby apply. A new attempt is automatically being made by Logical Standby apply.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16223: DDL skipped, unsupported in current version

Cause: The given DDL statement was not supported in the current version of Logical Standby and was skipped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16224: Oracle Data Guard is enabled.

Cause: Operation could not be performed because Oracle Data Guard was enabled.

Action: If the statement needs to be executed, contact the system administrator to disable Oracle Data Guard.

OCI-16225: Missing LogMiner session name for Capture

Cause: An attempt was made to register the log file for Capture without a specified LogMiner session name.

Action: Specify a valid LogMiner session name to which the log file will be registered.

OCI-16226: DDL skipped due to lack of support

Cause: Logical Standby does not support this type of DDL in this version, so the DDL is skipped.

Action: The DBA may apply the DDL explicitly at a later time or a procedure to handle this type of DDL can be created. see DBMS_LOGSTDBY.SKIP procedure for details.

OCI-16227: DDL skipped due to missing object

Cause: A table or other database object upon which this DDL depended was not defined on the Logical Standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16228: Insufficient recovery for logical standby

Cause: Insufficient amount of recovery was run for logical standby instantiation.

Action: Continue to recover the database using ALTER DATABASE RECOVER MANAGED STANDBY DATABASE.

OCI-16229: PDML child *string string string* for parent *string string string* cannot be skipped.

Cause: A request was made to skip a parallel DML child transaction id. This is not supported.

Action: Using the DBMS_LOGSTDBY.UNSKIP_TRANSACTION procedure, remove the child transaction id, then specify the parent transaction id using DBMS_LOGSTDBY.SKIP_TRANSACTION if appropriate.

OCI-16230: committing transaction *string string string*

Cause: Logical Standby apply was committing changes for the given transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16231: Zero Data Loss Recovery Appliance (ZDLRA) is shutdown.

Cause: ZDLRA was shutdown and was not accessible for ten minutes.

Action: Automatic attempts to access the ZDLRA occur every ten minutes or the LOG_ARCHIVE_DEST_STATE_n parameter can be set to ENABLE to clear the error state.

OCI-16232: adding Logical Standby skip entry for table *string.string*

Cause: Table was previously unsupported due to datatype or storage attribute definitions. Table is now capable of being supported.

Action: To have Logical Standby maintain the table, import that table directly from the primary.

OCI-16233: The table *string.string* is unsupported now

Cause: Table was previously supported but now is unsupported due to altered datatype or storage attribute definitions.

Action: None

OCI-16234: restarting to reset Logical Standby apply

Cause: Logical Standby encountered a work load that required a restart to properly reschedule.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16235: DDL skipped because import has occurred

Cause: An object was exported from the primary database and imported into the Logical Standby database. This DDL occurred before the export.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16236: Logical Standby metadata operation is in progress.

Cause: The requested operation failed because an incompatible Logical Standby metadata operation such as DBMS_LOGSTDBY.SET_TABLESPACE, DBMS_LOGSTDBY.APPLY_SET or DBMS_LOGSTDBY.INSTANTIATE_TABLE was still running.

Action: Wait for the incompatible Logical Standby metadata operation to finish, then reenter or re-specify the operation.

OCI-16237: SGA specified for Logical Standby is too small

Cause: MAX_SGA must be at least 10 Megabytes for proper functioning of Logical Standby.

Action: Specify the value of MAX_SGA to be greater than or equal to 10Mb. Alternatively, increase the shared_pool_size/sga_target so that 1/4 of it will amount to 10 Megabytes.

OCI-16238: attempt to use version 9 log

Cause: Version 9 log files are not supported.

Action: Use log files of a supported version.

OCI-16239: IMMEDIATE option not available without standby redo logs

Cause: The IMMEDIATE option cannot be used without standby redo logs.

Action: Do not specify the IMMEDIATE option unless standby redo logs are being used.

OCI-16240: Waiting for log file (thread# *string*, sequence# *string*)

Cause: Process is idle waiting for additional log file to be available.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16241: Waiting for gap log file (thread# *string*, sequence# *string*).

Cause: Reader process was idle waiting for the log file to fill the log sequence gap.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16242: Processing log file (thread# *string*, sequence# *string*)

Cause: Reader process was processing the log file.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16243: paging out *string* bytes of memory to disk

Cause: Builder process is paging out memory to free up space in lcr cache.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16245: change db_name to *string* in the server-side parameter file (SPFILE)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a modifiable server parameter file (SPFILE).

Action: The server-side parameter file must be modified so that db_name is set to the given name before mounting the database again. You must do this by executing CREATE PFILE FROM SPFILE, editing the resulting text parameter file, and then executing CREATE SPFILE FROM PFILE.

OCI-16246: User initiated abort apply successfully completed

Cause: SQL Apply was stopped using the abort option.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16247: DDL skipped on internal schema

Cause: Logical Standby ignores DDLs on internal schemas such as SYS and SYSTEM. For a complete list of internal schemas ignored by Logical Standby perform the following query: SELECT owner FROM dba_logstdby_skip WHERE statement_opt = 'INTERNAL SCHEMA'.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16248: Remote file server (RFS) connections are not permitted during terminal apply.

Cause: Writes by remote file server (RFS) processes were not permitted while a logical standby database was performing terminal apply.

Action: Allow outstanding logical standby database operations to complete and retry.

OCI-16249: Terminal apply failed to complete during failover

Cause: The logical standby coordinator process terminated abnormally."

Action: Examine the DBA_LOGSTDBY_EVENTS view for the reason behind the abnormal shutdown, and resolve accordingly. Once the problem has been rectified, reissue the ALTER DATABASE ACTIVATE LOGICAL STANDBY DATABASE command to complete the failover.

OCI-16250: Failed to acquire starting scn of new log stream

Cause: The starting SCN for the new log stream could not be determined.

Action: Please reissue the ACTIVATE LOGICAL STANDBY DATABASE command.

OCI-16251: LSP1 Background Build not permitted

Cause: The LSP1 background process is not permitted to start because it had previously been attempted.

Action: This is an internal error. Contact Oracle support.

OCI-16252: Rebuild operation not permitted

Cause: The REBUILD operation is not permitted.

Action: Only on a primary database that has failed to complete the LogMiner dictionary build may the REBUILD operation take place. Reissue the ACTIVATE LOGICAL STANDBY DATABASE command if it previously failed to complete.

OCI-16253: Logical standby cannot start due to a prior, incomplete operation

Cause: A failure during a prior failover or configuration-related operation left the logical standby in an inconsistent state.

Action: Identify and reissue the operation before attempting to restart the logical standby apply engine.

OCI-16254: change db_name to *string* in the client-side parameter file (pfile)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a server parameter file (spfile).

Action: The client-side parameter file must be edited so that db_name is set to the given name before mounting the database again.

OCI-16255: Log Auto Delete conflicts with another LogMiner session

Cause: Log Auto Delete cannot be on while another LogMiner session is running on the same database.

Action: Start Logical Standby without Log Auto Delete or destroy other LogMiner sessions first.

OCI-16256: Failure to complete standby redo log file archival after failover

Cause: The standby redo log files processed during the failover of a logical standby were not archived.

Action: Execute DBMS_LOGSTDBY.REBUILD to reattempt the archival.

OCI-16257: Switchover initiated Stop Apply successfully completed

Cause: The SQL Apply process was stopped because of a switchover.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16258: marking index unusable due to a constraint violation

Cause: A constraint violation occurred during the apply of a direct path load. The index will be marked unusable and the apply will be restarted.

Action: No action necessary. See alert log for index schema and name.

OCI-16259: Switchover to logical standby requires a log archive destination

Cause: A valid log archive destination was not found to which the local system could archive the end of redo (EOR) log file. A minimum of one destination is required.

Action: Ensure all log archive destinations are properly configured and, if applicable, have network connectivity before reissuing the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY DDL operation.

OCI-16260: Waiting to replace partial or corrupt log file (thread# *string*, sequence# *string*)

Cause: LogMiner Reader process reached the end of a partial log file or encountered a corrupted block. It is now waiting for the log file to be recovered and reregistered.

Action: No action necessary. Once the fetch archive log (FAL) archiver replaces the log file, standby will automatically restart to process the replaced file.

OCI-16261: Identification key mismatch for table "*string*"."*string*".

Cause: Internal error in SQL Apply.

Action: Contact Oracle Support Services.

OCI-16262: Invalid value specified for Logical Standby parameter

Cause: The value specified in APPLY_SET is invalid for the parameter.

Action: Specify correct parameter value. Please refer to documentation on DBMS_LOGSTDBY PL/SQL package for details.

OCI-16263: Dynamic parameters can only be set on SQL apply instance

Cause: Attempt to set a Logical standby dynamic parameter on an instance other than where SQL apply coordinator is running.

Action: Connect to the instance where SQL apply coordinator is running and reissue the statement.

OCI-16264: invalid value for PREPARE_SERVERS parameter

Cause: attempt to set PREPARE_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set PREPARE_SERVERS parameter to a non zero value and or increase MAX_SERVERS parameter accordingly.

OCI-16265: Unsupported PL/SQL procedure encountered

Cause: Apply encountered an unsupported procedure from an Oracle supplied PL/SQL package that is otherwise supported

Action: Either add a skip rule for this procedure or manually apply the procedure and restart apply skipping the failed transaction Please refer to documentation on the PL/SQL package for details.

OCI-16266: Cannot instantiate a Logical Standby from another Logical Standby

Cause: An instantiation of a Logical Standby has been attempted for another database with the Logical Standby role, which is not supported.

Action: Instantiate a Logical Standby database only from a Primary Database.

OCI-16267: Cannot instantiate a Logical Standby during a switchover

Cause: An instantiation of a Logical Standby has been attempted for a primary database that is in the middle of a switchover.

Action: Execute ALTER DATABASE PREPARE TO SWITCHOVER CANCEL to cancel the switchover, and attempt the instantiation again.

OCI-16268: user procedure processing of logical standby apply PL/SQL

Cause: A user-provided stored procedure was called to inspect a PL/SQL statement prior to the statement being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

OCI-16269: PL/SQL procedure skipped due to failure on primary database

Cause: Because the PL/SQL procedure failed when executed on the primary database, it could not be executed on the standby database.

Action: This informational statement is provided to record the event for diagnostic purposes. The failed PL/SQL procedure needs to be investigated to ensure it did not commit interesting data before it failed.

OCI-16270: PL/SQL procedure skipped due to unmaintained standby objects

Cause: Because the PL/SQL procedure manipulated objects not being maintained by the standby database, it was skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16271: PL/SQL successfully applied

Cause: A PL/SQL procedure was successfully applied on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16272: PL/SQL procedure skipped due to skip setting

Cause: A setting in the logical standby skip table indicated that this PL/SQL procedure should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

OCI-16273: invalid value for APPLY_SERVERS parameter

Cause: attempt to set APPLY_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set APPLY_SERVERS parameter to a non zero value or increase MAX_SERVERS parameter accordingly.

OCI-16274: failure to perform operation on all Oracle RAC instances

Cause: One or more instances encountered an error while performing an operation.

Action: Ensure every instance in the Oracle RAC meets the requirements for the operation, and retry the operation.

OCI-16275: prior failed CTAS detected and pre-existing table dropped

Cause: During the processing of a CTAS operation, an existing empty table with the same name and attributes as the CTAS source table was found, and the table was dropped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16276: specified database link does not correspond to primary database

Cause: The database link specified to DBMS_LOGSTDBY.INSTANTIATE_TABLE did not link to the primary database for this logical standby database.

Action: Specify a database link that corresponds to the primary database for this logical standby database. The link should have privileges to read and lock the table being instantiated, as well as the SELECT_CATALOG_ROLE.

OCI-16277: specified table is not supported by logical standby database

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE to instantiate an unsupported table on the logical standby database. Tables with unsupported data types cannot be replicated to a logical standby database.

Action: Specify a table which is not listed in the DBA_LOGSTDBY_UNSUPPORTED_TABLE view.

OCI-16278: specified table has a multi-object skip rule defined

Cause: A table that is instantiated via DBMS_LOGSTDBY.INSTANTIATE_TABLE must not have any skip rules defined with wildcard characters.

Action: Remove or rewrite any skip rules defined for the specified table so that they no longer contain wildcard characters, or no longer affect the specified table.

OCI-16279: supplied dblink does not have sufficient privileges

Cause: A dblink was specified that lacked one or more of the CONNECT, RESOURCE, or SELECT_CATALOG_ROLE roles or that connects to a user with insufficient privileges to lock the table.

Action: Grant the necessary privileges to the dblink and the user to which the dblink connects and retry the operation.

OCI-16280: cannot change master key on a logical standby database

Cause: An attempt was made to change the master key for transparent data encryption on a logical standby database.

Action: Set GUARD to NONE and reissue the command. This prevents you from replicating tables with encrypted columns from the primary database.

OCI-16281: missing identification key for table "*string*"."*string*".

Cause: No identification key was created for specified table.

Action: Create a primary key or unique index for specified table.

OCI-16283: operation not permitted on non-apply instance

Cause: An operation was attempted that is not supported since it requires a running logical apply on the local instance.

Action: Retry the operation on the instance on which the apply engine is running.

OCI-16284: timed out waiting for an in-progress operation to complete

Cause: An operation timed out waiting for another operation to complete.

Action: Retry the operation when the in-progress operation has completed.

OCI-16285: operation not permitted due to inconsistent role state

Cause: A prior attempt to change the role of this database has failed before the new role state could be fully committed.

Action: Retry the previously attempted role-related operation before attempting the current operation.

OCI-16286: operation not permitted due to lack of synchronized destination

Cause: A synchronized log archive destination was not found to which the end-of-redo log file could be archived.

Action: Before re-attempting the operation, wait at least one minute for the Remote File Server to automatically recover any missing log files or manually recover and register any missing log files with logical standby.

OCI-16287: operation not permitted due to active apply state

Cause: An operation was attempted that was not supported while the logical standby database had an active apply state.

Action: Confirm the procedures used to configure the logical standby database. Procedures which attempt to reconfigure a logical standby database for a new primary database may encounter this error if an error in a preliminary step was encountered.

OCI-16288: DDL skipped due to missing edition "*string*"

Cause: The edition in which the DDL was performed on the primary did not exist on the standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16289: unable to access Pluggable Database "*string*"

Cause: Logical standby attempted to access a Pluggable Database that did not exist.

Action: Create or plug in the specified Pluggable Database or add an appropriate skip rule and then restart logical standby.

OCI-16290: cannot alter the session logical replication state within a transaction

Cause: A transaction was already in progress.

Action: Commit or rollback the transaction and then reexecute.

OCI-16291: operation not permitted due to incomplete setup

Cause: An operation was denied due to the logical standby being in a transitional state.

Action: Perform any multistep procedures such as instantiation, switchover, or failover to completion as written in the documentation.

OCI-16292: cannot replicate ALTER TABLE ADD COLUMN with sequence default value

Cause: The logical standby database attempted to replicate an unsupported DDL statement. The DDL added a column with a sequence as the default with compatibility set to a release earlier than 12.2.0.2.0.

Action: The table must be re-instantiated from the primary database using `DBMS_LOGSTDBY.INSTANTIATE_TABLE()`.

OCI-16293: cannot replicate a failed ALTER TABLE ADD COLUMN

Cause: The logical standby database attempted to replicate a failed ALTER TABLE ADD COLUMN for an identity column, but the operation could not be rolled back on the target.

Action: The added columns must be dropped from the table on the target before restarting apply, or the table must be reinstantiated.

OCI-16294: operation not allowed on a LogMiner table

Cause: An attempt was made to use the SQL command ALTER TABLE or DROP TABLE on a table used for LogMiner metadata.

Action: Connect as SYS to perform this operation.

OCI-16295: cannot create a synonym with same name as LogMiner table

Cause: An attempt was made to create a synonym with the same name as a table used by LogMiner.

Action: Choose a different name for the synonym.

OCI-16300: LSBY architected tracing event**OCI-16302: extended data type support is not supported for specified table**

Cause: A call was made to `DBMS_LOGSTDBY.EDS_ADD_TABLE` for a table that was not supported for such an operation. The table either does not have a primary key or it has a data type not supported by this procedure.

Action: Specify a table for which support exists in `EDS_ADD_TABLE`.

OCI-16303: specified table already has extended data type support

Cause: A call was made to `DBMS_LOGSTDBY.EDS_ADD_TABLE` for a table that already had EDS added on the local database.

Action: None

OCI-16304: procedure must first be called on primary database

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE on a logical standby database without having first called it on the primary database.

Action: Call DBMS_LOGSTDBY.EDS_ADD_TABLE on the primary database and then retry on the standby.

OCI-16305: procedure not supported on a logical standby

Cause: A call was made to DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on a logical standby database which can only be called on a primary database

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on the primary database

OCI-16306: specified table does not have a primary key

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that did not have a primary key.

Action: Add a primary key and retry the operation.

OCI-16307: TSE key *string* successfully applied

Cause: An ALTER SYSTEM SET ENCRYPTION KEY statement was successfully committed on the logical standby database.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

OCI-16308: specified table has extended data type support

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE for a table that is being maintained by extended data type support.

Action: Call DBMS_LOGSTDBY.EDS_REMOVE_TABLE followed by either DBMS_LOGSTDBY.EDS_ADD_TABLE or a retry of the operation.

OCI-16309: extended data type support evolve operation not yet started

Cause: A call was made to finish an extended data type support evolve operation without having first started the operation.

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with START option and then retry.

OCI-16310: extended data type support evolve operation in progress

Cause: An extended data type support evolve operation was started but not yet completed.

Action: Wait a few seconds and retry the command if automatic evolve has been enabled or call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with the FINISH option and then retry.

OCI-16311: materialized view log already exists

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table with a LOB that requires the creation of a specifically-defined materialized view log but one already exists.

Action: Drop the existing materialized view log and retry the operation.

OCI-16330: error in container "*string*"

Cause: An operation was attempted on a container and an error occurred.

Action: Address the failure condition and then retry.

OCI-16331: container "*string*" is not open

Cause: An operation was attempted on a container. However, the container was not open.

Action: Open the container and then retry.

OCI-16332: logical standby encountered non-fatal error *ORA-string* during DDL execution

Cause: Logical standby apply encountered a non-fatal error during DDL execution and continued to process subsequent transactions.

Action: This error is informational only. No user action is required.

OCI-16333: `_MAX_LOG_LOOKBACK` parameter not sufficiently larger than `MAX_SGA`

Cause: `_MAX_LOG_LOOKBACK` or `MAX_SGA` parameter was set to a value that will lead to decreased performance.

Action: Reset parameters such that `_MAX_LOG_LOOKBACK` is at least 5 times the value of `MAX_SGA`.

OCI-16334: skip procedure does not exist

Cause: The specified skip procedure did not exist.

Action: Ensure that the specified skip procedure exists and is accessible by the calling user.

OCI-16390: incorrect database role

Cause: The database role of a target database did not match the role attribute of the `LOG_ARCHIVE_DEST_n` parameter.

Action: Correct the `ROLE` attribute of the `LOG_ARCHIVE_DEST_n` parameter. See the trace file for information about the role of the target database.

OCI-16391: parameter `STATEMENT_REDIRECT_SERVICE` has invalid service name

Cause: The value for the specified `STATEMENT_REDIRECT_SERVICE` parameter has an invalid service name.

Action: Correct the value for the `STATEMENT_REDIRECT_SERVICE` parameter.

OCI-16393: Redo log management parameter setting is invalid.

Cause: The value specified for the redo log management parameter had invalid attributes or was not specified with `SID=*` in a cluster configuration.

Action: Check the documentation regarding the correct specification for redo log management.

OCI-16395: ADG standby session terminated

Cause: ADG standby session was stopped because server detected that the primary database connection associated with redirected statement execution is lost.

Action: Reconnect to ADG standby database and re-run the statement.

OCI-16397: statement redirection from Oracle Active Data Guard standby database to primary database failed

Cause: The statement redirection failed due to one of the following: * The primary database connect string was not established. * The primary database could not be reached. * The undo-mode or incarnation were not the same. * The current user and logged-in user were not the same. * Redirecting PL/SQL execution having bind variable was not supported.

Action: Run the statement after fixing the condition that caused the failure.

OCI-16398: online log has been reused and archive log cannot be found

Cause: ASYNC redo transport was unable to find either an online or standby log, or an archived redo log that represented the current redo sequence number.

Action: No action is required. There will be further attempts by the process reporting this error or another process to locate a file containing the required redo.

OCI-16399: current redo has moved to a new branch

Cause: A new branch was detected by ASYNC redo transport. No further redo will be transferred from the old branch. ASYNC redo transport will commence on the new branch.

Action: No action is required.

OCI-16400: quota attributes are not allowed with USE_DB_RECOVERY_FILE_DEST

Cause: A destination parameter that specified USE_DB_RECOVERY_FILE_DEST also specified a quota attribute.

Action: Remove quota attributes from destination parameters that specify USE_DB_RECOVERY_FILE_DEST.

OCI-16401: archive log rejected by Remote File Server (RFS)

Cause: An attempt was made to re-archive an existing archive log.

Action: See alert log and trace file for more details. No action is necessary. This is an informational statement provided to record the event for diagnostic purposes.

OCI-16402: TRANSPORT=ONDEMAND is unsupported.

Cause: The ARCHIVELOG destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

OCI-16403: shut down in progress - remote connection is not permitted

Cause: A redo transport session could not be started because the database was shutting down.

Action: Wait for the remote instance to be restarted, or contact your DBA.

OCI-16406: primary and standby database software version mismatch

Cause: The primary and standby databases were not running compatible versions of Oracle server software.

Action: Install the correct Oracle server software and try again.

OCI-16407: An archive log from an earlier redo branch has been rejected

Cause: An archive log from a redo branch that is earlier than the one that the standby database is currently applying was rejected.

Action: No action is required.

OCI-16408: Archive log from an incompatible redo branch has been rejected.

Cause: An archive log from a redo branch was rejected. The redo branch was incompatible with the standby database where it was attempted to be applied.

Action: No action is required.

OCI-16409: archive log switchover reference number mismatch

Cause: The archive log switchover reference numbers of the primary and standby database did not match. Remote archival of redo log files is not allowed to incompatible standby database instances.

Action: No action is required.

OCI-16411: TRANSPORT=ONDEMAND is unsupported

Cause: The archive log destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

OCI-16412: TRANSPORT=ONDEMAND is unsupported

Cause: The archive log destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter setting.

OCI-16413: TRANSPORT=ONDEMAND is unsupported

Cause: The archive log destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

OCI-16416: no viable *strings* switchover targets available

Cause: Switchover failed because standby databases of the appropriate type were not available.

Action: Check the alert log for errors, correct the problem, and retry the switchover.

OCI-16417: Activation occurred after recovery from standby redo log files; a full database backup is required

Cause: Activation occurred after recovery from standby redo log files.

Action: Take a full database backup.

OCI-16419: Snapshot standby must be converted to a physical standby database.

Cause: The database was not a physical standby database.

Action: Convert to physical standby database and retry the operation.

OCI-16420: fast-start failover target cannot be converted to snapshot standby

Cause: The database chosen for conversion to a snapshot standby was the fast-start failover target standby database.

Action: Choose another physical standby database and retry the operation.

OCI-16424: RECOVER FINISH cannot complete due to a redo gap.

Cause: RECOVER FINISH failed because there was a redo gap on the standby database.

Action: Resolve redo gap or issue ALTER DATABASE ACTIVATE STANDBY DATABASE to perform an immediate failover with some data loss.

OCI-16425: a RECOVER FINISH failed because recovery incarnation *string* is not the target incarnation *string*

Cause: RECOVER FINISH failed because a new incarnation existed on the physical standby database. This situation could happen if two failures occurred in a short time and the current failover target was still in the previous incarnation.

Action: Issue real-time apply recovery and see if recovery can proceed on the new branch by checking if logs on the new branch are applied by recovery. If so, issue another RECOVER FINISH. Otherwise, issue ALTER DATABASE ACTIVATE STANDBY DATABASE.

OCI-16426: recovery requested an incorrect log from which to recover redo

Cause: Media recovery selected an incorrect log. See the alert log file for additional information.

Action: Verify that the appropriate log has been properly registered and restart media recovery.

OCI-16427: redo gap is too large to resolve

Cause: The redo transport lag at this database was too large for the automatic redo gap detection to take place.

Action: Re-create this standby database from a current backup copy of the primary database.

OCI-16431: cannot expand control file

Cause: Additional redo log threads were added on the primary database after the standby control file was created.

Action: Shut down the standby database and replace the control file with a new standby control file from the primary database or change the COMPATIBLE parameter to 10.2.0 or above and restart the standby database.

OCI-16432: inconsistent set of logs applied at a standby database

Cause: Redo apply stopped because it detected an inconsistency in the progression of the SCNs. If this database is a bystander standby database, this is most likely due to a failover operation in which incompatible logs were applied from the old and new primary databases.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V\$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end of redo (EOR) logs corresponding to the failover operation from the new primary and register all these logs at the target database. Restart redo apply.

OCI-16433: The database or pluggable database must be opened in read/write mode.

Cause: An attempt was made to open the database or pluggable database in read-only mode after an operation that requires the database or pluggable database be opened in read/write mode.

Action: Open the database in read/write mode. The database can then be opened in read-only mode.

OCI-16434: Archive log for branch *string* thread *string* sequence *string* cannot be queued.

Cause: An archive log needed by the standby database to resolve a redo gap was not found on the source database. This is an unrecoverable error during a switchover or a failover assisted by a far sync instance because the source database waits for the target standby to be clear of all archive log gaps before allowing the operation to proceed. If a redo gap cannot be resolved, the operation fails.

Action: If the specified log is listed in V\$ARCHIVED_LOG for the DEST_ID of the local destination on the source database but no longer exists at that location on disk, copy the archived log back to the listed location to allow gap processing to automatically resolve the gap. If the specified log has been purged from V\$ARCHIVED_LOG, copy the archived log to disk on either the source or destination database and register it using the ALTER DATABASE REGISTER OR REPLACE LOGFILE command.

OCI-16436: an ALTER DATABASE...RECOVER FINISH request could not start

Cause: ALTER DATABASE...RECOVER FINISH failed to start because the standby database was missing redo changes below the checkpoint of data files or because there was no standby redo log file available to create an EOR log. See the trace file for additional information.

Action: Issue ALTER DATABASE ACTIVATE STANDBY DATABASE command instead or add one or more standby redo logs and retry command.

OCI-16437: No active coordinator RFS for current operation

Cause: The coordinator Remote File Server (RFS) for this parallel archival either abnormally terminated or ran down before this subordinate RFS could begin its leg of the operation.

Action: No explicit user action is required.

OCI-16438: Switchover to primary cannot be executed at this time

Cause: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY could not be executed because an incompatible operation such as RMAN restore or flashback was in progress. See the database alert log for details.

Action: Wait for the incompatible operation to complete. The files that have been flashed back or restored need recovery before you can reissue ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY statement. Start redo apply and verify that the SWITCHOVER_STATUS column of the V\$DATABASE view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

OCI-16439: Remote destination is not ready to receive redo at this time.

Cause: A remote database was not in the appropriate state to receive redo. - A physical standby, far sync, or snapshot standby must be mounted to receive redo. - A

logical standby, Data Guard pluggable database (PDB), or downstream capture database must be open for write to receive redo.

Action: See the database alert log at the receiving side of the transfer for details about why the database was not ready. If the database was not in the correct state, put it in the required state. The parameter LOG_ARCHIVE_DEST_STATE_n at the sending site may need to be set to ENABLE to activate further attempts to ship redo.

OCI-16440: Control file is corrupt.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the control file was corrupt.

Action: Restore the current control file at the primary database and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

OCI-16441: Current log *string* for thread *string* sequence *string* is invalid.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the current redo log file was corrupt.

Action: Restore the current log at the primary database, and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

OCI-16442: an ALTER SYSTEM FLUSH REDO TO STANDBY succeeded, but some redo has not been applied

Cause: The target standby database did not apply all received redo.

Action: Allow the target standby database to apply all redo and then reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement.

OCI-16443: could not switch out of log *string* thread *string*

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY could not switch out of the current log.

Action: This can happen if there are one or more errors during archival of the current log at the primary database. Reissue ALTER SYSTEM FLUSH REDO TO STANDBY after resolving the archiving errors.

OCI-16444: ALTER SYSTEM FLUSH REDO TO STANDBY failed due to a corrupted control file or online log file.

Cause: A flush redo operation discovered SCNs greater than a previously failed flush redo operation.

Action: This can happen if there are one or more errors that have corrupted the control file or online redo logs. In these cases, flush redo operation is not possible.

OCI-16445: Database has to be mounted and cannot be open

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY required that the database be mounted, but not opened.

Action: Mount the database and then reissue the operation.

OCI-16446: Target database was not a standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the target database is not a standby database.

Action: Reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement and specify a standby database as the target database.

OCI-16447: Redo apply was not active at the target standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because redo apply is not active at the target database.

Action: Start redo apply at the standby database and reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement, or reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement with the NO CONFIRM APPLY clause.

OCI-16448: media recovery is still active after *string* seconds

Cause: The media recovery did not stop after the timeout.

Action: See the trace file for more information. Once the media recovery process is no longer active, retry the command.

OCI-16449: incomplete redo thread enable operation

Cause: The switchover operation could not continue because it failed to disable a thread that was left in an incomplete thread enable state.

Action: Check alert log for more details.

OCI-16451: A remote archival request has timed out.

Cause: When opening or closing a database instance, the database may wait for up to a minute for pending remote archival requests to be performed before proceeding with the operation. This error was reported because that time limit was exceeded.

Action: This is an informational message so no action is required.

OCI-16454: standby redo log could not be selected

Cause: The selection of standby redo log failed. Possible causes were: - Insufficient standby redo log files. - The standby redo log size did not match the source database online redo log size. - The standby redo log block size did not match the source database online redo log block size.

Action: Examine the trace file for additional information and ensure that: - The standby redo log size and block size match the online redo log size and block size at the source. - There are sufficient standby redo log files for each thread at the source.

OCI-16455: switchover to standby failed

Cause: An attempt to switchover to a physical standby database failed.

Action: Check alert log for more details. Issue the SHUTDOWN ABORT command on the database before issuing another ALTER DATABASE COMMIT TO SWITCHOVER TO STANDBY command.

OCI-16456: switchover to standby in progress or completed

Cause: The requested operation was not allowed because a switchover to standby operation was either in progress or had completed.

Action: Issue the SHUTDOWN ABORT command on the database after switchover operation completes.

OCI-16459: recovery already beyond standby failover

Cause: Redo Apply stopped because it detected that it had proceeded beyond a standby failover operation.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V\$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end-of-redo (EOR) logs corresponding to the failover operation from the new primary database and register all these logs at the target database. Restart Redo Apply.

OCI-16461: database not flashed back or recovered to a consistent point

Cause: ALTER DATABASE CONVERT TO STANDBY command failed because either the database was not properly flashed back to STANDBY_BECAME_PRIMARY_SCN, or at least one of the online data files was not current.

Action: Flashback database to STANDBY_BECAME_PRIMARY_SCN and retry the ALTER DATABASE CONVERT TO STANDBY command.

OCI-16463: invalid target database name

Cause: ALTER DATABASE FAILOVER TO <target_db_name> or ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command failed because the target_db_name was invalid. The target_db_name must be the same as the name of the database on which the SQL command is issued.

Action: Change the target database name and reissue the command.

OCI-16464: operation must be initiated on a physical standby database

Cause: An attempt was made to issue the ALTER DATABASE FAILOVER TO <target_db_name> or the ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on a database other than a physical standby database.

Action: Issue the command on a physical standby database.

OCI-16465: operation must be initiated on an open primary database

Cause: An attempt was made to issue the ALTER DATABASE SWITCHOVER TO <target_db_name> [VERIFY] or ALTER DATABASE COMMIT TO SWITCHOVER TO STANDBY command on a database other than an open primary database.

Action: Issue the command on an open primary database.

OCI-16466: invalid switchover target

Cause: The switchover target was not a valid, enabled, or active standby database.

Action: Fix the problem in the switchover target and reissue the command.

OCI-16467: switchover target is not synchronized

Cause: The switchover target was not synchronized with the primary database.

Action: Wait until the switchover target is synchronized with the primary database, then reissue the command.

OCI-16468: error connecting to switchover target *string*

Cause: The primary database could not connect to the switchover target.

Action: Check the alert log for detailed errors.

OCI-16469: switchover target version number is lower than 12

Cause: The switchover target version number was lower than 12.

Action: Upgrade the switchover target to a higher release.

OCI-16470: Redo Apply is not running on switchover target

Cause: The switchover target was not running Redo Apply.

Action: Start Redo Apply on the switchover target and reissue the command.

OCI-16471: cannot convert switchover target *string* to a primary database

Cause: Switchover failed because the switchover target could not convert to a primary database.

Action: Check the database role of the switchover target. If the switchover target database role is standby, do one of the following: - Fix the problem shown in the alert log. - Issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command to convert the switchover target to a primary database. - If the problem in the switchover target cannot be fixed, issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on the old primary database to convert the old primary database back to a primary database. If the switchover target database role is primary, the switchover has completed. Open the switchover target and startup the old primary database to finish the switchover process.

OCI-16472: failover failed due to data loss

Cause: The database was in MaxAvailability or MaxProtection mode but terminal recovery finished with data loss.

Action: For a data loss failover, issue ALTER DATABASE ACTIVATE STANDBY DATABASE command.

OCI-16473: database is not in limbo

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE statement could not proceed because the database was in an active state.

Action: Ensure that the SWITCHOVER_STATUS column in the V\$DATABASE view has the value TO PRIMARY or SESSIONS ACTIVE. If needed, start managed standby recovery and reissue the statement after the SWITCHOVER_STATUS column value changes to one of the above values.

OCI-16474: target_db_name not found in a LOG_ARCHIVE_DEST_n parameter

Cause: ALTER DATABASE SWITCHOVER TO <target_db_name> or ALTER SYSTEM FLUSH REDO TO <target_db_name> statement failed because the target_db_name was not defined in a LOG_ARCHIVE_DEST_n parameter.

Action: Ensure that the target_db_name is defined in a LOG_ARCHIVE_DEST_n parameter.

OCI-16475: succeeded with warnings, check alert log for more details

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> VERIFY command succeeded but with warnings.

Action: Check alert log for more details.

OCI-16476: far sync instance does not allow *string* operation

Cause: The specified operation was invalid on a far sync instance.

Action: Do not attempt the specified operation on a far sync instance.

OCI-16477: destination is being serviced by another viable source

Cause: An attempt was made by a far sync to perform gap analysis with a remote destination that already had connectivity with a different viable source of redo.

Action: No action is required. This error is informational and is used by the far sync to remain idle with respect to this destination until it establishes connectivity with the primary database.

OCI-16478: cannot locate far sync connect string

Cause: The connect string for the far sync that was flagged as the source of redo for this database could not be located.

Action: Define a LOG_ARCHIVE_DEST_n parameter on the standby for the far sync using the SERVICE attribute to define the connect string for the far sync. This destination should be set to the DEFER state using the corresponding LOG_ARCHIVE_DEST_STATE_n parameter. Once the connect string is defined, retry the failover operation. Note that while using the FORCE option on the failover command allows the operation to proceed and bypass the far sync, this choice increases the potential for data loss.

OCI-16479: cannot connect to the far sync

Cause: An attempt was made to connect to the far sync to facilitate the failover operation; but the connection attempt failed.

Action: Ensure that the far sync is mounted. Check the alert log and trace files on both the current database and the far sync for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

OCI-16480: operational error during far sync assisted failover

Cause: After successfully connecting to the far sync instance, an error was encountered when polling the far sync for progress.

Action: Check the alert log and traces of both the current database and the far sync instance for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

OCI-16481: destination error during far sync assisted failover

Cause: After successfully connecting to the far sync, an error was encountered when managing the failover target destination on the far sync.

Action: Check the alert log and traces of both the current database and the far sync for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

OCI-16482: a role transition is in progress

Cause: The operation failed because a role transition was in progress.

Action: None

OCI-16483: unable to set a LOG_ARCHIVE_DEST_n parameter to the switchover target

Cause: An attempt was made to set a LOG_ARCHIVE_DEST_n parameter to the switchover target failed.

Action: Manually set a LOG_ARCHIVE_DEST_n parameter to the switchover target.

OCI-16484: compatibility setting is too low

Cause: The compatibility setting of the primary database was higher than the standby database. The transported redo log could not be applied.

Action: Check the compatibility setting on the primary and standby database, and increase the compatibility setting in the initialization parameter file on the standby database accordingly.

OCI-16485: protection mode modification not allowed at this time

Cause: This exception occurred because of one of the following circumstances: * If the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter was not defined, the protection mode could not be modified if any instance of the database was open. See the Data Guard documentation for details on the DG_CONFIG attribute. * If the current instance was not open, then the protection mode could not be modified if any other instance was open. * Once the database instance was opened, directly upgrading from MAXIMUM PERFORMANCE mode to MAXIMUM PROTECTION mode was not allowed, even if the DG_CONFIG attribute was defined. Instead, upgrade first to MAXIMUM AVAILABILITY protection mode, and wait until there was at least one synchronized destination before attempting to move to MAXIMUM PROTECTION mode. To determine if there were any synchronized destinations, refer to the Data Guard documentation.

Action: Retry the operation after addressing the applicable issues as described in the Cause.

OCI-16486: a redo log is rejected by the destination

Cause: The destination was not allowed to receive this redo log.

Action: Ensure the source database is registered at the destination, the destination is up and running, and storage is available. Examine the trace file of the Remote File Server (RFS) process and the database's alert log file for additional information.

OCI-16487: the destination database is not writable

Cause: The destination database was in read-only mode.

Action: Ensure the destination database is open for write.

OCI-16488: cannot create a bookkeeping entry in database

Cause: The destination database failed to create an entry in the table used to track the redo log file or the database.

Action: See the trace file of the Remote File Server (RFS) process. Ensure that table space is available in your database.

OCI-16489: cannot register the redo log at the destination database

Cause: Registering the redo log file to the destination database failed.

Action: Examine the trace file of the Remote File Server (RFS) process. Ensure that space is available in your database.

OCI-16491: operation not allowed due to insufficient online redo log files *string*

Cause: A minimum of two online redo log files per active thread were not supplied.

Action: Add the required redo log files and reissue the command.

OCI-16492: switchover target local destination has error

Cause: The switchover target local destination either exceeded quota size or had an error.

Action: Fix the problem in the switchover target and reissue the command.

OCI-16493: using SYSDBA, SYSOPER, SYSDG, or SYSBKUP user for redo shipping to Recovery Appliance is not supported

Cause: An attempt was made to use a SYSDBA, SYSOPER, SYSDG, or SYSBKUP user to ship redo logs to a Recovery Appliance.

Action: Use a user without the SYSDBA, SYSOPER, SYSDG, or SYSBKUP privilege to ship redo logs to a Recovery Appliance.

OCI-16494: process started from pluggable database (PDB)

Cause: The Remote File Server (RFS) process or the Remote Message Interface (RMI) process or the Fetch Archive Log (FAL) process was started from a Pluggable Database (PDB).

Action: Check the service name that the RFS or RMI or FAL client connected to and ensure the service is not from a PDB.

OCI-16495: using the Fast Recovery Area to receive redo log files on a Recovery Appliance is not supported

Cause: An attempt was made to use the Fast Recovery Area to store a redo log file on a Zero Data Loss Recovery Appliance.

Action: Do not configure the Fast Recovery Area as a destination for redo log files on the Zero Data Loss Recovery Appliance. Refer to the documentation for more details.

OCI-16496: corruption in network metadata packet

Cause: Invalid or corrupt metadata was encountered in a network packet.

Action: No user action is required.

OCI-16497: LOG_ARCHIVE_DEST_ *string* DELAY attribute is not 0

Cause: The DELAY attribute was not 0 for the LOG_ARCHIVE_DEST_n parameter. Since the DELAY attribute delays standby database recovery, the switchover will be prolonged by that amount of time.

Action: Remove the DELAY attribute from the LOG_ARCHIVE_DEST_n parameter, then reissue the command.

OCI-16498: Cancellation of managed recovery operation cannot be performed

Cause: Cancellation of managed recovery was invoked when the Oracle Active Data Guard (Oracle ADG) instance recovery was running.

Action: None

OCI-16501: The Oracle Data Guard broker operation failed.

Cause: The Oracle Data Guard broker operation failed.

Action: See accompanying messages for details.

OCI-16502: The Oracle Data Guard broker operation succeeded with warnings.

Cause: The Oracle Data Guard broker operation succeeded with warnings.

Action: Refer to the broker messages for details. The messages are presented in a severity/status pair. Error number 16502 indicates a warning. There will be another error number providing the exact issue found by the broker.

OCI-16503: cannot exceed the maximum number of members in this configuration

Cause: The Oracle Data Guard broker configuration already contained the maximum number of members that could be configured and managed by the broker.

Action: Select and remove an existing member from the broker configuration, then reissue the command to add another member to the configuration. The maximum number of members permitted in a broker configuration is 253.

OCI-16504: The Oracle Data Guard broker configuration already exists.

Cause: A request to create or import an Oracle Data Guard broker configuration is being made while connected to a database that is part of an existing configuration; or to add a second Oracle Data Guard broker configuration with the same configuration name or DRC_UNIQUE_ID as the local configuration.

Action: To create or import a new configuration, the existing configuration must be deleted. To add a second configuration, remove one of the configurations and re-create it, optionally with a different configuration name if it is the same as the first configuration. If the configurations have the same DRC_UNIQUE_IDs, the act of re-creating results in a different DRC_UNIQUE_ID. Once both configurations have different names and DRC_UNIQUE_IDs, reissue the ADD CONFIGURATION command.

OCI-16506: out of memory

Cause: Process exceeded private or shared memory limits.

Action: Check for memory leaks, increase system parameters, and restart.

OCI-16509: request timed out

Cause: The Oracle Data Guard broker timed out the request.

Action: Check the Oracle Data Guard broker log file for more information. Ensure that the network connections between the databases are functioning properly and retry the request.

OCI-16513: maximum requests exceeded

Cause: The maximum number of requests that the broker can service on the database instance was exceeded.

Action: Wait for the broker to complete processing the requests before issuing more requests.

OCI-16516: current state is invalid for the attempted operation

Cause: The broker may have returned this error for either switchover operations or for database state change operations. If this error was returned for a switchover operation, the broker determined that either: - The databases changing roles were shut down. - The primary database was not shipping redo data. - The standby database that will become the primary database was not applying redo data. If this

error was returned for database state change operations, the database state specified was invalid.

Action: If this error is returned when attempting a switchover operation, ensure that: - The databases changing roles are started. - The primary database is shipping redo data. - The standby database is applying redo data. If this error is returned when attempting a database state change operation, ensure that a valid database state is specified.

OCI-16521: Service name specified in connect identifier connects to a PDB.

Cause: The connect identifier that was specified resulted in a connection to a pluggable database (PDB) and not to the multitenant container database root.

Action: Check the connect identifier and confirm that it specifies a service name that results in a connection to the multitenant container database root.

OCI-16522: The configuration is part of the Global Data Services pool.

Cause: The attempted command was not allowed because the configuration was part of a Global Data Services pool.

Action: Remove the configuration from the Global Data Services pool using GDSCTL. Then, retry the broker command. If the command was attempting to repair a database, then disable or remove the individual database from the configuration and fix the issue. After the problem is resolved, re-enable the database, or add the database back to the configuration if it had been removed.

OCI-16523: Switchover or failover operation requires client connection to instance "string".

Cause: The switchover or failover operation required the client to connect to the apply instance of the specified database.

Action: Connect to the specified instance and retry the command.

OCI-16524: unsupported command, option, or argument

Cause: A command, option, or fast-start failover condition argument was specified that is not supported in this release.

Action: If trying to enable or disable a fast-start failover condition, try a different Oracle error number. Otherwise, contact Oracle Support Services.

OCI-16525: The Oracle Data Guard broker is not yet available.

Cause: The Oracle Data Guard broker process was either not yet started, was initializing, or failed to start.

Action: If the broker has not been started, set the DG_BROKER_START initialization parameter to true and allow the broker to finish initializing before making the request. If the broker failed to start, check the Oracle Data Guard log for possible errors. Otherwise, retry the operation.

OCI-16526: Unable to allocate memory to process request.

Cause: Oracle Data Guard broker was unable to allocate memory for a request.

Action: Increase the size of the System Global Area (SGA).

OCI-16527: Unable to create output file for broker configuration metadata.

Cause: Oracle Data Guard broker was unable to create the output file to capture the contents of the broker configuration metadata.

Action: Verify space, permissions, and the file name specified to ensure that the file can be created.

OCI-16528: Unrecognized role change event for reinstatement.

Cause: The Data Guard broker did not recognize the role change event that required a database to be reinstated. This was an internal error.

Action: Contact Oracle Support.

OCI-16530: invalid buffer or length

Cause: A NULL buffer or a length of zero was specified.

Action: Correct the command parameters and retry the command.

OCI-16532: Oracle Data Guard broker configuration does not exist.

Cause: The broker operation could not be performed because the broker configuration did not exist.

Action: Create a Data Guard broker configuration prior to attempting the operation. If only one instance of an Oracle Real Application Cluster (RAC) database reports this error, verify that the DG_BROKER_CONFIG_FILE[1|2] initialization parameters are set to shared file locations accessible to all RAC instances.

OCI-16534: Switchover, failover or convert operation is in progress.

Cause: The Oracle Data Guard broker returned this status because a switchover, failover or convert operation was in progress. The broker could not accept new commands until the operation finished.

Action: Wait until the operation is complete and retry.

OCI-16535: Oracle Restart or Oracle Clusterware prevented completion of broker operation.

Cause: The broker could not complete the operation because Oracle Restart (for single instance databases) or Oracle Clusterware (for Oracle RAC databases) could not stop services or instances on this database.

Action: Check the Oracle Data Guard broker log file for more information and stop the appropriate services or instances using SRVCTL. Then retry the broker operation.

OCI-16538: Unrecognized property or state name.

Cause: The Oracle Data Guard broker did not recognize the specified property or state name.

Action: Check that the name of the property or state exists and then retry the command with a valid property or state name.

OCI-16540: invalid argument

Cause: One of the arguments for the specified command was invalid.

Action: Verify the arguments and then reissue the command.

OCI-16541: member is not enabled

Cause: An attempt was made to modify or query a disabled member. This error is also returned when an attempt is made to enable, modify, or query a member that the broker has disabled because of a switchover or failover operation. The broker

disables its management of a member when it detects that the database needs to be re-created because of a failover or switchover operation.

Action: If broker management of the member is disabled, re-create it if necessary, enable it and reissue the command.

OCI-16544: modifying DG_BROKER_START requires SID='*' qualifier

Cause: The setting for the DG_BROKER_START parameter must be exactly the same on all RAC database instances. The SID='*' qualifier was required in the command.

Action: Reenter the command using the SID='*' qualifier.

OCI-16547: Cannot disable or remove the primary database.

Cause: An attempt was made to disable broker management of the primary database or remove the primary database from the broker configuration while the configuration was enabled.

Action: To disable the primary database, disable the configuration. To remove the primary database, remove the configuration.

OCI-16549: invalid string

Cause: An invalid or NULL string value was specified.

Action: Correct the command parameters and retry.

OCI-16550: truncated result

Cause: A string property value was truncated due to insufficient buffer size.

Action: Specify a larger receive buffer.

OCI-16551: short string copied - information only - no action required

Cause: A string property value that did not fill the receive buffer was placed in the receive buffer.

Action: No action needed; this situation did not cause the software to stop. This is an informational message only.

OCI-16552: error occurred while generating directives for client

Cause: The client could not provide the required assistance to the broker because of the accompanying error.

Action: See the accompanying error message for more information and follow the directions provided in the Action of that message. Then, retry the operation.

OCI-16555: Member is not active.

Cause: Attempted an operation on an inactive member.

Action: Verify that the member is active and retry.

OCI-16556: Observer version incompatible with Oracle database server version.

Cause: Observer version was incompatible with the Oracle database version to which the observer attempted to connect.

Action: Use an observer version compatible with the Oracle database server being observed.

OCI-16557: Member already exists in the configuration.

Cause: Attempted to create a duplicate member in the Oracle Data Guard broker configuration, or to add a duplicate instance (SID) for an existing member in the configuration.

Action: Check the configuration to avoid duplicate members.

OCI-16558: database specified for switchover is not a standby database

Cause: An attempt was made to switchover to a database that was not a standby database.

Action: Locate an enabled standby database and select that database as the target of the switchover.

OCI-16561: cannot remove an active instance

Cause: The instance to be removed was running.

Action: Shut down the instance and reissue the REMOVE command.

OCI-16568: cannot set property *string*

Cause: The specified property could not be modified because it was either a monitorable property or a property that did not exist.

Action: Retry the command with a valid configurable property.

OCI-16569: Oracle Data Guard configuration is not enabled.

Cause: The command could not be completed because broker management of the Oracle Data Guard configuration was not enabled.

Action: Enable the Oracle Data Guard configuration and reissue the command.

OCI-16570: Database needs to be restarted.

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If DGMGRL or Oracle Enterprise Manager has not already done so, restart the database instance.

OCI-16571: Oracle Data Guard configuration file creation failure.

Cause: The Oracle Data Guard broker was unable to create the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters and retry the operation.

OCI-16572: Oracle Data Guard configuration file not found.

Cause: The Oracle Data Guard broker configuration file was either unavailable or did not exist.

Action: Verify that the configuration file was successfully created. If the DG_BROKER_CONFIG_FILE[1|2] initialization parameters were changed, then check that the file name on disk and the parameter value match, that there is space on the device, and that the proper permissions are granted. For an Oracle Real Application Clusters (Oracle RAC) database, check that the initialization parameters are set to file locations that are accessible and shared by all instances of the Oracle RAC database.

OCI-16573: attempt to change or access configuration file for an enabled broker configuration

Cause: The operation was rejected because the Oracle Data Guard broker configuration file was in use. The attempted operation was unsafe while broker management of the configuration was enabled. For example: - An attempt was made to alter the DG_BROKER_CONFIG_FILE[1|2] initialization parameters while the broker was running. - Non-broker access (such as DBMS_FILE_TRANSFER) to the configuration files was attempted. See the alert log for additional information.

Action: Disable the broker configuration and shut down the Oracle Data Guard broker, then retry the operation. If the operation includes altering the DG_BROKER_CONFIG_FILE[1|2] initialization parameters, be sure that the new parameter values correctly specify the files at their expected location before reenabling broker management of the configuration.

OCI-16574: Switchover is disallowed when required databases are shut down.

Cause: Switchover failed because either the primary database or the designated standby database was shut down.

Action: Ensure that the primary and standby databases are running and that primary database is shipping redo data to the designated standby database. Also ensure that the designated standby database is applying the redo data received from the primary database.

OCI-16575: LOG_ARCHIVE_DEST_n parameter conflicts with the new member to be added

Cause: One or more LOG_ARCHIVE_DEST_n initialization parameters on existing members were already set for the new member to be added when attempting to add a standby database, far sync instance, Recovery Appliance, or external destination to the configuration.

Action: Clear the LOG_ARCHIVE_DEST_n initialization parameter that specifies the standby database, far sync instance, Recovery Appliance, or external destination to be added.

OCI-16576: Failed to update Data Guard broker configuration file.

Cause: The broker failed updating the Oracle Data Guard broker configuration file on permanent storage.

Action: Verify that sufficient space exists on the device containing the the configuration files and the files specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters permit read and write access.

OCI-16577: Corruption detected in Data Guard configuration file.

Cause: The Oracle Data Guard broker detected errors while loading the configuration file.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters. Contact Oracle Support.

OCI-16578: failed to read Oracle Data Guard configuration file

Cause: A failure was encountered while the broker was reading the configuration file on permanent storage.

Action: Verify that sufficient space exists on the device containing the the configuration files and the files specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters permit read and write access.

OCI-16582: Cannot change an instance-specific property.

Cause: An attempt was made to change an instance-specific property for a member that had more than one instance.

Action: Retry the command and identify a specific instance whose property value is to be changed.

OCI-16584: operation cannot be performed on a standby database

Cause: The database specified for the operation was a standby database, or the operation was attempted on a standby database.

Action: Check the database type and retry the operation. If the command must be executed on a primary database, connect to the primary database and retry the operation.

OCI-16585: This operation cannot be performed on a primary database.

Cause: The database specified for the operation was a primary database, or the operation was attempted on a primary database.

Action: Check the database type and retry the operation. If the command must be executed on a standby database, then connect to a standby database and retry the operation.

OCI-16586: Cannot change member property with EDIT INSTANCE command.

Cause: Attempted to change a member level property using an EDIT INSTANCE command instead of an EDIT DATABASE, EDIT FAR_SYNC, or EDIT RECOVERY_APPLIANCE command.

Action: Use the EDIT DATABASE, EDIT FAR_SYNC, or EDIT RECOVERY_APPLIANCE command to change member level properties.

OCI-16587: Ambiguous member specified to Oracle Data Guard broker.

Cause: A member was specified that the broker could not uniquely distinguish from other members in the configuration.

Action: Try to further distinguish the member specified for the operation and retry the command.

OCI-16589: Oracle Data Guard broker detected a network transfer error.

Cause: The Oracle Data Guard broker detected an error while transferring data from one member to another. This may happen when either the Oracle Data Guard broker:
- Detected an inconsistency in the block count of the configuration file when the file is transmitted between members
- Encountered an error when writing the configuration file.
- A member received an incorrect message from another member.

Action: Contact Oracle Support.

OCI-16594: DMON background process is not running

Cause: The Oracle Data Guard broker background process, DMON, was not running.

Action: Check the Oracle Data Guard broker log file and DMON process trace file to determine why the DMON process is not running.

OCI-16595: process *string* failed to terminate

Cause: The specified process did not terminate at the request of the Data Guard broker.

Action: Contact Oracle Support.

OCI-16596: Member is not part of the Oracle Data Guard broker configuration.

Cause: The member was not in the Data Guard broker configuration.

Action: Retry the command using a member in the Data Guard broker configuration.

OCI-16597: Oracle Data Guard broker detects two or more primary databases.

Cause: The Oracle Data Guard broker detected two or more primary databases in the broker configuration and could not continue.

Action: Contact Oracle Support.

OCI-16598: Oracle Data Guard broker detected a mismatch in configuration.

Cause: The Oracle Data Guard broker detected a significant mismatch while performing configuration membership validation between two or more members in the broker configuration. This can occur when the primary database has stale broker configuration files.

Action: Contact Oracle Support.

OCI-16599: Oracle Data Guard broker detected a stale configuration

Cause: The Oracle Data Guard broker detected a stale configuration during initialization for this member.

Action: The broker will automatically resolve this situation once the primary database completes its initialization.

OCI-16600: Client is not connected to target standby database.

Cause: The SWITCHOVER or FAILOVER command failed because the client was not connected to the target standby database.

Action: Explicitly connect to the standby database that is to become the the new primary and retry.

OCI-16602: The member must be disabled to perform this operation.

Cause: An attempt was made to edit a member property while the member was enabled.

Action: Disable the member and retry the command.

OCI-16603: The member is part of another Oracle Data Guard broker configuration.

Cause: The member was part of another Oracle Data Guard broker configuration. This could occur if the original configuration was re-created while this member was disconnected from the network or the same member was added to two different Oracle Data Guard broker configurations.

Action: Ensure that the member belongs to only one broker configuration. Shut down the broker by setting the DG_BROKER_START initialization parameter to 'false'. Then, remove the Oracle Data Guard broker configuration files. Finally, restart the broker by setting the DG_BROKER_START initialization parameter to 'true'.

OCI-16604: Oracle Data Guard broker configuration file '*string*' is inaccessible.

Cause: The Oracle Data Guard broker was unable to access the configuration file specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

OCI-16606: unable to find property "*string*"

Cause: The specified property did not exist.

Action: Specify a valid property name and reissue the command.

OCI-16607: One or more members have failed.

Cause: A failure was detected for one or more members in the Oracle Data Guard broker configuration.

Action: Locate the member or members with a failure status and correct it.

OCI-16608: one or more members have warnings

Cause: A warning was detected for one or more members of the Data Guard broker configuration.

Action: Locate the member or members with warning status, and correct it.

OCI-16609: Database is being disabled.

Cause: Attempted a command on a database that was being disabled. For example, attempted to reinstate the old primary database, the database that was the primary database prior to the most recent failover, before it was ready to be reinstated.

Action: Wait for Oracle Data Guard broker to disable the database then retry the command.

OCI-16610: Oracle Data Guard broker command "*string*" in progress.

Cause: Specified Data Guard broker command was already running and could not be completed.

Action: Wait for the specified command to finish and then retry.

OCI-16611: command aborted at user request

Cause: The command was aborted at the user's request.

Action: No action required.

OCI-16612: string value too long for attribute "*string*"

Cause: The string value for the named attribute was too long.

Action: Specify a shorter string value.

OCI-16613: Oracle Data Guard broker initialization in progress for member.

Cause: A request was made that required access to the Oracle Data Guard broker configuration before it had completed initialization.

Action: Wait until the Oracle Data Guard broker has completed initialization, then reissue the command.

OCI-16614: Oracle Data Guard broker configuration is disabled.

Cause: An attempt to enable a member failed because the Oracle Data Guard broker configuration was disabled.

Action: Enable the Oracle Data Guard broker configuration and issue the DGMGRL CLI SHOW CONFIGURATION command to see if there are any members that are still disabled. If the member you tried to enable is still disabled, then issue the DGMGRL CLI SHOW command to check the status of the member. If the member is a database

whose status indicates that the database must be reinstated, then issue the DGMGRL CLI REINSTATE DATABASE command to reinstate and enable the database. If the member does not require reinstatement, then issue the DGMGRL CLI ENABLE command to enable the member.

OCI-16617: unrecognized member specified in request

Cause: The member specified in the request was not part of the Oracle Data Guard broker configuration.

Action: Check the member name specified in the request. Confirm that the member specified appears in the output of the DGMGRL SHOW CONFIGURATION command. Retry the request using one of the the member names shown in the SHOW CONFIGURATION command output.

OCI-16619: condition for fast-start failover is already enabled

Cause: The condition specified for fast-start failover was already enabled.

Action: No action is required. Use the DGMGRL CLI SHOW FAST_START FAILOVER command to view the conditions that are enabled.

OCI-16620: one or more members could not be reached for a remove operation

Cause: One or more members could not be reached for either a DGMGRL CLI REMOVE DATABASE, REMOVE FAR_SYNC or a REMOVE CONFIGURATION command.

Action: This typically indicates a network problem where the member is unable to respond to the primary database. If this is the case, examine the primary database Oracle Data Guard broker log file to determine which members cannot be reached. For each member not reached, connect to that member and shut down the broker by setting the DG_BROKER_START initialization parameter to 'false'. After the broker has been shut down for the member, locate the Oracle Data Guard broker configuration files from the member's DG_BROKER_CONFIG_FILE[1|2] initialization parameter values and delete them. Then, restart the broker by setting DG_BROKER_START to 'true'.

OCI-16621: A member with that name already exists in the configuration.

Cause: An attempt was made to add a member to the broker configuration that already included a member with the specified name. The member names must be unique.

Action: Verify that a unique name is specified for the new member to be added. Also, the member name must match the DB_UNIQUE_NAME initialization parameter of the member.

OCI-16622: two or more broker member objects resolve to the same member

Cause: Multiple member objects referred to the same member.

Action: Examine the details of all members in the broker configuration and verify that two or more members are not referring to the same member. If two or more members in the broker configuration have the same value for the DGConnectIdentifier configurable property, either:
- Remove and re-add the incorrectly defined member or members to resolve the ambiguity.
- Ensure that the DGConnectIdentifier configurable property for each member allows the broker to properly connect to that member.

OCI-16623: member detected role change

Cause: A successful switchover or failover operation had been completed and was detected during member startup or broker health check. If this member was a database that was unavailable during a switchover or failover operation, it may not be a viable standby database for the new primary database and was disabled by the Oracle Data Guard broker.

Action: Connect to the new primary database and examine the broker configuration for databases that were disabled and that may require reinstatement or re-creation.

OCI-16624: broker protocol version mismatch detected

Cause: A network protocol version number mismatch was detected. This could happen if the members in the broker configuration were not running the same version of Oracle. The broker would disable members that were not running the same version of Oracle as the primary database if this situation was detected.

Action: Examine the version of Oracle installed on all members in the broker configuration to ensure they are identical. Once all of the members in the broker configuration are running the same version of Oracle, reenabling the members that were disabled.

OCI-16625: cannot reach member "string"

Cause: The command could not be executed because the member noted in the error text was not reachable.

Action: See accompanying messages for more information. Check the network connections to the specified member. After ensuring connectivity, retry the command.

OCI-16626: failed to enable specified member

Cause: This status was returned when attempting to enable a member that: - Could not locate itself in the broker configuration file. - Failed to distinguish itself from two or more members in the configuration file. - Determined it missed a role change within the configuration.

Action: To correct the problem, try one of these actions: - Confirm that the host and SID names for the member exactly match the values in the HOST_NAME and INSTANCE_NAME columns of the V\$INSTANCE view. - Confirm that two or more members do not have the same connect identifier. That is, multiple members in the broker configuration should not reach the same member. - If a failover has been performed and the old primary database has been re-created (or a standby database has been re-created), then ensure that the Oracle Data Guard broker configuration files have been removed for that database. Do not remove the configuration files that are in use by the new primary database.

OCI-16627: No member available to support the protection mode.

Cause: Either there were no members in the configuration whose redo transport mode supported the desired protection mode, or an operation was attempted that resulted in no remaining members to support the protection mode.

Action: Ensure that at least one database supports the protection mode. For example, if the desired protection mode is maximum protection mode, ensure at least one enabled database has a redo transport mode set to SYNC mode.

OCI-16628: broker protection mode inconsistent with the database setting

Cause: The Oracle Data Guard broker protection mode saved in the broker configuration file was inconsistent with the actual database setting.

Action: Reset the protection mode through the Oracle Data Guard broker.

OCI-16629: Database reports a different protection level from the protection mode.

Cause: The current database protection level was different from the configured protection mode. This was typically caused if there were redo transport problems or if the primary database was not open.

Action: Check: - The database alert log files and Oracle Data Guard broker log files for more details. - The redo transport status. - That one standby database supports the configured protection mode. - That the network to that standby database is working properly. - That the primary database is open.

OCI-16630: configurable property has been deprecated

Cause: The property that was specified in the command was deprecated.

Action: Check the broker documentation to identify a replacement property.

OCI-16631: operation requires shutdown of database or instance "string"

Cause: The Oracle Data Guard broker operation required a shutdown of the database or instance.

Action: If the database or instance has not been shutdown by the DGMGRL CLI or Oracle Enterprise Manager, then shut down the database or instance manually.

OCI-16632: instance being added to member profile

Cause: The Oracle Data Guard broker determined that an instance successfully found its member profile within the broker configuration file, but lacked an instance-specific profile. The broker automatically created an instance-specific profile and associated the instance with its database profile.

Action: No user action is required. The broker will automatically associate the instance with its member profile and incorporate the instance into broker activity.

OCI-16633: The only instance of a member cannot be removed.

Cause: The instance to be removed was the only instance of the corresponding member that was known to the broker.

Action: Remove the corresponding member from the broker configuration instead of the individual instance of the member.

OCI-16635: Network connection failed during transmission.

Cause: The Oracle Data Guard broker detected a connection failure to a member in the broker configuration. This failure happened in the middle of a transmission session.

Action: In most cases, no action is required. The Oracle Data Guard broker tries to resend the data. The error indicates a problem in the network communication between broker managed members. If this persists, contact Oracle Support Services.

OCI-16636: Fast-start failover target standby in error state. Cannot stop observer.

Cause: A STOP OBSERVER operation could not be completed when fast-start failover was enabled because the target standby database could not participate in the STOP OBSERVER operation.

Action: Additional information about this failure is recorded in the Oracle Data Guard broker log file for the primary database. This information helps to identify the reason why the target standby database was unable to participate in the STOP OBSERVER operation. If the problem can be corrected by the information in the broker log file, retry the operation. Alternatively, fast-start failover may be forcibly disabled by connecting to the primary

database and issuing the `DISABLE FAST_START FAILOVER FORCE` command from the DGMGRL CLI. Once fast-start failover has been forcibly disabled, the observer can be stopped regardless of the current state of the target standby database.

OCI-16637: maximum number of Oracle error numbers for fast-start failover already reached

Cause: The broker could not enable any more Oracle error numbers for initiating a fast-start failover.

Action: Use the DGMGRL CLI `SHOW FAST_START FAILOVER` command to help identify an Oracle error number that can be disabled before attempting to enable an additional error number for initiating a fast-start failover.

OCI-16638: Could not obtain instance status.

Cause: The broker could not determine whether the specified instance was running.

Action: See the next error message in the error stack for more detailed information. If the situation described in the next error in the stack can be corrected, do so. Otherwise, contact Oracle Support Services.

OCI-16639: specified instance inactive or currently unavailable

Cause: An attempt was made to perform an operation on an instance that was not running or was unavailable.

Action: Ensure that the instance specified in the operation is running and then retry the operation.

OCI-16642: DB_UNIQUE_NAME mismatch.

Cause: The `DB_UNIQUE_NAME` value did not match the actual `DB_UNIQUE_NAME` value for the member that the broker contacted using the connect identifier associated with that member.

Action: Verify that the connect identifier correctly connects to the intended member. Verify that the name of the member the broker expects to find by that connect identifier matches the actual `DB_UNIQUE_NAME` for that member.

OCI-16643: Unable to determine location of broker configuration files.

Cause: Oracle Data Guard broker was unable to determine the location of its configuration files from the `DG_BROKER_CONFIG_FILE[1|2]` initialization parameters.

Action: Retry the operation. If the error persists, contact Oracle Support Services.

OCI-16644: Standby database does not have an apply instance available.

Cause: The broker operation could not finish, because it required a running apply instance for the standby database. There was no such instance designated for the standby database, or the designated apply instance was not currently available.

Action: Use the DGMGRL CLI `SHOW DATABASE` command to see if the standby database has a designated apply instance. If an apply instance is designated in the output, restart that instance. If the output does not show an instance designated to run apply, then wait until the broker specifies an instance to be the apply instance and retry the command.

OCI-16645: startup of an instance not part of the broker configuration interrupted current operation

Cause: The startup of an instance, that was not part of the broker configuration prevented the operation from completing.

Action: Restart the operation after the new instance has joined the Data Guard configuration.

OCI-16646: Fast-start failover is disabled.

Cause: This operation was not allowed because fast-start failover was disabled.

Action: Enable fast-start failover and retry the command.

OCI-16647: maximum number of observers has already been started

Cause: The attempt to start an observer failed because the maximum number of observers was already running. For Oracle Database releases earlier than 12.2, only a single observer can be started. For Oracle Database releases 12.2 through 19c, a maximum of three observers can be started. For Oracle Database release 21c and later, a maximum of 4 observers can be started.

Action: Stop one of the existing observers and retry the command.

OCI-16648: A new observer registered with identifier *string*.

Cause: An observer was registered with the Oracle Data Guard broker and will begin observing the Oracle Data Guard configuration for conditions that warrant doing a fast-start failover.

Action: No actions needed.

OCI-16649: Data Guard prevented this database from opening.

Cause: The primary database could not be opened because one of the following reasons. A fast-start failover has occurred, and there was another primary. Data Guard had detected a possible fast-start failover but could not contact the observer or target standby to verify. The database was configured for maximum protection and no standby database was available to support the protection mode.

Action: Check if a failover did occur. If it did, reinstate the database. If the failover did not occur and fast-start failover is enabled, ensure that connectivity exists between the primary database and either the observer or the target standby database, then retry opening the database.

OCI-16650: unrecognized member specified in a RedoRoutes rule

Cause: One of the members specified in a RedoRoutes configurable property rule was not part of the Oracle Data Guard broker configuration.

Action: Check the member names in the value specified for the RedoRoutes configurable property. Confirm that the names appear in the output of the DGMGRL SHOW CONFIGURATION command. Retry changing the RedoRoutes configurable property using the member names shown in the SHOW CONFIGURATION command output.

OCI-16651: upgrade to maximum protection mode not possible

Cause: An upgrade to maximum protection mode was attempted when the current protection mode was maximum performance mode.

Action: To upgrade the protection mode to maximum protection mode, first upgrade the protection mode to maximum availability mode, then upgrade the protection mode to maximum protection mode.

OCI-16652: fast-start failover target standby database is disabled

Cause: The command to enable or disable fast-start failover could not be run because the Data Guard broker management of the fast-start failover target standby database was disabled.

Action: Enable broker management of the target standby database and rerun the command. If an attempt was made to disable fast-start failover when this error was reported, then disable fast-start failover forcibly using the DGMGRL DISABLE FAST_START FAILOVER FORCE command. Refer to the documentation for more information.

OCI-16653: Oracle Data Guard broker failed to reinstate database.

Cause: The Data Guard broker failed to reinstate the database because the reinstatement could not be completed or the database was already reinstated.

Action: Additional information about the failure is recorded in the primary database or the specified database Data Guard broker log files. This information helps determine how to proceed.

OCI-16654: fast-start failover is enabled

Cause: The attempted command was not allowed while fast-start failover was enabled. This occurred because: - The FastStartFailoverTarget property may not be modified. - The LogXptMode property for either the primary database or the fast-start failover target standby database may not be modified. - The protection mode of the configuration may not be modified. - Neither the broker configuration nor the fast-start failover target standby database was disabled using the DGMGRL CLI DISABLE command. - Neither the broker configuration nor the fast-start failover target standby database was removed using the DGMGRL CLI REMOVE command. - The FAILOVER IMMEDIATE command was not allowed. - The DG_BROKER_START initialization parameter may not be set to FALSE.

Action: Disable fast-start failover, using the FORCE option if required. Then retry the attempted command.

OCI-16655: The specified standby database is not the current fast-start failover target standby database.

Cause: The attempted command was not allowed because fast-start failover was enabled for this Data Guard broker configuration and the standby database specified in the command was not the current fast-start failover target standby database associated with the current primary database.

Action: Retry the attempted command by specifying the current fast-start failover target standby database. Alternatively, disable fast-start failover and retry the command using the originally specified target standby database.

OCI-16656: Oracle Data Guard broker detected role change.

Cause: The Oracle Data Guard broker detected a role change during database startup or health check.

Action: Additional information about this failure is recorded in the Oracle Data Guard broker log files, one for the primary database and one for each standby database in the Oracle Data Guard configuration. This information is helpful in determining how best to resolve this failure.

OCI-16657: Reinstatement of database in progress.

Cause: Reinstatement of this database was in progress.

Action: None

OCI-16658: unobserved fast-start failover configuration

Cause: The fast-start failover configuration was currently unobserved and so failover was not possible.

Action: Ensure that the observer is running and has connectivity to both the primary and the target standby databases. If the primary is not available and failover must be performed, then disable fast-start failover to perform a failover in the absence of the observer process. If both primary and standby databases are available, and only one observer is registered, restart that observer. If it cannot be restarted, then use the DGMGRL CLI STOP OBSERVER command to deregister that observer and then start a new observer using the DGMGRL START OBSERVER command. If multiple observers are registered, this error will be temporary since the broker will select a new observer to be the primary observer from the set of observers that have been registered.

OCI-16659: Failover operation is in progress.

Cause: A primary database that restarted contacted a standby database while the failover is active to that standby database.

Action: Shut down the primary database and wait for failover to complete on the standby database. Once failover is complete, restart the old primary database.

OCI-16660: Fast-start failover operation attempted in absence of a broker configuration.

Cause: Attempted to enable or disable fast-start failover when connected to a standby database for which broker configuration details are currently unavailable. For instance, the standby database may currently require re-creation (or flashback reinstantiation) before it may respond to broker client commands.

Action: 1) Attempts to enable or disable (non-FORCE) fast-start failover at this standby database will be rejected until the broker configuration details are available to the standby database from the primary database. This typically occurs when the standby database is successfully recreated or flashed back, and then re-enabled on the primary database. 2) Use the FORCE option to override fast-start failover enabled on the standby database even when the broker configuration details are currently unavailable to the standby database. In this case, the status message is only a warning. Note that fast-start failover is not formally disabled in the broker configuration. The effect of this command issued under these circumstances may or may not be permanent, depending upon when the primary and standby databases regain full communication between each other and if the state of fast-start failover has been altered at the primary database in the meantime.

OCI-16661: The standby database must be reinstated.

Cause: A role change operation caused this database or pluggable database to require reinstatement.

Action: Use Enterprise Manager or the DGMGRL REINSTATE DATABASE or REINSTATE PLUGGABLE DATABASE command to reinstate the database or pluggable database.

OCI-16662: Network timeout when contacting a member.

Cause: Oracle Data Guard broker attempted to contact a member and failed because there was no response from the member within timeout specified by the CommunicationTimeout configuration property.

Action: Check the Oracle Data Guard broker log file for the details of the failure. Fix the problem and retry.

OCI-16664: unable to receive the result from a member

Cause: During execution of a command, a member in the Oracle Data Guard broker configuration failed to return a result.

Action: Check Oracle Data Guard broker log files for the details of the failure. Ensure network communications are working properly amongst the members of the configuration. Use the DGMGRL CLI VALIDATE NETWORK command to identify any communication issues in the configuration. Fix any identified network problems and retry the command.

OCI-16665: Timed out waiting for a result from a member.

Cause: The Oracle Data Guard broker was forced to time out a network connection to a remote member because: - The network call to the remote member did not complete in a timely manner - The remote member was unable to process the command due to an instance failure

Action: Check Data Guard broker log files for the details of the failure. If the network call did not complete in a timely manner, increase the CommunicationTimeout configuration property value and reissue the command.

OCI-16666: Unable to initiate fast-start failover on a bystander standby database.

Cause: The request to initiate a fast-start failover using DBMS_DG.INITIATE_FS_FAILOVER was made on a bystander standby database.

Action: Call DBMS_DG.INITIATE_FS_FAILOVER on either the primary or fast-start failover target standby database.

OCI-16667: request Oracle Data Guard broker client to reissue command

Cause: The Oracle Data Guard broker operation required that the same command be issued again from the client.

Action: If DGMGRL or Enterprise Manager has not already done so, reissue the same command to the Oracle Data Guard broker manually.

OCI-16668: operation cannot be performed on the fast-start failover target standby database

Cause: The database specified for the operation was the fast-start failover target standby database.

Action: Retry the operation on a different database. Alternatively, disable fast-start failover, and retry the operation.

OCI-16671: instance-specific property must be set uniquely for instances of an Oracle RAC database

Cause: An attempt was made to set an instance-specific property to the same value for all instances of an Oracle RAC database for a property whose value must be unique for each instance.

Action: Use the EDIT INSTANCE command and specify the SID of each instance whose instance-specific property value is to be changed.

OCI-16672: switchover not permitted to standby database with non-zero DelayMins property value

Cause: Switchover was attempted to a standby database that had a non-zero value for its DelayMins configurable property.

Action: For switchover to a standby database, set the DelayMins configurable property to zero for the standby database, wait for its apply lag to become zero seconds, and then retry the switchover command.

OCI-16673: A member is running a different Oracle version from that of the primary database version.

Cause: The standby member was running a different version of Oracle than the primary database.

Action: Ensure that all members of the configuration are running the same versions of Oracle.

OCI-16674: standby database type has changed

Cause: An attempt to enable a database whose standby type changed from physical or snapshot to logical (or vice versa) was disallowed.

Action: If the intention is to retain the database conversion to the new type, the database must be removed and added back into the configuration in order to obtain the correct values for database properties specific to the new standby type.

OCI-16675: Database instance restart required for the property value modification to take effect.

Cause: One or more properties that correspond to static initialization parameters were modified, but the database instances were not restarted. Or, a static initialization parameter that corresponds to a broker property was modified using an ALTER SYSTEM SQL*Plus statement.

Action: Restart the database instances for the modified property values to take effect. If the error persists after having restarted the instance, use the DGMGRL CLI or Enterprise Manager to modify the property to which the static initialization parameter corresponds.

OCI-16676: RedoRoutes property for two or more members contains a circular route

Cause: The value of a RedoRoutes property for two or more members was set such that a member that sent redo also received redo data in the same route. For example, A sends to B, B sends to C, and C sends to A.

Action: Correct the setting of the RedoRoutes property on one or more members to eliminate the circular route.

OCI-16677: Modification to RedoRoutes property may prevent one or more members from receiving redo data.

Cause: The change to the RedoRoutes property for the specified member may result in some members not receiving redo data. This may happen if another member has a LOG_ARCHIVE_DEST_n initialization parameter set to the same or higher value for the PRIORITY attribute.

Action: Use the DGMGRL SHOW CONFIGURATION WHEN PRIMARY IS command for each database that may become a primary database to ensure that all members continue to receive redo data after any role change.

OCI-16678: unrecognized or duplicate attribute specified

Cause: The specified value contained an unrecognized or duplicated attribute.

Action: Ensure the property string does not contain any undefined or duplicate attributes. See the Oracle Data Guard broker documentation for supported attributes.

OCI-16679: one or more disallowed keywords found

Cause: The specified value contained one or more disallowed keywords.

Action: See the Oracle Data Guard broker documentation for the supported keywords.

OCI-16680: value contains unbalanced set of parentheses

Cause: The specified value contained an unbalanced set of parentheses or a missing set of parentheses.

Action: Ensure the parentheses are correctly matched and specify parentheses when required. See the Oracle Data Guard broker documentation for more information.

OCI-16681: Value does not contain a colon.

Cause: The specified value did not contain a colon (:).

Action: Include the colon (:) in the value.

OCI-16682: value contains duplicate databases or far sync instances

Cause: The specified value contained the same database or far sync instance multiple times.

Action: Ensure that a database or far sync instance is specified only once.

OCI-16683: disallowed, empty substring specified in property value

Cause: The value specified contained a disallowed, empty string or substring, e.g. "()".

Action: Remove the disallowed empty strings and retry the command.

OCI-16684: maximum number of destinations exceeded

Cause: The value specified for the RedoRoutes property contained more than the maximum of 30 destinations.

Action: Ensure that no more than 30 destinations are specified.

OCI-16685: database does not receive redo data

Cause: The RedoRoutes property for all members of the configuration were set such that this database did not receive redo data. Or, the transport state of the database that sends redo data to this database was not valid.

Action: Check the setting of the RedoRoutes property for all members of the configuration. Ensure that at least one member's RedoRoutes property value is set to ship redo data to this database. Also check the transport state of the database that sends redo data to this database.

OCI-16686: member may not receive redo data if redo source is an alternate destination

Cause: This member may not receive redo data if the redo source is an alternate destination that does not ship redo to this database.

Action: Ensure that any alternates for the redo source for this member includes this member in its redo destination list.

OCI-16687: member has multiple redo sources

Cause: Two or more members had their RedoRoutes property set to ship redo data to the same member.

Action: Examine the RedoRoutes property values for all members to see which members are shipping redo data to the same member. Change the value of the RedoRoutes property for those members so that only one of them sends redo to the member that had multiple redo sources.

OCI-16688: command cannot be issued on a disabled member

Cause: The command was issued on a member that was disabled.

Action: Connect to an enabled member of the configuration and retry the command.

OCI-16689: invalid sender specified for RedoRoutes property

Cause: A far sync instance or a recovery appliance was specified as the redo source in a RedoRoutes property rule.

Action: Check the setting of the RedoRoutes property and confirm that a far sync instance or a recovery appliance is not specified as the redo source in the RedoRoutes property rule.

OCI-16690: invalid destination specified for RedoRoutes

Cause: A destination specified in a RedoRoutes rule either appeared in the primary setting of the same rule or was the same member whose RedoRoutes property was being changed.

Action: Ensure that any destination specified in a RedoRoutes rule does not appear in the primary setting of the same rule and is not the member whose RedoRoutes property is being changed.

OCI-16691: cannot remove a configuration member that is specified in a RedoRoutes property

Cause: An attempt was made to remove a database or far sync instance that was specified in another configuration member's RedoRoutes property.

Action: First remove the database or far sync instance from all other member's RedoRoutes property values. Then retry the remove command.

OCI-16692: operation disallowed for a member that is currently shipping redo to another member

Cause: An attempt was made to remove, disable, or convert (physical standby database) a member that currently shipped redo data to another member.

Action: Modify the value of the RedoRoutes property for the member to be removed, disabled, or converted (physical standby database) to not ship redo data for the current primary database and then retry the operation.

OCI-16693: requirements not met for enabling fast-start failover

Cause: The attempt to enable fast-start failover could not be completed because one or more requirements were not met: - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to either SYNC or FASTSYNC if the configuration protection mode was set to MaxAvailability mode. - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to either SYNC if the configuration protection mode was set to MaxProtection mode. - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to ASYNC if the configuration protection mode was set to MaxPerformance mode. - No valid target standby database was specified in the primary database FastStartFailoverTarget property prior to the attempt to enable fast-start failover, and more than one standby database existed in the Oracle Data Guard configuration. - fast-start failover target standby database did not receive redo data directly from the primary database when the protection mode was set to MaxPerformance. -

The primary database has multiple routes to the fast-start failover target standby database. - Logical standby databases could not be the fast-start failover targets because the configuration protection mode was set to MaxProtection.

Action: Retry the command after correcting the issue: - Ensure that the effective redo transport mode for both the primary database and the fast-start failover target standby database are either SYNC or FASTSYNC if the configuration protection mode is set to MaxProtection or MaxAvailability. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to ASYNC if the configuration protection mode is set to MaxPerformance. - Ensure the RedoRoutes property of the primary includes the name of the fast-start failover target standby database when the protection mode is set to MaxPerformance. - Ensure the RedoRoutes property of the primary database has only one route to the fast-start failover target standby database.

OCI-16694: one or more databases involved in switchover need to be restarted

Cause: An error occurred during the restart of either the old or new primary databases or both in a switchover operation.

Action: Manually restart both the old and new primary databases, including all their Oracle RAC instances if it is an Oracle RAC database.

OCI-16695: a RedoRoutes rule requires asynchronous redo transport mode

Cause: The member could not receive redo data from its source because the source was either a standby database or far sync instance, but the redo transport was not set to asynchronous mode. Standby databases and far sync instances cannot send redo data in synchronous mode. The asynchronous transport mode must be set in either the RedoRoutes parameter of the source member or in the LogXptMode configurable property of the receiving member.

Action: Set the LogXptMode configurable property for the receiving member to ASYNC before changing the RedoRoutes configurable property of the standby database or far sync instance that is to send redo data. Or, specify ASYNC in the RedoRoutes configurable property of either the sending standby database or far sync instance to override the value specified in the LogXptMode configurable property of the receiving member.

OCI-16696: cannot enable the member because its redo source is disabled

Cause: An attempt was made to enable a member, but its redo source was disabled.

Action: Check that the redo source configured for this member (primary, database, physical standby database, or far sync instance) is enabled. If the redo source is disabled, enable it first and then retry the command.

OCI-16697: current role of the member only allows a LOCAL rule in RedoRoutes property

Cause: A logical or snapshot standby database was specified as a redo data source in a RedoRoutes configurable property rule.

Action: Logical and snapshot standbys cannot be configured as a redo source. The only valid rules a logical or snapshot standby database can contain are those that specify LOCAL or its database unique name value in the redo source field of a redo routing rule. Check that the member for which you are setting the RedoRoutes configurable property is a primary database, physical standby database, or a far sync

instance. Note that a Oracle Zero Data Loss Recovery Appliance cannot be a redo source.

OCI-16698: member has a LOG_ARCHIVE_DEST_n parameter with SERVICE attribute set

Cause: One or more LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration were set on the new member when attempting to add a standby database or far sync instance to the configuration.

Action: Clear all LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration on the new member to be added.

OCI-16699: Connect identifier was not specified.

Cause: The connect identifier was not specified for the member being added to the configuration.

Action: Retry the ADD command with a connect identifier for the member to be added.

OCI-16700: The standby database has diverged from the primary database.

Cause: The primary database may have been flashed back or restored from a backup set and then reopened with the RESETLOGS option. Or, a role change to a logical standby database was performed.

Action: Re-create the standby database from the primary database or flashback the standby database to the same point the primary database had been flashed back to. If the roles are switched back to the original primary database, then no action is necessary.

OCI-16701: Oracle Data Guard broker command failed.

Cause: The command to modify or query the member failed.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command.

OCI-16702: Oracle Data Guard broker command warning

Cause: The command to modify or query the member resulted in a warning.

Action: Check the Oracle Data Guard broker log file for the warning and, if necessary, reissue the command.

OCI-16703: cannot set property while the member is enabled

Cause: An attempt was made to change a member property while the member was enabled.

Action: Disable the member first, update the property, and then reenble the member.

OCI-16704: standby database not valid for primary database

Cause: The standby database was not added to the Oracle Data Guard broker configuration because it was not a valid standby database for the primary database.

Action: Add a database to the Oracle Data Guard broker configuration that is a valid standby database to the primary database.

OCI-16706: Oracle Data Guard broker worker process not available.

Cause: Oracle Data Guard broker worker process was not available to process the request.

Action: Contact Oracle Support.

OCI-16707: The value of property *string* is invalid. Valid values are *string*.

Cause: An invalid property value was specified while broker management of the member was disabled.

Action: Reset the property to a valid value.

OCI-16709: Standby archived log location settings conflict with database recovery area.

Cause: The StandbyArchiveLocation or AlternateLocation property was set to USE_DB_RECOVERY_FILE_DEST, but the initialization parameter DB_RECOVERY_FILE_DEST did not specify a valid destination.

Action: Use a value other than USE_DB_RECOVERY_FILE_DEST for StandbyArchiveLocation or AlternateLocation, or set up a valid database recovery area by setting DB_RECOVERY_FILE_DEST to a valid destination.

OCI-16710: Snapshot standby database should be converted back to a physical standby database as soon as possible.

Cause: A failover operation caused the snapshot standby database to enter a state that would require it to be re-created if another failover operation occurs before it is converted back to a physical standby database.

Action: Re-enable the snapshot standby database if it is disabled and convert it back to a physical standby database as soon as possible, because the snapshot standby database will have to be re-created if another failover occurs while it is a snapshot standby database.

OCI-16713: The Oracle Data Guard broker command timed out.

Cause: The Oracle Data Guard broker timed out a health check, get property, or set property command because it took longer than the number of seconds specified by the OperationTimeout configuration property to complete.

Action: Enable support level tracing (the TraceLevel configuration property should be set to SUPPORT) and then examine the Data Guard broker log files for warnings or errors to see what may be causing the operation to be timed out.

OCI-16714: The value of property *string* is inconsistent with the member setting.

Cause: The value of the specified configuration property was inconsistent with the in-memory settings or the server parameter file settings for the member. This may be caused by changing an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentProperties property on the member to determine which properties are set inconsistently and set the properties to make them consistent.

OCI-16715: redo transport-related property *string* of member "*string*" is inconsistent

Cause: The value of the specified redo transport-related configuration property of the given member was inconsistent with the primary database redo transport service setting. This may be caused by a change in an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentLogXptProps property on the primary database to determine which redo transport properties are set inconsistently. Reset the properties on the member to make them consistent with the primary database redo transport settings.

OCI-16716: Unable to clear the LOG_ARCHIVE_DEST_n initialization parameter.

Cause: An attempt to clear the LOG_ARCHIVE_DEST_n initialization parameter failed.

Action: Check the Oracle Data Guard broker log files and the Oracle Database alert log for more information. Resolve any errors and retry the operation. If the problem persists, contact Oracle Support.

OCI-16717: clearing parameter LOG_ARCHIVE_DUPLEX_DEST failed

Cause: An attempt to clear the LOG_ARCHIVE_DUPLEX_DEST parameter failed.

Action: Contact Oracle Support Services.

OCI-16718: Failed to locate member.

Cause: Oracle Data Guard broker was unable to locate the member in the broker configuration.

Action: Add the member to the broker configuration and retry the command.

OCI-16719: Unable to query V\$ARCHIVE_DEST fixed view.

Cause: The broker failed to query the V\$ARCHIVE_DEST fixed view.

Action: Retry the query. If this persists, contact Oracle Support Services.

OCI-16720: No LOG_ARCHIVE_DEST_n initialization parameters are available.

Cause: All LOG_ARCHIVE_DEST_n initialization parameters were in use, or all initialization parameters from LOG_ARCHIVE_DEST_1 through LOG_ARCHIVE_DEST_10 that can support SYNC were in use.

Action: Clear one or more LOG_ARCHIVE_DEST_n initialization parameters so that Oracle Data Guard broker can use them to set up the primary database redo transport.

OCI-16721: unable to set LOG_ARCHIVE_DEST_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16722: unable to set LOG_ARCHIVE_DEST_STATE_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_STATE_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files for more details.

OCI-16723: Modification to RedoRoutes property may result in a terminal member having a higher priority than the cascading member.

Cause: The change to the RedoRoutes property for the specified member resulted in a terminal member having a higher priority setting than the cascading member.

Action: Use the DGMGRL CLI SHOW ALL MEMBERS RedoRoutes command to check the value of the RedoRoutes property for all members. Use the DGMGRL SHOW CONFIGURATION WHEN PRIMARY IS command for each database that may become a primary database to ensure that all members continue to receive redo data after any role change.

OCI-16724: Cannot resolve gap for one or more members.

Cause: Primary database could not resolve a gap request from one or more members.

Action: To identify the member with the unresolvable gap, check the status of the primary database using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Copy the missing archived log files from backups or from another member in the configuration that has the files for the member with missing files.

OCI-16727: Cannot close database.

Cause: Oracle Data Guard broker could not close the database.

Action: Terminate all active sessions connected to the database and retry.

OCI-16728: Consistency check for property *string* found *string* error.

Cause: Consistency check for specified property caused the specified error.

Action: Check the error message, clear the error, and retry.

OCI-16729: Found error *string* when validating value for property *string*.

Cause: An error was encountered while validating the specified value for the configurable property.

Action: Check the error message, clear the error, and retry.

OCI-16730: SQL Apply was not started.

Cause: SQL Apply was not started because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode. Oracle Data Guard will automatically start SQL Apply.

OCI-16731: No pluggable databases are opened in read/write mode.

Cause: Operation failed because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode and retry.

OCI-16732: Oracle Clusterware is restarting the database instance.

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If Oracle Clusterware has not already done so, shut down the Oracle instance and then restart it. No action is required if this error was returned from DBMS_DG.SWITCHOVER and Oracle Clusterware has restarted the database. If this error was returned by DBMS_DG.CONVERT_TO_PHYSICAL or DBMS_DG.REINSTATE, wait for the database to start, and wait for the broker to complete initialization using DBMS_DG.WAIT(WAIT_BOOT, *wait time in seconds*). Then, for reinstate and convert operations, retry the operation.

OCI-16734: An archive location property is empty while its alternate location property has a non-empty value.

Cause: The ArchiveLocation property value was empty while the AlternateLocation property had a non-empty value. Or, the StandbyArchiveLocation property value was empty while the StandbyAlternateLocation had a non-empty value.

Action: Ensure that the member's ArchiveLocation property is set to a valid directory location that is different than the value specified for the AlternateLocation property. Or, ensure that the StandbyArchiveLocation property is set to a valid directory location that is different than the value specified for the StandbyAlternateLocation property.

OCI-16735: primary redo generation suspended

Cause: Redo generation on the primary database was suspended because either the fast-start failover target was unavailable or the network connection between both databases was disrupted.

Action: Ensure that the fast-start failover target standby database is running and the network connection between both databases is restored.

OCI-16736: unable to find the destination entry of member "*string*" in V\$ARCHIVE_DEST

Cause: Either the destination was manually changed or the member was removed from the Oracle Data Guard broker configuration, or there was no available LOG_ARCHIVE_DEST_n initialization parameter that could be used to ship redo data to the member.

Action: Reset any LOG_ARCHIVE_DEST_n initialization parameters that are no longer required and reenact the configuration.

OCI-16737: The redo transport service for member "*string*" has an error.

Cause: Redo transport services were not able to communicate with the member.

Action: Query the LogXptStatus monitorable property for the sending member. Also, check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16738: Redo transport service for member "*string*" is not running.

Cause: The redo transport service for the specified member was not running.

Action: Check the Oracle Data Guard broker log file or the Oracle alert log file for more details. If necessary, start the redo transport service for the member.

OCI-16739: Redo transport service for member "*string*" is unexpectedly running.

Cause: The redo transport service for the member was expected to be stopped but was found running.

Action: Check the Oracle Data Guard broker log file for more details. If necessary, stop the redo transport service for the member.

OCI-16740: Redo transport service for member "*string*" incorrectly set as alternate.

Cause: The redo transport service for a member was set as alternate when no other member was set as an alternate for this member.

Action: Re-enable the member or the entire configuration to allow the correct configuration property settings to be propagated to the initialization parameters.

OCI-16741: The LOG_ARCHIVE_DEST_N initialization parameter value for member "*string*" contains incorrect syntax.

Cause: The value of a LOG_ARCHIVE_DEST_N initialization parameter that was defined in the server parameter file of the primary database contained incorrect syntax. The Data Guard broker was unable to change its value when the redo transport services were enabled.

Action: Fix the syntax error in the primary database server parameter file or remove the entry from the server parameter file. Also, check the values of the redo transport-related properties for the specified member.

OCI-16742: The member "*string*" exceeded its archived log storage quota.

Cause: The member exceeded its quota for stored archived redo logs.

Action: Remove some archived redo logs from the member or increase its quota.

OCI-16743: cannot determine status of redo transport service for member "*string*"

Cause: The status of redo transport to the specified member could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16744: The DG_CONFIG list of LOG_ARCHIVE_CONFIG parameter is full.

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Oracle Data Guard broker was not able to add a new DB_UNIQUE_NAME to the list.

Action: Remove unused entries in the DG_CONFIG list, then re-enable the member.

OCI-16745: Unable to add DB_UNIQUE_NAME "*string*" to the DG_CONFIG list.

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and Oracle Data Guard broker could not add the specified DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list then re-enable the member.

OCI-16746: Oracle Data Guard broker cannot mount the database.

Cause: The Oracle Data Guard broker failed to mount the database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16747: Logical standby database guard could not be turned on.

Cause: Oracle Data Guard broker could not turn on the logical standby database guard.

Action: Check Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16748: Oracle Data Guard broker cannot open the primary database

Cause: The Oracle Data Guard broker failed to open the primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16749: The member is disabled manually.

Cause: The Oracle Data Guard broker configuration member was disabled manually.

Action: Enable the Oracle Data Guard broker configuration member.

OCI-16750: Failed to activate logical standby database.

Cause: The Oracle Data Guard broker failed to activate a logical standby database during a failover operation.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16751: failed to enable supplemental logging

Cause: The Oracle Data Guard broker failed to enable supplemental logging during a switchover to a physical standby database in a configuration that also contained logical standby databases.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16753: Oracle Data Guard broker cannot open standby database.

Cause: Oracle Data Guard broker failed to open the standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16754: Failed to activate physical standby database.

Cause: The Oracle Data Guard broker failed to activate the physical standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16755: Failed setting an initialization parameter.

Cause: The Oracle Data Guard broker failed to set an initialization parameter using either the ALTER SYSTEM SET or ALTER SYSTEM RESET command.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16757: unable to get the value of this property

Cause: The Oracle Data Guard broker failed to get the value for the specified property because the value for the specified property was not available for the current database role.

Action: If the value of the specified property is not available for the current role of the database, specify this property for a database for which the value is available. Otherwise, check the Oracle Data Guard broker log file for more details.

OCI-16758: The specified apply instance is not running.

Cause: Oracle Data Guard broker could not start apply services on the specified instance because the instance was not running.

Action: Start the instance and then retry the command.

OCI-16759: Cannot start SQL Apply with initial system change number (SCN).

Cause: The Oracle Data Guard broker failed to start SQL Apply with an initial system change number (SCN).

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16760: Cannot start SQL Apply.

Cause: Oracle Data Guard broker failed to start SQL Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If needed, contact Oracle Support Services.

OCI-16761: cannot stop SQL Apply

Cause: The Oracle Data Guard broker failed to stop the SQL Apply service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16762: invalid database state

Cause: Database was not in the intended state.

Action: Determine the reason why the database is not running in the intended state and reissue the command.

OCI-16763: redo transport service for a member is running

Cause: The redo transport service for a member was running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, stop the redo transport service to the member.

OCI-16764: Redo transport service to a member is not running.

Cause: The redo transport service to a member was not running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, start the redo transport service to the member.

OCI-16765: Redo Apply is running.

Cause: Redo Apply was running when it should have been stopped.

Action: If necessary, stop Redo Apply.

OCI-16766: Redo Apply is stopped.

Cause: Redo Apply was stopped when it should have been running.

Action: Check the alert log to see why Redo Apply terminated, correct any problems that may exist, and restart Redo Apply by setting the physical standby database state to APPLY-ON.

OCI-16767: SQL Apply is running.

Cause: The Oracle Data Guard broker expected SQL Apply to have been stopped but detected that SQL Apply was still running.

Action: This normally occurs because SQL Apply was stopped using the Oracle Data Guard broker but restarted again outside of the Oracle Data Guard broker, for example through SQL*Plus. Stop SQL Apply using SQL*Plus and retry the required action using the Oracle Data Guard broker.

OCI-16768: SQL Apply is stopped.

Cause: SQL Apply was stopped when it should have been running.

Action: Check the alert log to see why SQL Apply terminated, correct any problems that may exist, and restart SQL Apply by setting the logical standby database state to APPLY-ON.

OCI-16769: The physical standby database is open in read-only mode.

Cause: All instances of the physical standby database were put into a read-only state instead of APPLY-OFF.

Action: Use the EDIT DATABASE SET STATE command to set the database to the APPLY-OFF state. Retry the operation.

OCI-16770: Redo Apply not started because the physical standby database is opening.

Cause: Redo Apply services could not be started on the physical standby database because it was being opened. The Oracle Data Guard broker will start Redo Apply services once the physical standby database has been opened.

Action: No action required.

OCI-16771: failover to a physical standby database failed

Cause: The Oracle Data Guard broker encountered errors when converting a physical standby database to a primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16772: switchover to a standby database failed

Cause: The Oracle Data Guard broker encountered errors when switching over to the specified standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16773: cannot start Redo Apply

Cause: The Oracle Data Guard broker failed to start Redo Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If the database is already open, the broker will not start Redo Apply if the Oracle Active Data Guard option is not enabled.

OCI-16774: cannot stop Redo Apply

Cause: The Oracle Data Guard broker failed to stop the Redo Apply service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16775: target standby database in broker operation has potential data loss

Cause: The target standby database specified for the broker operation did not have all the redo data from the primary database.

Action: Confirm that the redo transport service on the primary database is functioning correctly by checking its status using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Reissue the broker command once all redo data are available on the target standby database.

OCI-16776: Health check of the redo transport service failed.

Cause: The Oracle Data Guard broker could not complete the health check for the redo transport service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details on why the health check detected errors. These logs should contain other error messages that indicate the cause of the problem.

OCI-16777: Unable to find the destination entry of a member in V\$ARCHIVE_DEST.

Cause: Either a destination (LOG_ARCHIVE_DEST_N initialization parameter) was manually deleted or no LOG_ARCHIVE_DEST_N initialization parameter was available to set up redo transport for the member.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If there are sufficient LOG_ARCHIVE_DEST_N initialization parameters available, re-enable the configuration using the DGMGRL CLI ENABLE CONFIGURATION command to ensure all members are receiving redo data. If there are an insufficient number of LOG_ARCHIVE_DEST_N initialization parameters available, consider using the RedoRoutes property to take advantage of available LOG_ARCHIVE_DEST_N initialization parameters on other members so that all members are receiving redo data.

OCI-16778: Redo transport error occurred for one or more members.

Cause: The redo transport service was unable to send redo data to one or more members.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. These logs should contain other errors messages that indicate the cause of the problem. Also, query the LogXptStatus property to see the errors affecting the redo transport service.

OCI-16779: The LOG_ARCHIVE_DEST_n initialization parameter of a member is set incorrectly.

Cause: The LOG_ARCHIVE_DEST_n initialization parameter value in the server parameter file contained incorrect syntax. The Oracle Data Guard broker failed to update the destination when the redo transport service was enabled.

Action: Check the Oracle Data Guard broker log file to see which member has the problem. Fix the syntax error in the server parameter file or remove the entry from the server parameter file. Check if the syntax of the redo transport-related properties is correct.

OCI-16780: A member exceeded its archived redo log storage quota.

Cause: A member exceeded its archived redo log storage quota.

Action: Check the Oracle Data Guard broker log file to see which member has the problem. Remove older archived redo logs or increase the member's archived redo log storage quota.

OCI-16781: cannot determine status of redo transport service for member

Cause: The status of redo transport to the specified member could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

OCI-16782: instance not open for read/write access

Cause: The database was mounted on an instance but not opened for read/write access.

Action: For more details, check the status of the database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If possible, open the instance manually.

OCI-16783: Cannot resolve gap for member *string*.

Cause: The primary database could not resolve a gap request from the specified members.

Action: Copy the missing archived redo log files either from a backup or from another member in the configuration that has the missing files for the members.

OCI-16784: The member name specified by the Dependency property is incorrect.

Cause: The member name that should be the value of the DB_UNIQUE_NAME initialization parameter specified in the Dependency property was incorrect.

Action: Reset the Dependency property to the correct name of the member.

OCI-16785: The database is in NOARCHIVELOG mode.

Cause: The database was in NOARCHIVELOG mode when it was either a primary database or when it was a standby database that was being switched over to be a primary database.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

OCI-16786: unable to access Oracle Data Guard broker configuration files

Cause: The Oracle Data Guard broker configuration files did not exist or could not be accessed.

Action: Check the Oracle Data Guard broker log file for more details.

OCI-16788: Unable to set one or more member configurable property values.

Cause: The broker failed to execute an ALTER SYSTEM or ALTER DATABASE statement when it attempted to set the ApplyInstances, ApplyParallel, or DelayMins configurable property.

Action: Check the Oracle Data Guard broker log file to see which property could not be set, and retry the statement again using a valid property value.

OCI-16789: Standby redo logs are configured incorrectly.

Cause: Standby redo logs were not configured, or were configured incorrectly for the member.

Action: Standby redo logs are required when the redo transport mode is set to SYNC or ASYNC. Check the Oracle Data Guard documentation for more information on the correct configuration of standby redo logs.

OCI-16790: The value of the configurable property is invalid.

Cause: Either an invalid property value was entered, or a reset was attempted for a property that had no broker default value.

Action: Set the property to a valid value.

OCI-16791: Unable to check the existence of the standby redo logs.

Cause: The standby redo logs were not found or did not exist.

Action: Ensure that the member is mounted and query the V\$STANDBY_LOG fixed view to check if the problem is corrected. Retry the command.

OCI-16792: Configurable property value is inconsistent with member setting.

Cause: The value of one or more configurable properties were inconsistent with the in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the InconsistentProperties property on the member or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the member or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

OCI-16793: Logical standby database guard is off.

Cause: The logical standby database was turned off.

Action: Issue the ALTER DATABASE GUARD ALL command to turn the guard on and verify that Oracle Data Guard health check error or warning has cleared.

OCI-16794: database guard is on for primary database

Cause: The database guard was turned on for the primary database.

Action: Issue the ALTER DATABASE GUARD NONE command to turn off the database guard and verify that the Oracle Data Guard health check error or warning is cleared.

OCI-16795: The standby database needs to be re-created.

Cause: A switchover or failover operation caused this database to require re-creation.

Action: Re-create (or flashback) the standby database. Connect to the primary database in the broker configuration and re-enable broker management of that database. Once enabled, connect to the standby database and manage it with the broker. Some client commands cannot be completed on the standby database when in this error state. These commands can be completed successfully on the primary database. Retry the command on the primary database.

OCI-16796: One or more properties could not be imported from the member.

Cause: The broker was unable to import property values for the member being added to the broker configuration. This error indicates: The Oracle Net service name specified in DGMGRL CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command was not one that provides access to the member being added. There were no instances running for the member being added.

Action: Remove the member from the configuration using the REMOVE CONFIGURATION, REMOVE DATABASE, REMOVE FAR_SYNC, or REMOVE RECOVERY_APPLIANCE command. Ensure that the member to be added has at least one instance running and that the Oracle Net service name provides access to the running instance. Also, check the broker log file for additional information. Then, reissue the CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command.

OCI-16797: Member is not using a server parameter file.

Cause: The member was not using a server parameter file or the broker was unable to access the server parameter file.

Action: Issue the `CREATE SPFILE='.' FROM PFILE='...'` command to create a server parameter file and then restart the member to use it.

OCI-16799: Redo Apply is not running

Cause: Either the Oracle Data Guard broker configuration indicated that Redo Apply was turned off, or the MRP0 recovery process was not running. As a result, Redo Apply-related properties could not be set.

Action: Turn on Redo Apply through Oracle Data Guard broker and rerun the command to set the Redo Apply-related properties.

OCI-16800: Redo transport service for a standby database incorrectly set as alternate

Cause: The redo transport service for a member was set as an alternate destination when no other member is set as an alternate destination for this member.

Action: Re-enable the standby database or the entire configuration to allow the correct configuration property settings to be propagated to the initialization parameters.

OCI-16801: Redo transport-related property is inconsistent with member setting.

Cause: The values of one or more redo transport-related configuration properties were inconsistent with the in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the `InconsistentLogXptProps` property on the primary database or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent. Alternatively, enable the member or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

OCI-16802: Database role change operation permitted only by Data Guard broker when fast-start failover is enabled.

Cause: Fast-start failover was enabled and a role change was not initiated from a Data Guard broker interface.

Action: Use a Data Guard broker interface to perform a role change.

OCI-16803: Unable to query a database table or fixed view.

Cause: Querying a database table or fixed view failed. The database may not be opened or mounted.

Action: Check the Oracle Data Guard broker log file for more details.

OCI-16804: one or more configuration properties have invalid values

Cause: Oracle Data Guard broker health check detected that one or more configuration properties in the broker configuration had invalid values. The property values were changed while broker management of the member was disabled.

Action: Check Data Guard broker log file for more details on which properties have invalid values and reset them through the Oracle Data Guard broker.

OCI-16806: Supplemental logging is not turned on.

Cause: Supplemental logging was not turned on while there was a logical standby database in the configuration. This could happen either on the primary database or on the logical standby database that was being switched over to become the primary database.

Action: Check the Oracle Data Guard broker log file for more details. Issue the ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS statement to add supplemental logging.

OCI-16807: unable to change configuration protection mode

Cause: An attempt to issue the ALTER DATABASE SET STANDBY TO MAXIMIZE {PROTECTION | AVAILABILITY | PERFORMANCE} failed.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more information.

OCI-16808: Primary database is not open.

Cause: A prior attempt to open the primary database was disallowed because the primary had shut itself down earlier after being isolated from both the fast-start failover observer and the target standby database for more than the number of seconds specified by the FastStartFailoverThreshold configuration property. It was assumed that a fast-start failover was underway. Since that time, the primary database reestablished contact with either the observer or the target standby database indicating that a fast-start failover had not actually occurred.

Action: Open the database by issuing the SQL*Plus ALTER DATABASE OPEN command.

OCI-16809: Multiple warnings detected for the member.

Cause: The broker detected multiple warnings for the member.

Action: Get a detailed status report by checking the status of the member specified using either Enterprise Manager or the DGMGRL CLI SHOW command.

OCI-16810: Multiple errors or warnings detected for the member.

Cause: The Oracle Data Guard broker detected multiple errors or warnings for the member.

Action: Get a detailed status report by checking the status of the database with either Enterprise Manager or the DGMGRL CLI SHOW command.

OCI-16811: Apply instance not recorded by the Oracle Data Guard broker.

Cause: The broker did not register an Apply instance for a standby database.

Action: Reenable the standby database to clear the error.

OCI-16812: Apply services are not running on apply instance recorded by the broker.

Cause: Redo or SQL apply services were not running on the instance where Oracle Data Guard broker expected them.

Action: Re-enable the standby database to clear the error.

OCI-16813: apply service not running on apply instance *string* recorded by the broker

Cause: Redo or SQL Apply services were not running on the instance on which the Data Guard broker expected them to be running.

Action: Reenable the standby database to clear the error.

OCI-16814: Duplicate name specified for observer.

Cause: The observer was not started because an observer with that name was already started.

Action: Use the DGMGRL CLI SHOW OBSERVER command to check the names of the observers that have already been started. Retry the START OBSERVER command with an unused observer name.

OCI-16815: member does not need to be reinstated

Cause: The member specified was either already reinstated or did not need to be reinstated.

Action: No action necessary. Any stale reinstate required status will be cleared after the next health check has completed.

OCI-16816: incorrect database role

Cause: The Oracle Data Guard broker detected that the specified database had a different database role from the one that was recorded in the Oracle Data Guard broker configuration. This could be the result of a failed switchover or failover operation, or a switchover or failover operation performed with SQL*Plus.

Action: Check the Oracle Data Guard broker documentation to see how to recover from failed role change operations, or from role changes that were performed using SQL*Plus for databases managed by Oracle Data Guard broker.

OCI-16817: unsynchronized fast-start failover configuration

Cause: The fast-start failover target standby database was not synchronized with the primary database. As a result, a fast-start failover could not happen automatically in case of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases will then be synchronized. The Oracle Data Guard configuration may then failover automatically to the standby database in the event of loss of the primary database.

OCI-16818: fast-start failover suspended

Cause: The primary database was intentionally shut down. As a result, the fast-start failover could not take place automatically.

Action: Start the primary database. This effectively restores the ability to automatically perform a fast-start failover in the event of a failure of the primary database.

OCI-16819: fast-start failover observer not started

Cause: The observer for fast-start failover was not started. As a result, fast-start failover could not happen in the event of a primary database failure.

Action: Start the fast-start failover observer by using the DGMGRL START OBSERVER command.

OCI-16820: fast-start failover observer is no longer observing this database

Cause: A previously started observer was no longer actively observing this database. A significant amount of time elapsed since this database last heard from the observer. Possible reasons were:

- The host where the observer was running was not available.
- The network connection between the observer and this database was not available.
- The observer process was terminated unexpectedly.

Action: Check the reason why the observer cannot contact this database. If the problem cannot be corrected, stop the current observer by connecting to the Oracle Data Guard configuration and issuing the DGMGRL STOP OBSERVER command, and then start a new observer on another host using the DGMGRL START OBSERVER command.

OCI-16821: Logical standby database dictionary not loaded.

Cause: The logical standby database did not load the dictionary. This status may be returned when attempting to switchover or failover to a logical standby database that did not load its dictionary.

Action: Start SQL Apply on the logical standby database if it is not already running. Wait for it to reach the APPLYING state.

OCI-16822: New primary database not ready for standby database reinstatement.

Cause: The new primary database, as a result of a logical standby database failover operation, did not fully complete the failover operation.

Action: Wait until the failover operation has completed on the new primary database. Retry the reinstate operation.

OCI-16824: Multiple warnings, including fast-start failover-related warnings, detected for the database.

Cause: The broker detected multiple warnings for the database. At least one of these warnings may have prevented fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

OCI-16825: Multiple errors or warnings, including fast-start failover-related errors or warnings, detected for the database.

Cause: The broker detected multiple errors or warnings for the database. At least one of these errors or warnings may have prevented a fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

OCI-16826: apply service state is inconsistent with the DelayMins property

Cause: This warning was caused by one of the following reasons:

- The apply service was started without specifying the real-time apply option or without the NODELAY option when the DelayMins property was set to zero.
- The apply service was started with the real-time apply option or with the NODELAY option when the DelayMins property was set to a value greater than zero.

Action: Reenable the standby database to allow the broker to restart the apply service with the apply options that are consistent with the specified value of the DelayMins property.

OCI-16827: Flashback Database is disabled.

Cause: The broker detected that the Flashback Database feature was disabled. With Flashback Database disabled, the broker could not reinstate a database that required reinstatement. Flashback Database may be disabled manually with the ALTER DATABASE FLASHBACK DATABASE OFF command or automatically by the database in the event of an error.

Action: Check the database alert log to determine whether the Flashback Database was disabled due to errors and then correct the problem. If Flashback Database was manually disabled, reenable Flashback Database with the ALTER DATABASE FLASHBACK DATABASE ON command. If, after enabling Flashback Database, the database still cannot be reinstated, then the database must be re-created from a copy of the primary database.

OCI-16828: invalid value specified for REDO_TRANSPORT_USER initialization parameter

Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded the allowed maximum platform-specific length.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

OCI-16829: Fast-start failover configuration is lagging.

Cause: The fast-start failover target standby database was not within the lag limit specified by the FastStartFailoverLagLimit configuration property. As a result, a fast-start failover could not happen in the event of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully transmitting redo data. If this condition persists, consider raising the value of the FastStartFailoverLagLimit configuration property.

OCI-16830: Primary database isolated from its fast-start failover partners longer than FastStartFailoverThreshold seconds.

Cause: The primary database was isolated from both the observer and target standby database for longer than the seconds specified by the FastStartFailoverThreshold property. A fast-start failover probably occurred. If the FastStartFailoverPmyShutdown configuration property was set to TRUE, the broker shut down the primary database.

Action: Ensure one instance of this database is running and the database is mounted on that instance so that the broker may reinstate the old primary database.

OCI-16831: Oracle Data Guard operation not allowed on this member.

Cause: The Oracle Data Guard broker operation was not allowed for the specified member of the Oracle Data Guard broker configuration.

Action: Check the documentation for the Oracle Data Guard broker command and then reissue the command with the correct member.

OCI-16832: User-configurable fast-start failover initiated.

Cause: The broker initiated a fast-start failover to the target standby database because a user-configurable condition was detected on the primary database. The broker shut down the primary database.

Action: Correct the problem on the primary database that caused the broker to initiate a fast-start failover, then reinstate the primary database.

OCI-16833: No such pluggable database at this database.

Cause: There was no pluggable database with the specified name at the specified container database.

Action: Provide the correct pluggable database name or container database name and reissue the command.

OCI-16834: Specified pluggable database is not a standby pluggable database.

Cause: The specified pluggable database name was not a standby pluggable database.

Action: Provide the correct pluggable database name or container database name and retry.

OCI-16835: Source pluggable database was dropped.

Cause: The source pluggable database for this standby pluggable database was dropped.

Action: Consider immediate failover to make this a native pluggable database, or remove this standby pluggable database.

OCI-16836: Source pluggable database was unplugged.

Cause: The source pluggable database for this standby pluggable database was unplugged.

Action: Consider immediate failover to make this a native pluggable database, or remove this standby pluggable database.

OCI-16837: Standby pluggable database is not applying redo data.

Cause: Standby pluggable database was not applying redo data.

Action: Ensure recovery was started and is running. Use the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON to start Redo Apply services. If this does not resolve the issue, switch logs at the source database.

OCI-16838: Source pluggable database is not opened in read/write mode.

Cause: The source pluggable database was not opened in read/write mode.

Action: Open the source pluggable database in read/write mode and reissue the command.

OCI-16839: Pluggable database must be in mounted mode.

Cause: Could not remove the pluggable database that was in open mode.

Action: Close the pluggable database and reissue the command.

OCI-16841: Target pluggable database has not applied all redo.

Cause: The target pluggable database had not completed applying all the redo data.

Action: If the target pluggable database is still applying, allow it to apply all the redo and reissue the command. If apply has stopped, check why it has stopped and rectify the situation before proceeding.

OCI-16842: Multitenant container database name specified does not exist.

Cause: A multitenant container database name was incorrectly specified.

Action: Specify the correct multitenant container database name.

OCI-16843: Pluggable database needs to be re-created.

Cause: An immediate failover to this pluggable database active target caused this pluggable database to require re-creation.

Action: Drop this pluggable database and create it as a standby for its previous target pluggable database that was activated as a new source pluggable database.

OCI-16844: database does not have a valid fast-start failover target standby database

Cause: Fast-start failover was enabled and the current primary database did not have a value set for the FastStartFailoverTarget configurable property or the value specified for this property was not a valid fast-start failover target standby database.

Action: Disable fast-start failover or ensure that the primary database has a valid fast-start failover target standby database specified by setting the FastStartFailoverTarget configurable property value to a valid standby database.

OCI-16845: unsupported attribute specified for the local destination property

Cause: The value specified for a local destination property contained unsupported attributes.

Action: Ensure that the value specified for the ArchiveLocation, AlternateLocation, StandbyArchiveLocation, or StandbyAlternateLocation property does not contain the SERVICE, ALTERNATE, or VALID_FOR attribute.

OCI-16846: ArchiveLocation and StandbyArchiveLocation should specify different destinations.

Cause: An attempt was made to set the ArchiveLocation and StandbyArchiveLocation configurable properties to the same destination.

Action: Ensure that the ArchiveLocation and StandbyArchiveLocation configurable properties specify different destinations.

OCI-16847: A previous switchover from this database failed with error *string*.

Cause: A previous switchover operation from this database failed.

Action: Fix the underlying problem and reissue the switchover command again.

OCI-16848: A previous switchover to this database failed with error *string*.

Cause: A previous switchover operation to this database failed.

Action: Fix the underlying problem and reissue the switchover command.

OCI-16849: A previous switchover from this database was interrupted and aborted.

Cause: A previous switchover operation from this database was interrupted. The interruption may have been caused by a stalled switchover.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the switchover command.

OCI-16850: A previous switchover to this database was interrupted and aborted.

Cause: A previous switchover operation to this database was interrupted by the user. The interruption may be caused by a stalled switchover.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the switchover command.

OCI-16851: A previous failover to this database failed with error *string*.

Cause: A previous failover operation to this database failed.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem and then reissue the failover command.

OCI-16852: A previous failover to this database was interrupted and aborted.

Cause: A previous failover operation to this database was interrupted because the operation may have stalled.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the failover command.

OCI-16853: apply lag has exceeded specified threshold

Cause: The current apply lag exceeded the value specified by the ApplyLagThreshold configurable property. It may be caused either by a large transport lag or poor performance of apply services on the standby database.

Action: Check for gaps (missing archive log files) on the standby database. If no gap is present, tune the apply services following Maximum Availability Architecture best practice guidelines.

OCI-16854: apply lag could not be determined

Cause: Apply lag could not be determined because either apply services were not running or there was no connectivity between the redo source and standby database.

Action: Start apply services if they are not running. Also, ensure that there is network connectivity between the redo source and standby databases and that the redo source is sending redo data to the standby database.

OCI-16855: transport lag has exceeded specified threshold

Cause: The current transport lag exceeded the value specified by the TransportLagThreshold configurable property. This error is caused by either poor network performance between the redo source and the member or a network disconnection.

Action: Check the network connection between the redo source and the member. If they are connected, check the network performance between the redo source and the member and tune it according to the Maximum Availability Architecture best practice guidelines.

OCI-16856: transport lag could not be determined

Cause: Transport lag could not be determined because there was no connectivity between the redo source and the member.

Action: Ensure that there is network connectivity between the redo source and the members and that the redo source is working properly.

OCI-16857: member disconnected from redo source for longer than specified threshold

Cause: The amount of time the member was disconnected from the redo source exceeded the value specified by the TransportDisconnectedThreshold configurable database property caused by a lack of network connectivity between the redo source and the member.

Action: Ensure that there is network connectivity between the redo source and the member and that the redo source is working properly.

OCI-16858: Last communication time from redo source could not be determined.

Cause: The member was never contacted by the redo source, so the last time the redo source had contacted this member could not be determined.

Action: Ensure that there is network connectivity between the redo source and the member and that the redo source is working properly.

OCI-16859: request terminated because delete, disable, or failover operation is in progress

Cause: The broker terminated a request because it was processing a delete, disable, or failover operation.

Action: Wait for the operation to complete and then retry the request.

OCI-16860: Cannot remove the local configuration when it references a remote configuration.

Cause: The local configuration could not be removed because it was associated with one or more remote configurations.

Action: First, remove all the remote configurations using the REMOVE CONFIGURATION <config_name> command. Then, retry the remove operation for the local configuration using the REMOVE CONFIGURATION command.

OCI-16861: ExternalDestination property requires DB_UNIQUE_NAME attribute

Cause: The value specified for the ExternalDestination property did not contain the DB_UNIQUE_NAME attribute.

Action: Ensure that DB_UNIQUE_NAME is specified as the value for the ExternalDestination property.

OCI-16862: unsupported attribute specified for the ExternalDestination property

Cause: The value specified for the ExternalDestination property contained unsupported attributes.

Action: Ensure that the value specified for the ExternalDestination property does not contain any of these attributes: LOCATION, ALTERNATE, MAX_FAILURE, SYNC, TEMPLATE, MANDATORY, DELAY, NET_TIMEOUT, and VALID_FOR.

OCI-16863: A member whose MaxFailure property is set to zero cannot be part of a RedoRoutes group.

Cause: A member was specified to be part of a RedoRoutes group when the MaxFailure configurable property was set to zero.

Action: Set the MaxFailure property to a nonzero value and retry the command.

OCI-16864: The MaxFailure property cannot be set to zero for a member that is part of a RedoRoutes group.

Cause: An attempt was made to set the MaxFailure configurable property to zero when it was part of a RedoRoutes group.

Action: Set the MaxFailure configurable property to a nonzero value.

OCI-16865: database is closing or is not mounted on the instance

Cause: The Data Guard broker health check was unable to complete because the database was closing or was not mounted on the instance.

Action: No action is required if the database is closing. Mount the database if it is not yet mounted on the instance.

OCI-16866: database converted to transient logical standby database for rolling database maintenance

Cause: This database was converted to a transient logical standby database because a rolling database maintenance operation was in progress.

Action: No action is required. The database will be converted to a primary database when the DBMS_ROLLING.SWITCHOVER procedure is executed or to a physical standby database when the DBMS_ROLLING.FINISH procedure is executed.

OCI-16867: cannot remove a database that is specified in a FastStartFailoverTarget configuration property

Cause: An attempt was made to remove a database that was specified in the FastStartFailoverTarget configuration property of another database.

Action: First, remove the database from all other database's FastStartFailoverTarget configuration property values. Then, retry the REMOVE command.

OCI-16868: Fast-start failover target standby database not viable.

Cause: The fast-start failover target standby database was not viable. As a result, a fast-start failover to this database could not happen automatically.

Action: After the standby database has been re-created from a copy of the new primary database, disable and then reenble the standby database.

OCI-16869: fast-start failover target not initialized

Cause: The standby database was not ready to be a fast-start failover target standby database. Consequently, fast-start failover could not be initiated to this database in the event of a primary database failure.

Action: Ensure that the network connection between the primary and the fast-start failover target standby is functioning properly.

OCI-16871: fast-start failover target switch is not supported

Cause: Automatic switch of the fast-start failover target was not possible because the release of the observer was earlier than 12.2. Consequently, the fast-start failover target switch will not occur even though the primary database has more than one fast-start failover target configured.

Action: Upgrade the Oracle client home to release 12.2 and then stop and restart the observer using the DGMGRL CLI in that Oracle home.

OCI-16872: AlternateLocation and StandbyAlternateLocation should specify different destinations.

Cause: An attempt was made to set the AlternateLocation and StandbyAlternateLocation configurable properties to the same destination.

Action: Ensure that the AlternateLocation and StandbyAlternateLocation configurable properties specify different destinations.

OCI-16873: The observer with the specified name is not started.

Cause: The operation was not allowed because the observer corresponding to the specified name was not started.

Action: Issue the command again after ensuring that the observer corresponding to the specified name is started.

OCI-16874: The specified observer host is invalid.

Cause: The operation was not allowed because there was no registered observer running on the specified host.

Action: Issue the command again after ensuring that there is a registered observer running on the specified host.

OCI-16875: master observer switch is in progress

Cause: The operation was not allowed because a master observer switch was already in progress.

Action: Wait for a few seconds and retry the operation.

OCI-16876: observer name not specified

Cause: The operation was not allowed because an observer name was not specified and there was more than one observer registered.

Action: Retry the command and be sure to specify the observer name or use the term ALL when more than one observer is registered.

OCI-16877: no registered observers

Cause: The operation was not allowed because there were no registered observers.

Action: None

OCI-16878: master observer cannot be stopped

Cause: The master observer cannot be stopped when another observer is registered.

Action: Use the SET MASTEROBSERVER command to establish another observer as the master observer. Then use the STOP OBSERVER command to stop the former master observer.

OCI-16879: Fast-start failover cannot be initiated by a non-master observer.

Cause: Fast-start failover was initiated by a non-master observer. This can occur if the Oracle Data Guard broker started a master observer switch at the same time fast-start failover was being initiated.

Action: Check the Oracle Data Guard broker log files of the primary database to see why a master observer switch occurred.

OCI-16880: fast-start failover target switch is in progress

Cause: The operation was not allowed because a fast-start failover target switch was already in progress.

Action: Wait for a few seconds and retry the operation.

OCI-16881: standby database is not protecting the current primary database during rolling database maintenance

Cause: This standby database was a member of the leading group standby databases protecting the future primary database, or was a member of the trailing group standby databases protecting the original primary database during the rolling database maintenance operation.

Action: This issue will be resolved once all the databases have completed the maintenance operation and the DBMS_ROLLING.FINISH procedure is executed.

OCI-16882: rolling database maintenance processing is managing apply services

Cause: Apply services were stopped because a rolling database maintenance operation was in progress.

Action: No action is required. Apply services will be restarted by Oracle.

OCI-16883: unable to translate the DGConnectIdentifier property to a valid connect identifier

Cause: One or more members in the Data Guard configuration could not resolve the connect identifier specified by the DGConnectIdentifier property. The connectivity between the members could not be established for this reason. This might be caused by a missing or invalid tnsnames.ora entry, or an invalid connect descriptor, a missing naming method in sqlnet.ora, or another naming issue.

Action: Use the command VALIDATE NETWORK CONFIGURATION FOR ALL in DGMGRL and verify which database or instance could not resolve the connect identifier. Fix the problem depending on the naming method used in your environment.

OCI-16884: The specified observer name is invalid.

Cause: A reserved keyword (ALL or NONAME) was specified for the observer name for the START OBSERVER command.

Action: Specify a name other than ALL or NONAME and retry the command.

OCI-16885: A member whose RedoCompression property is set to LZO cannot receive redo data in SYNC or FASTSYNC mode.

Cause: A member was specified to receive redo data in SYNC or FASTSYNC mode when the RedoCompression configurable property was set to LZO.

Action: Set the RedoCompression property to a value other than LZO and then retry the command.

OCI-16886: The RedoCompression property cannot be set to LZO for a member that receives redo data in SYNC or FASTSYNC mode.

Cause: An attempt was made to set the RedoCompression configurable property to LZO when it receives redo data in SYNC or FASTSYNC mode.

Action: Set the RedoCompression configurable property to a value other than LZO and then retry the command.

OCI-16887: failed to import Oracle Data Guard broker configuration file

Cause: Fast-start failover was not initiated, even though a condition warranting failover was discovered, because it was enabled in observe-only mode.

Action: In this mode, the observer will only indicate that a fast-start failover would have been initiated. If a fast-start failover is desired, disable fast-start failover to exit the observe-only mode and then re-enable it using the DGMGRL CLI `DISABLE FAST_START FAILOVER` and `ENABLE FAST_START FAILOVER` commands.

OCI-16889: Fast-start failover must be disabled before changing between standard and observe-only modes.

Cause: Either the `ENABLE FAST_START FAILOVER` command was issued when fast-start failover was enabled in observe-only mode, or the `ENABLE FAST_START FAILOVER OBSERVE ONLY` command was issued when fast-start failover was enabled in standard mode.

Action: Disable fast-start failover using the `DISABLE FAST_START FAILOVER` command in DGMGRL, and then reissue the command that failed.

OCI-16890: Database does not have a valid fast-start failover target standby database in observe-only mode.

Cause: Fast-start failover was enabled in observe-only mode and the current primary database did not have a value set for the `FastStartFailoverTarget` configurable property or the value specified for this property was not a valid fast-start failover target standby database.

Action: Disable fast-start failover or ensure that the primary database has a valid fast-start failover target standby database specified by setting the `FastStartFailoverTarget` configurable property value to a valid standby database.

OCI-16891: unsynchronized fast-start failover configuration in observe-only mode

Cause: The fast-start failover target standby database was not synchronized with the primary database in observe-only mode. However, manual failover is still allowed in observe-only mode.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases are synchronized.

OCI-16892: fast-start failover configuration is lagging in observe-only mode

Cause: The fast-start failover target standby database was not within the lag limit specified by the `FastStartFailoverLagLimit` configuration property in observe-only mode. However, manual failover is still allowed in observe-only mode.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully transmitting redo data. If this condition persists, consider increasing the value of the `FastStartFailoverLagLimit` configuration property.

OCI-16893: Oracle Data Guard broker configuration does not exist in the remote database.

Cause: A broker operation was requested that required a broker configuration to be available at the remote database.

Action: Create an Oracle Data Guard broker configuration at the remote database prior to performing other broker operations for the remote database.

OCI-16894: invalid Oracle Data Guard broker configuration metadata

Cause: This was an internal error.

Action: Contact Oracle Support Services.

OCI-16895: Configuration could not be added because it contains one or more standby databases.

Cause: An attempt was made to add a configuration when one or more configurations already contain one or more standby members.

Action: Remove all members, except the primary database, from both configurations and retry the command.

OCI-16896: configuration name mismatch

Cause: The expected configuration name value did not match the actual configuration name that the broker contacted using the connect identifier that was associated with that configuration.

Action: Verify that the connect identifier correctly connects to the intended configuration. Verify that the name of the configuration the broker expects to find by that connect identifier matches the actual name of the configuration.

OCI-16897: start database to mount mode

Cause: This error was returned by DBMS_DG.SWITCHOVER because the database must be started to the mount mode to complete the switchover operation. Or, the error was returned from DBMS_DG.REINSTATE or DBMS_DG.CONVERT_TO_PHYSICAL when the database must be started to the mount mode to perform the operation.

Action: Start the database to the mount mode, wait for the database to start, and wait for the broker to complete initialization using DBMS_DG.WAIT(WAIT_BOOT, *wait time in seconds*). Then, for reinstate and convert operations, retry the operation.

OCI-16898: start database to open mode

Cause: This error was returned by DBMS_DRS.SWITCHOVER because the database was not started in the open mode to complete the switchover operation.

Action: Start the database in the open mode to complete the switchover operation.

OCI-16899: Operation requires a connection to the primary database.

Cause: The operation was rejected because it required a connection to the primary database.

Action: Connect to the primary database and retry the operation.

OCI-16900: changing LogXptMode or RedoRoutes property violates overall protection mode

Cause: The broker did not allow the attempt to change the LogXptMode or RedoRoutes configurable property for the standby database or far sync instance because, if allowed, the overall protection mode for the configuration would have been violated.

Action: If the LogXptMode or RedoRoutes configuration property must be changed for the specified standby database or far sync instance, first downgrade the overall protection mode for the broker configuration. After that operation has completed, the LogXptMode or RedoRoutes configuration property for the standby database can be changed.

OCI-16901: A rolling database maintenance operation is in progress.

Cause: The attempted operation was not allowed because a rolling database maintenance operation was in progress.

Action: Wait for the rolling database maintenance operation to complete. Then retry the operation.

OCI-16902: The specified standby database is not a valid fast-start failover target.

Cause: The attempted operation was not allowed because the specified database was not a valid fast-start failover target because of one of the following reasons: - The specified database was not a physical standby database or logical standby database. - The effective redo transport mode for the standby database was not set to SYNC or FASTSYNC if the protection mode was set to maximum availability mode. - The effective redo transport mode for the standby database was not set to SYNC if the protection mode was set to maximum protection mode. - The effective redo transport mode for the standby database was not set to ASYNC if the protection mode was set to maximum performance mode. - The standby database was not configured to receive redo data directly from the primary database when the protection mode was set to maximum performance mode. - The primary database had more than one rule in its RedoRoutes property to the standby database. - The specified standby database was a logical standby database when the protection mode was set to maximum protection mode. - The standby database was disabled. - Redo transport-related properties of the standby database were inconsistent with the database setting. - The specified standby database's FastStartFailoverTarget property did not specify the primary database when the standby is a logical standby database.

Action: Check that the specified standby database meets the requirements listed in the Cause section of this error message.

OCI-16903: change of FastStartFailoverLagLimit property violates configuration protection mode

Cause: The attempt to set the FastStartFailoverLagLimit property could not be completed. The new value for the FastStartFailoverLagLimit property did not meet one or more of the following requirements: - The property must be nonzero when the configuration protection mode is set to MaxPerformance mode. - The property must be zero when the configuration protection mode is set to MaxProtection mode.

Action: Check the above requirements and retry the operation.

OCI-16904: Member may be a primary database or is receiving redo data from another primary database.

Cause: A role change operation may have resulted in this member either becoming a primary database or was receiving redo data from a standby database that became a primary database.

Action: Evaluate all members' roles in the configuration and confirm which database should be the primary database before taking further action.

OCI-16905: The member was not enabled.

Cause: The Oracle Data Guard broker configuration member was added to the configuration, but not enabled.

Action: Enable the Oracle Data Guard broker configuration member.

OCI-16906: The member was shutdown.

Cause: The Oracle Data Guard broker configuration member was shutdown.

Action: This status will be changed when the member is restarted.

OCI-16907: syntax error for the PreferredObserverHosts property

Cause: The change to the PreferredObserverHosts property was disallowed because the new value contained syntax errors.

Action: Check the syntax of the PreferredObserverHosts property and retry the operation.

OCI-16908: This observer cannot become the master observer.

Cause: The observer specified to become the master observer could not be selected because it was not included in the list of observers specified for the PreferredObserverHosts configurable property of the primary database.

Action: Check the value specified for the PreferredObserverHosts configurable property of the primary database. Then, reissue the DGMGRL SET MASTEROBSERVERHOST TO command and select one of the observers specified in the list.

OCI-16909: Operation not allowed when configuration contains a remote configuration.

Cause: An attempt was made to add a remote configuration or a standby database when the configuration already contained a remote configuration.

Action: None

OCI-16910: inconsistency detected for one or more pluggable databases

Cause: There was an inconsistency in the Data Guard status for one or more Data Guard pluggable databases.

Action: Use the SHOW PLUGGABLE DATABASE command to determine which protected pluggable databases have an inconsistency. Also check the Oracle alert log files to see more details.

OCI-16911: Redo data from new source database has not been registered.

Cause: Redo data from the new source database was not registered for this standby pluggable database.

Action: Ensure the previous role change command completed successfully. If there were any errors, address the issues and complete the role change. If this still does not address the issues, try restarting recovery. Use the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON to start Redo Apply and switch logs at the source database.

OCI-16912: Target pluggable database may have been removed or a role change may have occurred.

Cause: Either a pluggable database switchover or failover occurred, resulting in this pluggable database not having an active target standby pluggable database; or the target standby pluggable database was removed.

Action: If a role change has occurred, after determining which pluggable database is the current source and status of the previous source pluggable database, proceed as follows: - If it is already in the standby role and a switchover has occurred, address the issues that resulted in Redo Apply Services failing to start and then start Redo Apply Services. - If it is already in the standby role and a failover has occurred, verify that the issues that necessitated the failover have been addressed and then start Redo Apply services. - If the previous source pluggable database is still in the primary

role, and a failover immediate has occurred, address the issues that necessitated the failover, drop the previous source pluggable database, and add it back as the target standby database using the ADD PLUGGABLE DATABASE command, and then start Redo Apply Services. Note that Redo Apply can be started using the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON command.

OCI-16913: cannot remove a remote configuration that sends or receives redo data

Cause: An attempt was made to remove a remote configuration that sent or received redo data.

Action: First, clear redo transport using EDIT CONFIGURATION *config name* CLEAR AS SOURCE command. Then, retry REMOVE CONFIGURATION *config name* command.

OCI-16914: Redo Apply Services were not started at the standby pluggable database.

Cause: Redo Apply Services were not started on the standby pluggable database.

Action: To start Redo Apply Services for all standby pluggable databases, use the ENABLE DATABASE command. To start Redo Apply Services for a single standby pluggable database, use the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON command.

OCI-16916: The specified fast-start failover condition is disabled.

Cause: The specified fast-start failover condition or Oracle error number was already disabled.

Action: This is an informational message. No additional action is required.

OCI-16917: Fast-start failover lag limit value is greater than fast-start failover threshold value.

Cause: The FastStartFailoverLagLimit configuration property is set to a value that is greater than the value of the FastStartFailoverThreshold configuration property.

Action: No corrective action is required. Be aware that the primary database will stall after the value of the FastStartFailoverThreshold configuration has elapsed. It will not continue to commit transactions up to the specified lag limit.

OCI-16918: Standby pluggable database after previous switchover is not ready.

Cause: The standby pluggable database after previous switchover operation is not recovering redo from the new source pluggable database.

Action: See accompanying messages for more information. If necessary, Complete the switchover by reissuing the same switchover command.

OCI-16919: The former target pluggable database executed a failover immediate.

Cause: Failover immediate to the former target pluggable database resulted in this pluggable database needing to be re-created.

Action: Drop this pluggable database. Then, add a standby pluggable database using the ADD PLUGGABLE DATABASE statement to create a new standby pluggable database.

OCI-16920: The specified pluggable database already exists.

Cause: The command could not be executed because the specified pluggable database already existed in the multitenant container database.

Action: Reissue the command with a different pluggable database name.

OCI-16921: The specified pluggable database already exists as a physical standby role.

Cause: The command could not be executed because the specified pluggable database already existed as a physical standby role.

Action: Check the pluggable database configuration in the multitenant container database and reissue the command with a correct pluggable database.

OCI-16922: Configuration not ready for Oracle Data Guard per Pluggable Database.

Cause: An Oracle Data Guard per Pluggable Database command was attempted before the configuration was ready for Oracle Data Guard per Pluggable Database. This could be because Golden Gate capture was already running, or the Data Guard per Pluggable Database was not available.

Action: If Golden Gate capture is not running, use the DGMGRL command EDIT CONFIGURATION PREPARE DGPDB command before attempting this operation again. If Golden Gate capture is running, the Data Guard per Pluggable Database feature cannot be used.

OCI-16923: The source and target multitenant container databases cannot be the same.

Cause: The command could not proceed because the specified source and target multitenant container database were the same name or same database identifier (DBID).

Action: Reissue the command with distinct multitenant container databases.

OCI-16924: The specified source pluggable database is a standby pluggable database.

Cause: The command could not be executed because the specified source pluggable database already existed in the physical standby role.

Action: Check the pluggable database configuration in the multitenant container database and reissue the command with a correct source pluggable database.

OCI-16925: Output document is too long.

Cause: The number of pluggable databases protected by Oracle Data Guard for pluggable database exceeds the size that can be represented in the response output buffer returned by the server.

Action: Query the names of pluggable databases on the multitenant container database using the SHOW PDBS command. Then, issue the DGMGRL SHOW PLUGGABLE DATABASE command for each pluggable database.

OCI-16926: Redo apply services of the specified standby pluggable database is waiting for redo data.

Cause: Redo apply services of the specified standby pluggable database was waiting for redo data. This could occur if standby redo logs had been added after recovery had been started.

Action: Consider switching logs at the source multitenant container database to expedite apply at the standby pluggable database.

OCI-16927: FastStartFailoverLagGraceTime value must be less than FastStartFailoverLagLimit value.

Cause: The value specified for the FastStartFailoverLagGraceTime configuration property is greater than, or equal to the value of the FastStartFailoverLagLimit configuration property.

Action: Specify a value for the FastStartFailoverLagGraceTime configuration property that is less than the value of the FastStartFailoverLagLimit configuration property.

OCI-16928: FastStartFailoverLagLimit value must be greater than FastStartFailoverLagGraceTime value.

Cause: The value specified for the FastStartFailoverLagLimit configuration property is less than, or equal to the value of the FastStartFailoverLagGraceTime configuration property.

Action: Specify a value for the FastStartFailoverLagLimit configuration property that is greater than the value of the FastStartFailoverLagGraceTime configuration property.

OCI-16929: Tag is not found

Cause: The specified tag does not exist.

Action: Retry the command with a valid tag name.

OCI-16930: Real Time Query will be enabled on an open instance shortly.

Cause: Either an open was initiated for this standby pluggable database at one of the instances and was not yet open when redo apply services was starting, or this standby pluggable database was previously open in Real Time Query mode and redo apply services is waiting for this standby pluggable database to be open. Data Guard broker will start redo apply services when an instance of this standby pluggable database is open and available to enable Real Time Query.

Action: If the standby pluggable database is in the process of opening, no action is necessary. Data Guard broker will start redo apply services once it is opened. If not, consider opening the standby pluggable database at one of the instances, or issue the DGMGRL command `EDIT PLUGGABLE DATABASE name SET STATE=APPLY-ON` to start recovery at a mounted instance in non-Real Time Query mode.

OCI-16931: Tag name is not valid.

Cause: The specified tag name is not allowed. - Tag names can contain letters, digits, hyphens, and underscores. - Tag names must start with a letter. - Tag names cannot start with the letters 'xml' or 'ora'.

Action: Retry the command with a valid tag name.

OCI-16932: Cannot connect to partner database.

Cause: An attempt was made to connect to the partner database for a per PDB Data Guard operation, but the connection attempt failed.

Action: Ensure the partner database is available and accessible. Check the Data Guard broker (DRC) log and alert logs of both databases for further details. Retry the operation once the database is available and accessible.

OCI-16933: A lost write was detected, no failover will be initiated.

Cause: A primary database lost write was reported by a physical standby database.

Action: Check the alert and Data Guard broker (DRC) logs of both databases for more information about the lost write.

OCI-16950: Remote mapped cursors are not supported by this feature.

Cause: This cursor is a remote mapped cursor which could not be processed locally.

Action: Try to process this statement directly on the remote site.

OCI-16951: Too many bind variables supplied for this SQL statement.

Cause: Binding this SQL statement failed because too many bind variables were supplied.

Action: Pass the correct number of bind variables.

OCI-16952: Failed to bind this SQL statement.

Cause: Binding this SQL statement failed.

Action: Check if bind variables for that statement are properly specified.

OCI-16953: Type of SQL statement not supported.

Cause: This type of SQL statement could not be processed.

Action: n/a

OCI-16954: SQL parse error.

Cause: The specified SQL statement failed to be parsed.

Action: Check if syntax is correct and ensure that this statement can be parsed by the specified user name.

OCI-16955: Unknown error during SQL analyze.

Cause: The specified SQL statement failed to be analyzed.

Action: This is an internal error, please contact Oracle support.

OCI-16956: Only SELECT or DML statements are supported for test execute.

Cause: The specified SQL statement cannot be tested for execute.

Action: n/a

OCI-16957: SQL Analyze time limit interrupt

Cause: This is an internal error code used indicate that SQL analyze has reached its time limit.

Action: n/a

OCI-16958: DML statements running parallel are not supported for test execute.

Cause: The specified DML statement cannot be tested for execute because part of it is running parallel.

Action: n/a

OCI-16959: Statement type has been disabled for SQL Analyze

Cause: The system attempted to analyze a type of statement that was disabled by the current feature.

Action: Try a different feature capable of analyzing this statement type.

OCI-16960: SQL Analyze could not reproduce the desired plan.

Cause: SQL Analyze failed to reproduce a particular plan using an outline.

Action: Check the outline data.

OCI-16961: SQL statement with SQL patch is ignored

Cause: SQL statements with SQL patches are not supported by SQL tuning advisor.

Action: Check the SQL patch information. Rerun SQL repair advisor on that SQL statement for a potential better SQL patch.

OCI-16962: SQL statement attempted to begin an autonomous transaction

Cause: The SQL statement being analyzed attempted to begin an autonomous transaction, which is not supported.

Action: Analyze another statement or remove the autonomous transaction from the current statement.

OCI-16963: The given user or schema is not supported by this feature.

Cause: The SQL statement being analyzed had a parsing user or schema which is not currently supported for SQL Analyze.

Action: Analyze another statement.

OCI-17001: Internal error

OCI-17002: I/O error

OCI-17003: Invalid column index

OCI-17004: Invalid column type

OCI-17005: Unsupported column type.

OCI-17006: Invalid column name

OCI-17008: Closed connection

OCI-17009: Closed statement

OCI-17010: Closed ResultSet

OCI-17011: Exhausted ResultSet

OCI-17012: Parameter type conflict

OCI-17014: Invalid ResultSet position. ResultSet is positioned before the first row.

Cause: The resultSet cursor is not positioned

Action: Set the ResultSet cursor, call resultSet.next() first

OCI-17018: Invalid cursor.

OCI-17020: Invalid row prefetch.

OCI-17021: Missing defines.

OCI-17023: Unsupported feature

OCI-17024: No data read.

- OCI-17026: Numeric overflow**
- OCI-17027: Stream has already been closed.**
- OCI-17028: Cannot do new defines until the current ResultSet is closed.**
- OCI-17030: READ_COMMITTED and SERIALIZABLE are the only valid transaction levels.**
- OCI-17031: setAutoClose: only supports auto close mode on.**
- OCI-17033: Malformed SQL92 string at position**
- OCI-17034: Non-supported SQL92 token at position**
- OCI-17035: Character set not supported!!**
- OCI-17039: Char array not long enough**
- OCI-17040: Subprotocol must be specified in the connection URL**
- OCI-17041: Missing IN or OUT parameter at index**
- OCI-17043: Invalid maximum size for stream.**
- OCI-17047: Error in type descriptor parse**
- OCI-17048: Undefined type**
- OCI-17049: Inconsistent Java and SQL object types for classes implementing ORaData or OracleData. Respective factory classes ORaDataFactory and OracleDataFactory should be registered in typeMap**
- OCI-17052: This reference is not valid.**
- OCI-17053: The size is not valid.**

- OCI-17119: Cannot obtain name for an unnamed savepoint.**
- OCI-17120: Cannot set a savepoint with auto-commit enabled.**
- OCI-17121: Cannot rollback to savepoint with auto-commit enabled.**
- OCI-17123: Invalid statement cache size specified.**
- OCI-17125: Improper statement type returned by explicit cache.**
- OCI-17128: SQL string is not a query.**
- OCI-17129: SQL string is not a DML Statement.**
- OCI-17131: Query timeout invalid state.**
- OCI-17132: Invalid conversion requested**
Cause: The conversion requested is not supported
- Action: Verify that the requested conversion is supported or not
- OCI-17133: Identifier or literal is invalid.**
- OCI-17134: Length of named parameter in SQL exceeded 32 characters**
- OCI-17135: Parameter name used in setXXXStream appears more than once in SQL.**
- OCI-17136: Malformed DATALINK URL. Try getString() instead.**
- OCI-17143: Invalid or stale connection found in the connection cache.**
- OCI-17144: Statement handle not executed**
- OCI-17146: Invalid Oracle Notification Service (ONS) event version received.**
- OCI-17147: Specified parameter name does not occur in the SQL**
- OCI-17148: Method only implemented in Oracle JDBC thin driver.**
- OCI-17149: This is already a proxy session.**
- OCI-17150: Wrong arguments for proxy session**

OCI-17151: CLOB is too large to be stored in a Java string.

OCI-17152: This method is only implemented in logical connections.

OCI-17153: This method is only implemented in physical connections.

OCI-17154: Cannot map Oracle character to Unicode.

OCI-17155: Cannot map Unicode to Oracle character.

OCI-17156: Invalid array size for end-to-end metric values.

OCI-17157: setString can only process strings of less than 32766 characters.

OCI-17158: Duration is invalid for this function.

OCI-17159: Metric value for end-to-end tracing is too long

OCI-17160: Execution context ID sequence number out of range

OCI-17162: Unsupported holdability value.

OCI-17164: Cannot call getXAResource() from physical connection with caching enabled.

OCI-17165: PRIVATE_JDBC package not available in server for this connection.

Cause: Starting in 12c database, the JDBC driver uses a PL/SQL PRIVATE_JDBC package for specific server-side tasks.

Action: Recreate the PRIVATE_JDBC package if it has been removed by accident.

OCI-17166: Cannot perform fetch on a PL/SQL statement

OCI-17167: Public Key Infrastructure (PKI) classes not found. To use 'connect /' functionality, oraclepki.jar must be in the classpath

OCI-17168: Encountered a problem with the secret store. Check the wallet location for the presence of an open wallet (cwallet.sso) and ensure that this wallet contains the correct credentials using the mkstore utility

OCI-17169: Cannot bind stream to a ScrollableResultSet or UpdatableResultSet.

OCI-17170: The namespace cannot be empty.

OCI-17171: The attribute length cannot exceed 30 characters.

OCI-17172: The value of the attribute cannot exceed 400 characters.

OCI-17173: Not all return parameters registered.

OCI-17176: Locale not recognized.

OCI-17177: Object does not wrap anything with requested interface.

OCI-17178: ANYTYPE pickler failed.

OCI-17179: Collection descriptor number mismatch while processing the ANYTYPE value.

- OCI-17180: Attribute definition mismatch while processing the ANYTYPE value.**
- OCI-17181: Character converter general error**
- OCI-17182: Character converter overrun error**
- OCI-17183: Unsupported encoding error.**
- OCI-17184: Incorrect form used to create NCLOB.**
- OCI-17190: Connection property format error**
- OCI-17191: Invalid commit options.**
- OCI-17192: Operation on freed LOB.**
- OCI-17193: Invalid Advanced Queuing (AQ) message format.**
- OCI-17194: Mark and reset are not supported by this class.**
- OCI-17195: Mark invalid or not set.**
- OCI-17196: Invalid mark for the CLOB input stream.**
- OCI-17197: The number of parameter names does not match the number of registered parameters.**
- OCI-17198: The database session time zone is not set.**
- OCI-17199: The database session time zone is not supported.**
- OCI-17207: The tnsEntry property was not set in DataSource.**
- OCI-17240: Could not retrieve localhost IP address. UnknownHostException was returned.**
- OCI-17241: Could not retrieve localhost IP address. SecurityException was returned.**
- OCI-17242: Error while parsing the TCP port specified in the options.**
- OCI-17243: Error while parsing the TIMEOUT value specified in the options.**
- OCI-17244: Error while parsing the CHANGELAG value specified in the options.**
- OCI-17245: An attempt was made to delete a registration that is using a different database instance than the one currently connected to.**
- OCI-17246: The listener cannot be null.**
- OCI-17247: An attempt was made to attach a listener to a registration that was created outside of the JDBC driver.**
- OCI-17248: Listener is already registered.**
- OCI-17249: Could not remove the listener because it is not registered.**
- OCI-17250: TCP PORT already in use.**

- OCI-17251: Closed registration.**
- OCI-17252: Invalid or undefined payload type.**
- OCI-17253: Invalid or unsupported name for clientInfo**
- OCI-17254: Out of memory. Not able to allocate requested memory size**
- OCI-17256: This instance property is not available.**
- OCI-17257: Invalid driverNameAttribute connection property. It must be 0 to 8 printable 7-bit ASCII characters.**
- OCI-17258: Synonym loop detected.**
- OCI-17266: IOException while reading stream. Transaction should be rolled back.**
- OCI-17267: Invalid LOB prefetch size.**
- OCI-17268: Year value is out of range.**
- OCI-17269: Unable to initialize Oracle Call Interface (OCI).**
- OCI-17270: Duplicate stream parameter**
- OCI-17271: Array passed to setPsqlIndexTable() cannot be NULL.**
- OCI-17272: Length of the array passed to setPsqlIndexTable() cannot be zero.**
- OCI-17273: Could not commit with auto-commit enabled.**
- OCI-17274: Could not rollback with auto-commit enabled.**
- OCI-17275: ResultSet exhausted because cursor reached the limit set by Statement.setMaxRows().**
- OCI-17276: Attempt to use a reserved namespace in ClientInfo method.**
- OCI-17277: Cannot open local error translation file.**
- OCI-17278: Parsing error: local error translation file cannot be processed.**
- OCI-17279: Translator in local mode: cannot translate queries.**
- OCI-17280: Server translation error: query or error cannot be translated.**
- OCI-17281: OracleData or ORADData factory is null.**
- OCI-17282: Class argument to getObject is null.**
- OCI-17283: Resultset is not available.**
- OCI-17284: Executor argument is null.**
- OCI-17285: Timeout argument to setNetworkTimeout is negative.**
- OCI-17287: Notification registration failed**
- OCI-17289: ResultSet after last row**

OCI-17290: Bind checksum mismatch during replay.

OCI-17291: Operation on freed array.

OCI-17292: No valid logon method found.

OCI-17293: Invalid value for allowedLogonVersion property.

OCI-17295: GRANT SELECT ON V_\$PARAMETER TO user is required.

OCI-17296: Null URL.

OCI-17297: Invalid session purity specified.

OCI-17298: Database Resident Connection Pool (DRCP): Timeout while waiting for a server.

OCI-17299: PL/SQL Boolean type not supported for this database version.

OCI-17357: Invalid ODM object store segment size *string*. Valid range: *string-string*.

Cause: The specified object store Dynamic Large Object (DLO) segment size was invalid. The DLO size must be within the specified valid range.

Action: Specify a valid segment size (`_objectstore_odm_segment_size`) for use with the Oracle Disk Manager (ODM) object store library. *Params: 1)

`ODM_segment_size`: The specified segment size that is outside of the supported range. 2) `min_ODM_segment_size`: The minimum supported segment size value. 3) `max_ODM_segment_size`: The maximum supported segment size value.

OCI-17359: Object store file is too large *string string string*.

Cause: The operation encountered a file on the object store that exceeds the maximum size for Swift API Dynamic Large Object (DLO) file or files.

Action: Retry the write operation with a file smaller than the first argument in the error code. Split exports using `DBMS_CLOUD` or Data Pump into multiple smaller files to avoid the limitation.

OCI-17361: User *string* in PDB *string* network access blocked by *string* code *string*.

Cause: An attempt to access the network is blocked by the specified security check.

Action: Review the lockdown profile (LDP), network access control list (ACL), or Oracle wallet file settings to grant the specified user and pluggable database (PDB) access to the network resource.

OCI-17362: Object store API mismatch. Object is '*string*' type and credential is '*string*' type.

Cause: An attempt to open an object store file was done using a credential which cannot be used properly on the object. The type of object requires a credential that can be used with the same application programming interface (API) used to create the object.

Action: Retry the operation using a credential that is the same type used to create the object.

OCI-17363: Custom URI authorization scheme failed to access *string* with error code *string*.

Cause: An attempt to access the specified file on the object store failed with the specified error code. The access method was explicitly specified in place of the https:// protocol identifier. This access scheme may be incorrect or invalid for the object store that was accessed.

Action: Check that the access scheme provided is both valid and correct for access to the associated object store URI. Retry the operation using the standard https:// protocol identifier instead of the explicit authorization scheme to allow automated protocol and authorization management to occur. Check that the credentials used for the operation are valid and work properly with some other database operations or an external tool like curl or an Oracle OCI SDK that can be used to access the object store.

OCI-17365: Replay disabled because unrecorded nested call resulted in outage**OCI-17366: Replay failed because of calling set container after PREPARE_REPLAY****OCI-17367: Replay disabled because of insufficient memory****OCI-17368: getLogicalTransactionId cannot be called during replay initialization callback.****OCI-17369: Replay disabled because it reconnected to instance with different Application Continuity (AC) configuration****OCI-17370: Replay is disabled****OCI-17371: Replay is disabled because of an active transaction****OCI-17372: Replay is disabled because of a nonreplayable call****OCI-17373: Replay is disabled because an outage occurred during PL/SQL execution****OCI-17374: Replay is disabled because transaction monitoring failed to be enabled****OCI-17375: Replay is disabled because the server begin_replay call failed****OCI-17376: Replay is disabled because the server end_replay call failed****OCI-17377: Replay is disabled because ReplayInitiationTimeout was exceeded****OCI-17378: Replay is disabled because the maximum number of retries was exceeded****OCI-17379: Replay is disabled because the Initialization callback failed****OCI-17380: Replay is disabled because of an open transaction in the Initialization callback****OCI-17381: Replay disabled after endRequest was called****OCI-17382: Replay is disabled because FAILOVER_RETRIES was exceeded****OCI-17383: Replay is disabled because retrieving the replay context failed****OCI-17384: Replay is disabled by server Continuity Management****OCI-17385: Replay is disabled because the server prepare_replay call failed**

- OCI-17386: Replay is disabled because of an embedded commit**
- OCI-17387: Replay failed.**
- OCI-17388: Replay failed because of checksum mismatch**
- OCI-17389: Replay failed because of an error code or message mismatch**
- OCI-17390: Replay failed because of an active transaction during replay**
- OCI-17391: BeginRequest called without calling endRequest first.**
- OCI-17392: BeginRequest failed because of an open transaction on connection.**
- OCI-17393: Open transaction rolled back in endRequest.**
- OCI-17395: Replay PL/SQL package is unavailable in the server.**
- OCI-17397: Replay is disabled because of concrete class usage**
- OCI-17398: Replay is disabled because the server killed session with a -noreplay option**
- OCI-17399: Replay is disabled because the server sent conflicting queueing instructions**
- OCI-17401: Protocol violation.**
- OCI-17405: Key name exceeds allowed limit while sending application context.**

- OCI-17407: Invalid type representation (setRep).**
- OCI-17408: Invalid type representation (getRep).**
- OCI-17409: Invalid buffer length.**
- OCI-17410: No more data to read from socket.**
- OCI-17411: Data type representations mismatch.**
- OCI-17412: Type length is larger than maximum allowed**
- OCI-17413: Exceeding key size.**
- OCI-17428: Logon must be called after connect.**
- OCI-17430: Must be logged on to the server.**
- OCI-17431: SQL Statement to parse is null.**
- OCI-17432: Unrecognized statement type.**
- OCI-17433: Invalid arguments in call.**
- OCI-17438: Internal: Unexpected value.**
- OCI-17439: Invalid SQL type.**

OCI-17444: Two-Task Common (TTC) protocol version received from server is not supported.

OCI-17445: LOB already opened in the same transaction.

OCI-17446: LOB already closed in the same transaction.

OCI-17448: Transaction is currently in use.

OCI-17449: Row shipping is not supported.

OCI-17450: Kernel column order is not supported.

OCI-17451: Unsupported verifier type.

OCI-17452: OAUTH marshaling failure.

OCI-17453: LOB read/write functions called while another read/write is in progress.

OCI-17454: Operation not allowed for value LOBs

OCI-17455: Operation not allowed for read-only LOB

OCI-17456: DB is in NOMOUNT state

Cause: Trying to connect to a DB in NOMOUNT state

Action: Start the database in MOUNT state

OCI-17500: ODM err:*string*

Cause: An error returned by ODM library

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

OCI-17501: logical block size *string* is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: check INIT.ORA file parameters

OCI-17502: (*string*)Failed to create file *string*

Cause: File creation failed due to either insufficient OS permission or the file already exists.

Action: Check for additional error messages.

OCI-17503: ksfdopn:*string* Failed to open file *string*

Cause: file open failed due to either insufficient OS permission or the name of file exceeds maximum file name length.

Action: check additional error messages

OCI-17504: ksfdel:Failed to delete file *string*

Cause: The file that was being deleted is still in use or the process has insufficient permission to delete file.

Action: check additional error messages

OCI-17505: ksfdrsz:string Failed to resize file to size string blocks

Cause: There is insufficient space left on the device or the process has insufficient permission to resize file.

Action: check additional error messages

OCI-17506: I/O error simulation

Cause: The I/O request was marked with an error because the I/O error simulation event was turned on.

Action: No action needed.

OCI-17507: I/O request size string is not a multiple of logical block size.

Cause: I/O's were done in a multiple of the logical block size.

Action: Check additional error messages.

OCI-17508: I/O request buffer pointer is not aligned.

Cause: I/O request buffer was not aligned. Check additional information for a buffer pointer value.

Action: Contact Oracle Support Services.

OCI-17509: An attempt to do I/O beyond block1 offset.

Cause: When a file is identified with logical block size of 0, only I/O's to block1 is allowed.

Action: Check additional error messages and contact Oracle Support Services.

OCI-17510: Attempted to do input/output (I/O) beyond file size string.

Cause: Attempted to do I/O beyond the end of the file.

Action: Check additional error messages, as well as the alert log and trace files to locate and solve the issue. If the error persists, contact Oracle Support Services.

OCI-17512: Block Verification Failed

Cause: Block Verification after a read operation on a database file failed since the block is media corrupt.

Action: check additional error messages in the trace file and call Oracle Support Services

OCI-17513: dNFS package call failed

Cause: An attempt was made to call a Direct NFS (dNFS) package in a non-dNFS environment.

Action: Ensure that dNFS is enabled and the file can be accessed using dNFS.

OCI-17514: Access to clonedb bitmap file failed.

Cause: An error was encountered when accessing the clonedb bitmap file.

Action: Check for additional error messages in trace file and contact Oracle Support.

OCI-17515: Creation of clonedb failed using snapshot file string

Cause: Creating a data file in a CloneDB environment failed.

Action: Ensure that the snapshot file passed to CloneDB is not from another CloneDB instance and call Oracle Support Services for further assistance.

OCI-17516: dNFS asynchronous I/O failure

Cause: The asynchronous I/O request failed due to storage server reboot.

Action: Ensure that the storage server does not reboot repeatedly during database operations.

OCI-17517: Database cloning using storage snapshot failed on file *string:string*

Cause: An invocation of the storage clone command was returned with an error.

Action: Ensure that all necessary steps are performed for storage cloning and check the Oracle trace file for additional information.

OCI-17518: backup file *string* cannot be found

Cause: Access to the specified backup file was required for Instant Restore.

Action: Ensure that the path and file name are correct for the backup file and the path to the backup file can be accessed from the node of the instance.

OCI-17519: Reason(*string*): data file *string* cannot be prepared

Cause: The snapshot layer could not prepare the specified data file.

Action: Ensure that the file does not already exist, is already part of a clone setup, or is being repopulated by an Instant Restore background process. Ensure that the path specified is accessible and writable by the instance.

OCI-17520: data file *string* cannot be added to repopulation

Cause: Instant Restore could not add the file to the repopulation work queue.

Action: The repopulation process may be working on too many files for the system. Try waiting for some files to complete and try again.

OCI-17521: Instant Restore is not enabled.

Cause: The initialization parameters for INSTANT_RESTORE were not set.

Action: Ensure that the required initialization parameters for INSTANT_RESTORE are set.

OCI-17522: file *string* is already being repopulated

Cause: The file was already being repopulated from a previous restore.

Action: Ensure that the current file restore completes before you start another restore.

OCI-17523: Instance *number* cannot spawn repopulation (RPOP) process.

Cause: The instance had too many running processes.

Action: Ensure that the initialization parameter for the maximum number of processes, PROCESSES, is set properly for this feature.

OCI-17524: Repopulation cannot take place. No RPOP processes.

Cause: The maximum processes initialization parameter was not set properly.

Action: Ensure that the maximum number of processes initialization parameter, PROCESSES, is set properly for this feature. Check the alert log for other related errors.

OCI-17525: Database clone using storage snapshot not supported on file *string* (storage type is *string*).

Cause: Cloning a database using storage level snapshot is not supported on the underlying storage.

Action: Use storage product that has snapshot based cloning support for Oracle.

OCI-17526: Block size of file *string* is too small *string*. Must be \geq *string*.

Cause: Files with block sizes smaller than a minimum size cannot be used for clones backed by snapshot file.

Action: Use files with larger block size.

OCI-17527: Creation of a snapshot failed because the destination *string* was not a sparse disk group.

Cause: Creating a snapshot failed because the destination disk group was not a sparse disk group.

Action: Ensure that the CREATE_FILE_DEST clause passed to the snapshot copy is in a sparse disk group.

OCI-17528: A read-only file or a file opened read-only cannot be written to: *string*.

Cause: The file was read-only or was opened read-only and an attempt was made to write to the file, or there was an internal error.

Action: If the file is a parent of a snapshot, then you cannot open read/write, drop or unplug the database. Otherwise, look at the trace file and contact Oracle Support Services.

OCI-17529: creation of compressed file failed

Cause: An attempt was made to create a compressed file on an instance that was not a CloneDB instance.

Action: Set CLONEDB parameter to TRUE and retry the operation.

OCI-17530: snapshot (parent), *string*, modified after clone (child) created, *string*

Cause: The snapshot referred to by the clone was incompatible with what the clone was created.

Action: Locate the appropriate snapshot and place it in the named location.

OCI-17531: snapshot (parent)=*string* modification time *string* is different from snapshot creation time *string* recorded in file *string*

Cause: The clone (child) referred to a snapshot at a specific point in time. The snapshot (parent) currently in that place is at the wrong time.

Action: Locate the appropriate snapshot (parent) and place it in the named location.

OCI-17532: snapshot (parent)=*string* checkpoint SCN *string* is different from snapshot checkpoint SCN *string* recorded in file *string*

Cause: The clone (child) referred to an SCN at a specific point in time. The snapshot (parent) currently in that place is at the wrong SCN.

Action: Locate the appropriate snapshot (parent) and place it in the named location.

OCI-17533: sparse merge copy operation failure because *string* and *string* do not share a valid relationship

Cause: Files specified with the 'sparse_merge_begin' and 'sparse_merge_end' options did not share a valid relationship.

Action: Check additional error messages.

OCI-17534: sparse merge copy operation failure because request to change file access permissions for file *string* failed

Cause: File access permissions for the file could not be modified.

Action: Check additional error messages.

OCI-17535: sparse merge copy operation failure because it tried to merge to the base parent *string*

Cause: The sparse merge copy operation was not successful because it tried to merge to the base parent.

Action: Check additional error messages.

OCI-17536: error in creation of database snapshot at SCN *string*

Cause: There was an error in creating a snapshot of the database files.

Action: Check additional error messages.

OCI-17537: ksfdreopn:*string* Failed to reopen file *string* with logical sector size *string*

Cause: File reopen failed due to either an invalid logical sector size argument or the file size was not a multiple of the given logical sector size.

Action: Check for additional error messages.

OCI-17538: DBMS_DNFS.CLONEDB_RENAMEFILE source or destination is NULL or has zero length

Cause: The string specified as input for the source or destination file name to the DBMS_DNFS.CLONEDB_RENAMEFILE procedure was either NULL or had zero length.

Action: Pass a non-empty input string for both source and destination file names.

OCI-17610: file '*string*' does not exist and no size specified

Cause: An attempt to create a file found neither an existing file nor a size for creating the file.

Action: Specify a size for the file.

OCI-17611: ('*string*') file '*string*' type '*string*' cannot be accessed because it is closed by the background process

Cause: An attempt is being made to access the file that has gone offline or is unidentified.

Action: Check for other errors in the stack. Note if the file type is KSFD_OSM_DISK(15), the file number is overloaded as the disk number.

OCI-17612: Failed to discover Oracle Disk Manager library, return value *string*

Cause: Discovery of the odm library by calling odm_discover() failed

Action: Contact your storage vendor who has provided the ODM library or call Oracle Support

OCI-17613: Failed to initialize Oracle Disk Manager library: *string*

Cause: Initialization of the Oracle Disk Manager (ODM) for the thread failed due to insufficient privilege or memory.

Action: Ensure that there is enough system resources available for the Oracle process and that it has access to the ODM library.

OCI-17618: Unable to update block 0 to version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: Check additional error messages and call Oracle Support Services

OCI-17619: max number of processes using I/O slaves in a instance reached

Cause: An attempt was made to start large number of processes requiring I/O slaves.

Action: There can be a maximum of 35 processes that can have I/O slaves at any given time in a instance.

OCI-17620: failed to register the network adapter with Oracle Disk Manager library: *string*

Cause: The Oracle Disk Manager (ODM) library returned an error while trying to register the network adapter.

Action: Ensure that the network adapter name specified in the FILEIO_NETWORK_ADAPTERS initialization parameter is a valid name, and that the Oracle user has the correct access privileges.

OCI-17621: failed to register the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to register the memory.

Action: Contact the Oracle Disk Manager Library provider.

OCI-17622: failed to deregister the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to deregister the memory.

Action: Contact the Oracle Disk Manager Library provider

OCI-17624: failed to delete directory *string*

Cause: The directory that was being deleted was still in use or the process had insufficient permission to delete the directory.

Action: Check additional error messages.

OCI-17626: ksfdcre: *string* file exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify REUSE if necessary

OCI-17627: *string*

Cause: An error returned by OCI while sending/receiving message from remote instance

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

OCI-17628: Oracle error *string* returned by remote Oracle server

Cause: Oracle server on the remote instance has returned an error.

Action: Look at remote instance alert log/trace file for more information and take appropriate action or contact Oracle Support Services for further assistance

OCI-17629: cannot connect to the remote database server

Cause: Connecting to the remote server specified by the database connect string for a network file transfer failed.

Action: Check additional error messages.

OCI-17630: Mismatch in the remote file protocol version client *string* server *string*

Cause: Cannot communicate with the remote database server as there is a mismatch in the Oracle file protocol version.

Action: Check additional error messages

OCI-17631: database name '*string*' specified by remote server does not match the instance name '*string*'

Cause: The database name specified by the remote server was not intended for this instance.

Action: Check the database name specified in the command of the remote instance and look for further error messages. *Params: 1) database_name: The specified target database name. 2) instance_name: The actual instance name.

OCI-17632: The file '*string*' is a formatted Oracle Automatic Storage Management (Oracle ASM) disk.

Cause: An attempt to create a database file on a device that was formatted for an Oracle ASM disk failed.

Action: Check that the device specified is not an Oracle ASM disk. If you would like to use the disk for database files, clear the disk before retrying the operation.

OCI-17633: Operation not supported as one of the servers involved is not capable of performing the requested operation

Cause: An attempt was made to perform an operation involving two Oracle servers where both servers did not have the capability required for carrying out the operation. It is likely that one of the servers needs a patch or an upgrade to successfully participate in the operation.

Action: Apply the required fix or update on the lower version server. Contact Oracle Support Services for further assistance.

OCI-17634: network file transfer operation aborted

Cause: An error occurred during network file transfer operation.

Action: Check additional error messages.

OCI-17635: failure in obtaining physical sector size for '*string*'

Cause: An error occurred while determining the physical sector size from the underlying storage (ASM/ODM/OSD).

Action: Check additional error messages.

OCI-17636: Invalid sparse block format (*string*). Start block=*string*. Error=*string*. File=*string*

Cause: An error occurred while reading the block on sparse media.

Action: Contact Oracle Support Services.

OCI-17637: failed to change permission on file '*string*'

Cause: An error occurred while changing permission on a database file.

Action: Verify that Oracle user has ownership on the database file.

OCI-17638: Error in accessing a compressed file *string*. '*string*'.

Cause: An error occurred while accessing a compressed file.

Action: Verify that the Oracle user has permission to access the compressed file.

OCI-17639: Snapshot backing file not read-only '*string*'.

Cause: An error occurred while opening the snapshot backing file.

Action: Verify that the backing file has not changed since the creation of the snapshot file and set the backing file permissions to read-only.

OCI-17640: SQL statement execution failed

Cause: The remote SQL statement execution failed on primary database.

Action: Check for the required privileges to run the SQL statement.

OCI-17641: event to release BCT enqueue on Oracle RAC environment with internal error

Cause: An attempt was made to release the enqueue after getting an internal error "kracrfr_nohist". This happens if any bitmap is not keeping in with its oldest_low_krcfde on Oracle RAC environment with block change tracking (BCT) enabled.

Action: None

OCI-17642: failed to get permission on file '*string*'

Cause: An error occurred while getting permission on a database file.

Action: Verify that the database file exists.

OCI-17643: error while creating or opening destination file '*string*'

Cause: The destination file or the path provided already existed or could not be accessed.

Action: If the destination file exists, delete the file and retry. Alternately, try with a different destination filename or provide a different path.

OCI-17644: clonedb_renamefile interface is not supported in a multitenant container database.

Cause: An attempt was made to clone a file using clonedb_renamefile interface in a multitenant container database (CDB).

Action: Use the snapshot copy option while creating the pluggable database.

OCI-17675: execution of OFS procedure failed with error: '*string*'

Cause: Either the Oracle File System (OFS) procedure was called on a platform where OFS was not supported or an invalid file system type was provided.

Action: Check for additional error messages in the trace file.

OCI-17676: failed to mount '*string*' with error:'*string*'

Cause: Mounting database file system failed with an error.

Action: Check additional error messages in the trace file.

OCI-17677: failed to unmount 'string' with error:'string'

Cause: Unmounting database file system failed with an error.

Action: Check additional error messages in the trace file.

OCI-17678: failed to mount 'string' with error:'string'

Cause: Mounting of the database file system failed with an error.

Action: Check additional error messages in the trace file.

OCI-17679: failed to makefs 'string' with error:'string'

Cause: Either an invalid file system creation option was specified, the file system already existed, or a failure to create the tables occurred.

Action: Check additional error messages in the trace file.

OCI-17680: failed to destroy database file system 'string' with error:'string'

Cause: Either the database file system was invalid, it was still busy, it did not exist, or some other error has occurred.

Action: Check additional error messages in the trace file.

OCI-17681: cannot connect to the remote database server

Cause: An attempt was made to connect to the remote server using a shared server connection. This is not supported.

Action: Verify the connect string and use a dedicated server to connect to remote database.

OCI-17682: invalid or missing object store credential: string

Cause: An I/O operation was attempted on a file located in the object store which requires credentials to perform. Valid credentials were not available to perform the operation.

Action: Retry the operation and specify a valid object store credential or set a default credential as a database property.

OCI-17683: insufficient privileges to execute Oracle file protocol code string on the remote instance

Cause: The user did not have the appropriate privileges on the remote instance to execute the requested command.

Action: The user has to be DBA or SYSOPER or SYSBACKUP or corresponding PDB privilege to execute the command on the remote instance.

OCI-17820: The network adapter could not establish the connection.

OCI-17821: The network adapter in use is invalid

OCI-17822: MSGQ adapter got a timeout while connecting the initial socket.

OCI-17823: MSGQ adapter got a timeout while exchanging queue names.

OCI-17824: MSGQ adapter read unexpected data on socket.

OCI-17826: NTMQ packet received on remote queue is not valid

OCI-17827: The Network Adapter could not disconnect

Cause: The adaptor failed to stop the underlying server process.

Action: Verify if the server process (`$ORACLEHOME/bin/oracle`) is still running and try to stop it manually.

OCI-17828: Bequeath Network Adapter connection timeout

Cause: The Bequeath adaptor failed to initiate on time the communication with the underlying server process.

Action: Verify if the server process (`$ORACLEHOME/bin/oracle`) is not hanging.

OCI-17829: Invalid DATA URI format. \;base64,\ is missing from uri.

Cause: The data uri provided is invalid.

Action: Check the data uri format. Must be of the form: 'data:[*media type*];base64,data'

OCI-17850: The protocol value pair is missing.**OCI-17851: TNS address string parsing error.****OCI-17852: The connect data in the TNS address is not valid.****OCI-17853: The hostname in the TNS address was not specified.****OCI-17854: The port number in the address was not specified.****OCI-17855: The CONNECT_DATA in the TNS address is missing.****OCI-17856: The SID or SERVICE_NAME in the TNS address is missing.****OCI-17857: An ADDRESS value pair was not defined in the TNS address.****OCI-17858: JNDI package failure****OCI-17860: JNDI class not found****OCI-17865: Invalid connection string format, a valid format is: \host:port:sid\.****OCI-17866: Invalid number format for port number**

Cause: The port specified may not be a valid integer or in the accepted value range [0, 65535]

Action: Make sure the port specified in the url is a valid integer and in the accepted range.

OCI-17868: Unknown host specified.**OCI-17869: System property oracle.net.tns_admin was empty.****OCI-17870: Connect identifier was empty.****OCI-17871: Invalid read path.****OCI-17874: Invalid LDAP url specified.****OCI-17900: Invalid operation, not connected.**

OCI-17901: Already connected.

OCI-17902: End of TNS data channel.

OCI-17904: Bad packet type.

OCI-17905: Unexpected packet.

OCI-17908: Connection string was null.

OCI-17909: Socket channel is closed.

Cause: Network IO failure

Action: Please check network/timeout configuration

OCI-17950: Invalid version of SSL specified.

OCI-17951: The ssl protocol specified is not supported.

OCI-17952: Invalid cipher suites specified

OCI-17953: The cipher suite specified is not supported.

OCI-17954: The configured DN, \{0\}, does not match the DN, \{1\}, of the server's certificate

Cause: The Distinguished Name (DN) provided in the JDBC URL using SSL_SERVER_CERT_DN or the JDBC property "oracle.net.ssl_server_cert_dn" does not match the DN's of the listener's or server's certificate.

Action: Modify the server's DN on the JDBC side or configure the proper certificate on both the listener and the server.

OCI-17956: Unable to parse the wallet location supplied

OCI-17957: Unable to initialize the key store.

Cause: Invalid Key store type provided or invalid or no key store password provided or oraclepki.jar is missing from classpath

Action: Make sure key store type is valid, key store password is provided and oraclepki.jar is present in the classpath

OCI-17958: Unable to initialize the trust store.

OCI-17959: Unable to initialize ssl context.

OCI-17961: The method specified in wallet_location is not supported

OCI-17962: Redirect failure: Protocol downgrade

OCI-17963: Redirect failure: Security parameters not allowed

OCI-17964: Redirect failure: Failed to parse redirect address

OCI-17965: Host name(s): \{0\} does not match the CN: \{1\} or SAN(s): \{2\} of the server's certificate

Cause: When the server's Distinguished Name is not configured in the URL through SSL_SERVER_CERT_DN or through the JDBC property "oracle.net.ssl_server_cert_dn", the driver will authenticate the server by matching the configured hostname with the server's

certificate Common Name (CN) or Subject Alternative Names (SAN). This error is thrown when this authentication fails.

Action: Make sure that the listener and server's certificate can be used for hostname-based authentication by either configuring the proper certificates or configuring the server's DN explicitly through `SSL_SERVER_CERT_DN` or `oracle.net.ssl_server_cert_dn`.

OCI-17966: Neither host name(s): {0} nor service name: {1} matches the CN: {2} or SAN(s): {3} of the server's certificate

Cause: When the server's Distinguished Name is not configured in the URL through `SSL_SERVER_CERT_DN` or through the JDBC property "oracle.net.ssl_server_cert_dn", and the JDBC property "oracle.net.ssl_allow_weak_dn_match" is set to "true", the driver will authenticate the server by matching the configured hostname or service name with the server's certificate Common Name (CN) or Subject Alternative Names (SAN). This error is thrown when this authentication fails.

Action: Make sure that the listener and server's certificate can be used for hostname-based or service-name-based authentication by either configuring the proper certificates or configuring the server's DN explicitly through `SSL_SERVER_CERT_DN` or `oracle.net.ssl_server_cert_dn`.

OCI-17967: SSL Handshake failure.

Cause: unsupported `ssl_version` / `cipher_suites` or invalid TLS certificate specified.

Action: Verify the connection properties, it should match with the properties configured on the server.

OCI-17968: Invalid ssl certificate alias / thumbprint.

Cause: Configured alias / thumbprint is not found in the keystore.

Action: Verify the alias / thumbprint value configured in the URL / Connection Properties.

OCI-18000: invalid outline name

Cause: The parser detected a missing or invalid outline name

Action: reissue the command, specifying a valid outline name.

OCI-18001: no options specified for ALTER OUTLINE

Cause: The parser detected that no clause was specified on the command Our performance tests, which are not typical as they exercise all branches of the code, have shown approximately a 30% performance increase line for ALTER OUTLINE.

Action: Re-issue the command, specifying a valid ALTER OUTLINE clause.

OCI-18002: the specified outline does not exist

Cause: Either the outline did not exist to begin with, or a timing window allowed for another thread to drop or alter the outline midstream.

Action: Check for the existence of the outline and try again.

OCI-18003: an outline already exists with this signature

Cause: The signature generation algorithm generates signatures that are 16 bytes in length so it is highly unlikely that any 2 signatures will be identical. This message is raised in such a rare case.

Action: Either re-issue the statement that led to the outline being created with some whitespace added or force the outline to be created in a different category.

OCI-18004: outline already exists

Cause: An outline already exists, either with the specified name, or for the specified SQL text.

Action: Try again with another name.

OCI-18005: CREATE ANY OUTLINE privilege is required for this operation

Cause: CREATE ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have CREATE ANY OUTLINE privilege and retry the operation.

OCI-18006: DROP ANY OUTLINE privilege is required for this operation

Cause: DROP ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have DROP ANY OUTLINE privilege and retry the operation.

OCI-18007: ALTER ANY OUTLINE privilege is required for this operation

Cause: ALTER ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have ALTER ANY OUTLINE privilege and retry the operation.

OCI-18008: cannot find OUTLN schema

Cause: The database creation script that creates this schema must not have been executed.

Action: Review the log files to see what happened when the database was created.

OCI-18009: one or more outline system tables do not exist

Cause: Either the database creation script that creates these tables was not executed or a user accidentally deleted the table

Action: Review the log files to see what happened when the database was created.

OCI-18010: command missing mandatory CATEGORY keyword

Cause: User failed to specify the CATEGORY keyword

Action: Re-issue the command with the CATEGORY keyword included

OCI-18011: the outline specified in the FROM clause does not exist**OCI-18012: SELECT_CATALOG_ROLE role is required for this operation.**

Cause: The SELECT_CATALOG_ROLE role was not granted.

Action: Rerun the operation after granting the required role.

OCI-18013: timed out while waiting for resource *string***OCI-18014: deadlock detected while waiting for resource *string***

OCI-18015: invalid source outline signature

Cause: User imported an 8i outline into a 9i database without updating signatures

Action: execute dbms_outln.update_signatures

OCI-18100: XUST0001 - Updating expression in a wrong position

Cause: An updating expression was used in a position other than one of the following:

- The topmost expression in the body of a query.
- The MODIFY clause of a TRANSFORM expression.
- The RETURN clause of a FLWOR expression.
- The RETURN clauses of a TYPESWITCH expression in which every RETURN clause contains an updating expression, an empty expression (), or a call to the fn:error function.
- The THEN and ELSE clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression (), or a call to the fn:error function.
- An operand of a comma expression in which each operand is either an updating expression, an empty expression (), or a call to the fn:error function.
- The content of a parenthesized expression.
- The body of a function declaration in which the keyword UPDATING is specified.

Action: None

OCI-18101: XUST0002 - Non-updating expression in a wrong position

Cause: A non-updating expression other than an empty expression () or a call to the fn:error function was used in one of the following positions: - The MODIFY clause of a TRANSFORM expression. - The top-level expression in the body of a function declaration in which the keyword UPDATING is specified.

Action: None

OCI-18102: XUST0003 - Repeated revalidation declaration

Cause: Prolog contained more than one revalidation declaration.

Action: None

OCI-18103: XUTY0004 - Invalid attribute node in the insertion sequence

Cause: The insertion sequence of an INSERT expression contained an attribute following a node that was not an attribute node.

Action: None

OCI-18104: XUTY0005 - invalid target expression for INSERT

Cause: In an INSERT expression where INTO, AS FIRST INTO, or AS LAST INTO was specified, the target expression returned a nonempty result that did not consist of a single element or document node.

Action: Specify a valid target expression for INSERT.

OCI-18105: XUTY0006 - Invalid target expression is used for INSERT.

Cause: Attempted an INSERT expression where BEFORE or AFTER was specified, the target expression returned a nonempty result that did not consist of an element, text, comment, or processing instruction node.

Action: Specify a valid target expression for INSERT.

OCI-18106: XUTY0007 - Invalid target expression for DELETE

Cause: The target expression of a DELETE expression did not return a sequence of zero or more nodes.

Action: None

OCI-18107: XUTY0008 - Invalid target expression for REPLACE

Cause: In a REPLACE expression, the target expression returned a nonempty result that did not consist of a single element, attribute, text,

Action: None

OCI-18108: XUDY0009 - Invalid target expression for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified, the node returned by the target expression did not have a parent.

Action: None

OCI-18109: XUTY0010 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target was an element, text, comment, or processing instruction node, the replacement sequence did not consist of zero or more element, text, comment, or processing instruction nodes.

Action: None

OCI-18110: XUTY0011 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target is an attribute node, the replacement sequence did not consist of zero or more attribute nodes.

Action: None

OCI-18111: XUTY0012 - Invalid target expression for RENAME

Cause: In a RENAME expression, the target expression returned a nonempty result that did not consist of a single element, attribute, or processing instruction node.

Action: None

OCI-18112: XUTY0013 - Invalid COPY expression for TRANSFORM

Cause: In a TRANSFORM expression, a source expression in the copy clause did not return a single node.

Action: None

OCI-18113: XUDY0014 - Modified node was not created by the COPY clause

Cause: In a TRANSFORM expression, the MODIFY clause modified a node that was not created by the COPY clause.

Action: None

OCI-18114: XUDY0015 - Duplicate RENAME for the same target node

Cause: A node was the target of more than one RENAME expression within the same query.

Action: None

OCI-18115: XUDY0016 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE expression (without VALUE OF being specified) within the same query.

Action: None

OCI-18116: XUDY0017 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE VALUE OF expression within the same query.

Action: None

OCI-18117: XUDY0018 - External not updating function returns an updated value

Cause: A function that was declared to be external but not updating returned a nonempty pending update list.

Action: None

OCI-18118: XUDY0019 - External updating function returns an invalid value

Cause: A function that was declared to be both external and updating returned a nonempty data model instance.

Action: None

OCI-18119: XUDY0020 - Deleted node has no parent

Cause: Node was deleted that had no parent before execution of the query began.

Action: None

OCI-18120: XUDY0021 - The result XDM instance violates XDM constraints

Cause: XDM instance resulting from applying all the updates in a query violated constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query were made effective.

Action: None

OCI-18121: XUDY0022 - Invalid attribute insertion into a document node

Cause: INSERT expression specified the insertion of an attribute node into a document node.

Action: None

OCI-18122: XUDY0023 - Updating expression introduces a namespace conflict.

Cause: An INSERT, REPLACE, or RENAME expression affected an element node by introducing a new namespace binding that conflicted with one of the existing namespace bindings.

Action: None

OCI-18123: XUDY0024 - Updating expression introduces a namespace conflict

Cause: Effect of a set of updating expressions introduced conflicting namespace bindings into an element node.

Action: None

OCI-18124: XUDY0025 - Invalid QName for processing instruction RENAME

Cause: Target of a RENAME expression was a processing instruction node, and the new name expression returned a QName with a nonempty namespace prefix.

Action: None

OCI-18125: XUST0026 Revalidation mode *string* is not supported

Cause: Revalidation declaration in a Prolog specified a revalidation mode that is not supported by the current implementation.

Action: None

OCI-18126: XUDY0027 - invalid target expression

Cause: The target expression of an INSERT, REPLACE, or RENAME expression was evaluated to an empty sequence.

Action: Specify a valid target expression.

OCI-18127: XUST0028 - Updating function '*string:string*' should not have a return type.

Cause: The function declaration specified both UPDATING and a return type.

Action: Do not declare an updating function with return type. *Params: 1) prefix: The prefix of the function. 2) function_name: The name of the function.

OCI-18128: XUDY0029 - INSERT expression target node doesn't have a parent

Cause: In an INSERT expression where BEFORE or AFTER was specified, a node returned by the target expression did not have a parent.

Action: None

OCI-18129: XUDY0030 - Invalid insertion of an attribute node

Cause: INSERT expression specified the insertion of an attribute node before or after a child of a document node.

Action: None

OCI-18130: FOUP0001 - Invalid 'fn:put' first operand

Cause: The first operand of fn:put was not a node of a supported kind.

Action: None

OCI-18131: FOUP0002 - Invalid 'fn:put' second operand

Cause: The second operand of fn:put was not a valid lexical representation of the xs:anyURI type.

Action: None

OCI-18150: SQL input value cannot be modified in updating expression

Cause: Updating expression was specified as top-level XMLQuery expression.

Action: Use XQuery TRANSFORM expression to copy input value and modify it.

OCI-18160: FTST0001 - FTMildNot operator not supported

Cause: An attempt was made to use the mild not option when the FTMildNot operator was not supported. An implementation that does not support the FTMildNot operator must raise a static error if a full-text query contains a mild not.

Action: Do not use the FTMildNot full-text query operator.

OCI-18161: FTST0002 - FTUnaryNot operator not supported

Cause: An implementation that enforces one of the restrictions on FTUnaryNot must raise a static error if a full-text query does not obey the restriction.

Action: Do not use the FTUnaryNot full-text query operator.

OCI-18162: FTST0003 - FTUnit and FTBigUnit not supported

Cause: An implementation that does not support one or more of the choices on FTUnit and FTBigUnit must raise a static error if a full-text query contains one of those choices.

Action: Do not use the FTUnit or FTBigUnit option.

OCI-18163: FTST0004 - FTScope not supported

Cause: An implementation that does not support the FTScope operator must raise a static error if a full-text query contains a scope.

Action: Do not use the FTScope full-text query operator.

OCI-18164: FTST0005 FTTimes not supported

Cause: An implementation that does not support the FTTimes operator must raise a static error if a full-text query contains a times.

Action: Do not use the FTTimes full-text query operator.

OCI-18165: FTST0006 FTStopwordOption not supported

Cause: An implementation that restricts the use of FTStopwordOption must raise a static error if a full-text query contains a stop word option that does not meet the restriction.

Action: Do not use the FTStopwordOption full-text query operator.

OCI-18166: FTST0007 FTIgnoreOption not supported

Cause: An implementation that restricts the use of FTIgnoreOption must raise a static error if a full-text query contains an ignore option that does not meet the restriction.

Action: Do not use the FTIgnoreOption full-text query operator.

OCI-18167: FTST0008 stop word list not found

Cause: It was a static error if, during the static analysis phase, the query was found to contain a stop word option that referred to a stop word list that was not found in the statically known stop word lists.

Action: Ensure that the stop word list exists.

OCI-18168: FTST0009 language option not supported

Cause: It may be a static error if, during the static analysis phase, the query is found to contain a language identifier in a language option that the implementation does not support. The implementation may choose not to raise this error and instead provide some other implementation-defined behavior.

Action: Do not use the language full-text query option.

OCI-18169: FTST0010 FTOrder not succeeding FTWindow or FTDistance operator

Cause: It is a static error if, during the static analysis phase, an expression is found to use an FTOrder operator that does not appear directly succeeding an FTWindow or an FTDistance operator and the implementation enforces this restriction.

Action: Do not use the FTOrder succeeding FTWindow or FTDistance full-text query operator.

OCI-18170: FTST0011 FTWindow and FTDistance restriction

Cause: An implementation may restrict the use of FTWindow and FTDistance to an FTOr that is either a single FTWords or a combination of FTWords involving only the operators && and ||. If it is a static error if, during the static analysis phase, an expression is found that violates this restriction and the implementation enforces this restriction.

Action: Follow FTWindow and FTDistance restriction.

OCI-18171: FTST0012 FTContent not supported

Cause: An implementation that does not support the FTContent operator must raise a static error if a full-text query contains one.

Action: Do not use FTContent full-text query operator.

OCI-18172: FTST0013 more than one language encountered

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the use of FTLanguageOption to a single language, encounters more than one distinct language option.

Action: Do not use more than one language in FTLanguage full-text option.

OCI-18173: FTST0014 score computation restriction

Cause: An implementation may constrain the form of the expression used to compute scores. It is a static error if, during the static analysis phase, such an implementation encounters a scoring expression that does not meet the restriction.

Action: n/a

OCI-18174: FTST0015 FTCaseOption restriction

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the choices of FTCaseOption encounters the "lowercase" or "uppercase" option.

Action: n/a

OCI-18175: FTDY0016 weights invalid

Cause: It is a dynamic error if an implementation that does not support negative weights encounters a weight expression that does not meet the restriction.

Action: Do not use invalid weights value.

OCI-18176: FTDY0017 mild not selection containings StringExclude

Cause: It is a dynamic error if an implementation encounters a mild not selection, one of whose operands evaluates to an AllMatches that contains a StringExclude

Action: n/a

OCI-18177: XQuery full text expression 'string' cannot be evaluated using XML full-text index

Cause: There was no XML full-text index to evaluate the XQuery full text expression filtering XML documents that were stored in an XMLType table or column.

Action: Create an XML full-text index on the XML documents stored in an XMLType table or column and ensure that the XQuery full text expression can be evaluated by an XML full-text index.

OCI-18178: XMLTYPE input to XMLTABLE row expression must use PASSING BY REF clause.

Cause: The XMLTABLE column expression used the XMLTYPE(SEQUENCE) BY REF clause but the XMLType input to the XMLTABLE row expression was not using the PASSING BY REF clause.

Action: Specify the PASSING BY REF clause for XMLTYPE input to the XMLTABLE row expression.

OCI-18179: XMLTABLE column expression must be specified using XMLTYPE(SEQUENCE) BY REF clause.

Cause: The output of the XMLTABLE column expression was passed to an XMLTABLE row expression with PASSING BY REF clause.

Action: Specify the XMLTABLE column expression using the XMLTYPE(SEQUENCE) BY REF clause.

OCI-18180: wrong argument is passed to XMLTABLE row expression using PASSING BY REF clause

Cause: An XML document that was not stored in an XMLType table or column was passed to an XMLTABLE row expression using the PASSING BY REF clause.

Action: Ensure that only XML documents that are stored in an XMLType table or column can be passed in as input to XMLTABLE row expression using the PASSING BY REF clause.

OCI-18181: XQuery full text expression option 'string' is not supported

Cause: An attempt was made to use an XQuery full text expression option that is not supported.

Action: Avoid using an XQuery full text expression option which is not supported.

OCI-18182: FTST0018 unknown thesaurus is used

Cause: During the static analysis phase, the query was found to contain a thesaurus option that referred to a thesaurus that was not found in the statically known thesauri. This is a static error.

Action: Avoid using unknown thesaurus.

OCI-18183: FTST0019 more than one match option of any given match option group is used within a single FTMatchOptions.

Cause: Within the single FTMatchOptions, there was more than one match option of any given match option group. This is a static error.

Action: Avoid using more than one match option of any given match option group is used within a single FTMatchOptions.

OCI-18184: FTDY0020 a query string violates wildcard syntax when wildcards is in effect

Cause: Because wildcards were in effect, the query string violated wildcard syntax. This is a dynamic error.

Action: Fix wildcard syntax when wildcards is in effect.

OCI-18185: query is not parsed correctly

Cause: The query string was not parsed correctly.

Action: Check the syntax of the query string.

OCI-18201: The input MDX string is empty.

Cause: The input MultiDimensional eXpression (MDX) string was empty.

Action: Correct the input MDX string.

OCI-18202: MDX parser error at line *string*, column *string*: *string*.

Cause: The input MDX (MultiDimensional eXpression) query had invalid syntax.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

OCI-18203: The MDX *string string* is not currently supported.

Cause: The input MultiDimensional eXpression (MDX) query contained an unsupported feature.

Action: Modify the MDX query to use only supported features. *Params: 1) keyword: The keyword indicating an operator or a function. 2) operator: The operator or function that is not supported.

OCI-18204: The identifier at line *string*, column *string* has no closing right bracket (]) character.

Cause: The delimited identifier had no closing right bracket (]) character.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

OCI-18205: Invalid arguments for function *string*.

Cause: The function had invalid arguments.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

OCI-18220: The type of the expression in *string* is *string*. *string* is expected.

Cause: The MDX (MultiDimensional eXpression) query had the wrong expression type.

Action: Use an expression with a valid type.

OCI-18221: The argument *string* in *string* has different hierarchies.

Cause: An argument had different hierarchies.

Action: Use uniform hierarchies.

OCI-18222: hierarchy *string* already appears in *string*

Cause: A hierarchy was repeated.

Action: Use unique hierarchies.

OCI-18223: Invalid identifier for dimension "*string*".

Cause: More than one hierarchy existed for dimension.

Action: Specify the hierarchy with the dimension.

OCI-18224: invalid cube identifier "*string*"

Cause: The cube identifier was specified incorrectly.

Action: Specify a valid cube identifier.

OCI-18225: The type of argument *string* of *string* is *string*. *string* is expected.

Cause: An argument of the function had the wrong type.

Action: Use an argument with a valid type.

OCI-18226: argument *string* does not contain the hierarchy "*string*" in argument *string* in *string*

Cause: The hierarchy in one argument did not exist in the SET argument.

Action: Use an expression with the hierarchy from the set in the SET argument.

OCI-18227: The index is out of range in *string*.

Cause: The index was out of range.

Action: Use an index within the range.

OCI-18228: The set of argument *string* of *string* contains multiple hierarchies. Only one hierarchy is expected.

Cause: The set argument had more than one hierarchy.

Action: Use a SET argument that contains only one hierarchy.

OCI-18229: The hierarchy *string* is used more than once in arguments of *string*.

Cause: The hierarchy was used more than once.

Action: Use arguments that contain different hierarchies.

OCI-18230: The member identifier "*string*" cannot be resolved.

Cause: The member identifier could not be resolved.

Action: Use a valid member identifier. *Params: 1) member_id: The member identifier."

OCI-18231: The StrToMember argument must be a member identifier when CONSTRAINED is specified.

Cause: The error occurred because the StrToMember argument was not a member identifier and the CONSTRAINED option was specified.

Action: Either replace the argument with a member identifier, or remove the CONSTRAINED option.

OCI-18232: A set with the name "*string*" has already been defined.

Cause: More than one set was defined with the same name.

Action: Rename the set so that it has a unique name within the WITH clause of the multidimensional expression (MDX) query.

OCI-18233: The set "*string*" has a cycle.

Cause: The set definition referenced itself either directly or indirectly using another referenced set.

Action: Change the definition of the set so that it does not directly or indirectly refer to itself.

OCI-18234: The calculated member "*string*" has the same name as an existing member.

Cause: The name specified for the calculated member was not unique, and matched with another identified member in the hierarchy.

Action: Change the name of the calculated member so that it is unique within the specified hierarchy.

OCI-18235: The calculated member "*string*" must be a member identifier qualified by hierarchy.

Cause: The calculated member identifier was not a valid member identifier or did not contain a hierarchy qualification.

Action: Change the calculated member identifier so that it is a valid member identifier qualifying the hierarchy.

OCI-18236: The calculated member "*string*" has a cycle.

Cause: The calculated member referenced itself either directly or indirectly using another referenced calculated member.

Action: Change the definition of the calculated member so that it does not directly or indirectly refer to itself.

OCI-18237: A calculated member with the name "*string*" has already been defined.

Cause: More than one calculated member was defined with the same name.

Action: Rename the calculated member so that it has a unique name in the WITH clause of the multidimensional expression (MDX) query.

OCI-18238: invalid index "*string*" for the specified axis

Cause: The index used for a specified axis was invalid (the index for the axis was either not distinct or followed a missing index value).

Action: Correct the semantic error for the MDX (Multidimensional Expression) query.

OCI-18239: There are no available hierarchies to initialize the empty set.

Cause: The empty set could not be initialized because there were no available hierarchies.

Action: Provide valid edges to extract the hierarchies to set the empty set.

OCI-18250: The input parameter to the MDX PL/SQL function is invalid.

Cause: The input parameter in the PL/SQL function was invalid.

Action: Correct the input parameter in the PL/SQL function.

OCI-18252: There are no active MDX queries.

Cause: Either an MDX (MultiDimensional eXpression) query was not run or all queries that were run were closed.

Action: Run an MDX (MultiDimensional eXpression) query.

OCI-18253: invalid queryID: *string*

Cause: The MDX (MultiDimensional eXpression) query did not exist in the session with the given queryID.

Action: Specify a valid queryID obtained by calling `dbms_mdx_odbo.execute`.

OCI-18254: invalid cellRange size: *string* given, *string* expected

Cause: The size of the cellRange sequence was not 2 times the number of axes.

Action: Specify a cellRange that has the correct number of elements.

OCI-18255: Invalid cellRange: start (*string*) is greater than end (*string*) for axis *string*

Cause: The start was greater than end for a particular axis in the cellRange.

Action: Specify start less than or equal to end for each axis in the cellRange.

OCI-18256: Invalid axisIndex: *string*

Cause: The axisIndex was out of range.

Action: Specify an axisIndex greater than or equal to 0 and less than the number of axes.

OCI-18257: The classification value for "*string*" for measure "*string*" is invalid for MDX.

Cause: The classification value was invalid for MultiDimensional eXpression.

Action: Replace the Classification value.

OCI-18258: The MDX Slicer contains more than one row.

Cause: The set defining the Slicer resulted in more than one row.

Action: Correct the Slicer portion of the MultiDimensional eXpression query.

OCI-18259: The MDX Schema Rowset type request is invalid.

Cause: The MDX (MultiDimensional eXpression) Schema Rowset type was not a valid value.

Action: Valid MDX (MultiDimensional eXpression) schema Rowset types are between 1 and 10.

OCI-18260: The MDX Schema Rowset Restrictions array and Empty array are not the same size.

Cause: The MultiDimensional eXpression Schema Rowset Restrictions array and the Empty array were not the same size.

Action: Correct the sizes of the Restriction and Empty arrays.

OCI-18261: The TREE_OP restriction value is invalid.

Cause: The given TREE_OP restriction value was invalid.

Action: Provide a valid TREE_OP restriction value.

OCI-18262: invalid empty value

Cause: A value in the given empty list was invalid.

Action: Provide a valid empty value.

OCI-18263: invalid object name and log number combination

Cause: The object name and log number combination did not match the value returned by DBMS_HIERARCHY.VALIDATE_HIERARCHY or VALIDATE_CUBE.

Action: Provide a valid combination of object name and log number and reexecute.

OCI-18264: The 'queryProperties' sequence has an invalid length.

Cause: The 'queryProperties' sequence had an odd number of elements.

Action: Ensure that the 'queryProperties' sequence is either empty or contains an even number of elements.

OCI-18265: key column (%0!s) from table %1!s with value (%2!s) not in dimension (%3!s) star table key column

Cause: There was a row in the fact table with a key column value that was not in the corresponding dimension star table key column.

Action: Ensure that each fact table key column value has a corresponding row in the dimension star table key column.

OCI-18266: analytic view key (*string*) with value (*string*) does not determine attribute "*string*" in hierarchy lowest level key for dimension ("*string*")

Cause: The attribute reference found on the analytic view keys could not determine the level key column value of the lowest level in the hierarchy.

Action: Ensure that the attribute reference found on the analytic view key determines the level key column value of the lowest level in the hierarchy.

OCI-18267: key (*string*) with value (*string*) for level "*string*" does not determine attribute "*string*"

Cause: There were rows with the level key column value where the number of distinct values of the attribute column and alternate key attribute were not zero or one.

Action: Ensure that the number of distinct values of the attribute column and alternate key attribute is zero or one for each level key column value.

OCI-18268: alternate key (*string*) with value (*string*) for level "*string*" does not determine level key column "*string*" value

Cause: There were rows with the alternate key attribute that had non-unique level key values.

Action: Ensure that the alternate key attribute rows all have the same level key value.

OCI-18269: key or alternate key attribute "*string*" has *string* NULL values

Cause: A level key column value was defined as NULL when it should be NOT NULL.

Action: Do not define a level key column value to NULL when it should be the NOT NULL value.

OCI-18270: key or alternate key attributes "*string*" and "*string*" for level "*string*" have *string* mismatched NULL values

Cause: There was a mismatch in the number of NULL values for a SKIP WHEN NULL level.

Action: Ensure that for each SKIP WHEN NULL level, either all level key column values and alternate key attributes are NULL, or all of the level key column values and alternate key attributes are not NULL.

OCI-18271: invalid value for VisualMode query property

Cause: A non-integer value, a negative value, or a value greater than 2 was specified for the VisualMode query property.

Action: Specify an integer value of 0, 1, or 2 for the VisualMode query property.

OCI-18272: analytic view join key (*string*) with value (*string*) not unique in star table for dimension ("*string*")

Cause: An analytic view join key did not determine all rows in the dimension star table.

Action: Ensure that the analytic view join key determines all rows in the dimension star table.

OCI-18273: analytic view does not contain cache

Cause: An attempt was made to create a materialized view SQL statement for an analytic view that did not contain a cache.

Action: Modify the analytic view to contain a cache or specify an analytic view with a cache.

OCI-18274: invalid analytic view cache index

Cause: The specified analytic view cache index was invalid.

Action: Specify a valid cache index.

OCI-18275: invalid log table format

Cause: The format of the table did not match the default log table.

Action: Ensure that the table provided has a correct definition.

OCI-18276: invalid log table version, upgrade is required

Cause: There was a mismatch in the log table format that corresponds with an older version of the table.

Action: Call DBMS_HIERARCHY.UPGRADE_VALIDATE_LOG_TABLE in order to upgrade to the latest format and retry the operation.

OCI-18277: analytic view key (*string*) with value (*string*) for measure *string* contains non-numeric data which cannot be implicitly converted to number

Cause: There was data for a measure with a non-numeric data type with an aggregation method that required implicit conversion to number.

Action: Either correct the data in the fact table column so that all rows are able to be implicitly converted to number, or change the data type or aggregation method.

OCI-18278: key (%0!s) with value (%1!s) for level "%2!s" has non-deterministic order by attribute values

Cause: The order by of the attribute dimension for the level did not result in a deterministic order.

Action: Ensure that the order by of the attribute dimension for the level results in a deterministic order.

OCI-18279: analytic view has been modified

Cause: The analytic view for the MultiDimensional eXpression (MDX) query was modified.

Action: Run the MDX query again.

OCI-18280: The REFERENCES clause for analytic view dimension "string" does not join to a level key of the dimension.

Cause: The attributes in the REFERENCES clause must consist of either a key or alternate key of a level.

Action: Correct the REFERENCES clause for the analytic view dimension to include a key or alternate key of a level.

OCI-18281: cyclic reference detected for calculated measure "string"

Cause: A cyclic reference for a calculated measure was detected.

Action: Correct the cyclic reference for the calculated measure.

OCI-18282: invalid join condition detected on join path "string"

Cause: An invalid join condition was detected.

Action: Ensure that each side of the join condition comes from a different source.

OCI-18283: invalid join path reference "string" detected on hierarchy "string"

Cause: An invalid join path reference was detected.

Action: Ensure that the join path on the hierarchy refers to a join path on the attribute dimension.

OCI-18284: invalid join paths detected on attribute dimension "string"

Cause: Invalid join paths were detected on the attribute dimension.

Action: Ensure that every dimension source is reachable starting with any source and applying join paths of the visited sources.

OCI-18285: Cycle in join paths detected using join path "string" when visiting source "string".

Cause: The current join paths defined for the attribute dimension produced a cycle.

Action: Ensure that every join path contains a single unique path and includes every dimension source of every level in the hierarchy exactly once.

OCI-18286: invalid SKIP WHEN NULL specification on a calculation expression detected on hierarchy string

Cause: An invalid SKIP WHEN NULL specification was detected on the calculation expression.

Action: Ensure that SKIP WHEN NULL is only specified on skip level hierarchies.

OCI-18287: invalid level name "string" detected on a calculation expression

Cause: An invalid level name specification was detected on the calculation expression.

Action: Ensure the level exists on the hierarchy specified in the calculation expression.

OCI-18288: parent-child hierarchy "string" detected on a calculation expression level specification

Cause: A parent-child hierarchy was detected on the calculation expression level specification.

Action: Ensure that the level specification on the calculation expression does not reference a parent-child hierarchy.

OCI-18289: parent-child member literal expression detected for level-based hierarchy *string*

Cause: A parent-child member literal expression was detected for a level-based hierarchy.

Action: Ensure that the parent-child member literal expression is used with a parent-child hierarchy.

OCI-18290: positional member key mismatch detected between member literal expression and hierarchy level "*string*" on hierarchy "*string*"

Cause: The number of member keys on the member literal expression did not match with those on the corresponding level.

Action: Ensure that the number of member keys on the member literal expression match with those on the corresponding level.

OCI-18291: named member key mismatch detected between member literal expression and hierarchy level "*string*" on hierarchy "*string*"

Cause: The member keys on the member literal expression did not match those on the corresponding level.

Action: Ensure that the member keys on the member literal expression match those on the corresponding level.

OCI-18292: invoker's rights specified on object referenced within a derived analytic view

Cause: Invoker's rights were specified on an object referenced within a derived analytic view.

Action: Ensure that no object referenced within a derived analytic view has invoker's rights specified.

OCI-18293: aggregation function *string* used outside of a window expression

Cause: An aggregation function was specified outside of a window expression.

Action: Ensure that an aggregation function is always specified inside of a window expression.

OCI-18294: invalid data type detected on attribute "*string*"

Cause: An invalid data type was detected on an attribute.

Action: Ensure that the attributes are not of LOB, BFILE, or LONG data type.

OCI-18295: duplicate hierarchy *string* detected in a calculation expression

Cause: The same cube hierarchy was named more than once in the calculation expression.

Action: Specify each cube hierarchy only once in the calculation expression.

OCI-18296: ambiguously defined hierarchy *string* detected in a calculation expression

Cause: An ambiguously defined hierarchy was detected in a calculation expression.

Action: Qualify the hierarchy with the attribute dimension name.

OCI-18297: invalid data type detected on base measure "string" for use with aggregation operator "string"

Cause: An invalid data type was detected on a base measure for use with its specified aggregation operator.

Action: Ensure that the data type of the base measure is valid with the aggregation operator on the base measure.

OCI-18298: The leaf level "string" of hierarchy "string" with level keys (string) is not determined by the join attributes (string) in the REFERENCES clause for the analytic view dimension "string".

Cause: The REFERENCES clause specified for the analytic view dimension was invalid.

Action: Verify that the REFERENCES clause determines the leaf level of every hierarchy in the analytic view dimension.

OCI-18299: level "string": data type of string expression is invalid

Cause: The specified hierarchical attribute of the specified level had an invalid data type.

Action: Ensure that all attributes of the specified type are character expressions using the same character set.

OCI-18300: level "string": character set of string expression does not match level "string"

Cause: The specified hierarchical attribute of the specified level used a character set that did not match the character set of other levels.

Action: Ensure that all attributes of the specified type are character expressions using the same character set. An explicit ALL clause may need to be specified if the default character set of the ALL attributes does not match the character set used in other levels.

OCI-18301: Attribute dimension "string"."string" does not exist.

Cause: The attribute dimension did not exist or the user did not have the required privileges.

Action: Check the spelling of the attribute dimension and ensure that the user has been granted the required privileges.

OCI-18302: Hierarchy "string"."string" does not exist.

Cause: The hierarchy does not exist or the user does not have the required privileges.

Action: Check the spelling of the hierarchy and ensure that the required privileges are granted to the user.

OCI-18303: The REFERENCES clause for the analytic view dimension "string" refers to a level key where the level is marked as SKIP WHEN NULL.

Cause: The REFERENCES clause specified for the analytic view dimension was invalid.

Action: Correct the REFERENCES clause for the analytic view dimension or remove the SKIP WHEN NULL from the attribute dimension level.

OCI-18304: non-measure "string" reference in calculated measure "string"

Cause: A non-measure was referenced in a calculated measure.

Action: Ensure that only a measure is referenced in a calculated measure.

OCI-18305: non-aggregation user-defined function *string* detected in window calculated measure

Cause: A non-aggregation user-defined function was specified for a window calculated measure.

Action: Ensure that a valid user-defined aggregation function is specified for a window calculated measure.

OCI-18306: invalid depth expression specified in a calculated measure

Cause: An invalid depth expression was specified in a calculated measure.

Action: Ensure that the depth expression evaluates to a positive integer no greater than the number of levels in the hierarchy.

OCI-18307: analytic view "*string*"."*string*" does not exist

Cause: The analytic view did not exist or the user did not have the required privileges.

Action: Check the spelling of the analytic view and ensure that the required privileges are granted.

OCI-18308: Source "*string*" cannot be reached using all join paths.

Cause: A source could not be reached using the current join paths defined for the attribute dimension.

Action: Ensure that every join path includes every dim source of every level in the hierarchy exactly once.

OCI-18309: Hierarchy "*string*"."*string*" does not reference the attribute dimension "*string*"."*string*".

Cause: The hierarchy did not reference the attribute dimension specified.

Action: Ensure that the hierarchy specified is based on the attribute dimension.

OCI-18310: The attribute dimension has no level specification.

Cause: The attribute dimension did not have a level specification.

Action: Specify at least one level in the attribute dimension.

OCI-18312: Dynamic caching is not enabled.

Cause: Analytic View (AV) dynamic caching initialization parameter was not set.

Action: Enable Dynamic AV caching using the appropriate initialization parameter.

OCI-18313: member set expression is not allowed

Cause: A member set expression was specified when a single member expression was expected.

Action: Specify a single member expression.

OCI-18340: Attribute "*string*" referenced in a key on level "*string*" does not exist.

Cause: The level key did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the level key.

OCI-18341: Determined attribute "string" referenced on level "string" does not exist.

Cause: The determined attribute did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the level.

OCI-18342: Level "string" does not have a member name.

Cause: The level did not have a member name.

Action: Specify a member name for this multi-attribute key level.

OCI-18343: Default measure "string" does not exist.

Cause: The default measure did not reference a valid measure in the Analytic View.

Action: Modify the Analytic View to reference an existing measure.

OCI-18344: Attribute "string" cannot be named using an Oracle reserved word.

Cause: The attribute was named using an Oracle reserved word.

Action: Use a name for the attribute that is not an Oracle reserved word.

OCI-18345: Duplicate metadata object string.

Cause: A duplicate metadata object was specified.

Action: Remove or rename the duplicate metadata object specification.

OCI-18346: Cube hierarchy "string" cannot be set as the default.

Cause: Another default cube hierarchy was specified within the same cube dimension.

Action: Set only one default cube hierarchy within a cube dimension.

OCI-18347: Duplicate level key "string" was detected in level "string".

Cause: A duplicate level key was specified.

Action: Remove or replace the duplicate level key specification.

OCI-18348: invalid hierarchical attribute name "string" specified

Cause: The hierarchical attribute was not defined in the attribute dimension.

Action: Use a hierarchical attribute that is already defined in the attribute dimension.

OCI-18349: Invalid skip level specification on attribute dimension "string".

Cause: The attribute dimension was defined with an invalid skip level specification.

Action: At least one level on the attribute dimension must be NOT NULL.

OCI-18350: Attribute "string" referenced in the ORDER BY clause on level "string" does not exist.

Cause: The specified ORDER BY clause did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the dimension.

OCI-18351: Cyclic-determined attribute reference detected for level "string".

Cause: A cyclic-determined attribute reference for a level was detected.

Action: Correct the cyclic-determined attribute reference for the level.

OCI-18352: Invalid expression (*string*) detected on a measure.

Cause: An invalid expression was detected on a measure. A nested select could not be used in an analytic view base measure expression.

Action: An offset expression or member key expression cannot contain a column expression or be an analytic view SQL calculation expression. Ensure the expression does not contain a nested select.

OCI-18353: invalid ALL member name "*string*" detected on a hierarchy dimension "*string*"

Cause: An invalid ALL member name was detected on a hierarchy dimension.

Action: Ensure that the ALL member name is a constant expression.

OCI-18356: duplicate level name "*string*" found in Cache Level List

Cause: A duplicate level was found in the level list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains a distinct list of levels.

OCI-18357: duplicate measure name in Cache Measure List "*string*"

Cause: A duplicate measure was found in the measure list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains a distinct list of measures.

OCI-18358: Cache Level List hierarchy not found "*string*".

Cause: A hierarchy specified in the level list for an Analytic View Cache Level Group was not found.

Action: Ensure that each specified hierarchy in the Analytic View Cache Level Group is defined within the Analytic View.

OCI-18359: Cache Level List dimension not found "*string*".

Cause: A dimension specified in the level list for an Analytic View Cache Level Group was not found.

Action: Ensure that each specified dimension in the Analytic View Cache Level Group is defined within the Analytic View.

OCI-18360: duplicate hierarchy found in Cache Level List *string*

Cause: Multiple levels for the same hierarchy were found in the level list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains only one level per hierarchy.

OCI-18361: duplicate cache object found in analytic view cache

Cause: A duplicate analytic view cache level group and measure list combination was found in the analytic view cache.

Action: Ensure that the analytic view cache level group lists are unique for each measure list.

OCI-18362: The level type of level "string" is inconsistent with the dimension type.

Cause: The level type was inconsistent with the dimension type.

Action: Ensure the level type is consistent with the dimension type.

OCI-18363: Key "%0!s" is a subset of another key at level "%1!s".

Cause: One of the keys used was a subset of a key at the same level.

Action: An alternate key cannot be a subset of a key at the same level, and a key cannot be a subset of an alternate key at the same level.

OCI-18364: invalid calculated measure clause "string" detected in measure "string"

Cause: Invalid syntax was specified for a calculated measure.

Action: Ensure that the syntax is correct.

OCI-18365: invalid argument count on window function "%0!s" detected in calculated measure "%1!s"

Cause: An invalid argument count on a window function was specified for a calculated measure.

Action: Ensure that a valid argument count for a window function is specified for a calculated measure.

OCI-18366: The aggregation operator on measure "string" is not allowed in a dynamic level group cache.

Cause: An invalid aggregation operator was specified on a measure in a dynamic level grouping cache.

Action: Remove the measure from the dynamic level group cache or change the aggregation operator.

OCI-18368: The attribute "string" is not used in the attribute dimension.

Cause: The specified attribute was not used as either a KEY, ALTERNATE KEY, or in the DETERMINES clause of at least one level.

Action: Ensure that all attributes are used as either a KEY, ALTERNATE KEY, or in the DETERMINES clause of at least one level.

OCI-18369: level grouping cache not found or is ambiguous

Cause: The level grouping cache specified in the ALTER statement was not found because it did not exist or there was more than one level grouping cache that matched with the specified level grouping cache.

Action: Ensure that the specified level grouping cache in the ALTER statement is defined in the analytic view and is valid.

OCI-18370: The HIERARCHIES clause may only be specified for cubes.

Cause: A HIERARCHIES clause was used on a table or other non-cube object.

Action: Remove the HIERARCHIES clause.

OCI-18371: invalid cube hierarchy qualification

Cause: Cube hierarchies may only be qualified by dimension in the HIERARCHIES clause.

Action: Remove the additional qualification.

OCI-18372: syntax error in HIERARCHIES list

Cause: Illegal syntax was found in the HIERARCHIES clause.

Action: Ensure that the HIERARCHIES clause only contains a comma delimited list of cube hierarchies enclosed in parentheses.

OCI-18373: missing hierarchy name

Cause: No hierarchy was specified in the HIERARCHIES clause.

Action: Specify at least one hierarchy in the HIERARCHIES clause enclosed in parentheses.

OCI-18374: duplicate hierarchies in HIERARCHIES clause

Cause: The same hierarchy was named more than once in the HIERARCHIES clause.

Action: Specify each hierarchy only once in the HIERARCHIES clause.

OCI-18375: Cube columns cannot be directly or indirectly referenced in ANSI named column joins.

Cause: A cube column was referenced in an ANSI NATURAL JOIN or USING clause.

Action: Use the ANSI ON clause or Oracle join syntax.

OCI-18376: A hierarchy or analytic view is not allowed here.

Cause: A hierarchy or analytic view was specified in an incorrect location in a statement.

Action: Ensure that the name is correct or remove it.

OCI-18377: Comments on columns of analytic view objects are not supported.

Cause: A comment for a column of an analytic view object was specified.

Action: Do not define comments for columns of analytic views. Use classifications instead.

OCI-18378: calculated measure "string" in cache measure list

Cause: Calculated measures were specified in the cache measure list.

Action: Remove calculated measures from the cache measure list.

OCI-18379: The query hint must start with "/*+".

Cause: Invalid syntax was found in the query hint session parameter.

Action: Ensure that the hint syntax provided is a valid SQL hint syntax.

OCI-18380: The query hint must end with "*/".

Cause: Invalid syntax was found in the query hint session parameter.

Action: Ensure that the hint session parameter provided is valid SQL hint syntax.

OCI-18381: the query hint cannot contain any occurrences of "*/" within the text.

Cause: Invalid syntax was found in the query hint session parameter.

Action: Ensure that the value provided is valid SQL hint syntax.

OCI-18382: analytic view cache "string" does not exist

Cause: Analytic view cache for avmdx_op read did not exist.

Action: Change avmdx_op to read_or_write.

OCI-18383: av_cache can only be specified for analytic views

Cause: The av_cache option was specified for an object that was not an analytic view.

Action: Remove the av_cache option.

OCI-18384: asymmetric condition is currently not supported for derived analytic view

Cause: An asymmetric condition was specified for derived analytic view.

Action: Remove the asymmetric condition.

OCI-18385: recursive WITH clause not allowed in a derived analytic view

Cause: Recursive WITH clause was used in a derived analytic view.

Action: Do not use recursive WITH clause in a derived analytic view.

OCI-18386: CONNECT BY cannot be used with an analytic view or hierarchy.

Cause: The CONNECT BY clause was used in a query from an analytic view or hierarchy.

Action: Enclose the analytic view or hierarchy within a SQL view and use CONNECT BY over the view.

OCI-18387: The FACT ROWS clause may only be specified for analytic views.

Cause: A FACT ROWS clause was specified for an object that was not an analytic view.

Action: Remove the FACT ROWS clause.

OCI-18388: Invalid usage of analytic view aggregation function.

Cause: An analytic view aggregation function was used in the wrong context.

Action: Remove the analytic view aggregation function.

OCI-18389: Aggregation table *string* is already used as a table in the object.

Cause: The aggregation table specified was already used in the object.

Action: Specify an aggregation table that is not used as a table in the object.

OCI-18390: The FACT ROWS clause cannot be specified for analytic views with any dense dimensions.

Cause: A FACT ROWS clause was specified for an analytic view with at least one dense dimension.

Action: Remove the FACT ROWS clause or change the dimension to be sparse.

OCI-18391: data manipulation operation not allowed on a hierarchy or analytic view

Cause: An attempt is being made to use an UPDATE, INSERT, DELETE or MERGE statement on a hierarchy or analytic view.

Action: UPDATE, INSERT, DELETE or MERGE are not allowed on a hierarchy or analytic view.

OCI-18400: Snowflake table key (*string*) with value (*string*) cannot be found in joining table using join path ("*string*").

Cause: There was a row in a snow flake table with a key column value that was not in the corresponding joining table key column.

Action: Ensure that each snow flake key column value has a corresponding row in the table key column that you are trying to join.

OCI-18401: Many-to-many join caused by key (*string*) with value (*string*) using join path ("*string*").

Cause: There was a key value in the snow flake table that was causing a many-to-many relation between two tables.

Action: Ensure that for a given one-to-many relation the values of the keys are unique.

OCI-18402: Analytic view key (%0!s) with value (%1!s) for measure %2!s contains numeric data which cannot be used with COUNT DISTINCT operator.

Cause: There was non-integer numeric data or numeric data that is out of a valid range for a measure with the COUNT DISTINCT aggregation method

Action: Either correct the data in the fact table column so that all rows are integers and are in a valid range, or change the COUNT DISTINCT aggregation method.

OCI-18450: operation not supported in the middle of a transaction

Cause: The call was made in the middle of a transaction.

Action: Commit or rollback the transaction.

OCI-18451: operation not supported when flashback enabled

Cause: The call was made while flashback was enabled.

Action: Disable flashback.

OCI-18452: unable to retrieve materialized view SQL for dimension "*string*" because the cache star type is not MATERIALIZED

Cause: An attempt was made to retrieve materialized view SQL for a non-MATERIALIZED dimension.

Action: Alter the dimension so that the cache star type is MATERIALIZED or select a dimension with a MATERIALIZED cache star type.

OCI-18453: extra row for keys (*string*) with values (*string*) in aggregation table (*string*)

Cause: An aggregation table key value did not match the source data.

Action: Ensure that the aggregation table rows match the source data.

OCI-18454: missing row for keys (*string*) with values (*string*) in aggregation table (*string*)

Cause: An aggregation table key value did not match the source data.

Action: Ensure that the aggregation table rows match the source data.

OCI-18455: invalid action column value for keys (*string*) with values (*string*) in change tracking table (*string*)

Cause: A change tracking table key value did not have a valid value for the action column.

Action: Ensure that all action column values in the change tracking table are either I or D.

OCI-18456: invalid row for keys (*string*) with values (*string*) in change tracking table (*string*)

Cause: A change tracking table key value row was invalid because it had an I action row that did not match a row in the fact table or a D action row in the change tracking table.

Action: Ensure that all I action change tracking table rows have a corresponding row in the fact table or a corresponding D action change tracking row.

OCI-18500: table has missing or invalid column "*string*"

Cause: The table had a missing or invalid column.

Action: Ensure that the table has the correct columns.

OCI-18501: The query transform cannot be enabled because there is more than one source for the analytic view dimension "*string*".

Cause: An attempt was made to enable query transform on a snowflake schema.

Action: Limit the number of sources to one for analytic view dimensions when enabling an analytic view for query transform.

OCI-18502: cannot enable query transform because fact source is joined to distinct members of analytic view dimension "*string*"

Cause: An attempt was made to enable query transform with a REFERENCES DISTINCT clause in which the fact and dimension tables did not match.

Action: Match the source of the dimension to the source of the fact when enabling an analytic view for query transform.

OCI-18503: Cannot enable query transform because NORELY was specified and a remote source was detected on "*string*" in the analytic view.

Cause: An attempt was made to enable query transform NORELY with a remote source.

Action: Specify RELY or do not use remote sources when enabling an analytic view for query transform.

OCI-18504: invalid measure in filter fact clause

Cause: A base measure that was built over an expression that was not a single column was used in the filter fact clause of the derived analytic view.

Action: Ensure that the base measures used in the derived analytic view filter fact clause have a single column expression.

OCI-18505: invalid analytic view dimension "*string*"

Cause: The specified analytic view dimension did not exist in the base analytic view.

Action: Ensure that the specified analytic view dimension exists in the base analytic view.

OCI-18506: invalid numeric value (*string*) in the calculated measure expression

Cause: The specified numeric value in the calculated measure expression was invalid.

Action: Ensure that the numeric value in the calculated measure expression is valid.

OCI-18507: invalid use of bind variable "*string*" in the analytic view query

Cause: A bind variable with the same name but different value was used in a clause of the query-scoped analytic view.

Action: Rename the bind variable so that all of the names are unique.

OCI-18508: The query transform cannot be enabled because there is a duplicate join path for the analytic view dimension "string" to columns (string) in source string.

Cause: Two analytic view dimensions cannot have the same join path if query transform is enabled.

Action: Ensure all analytic view dimension join paths are unique when query transform is enabled.

OCI-18521: analytic view auto caching is not enabled.

Cause: Analytic View (AV) autonomous caching initialization parameter was not set.

Action: Enable AV autonomous caching using the appropriate initialization parameter.

OCI-18551: One or more editioned attribute dimension, hierarchy, or analytic view objects exist that cannot be downgraded.

Cause: There were editioned attribute dimension, hierarchy, or analytic view objects that are not supported in the selected release for downgrade.

Action: Prior to downgrade, drop the editioned attribute dimension, hierarchy, or analytic view objects that cannot be downgraded to the selected release.

OCI-18571: An analytic view dimension may not be specified as dense when the cache clause has been included.

Cause: A dimension has been specified as dense and the cache clause has been included.

Action: Mark all dimensions as sparse or remove the cache clause.

OCI-18572: Either all or none of the analytic view caches are required to have a change tracking table.

Cause: Either all or none of the analytic view caches were required to have a change tracking table.

Action: Ensure that either all or none of the analytic view caches have a change tracking table.

OCI-18573: analytic view which uses a change tracking table cannot have a cube source column named "ACTION\$"

Cause: An analytic view with a change tracking table could not have a cube source column named action\$.

Action: Rename the cube source column name or remove the change tracking table.

OCI-18574: analytic view which uses a change tracking table has a measure "string" based on an expression that is not a single column

Cause: An analytic view with a change tracking table could not have a non column expression measure.

Action: Either remove the non column measure from the cache or remove the change tracking table.

OCI-18575: Analytic view with a change tracking table has a measure "string" with an invalid aggregation operator "string".

Cause: An analytic view with a change tracking table used an invalid aggregation operator.

Action: Either change the aggregation operator or remove the change tracking table.

*Params: 1) measure 2) aggregation operator

OCI-18700: Failed to read the file specified by the oracle.jdbc.config.file connection property

OCI-18701: The connection properties file contains an invalid expression in the value of

OCI-18702: The GSSCredential and user/password cannot both be set in a connection builder.

OCI-18703: Result description changed while processing resultset.

OCI-18704: Invalid sharding key information.

OCI-18705: Sharding driver does not support connection to a non-sharded database.

OCI-18706: Binary JSON received from database is too large to be processed by the driver.

OCI-18707: Invalid statement delegate.

OCI-18708: Sharding driver does not support a connection using the sharding key.

OCI-18709: Sharding driver does not support a connection using the catalog service.

OCI-18710: Sharding driver does not support Oracle Version. Minimum supported version is 21c.

OCI-18711: An OracleRow is valid only for the duration of the mapping function to which it is passed.

OCI-18712: Cannot publish rows after the cursor of a ResultSet has moved from its initial position.

OCI-18713: Subscriber received an onError signal.

OCI-18714: Login timeout specified by DataSource.setLoginTimeout(int) or by the oracle.jdbc.loginTimeout property has expired.

OCI-18715: Invalid length for the {0} name pattern. Maximum length is {1} characters.

OCI-18716: {0} not in any time zone.

OCI-18717: Cannot bind string of length greater than 32766 to a ScrollableResultSet or UpdatableResultSet.

OCI-18718: Configuration for token-based authentication is invalid

OCI-18719: The database does not support True Cache. Minimum supported version is 23c

OCI-18720: True Cache service is not configured on the database

OCI-18721: Invalid value {0} provided for connection property {1}

OCI-18722: Connection property {0} is not set**OCI-18723: JDWP is not supported with external authentication.**

Cause: JDWP is not supported with external authentication such as KERBEROS, RADIUS and TCPS

Action: Use O5Logon (username and password) based authentication to use JDWP

OCI-18724: Failed to encrypt JDWP value.

Cause: Unable to encrypt host and port value of the JDWP debugger

Action: The host and port information cannot be empty or null

OCI-18725: Sensitive diagnostics is not permitted. System property {0} is not set.

Cause: Sensitive logging cannot be enabled without setting permit sensitive diagnostics system property.

Action: Set the permit sensitive diagnostics system property before enabling sensitive logging.

OCI-18726: Failed to get a value from an OracleResourceProvider

Cause: A connection property identifies an OracleResourceProvider that can not be found or that fails to provide a value.

Action: Check the cause of the SQLException to get specific details. Verify that the provider is present on the JVM classpath and is discoverable by java.util.ServiceLoader. Review any provider specific documentation to understand the failure.

OCI-18727: Invalid private key: {0} does not contain {1}.

Cause: The private key provided is invalid.

Action: Check the private key file and make sure it contains the key in proper format.

OCI-18728: Timeout is less than zero

Cause: A timeout with a value less than zero has been provided

Action: Examine the stack trace of the SQLException to determine where the negative value came from

OCI-18729: Property {0} is not whitelisted for external providers.

Cause: A property that is not whitelisted has been included by a provider

Action: Examine the properties included by the provider to determine which one is not whitelisted

OCI-18730: Interrupted IO error.**OCI-18731: Oracle server process path does not point to any valid executable**

Cause: The oracle server process cannot be located relatively to ORACLE_HOME environment.

Action: Verify that ORACLE_HOME/bin/oracle points to an executable file.

OCI-18732: Invalid Parameter Metadata cache size specified.

Cause: Parameter Metadata cache is invalid

Action: Verify the cache size is a positive integer.

OCI-18733: Property oracle.net.wallet_location can only contain Base64 values if configured using Remote configuration.

Cause: oracle.net.wallet_location set by remote provider accesses filesystem.

Action: Set oracle.net.wallet_location to have Base64 Value.

OCI-18734: Error parsing statement.

Cause: ParameterMetadata API was unable to parse the statement.

Action: Make sure the statement is valid.

OCI-18735: Could not determine parameters for all function calls

Cause: ParameterMetadata API was unable to resolve the types of some function calls.

Action: Review the function calls in your statement which contain 1 or more JDBC parameter.

OCI-18736: The statement passed contains more than one query

Cause: ParameterMetadata API detected several queries in the same statement.

Action: Make sure the statement used only contains a single query.

OCI-18900: Failed to enable encryption.

OCI-18902: Wrong magic number in NA packet.

OCI-18903: Unknown authentication, encryption or data integrity algorithm

OCI-18904: Invalid parameter, use one of ACCEPTED, REJECTED, REQUESTED or REQUIRED.

OCI-18905: Wrong number of service subpackets.

OCI-18906: Supervisor service received status failure.

OCI-18907: Authentication service received status failure.

OCI-18908: Service classes not found in oracle.net.ano package.

OCI-18909: Invalid ANO driver.

OCI-18910: Error in array header received.

OCI-18912: Invalid length for an NA type.

OCI-18913: Invalid NA packet type received.

OCI-18914: Unexpected NA packet type received.

OCI-18915: Unknown encryption or data integrity algorithm.

OCI-18916: Invalid encryption algorithm from the server.

OCI-18917: Encryption class not installed.

OCI-18919: Invalid data integrity algorithm received from server.

OCI-18920: Received invalid services from the server

OCI-18921: Received incomplete services from the server

OCI-18922: Level should be one of ACCEPTED, REJECTED, REQUESTED or REQUIRED.

OCI-18923: The service in process is not supported

OCI-18925: Error during Kerberos5 authentication.

OCI-18950: Break packet was received.

OCI-18951: NL exception was generated

OCI-18952: SO exception was generated

OCI-18953: Socket connect timed out.

OCI-18957: Connection initialization failed with error number:

Cause: The connection could not be established. The listener returned the error code that's included at the end of the error message.

Action: Search the Oracle error number added to this error message to diagnose the cause.

OCI-18958: Invalid refuse packet data.

OCI-19000: missing RELATIONAL keyword

Cause: The keyword RELATIONAL in the work OBJECT RELATIONAL is missing in the XMLTYPE storage clause specification.

Action: Supply the RELATIONAL keyword in the storage clause

OCI-19001: invalid storage option *string* specified

Cause: An invalid storage option was specified for the OPAQUE type.

Action: Provide a valid storage option in the storage clause such as CLOB, BINARY XML, or TRANSPORTABLE BINARY XML in case of XMLType. *Params: 1) storage_option_name: The invalid storage option provided in the DDL.

OCI-19002: XML Schema URL is missing in the storage option.

Cause: An XML Schema URL was not specified in the storage option.

Action: Specify an XML Schema URL for the storage option.

OCI-19003: XML schema is missing XML root element name.

Cause: An XML schema was encountered that does not have a root element.

Action: Specify a root element in the XML schema.

OCI-19004: Duplicate XMLType OBJECT RELATIONAL storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

OCI-19005: duplicate XMLType storage option specified

Cause: A duplicate storage option for the XMLType column was specified.

Action: Specify a single storage option for an XMLType column.

OCI-19006: TYPE option is not appropriate for the storage option of XMLTYPE column.

Cause: Attempted to use the TYPE option outside the OBJECT RELATIONAL XML storage option.

Action: Remove the TYPE option or specify an OBJECT RELATIONAL storage for the XMLTYPE column.

OCI-19007: Schema *string* does not match expected schema *string*.

Cause: The specified XML document did not conform to the specified XML schema.

Action: INSERT/UPDATE XML documents which conform to the XML schema.

OCI-19008: invalid version of XMLTYPE instance

Cause: An invalid version of XMLTYPE instance was found.

Action: This is possibly due to data corruption, an internal error, or running an older client against a newer version of the database. Ensure that the version of the client can understand the XMLTYPE instance in the database. Contact Oracle Support Services if the error persists.

OCI-19009: Missing XMLSchema keyword

Cause: The XMLSchema keyword is missing

Action: Specify the XMLSchema URL and element name.

OCI-19010: cannot insert XML fragments

Cause: An XML fragment could not be inserted because it was not a well-formed XML document.

Action: Convert the XML fragment into a single well-formed XML document before insertion.

OCI-19011: Character string buffer is too small.

Cause: The requested string result is too big to return.

Action: Get the result as CLOB or reduce the length of the result.

OCI-19012: Cannot convert XML fragment to the required data type.

Cause: A conversion to a datatype was requested but cannot be performed.

Action: The XMLType may contain fragments and other elements that cannot be converted to the appropriate data type.

OCI-19013: cannot create VARRAY columns containing XMLType

Cause: An attempt was made to create a VARRAY column that contained an XMLType.

Action: Do not store VARRAY columns containing XMLTypes in tables. Use nested tables instead.

OCI-19015: Invalid XML tag identifier (*string*)

Cause: An invalid XML identifier was detected during XML generation

Action: Fix the offending tag to not contain characters or symbols that are not allowed by the XML specification

OCI-19016: Attributes cannot occur after element specifications.

Cause: Attributes specified using the "@" identifier can only occur before any other element definition when creating XML.

Action: Change the order of the types so that the attributes occur in the beginning.

OCI-19017: Attributes can only be simple scalars

Cause: Attribute values can only be simple scalar values

Action: Use only simple datatypes for attribute values

OCI-19018: Invalid character in XML tag '*string*'

Cause: A tag name was found to have an invalid XML character during XML generation.

Action: Rewrite the query so that the generated XML tag, corresponding to a column name or alias, contains only valid characters.

OCI-19019: Invalid context passed to DBMS_XMLGEN.GETXML().

Cause: The context value passed to GETXML() was invalid.

Action: Pass a valid value to GETXML().

OCI-19020: invalid dereference of XMLType columns

Cause: An attempt was made to dereference the attributes of an XMLType column which is not part of a base table

Action: You can only dereference the attributes of a base table XMLType column

OCI-19022: unoptimized XML construct detected

Cause: The XMLOptimizationCheck variable was enabled and an unrewritten XML construct was detected. This prevents the execution of the XML construct.

Action: Ensure that the XML construct is being optimized. See the trace file for further information. Disable the XMLOptimizationCheck variable if you want the unoptimized XML operation to be executed.

OCI-19023: The first argument to UPDATEXML operator has to be an XMLTYPE

Cause: The first argument passed to the update value operator was not an XMLTYPE.

Action: Rewrite the query so that the first argument to the UPDATEXML operator is XMLTYPE.

OCI-19024: Cursor expression must be named.

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

OCI-19025: EXTRACTVALUE cannot extract values of multiple nodes

Cause: The specified XPATH expression pointed to more than one node.

Action: Correct the XPATH expression so that it points to exactly one node.

OCI-19026: EXTRACTVALUE can only retrieve value of leaf node

Cause: Given XPath does not point to a leaf node.

Action: Rewrite the query so that a leaf node is returned.

OCI-19028: invalid abstract data type parameter in XMLType.toObject() function call

Cause: The object passed as abstract data type parameter to the XMLType.toObject() function was not of the same type, or a super-type, of the mapped type.

Action: Pass an object of the correct type to the XMLType.toObject() function.

OCI-19029: Cannot convert the given XMLType to the required type

Cause: The passed in XMLType could not be converted to the required type

Action: Binary XMLType instances or other objects cannot be converted to the required object or collection types.

OCI-19030: Method invalid for non-schema based XML Documents.

Cause: The method can be invoked on only schema based xmltype objects.

Action: Don't invoke the method for non schema based xmltype objects.

OCI-19031: XML element or attribute *string* does not match type *string.string*.

Cause: The given XML tag did not match the given type.

Action: Pass a valid canonical XML compatible with the given type.

OCI-19032: expected XML tag not present

Cause: During a conversion attempt of XML to an object, there was an invalid tag name present.

Action: Pass a valid canonical XML that can map to the given object type.

OCI-19033: schema mismatch: schema specified in the XML document does not match the schema parameter

Cause: When creating schema-based XML, the schema specified in the XML document was different from the schema that was passed in the 'schema' parameter.

Action: Change the schema parameter to match the schema specified in the XML document.

OCI-19034: Type is not supported during schema generation.

Cause: The object contained an unsupported type for schema generation.

Action: Use a different type to generate the schema.

OCI-19035: Invalid items are selected in the query passed to newContextFromHierarchy().

Cause: The query should only select a number followed by an XMLType.

Action: Ensure that the result set of the query passed to newContextFromHierarchy() has only two selected items: the first must be a number and the second must be an XMLType.

OCI-19036: invalid query result set in newContextFromHierarchy()

Cause: The result set of the query passed to newContextFromHierarchy() did not have the same property as the result set generated by a CONNECT BY query.

Action: Ensure that the query passed to `newContextFromHierarchy()` is a `CONNECT BY` query or that the query returns a result set having the same property as the result set generated by a `CONNECT BY` query.

OCI-19037: XMLType result cannot be a fragment.

Cause: An XML fragment was selected in the query passed to `newContextFromHierarchy()`.

Action: Ensure that the query passed to `newContextFromHierarchy()` does not result in an XML fragment.

OCI-19038: invalid operations on query context

Cause: `SetMaxRows`, `SetSkipRows`, or `SetRowTagName` were applied on a query context created from `newContextFromHierarchy()`.

Action: Do not apply `SetMaxRows`, `SetSkipRows`, or `SetRowTagName` on a query context created from `newContextFromHierarchy()`.

OCI-19039: Keyword *string* reserved for future use.

Cause: The keyword is reserved for future use as a built-in function.

Action: Change the name to a different one and retry.

OCI-19040: Element *string* does not match expected *string*.

Cause: The given XML document had a different root element than expected.

Action: Insert/Update only the XML documents that conform to that particular schema and element.

OCI-19041: XML comments cannot contain two consecutive hyphens.

Cause: An XML comment contained two consecutive hyphens.

Action: Eliminate the consecutive hyphens in the XML data.

OCI-19042: Enclosing tag *string* cannot be 'XML'.

Cause: The specified enclosing tag matched 'XML' in some case combination.

Action: Modify the enclosing tag so that it is not 'XML' in any case combination.

OCI-19043: Multiply nested XMLROOT function is not allowed.

Cause: An XMLROOT function had an operand that was also an XMLROOT function.

Action: Modify the query so that there are no multiply nested XMLROOT functions.

OCI-19044: character length specified for XMLSerialize is too small.

Cause: An XMLSerialize function was called with a type of character type (e.g. `VARCHAR2(27)`), and the length specified (27 in the example) was too small.

Action: Modify the query so that the character length specified is larger.

OCI-19045: character set id specified for XMLSerialize not valid

Cause: An XMLSerialize function was called with an invalid value for the character set id.

Action: Modify the query so that the character set id is valid.

OCI-19046: Out-of-line tables cannot be shared by two top-level tables (table "*string*". "*string*" and the current table being created).

Cause: An attempt was made to share an out-of-line table between two top-level tables.

Action: Use the existing top-level XML table.

OCI-19047: cannot specify storage for individual varrays if STORE ALL VARRAYS is used

Cause: An attempt was made to combine storage specification for particular varrays with the STORE ALL VARRAYS clause.

Action: Either specify storage for individual varrays or use the STORE ALL VARRAYS clause.

OCI-19048: cannot specify VARRAY storage in tableProps

Cause: An attempt was made to store all VARRAYS as tables or LOBs in tableProps.

Action: Do not specify VARRAY store as tables or LOBs in tableProps.

OCI-19051: Internal insert method is not working for XMLType tables.

Cause: An error occurred while trying to insert into an XMLType table using a different internal insert path.

Action: Set event 19049 and try again.

OCI-19055: unsupported use of DISABLE XML EXCHANGE

Cause: The option, DISABLE XML EXCHANGE, was specified in a CREATE TABLE statement.

Action: Do not specify DISABLE XML EXCHANGE in a CREATE TABLE statement.

OCI-19057: internal error: BINARY XML [*string*]

Cause: The operation failed due to an internal error.

Action: This is an internal error. Contact Oracle Support. *Params: 1) error: The internal error description.

OCI-19058: Enabling XML exchange for non-empty tables may cause data corruption.

Cause: An attempt was made to enable XML exchange for a binary XML column or table with a conflicting binary XML column or table.

Action: Use the XML exchange option only if at least one of the two involved tables is empty.

OCI-19059: XML exchange has not been enabled.

Cause: An attempt was made to disable XML exchange on a table that did not have XML exchange enabled.

Action: Use the disable XML exchange option only if the table already has XML exchange enabled.

OCI-19060: operation disallowed on XML token set object

Cause: An attempt was made to perform a disallowed operation on a token set object for binary XML support.

Action: Do not perform the attempted operation on an XML token set object.

OCI-19061: granular token set operations detected for unsupported tables

Cause: An attempt was made to perform some granular token set related operations on a non-binary XML table or on an older binary XML table.

Action: Do not perform the attempted operation unless tables support granular token set options.

OCI-19062: XML exchange is already enabled.

Cause: An attempt was made to enable XML exchange on a table that had XML exchange already enabled.

Action: Use the disable XML exchange option only if the table has XML exchange disabled.

OCI-19063: Granular token table feature does not support schema-based storage.

Cause: An attempt was made to use granular token tables with schema-based storage.

Action: Use non-schema based storage for granular token tables.

OCI-19064: Tablespace has XML token set objects used in another tablespace.

Cause: The tablespace contained an XML token set object that was used by a binary XML table in a different tablespace and dropping it would cause some data to be lost.

Action: Move the XML token set object to a different tablespace.

OCI-19065: cannot drop tablespace with XML token set while XDB tablespace is offline

Cause: The tablespace contained an XML token set object but the metadata could not be read since the XDB default tablespace was offline. By dropping the tablespace, some data may be lost.

Action: Bring the XDB default tablespace online.

OCI-19066: XML EXCHANGE is not enabled between the two tables.

Cause: The two tables specified in the EXCHANGE had different XML token sets. By exchanging partitions, some data might get corrupted.

Action: Enable XML EXCHANGE between the tables.

OCI-19067: unable to create binary granular token on user default tablespace

Cause: The user default tablespace was full.

Action: Increase the size of the user default tablespace.

OCI-19068: failed to disable XML EXCHANGE

Cause: Either the table was in SYSTEM tablespace or it was partitioned and the default tablespace was SYSTEM. Granular token tables are forbidden on SYSTEM tablespace.

Action: Move the table to a different tablespace or change the default tablespace if the table is partitioned.

OCI-19069: cannot enable XML EXCHANGE with itself

Cause: An XML EXCHANGE was performed with the same table.

Action: Do not enable XML EXCHANGE with the same table.

OCI-19070: cannot enable XML EXCHANGE in this type of table

Cause: XML EXCHANGE was not allowed in global temporary tables or external tables.

Action: Do not use a global temporary table or external table.

OCI-19071: Table does not have an XMLType stored as BINARY XML.

Cause: The table was not an XMLTable or did not have an XMLType column stored as BINARY XML.

Action: Use an XMLType or XMLTable stored as BINARY XML.

OCI-19072: Only STORE AS CLOB is supported with XMLType on the sharded table.

Cause: STORE AS CLOB was not specified with XMLType on the sharded table.

Action: Specify the STORE AS CLOB clause in the query.

OCI-19073: unsupported column type specified for granular token set enabled table

Cause: An attempt was made to add or modify a column with an unsupported type for a granular token set enabled table.

Action: Do not use user-defined Abstract Data Types (ADTs) or an ANYDATA column with granular token sets.

OCI-19074: Table does not have a granular token set.

Cause: The table was not used with a granular token set.

Action: Use an XMLType stored as BINARY XML with a granular token set.

OCI-19075: Failed to move the token table indexes. Run dbms_csx_admin.RebuildTokenTablesIndexes before using the table.

Cause: An attempt to move the indexes to the given tablespace failed.

Action: Run dbms_csx_admin.RebuildTokenTablesIndexes.

OCI-19076: cannot move the XML token set to tablespace where the table owner does not have privileges

Cause: The table owner did not have privileges in the given tablespace.

Action: Use a tablespace where the table owner has privileges.

OCI-19078: invalid binary XML document

Cause: The binary XML document was corrupt.

Action: Rebuild the binary XML document or contact Oracle Support Services.

OCI-19079: Only STORE AS TRANSPORTABLE BINARY XML is supported with XMLTYPE on a sharded table.

Cause: STORE AS TRANSPORTABLE BINARY XML was not specified with XMLTYPE on a sharded table.

Action: Specify STORE AS TRANSPORTABLE BINARY XML clause in the query.

OCI-19080: This sharding operation is not supported for XMLType.

Cause: XMLType support for a specific operation in sharding was not available.

Action: None

OCI-19081: Internal error '*string*' is received from XML processor.

Cause: An internal error was received during an XML operation.

Action: This is an internal error. Contact Oracle Support Services. *Params: 1) error:
The internal error received from XML processor.

OCI-19082: Operation is supported only for transportable binary XML.

Cause: XMLTYPE column was not a transportable binary XML.

Action: Use XMLTYPE column stored as transportable binary XML.

OCI-19083: XML Search Index supported only for Transportable Binary XML.

Cause: An attempt was made to create an XML Search Index on an XMLType column that was not stored as transportable binary XML.

Action: Use XMLType column stored as transportable binary XML.

OCI-19084: invalid number for function getNumberVal

Cause: The input XMLType instance contains more than a simple text node or is not convertible to a number.

Action: Check the input XMLType instance for getNumberVal, and make sure it is a valid number.

OCI-19085: BasicFile not supported for Transportable Binary XML.

Cause: An attempt is being made to create a Transportable Binary XMLType column or table with the BasicFile option.

Action: Use SecureFile for Transportable Binary XML.

OCI-19100: PASSING or RETURNING keyword expected

Cause: The keyword PASSING or RETURNING was missing.

Action: Specify the PASSING or RETURNING keyword.

OCI-19101: CONTENT keyword expected

Cause: The keyword CONTENT was missing.

Action: Specify the CONTENT keyword.

OCI-19102: XQuery string literal expected

Cause: The string literal containing the XQuery expression was missing.

Action: Specify the XQuery expression as a string literal.

OCI-19103: VALUE keyword keyword

Cause: The keyword VALUE was missing.

Action: Specify the VALUE keyword.

OCI-19104: invalid XQueryX: missing attribute *string*

Cause: The XQueryX expression was not assigned the expected attribute.

Action: Specify a valid XQueryX.

OCI-19105: invalid XQueryX: expected text node - got *string*

Cause: The XQueryX expression did not contain a text node as expected.

Action: Specify a valid XQueryX.

OCI-19106: invalid XQueryX: expected *string* - got *string*

Cause: The XQueryX expression did not contain the node as expected.

Action: Specify a valid XQueryX.

OCI-19107: invalid XQueryX - unsupported construct - *string*

Cause: The given XQuery expression contains an unsupported construct.

Action: Specify a valid XQueryX.

OCI-19108: WHITESPACE keyword expected

Cause: The keyword WHITESPACE was missing.

Action: Specify the WHITESPACE keyword.

OCI-19109: RETURNING keyword expected

Cause: The keyword RETURNING was missing.

Action: Specify the RETURNING keyword.

OCI-19110: unsupported XQuery expression

Cause: The specified expression in the XQuery was not supported.

Action: Rewrite the XQuery using the supported expressions.

OCI-19111: error during evaluation of the XQuery expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19112: error raised during evaluation: *string*

Cause: The error function was called during evaluation of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19113: trace function called during evaluation: *string*

Cause: The trace function was called during evaluation of the XQuery expression.

Action: Check the log file for the trace message.

OCI-19114: XPST0003 - error during parsing the XQuery expression: *string*

Cause: An error occurred during the parsing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19115: More than one context item specified to XMLQUERY function.

Cause: More than one context item was specified as input to the XMLQUERY function.

Action: Specify a single context item for the XMLQUERY function.

OCI-19116: too many xmlspace declarations

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

OCI-19117: XQST0070 - invalid redefinition of predefined namespace prefix 'string'

Cause: The given predefined namespace was being redefined in a namespace declaration.

Action: Remove the namespace declaration that redefines the predefined namespace prefix. *Params: 1) namespace_prefix: The predefined namespace prefix.

OCI-19118: XQST0066 - duplicate default namespace definition - string

Cause: More than one default namespace declaration used the given namespace URI.

Action: Remove the duplicate default namespace definition.

OCI-19121: duplicate attribute definition string

Cause: More than one attribute was defined with the same name.

Action: Remove the duplicate attribute definition.

OCI-19122: unsupported XQuery declaration

Cause: The program specified an XQuery declaration that is not supported.

Action: Rewrite the XQuery with a declaration that is supported.

OCI-19123: FORG0003: fn:zero-or-one() called with a sequence containing more than one item

Cause: sequence with more than one item was passed into fn:zero-or-one() function

Action: correct input argument to fn:zero-or-one() function

OCI-19124: FORG0004: fn:one-or-more() called with a sequence containing no items

Cause: sequence containing no items was passed into fn:one-or-more() function

Action: correct input argument to fn:one-or-more() function

OCI-19125: FORG0005: fn:exactly-one() called with a sequence containing zero or more than one item

Cause: sequence containing zero or more than one item was passed into fn:exactly-one() function

Action: correct input argument to fn:exactly-one() function

OCI-19126: XQUERY extension expression contains neither a PRAGMA that is recognized by the implementation nor an expression enclosed in curly braces.

Cause: Either no expression was enclosed in curly braces for the extension expression or the PRAGMA content was not recognized.

Action: Correct the input for the extension expression.

OCI-19127: XQST0067: XQST0067: A static error is raised if a Prolog contains more than one construction declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19128: XQST0068: A static error is raised if a Prolog contains more than one boundary-space declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19129: XQST0069: A static error is raised if a Prolog contains more than one empty order declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19130: XQST0070: A static error is raised if the predefined namespace prefix xml or xmlns is redeclared by a namespace declaration or namespace declaration attribute

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19131: XQST0071: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19132: XQDY0072: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19133: XQST0073: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19134: XQDY0074: It is a dynamic error if the value of the name expression in a computed element constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19135: XQST0075: An implementation that does not support the validation feature must raise a static error if it encounters a validate expression.

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes and act accordingly.

OCI-19136: XQST0076: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19137: XQST0079: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19138: invalid target type of cast or castable expression

Cause: A target type of a cast or castable expression was not a valid atomic type.

Action: Ensure that a cast or castable expression is an atomic type that is in the schema types in-scope and it is not `xs:NOTATION` or `xs:anyAtomicType`, optionally followed by the occurrence indicator "?".

OCI-19139: XPST0081: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Cause: An error occurred while processing the XQuery expression.

Action: Check the detailed error message for the possible causes and act accordingly.

OCI-19140: XPST0083: It is a static error if the target type of a cast expression or constructor function is `xs:QName` or a type derived from `xs:QName` or `xs:NOTATION`, and the argument of the cast expression or constructor function is not a string literal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19141: XQDY0084: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19142: FONC0001 = FONC0001: undefined context item

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19143: XQTY0086: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19145: XQST0087: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0]

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19146: XQST0088: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19147: XQST0089: It is a static error if a variable bound in a FOR clause of a FLWOR expression and its associated positional variable do not have distinct names (expanded QNames).

Cause: An error occurred while processing the XQuery expression.

Action: Check the detailed error message for the cause and act accordingly.

OCI-19148: XQST0090: It is a static error if a character reference does not identify a valid character in the version of XML that is in use

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19149: XQDY0091: An implementation may raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19150: XQDY0092: An implementation may raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19151: XQST0093: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19152: FOCH0001 = FOCH0001: codepoint not valid

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19153: FOCH0002: unsupported collation

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19154: FOCH0003: unsupported normalization form

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19155: FOCH0004: collation does not support collation units

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19156: FODC0001: no context document

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19157: FODC0002: error retrieving resource

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19158: FODC0004: invalid argument to fn:collection()

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19159: FODC0005: invalid argument to fn:doc

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19160: XPST0003 - syntax error: invalid variable name *string*

Cause: The given XQuery variable does not begin with the '\$' sign

Action: Fix the variable name to start with the "\$" sign.

OCI-19161: XPTY0004 - XQuery type mismatch: invalid argument type '*string*' for function '*string*'

Cause: The type of the argument that was passed to the given function was not valid.

Action: Fix the argument to be of a type supported by the given function.

OCI-19162: XPTY0004 - XQuery type mismatch: invalid argument types '*string*', '*string*' for function '*string*'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

OCI-19163: XPTY0004 - XQuery type mismatch: argument type mismatch: expected - '*string*' got - '*string*' for function '*string*'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

OCI-19164: XQST0085 - It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

OCI-19165: FONS0003: no prefix defined for namespace

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

OCI-19166: FONS0003: FONS0004: no namespace found for prefix

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

OCI-19167: FONS0005: base uri not defined in the static context

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

OCI-19168: FORG0002: invalid argument to fn:resolve-uri()

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

OCI-19169: FORG0006: invalid argument type in 'string'

Cause: The argument passed to the indicated function was inappropriate. For instance, non-numeric arguments were passed to fn:sum.

Action: Fix the argument or pick an appropriate function instead.

OCI-19171: FORG0007: invalid argument to aggregate function

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19172: FORG0008: both arguments to fn:dateTime have a specified timezone

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19173: FORG0009: error in resolving a relative URI against a base URI in fn:resolve-uri

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19174: FORX0001: invalid regular expression flags

Cause: The regular expression flags on the XQuery expression are invalid.

Action: Use valid regular expression flags.

OCI-19175: FORX0002: invalid regular expression

Cause: Processing of the XQuery expression is invalid.

Action: Check the detailed error message for the possible causes.

OCI-19176: FORX0003: regular expression matches zero-length string

Cause: Processing of the XQuery expression is resulting in an error.

Action: Check the detailed error message for the possible causes.

OCI-19177: FORX0004: invalid replacement string

Cause: Processing of the XQuery expression is invalid.

Action: Check the detailed error message for the possible causes.

OCI-19178: FOTY0001: type error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19179: FOTY0011: Type error. Context item is not a node

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19180: FOTY0012: argument node does not have a typed value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19181: FOTY0014: type exception

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19182: FORT0001: invalid number of parameters

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19183: FOTY0002: type definition not found

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19184: FOTY0021: invalid node type

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19185: FOAR0002: numeric operation overflow/unflow

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19186: FOCA0001: input value too large for decimal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19187: FOCA0002: invalid lexical value

Cause: Processing of the XQuery expression is invalid.

Action: Check the detailed error message for the possible causes.

OCI-19188: FOCA0003: input value too large for integer

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19189: FOCA0005: NaN supplied as float/double value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19190: FOER0000: Unidentified error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19191: FOAR0001: division by zero

Cause: There is an error during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19192: XQST0047: It is a static error if multiple module imports in the same Prolog specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19193: XQST0045: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/namespace>, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/04/xpath-functions>, <http://www.w3.org/2005/04/xpath-datatypes>

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19194: XQDY0026: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string ">"

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19195: invalid policy in function ora:contains

Cause: An invalid policy was specified in the ora:contains XQuery function.

Action: Either rename the policy name, policy schema name, or do not specify any policy to pick up the default policy.

OCI-19196: XMLType table or view is not allowed with this form of fn:collection

Cause: The table or view specified in fn:collection was of XMLType.

Action: XMLType table or view is not allowed in the form of fn:collection('oradb:/schema/table/ROW/column'). It has to be a relational table or view.

OCI-19197: Column not found or invalid column type with this form of fn:collection

Cause: The column to be retrieved was not found or was not of XMLType.

Action: The column to be retrieved in the form of fn:collection('oradb:/schema/table/ROW/column') or fn:collection('oradb:/schema/table/ROW[predicate]/column') has to be of XMLType.

OCI-19198: Column not found or invalid column specified in the predicate with this form of fn:collection

Cause: The column specified in the predicate was not found or was not allowed.

Action: The column specified in the predicate in the form of fn:collection('oradb:/schema/table/ROW[predicate]/column') cannot be of XMLType.

OCI-19199: too many levels of nesting

Cause: An XQuery expression contained too many levels of nesting parenthesis, which exceeded the maximum number of 256 nesting parenthesis.

Action: Reduce the number of levels of nesting parenthesis.

OCI-19200: invalid column specification

Cause: Not all input arguments were valid columns.

Action: Specify a valid list of columns.

OCI-19201: data type "string" not supported

Cause: The specified data type was not supported in the XMLGEN operator.

Action: Specify only supported data types as arguments to the XMLGEN operator.

OCI-19202: error in XML processingstring

Cause: An error occurred when processing the specified XML function.

Action: Check the given error message and fix the underlying issue.

OCI-19203: error occurred in DBMS_XMLGEN processing string

Cause: An error occurred during the processing of the DBMS_XMLGEN package.

Action: Check the given error message and fix the specified problem. *Params: 1) process: The failing subprogram from the DBMS_XMLGEN package.

OCI-19204: Non-scalar value 'string' is marked as an XML attribute.

Cause: A non-scalar value was prefixed with the at sign (@). Only scalar values (that is, values which are not of object or collection type) could be marked as an XML attribute with the prefix, @.

Action: Remove the at sign (@) or make the value scalar.

OCI-19205: Attribute 'string' qualifies a non-scalar value in the select list.

Cause: The attribute immediately followed a value of the object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar value. *Params: 1) attribute: The attribute that qualifies a non-scalar value.

OCI-19206: invalid value for query or REF CURSOR parameter

Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

OCI-19207: The scalar parameter string to XMLELEMENT cannot have an alias.

Cause: The scalar parameter to XMLELEMENT was qualified with an alias.

Action: Remove the AS clause of the scalar element.

OCI-19208: Parameter *string* of function *string* must be aliased.

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression by using the AS clause.

OCI-19209: invalid or unsupported XMLFormat argument

Cause: An invalid or unsupported formatting argument was supplied.

Action: Change the formatting argument to a valid supported value.

OCI-19210: Column '*string*', specified to be a key or update column for DBMS_XMLSTORE, does not exist in table '*string*'.

Cause: The column specified using setKeyColumn() or setUpdateColumn() did not exist in the table.

Action: Specify a table column instead.

OCI-19211: Column '*string*', specified as key using DBMS_XMLSTORE.setKeyColumn(), must be of scalar type.

Cause: The column specified using DBMS_XMLSTORE.setKeyColumn() was non- scalar.

Action: Specify a scalar table column instead.

OCI-19212: No key columns were specified before the DBMS_XMLSTORE.updateXML() call.

Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns.

OCI-19213: error occurred in XML processing at lines*string*

Cause: An error occurred when processing the specified lines in an XML function.

Action: Check the error message and fix the problem. *Params: 1) line_numbers: The line numbers that contain the errors.

OCI-19214: XMLAGG expression not allowed with window functions or first and last expressions

Cause: An attempt was made to use an XMLAGG expression with window functions or first and last expressions.

Action: Do not use window functions or first and last expressions with the XMLAGG expression.

OCI-19221: XPST0001 - XQuery static context component *string* not initialized

Cause: An uninitialized static context component was encountered during the static analysis of the expression.

Action: initialize the given static context.

OCI-19222: XPDY0002 - XQuery dynamic context component *string* not initialized

Cause: An uninitialized dynamic context component was encountered during the evaluation of the expression.

Action: Initialize the particular dynamic context component.

OCI-19223: XPST0003 - syntax error in XQuery expression

Cause: The given XQuery expression contains syntax errors.

Action: Fix the syntax error in the XQuery expression.

OCI-19224: XPTY0004 - XQuery static type mismatch: expected - *string* got - *string*

Cause: The expression could not be used because its static type is not appropriate for the context in which it was used.

Action: Fix the expression to be of the required type or add appropriate cast functions around the expression.

OCI-19225: XPST0005 - XQuery static type error: expected non empty type got empty sequence

Cause: The static type assigned to an expression other than the () expression must not be the empty type.

Action: Fix the expression so it does not return empty sequences.

OCI-19226: XPTY0006 - XQuery dynamic type mismatch: expected *string* got *string*

Cause: The expression could not be used because its dynamic type did not match the required type as specified by XQuery sequencetype matching rules.

Action: Fix the expression to return the expected type or use appropriate cast functions.

OCI-19227: XPTY0007 - fn:data function is applied to a node (type (*string*)) whose type annotation denotes a complex type with non-mixed complex content.

Cause: The input node for atomization contained a type annotation that denoted a complex type with non-mixed complex content.

Action: Fix the input expression to fn:data to be a node that does not contain non-mixed complex content.

OCI-19228: XPST0008 - undeclared identifier: prefix '*string*', local-name '*string*'

Cause: The specified identifier referred to either a type name, function name, namespace prefix, or variable name that was not defined in the static context.

Action: Fix the expression to remove the identifier, or declare the appropriate variable, type, function, or namespace.

OCI-19229: XQST0009 - schema import not supported

Cause: A schema import was encountered in the query.

Action: remove the schema import.

OCI-19230: XPST0010 - unsupported axis *string*

Cause: An unsupported axis was encountered in the given expression.

Action: Remove the unsupported axis from the expression.

OCI-19231: XPST0011 -

OCI-19232: XQST0012 - imported schemas violate validity rules

Cause: The imported schemas did not satisfy the conditions for schema validity specified in the XMLSchema specification.

Action: Fix the imported schemas to satisfy the validity rules. In particular, the definitions must be valid, complete, and unique -- that is, the pool of definitions must not contain two or more schema components with the same name and target namespace.

OCI-19233: XQST0013 - invalid XQuery PRAGMA content

Cause: An XQuery PRAGMA was specified with invalid content.

Action: Specify the PRAGMA with the valid content.

OCI-19234: XQST0014 - invalid or unsupported must-understand extension

Cause: The must-understand extension specified was either invalid or unsupported.

Action: remove the unsupported must-understand extension or fix the error.

OCI-19235: XQST0015 - unsupported must-understand extension

Cause: The XQuery flagger was enabled and the query contained a must-understand extension.

Action: remove the unsupported must-understand extension.

OCI-19236: XQST0016 - module declaration or import not supported

Cause: The given query had a module declaration or module import.

Action: Remove the import module or module declaration.

OCI-19237: XPST0017 - unable to resolve call to function - *string:string*

Cause: The given name and the number of the function call parameters could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

OCI-19238: XPTY0018 - It is a type error if the result of the last step in a path expression contains both nodes and atomic values

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19239: XPTY0019 - It is a type error if the result of an step (other than the last step) in a path expression contains an atomic value

Cause: The step expression returned a sequence containing an atomic value.

Action: Fix the path expression to return only nodes.

OCI-19240: XPTY0020 - context item must be node in an axis expression

Cause: The context item that was used in the axis expression is not a node.

Action: Change the context item to be a node.

OCI-19241: XPDY0021 - cast to type *string* failed

Cause: The value inside a cast expression could not be cast to the required type.

Action: Fix the input to the cast expression to be of a castable type.

OCI-19242: XQST0022 - namespace declaration attribute must be a literal

Cause: The namespace declaration attribute was not a literal string.

Action: Fix the namespace declaration to be a literal string.

OCI-19243: XQTY0023 - invalid document node content in element constructor

Cause: The content sequence in an element constructor contained a document node.

Action: Change the content of the element constructor so that it does not contain a document node.

OCI-19244: XQTY0024 - invalid attribute node in element constructor

Cause: The content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: Change the content sequence of the element constructor so that it does not contain the attribute node.

OCI-19245: XQDY0025 - duplicate attribute name *string*

Cause: The content sequence of the element constructor contained more than one attribute that had the same name.

Action: Remove the duplicate attributes.

OCI-19246: validation failed - element *string* not found in in-scope element declarations

Cause: The validation mode was strict and the element-constructor contained an element name that was not present in the in-scope element declarations.

Action: Fix the validation mode to be lax or import the schema definition that contains the required element declaration.

OCI-19247: XQDY0027 - validation error

Cause: An error was encountered during the validation of the expression.

Action: Fix the validation error.

OCI-19248: XQTY0028 - invalid node in document constructor

Cause: The content sequence in a document constructor contained either a document or an attribute node.

Action: Fix the content so it does not contain any of the above node types.

OCI-19249: XQDY0029 - value does not match facet of the target type

Cause: The input value to a cast expression did not satisfy the facets of the target type.

Action: Fix the value to conform to the facets of the target type.

OCI-19250: XQTY0030 - too many values to validate expression

Cause: The argument of a validate expression returned more than one element or document node.

Action: Fix the argument of the validate expression to return a single element or document node.

OCI-19251: XQST0031 - unsupported query version

Cause: The query version specified in the prolog was not supported.

Action: Supply the version of the query that is supported.

OCI-19252: XQST0032 - too many declarations for base URI

Cause: The query prolog contained multiple declarations for the base URI.

Action: Remove the duplicate definitions for the base URI.

OCI-19253: XQST0033 - too many declarations for namespace prefix *string*

Cause: The query prolog contained multiple declarations for the same namespace prefix.

Action: Remove the duplicate definitions for the namespace prefix. *Params: 1)

namespace_prefix: The namespace prefix that was defined multiple times.

OCI-19254: XQST0034 - too many declarations for function *string*

Cause: The query module contained more than one function, either declared or imported, which have the same expanded QName.

Action: Remove the duplicate function definitions.

OCI-19255: XQST0035 - too many declarations of *string* in imported schemas

Cause: Two schemas were imported that defined the same name in the same symbol space and in the same scope.

Action: Fix the schema imports to remove the name conflict.

OCI-19256: XQST0036 - missing type definitions in imported module

Cause: A module was imported, which contains references to type names that are not defined in the in-scope type definitions inside the module.

Action: Fix the module definition to include the in-scope type definition.

OCI-19257: XQST0037 - function or variable *string* in module already defined

Cause: A module being imported contained the function or variable that is already declared in the static context of the importing module.

Action: Remove the conflicting declarations.

OCI-19258: XQST0038 - unsupported or duplicate default collation specified

Cause: The query prolog either specified more than one default collation, or the collation specified was not supported.

Action: Remove the duplicate definition or specify a supported collation.

OCI-19259: XQST0039 - duplicate parameter name *string* in function declaration

Cause: The function declaration contained more than one parameter with the same name.

Action: Fix the function declaration to remove the duplicate parameters.

OCI-19260: XQST0040 - invalid namespace node in element constructor

Cause: The content sequence in an element constructor contained a namespace node node following a node that was not a namespace node.

Action: Remove the namespace node in the element constructor.

OCI-19261: XQDY0041 - non empty URI in QName

Cause: The name expression in a computed processing instruction or computed namespace constructor returned a QName whose URI part was not empty.

Action: Fix the processing instruction or computed namespace constructor to return the QName with an empty URI part.

OCI-19262: XQST0042 - namespace constructor not inside an element constructor

Cause: The enclosing expression of a computed namespace constructor was not a computed element constructor.

Action: Fix the namespace constructor to be inside an element constructor.

OCI-19263: XQST0043 - duplicate namespace prefix *string*

Cause: Two or more computed namespace constructors within the same computed element constructor attempted to bind the same namespace prefix.

Action: Remove the duplicate namespace definitions.

OCI-19264: XQDY0044 - invalid namespace in attribute constructors

Cause: A computed attribute constructor returned a QName that is in the pre-defined XML namespace (corresponding to namespace prefix xmlns).

Action: Change the namespace for the computed attribute constructor.

OCI-19265: XQST0045 - invalid or unknown prefix *string* in function declaration

Cause: The declared function name in a function declaration had no namespace prefix or had one of the predefined namespace prefixes other than local.

Action: Fix the function declaration to have the correct prefix.

OCI-19266: XQST0046 - invalid URI

Cause: The given URI contained a lexical form that was not valid according to the definition of xs:anyURI in XML Schema.

Action: Fix the URI.

OCI-19267: module *string* not found

Cause: The module with the given target URI could not be found.

Action: Fix the prolog to import only available modules.

OCI-19268: XQST0048 - namespace *string* does not match target namespace *string*

Cause: The module contained a function or variable whose namespace did not match the target namespace of the module.

Action: Fix the namespace of the function or variable to match the target namespace of the module.

OCI-19269: XQST0049 - variable *string* defined multiple times

Cause: The module defined or imported the same variable multiple times.

Action: Fix the import or the module definition to remove duplicate definitions.

OCI-19270: XPDY0050 - treat failed - expected *string* got *string*

Cause: The type of the operand to the treat expression does not match the required type.

Action: Fix the input operand to be of the correct type. *Params: 1) expected_operand_type: The required operand type. 2) actual_operand_type: The input operand type.

OCI-19271: XPST0051 - invalid atomic type definition

Cause: The QName used as an AtomicType in a SequenceType was not defined as an atomic type in the in-scope type definitions.

Action: Use the correct atomic type name.

OCI-19272: XQDY0052 - invalid atomic value in attribute or element constructor

Cause: The content of the element or attribute constructor included an atomic value that could not be cast into a string.

Action: Fix the content to contain atomic values that can be cast to a string.

OCI-19273: XQST0053 - empty string in namespace declaration

Cause: An empty string was used in a namespace declaration.

Action: Fix the namespace declaration to have a non-empty string.

OCI-19274: XQST0054 - variable initialization failed due to circularity

Cause: A circular definition was encountered when the variable was initialized.

Action: Remove the circularity in the initialization.

OCI-19275: XQST0055 - schema path *string* not found in list of in-scope schema definitions

Cause: The ElementTest specified a schema path that could not be found in the list of in-scope schema definitions.

Action: Include the appropriate schema that can be used to resolve the ElementTest.

OCI-19276: XPST0005 - XPATH step specified an invalid element/attribute name: (*string*).

Cause: The XPATH step specified an invalid element or attribute name that did not match any nodes according to the input XML schema or structure.

Action: Correct the element or attribute name, because the name may have been misspelled.

OCI-19277: XPST0005 - XPath step specifies an item type without matching node: (*string*)

Cause: The XPath step specified an item type that did not match any nodes according to the input XML schema or structure.

Action: Correct the item type definition because the node of such type does not exist in the input XML schema or structure. *Params: 1) xpath_step: The XPath used to match the desired nodes.

OCI-19278: Invalid value: (*string*) for type: (*string*)

Cause: The value was invalid for the type.

Action: Correct the value or change the type.

OCI-19279: XPTY0004 - XQuery dynamic type mismatch: expected singleton sequence - received multi-item sequence

Cause: The XQuery sequence passed in has more than one item.

Action: Correct the XQuery expression to return a single item sequence.

OCI-19280: XQuery dynamic type mismatch: expected atomic value - got node

Cause: A node was passed in to the expression where an atomic value was expected.

Action: Correct the XQuery expression to return an atomic value.

OCI-19281: XQST0055 - It is a static error if a Prolog contains more than one copy-namespaces declaration

Cause: The query prolog contained multiple copy-namespaces declarations.

Action: Remove the duplicate copy-namespaces declarations.

OCI-19282: XQST0068 - It is a static error if query prolog contains more than one XMLSPACE declaration.

Cause: The query prolog contained multiple XMLSPACE declarations.

Action: Remove the duplicate XMLSPACE declarations.

OCI-19283: XQST0031 - It is a static error if the version number specified in a version declaration is not supported by the implementation.

Cause: The query contained a version declaration that is not supported by this implementation.

Action: Change the version declaration to 1.0, which is the version supported by this implementation.

OCI-19284: Encoding specification in version declaration is not supported.

Cause: The version declaration contained an encoding specification.

Action: Remove the encoding specification from the version declaration.

OCI-19285: FODC0002 - error retrieving resource

Cause: The URI provided could not be resolved to a valid resource.

Action: Provide a valid URI for a resource.

OCI-19286: XPST0017 - unable to resolve call to function - *string*

Cause: The name and arity of the specified function call cannot be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions. *Params: 1) function_name: The name of the unmatched called function.

OCI-19287: XPST0017 - invalid number of arguments to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

OCI-19288: XPST0017 - invalid number of arguments to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

OCI-19289: XQST0034 - function *string:string* declared or defined multiple times

Cause: Multiple functions declared or imported by a module had the same expanded QName and the same number of arguments.

Action: Fix the function declaration or definition to remove duplicates.

OCI-19290: XQST0069 - more than one empty order declaration declared in the prolog

Cause: A prolog had more than one empty order declaration.

Action: Fix the prolog to have just one empty order declaration.

OCI-19291: XPST0081 - specified QName cannot be expanded into a namespace URI

Cause: The namespace prefix of the QName could not be expanded into a namespace URI by using the statically known namespaces.

Action: Use a namespace prefix that can be resolved into a namespace URI from the statically known namespaces.

OCI-19292: XQST0057: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19293: XQST0058: It is a static error if multiple schema imports specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19294: XQST0059: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19295: XQST0060: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19296: XQDY0061: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19297: XQDY0064: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19298: XQST0065: A static error is raised if a Prolog contains more than one ordering mode declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19299: XQST0066: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

OCI-19300: An error occurred in URI processing of *string*.

Cause: An error occurred when processing the Uniform Resource Identifier (URI).

Action: Check all error messages, fix the appropriate problem, and retry the operation. If the problem persists, contact Oracle Support.

OCI-19320: Host name not specified in HTTP URL

Cause: A host name was not specified in the HTTP url

Action: Specify a host name in the HTTP url when creating the URL string

OCI-19321: Could not open HTTP connection to host (*string*): port (*string*)

Cause: A HTTP connection could not be opened to the host

Action: Specify a valid host name and port to connect to

OCI-19322: An error occurred while reading from host (*string*): port (*string*)

Cause: An error occurred while reading from the HTTP host

Action: Specify a valid host name and port to read from

OCI-19323: Invalid url string

Cause: The URL must be a valid URL string

Action: Specify a valid url string

OCI-19330: Type '*string*'.*string*' is not installed. Install the type before using the SYS_DBURIGEN function.

Cause: The type required for the SYS_DBURIGEN function was not installed correctly.

Action: Read the installation notes to install the type correctly. *Params: 1) schema_name: The schema name of the type. 2) type_name: The name of the type.

OCI-19331: Last argument to SYS_DBURIGEN function must be a column.

Cause: The final argument to the SYS_DBURIGEN function was not a column to which the reference was being created.

Action: Specify a valid column name in the query.

OCI-19332: invalid column used in the SYS_DBURIGEN function call

Cause: The argument to the SYS_DBURIGEN function was not a valid column.

Action: Specify a valid column name for the operation.

OCI-19333: invalid flags for CREATE_DBURI operator

Cause: An invalid flags argument was given to the CREATE_DBURI operator.

Action: Specify a valid flag value (TEXT) for the CREATE_DBURI operator.

OCI-19334: invalid column specification for the SYS_DBURIGEN function

Cause: The DBURI generation had columns that were either invalid or did not point to the same table or view.

Action: Specify a valid list of columns that are from the same table or view.

OCI-19335: Invalid format type object

Cause: An invalid format type object was specified for the XML function

Action: Specify a valid format type object

OCI-19336: XML root element is missing.

Cause: The generated XML does not have an enclosing root element.

Action: The generated XML must have a root element.

OCI-19361: ONLINE option not allowed with this type of index

Cause: The ONLINE option was specified to validate the structure of a system-generated metadata index

Action: The ONLINE option can not be used with system-generated metadata indexes such as an LOB index, an IOT Top index, an Index on Clusters etc., Run query without using the ONLINE option.

OCI-19371: invalid update option

Cause: The user attempted to call load_sqlset with an update option that is different than REPLACE and ACCUMULATE.

Action: Adjust the update option and retry the operation.

OCI-19372: invalid update condition

Cause: The user attempted to call load_sqlset with an invalid update condition.

Action: Check the update condition (e.g., NEW.COL1_NAME >= OLD.COL2_NAME) and retry the operation.

OCI-19373: invalid staging table or tablespace

Cause: The user attempted to create a staging table and specified an invalid staging table (or one that already exists) or tablespace

Action: Check the arguments and try again.

OCI-19374: invalid staging table

Cause: The user specified an invalid staging table to one of the pack, unpack, or remap stgtab routines, or the user does not have the correct privileges on the staging table

Action: Provide a correct staging table or grant the appropriate privileges

OCI-19375: no CREATE TABLE privilege on schema "*string*"

Cause: The user tried to create a staging table when he is missing the CREATE TABLE privilege on the specified schema.

Action: Grant the privilege to the user and retry

OCI-19376: no privileges on tablespace provided or tablespace is offline

Cause: The user tried to create a staging table on a tablespace on which he does not have any space allocated, or it is offline

Action: Allocate space on the tablespace, bring it online, and retry

OCI-19377: no "SQL Tuning Set" with name like "*string*" exists for owner like "*string*"

Cause: The user specified a filter to a pack/unpack function for the SQL Tuning Set that targets no STS in the SYS schema or the staging table, respectively

Action: Provide a different filter after checking the state of the system

OCI-19378: invalid mode

Cause: The user specified an invalid mode argument to the capture function.

Action: Provide a mode argument that was defined in the dbmssqlt file

OCI-19379: invalid time_limit or repeat_interval

Cause: Either a NULL value was specified for the time_limit or the repeat_interval value, or the repeat_interval value was greater than the time_limit value.

Action: Provide a non-NULL value and ensure that time_limit value is greater than or equal to the repeat_interval value.

OCI-19380: invalid plan filter

Cause: The user specified an invalid filter for the plan when calling the select_sqlset table function.

Action: Adjust the the filter to be one of the following values and retry the operation: MAX_ELAPSED_TIME, MAX_CPU_TIME, MAX_DISK_READS, MAX_OPTIMIZER_COST, MAX_BUFFER_GETS, FIRST_LOADED LAST_LOADED, FIRST_GENERATED, or LAST_GENERATED.

OCI-19381: cannot create staging table in SYS schema

Cause: The user attempted to create a staging table in the sys schema

Action: Create the table in another schema.

OCI-19384: cannot pack into staging table from previous version

Cause: An attempt was made to perform a pack operation on a staging table from a previous version.

Action: Create a staging table in the current version and retry the operation.

OCI-19385: staging table is empty

Cause: An attempt was made to perform an operation on an empty staging table.

Action: Check the staging table to ensure that it has rows.

OCI-19386: target object already exists for tuning task "string"

Cause: An attempt was made to set a target object for a tuning task when one had already been set.

Action: Create a new task if another target object is needed.

OCI-19387: "SQL Tuning Set" "string" belongs to another tuning task

Cause: The user attempted to tune a task-managed SQL Tuning Set belonging to one task within the scope of another task.

Action: Check the SQL Tuning Set and retry the operation.

OCI-19388: operation not supported for "SQL Tuning Set" type

Cause: The attempted operation was unsupported for the type of the given SQL Tuning Set.

Action: Check the SQL Tuning Set and retry the operation.

OCI-19389: LOB types are not supported for SQL binds

Cause: A LOB type was provided in a SQL bind list.

Action: Replace the LOB binds with legal bind types or try another SQL.

OCI-19390: The profile type is not valid

Cause: The profile type is not valid.

Action: Check the available profile types.

OCI-19400: System type conflict with object SYS.string

Cause: The user had an object with the same name as one of the system types. The system types were not initialized properly.

Action: Remove the conflicting object and rerun migration.

OCI-19500 to OCI-19998

OCI-19500: device block size *string* is invalid

Cause: the device block size returned by sequential I/O OSD is invalid

Action: If the block size was set by using the PARMS option of the Recovery Manager ALLOCATE CHANNEL command, then the specified block size must be changed. If no PARMS option was specified on the ALLOCATE CHANNEL command, then this is an internal error that should be reported to Oracle.

OCI-19501: read error on file "*string*", block number *string* (block size=*string*)

Cause: read error on input file

Action: check the file

OCI-19502: write error on file "*string*", block number *string* (block size=*string*)

Cause: write error on output file

Action: check the file

OCI-19503: cannot obtain information on device, name="*string*", type="*string*", parms="*string*"

Cause: call to get device information returned an error

Action: check device name, type and parameters

OCI-19504: failed to create file "*string*"

Cause: call to create file returned an error

Action: check additional messages, check access permissions.

OCI-19505: failed to identify file "*string*"

Cause: call to identify the file returned an error

Action: check additional messages, and check if the file exists.

OCI-19506: failed to create sequential file, name="*string*", parms="*string*"

Cause: call to create the sequential file returned an error

Action: check additional messages, check access permissions.

OCI-19507: failed to retrieve sequential file, handle="*string*", parms="*string*"

Cause: call to retrieve the sequential file returned an error

Action: check additional messages, and check if the file exists.

OCI-19508: failed to delete, resize, or close file "*string*"

Cause: A request to delete, resize, or close a file failed.

Action: No action is required. Check the additional messages in the trace file.

OCI-19509: failed to delete sequential file, handle="string", parms="string"

Cause: call to delete the sequential file returned an error

Action: check additional messages.

OCI-19510: failed to set size of string blocks for file "string" (block size=string)

Cause: call to resize the file returned an error

Action: check additional messages.

OCI-19511: non RMAN, but media manager or vendor specific failure, error text:\n string

Cause: An error occurred in the media management software which is linked with the Oracle server to perform backup and restore in cooperation with Recovery Manager.

Action: If the text of message 19511 does not provide enough information to resolve the problem, then you should contact the vendor of the media management software.

OCI-19512: file search failed

Cause: Recovery manager or Oracle Server attempted to discover files that matched the specified pattern but failed.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

OCI-19513: failed to identify sequential file

Cause: Unable to identify the sequential file.

Action: Check additional messages, and check if the file exists on media.

OCI-19515: removal of a pattern from string not allowed

Cause: An existing pattern could not be removed from the named initialization parameter because it was being used to map from the primary file name to the standby file name.

Action: New patterns can be added to the end of the existing set of patterns, or the setting can be reset in the SPFILE and the database restarted.

OCI-19525: tempfile for the clone database must be renamed

Cause: Opening a clone database failed because Oracle server forces the tempfile to be renamed, in order to avoid overwriting the primary tempfile.

Action: Rename the tempfiles manually or automatically by using the DB_FILE_NAME_CONVERT initialization parameter.

OCI-19526: only one location allowed for parameter string

Cause: A list of default locations was provided in an Oracle-managed files parameter.

Action: Edit the parameter to include a single location.

OCI-19527: physical standby redo log must be renamed

Cause: An attempt was made to clear redo log at a physical standby database. Clearing an OMF redo log will not work unless DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter is specified. Clearing a non-OMF (or user-defined) redo log file will not work unless the LOG_FILE_NAME_CONVERT initialization parameter is set.

Action: Set DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter for OMF redo log files and re-issue the operation that attempted to clear redo log. Set LOG_FILE_NAME_CONVERT parameter for non-OMF redo log files and re-issue the operation that attempted to clear redo log.

OCI-19528: redo logs being cleared may need access to files

Cause: The redo logs are being cleared. This procedure may need the files this operation is being applied to.

Action: Wait for the redo logs to be cleared.

OCI-19529: Pattern *string* in initialization parameter *string* has an Oracle Managed Files file name.

Cause: An attempt was made to convert a database file name to an Oracle Managed Files file name using DB_FILE_NAME_CONVERT, PDB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameter. This was not a valid operation.

Action: Retry the operation with a pattern template instead of a full Oracle Managed Files file name.

OCI-19530: During the back up, the data file *string* is moved or rekeyed to *string*.

Cause: The data file has been moved or rekeyed.

Action: Check the status of the data file and try this command again.

OCI-19550: cannot use backup/restore functions while using dispatcher

Cause: Attempted to use backup/restore functions while connected to the dispatcher in a shared server. This is not allowed because the device that is used for backup and restore must remain allocated to a single process.

Action: Connect directly to the instance then re-execute the backup or restore function.

OCI-19551: device is busy, device type: *string*, device name: *string*

Cause: The indicated device could not be allocated because it is allocated to another session, or no device was named, or all devices of the requested type are busy.

Action: Either attempt to allocate another device or wait until the required device is no longer busy.

OCI-19552: device type *string* is invalid

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

OCI-19553: device name *string* is invalid

Cause: The device name indicated is invalid.

Action: Supply a valid device name and retry the allocation. *Params: 1) device_name: The device name specified in the Recovery Manager (RMAN) command.

OCI-19554: error allocating device, device type: *string*, device name: *string*

Cause: The specified device could not be allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

OCI-19555: invalid LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value

Cause: The value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was not set within the valid range.

Action: Specify a correct value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST. If the archive log parameters LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST are in use, set parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to either 1 or 2.

OCI-19556: required destination LOG_ARCHIVE_DUPLEX_DEST currently is deferred

Cause: The destination for parameter LOG_ARCHIVE_DUPLEX_DEST was deferred when it was required to be enabled. The destination was deferred automatically when an ALTER SYSTEM command for parameter LOG_ARCHIVE_DEST defined a destination which duplicated an existing LOG_ARCHIVE_DUPLEX_DEST parameter destination.

Action: Change the destination value for the LOG_ARCHIVE_DUPLEX_DEST parameter.

OCI-19557: device error, device type: *string*, device name: *string*

Cause: An error occurred in the platform-specific device code.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation. *Params: 1) device_type: The device type specified in Recovery Manager (RMAN). 2) device_name: The device name of the device type.

OCI-19558: error de-allocating device

Cause: The specified device could not be de-allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

OCI-19559: error sending device command: *string*

Cause: An error occurred while sending the indicated command to the session device.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

OCI-19560: *string* is not a valid device limit name

Cause: An invalid name of device limit was specified in a call to DBMS_BACKUP_RESTORE.SETLIMIT.

Action: Use one of the device limit names described in dbmsbkrs.sql

OCI-19561: *string* requires a DISK channel

Cause: The attempted command requires that a DISK device channel be allocated to the session, but a non-DISK device was found.

Action: Deallocate the current device and allocate a DISK channel, then then retry the command.

OCI-19562: File *string* is empty.

Cause: The indicated file, which is an archived log, control, or data file, was found to be empty during a copy, backup, or scan operation.

Action: Ensure that the correct files are being specified for the copy or backup operation.

OCI-19563: *string* header validation failed for file *string*

Cause: When opening the file to be placed in a copy or backup set to be inspected or used as the target for an incremental restore, the header was not recognized as a valid file header for a file of the indicated type (data file, archived log, or control file) belonging to the current database.

Action: Ensure that the correct files are being specified for the copy or backup operation.

*Params: 1) operation: The operation encountering an error. 2) file_name: The name of the file being processed.

OCI-19564: error occurred writing *string* bytes at block number *string*

Cause: An error occurred while writing to a file.

Action: One or more other messages should be displayed to describe the cause of the error. Correct the error if possible, then retry the copy, backup, or restore operation. *Params: 1) number_bytes: The number of bytes to write on the target file. 2) block_number: The target file block number.

OCI-19565: BACKUP_TAPE_IO_SLAVES not enabled when duplexing to sequential devices

Cause: An attempt was made to specify duplexing to sequential devices, but the BACKUP_TAPE_IO_SLAVES initialization parameter was not enabled.

Action: Specify BACKUP_TAPE_IO_SLAVES=TRUE in the INIT.ORA file, or do not specify duplexing to sequential devices.

OCI-19566: exceeded limit of *string* corrupt blocks for file *string*

Cause: The user-specified limit of allowable corrupt blocks was exceeded while reading the specified data file for a data file copy or backup.

Action: None. The copy or backup operation fails. The session trace file contains detailed information about which blocks were corrupt. *Params: 1) corrupt_limit: The corrupt block upper limit. 2) data_file: The data file to be backed up.

OCI-19567: cannot shrink file *string* because it is being backed up or copied

Cause: An ALTER statement attempted to reduce the size of the indicated file while the same file is being backed up or copied.

Action: Retry the resize after the backup or copy is complete.

OCI-19568: A device is already allocated to this session.

Cause: An attempt was made to allocate a device to a session when another device was already allocated.

Action: Deallocate the current device.

OCI-19569: No device is allocated to this session.

Cause: An operation was attempted that requires a device to be allocated to the current session, and there is no device allocated.

Action: Allocate a device then retry the operation.

OCI-19570: file number *string* is outside valid range of 1 through *string*

Cause: A file number used in a copy, backup, or restore operation was not valid for the current database.

Action: Specify a valid file number. *Params: 1) file_number: The target file number. 2) max_file_number: The maximum supported file number.

OCI-19571: *string* RECID *string* STAMP *string* not found in control file

Cause: The input file specified for a copy or backup operation could not be opened because the record describing the file is not found in the control file.

Action: Specify a correct RECID/STAMP and retry the copy or backup.

OCI-19572: cannot process file *string*, file is being being resized

Cause: The input file specified for a copy or backup operation could not be opened because the file is being resized.

Action: Wait for the resize to complete then retry the copy or backup.

OCI-19573: cannot obtain *string* enqueue for datafile *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation. If the enqueue type shown is 'shared', then the file is the input file for a backup or copy. If the type is 'exclusive', then the file is the output file for a datafile copy or restore which is attempting to overwrite the currently active version of that file - in this case, the file must be offline or the database must be closed. If the type is 'read-only', then you are attempting to back up or copy this file while the database is in NOARCHIVELOG mode.

Action: Wait until the conflicting operation is complete, then retry the copy or backup. If the database is in NOARCHIVELOG mode, then all files being backed up must be closed cleanly.

OCI-19574: output file name must be specified

Cause: This type of copy or restore requires an output file name.

Action: Specify an output file name and retry the copy.

OCI-19575: Expected *string* blocks in file *string*, but found *string*.

Cause: During a backup, restore, copy, or scan operation the specified file did not contain as many blocks as were indicated in the file header.

Action: The input copy or backup piece specified is probably corrupt. If there is another copy or backup piece of the file being restored, delete the corrupt file from the recovery catalog and retry.

OCI-19576: data file *string* not defined in control file

Cause: The specified file number was not found in the control file.

Action: Specify a valid file number and retry the Recovery Manager (RMAN) operation. *Params: 1) datafile_number: The data file number specified in the RMAN command.

OCI-19577: File *string* is missing.

Cause: A COPYDATAFILECOPY, RESTOREDATAFILETO or PROXYRESTOREDATAFILE function specified a file number but did not specify an output file name, indicating that the output file name should be taken from the control

file. However, the control file entry for this file indicates that it was created for a file that was present in the data dictionary but not named during the last CREATE CONTROLFILE statement, so the name in the control file cannot be used for restoration.

Action: Either specify an output file name or issue a SQL RENAME statement to enter a valid name for this file in the control file. *Params: 1) file_name: The file to create during the COPYDATAFILECOPY, RESTOREDATAFILETO or PROXYRESTOREDATAFILE operation.

OCI-19578: end of volume while duplexing to sequential files, backup piece incomplete

Cause: An end of volume (EOV) condition was detected while duplexing to sequential files, and this condition cannot be handled currently.

Action: Before retrying the backup, make sure the backup pieces will fit in the volume, or disable duplexing.

OCI-19579: archived log record for *string* not found

Cause: No archived log record corresponding to input file could be found in the control file.

Action: Specify a valid archived log file name and retry the operation.

OCI-19580: *string* conversation not active

Cause: A backup, restore, or related operation is being attempted before the conversation is started.

Action: Start a conversation first, and then retry the operation.

OCI-19581: no files have been named

Cause: An attempt was made to proceed from the file naming phase to the piece processing phase of a backup or restore conversation before any files have been specified for backup or restore.

Action: Specify some files then retry the operation.

OCI-19582: archived log file header validation for *string* failed

Cause: The archived log file header was corrupt and could not be validated.

Action: Provide a valid archived log file and retry the operation. *Params: 1) log_filename: The archived log file name.

OCI-19583: conversation terminated due to error

Cause: An error occurred which forced the termination of the current backup or restore conversation.

Action: There should be other error messages to help identify the cause of the problem. Correct the error and begin another conversation.

OCI-19584: file *string* already in use

Cause: The indicated file, which was specified as the target for a copy, restore, or delete operation is already in use by the database.

Action: Specify a different name and retry the operation.

OCI-19585: premature end of volume on piece *string*

Cause: While creating the indicated backup piece, an end-of-volume condition was encountered before all of the backup set control data was written to the backup piece. This is

most likely a media error, because the amount of backup set control data is very small in relation to the total amount of data in a backup set.

Action: Retry the piece with a larger piece of output media.

OCI-19586: The *string* k-byte limit is too small to hold piece directory.

Cause: The user-specified limit for the MAXPIECESIZE parameter for this channel is not enough to hold the backup set control data.

Action: Allocate a channel specifying a larger value for the MAXPIECESIZE parameter, and retry the operation.

OCI-19587: error occurred reading *string* bytes at block number *string*

Cause: An error occurred while reading from a file.

Action: Other messages should be displayed describing the cause of the error. Correct the error and then retry the copy, backup, or restore operation. *Params: 1) read_bytes: The number of bytes attempted to be read. 2) block_number: The corrupt block number.

OCI-19588: *string* RECID *string* STAMP *string* is no longer valid

Cause: The indicated record was marked as deleted. This indicates that the corresponding file has either been overwritten by another copy or restore, or that the copy was consumed by a SWITCHTOCOPY operation.

Action: If you know the name of the file that you want to copy, then inspect it and retry the copy specifying the new RECID. *Params: 1) object_type: The object type of the record. 2) record_id: The record ID in the control file. 3) set_stamp: The set stamp of the object.

OCI-19589: *string* is not a snapshot or backup control file

Cause: The control file that is the source for a backup or copy operation is not a snapshot or backup control file.

Action: Specify the name of a snapshot or backup control file.

OCI-19590: conversation already active

Cause: You tried to begin a backup or restore conversation, but another conversation is already active in this session.

Action: Either continue the current conversation, or call BACKUPCANCEL or RESTORECANCEL to end the current conversation before starting a new one.

OCI-19591: backup aborted because job time exceeded duration time

Cause: You tried to backup with duration option and the time provided was not sufficient to complete the backup.

Action: Adjust the duration time and re-run the command. Or run the backup command without duration option.

OCI-19592: wrong *string* conversation type

Cause: You attempted to specify a type of file for a backup or restore operation, but the current conversation cannot process this type of file. For example, you specified an archived log to be included in a data file backup set. The specified file will not be included in the backup or restore operation.

Action: No action required: the conversation is still active, and more files can be specified.

OCI-19593: data file number *string* already included as *string*

Cause: This data file was already specified for inclusion in this backup or restore conversation. A backup or restore conversation can process only a single instance of a data file.

Action: No action required. The conversation is still active, and more files can be specified.

*Params: 1) `data_file_number`: The data file number of the target data file. 2)

`data_file_name`: The data file name of target data file.

OCI-19594: control file already included as *string*

Cause: The control file is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the control file.

Action: No action required - the conversation is still active, and more files can be specified.

OCI-19595: archived log *string* already included in backup conversation

Cause: The indicated archived log had already been specified for inclusion in this backup conversation.

Action: No action required. The conversation is still active, and more files can be specified.

OCI-19596: SPFILE already included

Cause: The SPFILE is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the SPFILE.

Action: No action required. The conversation is still active, and more files can be specified.

OCI-19597: file *string* block size *string* does not match backup set block size *string*

Cause: A file was specified for inclusion in a backup set, but its logical block size is different from the other files in the backup set. All files in a backup set must have the same logical block size.

Action: Specify a file that has the same block size as the other files in the backup set. The conversation is still active and more files can be specified. *Params: 1) `file_name`: The name of the file whose size is incorrect. 2) `file_size`: The offending size of the named file. 3) `block_size`: The correct block size that the second parameter should match.

OCI-19598: cannot backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE had been used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE.

OCI-19599: Block number *string* is corrupt in *string string*.

Cause: A corrupt block was found in a control file, archived log, or backup piece that is being read to create a backup or copy. Corruption cannot be allowed in control files, archived logs, or backup pieces.

Action: No action necessary. The copy or backup operation failed. In the case of a backup set, the conversation is active and the piece may be retried.

OCI-19600: input file is *string string (string)*

Cause: This message identifies the input file for a failed copy operation. Both the file number and name (if the name has been determined) are shown. For a datafile, the file number refers to the datafile's absolute file number as shown in the DBA_DATA_FILES view. For a datafile copy, the file number refers to the copy's control file record number as shown in the RECID column of the V\$DATAFILE_COPY view. For an archived log, the file number refers to the log's control file record number as shown in the RECID column of the V\$ARCHIVED_LOG view.

Action: See other error message.

OCI-19601: output file is *string string (string)*

Cause: This message identifies the output file for a failed copy operation. The fields are as described in message 19600. When creating a new datafile copy, its control file record number may not have been determined when the message is printed. In that case, the record number shown is zero.

Action: See other error message.

OCI-19602: cannot backup or copy active file in NOARCHIVELOG mode

Cause: An attempt was made to copy or backup a file that was not closed cleanly, and the database was in NOARCHIVELOG mode. This is not allowed because, when restored, the file requires redo application before it is usable, and redo is not currently being saved beyond the contents of the online redo logs.

Action: Take the tablespace cleanly offline or close the database and retry the copy or backup.

OCI-19603: cannot backup or copy an active file with KEEP ... UNRECOVERABLE options

Cause: You tried to copy or backup a file, which was not closed cleanly, with KEEP ... UNRECOVERABLE option. This is not allowed because when the file is restored, it will require redo logs before it becomes usable, and redo logs will not have been saved because of KEEP ... UNRECOVERABLE option.

Action: Take the tablespace offline cleanly, or close the database and retry the operation.

OCI-19604: conversation file naming phase is over

Cause: A call was made to specify a file for backup or restore operation after the first backup piece was processed.

Action: Specifying more files to be processed during a backup or restore conversation is not allowed after the first backup piece has been processed. To more files must be specified, then begin a new conversation.

OCI-19605: input file name must be specified

Cause: The input file name was not specified for a control file copy operation.

Action: Specify an input file name and retry the operation.

OCI-19606: cannot copy or restore to snapshot control file

Cause: A control file copy or restore operation specified the name of the snapshot control file as the output file. It overwriting the snapshot control file is not permitted in this manner. Other methods are available to create the snapshot control file.

Action: Specify a different file name and retry the operation. If this is a restore, then the restore conversation remains active and more files may be specified.

OCI-19607: *string* is an active control file

Cause: A control file copy, restore, or backup specified a control file named in the initialization parameter file as the input or output file.

Action: Specify a different file name and retry the operation. If this is a backup or restore conversation, then the conversation remains active and more files may be specified.

*Params: 1) control_file: The file name of the control file backup.

OCI-19608: *string* is not a backup piece

Cause: The specified file is not a backup piece produced by the DBMS_BACKUP_RESTORE package. Either the first block of the backup piece is corrupt or this file is not a backup piece.

Action: Specify a different file name and retry the operation.

OCI-19609: *string* is from different backup set: stamp *string* count *string*

Cause: The specified file was not from the backup set that is currently being processed. It is part of a different backup set. The identification of the set containing this piece is shown.

Action: Specify the correct backup piece and retry the operation. *Params: 1) backup_piece: The backup piece being processed. 2) backup_set_actual: The backup set name to which the backup piece belongs. 3) backup_set_count: The backup set count of the backup piece.

OCI-19610: Backup piece directory block *string* is corrupt.

Cause: The indicated directory block failed checksum validation. This backup piece is unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation.

OCI-19611: backup piece out of order. Expected *string* but found *string*

Cause: This backup piece is out of sequence.

Action: Supply the correct backup piece.

OCI-19612: datafile *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

OCI-19613: datafile *string* not found in backup set

Cause: The indicated file could not be restored, because it is not in this backup set. If the file number is zero, then this refers to the control file.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

OCI-19614: archived log thread *string* sequence *string* not found in backup set

Cause: The indicated archived log file was named explicitly for restoration but is not contained in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

OCI-19615: some files not found in backup set

Cause: Some files that were specified for restoration were not found in the backup set directory. Error message 19613 or 19614 is issued for each file that was not found.

Action: See the instructions for error message 19613.

OCI-19616: output file name must be specified if database not mounted

Cause: A datafile restore specified no target file name, but the database is not mounted. The database must be mounted when no target file name is specified, so that the target file name can be obtained from the control file.

Action: The restore conversation remains active. If you wish to restore datafiles without their target file names, then mount the database before continuing. Otherwise, a target file name must be specified on all datafile restoration calls.

OCI-19617: File *string* contains different RESETLOGS data.

Cause: The indicated file contains RESETLOGS data that is different from the archived log files that are already included in the backup set. All archived log files in a backup set must have the same RESETLOGS data.

Action: The restore conversation remains active, and you can continue to specify archived log files for inclusion in the backup set.

OCI-19618: cannot name files after RESTOREVALIDATE has been called

Cause: A call was made to specify a file to restore from a backup set, but a previous call to RESTOREVALIDATE had already been made.

Action: Cancel and restart the conversation to specify the files to restore.

OCI-19619: cannot call RESTOREVALIDATE after files have been named

Cause: RESTOREVALIDATE was called after some files had already been specified for restoration.

Action: You must cancel and restart the conversation if you wish to call RESTOREVALIDATE.

OCI-19620: *string* is not of *string* type

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: The indicated file cannot be processed. Ensure that the correct files are being specified for the copy or backup operation.

OCI-19621: archived log range is already specified

Cause: A range of logs was already specified. Only one system change number (SCN) range can be specified for each conversation.

Action: The restore conversation remains active and more logs may be specified by thread and sequence number, if desired.

OCI-19622: archived log thread *string* sequence *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

OCI-19623: file *string* is open

Cause: A SWITCHTOCOPY operation specified a datafile copy whose parent datafile is open.

Action: Take the owning tablespace offline or close the database, then retry the operation.

OCI-19624: operation failed, retry possible

Cause: A backup, restore, or image copy operation failed with an I/O error. If the source of the I/O error can be corrected, then the operation may be retried.

Action: This message is used by the Recovery Manager to decide whether or not to retry the operation.

OCI-19625: error identifying file *string*

Cause: A file specified as input to a copy or backup operation, or as the target for an incremental restore, could not be identified as an Oracle file. The file may have been deleted or moved so that it is no longer accessible to RMAN. An operating system-specific error accompanies this error to help pinpoint the problem.

Action: Specify a different file and retry the operation. If the problem file has simply been deleted or moved, you can run crosscheck to allow RMAN to update its metadata with the correct file status.

OCI-19626: backup set type is *string* - can not be processed by this conversation

Cause: The data in the backup set is not compatible with the current conversation.

Action: Either supply the first piece from a backup set that matches the current conversation or start a new restore conversation which can process this backup set.

OCI-19627: cannot read backup pieces during control file application

Cause: This is a control file restore conversation, which is using the offline range information from one or more control files to update datafile checkpoint data. Backup sets are not used during this type of conversation.

Action: The conversation is still active and more control files may be applied.

OCI-19629: no files in specified archived log SCN range

Cause: This backup set contains no files in the specified range.

Action: Either supply a backup set that contains files in the correct range or start a new conversation and specify a range which will select some files from this backup set.

OCI-19630: end of volume encountered while copying backup piece

Cause: While copying a backup piece from the OS native file system to an output device, the output device encountered end-of-volume.

Action: The copy fails. This could happen if a tape was used which is not large enough to hold the entire backup piece.

OCI-19631: archived log record does not contain a file name

Cause: This archived log record represented a switch into an active log that took place without archiving its prior contents. The prior contents of the log file were lost.

Action: Specify the RECID of an archived log record that contains a file name. Fixed view V\$ARCHIVED_LOG can be used to examine the archived logs.

OCI-19632: file name not found in control file

Cause: The name passed to GETFNO was not found in the control file.

Action: Supply a valid file name.

OCI-19633: control file record *string* is out of sync with recovery catalog

Cause: The control file record describing the file to be deleted in a call to DELETEDBACKUPPIECE, DELETEDATAFILECOPY, PROXYDELETE or DELETEDARCHIVEDLOG does not match the validation data supplied by recovery manager.

Action: contact Oracle support

OCI-19634: file name required for this function

Cause: The FNAME or HANDLE parameter was not specified for DELETEDPIECE, DELETEDATAFILECOPY, DELETEDREDOLOG or PROXYDELETE.

Action: Specify the FNAME or HANDLE parameter when calling these functions.

OCI-19635: input and output file names are identical: *string*

Cause: Identical input and output file names were specified for a data file copy operation.

Action: Specify an output file name that is different from the input file name. *Params:
1) file_name: The file name specified for the data file copy operation.

OCI-19636: archived log thread *string* sequence *string* already included

Cause: The indicated archived log has already been specified for inclusion in this restore conversation. A restore conversation may process only one copy of any archived log.

Action: No action required - the conversation is still active, and more files can be specified.

OCI-19637: Backup piece file name for Oracle Recovery Manager (RMAN) must be specified.

Cause: Attempted to create an RMAN backup without specifying the name of the backup piece(s) to be created.

Action: Supply a file name using the RMAN FORMAT option and retry.

OCI-19638: file *string* is not current enough to apply this incremental backup

Cause: The checkpoint of the target for this incremental backup was less than the start of the incremental backup. If this backup were applied, then any changes made between the data file checkpoint and the start of the incremental backup could be lost.

Action: Supply a backup set that can be applied and retry the operation. *Params: 1) data_file: The target data file to be restored.

OCI-19639: file *string* is more current than this incremental backup

Cause: The checkpoint of the target for this incremental backup is greater than or equal to the checkpoint of the file in the incremental backup set. This backup cannot advance the checkpoint of the target file, so there is no point in applying it.

Action: Supply a backup set that can be applied and retry the operation.

OCI-19640: Data file checkpoint system change number (SCN) is *string* at time *string*.

Cause: If you attempted a backup operation, the checkpoint is too old to take an incremental backup of the data file. If you attempted a restore operation, the checkpoint is too old for an incremental backup to be applied on the data file.

Action: See accompanying error messages.

OCI-19641: backup data file checkpoint is system change number (SCN) *string* time *string*

Cause: This message identifies the checkpoint of a data file in an incremental backup set that could not be applied.

Action: See the other error messages accompanying this error message. *Params: 1) scn: The data file checkpoint SCN. 2) time: The timestamp of the SCN.

OCI-19642: start SCN of incremental backup is *string*

Cause: This message identifies the starting SCN of an incremental backup that could not be applied.

Action: See other error message.

OCI-19643: For data file *string*, incremental-start SCN is too recent.

Cause: The incremental-start SCN which was specified when starting an incremental backup of a data file is greater (more recent) than the data file's checkpoint SCN, which could cause some blocks to be missed by the backup.

Action: Specify a smaller (less recent) incremental-start SCN.

OCI-19644: datafile *string*: incremental-start SCN is prior to RESETLOGS SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the RESETLOGS SCN.

Action: Specify a larger incremental-start SCN.

OCI-19645: For data file *string*, incremental-start SCN is prior to creation SCN *string*.

Cause: The incremental-start SCN, which was specified when starting an incremental backup of a data file, is less than the data file's creation SCN.

Action: Specify a larger incremental-start SCN.

OCI-19646: cannot change size of data file *string* from *string* to *string*

Cause: Restore required adjustment to the size of the file as indicated, but the file size adjustment failed.

Action: Examine the other messages that indicate the cause of the failure. *Params: 1) *data_file*: The target data file to be restored. 2) *old_size*: The size of the data file before being resized. 3) *new_size*: The size of the data file after being resized.

OCI-19647: non-zero LEVEL cannot be specified when INCREMENTAL is FALSE

Cause: BACKUPSETDATAFILE was called with a non-zero backup_level and a FALSE incremental indication.

Action: Either set incremental to TRUE or change backup_level to zero.

OCI-19648: datafile *string*: incremental-start SCN equals checkpoint SCN

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is equal to the datafile's checkpoint SCN. Since an incremental backup can only be applied to a datafile whose checkpoint SCN is between the backup set incremental-start SCN (inclusive) and the backup set checkpoint SCN (exclusive), there is no datafile that this backup set could ever be applied to.

Action: Specify a smaller incremental-start SCN. NOTE that this message will usually only be encountered by the user while taking an incremental backup with Recovery Manager. Recovery Manager should intercept all usual cases of this error and simply ignore the incremental backup for this file. So, if you do encounter this error, please report it to Oracle Support.

OCI-19649: offline-range record RECID *string* STAMP *string* not found in file *string*

Cause: APPLYOFFLINERANGE was called with a RECID/STAMP which was not found in the indicated control file. This probably means that the specified control file is no longer the same control file that Recovery Manager thinks it is.

Action: Specify the RECID/STAMP of a record that exists in the control file copy.

OCI-19650: Offline-range record RECID *string* STAMP *string* in file *string* has SCN *string*

Cause: This messages identifies the offline-clean SCN from the indicated offline-range record in the indicated file.

Action: See other error message.

OCI-19651: cannot apply offline-range record to datafile *string*: SCN mismatch

Cause: APPLYOFFLINERANGE cannot apply an offline-range record to a target datafile unless the datafile's checkpoint SCN exactly matches the offline-clean SCN in the specified offline-range record.

Action: Specify an offline-range record whose offline-clean SCN matches the target datafile's checkpoint.

OCI-19652: cannot apply offline-range record to datafile *string*: file is fuzzy

Cause: The target datafile for an APPLYOFFLINERANGE call is fuzzy.

Action: Specify a target datafile that is closed cleanly.

OCI-19653: cannot switch to older file incarnation

Cause: SWITCHTOCOPY was called with a data file copy for a data file that was dropped prior to the time that this control file was backed up.

Action: Restore and mount an earlier control file. It is acceptable to use a control file that was backed up prior to the creation of the specified data file.

OCI-19654: must use backup control file to switch file incarnations

Cause: This SWITCHTOCOPY operation attempted to switch incarnations of a data file, but the currently mounted control file was not a backup control file.

Action: Restore and mount a backup control file.

OCI-19655: cannot switch to incarnation with different RESETLOGS data

Cause: This SWITCHTOCOPY operation attempted to switch to a data file that came from a different RESETLOGS version of the database.

Action: Either restore a backup control file that was taken from the same database version as the target data file copy, or switch to a different data file copy.

OCI-19656: cannot backup, copy, or delete online log *string*

Cause: The indicated log file is an active log. You can only backup, copy, or delete archived logs.

Action: The indicated log file cannot be processed - select another file.

OCI-19657: cannot inspect current datafile *string*

Cause: The file being inspected is already part of the currently mounted database.

Action: None - the file is already part of the database.

OCI-19658: cannot inspect *string* - file is from different RESETLOGS

Cause: The RESETLOGS data in the log file being inspected does not match that in the currently mounted control file.

Action: The indicated file cannot be processed - inspect another file.

OCI-19659: incremental restore would advance file *string* past RESETLOGS

Cause: This incremental backup cannot be applied to the specified datafile, because the datafile is from an earlier incarnation of the database, and its checkpoint would be advanced too far to be recoverable in the current incarnation of the database.

Action: This incremental cannot be applied to this datafile. If you wish to recover the file to the RESETLOGS SCN so that the database can be opened with the RESETLOGS option, then you must use redo-log recovery, not incremental restore, to continue recovering this file.

OCI-19660: some files in the backup set could not be verified

Cause: A restore conversation was made to verify all the files in a backup set, and the files which were printed in messages 19661 or 19662 could not be verified because corrupt blocks for those files were found in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated files cannot be restored from this backup set.

OCI-19661: datafile *string* could not be verified due to corrupt blocks

Cause: Some data blocks for the indicated datafile were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated datafile cannot be restored from this backup set. Examine the alert log and trace files for more information.

OCI-19662: archived log thread *string* sequence *string* could not be verified

Cause: Some data blocks for the indicated archived log were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated archived log cannot be restored from this backup set.

OCI-19663: cannot apply current offline range to datafile *string*

Cause: An attempt was made to apply the current offline range to the specified datafile, but the datafile is either not current enough or is not at the correct SCN to apply the offline range.

Action: The datafile remains unchanged.

OCI-19664: file type: *string*, file name: *string*

Cause: This message is issued to identify the file which is the subject of an error.

Action: None - this is an informational message. There should be other Oracle messages explaining the cause of the error.

OCI-19665: size *string* in file header does not match actual file size of *string*

Cause: The size of the file as indicated in the file header does not match the true size of the file. The two differing sizes are shown in units of logical blocks.

Action: This file is not usable - it has most likely been truncated.

OCI-19666: cannot do incremental restore of the control file

Cause: The control file was included in an incremental restore conversation

Action: If you wish to restore the control file, you must do a full restore of the control file

OCI-19667: cannot do incremental restore of data file *string*

Cause: The backup of the data file was a full backup.

Action: To restore the data file, do a full restore of the data file. *Params: 1) data_file: The target data file being restored.

OCI-19668: cannot do full restore of data file *string*

Cause: The data file backup was incremental.

Action: To restore the data file, do an incremental restore of the data file. *Params: 1) data_file: The data file being restored.

OCI-19669: proxy copy functions cannot be run on DISK channel

Cause: A proxy copy procedure was called, but the device which is allocated to the current session has type DISK.

Action: Allocate a non-DISK channel and retry the operation. Note that proxy copy requires a 3rd-party media management software product that supports the this backup/restore feature.

OCI-19670: file *string* already being restored

Cause: A proxy restore function has already named this file as a restore destination.

Action: Use a different file name. If this message occurs during a Recovery Manager job, then this is an internal error in the Recovery Manager. Contact Oracle Support. *Params: 1) `data_file`: The target data file being restored.

OCI-19671: media management software returned invalid proxy handle

Cause: During a proxy backup or restore, the media management software returned an invalid file handle.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

OCI-19672: media management software returned invalid file status

Cause: During a proxy backup or restore, the media management software returned an invalid file status.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

OCI-19673: error during proxy copy of file *string*

Cause: During a proxy backup or restore, an error occurred while copying this file, but other files may have been copied successfully.

Action: There should be other errors on the error stack that explains why the file could not be successfully copied. *Params: 1) `data_file`: The target data file to proxy copy.

OCI-19674: File *string* is already being backed up with a proxy copy.

Cause: The Recovery Manager (RMAN) attempted to back up the specified file with a proxy copy, but the file was already being backed up by another RMAN job.

Action: Wait until the other RMAN backup of this file is complete, and then retry the backup. *Params: 1) `data_file`: The specified data file to be backed up.

OCI-19675: file *string* was modified during proxy copy

Cause: A proxy backup of the specified file failed because the file was brought on-line or otherwise modified while the proxy backup was in progress. This file was off-line or read-only when the backup began, so the file was not put into hot-backup mode, therefore no modifications are permitted while the backup is in progress.

Action: Take another backup of this file.

OCI-19676: one or more files failed during proxy backup or restore

Cause: During a proxy backup or restore, errors were encountered while processing some files. The files for which no error messages are shown were processed successfully.

Action: Examine the messages regarding the specific files to determine the cause of the problems.

OCI-19677: Recovery Manager (RMAN) configuration name exceeds the maximum length of *string*.

Cause: The configuration name string exceeded the maximum length.

Action: Supply a valid configuration name and retry the function. *Params: 1) `config_max_len`: The maximum length of an RMAN configuration parameter.

OCI-19678: RMAN configuration value exceeds maximum length of *string*

Cause: The configuration value string exceeds maximum length.

Action: Supply a correct configuration value and retry the operation.

OCI-19679: RMAN configuration number *string* is outside valid range of 1 through *string*

Cause: An invalid RMAN Configuration number was specified.

Action: Specify a correct datafile number and retry the operation.

OCI-19680: some blocks not recovered. See trace file for details

Cause: Some blocks are not recovered during block media recovery.

Action: See trace files for details of the problem.

OCI-19681: block media recovery on control file not possible

Cause: file number 0 specified in block media recovery

Action: check file number

OCI-19682: file *string* not in block media recovery context

Cause: Internal error

Action: n/a

OCI-19683: real and backup block size of file *string* are unequal

Cause: block size changed between backup & real file

Action: use right backup

OCI-19684: block media recovery failed because database is suspended

Cause: Database is suspended, probably by an ALTER SYSTEM SUSPEND statement

Action: Execute ALTER SYSTEM RESUME then retry block media recovery

OCI-19685: SPFILE could not be verified

Cause: Some data blocks for the SPFILE were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

OCI-19686: SPFILE not restored due to *string*

Cause: The indicated file could not be restored, because some of its data blocks were not found in the backup piece.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

OCI-19687: SPFILE not found in backup set

Cause: The server parameter file (SPFILE) could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration are not found in the piece. Supply the first backup piece of a backup set that contains the requested file.

OCI-19688: control file AUTOBACKUP format(*string*) for *string* does not have %F

Cause: control file AUTOBACKUP format must contain %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

OCI-19689: cannot have more than one %F in control file AUTOBACKUP format(%0!s) for %1!s

Cause: control file AUTOBACKUP format contains more than one %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

OCI-19690: backup piece release *string* incompatible with Oracle release *string*

Cause: The backup piece was created by incompatible software.

Action: Either restart with a compatible software release or create another backup using the current release.

OCI-19691: *string* is from different database: id=*string*, name=*string*

Cause: The database name or database ID in the backup piece header did not match the one in the control file.

Action: Supply the correct backup piece belonging to this database. *Params: 1) backup_piece: The backup piece name being processed. 2) db_id: The database ID of the backup piece. 3) db_name: The database name of the backup piece.

OCI-19692: missing creation stamp on piece *string*

Cause: The backup piece doesn't have information about creation stamp.

Action: Supply another backup piece which is created by oracle 9i or later version.

OCI-19693: backup piece *string* already included

Cause: This backup piece was already specified for inclusion in the restore conversation. A restore conversation may process a single instance only of a backup piece.

Action: Remove the specified duplicate backup piece in the restore steps and restart the conversation. *Params: 1) piece_name: The duplicate piece name.

OCI-19694: Some changed blocks were not found in the change tracking file.

Cause: A backup or copy found that some changed blocks were not recorded in the change tracking file. The details of the affected files and blocks are in an Oracle trace file.

Action: This indicates that there is a problem with the change tracking feature. Disable change tracking and restart the backup.

OCI-19695: The fixed table X\$KRBMSFT has not been populated.

Cause: This is an internal error. The fixed table X\$KRBMAFT was not populated using the function DBMS_BACKUP_RESTORE.SEARCHFILES.

Action: This is an internal error. Contact Oracle Support.

OCI-19696: control file not found in backup set

Cause: The control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

OCI-19697: standby control file not found in backup set

Cause: The standby control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

OCI-19698: *string* is from different database: id=*string*, db_name=*string*

Cause: Catalog failed because the database id in file header does not match the one in control file.

Action: Supply the correct file belonging to this database.

OCI-19699: cannot make copies with compression enabled

Cause: Image copies cannot be compressed.

Action: If the function DBMS_BACKUP_RESTORE.BACKUPPIECECREATE is called outside Recovery Manager (RMAN), then incompatible values are being passed for the parameters DOCOMPRESS and IMAGCP. If this message occurs during an RMAN job, then this is an internal error in RMAN, and you should contact Oracle support.

OCI-19700: device type exceeds maximum length of *string*

Cause: The device type specified was invalid.

Action: Specify the correct device type and retry the allocation.

OCI-19701: The device name exceeds the maximum length of *string*.

Cause: The device name specified was invalid.

Action: Supply a valid device name and retry the allocation.

OCI-19702: device parameter exceeds maximum length of *string*

Cause: The device parameter exceeded the platform-specific length limit.

Action: Correct the device parameter and retry the operation.

OCI-19703: device command *string* exceeds maximum length of *string*

Cause: The device command *string* exceeded the maximum length.

Action: Correct the command and retry the operation.

OCI-19704: file name exceeds maximum length of *string*

Cause: The specified file name, which was a parameter to a copy, backup, or restore operation, exceeded the maximum file name length for this operating system.

Action: Retry the operation with a shorter file name.

OCI-19705: Tag value exceeds maximum length of *string* characters.

Cause: During a backup or copy operation, a tag value was used that is too long to fit in the file header.

Action: Supply a shorter tag and retry.

OCI-19706: invalid SCN

Cause: The input SCN is either not a positive integer or too large.

Action: Check the input SCN and make sure it is a valid SCN.

OCI-19707: invalid record block number - *string*

Cause: The specified record block number was either negative or too large.

Action: Check the record block number and ensure it is a valid number.

OCI-19708: Log destination exceeds maximum length of *string* characters.

Cause: When starting a restore conversation, the user specified a log restore destination longer than the port-specific maximum length.

Action: Supply a shorter destination and retry.

OCI-19709: numeric parameter must be non-negative integer

Cause: A numeric parameter to an DBMS_BACKUP_RESTORE procedure is negative or contains a fractional portion.

Action: Supply a valid numeric parameter.

OCI-19710: Character set *string* is unsupported.

Cause: When the target database is not mounted, RMAN sets the character set of the target database to the value specified in the user's environment.

Action: Specify a valid character set in the environment. This is usually done via the NLS_LANG environment variable.

OCI-19711: cannot use RENORMALIZEALLFILENAMES while database is open

Cause: An attempt was made to re-normalize all the file names in the control file while the database is open.

Action: Close the database before using the RENORMALIZEALLFILENAMES procedure.

OCI-19712: table name exceeds maximum length of *string*

Cause: The table name string exceeds maximum length.

Action: Retry the operation with a shorter table name.

OCI-19713: invalid copy number: *string*

Cause: The copy number is not in a valid range or the maximum limit has been reached.

Action: Report the error to Oracle Support.

OCI-19714: length for generated name longer than *string*

Cause: The specified format exceeded the maximum length for the piece name.

Action: Change the format to create shorter piece names. *Params: 1) max_length: The maximum length for a piece name.

OCI-19715: invalid format *string* for generated name

Cause: A restricted format or undefined format was used incorrectly.

Action: Change the format specified in the additional information by removing the restricted format.

OCI-19716: error processing format *string* to generate name for backup

Cause: There were errors while processing the format to generate name for backup.

Action: Change the format.

OCI-19717: for non-OMF search the pattern must be specified

Cause: The procedure DBMS_BACKUP_RESTORE.SEARCHFILES was called with an empty pattern while the parameter OMF was set to FALSE.

Action: Either specify the pattern or set the parameter OMF to TRUE.

OCI-19718: length for command ID longer than *string*

Cause: The specified command ID exceeded the maximum length for the command ID.

Action: Supply a shorter command ID and retry the operation.

OCI-19719: length for operation name longer than *string*

Cause: The specified operation name exceeds the maximum length for operation name.

Action: Supply a shorter operation name and retry the operation.

OCI-19720: Error occurred when converting an OCI number into an SCN

Cause: This is most likely caused by an invalid SCN number that came from an external file, such as an export file.

Action: See other errors on the error stack to look for the source of the problem.

OCI-19721: Cannot find data file with absolute file number *string* in tablespace *string*

Cause: One of the data files that should have been in the pluggable set was not found. Alternatively, one of the data files in the pluggable set had already been plugged in from a previous import job and so was excluded from the pluggable set.

Action: Ensure that all of the data files are specified using the import command-line option or parameter files. Also, ensure that none of the data files have already been plugged into the database.

OCI-19722: datafile *string* is an incorrect version

Cause: The datafile is an incorrect version. It contains either less or more changes than the desired version.

Action: Make sure the right datafiles are transported. Make sure the datafile is copied while its tablespace is read only.

OCI-19723: cannot re-create plugged in data file *string*

Cause: The data file was plugged in read only or plugged in as part of pluggable database creation or pluggable database plug-in. It cannot be re-created.

Action: Use the ALTER DATABASE RENAME FILE statement instead.

OCI-19724: snapshot too old: snapshot time is before file *string* plug-in time

Cause: The snapshot SCN is before the SCN at which the referred datafile is plugged into the database.

Action: retry the query.

OCI-19725: can not acquire plug-in enqueue

Cause: There maybe another "ALTER DATABASE RESET COMPATIBILITY" command issued concurrently, preventing this process from acquiring the plug-in enqueue.

Action: retry the operation.

OCI-19726: cannot plug data [*string*] at level *string* into database running at compatibility level *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than what is currently allowed by the database. The string in square bracket is the name of the compatibility type associated with the data.

Action: Raise the "compatible" init.ora parameter and retry the operation.

OCI-19727: cannot plug data [*string*] at level *string* into database running Oracle *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than the release level of the Oracle executable. The string in square bracket is the name of the compatibility type associated with the data.

Action: Upgrade Oracle and retry the operation.

OCI-19728: data object number conflict between table *string* and partition *string* in table *string*

Cause: The non-partitioned table has the same data object number as one of the partitions in the partitioned table. One can not exchange the table with the partition in this case.

Action: Use "alter table move partition" command to move the offending partition, so that the partition will get a new data object number. Retry the operation then.

OCI-19729: File *string* is not the initial version of the plugged in datafile

Cause: The file is not the initial version of the plugged in datafile.

Action: Use the correct initial version of the plugged in datafile.

OCI-19730: can not convert offline plugged-in datafile *string*

Cause: As part of making a tablespace read-write, we need to convert datafiles that are plugged in read-only. The file must be online.

Action: Online the datafile and retry the operation.

OCI-19731: cannot apply change to unverified plugged in data file *string*

Cause: Recovery was not able to verify the specified data file according to information in the control file. Before encountering the change vector for this file, recovery did not find the file conversion redo required to verify this file. This may happen due to a corrupted or incorrect control file used for media recovery.

Action: Use the correct control file and continue recovery.

OCI-19732: incorrect number of datafiles for tablespace *string*

Cause: The number of datafiles in the export file for the referred tablespace is not the same as expected. This is most likely caused by a user editing the export file.

Action: Use the correct export file and retry the operation.

OCI-19733: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

OCI-19734: wrong creation SCN - control file expects converted plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the initial version of plugged-in datafile.

Action: Either restore the converted datafile or continue recovering the datafile.

OCI-19735: wrong creation SCN - control file expects initial plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the converted datafile.

Action: Either restore the initial version of the plugged-in datafile, or continue database recovery, which will recover the control file.

OCI-19736: can not plug a tablespace into a database using a different national character set

Cause: Oracle does not support plugging a tablespace into a database using a different national character set.

Action: Use import/export or unload/load to move data instead.

OCI-19738: cannot find language information for character set: '*string*'

Cause: The compatibility check failed because a character set name that was provided is not valid.

Action: Correct the character set name and retry.

OCI-19739: operation failed, retry is possible and connection is reusable

Cause: A backup, restore, or image copy operation is failing with a retrieval error. The failed operation can be re-tried on the same connection.

Action: This message is used by the Recovery Manager to decide whether or not to retry the operation on the same connection.

OCI-19740: text is longer than *string*

Cause: The specified text exceeds the maximum length for text.

Action: Supply a shorter text and retry the operation.

OCI-19741: *string* exceeds maximum allowable length of *string* for parameter '*string*'

Cause: The specified string exceeded the maximum allowable length for the parameter.

Action: Specify a shorter string for the parameter and retry the operation.

OCI-19742: The specified control file is not a backup control file.

Cause: An attempt was made to mark a control file as unmountable. Only a backup control file can be marked as unmountable during Oracle Recovery Manager (Oracle RMAN) duplicate command processing. This control file is not a backup control file.

Action: Do not use this call for a control file that is not a backup control file.

OCI-19743: could not unmount volume *string:string*

Cause: The specified server and volume combination was not found and could not be unmounted.

Action: Specify the server and volume name correctly to complete the operation successfully.

OCI-19744: Volume *string:string* is currently in use and cannot be unmounted.

Cause: The specified volume could not be unmounted because it was in use and had open files.

Action: Retry the unmount after all open files in the volume have been closed.

OCI-19745: invalid call to DBMS_BACKUP_RESTORE package, reason: *string*.

Cause: The call to the DBMS_BACKUP_RESTORE package was invalid. The DBMS_BACKUP_RESTORE API was either called with invalid arguments or called without required parameters set.

Action: Use the RMAN utility for backup and restore operations. Do not use DBMS_BACKUP_RESTORE package APIs directly.

OCI-19746: Privileged Procedure call from user without SYSBACKUP role

Cause: The call to a privileged DBMS_BACKUP_RESTORE procedure was made by an user without SYSBACKUP or SYSDBA privileges.

Action: Use the RMAN utility for backup and restore operations. Do not use DBMS_BACKUP_RESTORE APIs directly.

OCI-19747: RMAN remote procedure call from user without SYSBACKUP role

Cause: A remote procedure call (RPC) to a Recovery Manager (RMAN) RPC operation was done by a remote user without SYSBACKUP or SYSDBA privilege.

Action: Use the RMAN utility for backup and restore operations. Do not use DBMS_BACKUP_RESTORE APIs directly.

OCI-19748: Backup failure due to NULL checkpoint time in data file records.

Cause: NULL is populating the data file checkpoint time which is invalid.

Action: Validate the data file and ensure that NULL checkpoint time does not get populated.

OCI-19750: change tracking file: '*string*'

Cause: This message reports the name of a file involved in other messages.

Action: See associated error messages for a description of the problem.

OCI-19751: could not create the change tracking file

Cause: It was not possible to create the change tracking file.

Action: Check that there is sufficient disk space and no conflicts in file names and try to enable block change tracking again.

OCI-19752: block change tracking is already enabled

Cause: The ALTER DATABASE ENABLE BLOCK CHANGE TRACKING command was issued, but block change tracking is already turned on for this database.

Action: None, this is an informative message only.

OCI-19753: error writing to change tracking file

Cause: An I/O error occurred while writing to the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

OCI-19754: error reading from change tracking file

Cause: An I/O error occurred while reading from the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

OCI-19755: could not open change tracking file

Cause: The change tracking file could not be opened.

Action: There will be other messages on the error stack that show details of the problem.

OCI-19756: corrupt block number *string* found in change tracking file

Cause: The specified block number was corrupt in the change tracking file.

Action: There will be other messages on the error stack that show details of the problem. There will also be a trace file that contains a complete dump of the corrupt block. *Params: 1) block_number: The block number of the change tracking file.

OCI-19757: could not resize change tracking file to *string* blocks

Cause: An error occurred while trying to change the size of the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

OCI-19758: failed to enable/disable block change tracking: out of SGA memory

Cause: out of SGA memory

Action: Increase SGA and restart the instance.

OCI-19759: block change tracking is not enabled

Cause: A command was entered that requires block change tracking to be enabled, but block change tracking is not enabled.

Action: None, this is an informative message only.

OCI-19760: error starting change tracking

Cause: Change tracking was enabled, but a problem was encountered while enabling the change tracking subsystem in this instance. The alert log and the trace file from the Change Tracking Writer (CTWR) process contains more information about the error.

Action: Examine the trace and alert files. Correct the error if possible, otherwise disable change tracking and contact Oracle Support.

OCI-19761: block size *string* is not valid for change tracking file

Cause: While opening the specified change tracking file, it was found that the file header did not contain a valid logical block size. This probably means that the file is corrupt.

Action: If the file can be repaired, do so, otherwise disable and re-enable change tracking to re-initialize the file.

OCI-19762: invalid file type *string*

Cause: An invalid file type was found in the change tracking file. Some other file was put in place of the change tracking file or the file was corrupt.

Action: Disable and then re-enable change tracking. *Params: 1) *file_type*: The file type found while reading the change tracking file.

OCI-19763: compatibility version *string* is higher than maximum allowed: *string*

Cause: The compatibility version in the change tracking file is greater than what can be used by the current release of Oracle. This can happen when you upgrade, use change tracking with a new release, then downgrade.

Action: Disable then re-enable change tracking.

OCI-19764: database id *string* does not match database id *string* in control file

Cause: The change tracking file is not the correct one for this database. This can happen when the database ID for this database has been changed.

Action: Disable then re-enable change tracking.

OCI-19765: mount ID *string* does not match mount ID *string* in control file

Cause: The change tracking file did not match the one that was present when this instance was opened. In Oracle Real Application Clusters (Oracle RAC), this error is most likely caused by a change tracking file that cannot be consistently updated by all instances.

Action: In Oracle RAC, ensure that the name specified for the change tracking file represents the same disk location for all nodes in the cluster. Disable and then re-enable change tracking. *Params: 1) *mount_id1*: The mount ID found in the change tracking file. 2) *mount_id2*: The mount ID found in the control file.

OCI-19766: missing CHANGE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

OCI-19767: missing TRACKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

OCI-19768: USING clause only valid with ENABLE CHANGE TRACKING

Cause: The USING clause was specified with DISABLE CHANGE TRACKING

Action: Correct the statement.

OCI-19769: missing FILE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

OCI-19770: invalid change tracking file name

Cause: The USING clause was specified with ALTER DATABASE ENABLE BLOCK CHANGE TRACKING, but no file name was given.

Action: Specify the change tracking file name, or omit the USING clause to allow Oracle to create a default name for the change tracking file.

OCI-19771: cannot rename change tracking file while database is open

Cause: The ALTER DATABASE RENAME FILE command was used to rename the change tracking file, and the database is open by one or more instances. The database must be mounted, and not open, to rename the change tracking file.

Action: Close the database and reissue the command.

OCI-19772: change tracking file name exceeds limit of *string* characters

Cause: The name specified for the change tracking file was too long.

Action: Specify a shorter change tracking file name. *Params: 1) filename_length: The character limit of the file name of the change tracking file.

OCI-19773: must specify change tracking file name

Cause: No file name was specified with the ALTER DATABASE ENABLE CHANGE TRACKING command, and the DB_CREATE_FILE_DEST parameter was not set.

Action: Either specify a file name, or set the DB_CREATE_FILE_DEST parameter.

OCI-19776: PROXY restore to Oracle ASM disk group "*string*" is not supported.

Cause: An attempt was made to proxy restore a file to Oracle Automatic Storage Management (Oracle ASM) disk group using a Recovery Manager (RMAN) command. This is not supported.

Action: Use a different file name and reissue the RMAN command. *Params: 1) dg_name: The Oracle ASM disk group specified in the proxy restore command.

OCI-19777: Oracle ASM file *string* cannot be proxy backed up.

Cause: An attempt was made to proxy backup an Oracle Automatic Storage Management (Oracle ASM) file. This is not supported.

Action: Use a different file name and reissue the Recovery Manager (RMAN) command. *Params: 1) asm_file: The specified Oracle ASM file to backup with RMAN.

OCI-19779: could not obtain resilvering status for change tracking file

Cause: An error occurred while obtaining the mirror resilvering status of the change tracking file.

Action: Refer to other error messages shown for additional details of the problem.

OCI-19780: Active Data Guard option not enabled

Cause: Change tracking at a standby database required the Active Data Guard option.

Action: Enable the Active Data Guard option.

OCI-19781: The PROXY option is not supported on sparse file *string*.

Cause: The PROXY option was used with a sparse file. This is not supported.

Action: Do not use the PROXY option with sparse files. *Params: 1) sparse_file: The sparse file to backup.

OCI-19784: error enabling change tracking due to ORA-4031

Cause: The change tracking writer could not get requested memory for buffer allocation.

Action: Try again, if error recurs, increase the large pool size.

OCI-19787: block change tracking is in transition state

Cause: The ALTER DATABASE ENABLE BLOCK CHANGE TRACKING statement was issued, but block change tracking was in transition state.

Action: Retry the operation after some time. If the error persists, contact Oracle Support.

OCI-19800: Unable to initialize Oracle Managed Destination

Cause: The name given for an Oracle managed files destination cannot be initialized.

Action: Check previous error messages for the reason Oracle was unable to initialize destination. Take corrective action, if possible, and retry the command or use a different name for destination.

OCI-19801: initialization parameter DB_RECOVERY_FILE_DEST is not set

Cause: An attempt was made to create a file in DB_RECOVERY_FILE_DEST when DB_RECOVERY_FILE_DEST was not set. There are number of possible causes of this error, including: 1) A LOG_ARCHIVE_DEST_n parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted. 2) STANDBY_ARCHIVE_DEST parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted.

Action: Specify a valid destination for DB_RECOVERY_FILE_DEST in initialization parameter file or with the ALTER SYSTEM SET command.

OCI-19802: cannot use DB_RECOVERY_FILE_DEST without DB_RECOVERY_FILE_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_RECOVERY_FILE_DEST parameter was in use when no DB_RECOVERY_FILE_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

OCI-19803: Parameter DB_RECOVERY_FILE_DEST_SIZE is out of range (1 - *string*)

Cause: Parameter DB_RECOVERY_FILE_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

OCI-19804: cannot reclaim *string* bytes disk space from *string* bytes limit

Cause: Disk space of specified bytes from the DB_RECOVERY_FILE_DEST location for DB_RECOVERY_FILE_DEST_SIZE limit could not be reclaimed.

Action: Do one or more of the following: 1) Take more frequent RMAN backups of the recovery area. 2) Consider changing the RMAN retention policy. 3) Consider changing the RMAN archived log deletion policy. 4) Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

OCI-19805: RECID *string* of *string* was deleted to reclaim disk space.

Cause: The file described by the record in the control file was deleted in order to reclaim disk space from the recovery area for other operations or deleted by another Recovery Manager (RMAN) session.

Action: Wait and try again. *Params: 1) record_id: The record ID of the deleted object. 2) record_type: The record type of the deleted object.

OCI-19806: Cannot make a duplex backup to the recovery area.

Cause: Duplex backup to the recovery area is not supported.

Action: Remove duplex option and retry.

OCI-19807: duplex number *string* is out of range: expected between 0 and *string*

Cause: The duplex number specified is outside of the expected range.

Action: Specify a duplex number that is within the range and try again.

OCI-19808: recovery destination parameter mismatch

Cause: The value of parameters DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE must be same in all instances. All databases must have same recovery destination parameters.

Action: Check DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE values in all instances.

OCI-19809: limit exceeded for recovery files

Cause: The limit for recovery files specified by the DB_RECOVERY_FILE_DEST_SIZE parameter was exceeded.

Action: There are five possible solutions: 1. Take frequent backup of recovery area using RMAN. 2. Consider changing RMAN retention policy. 3. Consider changing RMAN archived log deletion policy. 4. Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5. Delete files from recovery area using RMAN.

OCI-19810: Cannot create temporary control file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to create a control file for a temporary purpose in DB_RECOVERY_FILE_DEST.

Action: Retry the operation with a new file name.

OCI-19811: cannot have files in DB_RECOVERY_FILE_DEST with keep attributes

Cause: An attempt was made to 1) Create a backup piece or image copy in the recovery area with KEEP option. 2) Update the KEEP attributes of an existing backup piece or image copy in the recovery area.

Action: Reissue RMAN command without KEEP options.

OCI-19812: cannot use *string* without DB_RECOVERY_FILE_DEST

Cause: There are three possible cause for this error: 1) The indicated parameter was in use when no DB_RECOVERY_FILE_DEST parameter was encountered while fetching the initialization parameter. 2) An attempt was made to set indicated the parameter with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST was in use. 3) An attempt was made to clear DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when the indicated parameter was in use.

Action: Eliminate any incompatible parameter definitions.

OCI-19813: cannot have unavailable file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to change a backup piece or image copy in the recovery area to UNAVAILABLE.

Action: Correct and resubmit the Recovery Manager (RMAN) command. *Params: 1) file_name: The file name to mark unavailable.

OCI-19815: WARNING: *string* of *string* bytes is *string*%% used, and has *string* remaining bytes available

Cause: The DB_RECOVERY_FILE_DEST parameter is running out of disk space.

Action: Perform one of the following: - Add disk space and increase the DB_RECOVERY_FILE_DEST_SIZE parameter. - Back up the files to a tertiary device using Oracle Recovery Manager (Oracle RMAN). - Consider changing the RMAN retention policy. - Consider changing the RMAN archived log deletion policy. - Delete the files from recovery area using RMAN.

OCI-19816: WARNING: Files may exist in *string* that are not known to database.

Cause: One of the following events caused this: 1. A database crash happened during file creation. 2. A backup control file was restored. 3. The control file was re-created. 4. DB_RECOVERY_FILE_DEST has previously been enabled and then disabled.

Action: Use RMAN command CATALOG RECOVERY AREA to re-catalog any such files. If the file header is corrupted, then delete those files using an OS utility. Do not use messages 19817; it is used for simulating lock failure Do not use messages 19818; it is used for space reclamation before backup Do not use messages 19819; it is used to disable clearing file name

OCI-19820: database must be in NOARCHIVELOG mode to disable logging

Cause: Logging was disabled when ARCHIVELOG mode was used.

Action: Execute ALTER DATABASE NOARCHIVELOG in mount state.

OCI-19821: an intentionally corrupt log file was found

Cause: A log file that was intentionally corrupt for testing or benchmarking purposes was found and failed the operation.

Action: Remove such log files and retry or use the NOARCHIVELOG option if possible.

OCI-19827: Restoring preplugin files to a recovery area is not supported.

Cause: An attempt to restore a preplugin file in a recovery area failed. This is not supported.

Action: Use the SET ARCHIVELOG DESTINATION RMAN command to specify an archive log destination and retry the RESTORE or RECOVER command.

OCI-19830: error from target database: *lnstring*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: No action required.

OCI-19831: incompatible *string.string.string.string* DBMS_BACKUP_RESTORE package: *string.string.string.string* required

Cause: This version of database was incompatible with the the indicated DBMS_BACKUP_RESTORE package installed in the database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary.

OCI-19836: cannot use passphrase encryption for this backup

Cause: Passphrase encryption was attempted for a backup that contains encrypted tablespaces and uses compression.

Action: Do not use passphrase encryption for this backup. Use Transparent Data Encryption (TDE) instead.

OCI-19837: invalid blocksize *string* in backup piece header

Cause: The blocksize of the backup piece obtained from the header was invalid.

Action: The backup piece is corrupt. A different backup piece should be used for restore.

OCI-19838: cannot use this control file to mount or open database

Cause: This control file was restored by a DUPLICATE operation used only to restore and recover the data files of the new database. It is not meant to be used for mounting or opening the database, as allowing so might corrupt data files or online redo logs of the target database or both.

Action: Re-create the control file manually specifying all of the names of the data files and online redo logs. Do not forget to use NID to change the name or DBID or both of the new database.

OCI-19839: snapshot datafile checkpoint time is greater than snapshot time

Cause: The snapshot time which was specified when starting the recovery less than data file's checkpoint time. The snapshot recovery is only possible with data file's whose checkpoint time is less than snapshot time.

Action: Restore the data file's associated for the specified snapshot time or specify the correct snapshot time associated with the data file.

OCI-19840: SNAPSHOT TIME recovery is not enabled

Cause: An attempt was made to use SNAPSHOT TIME recovery. But, the feature was not enabled.

Action: Contact Oracle Support Services to enable snapshot time recovery and then retry the command.

OCI-19841: Cross-platform backups require a COMPATIBLE parameter value *string* or greater.

Cause: An attempt was made to create a cross-platform backup, but the COMPATIBLE parameter value was not set to a high enough value to allow this creation.

Action: Set the COMPATIBLE parameter to the suggested or higher value, and retry the command. *Params: 1) the minimum value for COMPATIBLE that is required for a cross-platform backup.

OCI-19842: The current database incarnation changed during backup.

Cause: The backup failed because the current database incarnation was changed during the backup. One of these events caused this incarnation change: - The database was opened using ALTER DATABASE OPEN RESETLOGS statement. - RMAN command RESET DATABASE TO INCARNATION was issued. - If this happened on physical standby database, then redo apply has applied redo data from a new database incarnation.

Action: Retry the backup command.

OCI-19843: Cannot obtain datafile name for datafile *string*

Cause: While trying to obtain the file enqueue for the datafile the datafile name could not be obtained.

Action: Examine the trace and alert files for possible causes. Fix underlying problem before attempting command again.

OCI-19844: Remote database ID *string* is different from local database ID *string*.

Cause: The database ID on the remote site did not match the ID of the target database. This was caused by an incorrect service name for the remote connection.

Action: Supply the correct service name and retry the command.

OCI-19845: error in *string* while communicating with remote database server

Cause: An error occurred while initiating backup on a remote database server for network restore. Additional error messages will be issued to describe the failure.

Action: Check additional error messages. *Params: 1) module_name: The module where error was encountered.

OCI-19846: cannot read header of the data file *string* from remote site

Cause: An attempt to read the file header from the remote site failed.

Action: Ensure that the data file is accessible on the remote site and retry the command. *Params: 1) data_file: The data file read from remote site.

OCI-19847: cannot read header of control file from remote site

Cause: Could not read the control file header from the remote site.

Action: Make sure the database is mounted on the remote site and retry the command.

OCI-19848: cross-platform backup piece requires COMPATIBLE *string* or greater

Cause: An attempt was made to perform a cross-platform operation from a backup piece created with a higher compatibility than the current COMPATIBLE parameter.

Action: Raise the compatibility level or do not attempt a cross-platform restore from this backup piece. *Params: 1) min_compat_version: The minimum compatible backup version required.

OCI-19849: error while reading backup piece from service *string*

Cause: This error is followed by other errors indicating the cause of the problem.

Action: See the other error actions. *Params: 1) service_name: Remote instance where backup piece resides.

OCI-19850: backup piece constructed from service *string* is corrupt

Cause: This error indicates that the backup piece that was constructed from the service is corrupt.

Action: See alert log for details of the corruption. Fix the corruption and retry the command.

OCI-19851: OS error while managing auxiliary database *string*

Cause: An operating system (OS) error occurred when managing the automatic auxiliary instance.

Action: Check the accompanying errors.

OCI-19852: error creating services for auxiliary instance *string* (error *string*)

Cause: An error was received while managing the services of the auxiliary instance.

Action: Check the accompanying errors.

OCI-19853: error preparing auxiliary instance *string* (error *string*)

Cause: An error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

OCI-19854: error obtaining connect string from target

Cause: Could not obtain the connect string from the target database

Action: Check the accompanying errors.

OCI-19855: cannot use clone mounted control file to drop database

Cause: The clone mounted control file could not be used to drop the database because the names of the data files and online logs were not fixed using the RMAN DUPLICATE command. This could cause the original database files to be lost.

Action: Manually drop the database.

OCI-19856: cannot use clone mounted control file to recover database

Cause: The clone mounted control file could not be used to recover the database because the names of the data files and online logs were not fixed using the Recovery Manager (RMAN) operation. This could result in the loss of original database files.

Action: Manually delete the files restored from the previous Recovery Manager (RMAN) operation by looking at the mounted control file and Recovery Manager (RMAN) output to clean up the partially incomplete operation. When deleting the files, be cautious to not delete production database files because some files in the control file may be pointing to those files.

OCI-19860: piece validation cannot be performed more than once

Cause: The user attempted to validate a list of backup pieces more than once. Validation may only be performed once for a given validation conversation.

Action: Do not attempt to validate the pieces more than once.

OCI-19861: additional backup pieces cannot be validated in this conversation

Cause: The user tried to add new pieces to the list of files being validated after the validation had already been performed. In a validation conversation, the list can only be validated once.

Action: Add all the backup pieces to the list before validating, or start a new validation conversation for the remaining pieces.

OCI-19862: backup pieces must be validated before accessing results

Cause: The user tried to get validation results for backup pieces before the pieces were actually validated.

Action: Validate the pieces before trying to access the results.

OCI-19863: device block size *string* is larger than max allowed: *string*

Cause: The user specified a device BLKSIZE that is larger than the device BLKSIZE specified during compressed backup.

Action: Change the device BLKSIZE to be smaller than the maximum allowed.

OCI-19865: Backup piece *string* has no data.

Cause: No data was returned for the specified backup piece.

Action: This usually indicates a problem with the media management software which is linked with the Oracle software to provide backup and restore services. Contact the media management software vendor.

OCI-19866: error writing file header for data file *string*

Cause: During a block recovery, the header of the data file could not be updated.

Action: Check the trace file for more information and contact Oracle Support.

OCI-19867: backup piece *string* is from a different container identifier *string*; data file *string*

Cause: This backup piece container identifier did not match the supplied data file container identifier.

Action: Retry the command with the correct backup piece or the correct data file.

OCI-19868: cannot recover block *string* for file number *string*

Cause: The specified block could not be cleared.

Action: Retry the command with the correct block number for the recover operation.

OCI-19869: Input file name or destination is an empty string.

Cause: A valid string for the file name or destination was not provided.

Action: Provide a string which is nonempty and is valid for the file name or the destination.

OCI-19870: error while restoring backup piece *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: See other errors actions.

OCI-19872: Unexpected end of file at block *string* while decompressing backup piece *string*

Cause: While reading a compressed backup piece, RMAN received an end-of-file without finding the end-of-compression stream.

Action: This is most likely caused by a corrupted backup piece. Consider using a different backup piece for restore.

OCI-19873: cannot apply this backup section to file *string*

Cause: RMAN cannot restore a multi-section backup to the indicated file, because this section is not a backup of this file, or the file was not prepared correctly for this restore.

Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

OCI-19874: cannot finish multisection restore or copy to file *string*

Cause: During a multisection restore or copy, the file being restored was not a file in which a multisection restore or copy was in progress.

Action: If this error occurs while running RMAN, then it was an internal error and you should contact Oracle Support Services.

OCI-19875: multisection restore or copy not complete for section *number* of file *string*

Cause: Not all required sections for this file are correctly applied while completing a multisection restore or copy.

Action: If this error occurs while running Recovery Manager (RMAN), then it is an internal error and you should contact Oracle Support.

OCI-19880: corrupted space header for data file *string* at block *string*

Cause: A space header block of a data file was used by the unused block optimization feature. The space header block of the reported data file had corrupted information.

Action: Fix the corrupted space header of this data file, or do not use the unused block optimization feature for this data file. If the corruption is not fixed then the availability of the data in the file will be impacted.

OCI-19881: corrupt space bitmap for data file *string*, block *string*

Cause: When reading a space bitmap block to use Unused Block Optimization for the data file backup, the space bitmap block had corrupt information.

Action: The corrupt space bitmap must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption because it will affect the availability of the data in the file, beyond just taking backups. *Params: 1) *data_file*: The data file being backed up. 2) *block_number*: The corrupt block number found on the data file.

OCI-19882: datafile *string* checkpoint *string* is ahead of space bitmap datafile *string* checkpoint *string*

Cause: When checkpointing the datafile containing the space bitmaps for the datafile being backed up in order to use Unused Block Optimization, the checkpoint of the datafile containing the space bitmaps did not advance.

Action: Examine the trace and alert files for possible causes. Fix underlying problem to use Unused Block Optimization for datafile's backup.

OCI-19883: Unused Block Optimization stopped for data file *string*

Cause: Accompanying errors detail the problem that prevented Unused Block Optimization from being used.

Action: See accompanying errors for appropriate action.

OCI-19884: datafile *string* is unable to use Unused Block Optimization because tablespace has been dropped

Cause: When attempting to find information about datafile that holds bitmaps of migrated tablespace, the tablespace was found to have been dropped.

Action: None. This is an informational message.

OCI-19885: Unused Block Optimization is not implemented for shadow data file *string*

Cause: Unused Block Optimization is not implemented for shadow data files.

Action: This is an informational message.

OCI-19887: all participating data files in the backup session were dropped by the database

Cause: All data files added to the backup session were dropped from the database before the backup session could checkpoint these files.

Action: Retry the command.

OCI-19890: data file already in use

Cause: The file access enqueue could not be obtained for a file specified in restore operation. The file was an output file for a restore operation, which was attempting to overwrite the currently active version of that file. In this case, the file must be offline or the database must be closed.

Action: One of the following actions can be taken: - Remove the file in place and retry the operation. - Take the data file offline and retry the operation. - Open the database in mount mode and retry the operation.

OCI-19891: cannot open backup piece *string*

Cause: When attempting to open the specified backup piece, an error was received.

Action: Verify that the specified backup piece exists and is accessible.

OCI-19892: failed to allocate buffer while reading backup piece

Cause: Internal error

Action: None

OCI-19893: sparse information block *string* is corrupt

Cause: The indicated sparse information block failed checksum validation. This backup piece was unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation. *Params: 1) block_number: The corrupt block number.

OCI-19899: missing incarnation information

Cause: Media recovery stopped because information of one or more ancestor incarnations of recovery target incarnation was not available.

Action: Register logs from the missing incarnations and retry recovery.

OCI-19900: RESETLOGS must be specified after recovery to new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command.

Action: Open the database with the RESETLOGS option.

OCI-19901: database needs more recovery to create new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command, but one or more of the recovered datafiles still belongs to the parent incarnation. This usually happens when recovery is ended before any logs from the desired incarnation have been applied.

Action: Continue recovery.

OCI-19902: incarnation key *string* not found

Cause: The specified incarnation was not found in the control file.

Action: Resubmit request with known incarnation key. To see which incarnations are available for this target database or pluggable database, query V\$DATABASE_INCARNATION or V\$PDB_INCARNATION or use RMAN's LIST INCARNATION command.

OCI-19903: test recovery not allowed when recovering to new incarnation

Cause: Either a new incarnation was set using RMAN's RESET DATABASE command for a control file that was CURRENT, or the control file is from a prior incarnation. As recovery to a new incarnation requires changing the control file, test recovery is not allowed.

Action: Perform actual recovery or RESET DATABASE to incarnation that was last opened using the control file to do test recovery.

OCI-19904: test recovery not allowed for datafile *string*

Cause: The specified datafile has been restored from a backup that was taken before the last RESETLOGS. Recovering this datafile will require a file header update that is incompatible with test recovery.

Action: Perform actual recovery.

OCI-19905: LOG_ARCHIVE_FORMAT must contain sequence *%string*, thread *%string*, and resetlogs ID *%r* for files to be unique.

Cause: The LOG_ARCHIVE_FORMAT initialization parameter was missing a mandatory format element. Starting with Oracle Database 10g, archived log file names must contain sequence, thread, and resetlogs ID to ensure that all archived log file names are unique.

Action: Add the missing format elements to the LOG_ARCHIVE_FORMAT parameter.

OCI-19906: recovery target incarnation changed during recovery

Cause: While a media recovery was active, a new incarnation was detected by the server due to inspection or cataloging of archived logs or backup files.

Action: If you want recovery to use the new incarnation, restart recovery. This is the most common action on a standby database when RESETLOGS is done in primary. If you do not want recovery to use the new incarnation, change the recovery destination using RMAN's RESET DATABASE TO INCARNATION <incarnation#> command. To see which incarnations are available for this target database, query V\$DATABASE_INCARNATION or use RMAN's LIST INCARNATION command.

OCI-19907: recovery time or SCN does not belong to recovered incarnation

Cause: A point-in-time recovery to an SCN or time stamp prior to the last RESETLOGS was requested.

Action: Either change the specified recovery time/SCN, or change the recovery destination using RMAN's RESET DATABASE command.

OCI-19908: datafile *string* has invalid checkpoint

Cause: The specified datafile has an invalid checkpoint.

Action: Restore the datafile from a backup.

OCI-19909: datafile *string* belongs to an orphan incarnation

Cause: Either the specified datafile was restored from a backup that was taken during a period of time that has already been discarded by a RESETLOGS operation, or Oracle cannot identify which database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belongs to either the current or a prior incarnation of the database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

OCI-19910: can not change recovery target incarnation in control file

Cause: The RESET DATABASE TO INCARNATION or RESET PLUGGABLE DATABASE TO INCARNATION command was used while the database or pluggable database was open. This is not allowed.

Action: Close the database or the pluggable database and then re-issue the command.

OCI-19911: datafile *string* contains future changes at the incarnation boundary

Cause: The file did not hit end backup marker redo during recovery at the incarnation boundary, hence may contain changes discarded by new incarnation.

Action: Use older backup of the file and then re-issue the command.

OCI-19912: cannot recover to target incarnation *string*

Cause: The control file is not in the recovery path of the target incarnation, and does not contain enough information as to how to recover to the target incarnation.

Action: Restore the latest control file from the target incarnation and retry.

OCI-19913: unable to decrypt backup

Cause: A backup piece could not be decrypted. This message is accompanied with another message that indicates the name of the encrypted backup that could not be restored. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device is not open.

Action: If password-based restore was enabled for this backup, then supply the correct password using the RMAN SET DECRYPTION command. If transparent restore was enabled for this backup, then ensure that the database external security device is open.

OCI-19914: unable to encrypt backup

Cause: Recovery Manager (RMAN) could not create an encrypted backup. This message will be accompanied by other messages that give more details about why the encrypted backup could not be created. The most common reason for this message is an attempt to create a backup that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted backup that you can create is a password-based backup.

OCI-19915: Unable to encrypt files created prior to Oracle Database release 10.2.

Cause: An encrypted RMAN backup was requested that included one or more archived logs generated by an older Oracle release. These archived logs cannot be encrypted.

Action: Back up the older logs without encryption.

OCI-19919: Encrypted backups to tertiary storage require Oracle Secure Backup.

Cause: Oracle Recovery Manager (Oracle RMAN) was configured to create encrypted backups, but the channel is neither a DISK channel nor an Oracle Secure Backup channel.

Action: Allocate a DISK channel or an Oracle Secure Backup channel to use backup encryption.

OCI-19920: RMAN does not support PKI-based master key for encryption.

Cause: An attempt was made to use Oracle public key infrastructure (PKI) based master key algorithm. RMAN only supports Advanced Encryption Standard (AES) based encryption.

Action: Use AES based encryption.

OCI-19921: maximum number of *string* rows exceeded

Cause: The maximum number of rows in the V\$RMAN_STATUS or V\$RMAN_OUTPUT table was exceeded.

Action: Close some of existing and unused Recovery Manager (RMAN) connections and sessions. *Params: 1) max_rows: The maximum number of rows in the V\$RMAN_STATUS or V\$RMANOUTPUT table.

OCI-19922: there is no parent row with id *string* and level *string*

Cause: RMAN tried to add a new V\$RMAN_STATUS row, but the parent row did not exist.

Action: This is an internal error. Contact Oracle Support.

OCI-19923: The session for row with ID *string* is not active.

Cause: Recovery Manager (RMAN) tried to update a V\$RMAN_STATUS row but the process that owned this row stopped.

Action: This is an internal error. Contact Oracle Support. *Params: 1) row_id: The row ID found to be inactive.

OCI-19924: there are no row with id *string*

Cause: RMAN tried to update an V\$RMAN_STATUS row, but the row don't exist.

Action: This is an internal error. Contact Oracle Support.

OCI-19925: Internal error while cleaning memory used by V\$RMAN_STATUS view**OCI-19926: Database cannot be converted at this time**

Cause: Another CONVERT DATABASE operation is already in progress.

Action: Retry CONVERT DATABASE command later.

OCI-19927: CONVERT DATABASE operation cannot proceed

Cause: An error occurred earlier during CONVERT DATABASE operation.

Action: Retry CONVERT DATABASE command.

OCI-19928: CONVERT of data files with undo segments between different endian is not supported.

Cause: Conversion of data files with undo segments was not supported between endianness. The only time that data files with undo segments can be converted is between the same endianness as part of convert database. Convert database between different endian is not supported.

Action: Do not attempt to convert data files with undo segments between different endian.

OCI-19929: no archive log registered

Cause: An error occurred during ALTER DATABASE RECOVER with the FORCE START AT option because there were no archive logs registered in the control file covering the specified start SCN or time.

Action: Register archive logs covering the specified SCN or time.

OCI-19930: file *string* has invalid checkpoint SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid checkpoint SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

OCI-19931: file *string* has invalid creation SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid creation SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

OCI-19932: control file is not clone, standby or backup

Cause: The operation failed because the control file was not mounted as clone, standby or backup.

Action: Mount the database as clone, standby or backup and retry.

OCI-19933: catalog backup piece *string* of data pump dump file is not supported

Cause: This backup piece contained data pump dump file. Cataloging such a backup piece is not supported.

Action: Do not request to catalog data pump dump file backup piece.

OCI-19934: cannot validate block 0

Cause: You tried to validate block 0 of a data file.

Action: Do not specify block 0 for validation.

OCI-19935: During the back up, the data file *string* is deleted.

Cause: The data file has been deleted.

Action: Check the status of the data file and try this command again.

OCI-19936: some tablespaces were not found in backup set

Cause: Some tablespaces that were specified for restoration were not found in the backup set directory. Message 19937 is issued for each file that was not found.

Action: See the instructions for message 19937.

OCI-19937: tablespace *string* was not found in backup set

Cause: The indicated tablespace could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more tablespaces named for restoration are not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files or tablespaces or both.

OCI-19938: can not backup Data Pump dump or PDB unplug XML file, requires COMPATIBLE *string* or higher.

Cause: An attempt was made to perform a Data Pump dump file or PDB unplug XML file backup with a database compatibility that was not high enough.

Action: Raise the compatibility level and retry the operation.

OCI-19939: Data Pump dump file can only be included in a cross-platform backup

Cause: Data Pump dump file backup requested but the backup conversation is not a cross-platform conversation.

Action: Start a new cross-platform backup conversation or do not include a Data Pump dump file.

OCI-19940: cannot use cross-platform backups to convert whole database to different endianness

Cause: The requested cross-platform backup or restore of an entire database requires the same endian format on both platforms.

Action: Ensure the specified platforms have the same endian format for conversion, or refer to the documentation for alternatives.

OCI-19941: invalid blocksize in cross-platform datafile *string*

Cause: Blocksize in header of datafile copy being converted at target was invalid. Either datafile has not been made read/write with compatibility 10.0 or greater at source database or datafile copy is corrupted.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

OCI-19942: datafile copy *string* not created with compatibility 10.0 or greater

Cause: The specified datafile copy to be converted at the target was not produced after making the tablespace in read/write mode with compatibility 10.0 or greater at the source database.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

OCI-19943: Oracle Data Pump dump file was not found in backup set.

Cause: The Oracle Data Pump dump file could not be restored because it was not in this backup set. This message is issued when the directory from the first backup piece is read and the Oracle Data Pump dump file is not found in the piece.

Action: Supply the first backup piece of a backup set that contains the requested file.

OCI-19944: Specified platform: '*string*' does not match piece header platform: '*string*'

Cause: The backup piece did not belong to the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

OCI-19945: file *string* already included to be restored to *string*

Cause: This file was already specified for inclusion in this restore conversation. The restore conversation may process a single instance only of a data file.

Action: No action required. The conversation is still active and more files can be specified.
*Params: 1) file_number: The file number to be restored. 2) file_name: The file name of file number to be restored.

OCI-19946: Cannot determine block size of backup piece '*string*' (*string*)

Cause: It was not possible to determine the cross-platform transportable backup piece block size.

Action: Contact Oracle Support Services.

OCI-19947: invalid block size *string* in backup piece '*string*' from specified platform '*string*'

Cause: The block size obtained from the backup piece using the specified platform was not valid. Either the piece was corrupt or the specified platform was incorrect.

Action: Retry the restore using the correct FROM PLATFORM clause. *Params: 1) block_size: The block size found in the backup piece. 2) backup_piece: The backup piece name to be restored. 3) platform: The platform of the backup piece to be restored.

OCI-19948: Backup piece does not contain a cross-platform data file backup, reason=*string*.

Cause: A cross-platform transportable restore was specified but the backup piece was not produced with the correct command.

Action: Produce a cross-platform transportable backup piece by using the BACKUP ... TO PLATFORM command and try the restore again. *Params: 1) reason: The reason for the failure.

OCI-19949: Specified platform: '*string*' has different endianness than piece '*string*', cannot read

Cause: The backup piece had a different endianness than the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

OCI-19950: tablespace *string* already included to be restored

Cause: This tablespace was already specified for inclusion in this restore conversation.

Action: No action required. The conversation is still active and more tablespaces or files or both can be specified. The restore conversation may process only a single instance of a tablespace. *Params: 1) tablespace: The duplicate tablespace name.

OCI-19951: cannot modify control file until DBNEWID is completed

Cause: An operation requiring to modify the control file was attempted, but a NID change is in progress.

Action: Wait until NID completes before attempting the operation.

OCI-19952: database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

OCI-19953: database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and mount it in exclusive mode.

OCI-19954: control file is not current

Cause: The operation failed because a non-current, non-standby control file was mounted.

Action: Make the control file current and retry.

OCI-19955: only one open thread is allowed to change the DBID

Cause: The operation failed because there were active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

OCI-19956: database should have no offline immediate data files

Cause: The operation failed because the database had one or more data files that were in OFFLINE IMMEDIATE mode.

Action: Drop the data files or recover them and bring them online.

OCI-19957: database should have no datafiles in unknown state

Cause: The operation failed because the database had one or more datafiles that were in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

OCI-19958: potential deadlock involving DIAG process

Cause: DIAG requested a control file operation that may lead to a deadlock

Action: Try last operation later when the control file is released

OCI-19959: DBNEWID utility only allowed in CDB\$ROOT

Cause: An attempt was made to use the DBNEWID utility in a pluggable database.

Action: Connect to CDB\$ROOT and retry the command.

OCI-19961: compression algorithm *string* requires advanced compression option to be enabled

Cause: Requested compression algorithm in initialization parameter or by RMAN configuration requires that the advanced compression option be enabled and it was not.

Action: Change initialization parameter `advanced_compression_option_usable` to true or change RMAN configurations and retry the operation.

OCI-19962: Compression algorithm *string* is not valid with release *string*.

Cause: The specified compression algorithm in the initialization parameter requires an older compatibility than the one currently set.

Action: Use an older compatibility, or change the compression algorithm in the initialization parameter file.

OCI-19963: error getting logical block size of file *string*

Cause: Error occurred when querying the logical block size of a file.

Action: None

OCI-19964: cannot set mirror side %0!s for file %1!s

Cause: An error occurred when trying to set the mirror side for a file. The specified mirror could be out of range.

Action: Use a different mirror side and retry the command.

OCI-19965: ALTER DATABASE RECOVER STANDBY TABLESPACE has been deprecated

Cause: The STANDBY TABLESPACE clause of the ALTER DATABASE RECOVER statement (`partial_database_recovery` clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement `ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT`.

OCI-19966: ALTER DATABASE RECOVER STANDBY DATAFILE has been deprecated

Cause: The STANDBY DATAFILE clause of the ALTER DATABASE RECOVER statement (partial_database_recovery clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT.

OCI-19970: multi-instance standby role transition in progress

Cause: ALTER DATABASE MOUNT failed because a multi-instance standby role transition was in progress.

Action: Retry after the multi-instance standby role transition finishes.

OCI-19971: event 10875 or 10879 is set

Cause: Event 10875 or event 10879 was set which prevented the operation from completing with multiple instances running in Oracle RAC.

Action: Shutdown all but one instance, then retry the command.

OCI-19972: ALTER DATABASE RECOVER TO LOGICAL requires one instance left

Cause: ALTER DATABASE RECOVER TO LOGICAL required only one instance to be left running.

Action: Shutdown all but one instance, then retry the command.

OCI-19973: flashback database is not enabled

Cause: Physical standby transition to snapshot standby required only one instance left running if flashback database logging was not enabled.

Action: Shutdown all but one instance, then retry the command.

OCI-19974: database name has changed

Cause: Physical standby role transition required only one instance left running if database name was changed and flashback database logging was enabled.

Action: Shutdown all but one instance, then retry the command.

OCI-19975: database must not be started in any other instance

Cause: The physical standby role transition command failed because a certain condition required the database to be mounted in this instance and not started in any other instance.

Action: See associated error message for detailed explanation.

OCI-19976: a concurrent standby role transition in progress

Cause: The standby role transition operation failed because a concurrent standby role transition was already in progress.

Action: None

OCI-19980: cannot open Data Pump dump file *string*

Cause: When attempting to open the specified dump file, an error was received.

Action: Verify that the specified dump file exists and is accessible.

OCI-19981: cannot read header of Data Pump dump file *string*

Cause: When attempting to read the header of the specified dump file, an error was received.

Action: Verify that the specified dump file is complete.

OCI-19982: file *string* is not a Data Pump dump file

Cause: The specified dump file did not contain data created by Data Pump.

Action: Verify that the specified dump file is really a file created by Data Pump.

OCI-19983: Data Pump dump file could not be verified

Cause: Some data blocks for the Data Pump dump file were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the Data Pump dump file cannot be restored from this backup set.

OCI-19984: foreign data file copy filename does not exist for file number *string*

Cause: Data files could not be restored from this backup set. A full backup restore may not have been performed.

Action: Try a foreign data file restore from level 0 backup and retry the operation.

OCI-19985: Data Pump dump file can only be requested in a cross-platform restore

Cause: Data Pump dump file restore requested but the restore conversation is not a cross-platform conversation.

Action: Start a new cross-platform restore conversation or do not include a Data Pump dump file.

OCI-19986: archived log backup piece found for cross-platform backup

Cause: A cross-platform backup was requested for a backup piece that contained archived logs.

Action: Specify a valid data file backup piece for cross-platform processing.

OCI-19987: unknown platform ID *string*

Cause: The platform ID obtained from a cross-platform backup was incorrect.

Action: Verify that the platform specified in the FROM PLATFORM clause is correct.

OCI-19988: must specify FROM PLATFORM for cross-platform restore of backup sets with pre-12.1 compatibility

Cause: A cross-platform restore was requested from a backup piece created with pre-12.1 compatibility without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

OCI-19990: restore from cross-platform encrypted backup is not supported

Cause: A cross-platform restore was requested from an encrypted backup set.

Action: Specify a non-encrypted backup set from which to perform the restore.

OCI-19991: Cross-platform encrypted backups to a platform with a different endianness are not supported.

Cause: A cross-platform backup was requested for an encrypted backup to a platform with different endianness from the current platform.

Action: Do not include encrypted backups in the cross-platform backup, or specify a platform with the same endianness.

OCI-19992: A cross-platform backup of encrypted backup piece with different endianness is not supported.

Cause: A cross-platform backup was requested for an encrypted backup piece with different endianness from the current platform.

Action: Specify a backup piece without encryption to the backup.

OCI-19993: must specify FROM PLATFORM for cross-platform backup of backup pieces with compatibility set prior to 12.1

Cause: A cross-platform backup was requested for a backup piece created with compatibility prior to 12.1 without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

OCI-19994: cross-platform backup of compressed backups to different endianness is not supported

Cause: A cross-platform backup was requested for a compressed backup to a different endianness from the current platform.

Action: Do not specify a compressed backup or specify the same endian platform.

OCI-19995: controlfile cannot be restored from a cross-platform backup with different endianness

Cause: A restore of the controlfile was requested from a cross-platform backup, but the backup did not have the same endianness and restore was not possible.

Action: Do not attempt to restore a controlfile from a cross-platform backup set.

OCI-19996: Cross-platform backup of backup pieces created with compatibility earlier than Oracle Database 10g release 2 (10.2) is not supported.

Cause: A cross-platform backup was requested for a backup created with compatibility earlier than Oracle Database 10g Release 2 (10.2).

Action: Do not perform cross-platform backup of backups created with with compatibility earlier than Oracle Database 10g Release 2 (10.2).

OCI-19997: Backup pieces earlier than Oracle Database 10g Release 2 cannot be operated for cross-platform.

Cause: A cross-platform operation was requested for a backup created with compatibility earlier than Oracle Database 10g Release 2.

Action: Do not perform cross-platform operation of backups created with compatibility earlier than Oracle Database 10g Release 2.

OCI-19998: data file *string* already included to be plugged

Cause: This data file was already specified for inclusion in this restore conversation.

Action: No action required. The conversation is still active and more files can be specified. *Params: 1) data_file: The target data file to plug in.

OCI-19999 to OCI-24279

OCI-19999: skip_row procedure was called

Cause: The skip_row procedure was called which raises this error

Action: Skip_row should only be called within a trigger or a procedure called by a trigger.

OCI-20000: *string*

Cause: The stored procedure 'raise_application_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

OCI-21000: error number argument to raise_application_error of *stringstring* is out of range**OCI-21001: error number argument to raise_system_error of *stringstring* is out of range****OCI-21300: objects option not installed**

Cause: The objects option is not installed at this site. object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

OCI-21301: not initialized in object mode

Cause: This function requires the OCI process to be initialized in object mode.

Action: Specify OCI_OBJECT mode when calling OCIInitialize().

OCI-21302: object snapshot error: *string*

Cause: The object snapshot operation failed. Additional details are provided in the error message.

Action: Contact Oracle Support Services.

OCI-21500: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: This is the generic error number for client-side Oracle Call Interface (OCI) internal errors. This error indicates that the OCI environment has encountered an exceptional condition.

Action: Report this as a bug to Oracle Support Services.

OCI-21501: memory allocation failed

Cause: The operating system could not allocate the amount of memory that was requested.

Action: Ensure that sufficient memory is available to the program.

OCI-21503: program terminated by fatal error

Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

OCI-21520: database server driver not installed

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

OCI-21521: exceeded maximum number of connections in OCI (object mode only)

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

OCI-21522: attempted to use an invalid connection in OCI (object mode only)

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

OCI-21523: functionality not supported by the server (object mode only)

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

OCI-21524: object type mismatch

Cause: The object type specified did not match the required object type for the operation.

Action: Check the type of the object and correct it.

OCI-21525: attribute number or (collection element at index) *string* violated its constraints

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

OCI-21526: initialization failed

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

OCI-21527: internal OMS driver error

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

OCI-21528: internal error, image could not be understood

Cause: The format of the image passed to the pickler is incorrect and cannot be understood.

Action: Contact Oracle Support Services.

OCI-21529: An error occurred while trying to do object type conversion for column *string*.

Cause: An error occurred during object type conversion for the specified column.

Action: Check the data to make sure it is valid for the object type definition. For example, check that there are no constraint violations. It should also be noted that conversion issues can arise if using different character sets for the database and the client.

OCI-21560: argument at position *string* is null, invalid, or out of range

Cause: The value of the argument at the specified position was null, invalid, or out of range. For example, when a LOB or BFILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file. This error is reported when an API is invoked with invalid arguments.

Action: Correct the API call in your program to not pass a null, invalid or out of range argument value.

OCI-21561: OID generation failed

Cause: The handles passed in may not be valid

Action: Check the validity of the env, svc handles

OCI-21600: path expression too long

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

OCI-21601: attribute is not an object

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

OCI-21602: operation does not support the specified typecode

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

OCI-21603: property id [*string*] is invalid

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

OCI-21604: property [*string*] is not a property of transient or value instances

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

OCI-21605: property [*string*] is not a property of value instances

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

OCI-21606: can not free this object

Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

OCI-21607: memory cartridge service handle not initialized

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

OCI-21608: duration is invalid for this function

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or external procedure duration, use OCIExtProcAllocCallMemory.

OCI-21609: memory being resized without being allocated first

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

OCI-21610: size [*string*] is invalid

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

OCI-21611: key length [*string*] is invalid

Cause: An attempt was made to use an invalid key length.

Action: Key length is invalid; a valid range is 0 to 254.

OCI-21612: key is already being used

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

OCI-21613: key does not exist

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

OCI-21614: constraint violation for attribute number [*string*]

Cause: Constraints on the attribute were violated

Action: Correct the value (of the attribute) so that it satisfies constraints

OCI-21615: copy of an OTS (named or simple) instance failed

Cause: see following message

Action: Check that no attribute value violates constraints.

OCI-21700: object does not exist or is marked for deletion

Cause: An operation was attempted on an object that did not exist or was marked for deletion. Operations such as pinning, deleting, and updating cannot be performed on these objects.

Action: Reinitialize the object reference to refer to a valid object or unmark the object for deletion.

OCI-21701: attempt to flush objects to different servers

Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

OCI-21702: object is not instantiated or has been de-instantiated in cache

Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

OCI-21703: cannot flush an object that is not modified

Cause: See the error message.

Action: The object should not be flushed.

OCI-21704: cannot terminate cache or connection without flushing first

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

OCI-21705: service context is invalid

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

OCI-21706: duration does not exist or is invalid

Cause: The duration number that is supplied by the user is not valid.

Action: User must establish the duration or use a correct predefined duration.

OCI-21707: pin duration is longer than allocation duration

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

OCI-21708: inappropriate operation on a transient object

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

OCI-21709: cannot refresh an object that has been modified

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

OCI-21710: argument is expecting a valid memory address of an object

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

OCI-21711: invalid cache reference

Cause: Cached reference (cref) supplied by the user did not exist or was NULL or with an invalid flag.

Action: User should pass a correct cache reference.

OCI-21712: invalid pin option

Cause: The pin option supplied by the user was not a valid value.

Action: User should pass a valid pin option value.

OCI-21713: invalid lock option

Cause: The lock option supplied by the user was not a valid value.

Action: User should pass a valid lock option value.

OCI-21779: duration not active

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

OCI-21780: Maximum number of object durations exceeded.

Cause: This typically happens if there is infinite recursion in the PL/SQL function that is being executed.

Action: User should alter the recursion condition in order to prevent infinite recursion.

OCI-22053: overflow error

Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

OCI-22054: underflow error

Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

OCI-22055: unknown sign flag value [string]

Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

OCI-22056: value [string] is divided by zero

Cause: Given value is divided by zero.

Action: Modify divisor value to be non-zero.

OCI-22057: bad integer length [string]

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

OCI-22059: buffer size [string] is too small - [string] is needed

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

OCI-22060: argument [string] is an invalid or uninitialized number

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

OCI-22061: invalid format text [string]

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22062: invalid input string [string]

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

OCI-22063: reading negative value [string] as unsigned

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

OCI-22064: invalid NLS parameter string [string]

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22065: number to text translation for the given format causes overflow

Cause: Rounding done due to the given string format causes overflow.

Action: Change the string format such that overflow does not occur.

OCI-22130: buffer size [string] is less than the required size [string]

Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

OCI-22131: hexadecimal string length is zero

Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

OCI-22132: hexadecimal string does not correspond to a valid REF

Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

OCI-22140: String resize operation failed. Size [*string*] specified must be in the range of 0 to [*string*].

Cause: The specified value for the resize operation was not within the valid range.

Action: Ensure that the string value for the resize operation is within the required range.

OCI-22141: given size [*string*] must be even in UTF-16 environment

Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

OCI-22150: variable-length array has not been initialized

Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

OCI-22151: cannot resize non-zero variable-length array to zero elements

Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

OCI-22152: destination variable-length array is not initialized

Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22153: source variable-length array is not initialized

Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22160: element at index [*string*] does not exist

Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

OCI-22161: type code [*string*] is not valid

Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

OCI-22162: element at index [string] has been previously deleted

Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

OCI-22163: left hand and right hand side collections are not of same type

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

OCI-22164: delete element operation is not allowed for variable-length array

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

OCI-22165: given index [string] must be in the range of [string] to [string]

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

OCI-22166: collection is empty

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

OCI-22167: given trim size [string] must be less than or equal to [string]

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

OCI-22168: collection that was referenced in this statement is invalid

Cause: The collection that was referenced in PL/SQL was invalid.

Action: Use a valid collection variable.

OCI-22169: SQL statement was invalid

Cause: The SQL statement passed for execution was not valid.

Action: Pass a valid SQL statement or retry.

OCI-22275: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only; (5) the locator is for a BFILE/BLOB and the routine expects a CLOB/NCLOB locator; (6) the locator is for a CLOB/NCLOB and the routine expects a BFILE/BLOB locator;

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2),(3), (5) and (6)pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

OCI-22276: invalid locator for LOB buffering

Cause: The error occurred due to one of the following reasons: 1. The locator was not enabled for buffering. 2. The locator was not updated but was used for a write or a flush operation.

Action: Choose the action corresponding to the cause as numbered: 1. Enable the locator for buffering. 2. Use only an updated locator for an LOB update operation.

OCI-22277: cannot use two different locators to modify the same LOB

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

OCI-22278: must update the LOB only through the LOB buffers

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

OCI-22279: operation not allowed because LOB buffering is enabled

Cause: The attempted operation failed because LOB buffering was enabled.

Action: For this operation, LOB buffering cannot be used and must be disabled. Flush the buffers associated with the input LOB locator, disable the buffering on the input LOB locator, and run the command again.

OCI-22280: no more buffers available for operation

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

OCI-22281: cannot perform operation with an updated locator

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

OCI-22282: non-contiguous append to a buffering enabled LOB not allowed

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

OCI-22283: filename contains characters that refer to parent directory

Cause: Filename contains a path "../" which references a parent directory

Action: Ensure that the filename does not contain characters which reference a parent directory.

OCI-22284: duplicate LONG binds are not supported

Cause: LOB access layer could not handle duplicate LONG binds.

Action: Provide distinct LONG or VARCHAR binds.

OCI-22285: non-existent directory or file for *string* operation

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

OCI-22286: insufficient privileges on file or directory to perform *string* operation

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

OCI-22287: invalid or modified directory occurred during *string* operation

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occurred, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

OCI-22288: file or LOB operation *string* failed

Cause: The operation attempted on the file or LOB failed.

Action: For more information, see the next error message in the error stack. Also, verify that the file or LOB exists and that the necessary privileges are set for the specified operation. If the error still persists, then report the error to the Database Administrator.

OCI-22289: cannot perform *string* operation on an unopened file or LOB

Cause: The file or Large Object (LOB) was not open for the operation to be performed.

Action: Open the file or LOB.

OCI-22290: operation would exceed the maximum number of opened files or LOBs

Cause: The number of open files or LOBs has reached the maximum limit.

Action: Close some of the opened files or LOBs and retry the operation.

OCI-22291: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: Close the LOBs before committing the transaction.

OCI-22292: cannot open a LOB in read/write mode without a transaction

Cause: An attempt was made to open a LOB in read/write mode before a transaction was started.

Action: Start a transaction before opening the LOB in read/write mode. One way to start a transaction includes issuing a SQL DML or SELECT FOR UPDATE command. Opening the LOB in read-only mode does not require a transaction.

OCI-22293: LOB already opened in the same transaction

Cause: An attempt was made to open a LOB that was already opened in this transaction.

Action: Close the LOB before attempting to reopen it.

OCI-22294: cannot update a LOB opened in read-only mode

Cause: An attempt was made to write to or update a LOB opened in read-only mode.

Action: Close the LOB and re-open it in read/write mode before attempting to write to or update the LOB.

OCI-22295: cannot bind more than 4000 bytes data to LOB and LONG columns in 1 statement

Cause: An attempt was made to bind data more than 4000 bytes of data to both LOB and LONG columns in the same insert or update statement. You can bind more than 4000 bytes of data to either a LONG column or one or more LOB columns but not both.

Action: Bind more than 4000 bytes of data to either the LONG column or one or more LOB columns but not both.

OCI-22296: invalid ALTER TABLE option for conversion of LONG datatype to LOB

Cause: An attempt was made to specify ALTER TABLE options which are disallowed during conversion of LONG datatype to LOB. The only ALTER TABLE options allowed during conversion of LONG datatype to LOB are the default clause and LOB storage clause for the column being converted to LOB.

Action: Remove the disallowed options.

OCI-22297: warning: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: This is just a warning. The transaction was committed successfully, but any domain or functional indexes on the open LOBs were not updated. You may want to rebuild those indexes.

OCI-22298: length of directory alias name or file name too long

Cause: The length of directory alias name or file name given for a BFILE was too long.

Action: Use a shorter alias or file name.

OCI-22303: type "*string*"."*string*" not found

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

OCI-22304: Input type "*string*"."*string*" is not an object type.

Cause: The user was trying to obtain the supertype information for a non-object type.

Action: Pass in only an object type. *Params: 1) schema: The owner of input type. 2) input_type: The name of the input type.

OCI-22305: attribute, method, or parameter *string* not found

Cause: The type element with the specified name was not found in the type.

Action: Ensure that the type element exists.

OCI-22306: type "*string*"."*string*" already exists

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

OCI-22307: operation must be on a user-defined type

Cause: attempt to perform an operation that is allowed only on a user-defined type, and the type is not a user-defined type.

Action: Check to make sure that only user-defined types are being operated on.

OCI-22308: operation not allowed on evolved type

Cause: An attempt was made to replace a type whose attribute definition been altered.

Action: Submit ALTER TYPE ADD/DROP statement instead of ALTER TYPE REPLACE.

OCI-22309: attribute with name *string* already exists

Cause: The creation or alteration of the object type failed because an attribute was specified more than once.

Action: Ensure that all attributes are specified only once and retry the operation.

OCI-22310: ALTER TYPE error. Refer to table *string.string* for errors.

Cause: An invalid ALTER TYPE statement was submitted.

Action: Correct the errors listed in the specified table and resubmit the statement.

OCI-22311: type for attribute "*string*" does not exist

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

OCI-22312: must specify either CASCADE or INVALIDATE option

Cause: An attempt was made to alter a type that has a dependent type or table without specifying the CASCADE or INVALIDATE option.

Action: Resubmit the statement with either the CASCADE or INVALIDATE option. Specify CASCADE if you want to cascade the type change to all the dependent types and tables; otherwise, specify INVALIDATE to invalidate all dependents.

OCI-22313: cannot use two versions of the same type "string"

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

OCI-22314: method information mismatch in ALTER TYPE

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

OCI-22315: type "string" does not contain a map or order function

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

OCI-22316: input type is not a collection type

Cause: An attempt was made to obtain information of a collection type that is not a named collection type.

Action: Use a named collection type for the function.

OCI-22317: typecode *string* is not legal as a number type

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

OCI-22318: input type is not an array type

Cause: An attempt was made to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type that is an array.

OCI-22319: type attribute information altered in ALTER TYPE

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

OCI-22320: missing user version string

Cause: The VERSION option is specified without a user version string.

Action: Resubmit the statement with the version string following the VERSION keyword.

OCI-22321: Method does not return any result.

Cause: OCITypeResult was called on a method that did not return any result.

Action: Check that you are passing in the correct method descriptor, and that your method creation was done correctly.

OCI-22322: error table "*string*"."*string*" has incorrect structure

Cause: The specified error table does not have the expected table structure.

Action: Execute the DBMS_UTILITY.CREATE_ALTER_TYPE_ERROR_TABLE procedure to create an error table, then resubmit the statement using the new error table.

OCI-22323: error table "*string*"."*string*" does not exist

Cause: The error table does not exist.

Action: Resubmit the statement with a correct error table name.

OCI-22324: altered type has compilation errors

Cause: The use of the ALTER TYPE statement caused a compilation error.

Action: Correct the error reported and resubmit the statement.

OCI-22325: event for create type with user version string**OCI-22326: cannot change a type to FINAL if it has subtypes**

Cause: An attempt was made to change a type with subtypes to FINAL.

Action: Drop all subtypes of the target type before changing it to FINAL.

OCI-22327: cannot change a type to NOT INSTANTIABLE if it has dependent tables

Cause: An attempt was made to change a type with dependent tables to NOT INSTANTIABLE.

Action: Drop all dependent tables of the target type and resubmit the statement.

OCI-22328: object "*string*"."*string*" has errors.*lnstring*

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

OCI-22329: cannot alter a non-object type

Cause: An attempt was made to execute ALTER TYPE on a non-object type.

Action: Drop the non-object type first, then re-create it as an object type.

OCI-22330: cannot alter a type that is not valid

Cause: An attempt was made to perform ALTER TYPE on an invalid type.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

OCI-22331: cannot alter an incomplete type

Cause: An attempt was made to perform ALTER TYPE on an incomplete type.

Action: Use CREATE TYPE to completely define the original type before executing the ALTER TYPE.

OCI-22332: a dependent object in schema "string" has errors.Instring

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

OCI-22333: cannot reset type "string"."string" due to invalid dependent types and tables

Cause: An attempt was made to reset the type version with invalid dependent types and tables.

Action: Use the ALTER TYPE COMPILE statement to compile all invalid dependent types and use the ALTER TABLE UPGRADE INCLUDING DATA to upgrade all the dependent tables then resubmit the statement.

OCI-22334: cannot reset type "string"."string". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the type version when the data in the dependent table has not been upgraded to the latest type version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

OCI-22335: The client cannot work with an altered type

Cause: A pre 8.2 client has requested a type that has been altered on the server.

Action: Only 8.2 or higher clients could access altered types

OCI-22336: table contained 8.0 image format, must specify INCLUDING DATA

Cause: One of the following: 1) An attempt was made to alter a type with a dependent table in 8.0 image format and the NOT INCLUDING TABLE DATA option was specified. 2) An attempt was made to upgrade a table in 8.0 image format with the NOT INCLUDING DATA option specified.

Action: Resubmit the statement with INCLUDING DATA option.

OCI-22337: the type of accessed object has been evolved

Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

OCI-22338: must specify CASCADE INCLUDING DATA when altering the final property

Cause: An attempt was made to alter the final property of a type with dependent table or tables without specifying the CASCADE INCLUDING DATA option.

Action: Resubmit the statement with the CASCADE INCLUDING DATA option.

OCI-22339: cannot alter to NOT FINAL since its attribute column is SUBSTITUTABLE

Cause: An attempt was made to alter a type to not final when its embedded attribute is defined as substitutable in some tables. Note, this is a restriction in 9.0 version because when a type is altered to not final, column of that type is set to not substitutable at all levels; thus, it is an error if one of its embedded attribute column is already marked substitutable.

Action: Recreate the table and specify NOT SUBSTITUTABLE AT ALL LEVELS for all columns of non final type. Then resubmit the ALTER TYPE statement.

OCI-22340: cannot *string* type "*string*".*string*. Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the version, drop or alter a type when the data in dependent table has not been upgraded to the latest version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

OCI-22341: cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

OCI-22342: dependent VARRAY column exceeds the maximum inline column size

Cause: An attempt was made to alter a type (add or modify attribute) which causes the size of its dependent VARRAY column to exceed the maximum inline column size. However, the VARRAY column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY column to be stored as LOB at the table level when the table is created.

OCI-22343: Compilation error for type invalidated by ALTER TYPE

Cause: Compilation failed for a type which was invalidated by ALTER TYPE. We throw this error and rollback the compilation effort so that the user may be able to fix whatever is causing the compilation error and try again. It is important that we do not change status here and modify the dependency information as this will affect the creation of versions.

Action: Check what is causing the compilation error and correct it and try again.

OCI-22344: can not specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change

Cause: An attempt was made to specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change.

Action: Specify CONVERT TO SUBSTITUTABLE option only for ALTER TYPE NOT FINAL change.

OCI-22345: recompile type *string.string* before attempting this operation

Cause: An attempt was made to perform an operation which requires the specified datatype to be valid, but the datatype is invalid

Action: Recompile the specified type and retry the operation

OCI-22346: Type has cyclical dependency. Should use CASCADE option

Cause: An attempt was made to alter a type which has a cyclical dependency, with invalidate option.

Action: Give CASCADE option instead of INVALIDATE

OCI-22347: No changes to type specified for ALTER TYPE

Cause: The ALTER TYPE does not contain any changes to the type.

Action: If any change is required for the type, modify the ALTER TYPE to specify the change. Else no need for the ALTER.

OCI-22348: The object type DDL is not supported in Editioned schema

Cause: The object type DDL was not supported in an Editioned schema.

Action: Do not perform this DDL on an Editioned schema object.

OCI-22349: This version of the Oracle server does not support PL/SQL package type descriptions.

Cause: An attempt was made to get PL/SQL package type description information from a version of the Oracle server that does not support the description of PL/SQL package types.

Action: Do not attempt to describe package types on this Oracle server.

OCI-22350: Incomplete opaque type cannot be used here

Cause: An incomplete SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

OCI-22351: OCI API is not supported by this version of the Oracle server.

Cause: An attempt was made to call an Oracle Call Interface (OCI) API which is not supported by this version of the Oracle server.

Action: Do not call the unsupported OCI API when connected to this Oracle server.

OCI-22352: Type is unsupported or contains an unsupported attribute or element.

Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELS.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

OCI-22369: invalid parameter encountered in method *string*

Cause: An invalid parameter is being passed to this method of SYS.AnyType ,SYS.AnyData or SYS.AnyDataSet

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

OCI-22370: incorrect usage of method *string*

Cause: This method of SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

OCI-22371: Table contains data of type *string.string*, version *string*, which does not exist

Cause: Some of the older versions of the type may have got deleted because one or more of the types it were referencing was dropped.

Action: These data could not be read as the whole ADT. Read the data at individual scalar attribute level.

OCI-22373: An older hashcode version was encountered.

Cause: An older hashcode version was encountered while creating a new one.

Action: No action needed. This is handled internally.

OCI-22374: cannot reset the version of a type with table dependents

Cause: An attempt was made to reset the version of a type with table dependents.

Action: None

OCI-22375: Event to check for subtypes in complete type tree

Cause: This event is used to check for subtypes in complete type tree without any restriction on depth in the fix for bug# 12430142.

Action: None

OCI-22376: Event to keep old behavior for type public synonyms

Cause: A public type synonym was qualified with a schema which may lead to incorrect name resolution. This issue has been resolved. However, this event allows you to use the old behavior if desired.

Action: None

OCI-22377: Unpacking of ANYDATA columns is not supported for attribute columns.

Cause: An attribute column has been referenced in the 'modify_opaque_type' clause.

Action: Do not use an attribute column in the 'modify_opaque_type' clause.

OCI-22378: cannot add, drop or modify attributes of a type with synonym dependents defined on FINAL types

Cause: An attempt to ALTER TYPE [ADD | DROP | MODIFY] ATTRIBUTE on a type with synonym dependents defined on a FINAL type, which has table dependents, failed.

Action: None

OCI-22380: event to skip updating the dependencies

Cause: An attempt was made to bypass regenerating dependencies during upgrade while running ALTER TABLE MOVE on type dictionary tables to enable storage in rows. This happens on the upgrade path from Oracle Database 10.1.

Action: None

OCI-22381: type collation is not the same as default collation

Cause: An attempt was made to ALTER TYPE COMPILE when the type collation was different from the current active collation, which is not allowed.

Action: Set the active collation to be the same as the type collation or issue the REUSE SETTINGS clause.

OCI-22382: event to allow status 6 recompile to change settings

Cause: This event is used to allow types in status 6 to recompile with current environment settings. The standard behavior is to reuse the current compiled settings. This is made

available so that users can change the hash codes of types created under different NLS_LANGUAGE_SEMANTICS.

Action: None

OCI-22383: a persistable type cannot have non-persistable attributes

Cause: An attempt was made to create a persistable type with a non-persistable user-defined type (UDT) attribute.

Action: Ensure that all of the UDT attributes are persistable.

OCI-22384: cannot create a column or table of a non-persistable type

Cause: An attempt was made to create a column or table of a non-persistable type

Action: Ensure that the column or table type is persistable.

OCI-22385: event to optimize the abort of nested table column updates

Cause: This event is used to abort the unnecessary INSERT or DELETE of rows in the nested table storage table when the nested table column in the parent table does not qualify for update in the current row.

Action: None

OCI-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

OCI-22601: pickler TDS context [*string*] is not initialized

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

OCI-22602: pickler TDS handle [*string*] is not well-formed

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

OCI-22603: cannot add an attribute to the already generated TDS handle

Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

OCI-22604: TDS handle already generated

Cause: Attempt to generate TDS that is already generated.

Action: Use a TDS handle that is initialized but not yet generated.

OCI-22605: FDO handle [*string*] is not initialized

Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

OCI-22606: pickler image handle [*string*] is not well-formed

Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

OCI-22607: image handle already generated

Cause: Attempt to generate image that is already generated.

Action: Use a image handle that is initialized but not yet generated.

OCI-22608: cannot add an attribute to the already generated image handle

Cause: Attempt to add an attribute to the already constructed image.

Action: Use a image handle that is initialized but not yet constructed.

OCI-22609: error *string* during initialization of FDO

Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

OCI-22610: cannot add a scalar attribute to an abstract data type

Cause: An error occurred while adding a scalar attribute to the image representation of an abstract data type. The image handle or the scalar data was invalid.

Action: Initialize the image handle before adding a scalar.

OCI-22611: TDS version is not recognized

Cause: Incorrect TDS handle is passed

Action: Make sure image handle is initialized with the correct TDS

OCI-22612: TDS does not describe a collection TDS

Cause: collection construct/access routines are being on an image but the TDS does not describe that a collection TDS

Action: Make sure a collection TDS is used before invoking collection routines on the image handle

OCI-22613: buflen does not match the size of the scalar

Cause: buflen is incorrect

Action: Make sure buflen is correct and matches the size of the scalar

OCI-22614: error while construction the collection in the image

Cause: Error during the construction of collection

Action: Make sure image handle is initialized and OCIPicklerImageCollBegin is called to begin collection

OCI-22615: attribute is not a collection

Cause: collection routine is invoked upon a non-collection attribute

Action: Make sure attribute is a collection

OCI-22616: image is not of Oracle 8.1 format

Cause: The function or code path being invoked is applicable only for 8.1 images

Action: Make sure image is of 8.1 format and not corrupt

OCI-22617: error accessing an attribute in a collection

Cause: An attempt to access an attribute in a collection failed because the object image did not represent a valid collection. It did not have collection data or it represented an unrecognized version.

Action: Ensure that the image is initialized correctly and that the collection is constructed properly.

OCI-22618: attribute is a BAD NULL in the image handle

Cause: attribute in question is probably the attribute of a null embedded image

Action: Make sure attribute number is valid or it is NULL or NOT NULL.

OCI-22619: all collection elements have already been accessed

Cause: Accessing a collection element after all the collection elements are already accessed

Action: This function should not be invoked any more.

OCI-22620: buffer size too small to hold the value

Cause: Buffer size is not enough to hold the value. Most likely while doing the character set conversion, a bigger buffer is needed.

Action: Pass in a bigger buffer. If the client character set format differs from that of server, doing the conversion may result in 4X expansion.

OCI-22621: error transferring an object from the agent

Cause: Any error returned from pickler routines on the agent side.

Action: Contact Oracle Support.

OCI-22625: OCIAnyData is not well-formed

Cause: Attempt to use the OCIAnyData without initializing constructing it.

Action: Use OCIAnyDataBeginConstruct to initialize the handle before it is adding attributes. Use OCIAnyDataEndConstruct to complete the construction. Or use OCIAnyDataConvert to do the construction. MAKE sure it is properly constructed before accessing attributes.

OCI-22626: Type Mismatch while constructing or accessing OCIAnyData

Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to be constructed or accessed.

OCI-22627: tc [*string*] must be that of object/varray/nested table

Cause: Type code is not that of object/varray/nested table

Action: Make sure the type code is OCI_TYPECODE_OBJECT or OCI_TYPECODE_VARRAY or OCI_TYPECODE_TABLE

OCI-22628: OCIAnyData already constructed

Cause: Attempt to add attributes to OCIAnyData that is already constructed.

Action: Use the OCIAnyData that is initialized but not yet constructed.

OCI-22629: OCIAnyData is null

Cause: Attempting an operation that is not valid on null OCIAnyData

Action: Make sure OCIAnyData is not null.

OCI-22630: attribute [*string*] is null or it is not well-formed

Cause: Passing an attribute that is null or not well-formed

Action: Make sure the attribute is not null or is well-formed.

OCI-22631: attribute [*string*] is is not well-formed or does not match the type

Cause: Passing an attribute that is not well-formed or does not match the input type.

Action: Make sure the attribute is well-formed and matches the type specified.

OCI-22632: AnyDataSet parameter is not valid for the current operation

Cause: The AnyDataSet parameter is null or it is somehow invalid for the current operation.

Action: Check the documentation for the current operation.

OCI-22633: Error freeing AnyDataSet

Cause: AnyDataSet that is passed in may not be valid.

Action: Check all the AnyDataSet parameters.

OCI-22634: Error adding new instance to AnyDataSet

Cause: Current instance in the AnyDataSet has not been fully constructed.

Action: Make sure that the current instance is fully constructed before adding new instance.

OCI-22635: time stamp with time zone type not supported

Cause: OCIAnyData did not support conversion of time stamp with time zone when the version of time zone files differ.

Action: Use same version of time zone files.

OCI-22636: object or collection unpickling failed due to corrupt image

Cause: An attempt was made to convert a corrupted image.

Action: Ensure that the image is not corrupt.

OCI-22637: A transformed image cannot be inserted or updated.

Cause: An attempt was made to insert or update an object column with transformed data. Preventing unexpected data from being written to disk is an internal error.

Action: Contact Oracle Support Services.

OCI-22638: object or collection pickling failed due to corrupt object [*string*]

Cause: An attempt was made to convert a corrupted object.

Action: Ensure that the object is not corrupt.

OCI-22800: invalid user-defined type

Cause: An attempt was made to use an incomplete type as a constructor.

Action: Complete the type definition before using it in a query.

OCI-22801: invalid object row variable

Cause: The specified object row variable is not available in the scope of name resolution.

Action: Verify the specified object row variable is correct, or use an object row variable visible in scope.

OCI-22802: implementation type cannot be remote

Cause: An attempt was made to use a user-defined aggregate function whose implementation type was not local to the current instance.

Action: Create the user-defined aggregate function with a local implementation type.

OCI-22803: Object type "string"."string" contains zero attributes.

Cause: An attempt was made to create or specify a column or constructor of an object type that has no attributes. Only object types that have at least one attribute are allowed in this context.

Action: specify a valid object type *Params: 1) schema: The owner of input type. 2) input_type: The name of the input type.

OCI-22804: remote operations not permitted on object tables or user-defined type columns

Cause: An attempt was made to perform queries or DML operations on remote object tables or on remote table columns whose type is one of object, REF, nested table or VARRAY.

Action: n/a

OCI-22805: cannot insert NULL object into object tables or nested tables

Cause: An attempt was made to insert a NULL object into an object table or a Nested Table.

Action: Ensure that a non-NULL object is inserted into the table or, if necessary, insert an object with attributes whose values are NULL instead.

OCI-22806: not an object or REF

Cause: An attempt was made to extract an attribute from an item that is neither an object nor a REF.

Action: Use an object type or REF type item and retry the operation.

OCI-22807: Attribute *string* cannot be resolved.

Cause: The specified column name using dot notation could not be resolved.

Action: Fix the dot notation of the column name and try again. *Params: 1) attribute: The attribute name.

OCI-22808: REF dereferencing not allowed

Cause: An attempt was made to access an object type's attributes by dereferencing a REF item.

Action: Make the item an object type instead of a REF to an object type.

OCI-22809: type *string* does not contain attribute *string*

Cause: An attempt was made to access a non-existent attribute of an object type.

Action: Check the attribute reference to see if it is valid. Then retry the operation. *Params: 1) type: The type name. 2) attribute: The attribute name.

OCI-22810: cannot modify object attributes with REF dereferencing

Cause: An attempt was made to modify the attributes an object by dereferencing a REF column in an UPDATE statement.

Action: Update the table containing the object that the REF points to, or change the REF column to an object type column.

OCI-22811: object cannot be marked or unmarked hot

Cause: Oracle maintained and fixed object could not be marked hot.

Action: This operation is not allowed.

OCI-22812: cannot reference nested table column's storage table

Cause: An attempt to access the nested table column's storage table is not allowed in the given context.

Action: Issue the statement against the parent table containing the nested table column.

OCI-22813: The operand value exceeds the system limits.

Cause: The object or collection value was too large. Either the size of the value might have exceeded 30 KB in a SORT context, or the size might be too big for the available memory.

Action: Avoid parallelism of objects larger than 30 KB when sorting. This can be done by using the NO_PARALLEL hint. Alternatively, parallelism can be done without SORT BY.

OCI-22814: Attribute or element value is larger than specified in type.

Cause: Value provided for the object type attribute or collection element exceeded the size specified in the type declaration.

Action: Choose another value and retry the operation.

OCI-22816: unsupported feature with RETURNING clause

Cause: RETURNING clause is currently not supported for object type columns, LONG columns, remote tables, INSERT with subquery, and INSTEAD OF Triggers.

Action: Use separate select statement to get the values.

OCI-22817: subquery not allowed in the default clause

Cause: An attempt was made to use a subquery in the column default clause expression.

Action: Remove the subquery from the default clause.

OCI-22818: subquery expressions not allowed here

Cause: An attempt was made to use a subquery expression where these are not supported.

Action: Rewrite the statement without the subquery expression.

OCI-22819: scope of input value does not correspond to the scope of the target

Cause: An attempt to operate on a REF value scoped to a different table than the expected one

Action: Use a ref which is scoped to the expected table and retry the operation

OCI-22826: Cannot construct an instance of a non-instantiable type.

Cause: Attempted to use a non-instantiable type as a constructor.

Action: Non-instantiable types can only be returned as method results.

OCI-22828: input pattern or replacement parameters exceed the 32K size limit of SQL function

Cause: The input string pattern or replacement string in the Large Object (LOB) SQL function exceeded the 32K size limit.

Action: Use a shorter string pattern, replacement string, or process long pattern strings in multiple passes.

OCI-22833: Must cast a transient type to a persistent type.

Cause: Attempted to use a transient type in the query result, or to return an instance of type SYS.ANYDATASET containing a transient type.

Action: Cast the transient type to a structurally equivalent persistent type, or avoid adding a transient type to a SYS.ANYDATASET instance.

OCI-22835: Buffer too small for CLOB to CHAR or BLOB to RAW conversion (actual: *string*, maximum: *string*)

Cause: An attempt was made to convert CLOB to CHAR or BLOB to RAW, where the LOB size was bigger than the buffer limit for CHAR and RAW types. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Do one of the following: 1. Make the LOB smaller before performing the conversion, for example, by using SUBSTR on CLOB 2. Use DBMS_LOB.SUBSTR to convert CLOB to CHAR or BLOB to RAW.

OCI-22837: Relational hint or keyword is disallowed for user-level DML

Cause: An attempt was made to use relational hint or keyword in user-level DML.

Action: Avoid using DML with relational hint or keyword.

OCI-22839: Direct updates on SYS_NC columns are disallowed

Cause: An attempt was made to update SYS_NC columns directly.

Action: Avoid direct updates on SYS_NC columns.

OCI-22840: REF column *string* being indexed is not scoped.

Cause: The REF column being indexed was not a scoped REF column. Only scoped REF columns can be indexed.

Action: If the REF column can be scoped, then do so. *Params: 1) column: The REF column being indexed.

OCI-22847: Cannot generate ANYDATA with a BFILE or OPAQUE TYPE inside it.

Cause: When the XML was generated from an ANYDATA with a BFILE or OPAQUE TYPE in it, it could not be transformed back into a valid ANYDATA.

Action: Do not generate or use ANYDATA from such XML documents.

OCI-22848: cannot use *string* type as comparison key

Cause: An attempt was made to perform a comparison against a type without comparison support.

Action: Use only types with comparison support.

OCI-22849: Type *string* is not supported for this function or operator.

Cause: The argument or operand had an unsupported type value for the function or operator.

Action: Check the Oracle documentation for the supported types of the function or operator.

OCI-22850: duplicate LOB storage option specified

Cause: A LOB storage option (CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, SECUREFILE/BASICFILE, [A]SYNC) was specified more than once.

Action: Specify all LOB storage options only once.

OCI-22851: invalid CHUNK LOB storage option value

Cause: The specified CHUNK LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

OCI-22852: invalid PCTVERSION LOB storage option value

Cause: The specified PCTVERSION LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

OCI-22853: invalid LOB storage option specification

Cause: A LOB storage option was not specified

Action: Specify one of CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, [A]SYNC or DATA SYNC as part of the LOB storage clause.

OCI-22854: invalid option for LOB storage index

Cause: A valid LOB store index option was not specified.

Action: Specify one of (INITRANS, MAXTRANS, TABLESPACE, STORAGE) as part of the LOB storage index.

OCI-22855: optional name for LOB storage segment incorrectly specified

Cause: The optional name for LOB storage segment was specified with multiple columns in the column list.

Action: Specify each column LOB storage only with optional name(s).

OCI-22856: cannot add columns to object tables

Cause: An attempt was made to add columns to an object table. Object tables cannot be altered to add columns since its definition is based on an object type.

Action: Create a new type with additional attributes, and use the new type to create an object table. The new object table will have the desired columns.

OCI-22857: cannot modify columns of object tables

Cause: An attempt was made to alter the object table by modifying existing columns. An object table cannot be altered to modify existing columns since it is based on an object type. The table definition must be in sync with the corresponding type.

Action: Create a new type with the desired attribute types and use it to create an object table. The new object table will have the desired columns.

OCI-22858: invalid alteration of datatype

Cause: An attempt was made to modify the column type to object, REF, nested table, VARRAY or LOB type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

OCI-22859: invalid modification of columns

Cause: An attempt was made to modify an object, REF, VARRAY, nested table, or LOB column type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

OCI-22860: object type expected

Cause: An attempt was made to create an object table using a non-object type, or to create a column that is a REF to a non-object type.

Action: Use a valid object type in the table or column definition.

OCI-22861: invalid user-defined type

Cause: An attempt was made to create a column or object table of a non-existent type.

Action: Specify a valid type in the table or column definition.

OCI-22862: specified object identifier doesn't match existing object identifier

Cause: An attempt was made to specify an object identifier for the type that does not match the existing identifier of the incomplete type of the same name.

Action: Specify the correct object identifier or leave it out of the statement.

OCI-22863: synonym for datatype *string.string* not allowed

Cause: A synonym specification for a datatype is not supported

Action: do not use the synonym for the datatype

OCI-22864: cannot ALTER or DROP LOB indexes

Cause: An attempt was made to ALTER or DROP a LOB index.

Action: Do not operate directly on the system-defined LOB index. Perform operations on the corresponding LOB column.

OCI-22865: more than one column specified

Cause: An attempt was made to specify multiple columns where only one is allowed.

Action: Specify a single column and retry the operation.

OCI-22866: cannot replace a type with table dependents

Cause: An attempt was made to replace a type that has table dependents.

Action: Drop all table(s) depending on the type, then retry the operation.

OCI-22868: table with LOBs contains segments in different tablespaces

Cause: An attempt was made to drop a tablespace which contains the segment(s) for the LOB columns of a table but does not contain the table segment.

Action: Find table(s) with LOB columns which have non-table segments in this tablespace. Drop these tables and reissue drop tablespace.

OCI-22869: depth of type dependency hierarchy exceeds maximum limit

Cause: The type dependency hierarchy was structured to have depth greater than 1024.

Action: Re-structure the type dependency hierarchy to a shorter depth.

OCI-22870: ALTER TYPE with REPLACE option a non-object type

Cause: attempt to perform ALTER TYPE with REPLACE option a non-object type

Action: drop the non-object type first, then re-create it as an object type

OCI-22871: ALTER TYPE with REPLACE is not allowed for pure incomplete types

Cause: An attempt to perform ALTER TYPE with REPLACE option for a pure incomplete type

Action: Completely define the original type, before using the ALTER TYPE with REPLACE option.

OCI-22872: OID INDEX clause not allowed on tables with primary key based object identifiers

Cause: An attempt was made to create an object identifier (OID) INDEX on a table with primary key based object identifiers.

Action: Remove the OID INDEX clause.

OCI-22873: primary key not specified for primary key based object table

Cause: An attempt was made to create a primary key based object table without specifying a primary key.

Action: Specify a primary key and retry the operation.

OCI-22874: Attribute "string" is not part of the type "string".

Cause: The attribute specified in the user-defined clause was not an attribute of the REF type.

Action: Ensure that the name specified in the user-defined clause is the name of a valid attribute of the REF type. *Params: 1) attribute_name: The attribute name. 2) type_name: The type name.

OCI-22875: cannot drop primary key of an object table whose object identifier is primary key based

Cause: An attempt to drop the primary key of an object table which has a primary key based object identifier

Action: Remove the drop primary key clause

OCI-22876: cannot create an object table of XMLType or OPAQUE type

Cause: An attempt was made to create an object table of either XMLType or OPAQUE type, which is not supported.

Action: None

OCI-22877: invalid option specified for a HASH partition or subpartition of a LOB column

Cause: One or more invalid options were encountered while parsing the physical attributes of a LOB partition or subpartition. Either the LOB partition is in a table partitioned using the HASH method, or the LOB subpartition is in a table subpartitioned using the HASH method. TABLESPACE is the only valid option for a HASH partition or subpartition.

Action: Remove the invalid option(s).

OCI-22878: duplicate LOB partition or subpartition specified

Cause: An attempt was made to specify a partition or subpartition that has already been specified for the LOB column.

Action: Remove the duplicate specification.

OCI-22879: cannot use the LOB INDEX clause for partitioned tables

Cause: An attempt was made to specify a LOB INDEX clause in a CREATE TABLE or ALTER TABLE statement for a partitioned table.

Action: Remove the LOB INDEX clause.

OCI-22880: invalid REF

Cause: The REF that was accessed was either invalid or did not exist.

Action: Verify the REF and retry the operation.

OCI-22881: dangling REF

Cause: The object corresponding to the REF that was accessed does not exist.

Action: Ensure that the REF value is pointing to an existing object.

OCI-22882: object creation failed

Cause: The object cannot be created in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

OCI-22883: object deletion failed

Cause: The object could not be deleted from the database.

Action: Check if the object table exists. Then retry the operation.

OCI-22884: object modification failed

Cause: The object could not be modified in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

OCI-22885: cannot get REF to a non-persistent object

Cause: An attempt was made to get a REF for something other than an object in an object table. REFs can only be taken for objects in object tables.

Action: Rewrite the query to obtain REF values from object tables.

OCI-22886: scoped table "string" in schema "string" is not an object table

Cause: The scoped table specified for a REF column was not an object table.

Action: Ensure that the scoped table is an object table. Then retry the operation. *Params: 1) table: The table name. 2) schema: The schema name of the table.

OCI-22887: type of REF column string is not the same as that of its scoped table

Cause: The type specified for the REF column and the type specified for the scope table were different.

Action: Ensure that the types of a REF column and its scoped table are the same. *Params: 1) column_name: The REF column name.

OCI-22888: duplicate SCOPE clauses for REF column string

Cause: Multiple SCOPE clauses were specified for a single REF column.

Action: Remove the duplicate SCOPE clauses and retry the operation. *Params: 1) ref_column: The REF column with duplicate SCOPE clauses.

OCI-22889: REF value does not point to scoped table string.

Cause: An attempt was made to insert a REF value that did not point to the scoped table.

Action: Ensure that the REF value points to the scoped table. *Params: 1) table_name: The table that should be in the scope of the REF.

OCI-22890: cannot specify name for REF column constraint

Cause: An attempt was made to specify a constraint name for a constraint on a REF column.

Action: Remove the constraint name and retry the operation.

OCI-22891: cannot have multiple columns in REF constraint

Cause: An attempt was made to specify multiple columns in a single REF constraint.

Action: Specify separate constraints for each column and retry the operation.

OCI-22892: Scoped table "string" does not exist in schema "string".

Cause: The scoped table specified for a REF column did not exist.

Action: Ensure that the scoped table exists and retry the operation. *Params: 1) table: The table name. 2) schema: The schema name.

OCI-22893: constraint can be specified only for REF columns

Cause: The constraint specified does not apply to non-REF columns.

Action: Remove the constraint and retry the operation.

OCI-22894: cannot add constraint on existing unscoped REF columns of non-empty tables

Cause: An attempt was made to add a constraint to existing unscoped REF columns of a table which contains one or more rows.

Action: Remove the constraint specification or add the constraint after emptying the table.

OCI-22895: Referenced table "*string*" in schema "*string*" is not an object table.

Cause: The referenced table specified for a REF column was not an object table.

Action: Ensure that the referenced table is an object table. Then retry the operation.

*Params: 1) table: The table name. 2) schema: The schema name.

OCI-22896: cannot have both scope and referential constraint on REF column "*string*"

Cause: The REF column had both a referential and a scope constraint. A referential constraint implies a scope constraint.

Action: Remove either the referential or the scope constraint and then retry the operation. *Params: 1) column: The REF column name.

OCI-22897: no scope clause specified for user-defined REF column "*string*"

Cause: User-defined REF column does not have a scope constraint.

Action: Specify a scope constraint for the user-defined REF column and retry the operation.

OCI-22898: Existing scope clause on "*string*" points to a table other than the one mentioned in the referential constraint.

Cause: The table mentioned in the referential integrity constraint was different from the scope table of the REF column.

Action: Specify the scope table of the REF column in the referential integrity constraint and then retry the operation. *Params: 1) table_name: The specified scope table.

OCI-22899: cannot specify both scope and rowid constraint on ref column

Cause: An attempt was made to specify both a scope and a rowid constraint on a REF column.

Action: Remove either the rowid or scope constraint and then retry the operation.

OCI-22900: the SELECT list item of THE subquery is not a collection type

Cause: The THE subquery must SELECT a nested table or VARRAY item.

Action: change the subquery to SELECT a nested table or VARRAY item.

OCI-22901: cannot compare VARRAY or LOB attributes of an object type

Cause: Comparison of VARRAY or LOB attributes of an object type was attempted in the absence of a MAP or ORDER method.

Action: Define a MAP or ORDER method for the object type.

OCI-22902: CURSOR expression is not allowed in this context.

Cause: A CURSOR expression was specified outside the SELECT list of the top-level query block or as an argument to a PL/SQL function.

Action: Specify the CURSOR expression only inside the SELECT list of the top-level query block or as an argument to a PL/SQL function.

OCI-22903: MULTISSET expression not allowed

Cause: MULTISSET expressions are allowed only inside a CAST to a nested table or VARRAY type.

Action: put the MULTISSET(subquery) expression inside a CAST to a nested table or VARRAY type.

OCI-22904: invalid reference to a nested table column

Cause: invalid use of a nested table column

Action: remove invalid reference to the nested table column

OCI-22905: Cannot access rows from unsupported input to TABLE operator.

Cause: Attempted to access rows using the TABLE operator and either the input type was an invalid collection, or it was unknown at parse time.

Action: Use a valid collection type as input to the TABLE operator or use CAST to cast the input to a valid collection type.

OCI-22906: cannot perform DML on expression or on nested table view column

Cause: Attempted to perform a DML on an expression or on a nested table view column where a nested table column of a base table is expected.

Action: Only nested table column of a base table is allowed in the DML.

OCI-22907: invalid CAST to a type that is not a nested table or VARRAY

Cause: Attempted to CAST to a type that is not a nested table or VARRAY

Action: Re-specify CAST to a nested table or VARRAY type.

OCI-22908: reference to NULL table value

Cause: The evaluation of the THE subquery or nested table column resulted in a NULL value implying a NULL table instance. The THE subquery or nested table column must identify a single non-NULL table instance.

Action: Ensure that the evaluation of the THE subquery or nested table column results in a single non-null table instance. If happening in the context of an insert statement where the THE subquery is the target of an insert, then ensure that an empty nested table instance is created by updating the nested table column of the parent table's row specifying an empty nested table constructor.

OCI-22909: exceeded maximum VARRAY limit of *string* elements

Cause: The total number of elements used in VARRAY construction exceeded the indicated size limit of the specified VARRAY type.

Action: Do not construct a VARRAY instance with more elements than allowed.

OCI-22910: cannot specify schema name for the storage table of the nested table

Cause: The table name was qualified with a schema name in the column or attribute storage clause of the nested table.

Action: Re-specify the nested table item storage clause without the schema name qualification. By default, the storage table for the nested table item is created in the same schema as the containing table.

OCI-22911: duplicate storage specification for the nested table column

Cause: The storage clause was specified more than once for the NESTED TABLE column.

Action: Remove the duplicate storage specification.

OCI-22912: Column or attribute *string* is not a nested table type.

Cause: The storage clause was specified for a column or attribute that is not a nested table column or attribute.

Action: Specify a valid nested table column or attribute. *Params: 1) column: The column or attribute for which the storage clause is specified.

OCI-22913: must specify table name for nested table column or attribute *string*

Cause: The storage clause was not specified for a nested table column or attribute.

Action: Specify the nested table storage clause for the nested table column or attribute. *Params: 1) column: The nested table column or attribute that is missing

OCI-22914: DROP of nested tables not supported

Cause: Attempted to DROP a nested table.

Action: nested tables cannot be explicitly dropped. nested tables can only be dropped by dropping their containing parent table.

OCI-22915: cannot ALTER a nested table's storage table to ADD/MODIFY columns

Cause: An attempt was made to ADD or MODIFY columns of a nested table's storage table.

Action: Columns cannot be added or modified for a nested table's storage table. You must alter the parent table's nested table column to cause any such change.

OCI-22916: cannot do an exact FETCH on a query with Nested cursors

Cause: Exact FETCH on a query was specified which is not allowed if the query returns any cursors.

Action: Do not use an exact FETCH.

OCI-22917: use VARRAY to define the storage clause for this column or attribute

Cause: Not using VARRAY to define storage clause for VARRAY column or attribute.

Action: Specify VARRAY before the column storage clause and resubmit statement.

OCI-22918: specified column or attribute is not a VARRAY type

Cause: Attempt to define a VARRAY storage clause for a column or attribute which is not VARRAY type.

Action: Specify VARRAY storage clause for a VARRAY column or attribute.

OCI-22919: dangling REF or nowait lock request of referenced object failed

Cause: Either the object corresponding to the REF did not exist or the object was locked by another user and the lock with nowait request failed.

Action: Ensure that the REF value is pointing to an existing object or issue a lock request without the nowait option.

OCI-22920: row containing the LOB value is not locked prior to update

Cause: The row containing the Large Object (LOB) value was not locked before updating the LOB value.

Action: Lock the row containing the LOB value before updating the LOB value.

OCI-22921: length of input buffer is smaller than the amount requested

Cause: The buffer length was too small for the amount of data requested.

Action: Verify that the number of bytes or characters specified in the input amount parameter is not larger than the number of bytes specified in the input buffer length parameter. Allocate more space for the input buffer if necessary.

OCI-22922: LOB value does not exist

Cause: The large object (LOB) value associated with the input locator was not found. The information in the locator did not refer to an existing LOB.

Action: Refresh the locator using a select statement and retry the operation.

OCI-22923: amount of data specified in streaming LOB write is 0

Cause: Trying to write LOB value via the streaming mechanism (i.e. unlimited write) but the input amount of data to stream was specified as 0. Thus, the user is trying to write 0 bytes to the LOB value.

Action: Write more than 0 bytes to the LOB value.

OCI-22924: snapshot too old

Cause: The version of the LOB value needed for the consistent read was already overwritten by another writer.

Action: Use a larger version pool.

OCI-22925: operation would exceed maximum size allowed for a LOB value

Cause: An attempt was made to write too much data to the LOB value. LOB size is limited to $(4 \text{ gigabytes} - 1) * \text{DB_BLOCK_SIZE}$.

Action: Either start writing at a smaller LOB offset or write less data to the LOB value.

OCI-22926: specified trim length is greater than current LOB value's length

Cause: The input length for which to trim the LOB value to is greater than the current length of the LOB value.

Action: May not need to trim the LOB value because it's already smaller than the trim length specified. Or, if trimming the LOB value really is required, use a smaller trim length.

OCI-22927: Invalid large object (LOB) locator specified.

Cause: There are several causes: 1) The LOB locator was never initialized. 2) The locator was a BFILE locator and the routine expects a BLOB/CLOB/NCLOB locator. 3) The locator was a BLOB/CLOB/NCLOB locator and the routine expects a BFILE locator. 4) A LOB in a trigger body is read-only, and a trigger body attempted to update the LOB.

Action: For 1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For 2) and 3), pass a locator of correct types to the routine. For 4), remove statements in the trigger body that update LOB values.

OCI-22928: invalid privilege on directories

Cause: An attempt was made to grant or revoke an invalid privilege on a directory.

Action: Only CREATE, DELETE, READ, WRITE and EXECUTE privileges can be granted or revoked on directories. Do not grant or revoke other privileges.

OCI-22929: invalid or missing directory name

Cause: The required directory name is invalid or missing.

Action: Specify a valid name.

OCI-22930: directory object does not exist

Cause: An attempt was made to access a directory object that did not exist or the current user did not have privileges on the directory object.

Action: Check the directory name and verify that the current user has appropriate privileges on the directory object.

OCI-22931: function protocol violation - *string*

Cause: Function argument(s) contain unexpected value.

Action: Review error message and accordingly pass appropriate arg value. Additionally, review process trace file for related diag data.

OCI-22933: cannot change object with type or table dependents

Cause: Attempt to replace, drop or rename an object with type or table dependents.

Action: Drop depending objects or use FORCE option if available.

OCI-22936: cannot replace a system predefined type

Cause: An attempt was made to replace a system predefined type.

Action: Use other names for newly created system types.

OCI-22937: cannot reinit lib-cache object (*string.string*) marked dirty

Cause: An attempt was made to reinit a lib-cache object that was marked dirty.

Action: Make sure there is no indirect dependency between this object and any PL/SQL object.

OCI-22950: cannot order objects without MAP or ORDER method

Cause: an object type must have a MAP or ORDER method defined for all comparisons other than equality and inequality comparisons.

Action: Define a MAP or ORDER method for the object type

OCI-22951: NULL returned by ORDER method

Cause: ORDER method used to compare two object values returned NULL which is not allowed.

Action: Redefine the ORDER method to not return a NULL.

OCI-22952: Nested Table equality requires a map method on the element ADT

Cause: Nested Table equality was tried where the element ADT did not have a map method defined on it.

Action: Define a map method on the element ADT..

OCI-22953: The cardinality of the input to POWERMULTISET exceeds the maximum allowed.

Cause: The cardinality of the input nested table to the POWERMULTISET function exceeded 32 elements.

Action: Reduce the number of elements of the input nested table.

OCI-22954: This multiset operation is not supported for this element type.

Cause: The multiset operation attempted was not supported for the nested table element type.

Action: Use a supported element type.

OCI-22955: The cardinality parameter is not within the allowed limits.

Cause: The cardinality parameter has to be greater than 1 and less than or equal to the cardinality of the input value.

Action: Use a valid cardinality value.

OCI-22956: Input to POWERMULTISET cannot be an empty set.

Cause: An empty set was specified as input to the POWERMULTISET function.

Action: Specify a non-empty set as input to the POWERMULTISET function.

OCI-22957: NULL is an invalid input to powermultiset and COLLECT functions

Cause: NULL was given as input to the powermultiset or COLLECT function.

Action: Give a non-null value as input

OCI-22958: This operation is not allowed in check constraints or triggers

Cause: An invalid operation is used in a check constraint or trigger

Action: Do not use the operation

OCI-22970: Name does not correspond to an object view.

Cause: Either the expression was not a view name or the name specified did not correspond to an object view.

Action: Replace the expression with the name of an object view.

OCI-22971: invalid data type for PRIMARY KEY based object identifier

Cause: When creating an object view, the data type of an expression in the WITH OBJECT OID clause was not allowed for a PRIMARY KEY based object identifier (OID). Only scalars are allowed here.

Action: Replace the expression with an appropriate scalar data type.

OCI-22972: NULL value not allowed in PRIMARY KEY-based object identifier

Cause: A value constituting the PRIMARY KEY-based object identifier is NULL.

Action: Ensure the expressions in MAKE_REF system function or attributes in the WITH OBJECT OID clause of an object view do not evaluate to NULL.

OCI-22973: size of object identifier (*string*) exceeds maximum size allowed

Cause: Size of the PRIMARY KEY-based object identifier of an object view exceeds the maximum size of 4000 bytes.

Action: Specify fewer or smaller PRIMARY KEY attributes in the WITH object OID clause when creating the object view.

OCI-22974: missing WITH OBJECT OID clause

Cause: The WITH OBJECT OID clause was not specified when creating an object view.

Action: Specify the WITH OBJECT OID clause.

OCI-22975: cannot create a primary-key based REF for this object view

Cause: The object view that was specified in the MAKE_REF function did not have a primary-key based object identifier. A primary-key based REF could not be created for such a view.

Action: Specify an object view that has a primary-key based object identifier in the MAKE_REF function.

OCI-22976: incorrect number of arguments to MAKE_REF

Cause: The number of arguments for MAKE_REF was different from the number of PRIMARY KEY attributes of the object view.

Action: Specify the correct number of arguments for MAKE_REF.

OCI-22977: missing or invalid attribute

Cause: Either the attribute name is missing in the WITH OBJECT OID clause or it is invalid.

Action: Specify a valid attribute of the object type of the object view.

OCI-22978: only simple attribute name is allowed in the WITH OBJECT OID clause

Cause: Attempted to specify a Nested attribute in the WITH OBJECT OID clause.

Action: Specify a top-level attribute of the object type of the object view.

OCI-22979: cannot INSERT object view REF or user-defined REF

Cause: An attempt was made to insert an object view REF or user-defined REF in a REF column created to store system-generated REF values.

Action: Ensure that the REF to be inserted is not from an object view or from a user-defined REF column.

OCI-22980: must specify a set of attributes for the WITH OBJECT OID clause

Cause: The WITH OBJECT OID DEFAULT clause was used, but the underlying view or table does not have a OID.

Action: Specify attributes for the WITH OBJECT OID clause to create a primary key based object identifier for the object view.

OCI-22981: sub-view should be on a table or view with system generated OID

Cause: The super-view was based on a table or view that had a system generated object identifier (OID). The sub-view must also be based on a similar table or view.

Action: Specify a table or view that has a system generated OID and retry the operation.

OCI-22982: cannot create sub-view under this view

Cause: The view derived its object identifier (OID) from a table or view that had a primary key based OID. Sub-views cannot be created under such views.

Action: Specify a view that has a system generated OID or a view created with the specification of attributes in the WITH OBJECT ID clause and retry the operation.

OCI-22983: not a user-defined REF

Cause: An attempt was made to use a system-generated REF value where a user-defined REF value should be used.

Action: Ensure that the REF value is user-defined.

OCI-22984: view query for a sub-view cannot contain references to its super view

Cause: The query defining a sub-view contained references to the super view of the view being created.

Action: Ensure that the view query does not reference the super view.

OCI-22985: Invalid second argument to MAKE_REF. Expected value is a 16 byte OID.

Cause: The second argument to MAKE_REF on an object table/view with system generated key is not a 16 byte OID

Action: Provide a correct value for the second argument of MAKE_REF.

OCI-22990: LOB locators cannot span transactions.

Cause: An attempt was made to use a Large Object (LOB) locator selected in one transaction in a different transaction.

Action: Select the LOB locator again and retry the operation.

OCI-22991: insufficient space allocated for argument *string*

Cause: The data to be returned in the argument is greater than the amount of space allocated for the argument.

Action: Allocate more space for the argument.

OCI-22992: cannot use LOB locators from remote table

Cause: A LOB column in a remote table could not be referenced.

Action: Remove references to LOB columns in remote table.

OCI-22993: specified input amount is greater than actual source amount

Cause: (1) For LOB write, the amount of data received is different from the amount that was indicated would be sent. (2) For LOB copy and loadfromfile, the end of the source LOB/FILE value was reached before the specified input amount was copied/loaded.

Action: (1) will happen when using OCI's piecewise mechanism with polling or with a callback function. Modify the code either to send the amount specified or to pass 0 as the input amount so that any amount of data can be sent. (2) will happen if the specified input amount is too large for the source LOB/FILE given the starting source offset. Either decrease the starting source offset, or decrease the amount to copy/load.

OCI-22994: source offset is beyond the end of the source LOB

Cause: The source offset for a LOB COPY or LOB LOADFROMFILE is beyond the end of the source LOB.

Action: Check the length of the LOB and then adjust the source offset.

OCI-22995: TABLESPACE DEFAULT option is invalid in this context

Cause: TABLESPACE DEFAULT option can be specified for LOB columns only in the following contexts: - at the table level for a partitioned table - at the partition level for a composite partition. An attempt was made to use the TABLESPACE DEFAULT option in a different context.

Action: Remove the TABLESPACE DEFAULT option.

OCI-22996: NEXT extent size is smaller than LOB chunksize

Cause: An attempt was made to create or alter a LOB segment so that its NEXT extent size was less than the LOB chunksize

Action: Specify a NEXT extent size that is greater than or equal to the LOB chunksize

OCI-22997: VARRAY | OPAQUE stored as LOB is not specified at the table level

Cause: An attempt was made to specify a VARRAY|OPAQUE column to be stored as LOB at the partition/subpartition/template level. However the VARRAY|OPAQUE column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY | OPAQUE column to be stored as LOB at the table level when the table is created. Alternatively, do not specify the VARRAY | OPAQUE column to be stored as LOB at the partition/subpartition/template level if it is not specified at the table level when the table is created.

OCI-22998: CLOB or NCLOB in multibyte character set not supported

Cause: A SQL character function that does not support multibyte Large Object (LOB) data was passed a Character Large Object (CLOB) or National Character Large Object (NCLOB) in a multibyte character set of fixed-width or varying-width.

Action: Use DBMS_LOB functions such as DBMS_LOB.INSTR() and DBMS_LOB.SUBSTR(); or use PLSQL DBMS_LOB.READ and DBMS_LOB.WRITE to access LOB data.

OCI-22999: CLOB or NCLOB data may have been corrupted

Cause: CLOB or NCLOB contains invalid character data. One possible cause is that the wrong csid was specified for the external file when calling DBMS_LOB.LOADCLOBFROMFILE or DBMS_XSLPROCESSOR.READ2CLOB to load CLOB or NCLOB data from external files.

Action: Reload the CLOB/NCLOB data with the correct csid specified for the external file.

OCI-23290: This operation may not be combined with any other operation

Cause: ALTER TABLE RENAME COLUMN/CONSTRAINT operation was given in conjunction with another ALTER TABLE Operation. This is not allowed.

Action: Ensure that RENAME COLUMN/CONSTRAINT is the only operation specified in the ALTER TABLE.

OCI-23291: Only base table columns may be renamed

Cause: Tried to rename a column of a non-base table, like object table/ nested table/ materialized view table.

Action: None. This is not allowed.

OCI-23292: The constraint does not exist

Cause: The given constraint name does not exist.

Action: Give an existing constraint's name.

OCI-23293: Cannot rename a column which is part of a join index

Cause: The column participates in a join index.

Action: If you need to rename the column, you need to drop the join index.

OCI-23300: *string*

Cause: The stored procedure 'raise_system_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

OCI-23301: mixed use of deferred rpc destination modes

Cause: Replication catalog determined deferred RPC destinations were mixed with destination determined by other mechanisms in the same transaction.

Action: Do not mix destination types in the same transaction.

OCI-23302: application raised communication failure during deferred RPC

Cause: An application declared a communication failure during a deferred RPC.

Action: Retry the application when communication is restored.

OCI-23303: application raised generic exception during deferred RPC

Cause: An application declared a generic failure during a deferred RPC.

Action: Determined by the application

OCI-23304: malformed deferred rpc at arg *string* of *string* in call *string*, in tid *string*

Cause: A deferred RPC call was issued without the correct number of arguments as determined by the count parameter to dbms_defer.call

Action: Be sure the number of actuals matches the count.

OCI-23305: internal deferred RPC error: *string*

Cause: An internal error occurred in deferred rpc.

Action: Report the error and other information to support.

OCI-23306: schema *string* does not exist

Cause: The schema name was null or misspelled, or the schema does not exist locally.

Action: Specify the schema correctly, or create it with CREATE USER.

OCI-23307: replicated schema *string* already exists

Cause: The given database already replicates the given schema.

Action: Choose a different schema or a different database.

OCI-23308: object *string.string* does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_*reproject*.

OCI-23309: object *string.string* of type *string* exists

Cause: An object in the same namespace exists, perhaps with a different type or shape, or the same object has already been registered as an *reproject* in another object group.

Action: Remove the offending object with the SQL DROP command, unregister the offending object with `dbms_repcat.drop_master_reproject()`, or reinvoke the request using TRUE for a boolean parameter such as `retry` or `use_existing_object`.

OCI-23310: object group "*string*"."*string*" is not quiesced

Cause: The requested operation requires the object group to be suspended.

Action: Invoke `suspend_master_activity` at the *reproject*'s *masterdef*, wait until the status has changed to quiesced, and then retry the original request.

OCI-23312: not the masterdef according to *string*

Cause: The group name is null, the group name is misspelled, the invocation or given database is not the *masterdef*, or one of the masters does not believe the invocation database is the *masterdef*.

Action: If the given group name and *masterdef* were both correct, connect to the *masterdef* and retry the request, or relocate the *masterdef* at the (errant) databases using `relocate_masterdef`.

OCI-23313: object group "*string*"."*string*" is not mastered at *string*

Cause: The group name is null, the group name is misspelled, the invocation database is not a master, or the invocation database does not believe the given database is a master.

Action: If the given group name was correct, connect to a current master and retry the request, make the invocation database a master with `add_master_database`, or use `switch_mview_master` if the invocation database is a materialized view site.

OCI-23314: database is not a materialized view site for "*string*"."*string*"

Cause: The invocation database is not a materialized view database for the given object group.

Action: Connect to the desired materialized view database and retry the request, or make the invocation database a materialized view site with `create_mview_repschema` or `create_mview_reproject`.

OCI-23315: repcatlog version or request *string* is not supported by version *string*

Cause: Either incompatible *repcat* versions are used, or a *repcatlog* record has been corrupted.

Action: Convert the master to a compatible version of repcat or retry the request.

OCI-23316: the masterdef is *string*

Cause: The requested operation is not permitted on a masterdef site.

Action: Relocate the masterdef to another master and retry the operation.

OCI-23317: a communication failure has occurred

Cause: The remote database is inaccessible.

Action: Ensure the remote database is running, the communications network is functioning, and the appropriate database links are present.

OCI-23318: a ddl failure has occurred

Cause: User-supplied or system-generated ddl did not execute successfully.

Action: Examine ddl, database state, repcatlog, and all_errors to determine why the failure occurred.

OCI-23319: parameter value *string* is not appropriate

Cause: The given value of a parameter is either null, misspelled, or not supported.

Action: Refer to the documentation and use parameter values that are appropriate for the given situation.

OCI-23320: the request failed because of values *string* and *string*

Cause: A missing ddl record for a repcatlog record, or inconsistency in repcat views.

Action: Retry the request, or make the views consistent.

OCI-23321: Pipename may not be null

Cause: You called dbms_pipe with a null pipe name.

Action: Find out the name of the pipe and call function with non-null pipename.

OCI-23322: Privilege error accessing pipe

Cause: You either tried to create a pipe that already existed and belonged to someone else, or remove a pipe that you were not authorized to use, or put a message into a pipe that you were not authorized for, or get a message from a pipe that you were not authorized for.

Action: You may have to use a different pipename.

OCI-23323: parameter length exceeds deferred RPC limits

Cause: A deferred rpc parameter was longer than the deferred rpc limits of 4000 bytes for char/varchar2 parameters and 2000 bytes for raw parameters.

Action: Use smaller parameters.

OCI-23324: error *string*, while creating deferror entry at "*string*" with error *string*

Cause: The given error was encountered while attempting to create a deferror entry for the give error code and the give database.

Action: Correct the cause of the given error.

OCI-23325: parameter type is not *string*

Cause: A conflict resolution priority function was given a type different than the type assigned to the priority group; or the priority group has no type assigned or a function; or

dbms_defer_sys_query was called to retrieve a deferred rpc parameter from the deferred rpc queue, but the type of the parameter does not match the return type of the function.

Action: Use the function corresponding to the parameter type.

OCI-23326: object group "string"."string" is quiesced

Cause: Either suspend_master_activity has been called before the object group has resumed normal operation or a (deferred) rpc operation was attempted while the object group was quiesced.

Action: If suspend_master_activity has been called and a resume_master_activity request is pending, wait until it completes, and then reinvoke suspend_master_activity. Otherwise, resume database activity with the resume_master_activity call.

OCI-23327: imported deferred rpc data does not match string of importing db

Cause: Deferred rpc queues were imported from a database with a different global name or operating system than importing database.

Action: Deferred rpc data should only be imported into a database with the same global name and hardware and operating system.

OCI-23328: mview base table "string"."string" differs from master table "string"."string"

Cause: When creating a materialized view through repcat, the materialized view base table name did not match a replicated table name at the master.

Action: Change the materialized view ddl to use the same base table as the replicated table name at the master.

OCI-23329: successful user-provided ddl but no materialized view "string"."string"

Cause: The DDL provided by the user to create a materialized view was executed without error, but materialized view does not exist.

Action: Manually back-out the DDL, and reregister with matching ddl and materialized view.

OCI-23330: column group string already exists

Cause: The column group was already registered in the object group.

Action: Use a column group name not yet registered in the replicated object group.

OCI-23331: column group string does not exist

Cause: The given column group is either null, misspelled or not registered.

Action: Use a registered column group.

OCI-23332: group string is in use; cannot drop

Cause: The given column group or priority group is being used to resolve conflicts.

Action: Call dbms_repcat procedures drop_update_resolution, drop_delete_resolution, drop_unique_resolution so that the column group or priority group is no longer in use before dropping.

OCI-23333: column *string* is already part of a column group

Cause: Attempted to add a column to a column group when the column was already a member of a column group.

Action: Drop the column from its existing column group before trying to add it to another.

OCI-23334: column *string* does not exist in table or column group

Cause: The given column is either null, misspelled or is not part of the given table or column group.

Action: Use a column that is a member of the table or column group.

OCI-23335: priority group *string* already exists

Cause: The priority group was already registered in the object group.

Action: Use a column group name not yet registered in the object group.

OCI-23336: priority group *string* does not exist

Cause: The priority group was already registered in the object group.

Action: Use a priority group name not yet registered in the object group.

OCI-23337: priority or value not in priority group *string*

Cause: The specified value or priority has not been registered as part of the priority group.

Action: Either specify a different value or priority that is already part of the priority group, or add the value to the priority group.

OCI-23338: priority or value already in priority group *string*

Cause: The specified value or priority has already been registered as part of the priority group.

Action: Either specify a different value or priority that not already part of the priority group, or drop the value to the priority group.

OCI-23339: duplicate conflict resolution information

Cause: The specified combination of column group, sequence, conflict type and/or parameter table name, parameter column name, and parameter sequence number has already been registered.

Action: Verify that additional conflict resolution information needs to be added and provide a new sequence number. If modifying existing information, the existing information must be dropped first.

OCI-23340: incorrect resolution method *string*

Cause: User function is specified when conflict resolution method was not "USER FUNCTION" or specified resolution method is not one of the predefined methods.

Action: If user function is specified when conflict resolution method was not "USER FUNCTION", either reregister function with method as "USER FUNCTION" or specify a NULL user function. Otherwise Specify one of the documented supported conflict resolution methods.

OCI-23341: user function required

Cause: A NULL user function was specified for the "USER FUNCTION" method.

Action: Provide user function name (e.g., "schema"."package"."function") that conforms to the documented user function specifications or specify one of the documented supported conflict resolution methods.

OCI-23342: invalid parameter column *string*

Cause: The parameter column name is null or misspelled, the invocation database is not a master, or is of the wrong type for the specified conflict resolution method.

Action: Specify a parameter column from the specified column group that has a correct type for the conflict resolution method.

OCI-23343: no match for specified conflict resolution information

Cause: The specified combination of column group, sequence, conflict type has not been registered (e.g., for adding a comment).

Action: Specify a combination of column group, sequence, conflict type has been registered.

OCI-23344: constraint (*string.string*) does not exist

Cause: A null, misspelled or nonexistent constraint was specified when registering a uniqueness conflict.

Action: Register a named constraint for the specified table.

OCI-23345: table "*string*"."*string*" not registered to collect statistics

Cause: A procedure that deals with conflict resolution statistics-gathering was called for a table that was not registered to collect statistics.

Action: Call `dbms_repcat.register_statistics` to register the table.

OCI-23346: primary key or object ID is undefined for table or materialized view *string*

Cause: Trying to generate replication support for a table or materialized view without a primary key (as defined by a constraint or `dbms_repcat.set_columns`) or an object ID.

Action: For a table, add a primary key constraint or define a primary key using `dbms_repcat.set_columns` or use object tables. For a ROWID materialized view, set `min_communication` to false or use primary key or object ID materialized views.

OCI-23347: datatype *string* for column *string* table *string* not supported

Cause: The table has a column whose datatype is not supported by `repcat`.

Action: Remove the column from the table, or alter the column to have one of the supported datatypes.

OCI-23348: cannot replicate procedure *string*; only IN parameters supported

Cause: Trying to generate replication support for a package that has a procedure with OUT or IN OUT parameters.

Action: Remove the procedure from the package, or remove the OUT or IN OUT parameters from the procedure.

OCI-23349: cannot generate replication support for functions

Cause: Trying to generate replication support for a package that has a public function, or for a stand-alone function.

Action: Remove the public function from the package, or alter the function to be a procedure.

OCI-23350: maximum number of recursive calls exceeded

Cause: This usually occurs when trying to resolve conflicts in a table while concurrent updates to the same row create more conflicts.

Action: Re-execute the deferred transaction from DefError using
dbms_defer_sys.execute_error

OCI-23351: parameter datatype *string* for procedure *string* not supported

Cause: The procedure has a parameter whose datatype is not supported by repcat.

Action: Remove the parameter from the procedure, or alter the parameter to have one of the supported datatypes.

OCI-23352: duplicate destination for deferred transaction

Cause: A duplicate destination was specified for a deferred transaction either in a dbms_defer.call call or an earlier dbms_defer.transaction call or a dbms_defer_sys.add_default_dest call.

Action: Remove the duplicate entry

OCI-23353: deferred RPC queue has entries for object group "*string*"."*string*"

Cause: The requested action cannot be performed until the queue is empty for the given object group

Action: Use dbms_defer_sys.execute or dbms_defer_sys.delete_tran to empty the queue.

OCI-23354: deferred RPC execution disabled for "*string*" with "*string*"

Cause: Deferred RPC can not be executed at the destination with the specified catchup value because their propagation has been disabled.

Action: Enable deferred RPC execution with the dbms_defer_sys.set_disabled call.

OCI-23355: object *string.string* does not exist or is invalid at master site

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object at the master site, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the master database, and is visible to the user, and, if appropriate, is a valid object in all_repobject.

OCI-23356: masterdef recognizes a master which does not recognize the masterdef

Cause: Possibly drop_master_repgroup was run at a master site but remove_master_databases was not run at master definition site for that master.

Action: Run remove_master_databases from master definition site to remove the appropriate master (see associated error messages).

OCI-23357: the propagator does not exist

Cause: The propagator does not exist.

Action: Register a new propagator.

OCI-23358: invalid remote user

Cause: The local user does not match the remote user connected via a database link.

Action: Drop and recreate the identified database link with the connect-to user identical to the owner of the database link.

OCI-23359: error on creating a ddl record for a repcatlog record

Cause: The userid in the repcatlog record does not match the userid of the connected user.

Action: Retry the operation with a different user.

OCI-23360: only one materialized view for master table "*string*" can be created

Cause: Trying to create more than one materialized view on a given master table in the same rep group.

Action: Create these other materialized views in a different rep group at another site.

OCI-23361: materialized view "*string*" does not exist at master site

Cause: The materialized view does not exist at the master site for offline instantiation of the materialized view.

Action: The correct procedure is to create the materialized view in a different schema at the master site, and then follow the instructions for offline instantiation of materialized views.

OCI-23362: Invalid user specified.

Cause: The user does not exist.

Action: Provide a valid user name.

OCI-23363: mismatch of mview base table "*string*" at master and mview site

Cause: The name of the base table of the materialized view at the master site is different from the base table at the materialized view site. This error may arise during offline instantiation of materialized views.

Action: Retry offline instantiation with a materialized view name less than 24 bytes

OCI-23364: Feature not enabled: Advanced replication

Cause: The Advanced Replication feature is not enabled at this site. Updatable materialized views, deferred RPCs, and other replication features are, therefore, unavailable.

Action: Do not attempt to use this feature. Contact an Oracle Customer Support representative if the Advanced Replication feature has been purchased but not enabled.

OCI-23365: site *string* does not exist

Cause: site specified in argument "reference_site" or argument "comparison_site" in call to "differences()" routine or "rectify()" routine does not name an existing site.

Action: Make sure that database sites specified really do exist, and re-run the routine.

OCI-23366: integer value *string* is less than 1

Cause: Value of argument "max_missing" to routine "differences()" cannot be less than 1. Value of argument "commit_rows" to routines "differences()" and "rectify()" cannot be less than 1.

Action: Choose an integer value for those arguments to be 1 or greater.

OCI-23367: table *string* is missing the primary key

Cause: Table specified in argument "oname1" or "oname2" in call to "differences()" routine does not contain either a primary key or a virtual primary key (defined through dbms_repcat package under symmetric replication).

Action: Make sure the tables specified have a primary key defined.

OCI-23368: name *string* cannot be null or the empty string

Cause: Argument "sname1," "sname2," "oname1," "oname2," "missing_rows_sname," "missing_rows_oname1," "missing_rows_oname2" to "differences()" or "rectify()" cannot be NULL or " (empty string).

Action: Change argument to non-null or non-empty string.

OCI-23369: value of "*string*" argument cannot be null

Cause: Argument "max_missing" to "differences()" routine cannot be NULL.

Action: Legal values for "max_missing" are integers 1 or greater.

OCI-23370: table *string* and table *string* are not shape equivalent (*string*)

Cause: The tables specified are not shape equivalent, which means intuitively that the number of columns, the names, their datatypes and lengths are not the same. Specifically, problem is in the parentheses and is one of the following: the number of columns are not equal, datatypes of columns with same name in different tables are different, lengths of varchar2 and char columns are not equal, precision and scale of number datatypes are not equal.

Action: Make sure the two tables being compared have the same number of columns, same column names, and same datatypes.

OCI-23371: column *string* unknown in table *string*

Cause: Some column in "array_columns" argument (or "column_list" argument) to "differences()" routine does not correspond to a column in the specified table.

Action: Make sure that all the columns in either "array_columns" or "column_list" are present in the specified table.

OCI-23372: type *string* in table *string* is unsupported

Cause: Certain types in the table comparison utility are not supported.

Action: Make sure that the types of columns in the tables to be compared are the ones supported by symmetric replication.

OCI-23373: object group "*string*". "*string*" does not exist

Cause: The group name was null or misspelled, or the group does not exist locally.

Action: Specify the group correctly, or create it with dbms_repcat.create_master_repgroup().

OCI-23374: object group "*string*". "*string*" already exists

Cause: The given database already replicates the given object group. A materialized view repgroup cannot be created at a given site where a master repgroup with the same name already exists.

Action: Choose a different group or a different database.

OCI-23375: feature is incompatible with database version at *string*

Cause: A feature not compatible with the specified database was used

Action: Set or raise the value of the "compatible" INIT.ORA parameter to match the necessary compatibility level.

OCI-23376: node *string* is not compatible with replication version "*string*"

Cause: A feature not compatible with the remote database was used

Action: Upgrade the remote database and retry the operation

OCI-23377: bad name *string* for missing_rows_otype1 argument

Cause: An attempt was made to use the name of the reference site table as the name of the missing_rows_otype1 argument.

Action: Provide a separately created table with a different name for missing_rows_otype1 argument. The separately created table will contain the differences between the tables being compared.

OCI-23378: connection qualifier "*string*" is not valid for object group "*string*". "*string*"

Cause: The connection qualifier used in the database link for the specified object group does not match the qualifier specified for the group in create_master_repgroup.

Action: Use or create a database link which contains the correct connection qualifier.

OCI-23379: connection qualifier "*string*" is too long

Cause: The maximum length of a database link, including the connection qualifier, is 128 bytes.

Action: Use a shorter connection qualifier, or shorten the name of the database link

OCI-23380: propagation mode "*string*" is not valid

Cause: The specified propagation may be misspelled, or is not supported. For materialized view sites, all materialized view object groups at the same materialized view site with the same master object group must all have the same propagation method.

Action: Refer to the manual on replicated data for valid propagation modes. For materialized view sites, also ensure that the propagation modes of all materialized view object groups with the same master object group are the same.

OCI-23381: generated object for base object *string.string@string* does not exist

Cause: The system generated object(s) for the specified base object do not exist at the specified site. The current operation requires the base object to have generated replication support.

Action: Ensure that the generated replication object(s) for the base object exist and are valid at the specified site. If the generated object(s) do not exist, then the procedure dbms_repcat.generate_replication_support() needs to be called from the master definition site for the base object. missing_rows_otype1 argument. The separately created table will contain the differences between the tables being compared.

OCI-23382: materialized view repgroup "*string*". "*string*" is not registered at site *string*

Cause: The materialized view repgroup is not currently registered at the master and so cannot be unregistered.

Action: None

OCI-23383: registration for materialized view repgroup "*string*". "*string*" failed at site *string*

Cause: Insertion into local repschema table failed.

Action: None

OCI-23384: replication parallel push *string* argument out of range

Cause: Specified numeric argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

OCI-23385: replication parallel push *string* argument not valid

Cause: Specified string argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

OCI-23386: replication parallel push cannot create slave processes

Cause: An error was occurred while creating slave processes for parallel push.

Action: n/a

OCI-23387: replication parallel push dequeue error

Cause: An attempt to dequeue a deferred transaction failed while trying to assign a new queue batch number.

Action: n/a

OCI-23388: replication parallel push watermark error

Cause: An error occurred during parallel push while trying to update the high-water-mark information in system.def\$_destination.

Action: n/a

OCI-23389: obsolete procedure; drop objects and recreate using new master

Cause: dbms_repcat.switch_mview_master is no longer supported.

Action: Drop the objects in the object group and recreate them using the new master.

OCI-23392: could not find materialized view to be associated with "*string*". "*string*"

Cause: Could not find materialized view associated with a trigger or index that is being pulled from the master site.

Action: Ensure that materialized view, master, and master index or trigger is registered as replicated objects.

OCI-23393: the user is already the propagator

Cause: The given user is already the current propagator.

Action: n/a

OCI-23394: duplicate propagator

Cause: More than one valid propagator exist.

Action: Unregister any duplicate propagator.

OCI-23395: object "*string*"."*string*" of type "*string*" does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_reprobject.

OCI-23396: database link "*string*" does not exist or has not been scheduled

Cause: the database link does not exist in the schema of the replication propagator or has not been scheduled.

Action: Ensure that the database link exists in the database, is accessible and is scheduled for execution.

OCI-23397: global name "*string*" does not match database link name "*string*"

Cause: the database link name at the local node does not match the global name of the database that the link accesses.

Action: Ensure that global names is set to true and the link name matches the global name.

OCI-23398: user name "*string*" at database link "*string*" does not match local user name "*string*"

Cause: the user name of the replication administration user at the local node and the user name at the node corresponding to the database link are not the same. Symmetric replication expects the two users to be the same.

Action: Ensure that the user ID of the replication administration user at the local node and the user ID at the node corresponding to the database link are the same.

OCI-23399: generation of replication support for "*string*"."*string*" is not complete

Cause: Replication support for the specified object has not been generated or the generation process is not yet complete.

Action: Ensure that replication support has been generated for the object. Use DBMS_REPCAT.GENERATE_REPLICATION_SUPPORT() to generate replication support for the object.

OCI-23400: invalid materialized view name "*string*"

Cause: A null, misspelled, or badly formed materialized view name was given to dbms_mview.refresh.

Action: Provide a valid materialized view name to dbms_mview.refresh.

OCI-23401: materialized view "*string*"."*string*" does not exist

Cause: A materialized view name was given to dbms_mview.refresh that is not in sys.snap\$ or its associated views.

Action: Provide a materialized view name that is in sys.snap\$, all_mvviews or user_mvviews.

OCI-23402: refresh was aborted because of conflicts caused by deferred txns

Cause: There are outstanding conflicts logged in the DefError table at the materialized view's master.

Action: Resolve the conflicts in the master DefError table and refresh again after the table is empty. Alternatively, refresh with refresh_after_errors set to TRUE, which will proceed with the refresh even if there are conflicts in the master's DefError table. Proceeding despite conflicts can result with an updatable materialized view's changes appearing to be temporarily lost (until a refresh succeeds after the conflicts are resolved).

OCI-23403: refresh group "*string*"."*string*" already exists

Cause: Making a new refresh group when there is already a group of the same name in sys.rgroup\$.

Action: Choose a different refresh group name.

OCI-23404: refresh group "*string*"."*string*" does not exist

Cause: A refresh group name was given that is not in sys.rgroup\$.

Action: Provide a refresh group name that is in sys.rgroup\$ or dbs_rgroup.

OCI-23405: refresh group number *string* does not exist

Cause: A refresh group number was given that is not in sys.rgroup\$.

Action: Provide a refresh group number that is in sys.rgroup\$ or dbs_rgroup.

OCI-23406: insufficient privileges on user "*string*"

Cause: The caller is not the owner of the materialized view and does not have ALTER ANY MATERIALIZED VIEW privileges.

Action: Perform the operation as the owner of the materialized view or as a user with ALTER ANY MATERIALIZED VIEW privileges.

OCI-23407: object name *string* must be shaped like "*schema*"."*object*" or "*object*"

Cause: The object name (e.g., the rollback segment, the materialized view name, the refresh group) was incorrectly specified.

Action: Retry the operation with the object name properly specified (like "*schema*"."*object*" or "*object*")

OCI-23408: this replication operation is not supported in a mixed configuration

Cause: operation is not supported if the object group is replicated at a pre-V8 node.

Action: Ensure that all nodes of the replicated object group are V8.

OCI-23409: could not find an unused refresh group number

Cause: 1000 consecutive refresh group numbers, as defined by the rgroupseq number, were already used by rows in sys.rgroup\$.

Action: Alter the sequence number to be within a legal unused range and destroy unneeded refresh groups.

OCI-23410: materialized view "*string*"."*string*" is already in a refresh group

Cause: A materialized view of the same name is already in a refresh group.

Action: Subtract the materialized view from the current refresh group and add it to its new refresh group, or combine the two refresh groups into a single refresh group.

OCI-23411: materialized view "*string*"."*string*" is not in refresh group "*string*"."*string*"

Cause: The specified materialized view is not in the specified refresh group.

Action: Try again with the proper materialized view and refresh group names.

OCI-23412: master table's primary key columns have changed

Cause: The master table's primary key constraint was modified after the primary key materialized view was created.

Action: Drop and recreate the primary key materialized view

OCI-23413: table "*string*"."*string*" does not have a materialized view log

Cause: The fast refresh can not be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

OCI-23414: materialized view log for "*string*"."*string*" does not record rowid values

Cause: A rowid materialized view is being fast refreshed, but the materialized view log does not record rowid information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD ROWID command to begin recording rowid information in the materialized view log.

OCI-23415: materialized view log for "*string*"."*string*" does not record the primary key

Cause: A primary key materialized view is being fast refreshed, but the materialized view log does not record primary key information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD PRIMARY KEY command to begin recording primary key information in the materialized view log.

OCI-23416: table "*string*"."*string*" does not contain a primary key constraint

Cause: The table did not contain a primary key constraint or the primary key constraint was disabled.

Action: Create a primary key constraint on the table or enable the existing constraint.

OCI-23417: unknown materialized view type: *string*

Cause: A fast refresh is being performed on a materialized view of an unknown or unsupported type.

Action: Check all_mviews and ensure that the materialized view being refreshed a valid materialized view.

OCI-23418: cannot unregister the propagator who is currently in use

Cause: The propagator is currently used in propagating replication RPCs.

Action: Try again later when there is no transaction active in propagating replication RPCs.

OCI-23419: regenerate replication support before resuming master activity

Cause: There are tables in the object group that require regeneration of replication support.

Action: Check the `generation_status` column in the `all_repobjects` view. Regenerate replication support for any table in the object group with a 'NEEDSGEN' status. Resume master activity.

OCI-23420: interval must evaluate to a time in the future

Cause: The parameter "interval" evaluates to a time earlier than SYSDATE.

Action: Choose an expression that evaluates to a time later than SYSDATE.

OCI-23421: job number *string* is not a job in the job queue

Cause: There is no job visible to the caller with the given job number.

Action: Choose the number of a job visible to the caller.

OCI-23422: Oracle Server could not generate an unused job number

Cause: Oracle Server could not generate a job number that was not used to identify another job.

Action: Retry the operation.

OCI-23423: job number *string* is not positive

Cause: The given job number is less than 1.

Action: Choose a positive integer.

OCI-23424: materialized view "*string*"."*string*" at *string* not registered

Cause: The specified materialized view has not been successfully registered at this site.

Action: Register the materialized view manually at either the master site or the materialized view site.

OCI-23425: invalid materialized view identifier *string*

Cause: The argument provided to `dbms_mview.purge_mview_from_log` is an invalid materialized view identifier or it does not identify an Oracle 8 fast refreshable materialized view or the materialized view has been already purged.

Action: If the materialized view is an Oracle 8 fast refreshable materialized view then provide `purge_mview_from_log` with its valid materialized view identifier.

OCI-23426: deferred RPC queue has entries for *string*

Cause: The requested action cannot be performed until the queue is empty for the given site/`dblink`

Action: Use `dbms_defer_sys.push`, `dbms_defer_sys.purge_queue` or `dbms_defer_sys.delete_tran` to empty the queue.

OCI-23427: deferred purge queue argument *string* out of range

Cause: Specified numeric argument to `dbms_defer_sys.purge_queue` is invalid.

Action: Fix the argument value and try again.

OCI-23428: job associated instance number *string* is not valid

Cause: A job is associated with an instance that is not running.

Action: Choose a running instance for job affinity, or set force parameter to TRUE.

OCI-23430: argument "*string*" cannot be NULL or empty string

Cause: The caller has provided an argument whose value cannot be NULL or the empty string.

Action: Check that the varchar2 value provided is not NULL or the empty string, and retry the call.

OCI-23431: wrong state: *string*

Cause: The routine was executed against a replicated object group that was in the wrong state.

Action: Make sure that the replicated object group is in the state given in the error message.

OCI-23432: master site *string* already exists

Cause: An attempt was made to instantiate a replicated object group at a master site that was already a part of the object group.

Action: If you were trying to add this site, do nothing because it already exists; otherwise, pick the name of another site, and re-run the routine.

OCI-23433: executing against wrong master site *string*

Cause: An attempt was made to execute the routine at a site that is different from the site specified in the argument of the routine.

Action: Provide an argument to the routine that correctly indicates the site against which the routine should be executing.

OCI-23434: master site *string* not known for object group

Cause: The site name given as an argument to a routine was not already known to the replicated object group.

Action: Execute the `dbms_offline_og.begin_instantiation()` routine to add a new site to the replicated object group.

OCI-23435: cannot create an updatable ROWID materialized view with LOB columns

Cause: The propagation of LOB data from materialized view sites to the master site requires a primary key on the replicated table. Thus updatable ROWID materialized views that contain LOB columns are not supported.

Action: Create a primary key materialized view instead of a ROWID materialized view. If the materialized view already exists, it can be converted to a primary key materialized view using the ALTER MATERIALIZED VIEW DDL command.

OCI-23436: missing template authorization for user

Cause: The specified template authorization does not exist.

Action: Check the values for user name and refresh template name to ensure a valid row exists in the `DBA_REPCAT_USER_AUTHORIZATIONS` view.

OCI-23437: template authorization already exists for user

Cause: The specified user already has been authorized to use the specified refresh group template.

Action: Check the values for user name and refresh template name or query the DBA_REPCAT_USER_AUTHORIZATIONS view to ensure that the correct values were passed as parameters.

OCI-23438: missing refresh group template

Cause: The specified refresh group template does not exist.

Action: Verify that the refresh group template does not exist by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

OCI-23439: refresh group template already exists

Cause: The specified refresh group template already exists.

Action: Verify that the refresh group template exists by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

OCI-23440: incorrect public template value

Cause: The public template parameter is not 'Y', 'N' or NULL.

Action: Correct the value of the public template parameter. It must be 'Y','N' or NULL.

OCI-23441: object does not exist for refresh group template

Cause: The specified object does not exist in the refresh group template.

Action: Correct the object name and object type parameters. Check the DBA_REPCAT_TEMPLATE_OBJECTS view to verify the correct name and type of the object.

OCI-23442: object already exists for the refresh group template

Cause: The specified object already exists in the refresh group template.

Action: Change the object name and object type parameters. Query the DBA_REPCAT_REMPLATE_OBJECTS view to verify the correct name and type of the object.

OCI-23443: missing template parameter

Cause: The specified template parameter does not exist.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

OCI-23444: duplicate template parameter

Cause: The template parameter already exists for the specified refresh group template.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

OCI-23445: missing template site

Cause: The template site specified by the site name, user name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

OCI-23446: duplicate template site

Cause: The template site specified by the site name, user name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

OCI-23447: missing user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

OCI-23448: duplicate user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

OCI-23449: missing user name

Cause: The user specified by the user name parameter does not exist in the database.

Action: Correct an invalid user name or create the user in the master database. Use the DBA_USERS view to select the valid database users.

OCI-23450: flavor already contains object "*string*"."*string*"

Cause: The flavor already contains the specified object.

Action: Check that the specified object is correct. To add all columns of a table object, delete the object from the flavor and then add it again.

OCI-23451: flavor *string* already defined for object group "*string*"."*string*"

Cause: The given object group already contains a (possibly unpublished) definition of the specified flavor.

Action: Check the spelling of the flavor name. Check for an unpublished flavor of the desired name.

OCI-23452: flavor *string* of object group "*string*"."*string*" is already published

Cause: The given object group already contains a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name.

OCI-23453: requested operation is not supported on top flavor

Cause: The TOP flavor has a NULL name and may not be directly defined or deleted.

Action: Supply the name of a flavor other than the TOP flavor or use dbms_repcat routines to implicitly change the TOP flavor.

OCI-23454: flavor *string* not defined for object group "*string*"."*string*"

Cause: The given object group does not contain a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name. Ensure the flavor has been defined (and published) for the object group.

OCI-23455: flavor *string* contains object "*string*"

Cause: The given flavor contains the object to be dropped.

Action: Purge the flavor or choose another object to drop.

OCI-23456: flavor *string* does not contain "*string*"

Cause: The flavor does not contain the given object, column, or attribute.

Action: Either drop the flavor or choose a different object, column, or attribute.

OCI-23457: invalid flavor ID *string*

Cause: The given flavor ID is invalid.

Action: Make sure this flavor has been instantiated. If the flavor ID is outside the range (-2147483647, 2147483647), contact customer support.

OCI-23458: inappropriate flavor *string* at *string*

Cause: The given flavor at the given database prevents the operation from succeeding.

Action: Either change the database flavor or choose a different operation.

OCI-23459: flavor *string* must contain "*string*"

Cause: The flavor must contain the given object, column, or attribute.

Action: Either choose a different database flavor or ensure the object, column, or attribute is available.

OCI-23460: missing value for column *string* in resolution method "*string*" for "*string*"."*string*"."*string*"

Cause: before resolving conflicts, some values necessary resolving conflicts are not available, or after resolving conflicts, some values necessary for re-trying of the SQL are not available

Action: define appropriate flavors, provide necessary values through availability vector in USER FLAVOR FUNCTION for conflict resolution

OCI-23461: fail to resolve conflict for "*string*"."*string*"."*string*"

OCI-23462: flavor *string* in use at site *string*

Cause: The given flavor cannot be deleted because it is being used at the given site.

Action: Change the flavor of the site, or unregister it if it is a materialized view site.

OCI-23463: flavor incompatible with object "*string*"."*string*"

Cause: An existing flavor includes the specified object with an incompatible type.

Action: Change the type of the object, or delete the flavor if it is not in use.

OCI-23464: flavor lacks column *string* of "*string*"."*string*"

Cause: The flavor includes some columns of an object group but not all the required columns.

Action: Change the flavor definition to include all required columns.

OCI-23465: flavor already includes column *string* of "*string*".*string*"

Cause: The flavor includes the specified column which is being added.

Action: Check that the specified column is correct.

OCI-23466: flavor requires missing object "*string*".*string*"

Cause: The flavor includes the specified object which does not exist

Action: Check that the specified object name is correct, and create the object if appropriate.

OCI-23467: flavor lacks object "*string*".*string*"

Cause: The flavor does not include the specified object which is being dropped.

Action: Check that the specified object is correct.

OCI-23468: missing *string string*

Cause: The template is missing the object with the specified key.

Action: Add the object to the template.
