Action: Check that enough servers are running, and that they are processing commands of the correct type. For instance, a DDL command might timeout if all the servers are setup to exclusively process query commands. Also, check the server log files.

DRG-10302: interrupted waiting for responses from servers

Cause: User interrupted the request before it was completed

Action: Restart the request

DRG-10303: could not queue given commands to be processed

Cause: The given command or commands could not (all) be queued. This could indicate an extremely high system load, but it is more likely an internal error.

Action: Check if any servers are running to process the command.

DRG-10304: unexpected error sending command(s) to Oracle Text server

Cause: There was an unexpected error sending command(s) to server

Action: Call customer support.

DRG-10305: pipe *string* is full

Cause: Could not send command to pipe, because the pipe was full

Action: Check if any servers are running to process the commands on that pipe

DRG-10306: server terminated unexpectedly while processing command

Cause: The server shutdown during execution of your command. This could be caused by a shutdown abort, or by an internal error in the server.

Action: If the server terminated had an internal error, contact customer support.

DRG-10307: no servers running

Cause: Could not process command because no servers are running with the correct personality mask.

Action: Start some servers with correct personality mask.

DRG-10308: no server with the required *string* personality mask is running

Cause: Could not process command because no servers are running with the correct personality mask.

Action: Start some servers with correct personality mask.

DRG-10309: not enough job queue processes

Cause: Could not process command because no servers with the correct personality mask are running.

Action: increase the JOB_QUEUE_PROCESSES initialization parameter or reduce the parallel degree for this statement.

DRG-10310: servers were shutdown before processing request

Cause: The command could not be completed because the servers were shut down or terminated before processing the request.

Action: Start another server with the correct personality mask.

DRG-10311: remote send not supported

Cause: You tried to specify a database link in an index specification

Action: Specify only local index names

DRG-10312: logfile name must be specified

Cause: You tried to start logging without specifying a logfile name

Action: Specify a logfile name

DRG-10313: logging has already been started

Cause: You tried to start logging even though logging has already been started

Action: Stop logging first, or ignore

DRG-10314: logging has not been started

Cause: You tried to stop logging even though logging has not been started

Action: Start logging first, or ignore

DRG-10315: logging is not supported on MTS

Cause: You tried to start logging on MTS

Action: n/a

DRG-10500: CREATE_INDEX failed: column spec *string*

Cause: failed to create text index on the specified column

Action: See the next errors on stack and take appropriate action

DRG-10501: invalid stopword: *string*

Cause: The stopword specified could be lexed into multiple tokens with current lexer preference

Action: Check lexer preference and Respecifies the stopword

DRG-10502: index *string* does not exist

Cause: the specified index does not exist or you do not have access to it.

Action: Specify an existing index

DRG-10503: table *string* cannot be indexed because it has no primary key

Cause: a textkey needs to be a single column unique key whose length does not exceed 64 bytes. no such key was defined as an unique index or declared as a primary or unique key constraint

Action: create a suitable textkey for the table or specify it explicitly in this procedure call

DRG-10504: primary key is required when using the DETAIL_DATASTORE

Cause: you tried to use the detail datastore to index a table with no primary key constraint

Action: add a primary key constraint on the table

DRG-10505: TRANSACTIONAL parameter not supported for NDATA

Cause: NDATA sections do not support the TRANSACTIONAL parameter

Action: Remove the TRANSACTIONAL parameter when creating the index

DRG-10506: table does not exist: *string*

Cause: The table, view, or synonym specified does not exist. There may also be a permissions problem reading the table.

Action: Reinvoke the operation with the correct table name

DRG-10507: duplicate index name: *string*

Cause: the specified index already exists in the dictionary

Action: this index can be updated or deleted, however this is only allowed if there is no text index available on the text column

DRG-10508: TRANSACTIONAL parameter not supported for JSON INDEX

Cause: JSON search index does not support TRANSACTIONAL parameter

Action: remove the parameter transactional for creating the index

DRG-10509: invalid text column: *string*

Cause: the column specified is not valid

Action: check that the followings are valid: a) text column is of supported datatype b) valid table name, column name in the specification.

DRG-10510: stopword is missing

Cause: The stopword to be added was not specified.

Action: Specify the stopword

DRG-10511: index *string* does not exist or is incomplete

Cause: index creation is not complete

Action: create index before performing this operation

DRG-10512: TRANSACTIONAL parameter not supported for CONTEXT SEARCH INDEX

Cause: CONTEXT search index does not support TRANSACTIONAL parameter

Action: remove the parameter transactional for creating the index

DRG-10513: index *string* metadata is corrupt

Cause: dictionary contains bad preferences for this index

Action: contact you DBA

DRG-10514: cannot create index with RIO\$ prefix

Cause: user attempted to create an index whose name is prefixed with RIO\$

Action: create index using a different index name

DRG-10515: Combination of parameters '*string*' and '*string*' is not supported

Cause: Parameters are incompatible.

Action: Remove either one of the parameters to allow index creation.

DRG-10516: failed to perform DDL operation due to an Oracle error

Cause: the ddl operation requested has failed because of an Oracle error

Action: see the Oracle error on the stack and take the appropriate action

DRG-10517: index *string* is already valid

Cause: The index was in a valid state and did not need the requested operation.

Action: Check the requested operation

DRG-10518: an operation is in progress which conflicts with *string* request

Cause: another session is operating on this index. it could be: a) DML is requested and DDL is in progress or b) DDL is requested and DML is in progress operation on the index

Action: try again later

DRG-10519: Shadow Index is not supported for 'search index'

Cause: attempt to create a shadow index on 'search index'

Action: use ctxsys.context instead

DRG-10520: failed to drop index: *string*

Cause: Failed to drop index on the specified index

Action: see the Oracle error on the stack and take the appropriate action

DRG-10521: Operation not supported with *string* on a *string* Index

Cause: The operation uses a feature not supported for index type

Action: Do not specify this feature for this index type

DRG-10522: cannot optimize Sort SDATA for an index without Sortable SDATA sections or columns

Cause: You cannot do this operation if you do not have SDATA sections

Action: Create index with SDATA sections or try out different optimize modes

DRG-10525: missing REBUILD keyword

Cause: all Oracle Text alter index options require the REBUILD keyword

Action: specify alter index with the REBUILD keyword

DRG-10528: primary keys of type *string* are not allowed

Cause: you tried to create an index on a table with an illegal primary key datatype

Action: change the textkey to one of the followings: VARCHAR2, NUMBER, VARCHAR, DATE, CHAR, MLSLABEL

DRG-10531: parallel parameter must be > 0

Cause: you called create index with parallel = 0

Action: specify with value > 0

DRG-10532: table is not partitioned

Cause: you called parallel create index on non-partitioned table

Action: recreate the table with partitions or remove the PARALLEL clause

DRG-10533: invalid user name: *string*

Cause: you specified a user name that is invalid

Action: specify the correct user name

DRG-10535: failed to optimize text index *string*

Cause: the optimize operation requested has failed because of an Oracle error

Action: see the Oracle error on the stack and take the appropriate action

DRG-10536: Storage cannot be altered at index-level for partitioned indexes.

Cause: Alter-index operation was used to modify storage at index-level.

Action: For partitioned indexes alter storage at partition-level.

DRG-10549: length of the object name *string* exceeded the limit

Cause: object name has exceeded the maximum length of 30 bytes

Action: Reduce the length of the object name if you want to re-create it

DRG-10550: illegal syntax for index, preference, source or section name

Cause: name may have additional periods(.)

Action: check the syntax of the name

DRG-10553: illegal syntax for column specification *string*

Cause: column specification may have additional periods(.)

Action: check the syntax of column specification if you want to re-create it

DRG-10561: index *string* is not valid for requested operation

Cause: The index was not in a valid state due to some prior error.

Action: Drop index and create index again.

DRG-10562: missing alter index parameter

Cause: The parameter string was missing

Action: Provide correct parameter string with regard to the requested alter index operation.

DRG-10569: table or column does not exist: *string*

Cause: The table, view, synonym or column specified does not exist. There may also be a permissions problem reading the table.

Action: Reinvoke the operation with the correct table name or column name

DRG-10573: index *string* is obsolete

Cause: you specified an obsolete index

Action: perform upgrade_index on the index

DRG-10574: failed to upgrade text index *string*

Cause: the upgrade operation has failed because of an Oracle error

Action: see the Oracle error on the stack and take the appropriate action

DRG-10579: must provide text query criteria

Cause: text query criteria is mandatory

Action: provide text query criteria

DRG-10581: indirect datastores cannot be used with long or lob text columns

Cause: You tried to create an index on a long or lob column using an indirect datastore such as the file or url datastores

Action: Use direct datastore or a varchar column

DRG-10582: column *string* does not exist in table *string*

Cause: you specified an invalid column

Action: specify valid column

DRG-10583: TRUNCATE INDEX failed: *string*

Cause: Failed to truncate index

Action: See the next errors on stack and take appropriate action

DRG-10584: failed to *string string string* due to an Oracle error

Cause: a DDL operation on an index object failed due to SQL error

Action: see following error

DRG-10594: *string* feature not supported for *string* Index

Cause: feature not supported for index type

Action: Do not specify this feature for this index type

DRG-10595: ALTER INDEX *string* failed

Cause: failed to alter index

Action: See the next errors on stack and take appropriate action

DRG-10596: *string* feature not supported for *string* Search Index

Cause: Specified feature not supported for the index being created

Action: Do not specify this feature

DRG-10597: invalid rebuild online operation

Cause: REBUILD ONLINE is not supported for requested operation.

Action: Alter index without the online option.

DRG-10598: invalid parallel operation

Cause: PARALLEL is not supported for requested operation.

Action: Alter index without the parallel option

DRG-10599: column is not indexed

Cause: The column specified is not indexed.

Action: Create index on the column before performing this operation

DRG-10600: Optimization encountered ORA-01555 error

Cause: Optimization ran into the snapshot too old error.

Action: Increase undo tablespace

DRG-10601: failed to remove pending DML for this index

Cause: The system could not remove triggers setup to monitor updates to the requested table

Action: See next error on stack to determine course of action. Call Oracle support if necessary. Until this error is fixed, updates to all text columns in the given table may not be indexed.

DRG-10602: failed to queue DML change to column *string* for primary key *string*

Cause: The system could not record that a change had been made to the given column

Action: See next error on stack to determine course of action. Call Oracle support if necessary. Until this error is fixed, updates to all text columns in the given table may not be indexed.

DRG-10606: server failed to access the DML Queue

Cause: The server had an error accessing the DML Queue

Action: See next error on stack.

DRG-10607: index meta data is not ready yet for queuing DML

Cause: the meta data for the index has not been created yet

Action: retry the DML operation

DRG-10608: rowid to primary key mapping not available in base table

Cause: Procedural replication is on and no rowid to primary key mapping available in base table

Action: Modify base table to include a primary key

DRG-10609: cannot encode composite key with more than 16 columns

Cause: Cannot encode composite key with more than 16 columns

Action: Modify base table to have composite key with less than 16 columns

DRG-10610: Procedure not supported with Procedural replication on: *string*

Cause: This procedure is not supported when Procedural replication is on

Action: Turn off procedural replication to execute this procedure

DRG-10611: Unexpected DML operation for rowid: *string*

Cause: Sync on commit has encountered an unexpected sequence of DML operations

Action: Re-try DML operations.

DRG-10612: error occurred during sync-on-commit

Cause: An indexing error occurred during sync on-commit indexing

Action: Identify the reasons for the errors reported in the stack

DRG-10613: sync on-commit failed for index "*string*"."*string*"

Cause: Sync on-commit encountered an unexpected error

Action: Attempt to solve the underlying errors or contact customer support

DRG-10700: preference does not exist: *string*

Cause: the preference name specified does not exist

Action: retry with the correct preference name

DRG-10701: preference *string.string* already exists

Cause: the specified preference already exists

Action: must drop the preference if you want to re-create it.

DRG-10702: cannot create or modify preference in another user's schema

Cause: you tried to create a preference for another user

Action: owner or CTXSYS or a user who has CTXADMIN role should create preference

DRG-10703: invalid framework object *string*

Cause: you specified an invalid object type

Action: use a valid framework object

DRG-10704: preference *string* does not have an attribute named *string*

Cause: you tried to set value for a invalid attribute (not supported by the object).

Action: specify the correct attribute name

DRG-10705: invalid value *string* for attribute *string*

Cause: you tried to set an illegal value for an attribute

Action: specify the correct attribute value for the datatype of the attribute

DRG-10706: length of *string* exceeds maximum size of *string*

Cause: Parameter is too many bytes

Action: Correct preference setting and resubmit

DRG-10707: a value is required for attribute *string* of preference *string*

Cause: A required attribute was not provided

Action: Correct preference setting and resubmit

DRG-10708: invalid class id *string* for preference *string*

Cause: the specified class id is not correct for the specified preference

Action: specify the correct class id

DRG-10709: this preference is referenced by *string* and cannot be dropped

Cause: the specified preference is used as part of another preference and cannot be dropped until the referring preference is modified

Action: modify the referring preference

DRG-10710: Invalid value *string* for *string* attribute

Cause: Invalid value provided for save_copy attribute It should be one of these: (PLAINTEXT, FILTERED, NONE)

Action: Provide correct SAVE_COPY attribute value

DRG-10711: Invalid value for SAVE_COPY attribute: *string*

Cause: Invalid value provided for SAVE_COPY attribute. It should be a boolean value

Action: Provide boolean value for SAVE_COPY attribute

DRG-10712: preference *string* already has value for an attribute named *string*

Cause: Cannot call set_sec_grp_attr for an attribute whose value is already set in a preference

Action: Call add_sec_grp_attr_val to add an additional value for attribute

DRG-10713: preference *string* does not have any value for attribute named *string*

Cause: Cannot call add_sec_grp_attr_val for an attribute without calling set_sec_grp_attr for the same attribute

Action: Call set_sec_grp_attr to set value for attribute and then call add_sec_grp_attr_val to add an additional value for attribute

DRG-10714: cannot add or remove value for attribute named *string*

Cause: Cannot call add_sec_grp_attr_val or rem_sec_grp_attr_val for a boolean attribute

Action: Do not call add_set_grp_attr_val or rem_sec_grp_attr_val for a boolean attribute. Use set_sec_grp_attr and unset_sec_grp_attr instead.

DRG-10715: preference *string* has incompatible values for *string* and *string*

Cause: Cannot set related attributes to incompatible values

Action: Set or add a compatible value for related attributes

DRG-10716: invalid prefix_ns_mapping attribute value *string*

Cause: Value of prefix_ns_mapping is neither of the form xmlns:pxf="ns" nor of the form xmlns="ns"

Action: Call rem_sec_grp_attr_val to remove this prefix_ns_mapping attribute value.

DRG-10717: incompatible index settings

Cause: Invalid combination of PATH_SECTION_GROUP, DATAGUIDE attribute and NEVER_POPULATE

Action: Use a valid combination of PATH_SECTION_GROUP, DATAGUIDE attribute and NEVER_POPULATE

DRG-10718: operation not supported with NEVER_POPULATE

Cause: Operation is not supported with NEVER_POPULATE index option

Action: Operation is not supported with NEVER_POPULATE index option

DRG-10719: Value of stage_itab_max_rows can only be either 0 or >=1000

Cause: Invalid value for stage_itab_max_rows

Action: Provide correct value for stage_itab_max_rows

DRG-10720: Syntax only supported with JSON data type or constraint: string

Cause: The syntax was invalid.

Action: Simplified syntax is only supported with constraints.

DRG-10721: ALTER INDEX does not support this operation

Cause: ALTER INDEX supported only with JSON_ENABLE and IS JSON constraint.

Any degradation of the index state is not supported either.

Action: Ensure constraints are met. To degrade index state, drop and recreate the index

DRG-10722: string is a desupported preference

Cause: creating a preference which was desupported

Action: refer to documentation for valid preferences

DRG-10723: string option cannot be enabled

Cause: An ALTER INDEX statement attempted to modify an option that is exclusive to JSON or XML Search Indexes.

Action: Remove the option from the PARAMETERS clause.

DRG-10724: invalid transition to SEARCH_ON string

Cause: An attempt was made to rebuild an index with a SEARCH_ON option that degrades the index state.

Action: ALTER INDEX REBUILD with the SEARCH_ON option can only upgrade the index state. To degrade the index, drop and recreate the index.

DRG-10750: unknown parameter string

Cause: Unrecognized parameter

Action: Specify correct parameter

DRG-10751: invalid value for parameter

Cause: Wrong data type or out of range

Action: Specify correct parameter value

DRG-10752: DEFAULT_INDEX_MEMORY cannot be greater than MAX_INDEX_MEMORY

Cause: You tried to set DEFAULT_INDEX_MEMORY to a value higher than the maximum set in MAX_INDEX_MEMORY

Action: Specify a lower value

DRG-10753: invalid size (in bytes) string string

Cause: You specified an incorrectly formatted size string

Action: Specify a correctly formatted size string

DRG-10754: Size (in bytes) must be between *string* and *string*

Cause: You specified size (in bytes) which is outside the allowed range

Action: Specify size (in bytes) within the allowed range

DRG-10755: *string* and *string* have characters in common

Cause: the join character sets cannot have characters in common

Action: Correct the attribute values and resubmit

DRG-10756: neither text indexing nor theme indexing has been selected

Cause: INDEX_TEXT and INDEX_THEMES preferences both cannot be FALSE.

Action: Set either of INDEX_TEXT or INDEX_THEMES or both to TRUE.

DRG-10757: stoplist cannot have more than 4096 stopwords

Cause: a stoplist cannot have more than 4096 stopwords. This includes stopthemes.

Action: none required

DRG-10758: index owner does not have the privilege to use file or URL datastore

Cause: index owner does not have the Text Datastore Access Privilege

Action: grant index owner the Text Datastore Access Privilege

DRG-10759: invalid role

Cause: the role does not exist in the database

Action: check the role name or create the role

DRG-10760: illegal format for procedure name

Cause: the procedure name specified is invalid. For instance, it may have a semicolon

Action: check the procedure name

DRG-10761: procedure *string* does not exist

Cause: the specified procedure could not be found

Action: check input. Try a fully-specified format such as OWNER.OBJECT

DRG-10762: index owner does not have access to procedure *string*

Cause: the index owner does not have execute privilege on the specified procedure

Action: grant index owner execute permission on the procedure

DRG-10763: value *string* is not a valid character set

Cause: the value specified for the filename_charset attribute of the file datastore is not a valid character set name

Action: specify a valid Oracle character set name

DRG-10765: stoplist cannot have more than 250 stopclasses with stoppatterns

Cause: a stoplist cannot have more than 250 stopclasses with stoppatterns. This does not include NUMBERS stopclass.

Action: none required

DRG-10766: Wildcard Index is not supported for *string* Index

Cause: Wildcard Index is not Supported for CTXCAT/CTXRULE index

Action: Do not use Wildcard Index with CTXCAT/CTXRULE index

DRG-10767: Specified datastore is not supported on the policy

Cause: Using a datastore not supported on the policy for inmemory text

Action: Use a valid datastore: Direct, Directory or Network

DRG-10768: num_themes must be greater than zero

Cause: Providing a number less than zero for num_themes parameter

Action: Provide a valid positive integer for num_themes

DRG-10769: token_type is not supported for this operation

Cause: chosen token_type is not supported for this operation

Action: chosen token_type is not supported for this operation

DRG-10770: Sharing type is not supported for this operation

Cause: chosen sharing type is not supported for this operation

Action: provide a supported sharing type

DRG-10800: query failed: *string string string*

Cause: Failed to process the query

Action: Check the errors on stack and take appropriate action

DRG-10801: cannot create an SQE for another user

Cause: You tried to create an SQE for another user

Action: Remove owner from SQE name specification

DRG-10816: display/highlight call failed

Cause: See the next error on the stack.

Action: See the next error on the stack.

**DRG-10817: CONTAINS term consists of stopword or phrase of stopwords:
*string***

Cause: One or more terms within a CONTAINS query consist of just a stopword or a phrase of just stopwords

Action: Replace the stopword or use stopwords within phrases containing non-stopwords.

DRG-10819: could not open contains cursor

Cause: An error occurred while trying to open a contains cursor

Action: See accompanying error messages in the stack

DRG-10820: invalid contains cursor id

Cause: You tried to fetch or close a contains cursor with an id which does not exist.

Action: Review fetch or close invocation

DRG-10821: contains cursor is not open

Cause: You tried to fetch from a contains cursor which was not open.

Action: Open cursor first

DRG-10822: duplicate query name

Cause: You tried to create a stored query with a name already used.

Action: Use different name

DRG-10823: invalid query name

Cause: The query name specified is not valid

Action: Check the query name

DRG-10825: stored query does not exist: *string*

Cause: The specified stored query does not exist.

Action: Check the query name

DRG-10826: no document with the specified textkey is found

Cause: There is no document with the specified textkey.

Action: Check the textkey

DRG-10827: open_con must be performed before count_last

Cause: last_count returns hit from in-memory query,so an in-memory query must be run before you can use count_last

Action: execute open_con before run count_last

DRG-10828: token *string* is longer than maximum length for column *string*

Cause: A token to be inserted in the feedback table is longer than the maximum allowed column size.

Action: Modify the query, or the column size for feedback table, or feedback procedure arguments accordingly.

DRG-10829: feedback id *string* is longer than the maximum length of *string* bytes

Cause: Feedback id is longer than the maximum allowed length for the feedback_id column.

Action: Use a smaller feedback_id.

DRG-10830: SHARELEVEL is not 0 or 1

Cause: You specified a sharelevel which is not 0 or 1

Action: Use sharelevel equal to 0 or 1 only.

DRG-10831: can not insert into feedback table *string*

Cause: Not privileged to insert.

Action: Check privileges.

DRG-10832: can not delete from feedback table *string*

Cause: Not privileged to delete.

Action: Check privileges.

DRG-10833: feedback failed

Cause: Failed to process feedback request

Action: Check the errors on stack and take appropriate action

DRG-10834: upper-case form of section name *string* too long

Cause: upper-case form of the section name is longer than supported length

Action: reduce length of section name when adding section

DRG-10835: WITHIN operator not supported for theme index

Cause: WITHIN operator used in theme index query

Action: Rewrite query without WITHIN operator

DRG-10836: field section and attribute section can not be nested

Cause: A field section or a attribute section is specified in a nested section search

Action: Rewrite query without nested field sections

DRG-10837: section *string* does not exist

Cause: The given section name does not exist in USER_SECTIONS

Action: Rewrite query with valid section name

DRG-10838: invalid SPAN argument supplied to NEAR

Cause: An invalid value was supplied for SPAN argument to NEAR

Action: Provide a valid SPAN. Valid values are integers from 0 to 100.

DRG-10839: invalid ORDER argument supplied to NEAR

Cause: An invalid value was supplied for ORDER argument to NEAR

Action: Provide a valid ORDER. Valid values are T, TRUE, F, FALSE (case insensitive).

DRG-10840: CONTAINS predicate including 0 is not supported by FIRST_ROWS hint

Cause: User attempts to issue a query with CONTAINS predicate including 0 while giving FIRST_ROWS hint.

Action: remove FIRST_ROWS hint.

DRG-10841: invalid SCORE argument supplied to FUZZY

Cause: An invalid value was supplied for SCORE argument to FUZZY

Action: Provide a valid SCORE. Valid values are integers from 1 to 80.

DRG-10842: invalid NUMRESULTS argument supplied to FUZZY

Cause: An invalid value was supplied for NUMRESULTS argument to FUZZY

Action: Provide a valid NUMRESULTS. Valid values are integers from 0 to 5000.

DRG-10843: invalid WEIGHT argument supplied to FUZZY

Cause: An invalid value was supplied for WEIGHT argument to FUZZY

Action: Set WEIGHT to WEIGHT or NOWEIGHT.

DRG-10844: index cannot execute this structured predicate efficiently

Cause: You specified a combination of condition and order by columns in a catsearch query which cannot be executed by the index's index set efficiently

Action: n/a

DRG-10845: column *string* is not indexed

Cause: You specified a column in a condition or order by which is not part of the ctxcat index

Action: n/a

DRG-10846: order by columns must be all ascending or all descending

Cause: You specified an order by clause which has some columns ascending and some descending. This is not currently supported by catsearch

Action: n/a

DRG-10847: catsearch requires prefix index for this type of query

Cause: For efficient execution of this Vgram query, we require presence of a prefix index.

Action: create a prefix index

DRG-10848: invalid structured clause

Cause: you have specified an invalid structured clause

Action: n/a

DRG-10849: catsearch does not support functional invocation

Cause: the query plan for your query is invoking a catsearch operator functionally rather than as an index rowsource. The catsearch operator does not support functional invocation

Action: add optimizer hints so that all catsearch operators are performed through index scans

DRG-10850: CTXRULE indextype does not support the operator

Cause: Used an operator not supported by CTXRULE. Currently it only supports AND, NEAR, phrase, NOT, WITHIN, OR, ABOUT, EQUIVALENCE, STEM and THESAURUS operators

Action: Rewrite query without this operator

DRG-10851: Invalid grammar *string* specified for query template

Cause: incorrect grammar specification

Action: Rewrite query specifying valid grammar name

DRG-10852: Invalid scoring type *string* specified for query template

Cause: incorrect scoring type specification

Action: Rewrite query specifying valid scoring type (integer/float)

DRG-10853: Catsearch does not support this operator

Cause: unsupported operator specified

Action: Rewrite query using valid operators

DRG-10854: Invalid scoring algorithm *string* specified for query template

Cause: incorrect scoring algorithm specification

Action: Rewrite query specifying valid scoring algorithm (default/count)

DRG-10855: CTXRULE indextype does not support the token type

Cause: Unsupported VGRAM token type 1.

Action: n/a

DRG-10856: SDATA section *string* does not exist

Cause: The given SDATA section name does not exist in USER_SECTIONS

Action: Rewrite query with valid SDATA section name

DRG-10857: literal is not compatible with the data type of the SDATA section

Cause: The given literal is not compatible with the data type of the specified SDATA section.

Action: Rewrite query with a compatible literal

DRG-10858: SDATA operator is not allowed in WITHIN

Cause: A field section or a attribute section is specified in a nested section search

Action: Rewrite query without nested field sections

DRG-10859: Only one predefined scoring component can be used in DEFINESCORE

Cause: More than one predefined scoring component (i.e. RELEVANCE, OCCURRENCE, etc.) is used in the scoring expression of the DEFINESCORE operator

Action: Rewrite query using only one predefined component

DRG-10860: All expressions under the same WITHIN must use the same predefined scoring component

Cause: The query side of the same within mixes different types of scoring components(i.e. RELEVANCE, OCCURRENCE, etc.)

Action: Rewrite query using only one type of predefined component

DRG-10861: COMPLETION score must be used with WITHIN operator

Cause: The completion score is used without using the WITHIN operator

Action: Rewrite query to include a within operator

DRG-10862: *string* attribute cannot be used with CTXRULE indexes

Cause: Used an attribute not supported by CTXRULE. This restriction is due to lack of wildcard support for CTXRULE indexes.

Action: Rewrite query without this attribute

DRG-10863: invalid ORDER argument supplied to NDATA

Cause: An invalid value was supplied for ORDER argument to NDATA

Action: Set ORDER to ORDER or NOORDER.

DRG-10864: invalid PROXIMITY argument supplied to NDATA

Cause: An invalid value was supplied for PROXIMITY argument to NDATA

Action: Set PROXIMITY to PROXIMITY or NOPROXIMITY.

DRG-10865: invalid datatype in user scoring expression

Cause: The scoring expression specified in DEFINESCORE or NORMALIZATION_EXPR in the query template either contains components with unsupported datatypes or does not return numerical values.

Action: Rewrite the scoring expression.

DRG-10866: The right hand operand of MINUS cannot use IGNORE score

Cause: The IGNORE score is used as the right hand operand of MINUS

Action: Rewrite the scoring expression.

DRG-10867: OCCURRENCE and COMPLETION score cannot be used with ABOUT in DEFINESCORE

Cause: The OCCURRENCE and COMPLETION score cannot be used with ABOUT queries

Action: Rewrite the scoring expression.

DRG-10868: matches does not support functional invocation

Cause: the query plan for your query is invoking a matches operator functionally rather than as an index rowsource. The matches operator does not support functional invocation

Action: add optimizer hints so that all matches operators are performed through index scans

DRG-10869: Invalid span supplied to NEAR2 operator

Cause: Near2 span must be between 0 and 100

Action: Use acceptable span

DRG-10870: Invalid weight supplied to NEAR2 operator

Cause: Near2 weights must be between 0 and 10

Action: Use acceptable weight

DRG-10871: NDATA operator not supported with *string*

Cause: NDATA operator is not supported in the specified operation

Action: Rewrite the query without NDATA operator

DRG-10872: Characters cannot be outside *string* in an XML query

Cause: Characters outside *query* element are not valid

Action: Write the characters inside *querytextquery*

DRG-10873: Invalid characters location in the XML query

Cause: Characters between certain elements are not allowed

Action: Write the characters in designed places

DRG-10874: Syntax error in XML Query Template

Cause: XML template is wrong. Possible causes include missing closing tag or receiving invalid attributes or characters.

Action: Check that the query is valid XML

DRG-10875: Missing closing tag in XML Query

Cause: Some tag has been opened and not closed properly.

Action: Close all tags properly

DRG-10876: Invalid ordering of elements in XML Query

Cause: Occurrence of some element that should be only between another element that was not found

Action: Check the proper ordering of elements

DRG-10877: *query* should always start an XML Query

Cause: Either *query* is missing or is wrongly positioned

Action: Insert *query* properly

DRG-10878: Invalid ordering in XML Query: *string* should be *string of string*

Cause: Invalid ordering of tags as of specs

Action: Rewrite query properly

DRG-10879: Invalid *string* element repetition in XML Query

Cause: Invalid repetition of XML element

Action: Rewrite query, merging both repeated elements

DRG-10880: Invalid nesting of *string* in XML Query

Cause: Invalid nesting of same element has been encountered

Action: Either close element properly or avoid nesting

DRG-10881: Invalid setting of *savescore* in *ctxfiltercache*

Cause: *savescore* argument must be true or false

Action: set *savescore* to true or false

DRG-10882: Invalid setting of *topn* in *ctxfiltercache*

Cause: *topn* argument must be true or false

Action: set *topn* to true or false

DRG-10883: *savescore* must be true to use *topn* in *ctxfiltercache*

Cause: *savescore* must be true to use *topn* in *ctxfiltercache*

Action: set *savescore* to true to use *topn* processing

DRG-10884: invalid use of *ctxfiltercache* with *topn*

Cause: *ctxfiltercache* with *topn* must be child of AND, THRESHOLD, or WEIGHT operators

Action: invalid query

DRG-10885: *ctxfiltercache* operator requires non-zero *query_filter_cache_size*

Cause: used *ctxfiltercache* operator with zero *query_filter_cache_size*

Action: Set a non-zero `query_filter_cache_size`

DRG-10886: topn must be used with order by score desc in ctxfiltercache

Cause: must order query results by score desc when topn argument is true

Action: Add order by score desc and use oracle hint `DOMAIN_INDEX_SORT`

DRG-10891: invalid MINREQD argument supplied to NEAR

Cause: An invalid value was supplied for MINREQD argument to NEAR

Action: Provide a valid MINREQD. Valid values are integers from 2 to 63.

DRG-10892: invalid THRESHOLD argument supplied to NDATA

Cause: An invalid value was supplied for the THRESHOLD argument to NDATA.

Action: Set the THRESHOLD to a value between 1-100 inclusive.

DRG-10894: Missing regular expression in PATTERN

Cause: The syntax is `PATTERN(regex)`. regex is missing.

Action: Supply the regular expression

DRG-10895: Invalid regular expression in PATTERN

Cause: The syntax of the regular expression is incorrect

Action: Correct the regular expression

DRG-10896: Regular expression specifies empty string in PATTERN

Cause: The expression `^$` has no match.

Action: Correct the regular expression

DRG-10897: Regular expression matches too many words

Cause: The regular expression matches too many words.

Action: Correct the regular expression

DRG-10898: ctxfiltercache is not supported with optimized for string SDATA

Cause: Used `ctxfiltercache` operator with unsupported SDATA.

Action: Do not use `ctxfiltercache` operator with this kind of SDATA.

DRG-10900: out of memory

Cause: can not allocate more memory

Action: Contact your system administrator

DRG-10901: memory deallocation failed

Cause: could not deallocate memory

Action: Contact your system administrator

DRG-11000: invalid keyword string

Cause: A keyword was invalid.

Action: Respecify the parameter string with correct keyword

DRG-11001: missing keyword when expecting one of *string*

Cause: A keyword was missing.

Action: Respecify the parameter string with keyword

DRG-11002: missing value for *string*

Cause: A value for the argument was missing.

Action: Respecify the parameter string with value

DRG-11003: invalid value *string* for *string*

Cause: An invalid value was given for the argument

Action: Specify a valid value

DRG-11004: duplicate or conflicting value for *string*

Cause: More than one value has been specified for the argument

Action: Check parameter string and correct the problem parameter

DRG-11005: invalid create index parameter string

Cause: the supplied parameter string is not correct

Action: drop index and recreate index with correct parameters

DRG-11006: invalid alter index parameter string

Cause: The parameter string was invalid.

Action: Reissue the statement with the correct parameter string.

DRG-11007: multiple stopwords specified

Cause: Tried to add more than one stopword

Action: Specify one stopword at a time

DRG-11008: invalid create index partition parameter string

Cause: The parameter string was invalid

Action: drop index and recreate index with correct parameters

DRG-11009: parameter *string* is not supported at the partition level

Cause: The parameter is not supported at the partition level during index creation and index alteration

Action: try specifying the parameter at index level

DRG-11010: operator *string* is not supported for JSON

Cause: The operator is not supported for JSON

Action: do not use the operator in your query

DRG-11100: unable to connect to the database

Cause: failed to connect to Oracle database

Action: check the Oracle error and connect string

DRG-11101: failed to open file *string*

Cause: failed to open a file

Action: check whether the file exist or access permission available

DRG-11102: assigned lexer can not operate on *string* language setting

Cause: Single byte lexer selected in multibyte language setting

Action: check RDBMS language setting or text columns lexer setting

DRG-11103: table *string* not supported

Cause: Table not in list of supported tables

Action: Use a valid table from the list: I,KG,G,P,S,SN,ST,SV,SD,D,O

DRG-11104: Oracle Text error:

Cause: See the next error on stack

Action: See the next error on stack

DRG-11106: user database session has terminated during this operation

Cause: this database session does not exist or has terminated

Action: determine why the user database session terminated while the operation was still being carried out.

DRG-11107: invalid path specification: *string*

Cause: the path specified is not valid

Action: check the path specification

DRG-11108: invalid filename specified: *string*

Cause: the filename specified is not valid

Action: check the filename for beginning or trailing spaces, invalid characters, or other such problems.

DRG-11109: assigned lexer does not support *string* query operator

Cause: This lexer does not support this query operator

Action: do not use the operator in your query

DRG-11111: value of *string* must be between *string* and *string*

Cause: You specified a value for the parameter which is out of range

Action: Specify a value which is in the allowed range

DRG-11112: length of *string* exceeds maximum of *string*

Cause: You specified a value for the parameter which is too long

Action: Specify a value which is less than or equal to the maximum length

DRG-11113: value of *string* must be one of *string*

Cause: You specified a value for the parameter which is invalid

Action: Specify a valid value for the parameter

DRG-11114: result table format is not correct for this operation

Cause: You specified a result table which has the wrong number, type, or names of columns for this operation.

Action: Check result table. Refer to the documentation for the correct format for each operation

DRG-11115: a value for *string* must be specified

Cause: You did not specify a value for the parameter

Action: Specify a value for the parameter

DRG-11116: value of *string* must be less than or equal to value of *string*

Cause: You specified values for the two parameters which are invalid

Action: Specify valid values for the parameters

DRG-11117: name is already used by an existing object

Cause: You tried to create an object whose name conflicts with an object of that type which already exists

Action: Specify a new name

DRG-11118: object *string* does not exist

Cause: You tried to modify or drop an object which does not exist

Action: Specify correct object name

DRG-11119: operation is not supported by this index type

Cause: You tried to invoke an operation on an index which is not supported by the index type

Action: n/a

DRG-11120: failed to write to file *string*

Cause: failed to write to a file

Action: check whether the file exist or access permission available

DRG-11121: failed to read from file *string*

Cause: failed to read from a file

Action: check whether the file exist or access permission available

DRG-11122: unsupported section group

Cause: unsupported section group is specified for functional contains

Action: change the section group to NULL_SECTION_GROUP

DRG-11123: theme indexing is not supported

Cause: theme indexing is on in the lexer preference for functional contains

Action: turn off theme indexing

DRG-11124: invalid value *string*

Cause: you specified an invalid value

Action: specify a valid value

DRG-11125: invalid format of existing log file *string*

Cause: the file specified by START_LOG already exists, and is not a previously written log file

Action: specify a new file, or remove the existing file

DRG-11126: context index is empty

Cause: the training table is empty or the context index of training table is not populated

Action: populate the training table or context index

DRG-11127: inconsistent index policy with trained rule

Cause: the ctxrule index policy is inconsistent with the policy in which the rule was trained

Action: change the ctxrule index policy

DRG-11128: invalid format of rule

Cause: the rule format is not valid for this operation

Action: check the rule type and operation type

DRG-11129: the rule table is empty

Cause: the rule table is empty

Action: populate the rule table by training

DRG-11130: no data found in the collection

Cause: feature preparation program can not find any feature in the specified collection

Action: check the setting for extracting features.

DRG-11131: Error from Oracle XML parser: *string*

Cause: The Oracle XML parser reported an error

Action: Check the document for the error, and fix if necessary

DRG-11132: Invalid character in logfile name

Cause: The logfile parameter to CTX_OUTPUT.START_LOG or CTX_OUTPUT.START_QUERY_LOG contains an invalid character (such as a forward slash)

Action: Remove the invalid character

DRG-11133: failed to convert a datetime value [*ora-number*]

Cause: Failed to convert the datetime value.

Action: Check the error code

DRG-11134: The file *string* is currently being used for logging by another process

Cause: The file is currently being used by another process.

Action: Give a different file name.

DRG-11135: feature not generally available

Cause: You tried to use a feature not generally available.

Action: Contact customer support

DRG-11136: assigned lexer does not support entity extraction

Cause: This lexer does not support entity extraction

Action: Do not use this lexer for entity extraction

DRG-11137: tracing is not supported on MTS

Cause: you tried to use ctx_output tracing in an MTS session

Action: connect using a dedicated session and retry the operation

DRG-11138: trace *string* is already enabled

Cause: you tried to enable a trace that is already enabled

Action: disable the trace first

DRG-11139: trace *string* is not enabled

Cause: you tried to disable a trace that is not enabled

Action: enable the trace first

DRG-11140: Section *string* is not MDATA

Cause: you tried to perform MDATA operation on non-mdata section

Action: provide correct mdata section name

DRG-11141: CTX_DDL.REMOVE_MDATA() and CTX_DDL.ADD_MDATA() not allowed for MDATA Section *string*

Cause: you tried to call CTX_DDL.REMOVE_MDATA() or CTX_DDL.ADD_MDATA() on a MDATA section which is created with ALLOW_ADD_REM parameter set to FALSE.

Action: do not call CTX_DDL.REMOVE_MDATA() or CTX_DDL.ADD_MDATA() on a MDATA section that is created with ALLOW_ADD_REM parameter set to FALSE.

DRG-11142: *string* cannot be *string*

Cause: The value for the specified parameter cannot be as specified

Action: Specify the correct value

DRG-11143: Only 64 errors can be traced

Cause: You tried to trace more than 64 errors with ctx_output

Action: Trace fewer errors, or use DRG_DUMP_ALL_ERRORS

DRG-11144: Invalid value for radius parameter: *string*

Cause: You specified invalid value for radius parameter

Action: Provide non-negative/non-decimal value for radius parameter

DRG-11145: Invalid value for max_length parameter: *string*

Cause: You specified invalid value for max_length parameter

Action: Provide non-negative/non-decimal value for max_length parameter

DRG-11146: Invalid value for use_saved_copy: string

Cause: You specified invalid value for use_saved_copy parameter

Action: Use one of these: SAVE_COPY_FALLBACK / SAVE_COPY_ERROR / SAVE_COPY_IGNORE

DRG-11147: Invalid lexer for ctx_doc.policy_stems

Cause: You specified/used a lexer which does not support ctx_doc.policy_stems

Action: Use auto lexer for ctx_doc.policy_stems

DRG-11148: Invalid lexer for ctx_doc.policy_noun_phrases

Cause: You specified/used a lexer which does not support ctx_doc.policy_noun_phrases

Action: Use auto lexer for ctx_doc.policy_noun_phrases

DRG-11149: Invalid lexer for ctx_doc.policy_part_of_speech

Cause: You specified/used a lexer which does not support ctx_doc.policy_part_of_speech

Action: Use auto lexer for ctx_doc.policy_part_of_speech

DRG-11150: Reverse Index feature not enabled

Cause: Feature not enabled

Action: Enable Reverse Index feature

DRG-11151: Invalid value for max_inst in sentiment procedure

Cause: Sentiment procedure called with an invalid max_inst value.

Action: Specify a max_inst value in the range of 1 to 10.

DRG-11152: Invalid value for type attribute in sentiment procedure

Cause: An invalid type attribute value was specified.

Action: Specify the type as either EXACT or ABOUT.

DRG-11153: classifier string does not exist

Cause: The specified classifier did not exist.

Action: Provide the name of an existing classifier.

DRG-11154: topic cannot be null

Cause: The specified topic was null for a non-aggregate sentiment request.

Action: Specify a non-null topic or use an aggregate request.

DRG-11155: Invalid Lexer for Default Sentiment Classifier

Cause: The specified lexer is not supported for the Default Sentiment Classifier.

Action: Use auto lexer for Default Sentiment Classifier.

DRG-11156: user buffer too small

Cause: The user buffer is too small for the output data.

Action: Specify a bigger buffer.

DRG-11157: dataguide is not supported on MTS

Cause: you tried to create a dataguide enabled index in an MTS session

Action: connect using a dedicated session and retry the operation

DRG-11158: Only Path or NULL Section Group are allowed for inmemory text

Cause: you tried to use an invalid section group for inmemory text

Action: use a valid section group

DRG-11159: JSON_ENABLE must be TRUE for inmemory text

Cause: Path Section Group must have json_enable true for inmemory text

Action: set json_enable to true

DRG-11160: Basic Lexer with index_themes is not allowed for inmemory text

Cause: Using a Basic Lexer with index_themes

Action: Remove index_themes from the Basic Lexer

DRG-11161: Filter is not supported for inmemory text

Cause: Using an invalid Filter for inmemory text

Action: Only NULL Filter is supported

DRG-11162: Wordlist is not supported for inmemory text

Cause: Using an invalid Wordlist for inmemory text

Action: Only NULL Wordlist is supported

DRG-11163: JSON Dataguide flush failed

Cause: An internal error prevented JSON Dataguide information from being flushed to disk

Action: Review the other errors and contact Oracle Support

DRG-11164: Operator *string* is not supported with in-memory text index.

Cause: Using an operator that is not supported for in-memory text index.

Action: Don't use the operator on in-memory text index.

DRG-11165: Invalid Section Group with *string* Datastore for In-Memory Text.

Cause: When using Directory or Network Datastore, only NULL_SECTION_GROUP is allowed

Action: Change the policy's section group to NULL_SECTION_GROUP

DRG-11166: Using JSON_ENABLE preference on an invalid column type.

Cause: An attempt was made to use Section Group's JSON_ENABLE preference on a non-JSON column.

Action: Do not use JSON_ENABLE preference on a non-JSON column.

DRG-11167: Missing language data.

Cause: An attempt was made to use a language that is not installed.

Action: Download and install the language data files.

DRG-11203: INSO filter not supported on this platform

Cause: You tried to use the INSO filter on a platform which does not support it

Action: Do not use the INSO filter

DRG-11204: user filter command is too long

Cause: The user filter command must be 32 characters or less

Action: Specify a shorted user filter command

DRG-11205: user filter command contains illegal characters

Cause: The user filter command cannot contain special characters such as slashes, parentheses, semicolons, etc.

Action: Correct command specification

DRG-11206: user filter command *string* could not be executed

Cause: The user filter command could not be executed.

Action: Check that the command exists in \$ORACLE_HOME/ctx/bin, and that it is executable.

DRG-11207: user filter command exited with status *string*

Cause: The user filter command exited with the given error status.

Action: See any DRG-11220, DRG-11221, DRG-11222, DRG-11223, DRG-11224, DRG-11225, or DRG-11227 error message on the error stack otherwise see error status.

DRG-11208: ORACLE_HOME is not set

Cause: ORACLE_HOME is not set

Action: make sure ORACLE_HOME is set when running ctxsrv

DRG-11209: filename for *string* exceeds maximum length of *string*

Cause: Value of the file name is too long

Action: Specify a shorter filename

DRG-11210: format column must be a char, varchar, or varchar2 type

Cause: you specified a format column which is not a char, varchar, or varchar2 type.

Action: specify a format column of correct type

DRG-11211: charset column must be a char, varchar, or varchar2 type

Cause: you specified a charset column which is not a char, varchar, or varchar2 type.

Action: specify a charset column of correct type

DRG-11212: procedure filter procedure name contains a semicolon

Cause: the procedure name specified had a semicolon

Action: remove semicolon or rename procedure name. The correct format is
PACKAGE_NAME.PROCEDURE_NAME

DRG-11213: CTXSYS does not own procedure filter stored procedure: *string*

Cause: CTXSYS does not have execute privilege to the procedure filter stored procedure

Action: make sure the package is owned by CTXSYS and the procedure exist

DRG-11214: execution of procedure filter stored procedure has failed

Cause: an error occur while executing the proedure filter stored procedure

Action: check or debug the stored procedure

DRG-11215: index owner does not have access to filter stored procedure: *string*

Cause: the index owner does not have execute privilege of the procedure

Action: CTXSYS to grant execute privilege of the procedure to index owner

DRG-11216: length of datastore data exceeds limit

Cause: the length of the datastore data passed to the filter stored procedure is longer than the maximum length (32767 bytes)

Action: check primary key parameter

DRG-11217: INSO safe callout failed

Cause: The INSO safe callout cannot be executed

Action: check the Oracle errpr

DRG-11218: malformed mail line, line *string*

Cause: The mail message has an error at the indicated line

Action: manually edit mail message, if possible

DRG-11219: malformed mail configuration file, line *string*

Cause: mail filter configuration file has an error at the indicated line

Action: manually edit mail filter configuration file, if possible

DRG-11220: Third-party filter is out of memory.

Cause: Third-party filter could not filter this document because it was unable to allocate sufficient virtual memory.

Action: Increase virtual memory provided by the Operating System and reindex this document.

DRG-11221: Third-party filter indicates this document is corrupted.

Cause: Third-party filter could not filter this document because this document is corrupted.

Action: Fix the corruption and reindex this document.

DRG-11222: Third-party filter does not support this known document format.

Cause: Third-party filter was able to recognize the format of this document but could not filter it because this format is not supported.

Action: Remove this document or specify it to be ignored.

DRG-11223: Third-party filter indicates this document is password protected or encrypted.

Cause: Third-party filter encountered a password protected or encrypted document and could not filter it because this level of password protection or encryption is not supported.

Action: Remove this document or specify it to be ignored.

DRG-11224: Third-party filter is unable to create or write to temporary file.

Cause: Third-party filter could not filter this document because it was unable to create a temporary file or unable to write to a temporary file.

Action: Make sure that the Operating System specified temporary directory has enough space and that the Operating System Oracle user has the privileges to create files in this temporary directory.

DRG-11225: Third-party filter timed out.

Cause: Third-party filter could not filter this document because the filter timed out.

Action: Increase the value of the TIMEOUT attribute of INSO_FILTER filter type and reindex this document. When TIMEOUT attribute is set to 0 and the session hangs then contact Oracle Support.

DRG-11226: Error initializing third-party filter: *string*

Cause: There was an error initializing the third-party filter.

Action: Check the following messages for details

DRG-11227: Third-party filter does not support this document format.

Cause: Third-party filter does not support the format of this document.

Action: Remove this document or specify it to be ignored.

DRG-11228: Charset filter does not support binary documents.

Cause: The format column specifies a binary document

Action: Do not attempt to filter binary documents using the charset filter

DRG-11229: configuration column must be a char, varchar, or varchar2 type

Cause: you specified a configuration column which is not a char, varchar, or varchar2 type.

Action: specify a configuration column of correct type

DRG-11301: error while indexing document

Cause: An error was encountered while indexing the document. The error may have occurred during lexing, parsing for sections, or other action during document tokenization

Action: review document and update with valid data. Note that the document contents may have been partially indexed, so it may be returned by some queries.

DRG-11303: secondary indexes are not supported by this indextype

Cause: You attempted to create an index on an index-organized table, but the indextype does not support this action.

Action: n/a

DRG-11304: function-based indexes are not supported by this indextype

Cause: You attempted to create a function-based index but the indextype does not support this action.

Action: n/a

DRG-11305: create/alter index *string* is in progress in another session

Cause: you attempted to mark the index from INPROGRESS to FAILURE but create/alter on the same index is in progress in another session

Action: n/a

DRG-11306: operation cannot be performed on a policy

Cause: you attempted to perform an operation on a policy, but the operation is only valid for an index.

Action: n/a

DRG-11307: operation cannot be performed on an index

Cause: you attempted to perform an operation on an index, but the operation is only valid for a policy.

Action: n/a

DRG-11308: unsupported column expression *string*

Cause: You attempted to create an index with an unsupported column expression.

Action: n/a

DRG-11309: invalid filter by column: *string* of datatype *string* and size *string*

Cause: the column specified is not valid

Action: check that the followings are valid: a) column is of supported datatype b) valid table name, column name in the specification. c) column size is at most 249 bytes long

DRG-11310: invalid order by column: *string* of datatype *string* and size *string*

Cause: the column specified is not valid

Action: check that the followings are valid: a) column is of supported datatype b) valid table name, column name in the specification. c) column size is at most 249 bytes long

DRG-11311: *string* cannot be specified for this optimization mode

Cause: the specified option is not valid for this optimization mode

Action: remove the specified option

DRG-11312: source and new policy must have same owner

Cause: the new policy has a different owner than the source policy

Action: Ensure that both policies are owned by the same user

DRG-11313: populate index error on index partition *string*

Cause: failed to populate the text index on the specified partition

Action: See the next errors on stack and take appropriate action

DRG-11314: changing TRANSACTIONAL property on index with rows on pending queue not allowed

Cause: the index has pending unsynced rows

Action: sync the index before changing the TRANSACTIONAL property

DRG-11316: \$\$ table cannot be created with *string*

Cause: the \$\$ table cannot be created with the specified storage option

Action: remove the specified option from the index preference and retry the index creation

DRG-11317: rowid *string* is not in the index

Cause: you specified an invalid rowid in `ctx_ddl.add_mdata`

Action: correct the rowid and retry

DRG-11318: error processing `dr$$data_update`

Cause: there was an error

Action: check the error stack for more details

DRG-11319: more than 1 index found on \$. OPTIMIZE REBUILD not supported

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11320: no index found on \$. OPTIMIZE REBUILD not supported

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11321: triggers detected on \$. OPTIMIZE REBUILD not supported

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11322: fast optimize not supported for `big_io` option

Cause: OPTIMIZE FAST is not supported with `big_io` option

Action: run optimize full or rebuild instead

DRG-11323: merge optimize requires `near_realtime` option

Cause: OPTIMIZE MERGE requires `near_realtime` option

Action: run another optimize mode

DRG-11324: fast optimize not supported for `separate_offsets` option

Cause: OPTIMIZE FAST is not supported with `separate_offsets` option

Action: run optimize full or rebuild instead

DRG-11325: stageitab only supported for context index

Cause: STAGEITAB requires context index

Action: don't use stageitab on non context indexes

DRG-11326: separate offsets only supported for context index

Cause: SEPARATE_OFFSETS requires context index

Action: don't use `separate_offsets` on non context indexes

DRG-11327: `big_io` only supported for context index

Cause: BIG_IO requires context index

Action: don't use big_io on non context indexes

DRG-11328: optimize validation failed

Cause: optimize validation failed

Action: file a bug

DRG-11332: Index already has STAGE_ITAB set

Cause: Index already has stage_itab set

Action: Do not add stage_itab to this index

DRG-11333: Index does not have STAGE_ITAB set

Cause: Index does not have stage_itab set

Action: Do not remove stage_itab from this index

DRG-11334: Index already has BIG_IO set

Cause: Index already has big_io set

Action: Do not add big_io to this index

DRG-11335: Index does not have BIG_IO set

Cause: Index does not have big_io set

Action: Do not remove big_io from this index

DRG-11336: Index already has SEPARATE_OFFSETS set

Cause: Index already has separate_offsets set

Action: Do not add separate_offsets to this index

DRG-11337: Index does not have SEPARATE_OFFSETS set

Cause: Index does not have separate_offsets set

Action: Do not remove separate_offsets from this index

DRG-11338: policy *string* does not exist

Cause: the specified policy does not exist or you do not have access to it.

Action: Specify an existing policy

DRG-11339: duplicate policy name: *string*

Cause: the specified policy already exists in the dictionary

Action: this policy can be updated or deleted, however this is only allowed if there is no text policy available on the text column

DRG-11341: Index optimization failed for one or more tokens

Cause: Index optimization generated an error for one or more tokens, possibly due to corruption of the token_info blob.

Action: Check the index optimization log for the detailed error, or retry the optimize call with logging enabled

DRG-11342: OPTIMIZE REBUILD not supported for partitioned \$I and global \$X

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11343: OPTIMIZE REBUILD not supported for current \$I partitioning scheme

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11346: FORWARD INDEX only supported for context index

Cause: FORWARD INDEX needs context index

Action: Don't use FORWARD INDEX on non context indexes

DRG-11347: FORWARD INDEX does not exist for this index

Cause: FORWARD INDEX does not exist

Action: Enable forward index for the index

DRG-11348: OPTIMIZE REBUILD not supported for \$I with character length semantics columns

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: resolve the issue, and retry the operation

DRG-11349: FILTER CACHE only supported for context index

Cause: FILTER CACHE only for context index

Action: Don't use FILTER_CACHE on non context indexes

DRG-11350: SAVE COPY only supported for context index

Cause: SAVE COPY needs context index

Action: Don't use SAVE COPY on non context indexes

DRG-11351: Unable to fetch partition Id for given rowid: *string*

Cause: Not able to fetch partition id for given rowid

Action: Make sure index tables are partitioned correctly.

DRG-11352: Not able to fetch partition name for given partition position: *number*

Cause: Not able to fetch partition name for given partition position

Action: Make sure valid partition position has been provided

DRG-11353: xml_enable is not allowed for a local index

Cause: Section group attribute xml_enable set to TRUE for a local index

Action: Set xml_enable to FALSE for a local index.

DRG-11354: stage_itab_max_rows not allowed without stage_itab storage preference

Cause: Storage option stage_itab_max_rows needs to be accompanied by stage_itab

Action: Add stage_itab to storage preference

DRG-11355: Not able to fetch partition position from rowid: *string*

Cause: Not able to fetch partition position for given rowid

Action: Make sure valid rowid has been provided

DRG-11356: Optimize operations are not permitted on partition *string*

Cause: READ mode for this partition is set to FALSE. No optimize operations are permitted in this mode.

Action: Set READ mode for this partition to be TRUE.

DRG-11357: FORWARD INDEX must be specified at index, not partition level *string*

Cause: forward index was specified at partition level and not at index level

Action: Specify forward index option at index level. All partitions inherit.

DRG-11358: Save Copy must be specified at index, not partition level *string*

Cause: save copy was specified at partition level and not at index level

Action: Specify save copy option at index level. All partitions inherit.

DRG-11359: xml_save_copy can only be specified for xml enabled text index

Cause: xml_save_copy was specified for non-xml enabled text index

Action: Use xml_save_copy only for xml enabled text index.

DRG-11360: xml_forward_enable can only be specified for xml enabled text index

Cause: xml_forward_enable was specified for non-xml enabled text index

Action: Use xml_forward_enable only for xml enabled text index.

DRG-11361: xml_forward_enable can not be enabled without xml_save_copy set to true

Cause: attempt to enable xml_forward_enable without xml_save_copy set to true

Action: Set xml_forward_enable to true only when xml_save_copy set to true

DRG-11362: xml_enable is not allowed for non-XMLType columns

Cause: 'xml_enable' was set to TRUE for non-XMLType columns.

Action: Set 'xml_enable' to TRUE only for XMLType columns.

DRG-11363: xml_enable is not allowed for XMLType OR storage

Cause: 'xml_enable' was set to TRUE for XMLType with object-relational storage.

Action: Set 'xml_enable' to TRUE only for XMLType binary or CLOB storage.

DRG-11364: index *string* is invisible

Cause: the index is marked as invisible. Only DML operations on the base table are allowed

Action: mark the index as visible with alter index

DRG-11365: FORWARD_INDEX cannot be specified for XML enabled text index.

Cause: The FORWARD_INDEX attribute was specified for an XML enabled text index.

Action: Use the FORWARD_INDEX attribute for a non-XML enabled text index only.

DRG-11366: SAVE_COPY cannot be specified for XML enabled text index.

Cause: The SAVE_COPY attribute was specified for an XML enabled text index.

Action: Use the SAVE_COPY attribute for a non-XML enabled text index only.

DRG-11367: Index is too fragmented to run optimize for all fragmented tokens.

Cause: More than 50% of tokens in \$I are fragmented.

Action: Please run FULL/REBUILD optimize or specify value for maxtokens

DRG-11368: Invalid value for maxtokens attribute.

Cause: Maxtokens value was either less than zero or too high.

Action: Specify maxtokens values between 0 and 50% of token count of \$I.

DRG-11369: Stage itab row exceeds max allowable size.

Cause: Ctxagg optimize merge limits the size of rows to under 4K.

Action: Use traditional optimize merge.

DRG-11370: Error in optimize merge (ctxagg).

Cause: Internal error in optimize merge.

Action: Use traditional optimize merge.

DRG-11371: stage_itab_parallel not allowed without stage_itab storage preference

Cause: Storage option stage_itab_parallel needs to be accompanied by stage_itab

Action: Add stage_itab to storage preference

DRG-11372: forward index storage preference cannot be specified with asynchronous update

Cause: Storage option Forward index specified along with asynchronous update

Action: Remove forward index storage preference when using asynchronous update

DRG-11373: Invalid section type

Cause: Invalid section type parameter in optimize index

Action: Use a valid section type

DRG-11374: string not allowed when stage_itab_max_rows is set to 0.

Cause: Storage option specified is not allowed when stage_itab_max_rows is set to 0

Action: Set stage_itab_max_rows to a value >= 1000

DRG-11375: string not allowed without stage_itab storage preference

Cause: Storage option specified needs to be accompanied by stage_itab

Action: Add stage_itab to storage preference

DRG-11376: SIMPLIFIED_XML is not allowed with non xml enabled text index

Cause: Section group attribute XML_ENABLE not set to true when creating simplified XML Search Index

Action: Use a section group with attribute XML_ENABLE set to true

DRG-11377: ADD_MDATA/REMOVE_MDATA API is not supported with stage_itab

Cause: Combination of features is not supported in this code version.

Action: Please see feature documentation notes for usage and options.

DRG-11378: OPTIMIZE REBUILD not supported for Context Search index

Cause: OPTIMIZE REBUILD is not supported due to the specified reason

Action: use optimize FULL instead

DRG-11379: invalid tablespace

Cause: Invalid tablespace specified in parameter list.

Action: Use a valid tablespace.

DRG-11380: operation is not allowed on unsynced index

Cause: the index has pending unsynced rows

Action: sync the index before repeating the operation

DRG-11381: optimize fast mode is not supported in partitioned search index

Cause: The fast mode of opt is not supported for a partitioned search index

Action: use full/rebuild mode

DRG-11382: Cannot *string* a policy that is being used for an IMC Text column *string*

Cause: Attempt to drop or update a policy that is used on an IMC column.

Action: Purge tables using this policy for IMC Text from the Oracle recycle bin or alter the tables to 'no inmemory text'.

DRG-11383: *string* is not supported on a Sharded Database

Cause: Attempt to use an unsupported feature on a Sharded Database

Action: Do not use the feature

DRG-11384: cannot modify *string* option using partition granularity

Cause: An attempt was made to modify an option that can only be modified using global granularity or cannot be modified on a local index.

Action: Modify the option using index granularity by using the ALTER INDEX PARAMETERS statement or drop and re-create the index.

DRG-11385: View must have a Primary Key as a Foreign Key to a table to be added to a DBMS_SEARCH index.

Cause: Attempted to add view without PK/FK relationship to DBMS_SEARCH index

Action: Create a view with a relevant PK/FK relationship with a table

DRG-11386: Table or View Already Added to this DBMS_SEARCH index.

Cause: Attempted to add table or view which is already part of this DBMS_SEARCH index

Action: Remove the table or view from the DBMS_SEARCH index before attempting to add it again

DRG-11387: Table or View is not part of this DBMS_SEARCH index.

Cause: Attempted to remove table or view which is not part of this DBMS_SEARCH index

Action: None

DRG-11388: Table must have a Primary Key to be added to a DBMS_SEARCH index.

Cause: Attempted to add table without PK to DBMS_SEARCH index

Action: Create a table with a relevant PK

DRG-11389: Source to be indexed has a column of unsupported datatype

Cause: Attempted to add table with unsupported column data type to DBMS_SEARCH index

Action: Create a view on the table without those columns and index the view instead

DRG-11390: Source Table or View does not exist.

Cause: Attempted to add non-existent table or view to a DBMS_SEARCH index

Action: Ensure that the source exists.

DRG-11391: Unsupported value for the datatype parameter.

Cause: Attempted to create dbms_search index with unsupported datatype parameter

Action: Use one of DBMS_SEARCH.JSON_TYPE, DBMS_SEARCH.OSON_TYPE as datatype parameter

DRG-11392: Substring and wild card index options are not supported together.

Cause: Attempted to create/alter index with substring and wild card index options together

Action: Use either substring index or wildcard index

DRG-11400: failed to parse document with key *string*

Cause: the document specified for linguistic extraction could not be parsed. This could indicate that the document is not well-formed English

Action: check the document contents

DRG-11403: primary key value too long

Cause: the primary key value parameter passed to the service request is longer than the maximum primary key length (64 bytes)

Action: check primary key parameter

DRG-11404: no primary key value specified

Cause: the primary key value parameter passed to the service request is null

Action: check primary key parameter

DRG-11410: could not insert into *string* result table

Cause: an ORACLE error occurred while linguistic output was being inserted into the result table

Action: take action appropriate to the ORACLE error code.

DRG-11418: insufficient document content for linguistic parser

Cause: the document specified for linguistic extraction was parsed but the document content was insufficient for linguistic extraction by the specified parser.

Action: check the document contents or try modifying linguistic settings

DRG-11422: linguistic initialization failed

Cause: linguistic services initialization failed

Action: Check to see if knowledge base files present for the language

DRG-11425: gist level *string* is invalid

Cause: invalid gist level

Action: Specify a valid gist level

DRG-11427: valid gist level values are *string*

Cause: Invalid gist level

Action: Specify a valid gist level

DRG-11428: document contains invalid characters

Cause: The document contains invalid characters

Action: Remove invalid characters

DRG-11432: file error while accessing knowledge base

Cause: An oracle error was encountered during knowledge base access

Action: Check to see if knowledge base files present for the language

DRG-11435: primary key value is invalid

Cause: the primary key value parameter passed to the service request is not valid

Action: check primary key parameter

DRG-11439: index name length exceeds maximum of *string* bytes

Cause: the length of the index name is longer than the maximum index name size

Action: drop the index and recreate the index with a shorter index name

DRG-11440: operation not supported for the *string* language

Cause: the requested operation is not supported for the current language

Action: Do not request this operation

DRG-11441: gist numParagraphs *string* is invalid

Cause: invalid gist numparagraphs

Action: Specify valid gist numparagraphs

DRG-11442: valid gist numParagraphs values are *string*

Cause: invalid gist numparagraphs

Action: Specify valid gist numparagraphs

DRG-11443: gist maxPercent *string* is invalid

Cause: invalid gist max percent

Action: Specify valid gist max percent

DRG-11444: valid gist maxPercent values are *string*

Cause: invalid gist max percent

Action: Specify valid gist max percent

DRG-11445: rowid value is invalid: *string*

Cause: the rowid value parameter passed to the service request is not valid

Action: check rowid parameter

DRG-11446: supplied knowledge base file *string* not installed

Cause: Either using Oracle Database Free or supplied Knowledge Base was required but was not installed.

Action: If using Oracle Database Free then upgrade to Oracle Enterprise or Oracle Standard edition. Otherwise see post-installation tasks section of the Database Installation Guide for instructions to install supplied Knowledge Base.

DRG-11480: ctxkbtc memory allocation error: %(1)

Cause: Unable to allocate memory

Action: Contact your system administrator

DRG-11481: linguistic feature not enabled

Cause: linguistic feature not enabled

Action: enable linguistic feature

DRG-11500: column name expected, found *string* on line *string*

Cause: possibly miss-spelt column name or keyword

Action: check spellings and punctuation around specified line

DRG-11501: identifier *string* found in place of column name on line *string*

Cause: possibly miss-spelt column name

Action: check spellings around specified line

DRG-11502: read of file failed at line *string* for file *string*

Cause: bad file name, wrong file_type or file system error

Action: check file name, type and/or file integrity

DRG-11503: insert statement overflows maximum statement size

Cause: total length of statement exceeds database maximum

Action: reduce length of column names or number of columns

DRG-11504: invalid longsize parameter of *string* specified

Cause: invalid option argument

Action: specify long buffer size in kbytes above 0

DRG-11505: long data on line *string* not found or invalid

Cause: either bad data or bad data file

Action: check file exists and is accessible, if separate

DRG-11506: record ignored on line *string* because of error(s)

Cause: an error occurred parsing this row's data

Action: move and amend line in error to alternate load file

DRG-11507: file error trying to read file *string*

Cause: file not found or could not be read

Action: check name and location of file

DRG-11508: bad or missing *string* token on line *string*

Cause: token expected was not found

Action: move and amend record affected to error load file

DRG-11509: value expected on line *string*

Cause: could not make sense of text where value expected

Action: move and amend record affected to error load file

DRG-11510: encountered unrecoverable error on line *string*

Cause: see previous messages

Action: see previous errors

DRG-11511: specified table does not contain a LONG RAW column

Cause: text must be inserted into a LONG RAW type column

Action: check table and type of data

DRG-11512: bad syntax for thesaurus load file at line *string*

Cause: load file must have specific format for loading thesaurus

Action: check documentation for description of correct format

DRG-11513: unable to open or write to file *string*

Cause: an attempt to open or to write to the given file failed

Action: check with system administrator

DRG-11514: user *string* does not have UPDATE or SELECT privilege on *string*

Cause: user has not been granted UPDATE or SELECT privilege

Action: check privilege on the user

DRG-11515: not enough text key values

Cause: number of values provided does not match the number of text keys

Action: provide same number of values as the number of text keys

DRG-11516: user must be at least in role CTXUSER to perform this operation

Cause: user does not have CTXUSER, CXAPP or CTXADMIN role

Action: grant user the proper role

DRG-11517: error when validating text objects

Cause: see accompanying Oracle error

Action: see accompanying Oracle error

DRG-11518: text table *string* does not have a LONG or LONG RAW column

Cause: table specified does not have a LONG or LONG RAW column

Action: check the table

DRG-11519: encounter error when exporting a LONG or LONG RAW column

Cause: see accompanying error message

Action: see accompanying error message

DRG-11520: error writing to file

Cause: file does not exist

Action: make sure file exists

DRG-11521: encounter error when updating a LONG or LONG RAW column

Cause: see accompanying error message

Action: see accompanying error message

DRG-11522: no row exists for the text key(s) specified

Cause: no row in the table has the text key(s) specified

Action: use a valid text key(s)

DRG-11523: unable to lock the specified row for update

Cause: some other process has a lock on the row

Action: release the lock or wait until the lock is released

DRG-11524: primary key value is missing

Cause: primary key value is not provided

Action: provide the primary key value(s)

DRG-11525: invalid commitafter parameter of *string* specified

Cause: invalid option argument

Action: specify commitafter above 0

DRG-11526: filename exceeds maximum length

Cause: value of the file name is too long

Action: Specify a shorter file name

DRG-11527: end token not found on line *string*

Cause: *TEXTEND* not found at end of record

Action: processing discontinued - amend record

DRG-11528: LONG or LONG RAW column definition found in structure data

Cause: could be misplaced

Action: remove reference to LONG or LONG RAW column from structure data

DRG-11529: token exceeds maximum length

Cause: value of the column name or value is too long

Action: processing discontinued - amend record

DRG-11530: token exceeds maximum length

Cause: value of the phrase or relation word is too long

Action: processing discontinued - amend record

DRG-11531: start token not found on line *string*

Cause: <TEXTSTART: not found at start of record

Action: processing discontinued - amend record

DRG-11532: error reading through end of line *string* for file *string*

Cause: characters encountered while reading through end of line

Action: remove extraneous characters

DRG-11533: improper value of column *string*

Cause: value of the column is too long or mismatched quote

Action: processing discontinued - amend record

DRG-11534: invalid column *string*

Cause: column does not exist or it's misspelled

Action: processing discontinued - amend record

DRG-11535: error writing phrase or qualifier: *string* on line *string* to memory

Cause: not enough memory

Action: allocate more memory, contact WorldWide Support if problem persists

DRG-11600: URL store: *string* has permanently moved

Cause: the document referred to by the URL has permanently moved

Action: find the new address, if any, of the document

DRG-11601: URL store: bad syntax on request for *string*

Cause: client did not make correct request

Action: contact support

DRG-11602: URL store: access to *string* requires authentication

Cause: user has to provide password or other authentication

Action: get required access, or check URL

DRG-11603: URL store: payment required to access *string*

Cause: payment is required before the URL can be accessed

Action: check URL, or pay if required if access necessary

DRG-11604: URL store: access to *string* is denied

Cause: access to the URL is denied

Action: check URL; if correct, do not try to access URL again

DRG-11605: URL store: document specified by *string* not found

Cause: the document can not be found on the host specified

Action: check URL

DRG-11606: URL store: access to *string* timed out waiting for client request

Cause: client did not make response within timeout period

Action: check URL

DRG-11607: URL store: access to *string* was denied due to garbled response

Cause: Web server identified in URL doesn't obey HTTP protocol

Action: contact the Web administrator of the remote host

DRG-11608: URL store: host portion of *string* specified incorrectly

Cause: host portion of the URL could not be parsed

Action: check URL

DRG-11609: URL store: unable to open local file specified by *string*

Cause: attempt to open local file failed

Action: check URL

DRG-11610: URL store: unable to read local file specified by *string*

Cause: attempt to read local file failed

Action: contact system administrator

DRG-11611: URL store: unknown protocol specified in *string*

Cause: the protocol parsed is neither http or file

Action: check URL

DRG-11612: URL store: unknown host specified in *string*

Cause: the address of the host specified could not be resolved

Action: check URL

DRG-11613: URL store: connection refused to host specified by *string*

Cause: attempt to connect to host was forcibly refused

Action: check URL

DRG-11614: URL store: communication with host specified in *string* timed out

Cause: a network operation timed out

Action: try again later; network connection may be down to Web server

DRG-11615: URL store: write failed sending to *string* over network

Cause: unknown error writing request to Web server

Action: check network connection

DRG-11616: URL store: too many redirections trying to access *string*

Cause: too long a chain of HTTP redirections given the URL

Action: contact the Web administrator of the remote host

DRG-11617: URL store: URL *string* is too long

Cause: The length of the URL string is longer than URLSIZE

Action: set URLSIZE attribute to a larger value

DRG-11618: URL store: document identified by *string* is too large

Cause: document larger than user-set maximum size

Action: do not access URL, or increase document size limit

DRG-11619: URL store: row in table is empty

Cause: row deleted or otherwise missing

Action: check table if necessary

DRG-11620: URL store: thread operation error

Cause: thread operation failed

Action: contact system administrator

DRG-11621: URL store: socket open error for *string*

Cause: socket open failed; probably too many open file descriptors

Action: reduce the maximum number of threads started

DRG-11622: URL store: getting *string* , unknown HTTP error *string*

Cause: an unexpected HTTP error has occurred

Action: consult HTTP error codes; if valid, contact support

DRG-11623: URL store: unknown error getting *string*

Cause: unexpected error

Action: contact support

DRG-11624: invalid attribute *string* for *string*: proper range *string* to *string*

Cause: unexpected error

Action: change attribute value

DRG-11625: MAXURLS * URLSIZE must be less than *string*

Cause: MAXURLS * URLSIZE cannot be larger than the limit

Action: Lower either MAXURLS or URLSIZE

DRG-11626: URL store: unknown protocol specified during redirect from *string*

Cause: the URL redirected to a site with neither http nor file protocol

Action: check URL

DRG-11627: URL store: not implemented error getting *string*

Cause: The remote host returned a 501 not implemented error

Action: Check URL

DRG-11628: URL store: bad gateway error getting *string*

Cause: The remote host returned a 502 bad gateway error

Action: Check URL

DRG-11629: URL store: service unavailable error getting *string*

Cause: The remote host returned a 503 service temporarily unavailable error

Action: Check URL

DRG-11630: URL store: gateway timeout error getting *string*

Cause: The remote host returned a 504 gateway timeout error

Action: Check URL

DRG-11631: URL store: empty URL

Cause: Cannot read an empty URL

Action: Check URL

DRG-11700: thesaurus *string* already exists

Cause: thesaurus with same name exists

Action: use another name

DRG-11701: thesaurus *string* does not exist

Cause: thesaurus does not exist

Action: use another thesaurus or create it

DRG-11702: *string*

Cause: error while parsing thesaurus operator in query term. see error message for details.

Action: see error message

DRG-11703: user *string* must have at least CTXAPP role to execute this function

Cause: privilege is not sufficient

Action: grant user CTXAPP role

DRG-11704: phrase '*string*' does not exist

Cause: phrase does not exist

Action: use another phrase or create it

DRG-11705: multilevel jump from *string* to *string*

Cause: the thesaurus load file has a multilevel jump which could not be parsed.

Action: correct thesaurus file

DRG-11706: invalid relation *string*

Cause: You specified an invalid relation. The set of valid relations will be displayed. Additionally, you may be able to specify a translation, which has the syntax `language: where language` can be any string up to 10 bytes

Action: Specify a valid relation

DRG-11707: valid relations: *string*

Cause: You specified an invalid relation. The set of valid relations will be displayed. Additionally, you may be able to specify a translation, which has the syntax language: where language can be any string up to 10 bytes

Action: Specify a valid relation

DRG-11708: too many thesauri

Cause: ctxkbt cannot compile more than 16 thesauri

Action: Specify fewer thesauri

DRG-11709: too many terms in thesaurus

Cause: number of thesaurus terms exceeds maximum

Action: Use a thesaurus with fewer terms

DRG-11710: thesaurus term *string* too long

Cause: knowledge base does not permit terms longer than 80 characters

Action: Correct thesaurus

DRG-11711: too much data for term *string*

Cause: internal limit on size of data per term

Action: redesign thesaurus

DRG-11712: multiple Broader Terms for term *string*

Cause: There is a term in the thesaurus with multiple broader terms

Action: make sure each term has only one broader term

DRG-11713: multiple Preferred Terms per synonym ring

Cause: There is a synonym ring in the thesaurus with multiple preferred terms

Action: make sure each synonym ring has only one preferred term

DRG-11714: synonyms have different Broader Terms

Cause: Some synonyms in a synonym ring have different broader terms

Action: make sure all synonyms have the same broader term

DRG-11715: attempt to add a BT relation between 2 KB categories *string* and *string*

Cause: BT relation cannot be between two existing knowledge base categories

Action: redesign the BT hierarchy

DRG-11716: attempt to add Narrower Term *string* for non-Preferred Term *string*

Cause: only a PT can have NTs

Action: attach the NT to the preferred term

DRG-11717: attempt to add Related Term *string* to non-Preferred Term *string*

Cause: only a PT can have RTs

Action: attach the RT

DRG-11718: multiple Preferred Terms for term *string*

Cause: There are multiple preferred terms for this term

Action: Correct thesaurus

DRG-11719: Broader Term hierarchy too deep

Cause: The broader term hierarchy in this thesaurus is too deep

Action: flatten the hierarchy for best results

DRG-11720: too many synonyms per synonym ring

Cause: too many synonyms for a single preferred term

Action: introduce further distinctions to deepen the hierarchy

DRG-11721: thesaurus *string* is empty

Cause: no entries in thesaurus

Action: add some entries or drop the thesaurus

DRG-11722: invalid language specification

Cause: language specification cannot be more than 10 characters

Action: reduce language specification to less or equal to 10 char

DRG-11723: phrase cannot be NULL

Cause: you tried to add a NULL phrase to the thesaurus

Action: specify a valid phrase

DRG-11724: phrase *string* already exists

Cause: phrase with same name exists

Action: use another name

DRG-11725: phrase does not have any synonyms

Cause: you tried to nominate a phrase with no synonyms to be the preferred term, or you tried to drop SYN from a phrase with no synonyms

Action: None

DRG-11726: phrase is not a preferred term

Cause: you tried to remove the preferred term relation from a phrase which is not a preferred term.

Action: None

DRG-11727: phrase does not have any related terms

Cause: you tried to drop a relation which does not exist

Action: None

DRG-11728: phrase does not have any broader terms of this type

Cause: you tried to drop a relation which does not exist

Action: None

DRG-11729: phrase does not have any narrower terms of this type

Cause: you tried to drop a relation which does not exist

Action: None

DRG-11730: relation does not exist

Cause: you tried to drop a relation which does not exist

Action: None

DRG-11731: translation does not exist

Cause: you tried to drop a translation which does not exist

Action: None

DRG-11732: phrase does not have any translations

Cause: you tried to drop translations which does not exist

Action: None

DRG-11733: more than one translation for the term in the specified language

Cause: the term has more than one translation in the specified language

Action: specified a translation

DRG-11734: missing homograph

Cause: A term of the form 'homograph(disambiguation)' is missing the the homograph.

Action: None

DRG-11735: missing disambiguation

Cause: A term of the form 'homograph(disambiguation)' is missing the the disambiguation (i.e., homograph()).

Action: None

DRG-11736: illegal text after disambiguated homograph

Cause: A term of the form 'homograph(disambiguation)' has text after the disambiguation (e.g, homograph(disambiguation) extra text").

Action: None

DRG-11737: Unsupported attribute value for thes_toktype

Cause: An invalid value was specified for thes_toktype attribute.

Action: Please specify a valid token type as thes_toktype.

DRG-11801: Continue

Cause: Enquire user to decide if continue is necessary HTTP_ERROR = 100

Action: Upon positive response, continue the original operation

DRG-11802: Switching Protocols

Cause: Telling client a protocol switching just happened HTTP_ERROR = 101

Action: The user agent takes proper actions

DRG-11803: OK

Cause: Telling client things are ok HTTP_ERROR = 200

Action: The user agent takes proper actions

DRG-11804: Created

Cause: Telling client things are created HTTP_ERROR = 201

Action: The user agent takes proper actions

DRG-11805: Accepted

Cause: Telling client things are accepted but not committed HTTP_ERROR = 202

Action: The user agent takes proper actions

DRG-11806: Non-authoritative Information

Cause: The returned metainformation is not the definitive set HTTP_ERROR = 203

Action: The user agent knows the information is Non-authoritative

DRG-11807: No Content

Cause: request has been fulfilled but no new information found HTTP_ERROR = 204

Action: The user agent takes proper actions

DRG-11808: Reset Content

Cause: Telling client to reset the document view HTTP_ERROR = 205

Action: The user agent takes proper actions

DRG-11809: Partial Content

Cause: Telling client document content is a partial content HTTP_ERROR = 206

Action: The user agent takes proper actions

DRG-11810: Partial Update OK

Cause: Telling client document is partially updated HTTP_ERROR = 207

Action: The user agent takes proper actions

DRG-11811: Multiple Choices

Cause: Telling client multiple choices of resources is possible HTTP_ERROR = 300

Action: The user agent takes proper actions

DRG-11812: Moved Permanently

Cause: The URI has been assigned a new permanent URI HTTP_ERROR = 301

Action: The user agent takes proper actions

DRG-11813: Moved Temporarily

Cause: The URI resides temporarily under a different URI. HTTP_ERROR = 302

Action: The user agent takes proper actions

DRG-11814: See Other

Cause: The URI can be found using GET METHOD under a different URI
HTTP_ERROR = 303

Action: The user agent takes proper actions

DRG-11815: Not Modified

Cause: Response to conditional GET, indicating document not modified.
HTTP_ERROR = 304

Action: The user agent takes proper actions

DRG-11816: Use Proxy

Cause: The client should use specified proxy to repeat the request HTTP_ERROR = 305

Action: The user agent takes proper actions

DRG-11817: Proxy Redirect

Cause: Proxy redirection. Not used HTTP_ERROR = 306

Action: Outdated due to HTTP evolution

DRG-11818: Temporary Redirect

Cause: The resource is temporarily under a different URI. HTTP_ERROR = 307

Action: The takes proper actions

DRG-11819: Bad Request

Cause: The URL syntax is incorrect. Request rejected by server. HTTP_ERROR = 400

Action: The user agent takes proper actions

DRG-11820: Unauthorized

Cause: The request requires further authentication. HTTP_ERROR = 401

Action: The user agent takes proper actions

DRG-11821: Payment Required

Cause: Reserved for future use. HTTP_ERROR = 402

Action: The user agent takes proper actions

DRG-11822: Forbidden

Cause: The server refuses to fulfil the request from client HTTP_ERROR = 403

Action: The user agent takes proper actions

DRG-11823: Not Found

Cause: The server can not find the requested URI HTTP_ERROR = 404

Action: The user agent takes proper actions

DRG-11824: Method Not Allowed

Cause: The user agent specified method not allowed HTTP_ERROR = 405

Action: The user agent reads allow header to decide alternatives.

DRG-11825: Not Acceptable

Cause: Requested resource is not acceptable according to request header HTTP_ERROR = 406

Action: The user agent should query the user for the next action.

DRG-11826: Proxy Authentication Required

Cause: The client must authenticate itself with the proxy. HTTP_ERROR = 407

Action: The user agent takes proper actions

DRG-11827: Request Timeout

Cause: The server is tired of waiting for the request HTTP_ERROR = 408

Action: The user agent repeat the request

DRG-11828: Conflict

Cause: The request conflicts with the current state of the URI HTTP_ERROR = 409

Action: The user agent takes proper actions

DRG-11829: Gone

Cause: The resource is no longer available and no forwarding address. HTTP_ERROR = 410

Action: The user agent takes proper actions

DRG-11830: Length Required

Cause: The server must receive a content-length header. HTTP_ERROR = 411

Action: The user agent takes proper actions

DRG-11831: Precondition Failed

Cause: Telling the user agent that the resource failed preconditions HTTP_ERROR = 412

Action: The user agent takes proper actions

DRG-11832: Request Entity Too Large

Cause: Request rejected because request entity is too large. HTTP_ERROR = 413

Action: If Retry-After header found, the user agent should retry.

DRG-11833: Request-URI Too Big

Cause: The server is refusing to accept the URI which is too big. HTTP_ERROR = 414

Action: The user agent takes proper actions

DRG-11834: Unsupported Media Type

Cause: The server is refusing the request because of media type HTTP_ERROR = 415

Action: The user agent takes proper actions

DRG-11835: Requested Range Not Satisfiable

Cause: The byte range request can not be satisfied by the resource extent. HTTP_ERROR = 416

Action: The user agent reads content-range header in the response.

DRG-11836: Expectation Failed

Cause: Server can not meet the user agent's expectation. HTTP_ERROR = 417

Action: The user agent takes pro

DRG-11837: Reauthorization Required

Cause: Reserved HTTP_ERROR = 418

Action: Reserved

DRG-11838: Proxy Reauthentication Required

Cause: Reserved HTTP_ERROR = 419

Action: Reserved

DRG-11839: Internal Server Error

Cause: The server encountered internal error in fulfilling the request. HTTP_ERROR = 500

Action: The user agent takes proper actions

DRG-11840: Not Implemented

Cause: The server can't support a request feature which has yet to be implemented. HTTP_ERROR = 501

Action: The user agent takes proper actions

DRG-11841: Bad Gateway

Cause: In serving the request, the server received invalid response from gateway. HTTP_ERROR = 502

Action: The user agent takes proper actions

DRG-11842: Service Unavailable

Cause: Server overloaded or in maintenance mode. HTTP_ERROR = 503

Action: If retry-after header is in the response, retry the request.

DRG-11843: Gateway Timeout

Cause: Upstream server did not timely respond to the gateway server. HTTP_ERROR = 504

Action: The user agent takes proper actions

DRG-11844: HTTP Version Not Supported

Cause: The HTTP version in the request header is rejected by the server. HTTP_ERROR = 505

Action: The user agent takes proper actions

DRG-11845: No Partial Update

Cause: Reserved HTTP_ERROR = 506

Action: Reserved

DRG-11846: Response Is Stale

Cause: The the user agent knows the returned reponse is stale. HTTP_CACHE_ERROR = 10

Action: The user agent client takes proper actions.

DRG-11847: Revalidation Failed

Cause: User agent's attempt to revalidate a stale response failed. HTTP_CACHE_ERROR = 11

Action: The user agent client takes proper actions

DRG-11848: Disconnected Operation

Cause: The cache is intentionally disconnected for a time period. HTTP_CACHE_ERROR = 12

Action: The user agent client takes proper actions

DRG-11849: Heuristic Expiration

Cause: Cache freshness lifetime and response age both greater than 24 hours. HTTP_CACHE_ERROR = 13

Action: The user agent client takes proper actions

DRG-11850: Transformation Applied

Cause: Telling cache manager, content encoding/media type has been changed in cache. HTTP_CACHE_ERROR = 14

Action: The user agent takes proper actions

DRG-11851: Cache Related Warning

Cause: Arbitrary information about cache to be presented to logger. HTTP_CACHE_ERROR = 99

Action: The user agent client must not take any automated action.

DRG-11852: Can't Locate Remote Host

Cause: connection to remote host failed USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11853: No Host Name Found

Cause: The host name is not specicied in URI. USER_AGENT_ERROR

Action: The user agent client takes proper action.

DRG-11854: No File Name Found Or File Not Accessible

Cause: Unable to open the file specified USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11855: FTP Server Replies

Cause: FTP server responds to the agent request USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11856: FTP Server Doesn't Reply

Cause: No response from FTP server during operation. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11857: Server Timed Out

Cause: Server operation timed out USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11858: Gopher Server Replies

Cause: Gopher server responds to the agent request. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11859: Data Transfer Interrupted

Cause: Processing of URL request was interrupted USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11860: Connection Establishment Interrupted

Cause: Connection operation was interrupted USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11861: CSO-server Replies

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11862: This Is Probaly A HTTP Server 0.9 Or Less

Cause: A very old web server USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11863: Bad, Incomplete, Or Unknown Response

Cause: The server is numbering something not understandable
USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11864: Unknown Access Authentication Scheme

Cause: The server is using an unkown access authentication scheme
USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11865: News Server Replies

Cause: News Server is responding USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11866: Please Try `ftp://` Instead Of `file://`

Cause: wrong access scheme is used. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11867: Method Not Suited For Automatic Redirection

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11868: Too Many Redirections

Cause: The web server setup configured too many redirections USER_AGENT_ERROR

Action: The user agent client should take proper actions

DRG-11869: Premature End Of File Detected

Cause: Detected end of file is unexpected USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11870: Response From WAIS Server Too Large -- Extra Lines Ignored

Cause: Response from WAIS caused buffer overflow USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11871: WAIS Server Doesn't Return Any Data

Cause: Bad WAIS Server USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11872: Can't Connect To WAIS Server

Cause: Connect to WAIS server failed USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11873: System Call Replies

Cause: register what system call replies USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11874: Wrong Or Unknown Access Scheme

Cause: Protocol class is wrongfully connected to ther server USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11875: Access Scheme Is Not Allowed

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11876: When Your Are Connected, You Can Log In

Cause: Pass information to telnet agent USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11877: This Cache Version Has Expired And Will Be Automatically Reloaded

Cause: Need to tell user that cache entry has been reloaded USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11878: Loading New Rules Must Be Explicitly Acknowledged

Cause: Let user agent client be aware of new rule loading USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11879: Automatic Proxy Redirection Must Be Explicitly Acknowledged

Cause: Let user agent client be aware of proxy redirection USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-12001: Please enter username:

Cause: Prompt user for name W3CLIB_MSG = 0

Action: The user agent client takes proper actions

DRG-12002: Please enter username for proxy authentication:

Cause: Prompt user for name W3CLIB_MSG = 1

Action: The user agent client takes proper actions

DRG-12003: Please enter username for this FTP server:

Cause: Prompt user for name W3CLIB_MSG = 2

Action: The user agent client takes proper actions

DRG-12004: Password:

Cause: Prompt user for password W3CLIB_MSG = 3

Action: The user agent client takes proper actions

DRG-12005: Please give name of file to save in:

Cause: Prompt user for file name W3CLIB_MSG = 4

Action: The user agent client takes proper actions

DRG-12006: Please enter account:

Cause: Prompt user for account W3CLIB_MSG = 5

Action: The user agent client takes proper actions

DRG-12007: You might not be allowed to use this method here, continue?

Cause: Warn user of deny of service. W3CLIB_MSG = 6

Action: The user agent client takes proper actions

DRG-12008: Location has moved, continue?

Cause: Warn user of location changes. W3CLIB_MSG = 7

Action: The user agent client takes proper actions

DRG-12009: A new set of rules is requested to be added to your setup - continue?

Cause: Warn user of rule changes. W3CLIB_MSG = 8

Action: The user agent client takes proper actions

DRG-12010: This file already exists - replace existing file?

Cause: Warn user of pending replacement W3CLIB_MSG = 9

Action: The user agent client takes proper actions

DRG-12011: Authentication failed - retry?

Cause: Warn user of authentication failure W3CLIB_MSG = 10

Action: The user agent client takes proper actions

DRG-12012: Proxy authentication failed - retry?

Cause: Warn user of proxy authentication failure W3CLIB_MSG = 11

Action: The user agent client takes proper actions

DRG-12013: This method has already been performed - repeat operation?

Cause: Warn user the repetition of previous method used W3CLIB_MSG = 12

Action: The user agent client takes proper actions

DRG-12014: This document is very big - continue operation?

Cause: Warn user of big document processing W3CLIB_MSG = 13

Action: The user agent client takes proper actions

DRG-12015: The source document for this operation has moved - continue?

Cause: Warn user of location changes W3CLIB_MSG = 14

Action: The user agent client takes proper actions

DRG-12016: The target document for this operation has moved - continue?

Cause: Warn user of destination document changes W3CLIB_MSG = 15

Action: The user agent client takes proper actions

DRG-12017: A redirection may change the behavior of this method - proceed anyway?

Cause: Warn user of redirection effects on method W3CLIB_MSG = 16

Action: The user agent client takes proper actions

DRG-12018: Encountered an automatic request for changing proxy - continue?

Cause: Warn user of automatic proxy change W3CLIB_MSG = 17

Action: The user agent client takes proper actions

DRG-12201: section group *string* already exists

Cause: Section group with the same name already exists

Action: Use another name or delete the existing one first

DRG-12202: error while creating section group

Cause: detect an Oracle error while creating section group

Action: see the accompanying Oracle error and take appropriate action

DRG-12203: section group *string* does not exist

Cause: section group provided does not exist

Action: provide an existing section group

DRG-12204: error while dropping section group *string*

Cause: detect an Oracle error while dropping a section group

Action: see the accompanying Oracle error and take appropriate action

DRG-12205: error with sdata columns

Cause: detect an Oracle error while creating sdata columns

Action: add 'order by' or 'filter by' clause for the sdata column(s)

DRG-12206: tag *string* already exists in section group *string*

Cause: the start tag provided already exists in the same Section

Action: provide another start tag

DRG-12210: error while adding section *string*

Cause: detect an Oracle error while adding a section

Action: see the accompanying Oracle error and take appropriate action

DRG-12211: section or section id *string* does not exist

Cause: Section name or Section id to be dropped does not exist

Action: provide an existing Section name or Section id

DRG-12212: error while dropping section *string*

Cause: detect an Oracle error while dropping a Section

Action: see the accompanying Oracle error and take appropriate action

DRG-12213: cannot create/drop section group or sections for other user

Cause: You can only create/drop section group objects of your own

Action: have the other user create/drop his/her own objects

DRG-12217: tags cannot be more than 64 bytes

Cause: max limit of start and end tag is 64 bytes

Action: provide a shorter start and end tag

DRG-12218: section group name missing

Cause: must provide section group name

Action: provide a section group name when creating Section or section group

DRG-12219: section name missing

Cause: must provide Section name when creating a Section

Action: provide a Section name

DRG-12220: a valid tag must be provided

Cause: must provide tag when adding a section to a section group

Action: provide a tag

DRG-12223: section name *string* is a reserved name

Cause: you tried to name a section a reserved name

Action: Specify a different name for the section

DRG-12224: use ctx_ddl.create_section_group to create section groups

Cause: you tried to use ctx_ddl.create_preference to create a section group

Action: use ctx_ddl.create_section_group

DRG-12225: this type of section cannot be added to this section group

Cause: You tried to add sections to the null section group, add a stop section to a non-auto section group, or add a zone or field section to the auto section group

Action: Do not add this type of section to this section group

DRG-12226: a field section named *string* already exists in this section group

Cause: you tried to name an attribute or zone section the same name as an existing field section

Action: use another name

DRG-12227: a zone section named *string* already exists in this section group

Cause: you tried to name an attribute or field section the same name as an existing zone section

Action: use another name

DRG-12228: maximum number of field sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique field sections

Action: no action required

DRG-12229: special section *string* already exists in this section group

Cause: you tried to add a special section which already exists

Action: no action required

DRG-12230: special section name must be one of *string*

Cause: you tried to add an invalid special section

Action: specify a valid special section

DRG-12231: an attr section named *string* already exists in this section group

Cause: you tried to name a field or zone section the same name as an existing attribute section

Action: use another name

DRG-12232: invalid attribute tag format

Cause: you specified a tag for use as an attribute tag which did not have the correct format. An attribute tag must have the form TAG@ATTR

Action: use correct format

DRG-12233: xml sections cannot co-exist with other section types

Cause: you tried to add an xml section to a section group or index which already has zone, field, attr, or special sections, or you tried to add a zone, field, attr, or special section to a section group or index which already has xml sections

Action: n/a

DRG-12234: column *string* already mapped in section group *string*

Cause: you tried to add a column section which already exists

Action: use correct format

DRG-12235: an sdata section named *string* already exists in this section group

Cause: you tried to name a non-sdata section the same name as an existing sdata section

Action: use another name

DRG-12236: an mdata section named *string* already exists in this section group

Cause: you tried to name a non-mdata section the same name as an existing mdata section

Action: use another name

DRG-12237: a section named *string* already exists in this section group

Cause: you tried to map a column but the section name is already being used by another section

Action: use another name

DRG-12238: maximum number of mdata sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique mdata sections

Action: no action required

DRG-12239: maximum number of sdata sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique sdata sections

Action: no action required

DRG-12240: ORDER BY column *string* must be indexed as an SDATA section

Cause: an order by column has been mapped to an MDATA section

Action: adjust section group

DRG-12241: column name *string* is not a valid section name

Cause: an order by or filter by column cannot be implicitly mapped to an SDATA section because the name is not valid as a section name

Action: adjust section group to map column name to a valid section name

DRG-12242: value of *string* is too large for section *string*

Cause: the value of a filter by or order by column is too large to be indexed

Action: update the row

DRG-12243: invalid datatype

Cause: the datatype specified for a sdata or mdata section is invalid

Action: specify a supported datatype

DRG-12244: data conversion error for sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12245: SDATA operator not compatible with the sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12246: SDATA operand not compatible with the sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12247: maximum number of NDATA sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique NDATA sections

Action: no action required

DRG-12248: a NDATA section named *string* already exists in this section group

Cause: you tried to name a non-NDATA section the same name as an existing NDATA section

Action: use another name

DRG-12253: optimized for *string* SDATA sections do not support *string* operation

Cause: An attempt was made to use an operation that is not supported for these SDATA sections.

Action: Use another substitute operation if possible.

DRG-12254: order by for SDATA optimized for search only is not allowed

Cause: An attempt was made to use a query ordering by SDATA section that is optimized for search only.

Action: Use SDATA section that is optimized for sort or sort_and_search.

DRG-12255: invalid data type for SDATA section *string*

Cause: The data type of the SDATA section in the XML enabled context index was invalid.

Action: Specify a supported data type.

DRG-12256: SDATA section *string* is not optimized for search

Cause: Section attribute 'optimized_for' was not set to 'search' for the SDATA section in the XML enabled context index.

Action: Set 'optimized_for' to 'search' for the SDATA section.

DRG-12257: RANGE_SEARCH_ENABLE cannot co-exist with other section types.

Cause: An attempt was made to create an index with a section group having both RANGE_SEARCH_ENABLE on and other sections such as Attribute, Field, MDATA, NDATA, SDATA, Special, or Zone section.

Action: Remove other sections from the section group or do not use RANGE_SEARCH_ENABLE for the section group.

DRG-12258: sdata section *string* is too long

Cause: data too long for sdata section

Action: ensure data length is at most 249 bytes

DRG-12259: SDATA predicate operand for section *string* exceeds the maximum length allowed

Cause: The predicate comparison string for an SDATA operator querying a section of VARCHAR2 data type was larger than the maximum length of an SDATA section value.

Action: Verify SDATA operators in the query have comparison values whose length is smaller than 250 bytes.

DRG-12300: an index with this column list already exists in the index set

Cause: You tried to add an index to an index set, but an index with the specified column list already exists

Action: n/a

DRG-12301: index does not exist in index set

Cause: You tried to remove an index from an index set, but the specified index was not found

Action: n/a

DRG-12302: invalid column list

Cause: You specified an invalid column list -- it may have a syntax error, duplicate columns, or invalid column names

Action: n/a

DRG-12303: cannot add more than 99 indexes to an index set

Cause: You tried to add too many indexes to the index set

Action: n/a

DRG-12304: index set *string* does not exist

Cause: You specified an invalid index set name

Action: n/a

DRG-12305: column *string* data type is not supported for index set columns

Cause: You specified a column in the column list of an index of an index set which does not have a valid datatype

Action: use only DATE, NUMBER, CHAR, or VARCHAR2 columns in index column lists

DRG-12306: column *string* is too long for index set columns

Cause: You specified a column in the column list of an index of an index set which is too long

Action: CHAR and VARCHAR2 columns must be 30 bytes or less max length

DRG-12307: column *string* is NULL and cannot be indexed

Cause: You tried to index a row where at least one of the meta columns was NULL.

Action: provide a value for the meta column and reindex the row

DRG-12308: use ctx_ddl.create_index_set to create index sets

Cause: you tried to use ctx_ddl.create_preference to create an index set

Action: use ctx_ddl.create_index_set

DRG-12309: not to use compression on attributes lob column

Cause: you tried to use compression on attributes lob column for xml full text index

Action: not to use compression on attributes lob column for xml full text index

DRG-12310: index set name exceeds maximum size of string

Cause: Index set name is too many bytes

Action: Correct name and resubmit

DRG-12400: template string is empty

Cause: The template is empty.

Action: Check the template was installed successfully.

DRG-12401: invalid template: query within a loop

Cause: A CTX EXEC tag cannot occur within a CTX REPEAT tag.

Action: Remove the CTX EXEC tag.

DRG-12402: error processing template string, line string

Cause: An error occurred when processing a template.

Action: See other errors on the stack and take the appropriate action.

DRG-12403: template string was not found

Cause: The template does not exist.

Action: Check the name of the template and check that it is installed.

DRG-12404: more than one template string found

Cause: More than one template with the same name was found.

Action: Remove templates as appropriate.

DRG-12405: error occurred processing CTX REDIRECT or CTX LABEL tag

Cause: Error in syntax of a tag.

Action: Correct the syntax of the tag.

DRG-12406: invalid CTX EXEC tag attribute (string)

Cause: The specified attribute is incorrectly specified.

Action: Check the syntax of the specified attribute.

DRG-12407: invalid CTX REPEAT tag attribute (string)

Cause: The specified attribute is incorrectly specified.

Action: Check the syntax of the specified attribute.

DRG-12408: invalid variable reference: string.string

Cause: The variable referenced does not exist.

Action: Check the label and column name.

DRG-12409: syntax error for label in *string*

Cause: The SQL in a CTX EXEC tag has incorrect syntax for a label or label type.

Action: Check the SQL attribute of the CTX EXEC tag.

DRG-12410: could not process CTX EXEC tag

Cause: An error occurred when processing the SQL attribute of a CTX EXEC tag.

Action: See other errors on the stack and take the appropriate action.

DRG-12411: SQL processing error: *string*

Cause: Error executing SQL from SQL attribute of CTX EXEC tag.

Action: Check the SQL in the SQL attribute.

DRG-12412: missing or invalid Template Processor attribute (*string*)

Cause: The specified attribute was missing or invalid in a HTML input field.

Action: Check the Template Processor-specific attributes in the INPUT, SELECT, RADIO and CHECKBOX tags of the template.

DRG-12422: write to client failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12430: mandatory argument missing: *string*

Cause: This argument is mandatory.

Action: Re-submit the URL with this argument supplied.

DRG-12431: configuration section *string* not found

Cause: Specified conf argument is invalid.

Action: Re-submit the URL with this argument corrected.

DRG-12432: configuration file *string* not found or unreadable

Cause: An error occurred when processing the configuration file.

Action: Contact the administrator.

DRG-12433: load of *string* JDBC driver class failed

Cause: Driver class is invalid.

Action: Contact the administrator to modify configuration.

DRG-12434: connection failed using configuration *string* information

Cause: Configuration information is not correct.

Action: Contact the administrator to modify configuration.

DRG-12435: highlight table allocation failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12436: document table allocation failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12437: highlight table release failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12438: document table release failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12439: highlight table read failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12440: document table read failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12441: counting the number of highlights failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12500: stoplist *string* already exists

Cause: the specified stop list already exists

Action: must remove the duplicate stop list if you want to re-create it.

DRG-12501: null stoplist is not allowed

Cause: the specified stop list is null

Action: mustspecify a valid stop list

DRG-12502: cannot modify stoplists owned by other users

Cause: You can only create/drop Stop List or Stop Word objects of your own

Action: have the other user create/drop his/her own objects

DRG-12503: error while creating or dropping stoplist

Cause: detect an Oracle error while creating Stop List

Action: see the accompanying Oracle error and take appropriate action

DRG-12504: stoplist *string* does not exist

Cause: the specified stop list does not exist

Action: check that the Stop List is valid

DRG-12505: error while adding or removing a stop word

Cause: detect an Oracle error while adding or removing Stop Word

Action: see the accompanying Oracle error and take appropriate action

DRG-12506: stop word *string* does not exist in stoplist *string*

Cause: the specified Stop Word does not exist

Action: check that the Stop Word is valid

DRG-12507: stop word *string* already exists in this stoplist

Cause: the specified stop word already exists

Action: must remove the duplicate word if you want to re-create it.

DRG-12508: null stop words are not allowed

Cause: the specified stop word is null

Action: must remove the null stop word if you want to re-create it.

DRG-12509: length of the stop word *string* exceeded the limit of *string* bytes

Cause: A stop list entry has exceeded the maximum length

Action: Reduce the length of the stop list entry

DRG-12511: use `ctx_ddl.create_stoplist` to create stoplists

Cause: you tried to use `ctx_ddl.create_preference` to create a stoplist

Action: use `ctx_ddl.create_stoplist`

DRG-12512: invalid stop class *string*

Cause: you specified an invalid stop class

Action: specify a valid stop class

DRG-12513: valid stop classes are: *string*

Cause: You specified an invalid stop class

Action: Specify a valid stop class

DRG-12514: languages must be specified for stopwords in a `MULTI_STOPLIST`

Cause: You tried to add a stopword to a `multi_stoplist` without specifying the language of the stopword

Action: Specify the language of the stopword

DRG-12515: cannot specify language for stopwords in a `BASIC_STOPLIST`

Cause: You tried to add a language-specific stopword to a basic stoplist.

Action: Do not specify language for the stopword

DRG-12516: language column must be specified when using the multi stoplist

Cause: you tried to create an index using a multi stoplist but you did not specify a language column

Action: specify a language column

DRG-12517: cannot add stopthemes to a `MULTI_STOPLIST`

Cause: you tried to add a stoptheme to a `MULTI_STOPLIST`. This is not supported in this version.

Action: n/a

DRG-12518: cannot use this option with MULTI_STOPLIST

Cause: index already has multi_stoplist

Action: can only be used to migrate from basic to multi stoplist

DRG-12519: LANGUAGE COLUMN missing

Cause: index does not have a language column

Action: specify language column value

DRG-12520: LANGUAGE COLUMN mismatch

Cause: LANGUAGE COLUMN does not match language column of the Index

Action: index language column should match specified one

DRG-12521: cannot add STOP PATTERN to NUMBERS stopclass

Cause: NUMBERS is a predefined stopclass to specify numeric values

Action: use any other alphanumeric word

DRG-12522: stop class name cannot have a reserved symbol

Cause: character AMPERSAND is not supported for stop class name

Action: use any other alphanumeric word

DRG-12600: user datastore procedure name contains a semicolon

Cause: the procedure name specified had a semicolon

Action: remove semicolon or rename procedure name. The correct format is
PACKAGENAME.PROCEDURE_NAME

DRG-12601: invalid user datastore procedure name: *string*

Cause: the format of the procedure name is invalid. It should be in the form
PACKAGENAME.PROCEDURENAME or PROCEDURENAME

Action: make sure PROCEDURE attr has the format PACKAGENAME.PROCEDURENAME
or PROCEDURENAME

DRG-12602: index owner does not have access to user datastore procedure: *string*

Cause: the index owner does not have execute privilege of the procedure

Action: CTXSYS to grant execute privilege of the procedure to index owner

DRG-12603: CTXSYS does not own user datastore procedure: *string*

Cause: CTXSYS does not have execute privilege to the user datastore procedure

Action: make sure the package is owned by CTXSYS and the procedure exist

DRG-12604: execution of user datastore procedure has failed

Cause: an error occur while executing the user datastore procedure

Action: check or debug the datastore procedure

DRG-12605: datatype of column *number* in COLUMNS list is not supported

Cause: one or more of the columns in the column list of the multi datastore are of a type which the multi datastore is unable to process

Action: change the column list of the multi datastore to contain only supported types. PL/SQL functions can be used in the column list to convert unsupported types to supported types.

DRG-12606: error encountered while parsing COLUMNS list

Cause: An oracle error was encountered while parsing the columns list of the multi datastore.

Action: See next error on stack and take appropriate action

DRG-12607: only ctxsys can create MULTI_COLUMN preferences

Cause: In order to create a multi column datastore preference, the effective user must be ctxsys.

Action: contact your DBA to create the preference as ctxsys

DRG-12700: seed word must be a single word

Cause: seed word is not a single word

Action: use a single-word seed word

DRG-12800: Attribute NESTED_TYPE must have owner name as prefix

Cause: the attribute NESTED_TYPE does not have an owner name prefix

Action: reset the attribute NESTED_TYPE to include owner name prefix

DRG-12801: invalid type: *string*

Cause: invalid nested_type or

Action: check the owner and the type attribute names

DRG-12802: invalid type column: *string*

Cause: column specified does not exist in the type table

Action: check the type table

DRG-12803: invalid text datatype

Cause: LONG and LONG RAW are not supported in nested table

Action: change text column to a supported data type

DRG-12900: Operation:*string* for index: *string* has already been started

Cause: the specified operation has been started

Action: n/a

DRG-13000: error while adding or removing a sub lexer

Cause: see next error

Action: n/a

DRG-13001: sub lexer and multi lexer must have the same owner

Cause: you specified a sub lexer which is not owned by the owner of the enclosing multi-lingual lexer preference

Action: specify a sub lexer owned by the owner of the multi-lexer preference

DRG-13002: preference *string* is not a MULTI_LEXER

Cause: you tried to add a sub lexer to a lexer preference which cannot accept sub lexers. Only multi-lingual lexers can accept sub lexers.

Action: specify a multi lingual lexer

DRG-13003: preference *string* cannot be used as a sub lexer

Cause: you specified a preference for sub lexer which is not a lexer, or is a multi-lingual lexer or is an auto lexer

Action: specify a sub lexer which is not a multi-lingual lexer or an auto lexer

DRG-13004: language is invalid

Cause: you specified an invalid language for the sub lexer or stopword

Action: specify a valid language -- see NLS Support Guide for a list of valid languages

DRG-13005: alt_value cannot be an NLS language name

Cause: you specified an NLS language name as the alt value

Action: specify a non-NLS value

DRG-13006: sub lexer for this language is not defined

Cause: you tried to remove a sub lexer for a language, but no sub lexer was defined for that language

Action: None

DRG-13007: cannot define an alternate value for the DEFAULT sub lexer

Cause: you tried to define an alternate value for the DEFAULT sub lexer

Action: None

DRG-13008: cannot remove the DEFAULT sub lexer

Cause: you tried to remove the DEFAULT sub lexer

Action: None

DRG-13009: multi lexer preference does not have a DEFAULT sub lexer

Cause: you tried to use a multi lexer preference which does not have a DEFAULT sub lexer defined

Action: add a DEFAULT sub lexer to the multi lexer preference and retry

DRG-13010: alt_value is already used by another sub lexer

Cause: you tried to specify an alt value which is already in use by another sub lexer in the lexer preference

Action: specify a different alt value

DRG-13011: language column must be specified when using the multi lexer

Cause: you tried to create an index using a multi lexer preference, but you did not specify a language column

Action: specify a language column

DRG-13012: language column must be a char, varchar, or varchar2 type

Cause: you specified a language column which is not a char, varchar, or varchar2 type.

Action: specify a language column of correct type

DRG-13013: cannot have language independent DEFAULT sub lexer

Cause: you tried to define a language independent DEFAULT sub lexer

Action: DEFAULT sub lexer can only be language dependent

DRG-13014: base table has rows with language column value *string*

Cause: there are documents in the base table with language column value set to symbol for sublexer or stopword being removed

Action: base table should not have such rows

DRG-13015: sublexer *string* already exists in the index

Cause: cannot add a sub_lexer more than once

Action: if you want to update sub_lexer preferences, use update sub_lexer parameter or remove currently used sub_lexer

DRG-13100: index is not partitioned

Cause: you attempted to invoke a partition-level operation on an index which is not partitioned

Action: invoke appropriate index-level operation

DRG-13101: partition *string* does not exist in this index

Cause: you specified a partition name which does not exist

Action: specify correct partition name

DRG-13102: index partition name must be specified

Cause: you attempted to invoke a partition-level operation on a partitioned index but did not specify the partition name

Action: n/a

DRG-13103: index table *string* is partitioned

Cause: you attempted to perform an exchange partition including indexes, but one or more of the internal index tables are partitioned.

Action: specify EXCLUDING INDEXES on the exchange partition, then manually rebuild the indexes.

DRG-13104: indexes do not have equivalent settings for *string*

Cause: you attempted to perform an exchange partition including indexes, but the specified metadata setting is not equivalent across the two indexes, so the data cannot be exchanged

Action: specify EXCLUDING INDEXES on the exchange partition, then manually rebuild the indexes.

DRG-13200: failed to load dictionary file *string*

Cause: failed to load a dictionary file

Action: check whether the dictionary file exists in \$ORACLE_HOME/ctx/data/kolx or access permission is available

DRG-13201: KOREAN_LEXER is desupported

Cause: Using lexer type KOREAN_LEXER which is desupported.

Action: Use lexer type KOREAN_MORPH_LEXER instead.

DRG-13300: document size bigger than *string* bytes

Cause: size of the document being indexed is larger than the maximum supported size for the VARCHAR2 interface of stored procedure

Action: use the CLOB interface for the stored procedure

DRG-13301: syntax error in token data when expecting *string*, at line *string*

Cause: token data returned by the user-defined lexer procedure is incorrect

Action: modify user-defined lexer procedure to return expected data

DRG-13302: number of wildcard offsets must be in the range *string*..*string*, at line *string*

Cause: number of wildcard offsets specified as value for the wildcard attribute does not meet the supported range

Action: modify user-defined lexer query procedure to return valid number of wildcard offsets

DRG-13303: value of wildcard offset must be in the range *string*..*string*, at line *string*

Cause: value of pre-normalized wildcard offset or post-normalized wildcard offset specified as value for the wildcard attribute does not meet the supported range

Action: modify user-defined lexer query procedure to return valid value for wildcard offset

DRG-13304: character referenced by wildcard attribute is not a wildcard character, at line *string*

Cause: The wildcard attribute value specified the offset of a wildcard character. The character at the specified offset is neither the '%' character nor the '_' character.

Action: Modify user-defined lexer query procedure.

DRG-13305: 'off' attribute value must be in the range *string*..*string*, at line *string*

Cause: value of 'off' attribute does not meet the supported range

Action: modify user-defined lexer index procedure to return valid value for 'off' attribute

DRG-13306: 'len' attribute value must be in the range *string*..*string*, at line *string*

Cause: value of 'len' attribute does not meet the supported range

Action: modify user-defined lexer index procedure to return valid value for 'len' attribute

DRG-13307: 'off'=string and 'len'=string references character past end-of-file of string character document, at line string

Cause: value of 'off' attribute plus value of 'len' attribute is greater than the number of characters in the document

Action: modify user-defined lexer index procedure to return valid values for 'off' and 'len' attributes

DRG-13308: query operator ABOUT not supported by USER_LEXER

Cause: the query contains an ABOUT operator while using USER_LEXER lexer type

Action: remove ABOUT operator from query or use lexer type other than USER_LEXER

DRG-13309: operation not supported by USER_LEXER

Cause: USER_LEXER does not support this operation

Action: stop the operation or use alternate lexer type

DRG-13310: index owner does not have EXECUTE privilege on USER_LEXER stored procedure string

Cause: user CTXSYS did not grant EXECUTE privilege on USER_LEXER stored procedure to the index owner

Action: user CTXSYS grant EXECUTE privilege on USER_LEXER stored procedure to index owner

DRG-13311: USER_LEXER stored procedure name contains a semicolon

Cause: the procedure name contains a semicolon character

Action: remove semicolon from procedure name or rename stored procedure

DRG-13312: user CTXSYS does not own USER_LEXER stored procedure string

Cause: CTXSYS does not have EXECUTE privilege on the USER_LEXER stored procedure

Action: make sure the stored procedure exists and is owned by CTXSYS

DRG-13400: Oracle Data Mining was not installed

Cause: The function you used depends on Oracle Data Mining, which has not been installed yet.

Action: make sure the Oracle Data Mining is installed

DRG-13401: the preference string type is not supported in this API

Cause: the type you have specified is not supported

Action: use a different type

DRG-13500: Parameter_string must start with string

Cause: Wrong syntax for parameter_string.

Action: Make sure the parameter_string has the correct syntax

DRG-13501: Shadow Index Already Exists

Cause: A shadow index was previously created already

Action: Drop the shadow index and try again

DRG-13502: NOPOPULATE is not allowed in recreate_index_online

Cause: Specify NOPOPULATE in parameter_string in recreate_index_online

Action: Don't specify NOPOPULATE.

DRG-13503: POPULATE is not allowed for a local index in create_shadow_index

Cause: Specify POPULATE for a local index during create_shadow_index

Action: Don't specify POPULATE.

DRG-13504: string has no shadow index

Cause: Tried to perform exchange shadow without creating shadow index first

Action: create a shadow index before doing exchanges_shadow_index

DRG-13505: Keyword string is not allowed here in parameter_string

Cause: Wrong syntax for parameter_string

Action: Make sure the parameter_string has the correct syntax

DRG-13506: string has no shadow part

Cause: Tried to perform exchange shadow part without creating shadow part first

Action: create a shadow part before doing exchanges_shadow_index on the partition.

DRG-13507: SWAP and NOPOPULATE is incompatible

Cause: Specified SWAP and NOPOPULATE in parameter string

Action: Correct the parameter string setting

DRG-13508: Not all partitions for index string are swapped

Cause: try to swap an local partitioned index when not all partitions are swapped

Action: Swap all partitions first, then swap the (local) index.

DRG-13509: error while swapping shadow index

Cause: an error occurred during the shadow index swap

Action: check error message stack for the actual error

DRG-13510: shadow index does not exist

Cause: Tried to perform exchange shadow without creating shadow index first

Action: create a shadow index before doing exchanges_shadow_index

DRG-13511: Cannot sync until all partitions for index string are swapped

Cause: Tried to swap with sync a local partitioned index when not all partitions are swapped

Action: Swap all partitions first, then swap the (local) index with sync_idx true.

DRG-13600: Syntax error in the result set descriptor at string

Cause: The result set descriptor has a syntax error

Action: check the syntax of the result set descriptor

DRG-13601: Syntax error in the order attribute

Cause: The order attribute has a syntax error

Action: check the syntax of the order attribute

DRG-13602: Number parsing error in *string*

Cause: The number string is malformed

Action: check the syntax of the number string

DRG-13603: Too many sort keys

Cause: Too many sort keys are specified

Action: reduce the number of sort keys

DRG-13604: Too many items to select

Cause: Too many select items are specified

Action: reduce the number of select items

**DRG-13606: start_hit_num is not specified or out of valid range
*number..number***

Cause: start_hit_num is not specified or out of valid range

Action: set a correct start_hit_num value

DRG-13607: end_hit_num is not specified or out of valid range *number..number*

Cause: end_hit_num is not specified or out of valid range

Action: set a correct end_hit_num value

DRG-13608: Temporary lob not created for *ctx_query.result_set_document*

Cause: Temporary lob is not allocated for *ctx_query.result_set_document*

Action: Create a temporary lob for *ctx_query.result_set_document*

DRG-13609: empty query is not allowed

Cause: No query is specified and result set descriptor has invalid elements

Action: Either specify query or change result set descriptor

DRG-13613: Missing index name

Cause: index name not specified in the API

Action: specify an index name

DRG-13614: result_set_inteface not supported with security policy

Cause: result set interface not supported with security policies

Action: cannot use result set interface on table with security policy

DRG-13615: Only one snippet element allowed in result set interface

Cause: More than one snippet element specified with result set interface

Action: Specify only one snippet element with result set interface

DRG-13617: invalid value for topn in result set interface

Cause: Cannot use topn less than or equal to zero

Action: Use topn greater than zero

DRG-13621: Duplicate group count element in result set interface

Cause: Group Count element specified more than once for group

Action: Specify one count element for a group

DRG-13622: Unsupported SDATA 'bucketby' value specified in the result set interface

Cause: An unsupported attribute value was specified for the 'bucketby' attribute.

Action: Specify a valid attribute value (range or single).

DRG-13624: invalid attribute value for 'collocates' in the result set interface

Cause: An unsupported attribute value was specified for a 'collocates' attribute.

Action: Valid attribute values are larger than zero.

DRG-13625: more than one sentiment element in query

Cause: There was more than one sentiment element in the query.

Action: Ensure there is only one sentiment element.

DRG-13626: too many item elements in sentiment query

Cause: There were too many item elements in the sentiment query.

Action: Ensure there are less than 10 items in the sentiment element.

DRG-13627: Invalid item attribute value for *string* in result set interface

Cause: There was an unsupported attribute value specified for the item attribute.

Action: Provide a non-zero valid value for the attribute.

DRG-13628: Invalid value for 'sortby' SDATA group count in the result set interface

Cause: An unsupported attribute value was specified for the 'sortby' attribute.

Action: Valid attribute values are 'count' (default) and 'value'.

DRG-13629: Invalid value for 'order' SDATA group count in the result set interface

Cause: An unsupported attribute value was specified for the 'order' attribute.

Action: Valid attribute values are 'des' (default) and 'asc'.

DRG-13630: The 'bucketby' attribute is only supported for 'searchable' SDATA

Cause: The 'bucketby' attribute applies to 'searchable' SDATA sections only.

Action: Enable 'searchable' for this SDATA section.

DRG-13631: Empty queries are not supported with 'bucketby' single

Cause: Empty queries are supported with 'bucketby' range.

Action: Use 'bucketby' range or use a different query.

DRG-13632: Auto lexer is not supported with 'collocates' in the result set interface

Cause: An unsupported lexer was specified for 'collocates'.

Action: Use the basic lexer for 'collocates'.

DRG-13633: Error processing 'collocates' in the result set interface

Cause: Internal error processing the 'collocates' element.

Action: check syntax and re-try

DRG-13700: Syntax error in the Extraction Rule Descriptor

Cause: The Extraction Rule descriptor has a syntax error

Action: check the syntax of the Extraction rule descriptor

DRG-13701: Invalid rule_id

Cause: rule_id is NULL or rule_id <= 0

Action: rule_id must be number > 0

DRG-13702: Rule not found

Cause: No rule for given rule_id

Action: Specify a valid rule_id

DRG-13703: Invalid Type Specified: *string*

Cause: An invalid entity type was specified

Action: Specify a valid entity type

DRG-13704: Invalid Entity Type List

Cause: An invalid entity type list was specified

Action: Check format and types on entity type list

DRG-13705: Must use an Extract Policy

Cause: Using a non-extraction policy

Action: Use a policy created with `ctx_entity.create_extract_policy`

DRG-13706: Cannot use Entity Extraction Policy here

Cause: Using an entity extraction policy

Action: Use a policy created with `ctx_ddl.create_policy`

DRG-13707: Rule Engine Loading Failed

Cause: A user rule has an error

Action: Fix the user rule with the error

DRG-13708: Dictionary Loading Failed

Cause: The user dictionary has an error

Action: Fix the user dictionary

DRG-13709: Unsupported Language Specified: *string*

Cause: Unsupported Language Specified

Action: Specify a supported language

DRG-13710: Syntax Error in Dictionary

Cause: Syntax error in dictionary

Action: Correct syntax error in dictionary

DRG-13711: Stop Entity Not Found

Cause: Tried to remove a non-existent stop entity

Action: Cannot remove non-existent stop entity

DRG-13712: User Dictionary already loaded

Cause: Tried to load a 2nd user dictionary to a policy

Action: Drop the dictionary, and then load

DRG-13713: No User Dictionary loaded

Cause: No user dictionary loaded for this policy

Action: Cannot drop non-existent dictionary

DRG-13714: Duplicate Stop Entity

Cause: Trying to load a duplicate uncompiled stop entity

Action: Stop entity is already present

DRG-13715: Null name and type for Stop entity

Cause: Trying to load a stop entity with null name and type

Action: Stop entity must have at least one parameter non-null

DRG-13716: Entity Extraction not enabled

Cause: Haven't loaded correct event

Action: Must load correct event and level

DRG-13717: Null entry or alternate form in user dict

Cause: A entry or alternate form has null value

Action: Entries or alternate forms must be non-null

DRG-13718: No entity type given in user dict

Cause: An entry was not given an entity type

Action: All entries must have an entity type

DRG-13719: File and Drop are mutually exclusive

Cause: Tried to run ctxload with file and drop

Action: file and drop are mutually exclusive

DRG-13720: Stop entity already marked for deletion

Cause: Tried to re-drop a stop entity

Action: Only drop this stop entity once

DRG-13721: Duplicate Type on Typelist

Cause: Duplicate type on typelist

Action: Typelist must be unique

DRG-13722: Invalid Backreference

Cause: Backreference not between 1 and 10

Action: Backreferences must be between 1 and 10

DRG-13723: Invalid Attribute: *string*

Cause: Unsupported Attribute

Action: Follow correct syntax for rule or dictionary

DRG-13724: Invalid Attribute Value: *string*

Cause: Unsupported attribute value

Action: Follow correct syntax for rule or dictionary

DRG-13725: Type Name Too Long

Cause: Type name more than 30 bytes

Action: Type must be less than 30 bytes

DRG-13726: Invalid Tag: *string*

Cause: Unsupported Tag

Action: Follow correct syntax for rule or dictionary

DRG-13727: Missing Tag: *string*

Cause: Missing Necessary Tag

Action: Add tag for rule or dictionary

DRG-13728: Missing Attribute: *string*

Cause: Missing Necessary Attribute

Action: Add attribute for rule or dictionary

DRG-13729: Cyclic definition of rules, with type: *string*

Cause: Cyclic nested rules

Action: Remove the rule with the cycle

DRG-13730: Rules not found for the type: *string*

Cause: Rules doesn't exists for the type

Action: Remove the rule with the issue

DRG-13731: Level of nesting exceeded

Cause: More than 5000 levels of nesting

Action: Remove the rule with the issue

DRG-13732: Multiple types and backreferences are not supported

Cause: Using multiple types and backreferences is not supported

Action: Remove the rule with the issue

DRG-13733: dictionary for *string* is empty

Cause: Dictionary to import is empty

Action: The parameter cannot be null or empty

DRG-13734: Oracle supplied dictionary type "*string*" with backreference is not supported

Cause: Use of supplied dictionary types with backreference is not supported

Action: Remove or modify the rule with the issue

DRG-13735: Syntax error in the extraction rule: "*number*"

Cause: The extraction rule descriptor has a syntax error

Action: Check the syntax of the Extraction rule descriptor

DRG-13900: Auto_Optimize Process is already started

Cause: Auto_Optimize Process is already started

Action: Can't start auto_optimize when it's already running

DRG-13901: Index must have stage_itab

Cause: Auto_Optimize works on indexes with stage_itab

Action: Use an index with stage_itab for auto_optimize

DRG-13902: Index/Partition already added to auto_optimize list

Cause: Index/Partition already added to auto_optimize list

Action: Can't add index/partition to list twice

DRG-13903: Index/Partition not on the auto_optimize list

Cause: Index/Partition not on the auto_optimize list

Action: Can't remove index/partition from list

DRG-13904: Index/Partition has max_rows set to non-zero value

Cause: Index/Partition is using max_rows to merge

Action: Can't set both Auto_optimize and max_rows

DRG-13905: Index/Partition has auto optimization on

Cause: Index/Partition is using auto optimization

Action: Can't set both Auto_optimize and max_rows

DRG-50000: requested size larger than pagesize

Cause: The requested memoery size is larger than page size,

Action: Contact support

DRG-50100: CORE LSF error: *string*

Cause: detect a CORE LSF error

Action: look up the core error and take appropriate action

DRG-50101: CORE LEM error: *string*

Cause: detect a CORE LEM error while reading the error stack

Action: Contact support

DRG-50102: error getting database compatibility

Cause: could not obtain database compatibility setting

Action: Contact support

DRG-50200: Third-party filter internal error

Cause: Third-party filter could not filter this document because of an internal error.

Action: Contact Oracle Support.

DRG-50300: error sending message from server to client

Cause: internal database error or internal Text error

Action: Call customer support

DRG-50301: server error reading request queue

Cause: database error or internal Text error

Action: Call customer support

DRG-50302: server error reading OOB break queue; cannot detect interrupts

Cause: database error or internal Text error

Action: Call customer support

DRG-50303: error in bufout

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50304: error in execute()

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50305: getcmd() called when one of the queue names is NULL

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50400: maximum number of fuzzy match candidates exceeded: *string*

Cause: Internal error, probably result of large number of indexed words

Action: Contact Oracle support

DRG-50401: failed to retrieve fuzzy match candidates from db: *string*

Cause: Internal error

Action: Contact Oracle support

DRG-50402: Index validation failed for one or more tokens

Cause: Index validation generated an error for one or more tokens

Action: Check the ctx log for the detailed errors

DRG-50500: only RULE_CLASSIFIER is accepted in this API

Cause: you specified an illegal classifier

Action: use RULE_CLASSIFIER

DRG-50501: classifier preference not specified

Cause: the classifier preference is not specified

Action: specify a classifier preference

DRG-50502: cannot use RULE_CLASSIFIER in this API

Cause: you specified RULE_CLASSIFIER

Action: use a different classifier

DRG-50503: unsupported classification method

Cause: you specified an unsupported classification method

Action: use a different classifier

DRG-50504: invalid column datatype for *string* table

Cause: the column datatype is invalid

Action: specify a different datatype

DRG-50505: invalid sentiment label

Cause: A sentiment label other than 0, 1 or 2 was present in the training table.

Action: Use 0, 1 or 2 as a training label.

DRG-50600: assertion failed

Cause: An internal check-condition has been violated

Action: Contact Oracle support for assistance

DRG-50601: fatal error

Cause: A fatal error has occurred

Action: Contact Oracle support for assistance

DRG-50603: unrecognized operation code *string*

Cause: Bad operation code was encountered (reached switch default:)

Action: check .h files versions

DRG-50607: failed to obtain column info for cid *string*

Cause: internal error, probably a bug

Action: call customer support

DRG-50608: unexpected end of data

Cause: internal error, probably a bug

Action: call customer support

DRG-50609: pipe internal error

Cause: internal error, probably a bug

Action: call customer support

DRG-50610: internal error: *string*

Cause: internal error, probably a bug

Action: call customer support

DRG-50611: auto lexer internal error: *string*

Cause: internal error from ANL component

Action: call customer support

DRG-50612: internal error: you need to call bind first for this insertion mode

Cause: internal error

Action: call customer support

DRG-50613: internal error: model type is not supported in drctrwpf

Cause: internal error

Action: call customer support

DRG-50614: library loading error in *string*

Cause: internal error

Action: call customer support

DRG-50615: Third party lexer timed out

Cause: Third-party auto lexer could not complete tokenization because the lexer timed out.

Action: Increase the value of the TIMEOUT attribute of the auto_lexer and reindex the document. If TIMEOUT is set to 0 and the lexer still hangs context Oracle Support.

DRG-50617: Query string too long: *string*

Cause: internal error

Action: Invalid query string provided

DRG-50618: Failed to create XML context

Cause: internal error

Action: Failed to create XML context for XTI conversion from XML text

DRG-50619: basic lexer language *string* data error: *string*

Cause: internal error with language data

Action: call customer support

DRG-50700: unknown command (args=queue, command)

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50701: error in listener.get_cmd()

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50702: error in drtlsleep()

Cause: this is an internal error in a testing function

Action: Contact Oracle Support

DRG-50703: listener startup error

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50704: Net8 listener is not running or cannot start external procedures

Cause: Oracle Text needs to call external code to complete your request, and could not start the extproc agent process.

Action: Start listener if it is configured for external procedures and is not running. If your listener is running, configure it for starting external procedures and restart it. Consult Oracle documentation for details.

DRG-50800: failed to open cursor

Cause: Too many cursors open for internal queries

Action: implement cursor cleanup routine

DRG-50801: failed to parse cursor

Cause: parse error on an internal query

Action: check versions of code

DRG-50802: failed to bind input

Cause: bind error on an internal query

Action: check versions of code

DRG-50803: failed to define output

Cause: define error on an internal query

Action: check versions of code

DRG-50804: failed to exec cursor

Cause: exec error on an internal query

Action: debug code

DRG-50805: failed to close cursor

Cause: cursor close error on an internal query

Action: check versions of code

DRG-50806: failed to rollback

Cause: transaction rollback error

Action: contact support

DRG-50807: failed to commit

Cause: internal error

Action: contact support

DRG-50850: *string*

Cause: This is an oracle error

Action: See RDBMS documentation

DRG-50851: SQL execute failed

Cause: failed to execute a sql statement

Action: please report this as a bug

DRG-50852: failed to turn SQL trace on

Cause: internal error,

Action: Please contact Oracle support

DRG-50853: fetch error

Cause: fetch error on an internal query

Action: check versions of code

DRG-50855: logoff fail

Cause: Fail to logoff from the database

Action: check versions of code

DRG-50857: oracle error in *string*

Cause: this is an informational message

Action: See error

DRG-50858: OCI error: *string*

Cause: a generic OCI error occurred

Action: Please contact Oracle support

DRG-50859: failed to allocate statement handle

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50860: failed to prepare statement

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50861: failed to obtain type descriptor

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50862: failed to create new Oracle object

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50863: string assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50864: number assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50865: failed to append to collection

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50866: failed to resize string

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50867: failed to free Oracle object

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50868: failed to free statement handle

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50900: text query parser error on line *string*, column *string*

Cause: bad query

Action: fix query

DRG-50901: text query parser syntax error on line *string*, column *string*

Cause: bad query

Action: fix query

DRG-50902: unexpected character *string*

Cause: bad query

Action: fix query

DRG-50903: invalid weight *string*

Cause: invalid weight

Action: fix query

DRG-50904: weight *string* outside valid range 0.1 to 10.0

Cause: invalid weight

Action: fix query

DRG-50905: invalid score threshold *string*

Cause: invalid score threshold

Action: fix query

DRG-50906: score threshold *string* is not an integer

Cause: invalid score threshold

Action: fix query

DRG-50907: score threshold *string* outside valid range 1 to 100

Cause: invalid score threshold

Action: fix query

DRG-50908: invalid maximum number of documents *string*

Cause: invalid maximum number of documents

Action: fix query

DRG-50909: maximum number of documents *string* is not an integer

Cause: invalid maximum number of documents

Action: fix query

DRG-50910: max documents requested *string* outside valid range 1 to 65535

Cause: invalid maximum number of documents

Action: fix query

DRG-50911: invalid first document number *string*

Cause: invalid first document number

Action: fix query

DRG-50912: first document number *string* is not an integer

Cause: invalid first document number

Action: fix query

DRG-50913: first document requested *string* is not a positive number

Cause: invalid first document number

Action: fix query

DRG-50914: invalid last document number *string*

Cause: invalid last document number

Action: fix query

DRG-50915: last document number *string* is not an integer

Cause: invalid last document number

Action: fix query

DRG-50916: last document *string* is less than first document

Cause: invalid last document number

Action: fix query

DRG-50917: escape on at end of text query string

Cause: unbalanced escape characters

Action: turn escape off

DRG-50918: mismatched close escape character

Cause: no matching open escape character for close escape

Action: match open and close escapes

DRG-50919: NEAR operand not a phrase, equivalence or another NEAR expression

Cause: invalid operand type for NEAR operator

Action: correct operand type

DRG-50920: part of phrase not itself a phrase or equivalence

Cause: invalid type of expression which is part of phrase

Action: fix query

DRG-50921: EQUIV operand not a word or another EQUIV expression

Cause: invalid operand type for EQUIV operator

Action: correct operand type

DRG-50922: PL/SQL execution failed for *string*

Cause: PL/SQL function may not exist or is returning bad value

Action: PL/SQL may not exist or is returning bad value

DRG-50923: could not rewrite PL/SQL for execution

Cause: parser internal

Action: call support

DRG-50924: PL/SQL inside PL/SQL not supported

Cause: PL/SQL function call returned another PL/SQL call

Action: remove recursive PL/SQL

DRG-50925: could not parse return value of PL/SQL

Cause: string returned by PL/SQL function could not be parsed

Action: fix PL/SQL function being called

DRG-50926: invalid text query string

Cause: query string empty or made up of invalid characters

Action: fix query

DRG-50927: parser failed on line *string* on column *string*

Cause: bug

Action: call support

DRG-50928: reserved failure on line *string* on column *string*

Cause: bug

Action: call support

DRG-50929: parser internal on line *string* on column *string*

Cause: bug

Action: call support

DRG-50930: parser memory failure on line *string* on column *string*

Cause: memory allocation or freeing error

Action: call support

DRG-50931: parser not opened

Cause: bug

Action: call support

DRG-50932: parser preference initialization failed

Cause: bug

Action: call support

DRG-50933: parser hash insert failure

Cause: bug

Action: call support

DRG-50934: parser hash create failure

Cause: bug

Action: call support

DRG-50935: parser component failure

Cause: bug

Action: look for other errors

DRG-50936: query word *string* is too complex for index

Cause: bug

Action: look for other errors

DRG-50937: query too complex

Cause: query is too complex for our query evaluator

Action: make query smaller

DRG-50938: parser already bound

Cause: internal coding mistake

Action: call support

DRG-50939: parser not set

Cause: bug

Action: call support

DRG-50940: parser not parsed

Cause: bug

Action: call support

DRG-50941: PL/SQL function *string* cannot be executed

Cause: PL/SQL function may not exist or cannot be executed by user

Action: rewrite PL/SQL function specified in query

DRG-50942: errors: *stringstring*

Cause: PL/SQL function encountered error -- this is the error message

Action: See error message

DRG-50943: query token too long on line *string* on column *string*

Cause: A query token is longer than 3995 bytes

Action: Rewrite query

DRG-50944: NEAR operator not supported for theme index

Cause: NEAR operator used in theme index query

Action: Rewrite query without NEAR operator

DRG-50945: Illegal phrase in query for theme index

Cause: Phrase incorrectly defined in theme index query

Action: Rewrite query

DRG-50946: Invalid unary operator for theme index

Cause: Stemming, fuzzy match and soundex not allowed for theme index

Action: Rewrite query

DRG-50947: ABOUT clause not allowed without a theme index

Cause: The query contains an ABOUT clause, but there is no theme index to support it

Action: Rewrite query

DRG-50948: ABOUT clause required in the absence of a text index

Cause: There is no text index, but the query does not contain any about clause. With only a theme index present, each query term must belong to an ABOUT clause

Action: Rewrite query

DRG-50949: too many SQEs

Cause: Too many SQEs to expand

Action: Rewrite query or SQE

DRG-50950: circular SQE found

Cause: Circular SQE reference is found.

Action: Rewrite query or SQE

DRG-50951: Unable to resolve element name for attribute *string*

Cause: XPATH expression such as *A*/@B* or *A//@B* is not supported.

Action: Rewrite query

DRG-50952: Section is not PATH section group

Cause: XPATH expression has section which is not created using PATH section group.

Action: Rewrite query not to use XPATH expression or create the index with PATH section group

DRG-50953: Unable to determine section name

Cause: XPATH expression should not end with *.* or ***

Action: Rewrite the path expression not to use *.* or *** at the end

DRG-50954: Theme index is required for CTXCAT about queries

Cause: There is no theme index, but the catsearch query contains about clause. You must create a theme index before using ABOUT query against CTXCAT index

Action: create theme index

DRG-50955: Missing comma in transform clause *string*

Cause: A transform clause in a query template is missing a comma

Action: Add the comma in the appropriate position

DRG-50956: Theme index is required for THEMES transform queries

Cause: There is no theme index, but the operator TRANSFORM is used with THEMES as its parameter. You must create a theme index before using THEMES in TRANSFORM operator.

Action: create theme index

DRG-50957: Missing *textquery* element in query template *string*

Cause: The *textquery* tag is missing or misspelled in a query template

Action: Correct the missing tag

DRG-50958: Missing quote in transform clause *string*

Cause: A transform clause in a query template is missing a quote

Action: Add the quote in the appropriate position

DRG-50959: Query length exceeds *string* bytes

Cause: the query length exceeds the maximum allowed length

Action: reduce the length of the query

DRG-50960: Mild not operand not a term or phrase

Cause: invalid operand type for MNOT operator

Action: correct operand type

DRG-50961: Missing *string* for *string* clause

Cause: the specified tag is missing from the specified complex query clause

Action: Add missing clause

DRG-50962: Query operators are not allowed in transform input string

Cause: You specified an operator (such as wildcard) in the input string for the transform operator

Action: Remove or escape the query operator

DRG-51002: unexpected component failure

Cause: Internal error

Action: Contact Oracle support

DRG-51017: unable to open storage buffer for fuzzy match candidates

Cause: Internal error, probably insufficient memory

Action: Contact Oracle support

DRG-51019: unable to open or illegal format for fuzzy match data file: *string*

Cause: Unable to open OS file containing fuzzy matching information or the file was not of the correct format

Action: Consult the documentation for correct location of the fuzzy match information files and check for file damage

DRG-51020: out of memory in fuzzy matcher

Cause: Cannot allocate more memory

Action: Contact your system administrator

DRG-51021: undefined error in fuzzy matcher

Cause: Internal error

Action: Contact Oracle support

DRG-51028: unexpected error in fuzzy match expansion: *string*

Cause: Internal error

Action: Contact Oracle support

DRG-51029: unexpected error in stemmer expansion: *string*

Cause: Internal error

Action: Contact Oracle support

DRG-51030: wildcard query expansion resulted in too many terms

Cause: User error

Action: Make wildcard query narrower

DRG-51031: wordlist language *string* data error: *string*

Cause: internal error with language data

Action: call customer support

DRG-51100: invalid program argument index

Cause: This is an internal error

Action: Contact Oracle Support to report a bug

DRG-51101: argument processing callback failed

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-51200: open keymap failed for index id = *string*

Cause: Failed to initialize the keymap for the column id specified.

Action: Check index ID. Contact support if caused by internal errors

DRG-51201: failed to perform DDL operation: database object *string*

Cause: Textkey mapping service failed on DDL operation

Action: Check Oracle error and take corrective action

DRG-51202: invalid key mapping operation mode : *string*

Cause: invalid keymap mode value found. This is an internal error

Action: Contact Oracle support

DRG-51203: found doc ids without mappings during get maps

Cause: found doc ids without mappings during get mapping by doc ids, the index data and keymap service are out of synch.

Action: Contact Oracle support

DRG-51300: error getting dml Queue lock

Cause: a server must have hung while processing the dml Queue, leaving it locked

Action: Contact Oracle support

DRG-51301: error releasing dml Queue lock

Cause: internal database error, or perhaps someone dropped the lock while we were using it

Action: Contact Oracle support

DRG-51311: DML lock handle previously allocated

Cause: internal error

Action: Contact Oracle support

DRG-51312: DML lock internal error *string*

Cause: internal error

Action: Contact Oracle support

DRG-51313: timeout while waiting for lock

Cause: most likely an internal error

Action: Contact Oracle support

DRG-51314: index is not empty

Cause: you attempted to invoke populate_pending against an index which already has or has had indexed documents.

Action: populate pending manually, or recreate the index NOPOPULATE

DRG-51315: AGGMERGE lock internal error *string*

Cause: internal error

Action: Contact Oracle support

DRG-51400: incomplete SEARCH_ON VALUE or SEARCH_ON TEXT_VALUE clause

Cause: An attempt was made to create or alter an XML Search Index with a SEARCH_ON VALUE or SEARCH_ON TEXT_VALUE clause that did not list a data type specification.

Action: Specify the data type specification for the SEARCH_ON VALUE or SEARCH_ON TEXT_VALUE clause as part of the parameters to the CREATE SEARCH INDEX or ALTER INDEX statements. The data type specification must include at least one of NUMBER, BINARY_DOUBLE, TIMESTAMP, or VARCHAR2.

DRG-51401: duplicate SEARCH_ON specification for *string* component

Cause: The specified parameter string for an XML or JSON Search Index had a duplicate SEARCH_ON clause for one the following: TEXT, NUMBER, BINARY_DOUBLE, TIMESTAMP or VARCHAR2.

Action: Specify the duplicate component only once.

DRG-51402: cannot use SEARCH_ON feature with this index

Cause: An attempt was made to specify a SEARCH_ON clause as part of the index parameter string for an index that was not an XML Search Index or a JSON Search Index.

Action: Remove the SEARCH_ON clause from the parameter string.

DRG-51403: cannot index JSON type column *string* with this indextype

Cause: An attempt was made to create a CONTEXT or SEARCH INDEX with no FOR JSON clause on a JavaScript Object Notation (JSON) type column.

Action: Use the FOR JSON clause to index JSON type columns.

DRG-51404: invalid token '*string*' found for ALTER of *string* Search Index

Cause: An invalid token was found when parsing a parameter string that modified options specified to JSON or XML Search Index.

Action: Verify the token follows the syntax for the ALTER INDEX parameter string. Remove any options that do not relate to JSON or XML Search Index from the parameter string and retry the operation. Issue a separate ALTER INDEX statement to modify the removed options using the REPLACE command in the parameter string.

DRG-51405: cannot use PATHLIST feature with this index

Cause: An attempt was made to specify a PATHLIST clause as part of the index parameter string for an index that was not an XML Search Index or a JSON Search Index.

Action: Remove the PATHLIST clause from the parameter string.

DRG-51406: cannot use PATHLIST feature with SEARCH_ON INCLUDE feature

Cause: An attempt was made to specify a PATHLIST clause as part of the index parameter string for an index that has SEARCH_ON INCLUDE clause specified.

Action: Remove the PATHLIST clause from the parameter string.

DRG-51407: no data type specified for REMOVE SEARCH_ON command

Cause: An attempt was made to remove a SEARCH_ON data type component without having specified any data types to remove.

Action: Add a data type specification to the SEARCH_ON clause and retry the operation.

DRG-51408: The REMOVE SEARCH_ON command cannot remove the *string* component.

Cause: An attempt was made to remove a SEARCH_ON component whose removal was unsupported.

Action: Remove the unsupported component from the SEARCH_ON clause and retry the operation.

DRG-51409: cannot remove unused SEARCH_ON component: *string*

Cause: An attempt was made to remove a SEARCH_ON component which was not in use.

Action: Only specify enabled components as part of the REMOVE SEARCH_ON command and then retry the operation.

DRG-51410: cannot remove all SEARCH_ON components

Cause: An attempt was made to remove all enabled SEARCH_ON components from the index.

Action: Specify only a proper subset of enabled components as part of the REMOVE SEARCH_ON command.

DRG-51411: must create XML Search Index on a Transportable Binary XML column

Cause: An attempt was made to create an XML Search Index on a column of type XMLTYPE which is not using Transportable Binary XML storage."

Action: Drop the index and create the index on an XMLTYPE column using Transportable Binary XML storage."

DRG-51412: cannot enable DATAGUIDE feature for index using path subsetting

Cause: An attempt was made to create a JSON Search Index where the DATAGUIDE feature was enabled and either a PATHLIST was specified or there was a path subsetting specification.

Action: Create the index without the DATAGUIDE feature or without the path subsetting specification."

DRG-51801: failed to seek in file: *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-51802: failed to read from file: *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-51803: failed to open file: *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-51804: failed to write to file: *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-52100: *string* returned internal error code *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-52101: an invalid session handle was passed to Oracle Text

Cause: this is an internal error

Action: Contact Oracle support

DRG-52102: an invalid transaction handle was passed to Oracle Text

Cause: this is an internal error

Action: Contact Oracle support

DRG-52103: the Oracle Text environment could not reset

Cause: this is an internal error

Action: Contact Oracle support

DRG-52104: the Oracle Text environment could not initialize

Cause: this is an internal error

Action: Contact Oracle support

DRG-52105: no delete function found

Cause: this is an internal error

Action: Contact Oracle support

DRG-52106: Oracle Text service results could not be committed

Cause: this is an internal error

Action: Contact Oracle support

DRG-52107: ctxkbt internal error

Cause: this is an internal error

Action: Contact Oracle support

DRG-52108: failed to delete knowledge base user extension

Cause: this is an internal error

Action: check file permissions or contact Oracle support

DRG-52109: error in reading thesaurus

Cause: this is an internal error

Action: Contact Oracle support

DRG-52110: error in writing extended knowledge base

Cause: this is an internal error

Action: Contact Oracle support

DRG-52111: error in knowledge base cache

Cause: this is an internal error

Action: Contact Oracle support

DRG-52112: improper Chinese string *string* of length *number*

Cause: this is an internal error

Action: n/a

DRG-52113: improper Japanese string *string* of length *number*

Cause: this is an internal error

Action: n/a

DRG-52200: invalid state during export

Cause: this is an internal error

Action: Contact Oracle support

DRG-52201: incompatible Oracle Text versions

Cause: attempting to import an incompatible version of Oracle Text data

Action: make sure source and target Oracle Text versions are compatible

DRG-52202: invalid class name: *string*

Cause: the specified class name is not valid

Action: Contact Oracle Support

DRG-52203: invalid object name: *string*

Cause: the specified object name is not valid

Action: Contact Oracle Support

DRG-52204: error while registering index

Cause: this is an internal error

Action: Contact Oracle support

DRG-52205: class *string* and object *string* already exists for this index

Cause: duplicate entry of class and object

Action: Contact Oracle support

DRG-52206: error while registering index object

Cause: this is an internal error

Action: Contact Oracle support

DRG-52207: the specified attribute does not exist: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52208: the specified attribute already exist: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52210: error while registering value for attribute: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52211: error while registering partition

Cause: this is an internal error

Action: Contact Oracle support

DRG-52212: error while registering cdi columns

Cause: this is an internal error

Action: Contact Oracle support

DRG-52213: Insufficient privileges

Cause: this is an internal error

Action: Contact Oracle support

DRG-52300: Index *string.string* does not exist

Cause: The given index does not exist for the current user

Action: Give a valid index name

DRG-52301: Query Stats is already enabled for this index

Cause: attempting to enable the query stats for an index for which it is already enabled

Action: None. No need to enable again

DRG-52302: Query Stats is not enabled for this index

Cause: attempting to disable the query stats for an index for which it is not enabled

Action: None. No need to disable if it is not already enabled

DRG-52303: Option String is full

Cause: Index option string is full

Action: None

DRG-52304: This operation requires Query Stats to be enabled for the index

Cause: attempting to do an operation which required query stats option for the index to be enabled

Action: Enable query stats option for the index using `ctx_output.enable_query_stats()`

DRG-52305: Unknown value, *string*, passed in to *stat_type*

Cause: An invalid value is passed in to the parameter *stat_type*

Action: Give a valid value

DRG-52400: Dictionary *string* already exists

Cause: The specified dictionary already exists

Action: Must drop the dictionary if you want to re-create it.

DRG-52401: Invalid language *string* specified

Cause: Language specified is invalid

Action: Must specify a valid language

DRG-52402: Dictionary name is invalid

Cause: The specified dictionary name is invalid

Action: Must provide valid dictionary name

DRG-52403: Dictionary *string* does not exist

Cause: The specified dictionary does not exist

Action: Retry with the correct dictionary name

DRG-52404: *policy_languages* requires auto lexer

Cause: *policy_languages* requires the auto lexer to retrieve language information. The auto lexer was not specified, however.

Action: Specify auto lexer for the policy.

EVM-00001 to EVM-00901

EVM-00001: Cannot write raw events to a terminal

Cause: Attempted to redirect binary events to a terminal.

Action: Use evmshow to format events for display.

EVM-00002: Use evmshow to format events for display

Cause: Attempted to redirect binary events to a terminal.

Action: Use evmshow instead.

EVM-00003: Failed to open file "*string*": *string*

Cause: Filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00004: Failed to open channel config file "*string*"

Cause: Configuration file name, the path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00006: Failed to create temporary file

Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00007: Failed to write to temporary file

Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00008: Failed to read from temporary file

Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00009: Failed to create EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00010: Failed to read from EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00011: Failed to write to EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00012: Failed to create EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00013: Failed to read from EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00014: Failed to write to EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00015: Failed to create EVM service connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00016: Failed to read from EVM service connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00017: Failed to start EVM service "*string*"

Cause: EVM daemon failed to start.

Action: Check log for the EVM daemon.

EVM-00018: Failed to write to output stream

Cause: Failed to write to standard output.

Action: Contact Oracle Customer Support.

EVM-00019: Failed to read event from input stream

Cause: Bad input file for evmshow/evmsort EOF missing.

Action: Check the input file.

EVM-00020: Failed to create event subscription

Cause: Bad network connection between subscriber and EVM daemon.

Action: Check the network connection and filter string.

EVM-00021: Failed to create filter

Cause: Used a null filter string or memory allocation failed.

Action: Use a non null filter string.

EVM-00022: Invalid filter string

Cause: Used a null or invalid filter string.

Action: Contact Oracle Customer Support.

EVM-00023: Filter test operation failed

Cause: Used a null or invalid filter string.

Action: Use a non null filter string. Otherwise contact Oracle Customer Support.

EVM-00024: Lost connection to EVM daemon

Cause: Evmlogger lost connection to evmdaemon.

Action: Check status of evmlogger, evmd daemons and logs.

EVM-00025: Authorization database error

Cause: Not authorized to post/listen for certain events.

Action: Check evm.auth file to ensure the current user is authorized to post/listen for specific events.

EVM-00026: Failed to post event "*string*"

Cause: Evmpost failed to post an event.

Action: Check the status and log for EVM daemon.

EVM-00027: Memory allocation failure

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00029: Event contains invalid values

Cause: Invalid syntax for an event was used.

Action: Use a valid syntax for an event.

EVM-00030: Event name is missing

Cause: Name of the event was missing.

Action: Use a valid syntax for an event.

EVM-00031: Event name has too few components

Cause: Invalid syntax for an event was used.

Action: Use a valid syntax for an event.

EVM-00032: Failed to write event

Cause: Failed to write event to output file.

Action: Check the permissions of the file. Otherwise contact Oracle Customer Support.

EVM-00033: Error in input file "*string*", line *number*

Cause: Failed to parse input file.

Action: Check input file and the line for possible errors. Otherwise contact Oracle Customer Support.

EVM-00034: Error: *string*

Cause: Error Occured.

Action: Look at the error message for details.

EVM-00035: EVM service "*string*" terminated with exit code *number*

Cause: EVM daemon died.

Action: Check the EVM daemon log.

EVM-00036: Host "*string*" is unknown

Cause: Invalid hostname discovered while trying to create a connection to the EVM daemon.

Action: Check the hostname, on which EVM daemon is running. Otherwise contact Oracle Customer Support.

EVM-00037: Failed to connect to EVM daemon on "*string*"

Cause: EVM daemon is dead or is not responding.

Action: Check the status of EVM daemon and logs.

EVM-00038: Failed to create an EVM event

Cause: Failed to create an EVM event.

Action: Check the EVM daemon log.

EVM-00039: Invalid port number in host name "*string*"

Cause: Used an invalid port number.

Action: Use a valid or a different port number.

EVM-00040: Error occurred while reading from "*string*"

Cause: Error occurred when evmshow was reading from an input file.

Action: Check the input file.

EVM-00042: Use "*string* -A" to format events, or pipe output to evmshow

Cause: Invalid use of evmshow command.

Action: Use evmshow command as instructed.

EVM-00043: Attempting to reconnect to the EVM daemon...

Cause: Evmwatch trying to reconnect to the evm daemon.

Action: Not an error message.

EVM-00044: Attempting to reconnect to the EVM daemon on "*string*"...

Cause: Evmwatch trying to reconnect to the evm daemon on this host.

Action: Not an error message.

EVM-00045: EVM connection re-established

Cause: Evmwatch was able to reconnect to the evm daemon.

Action: Not an error message.

EVM-00104: End of file reached unexpectedly

Cause: End of event template file reached unexpectedly.

Action: Check the event template file in evm/admin.

EVM-00105: Missing end-of-group character

Cause: end-of-group character missing in event template file.

Action: Check the event template file in evm/admin.

EVM-00106: Missing end-of-string character

Cause: end-of-string character missing in event template file.

Action: Check the event template file in evm/admin.

EVM-00107: Value "*string*" is not valid

Cause: Invalid value found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00108: Keyword "*string*" is not valid

Cause: Invalid keyword found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00201: Failed to allocate space for application object

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00202: Failed to allocate space for local lock pathname

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00301: Failed to open logger config file "*string*"

Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00302: Configuration error - using default configuration

Cause: Configuration file had invalid configuration details

Action: Check the configuration file.

EVM-00303: Keyword "*string*" is invalid in this position

Cause: Valid Keyword was used in an invalid position in configuration file.

Action: Use the correct syntax.

EVM-00304: Configuration error in file *string*, line *number*

Cause: Configuration error in configuration file.

Action: Check the configuration file.

EVM-00305: Memory allocation failure for "*string*"

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00306: Failed to create filter for "*string*"

Cause: Failed to create a filter for events for evmlgger.

Action: Check the availability of memory.

EVM-00307: Filter string invalid for "*string*"

Cause: Used a null filter string or memory allocation failed.

Action: Use a non null filter string.

EVM-00308: Failed to open eventlog "*string*": *string*

Cause: Eventlog file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00309: Failed to write to eventlog "*string*"

Cause: Eventlog had one of the following problems; size or permissions were not valid.

Action: Check the permissions and the size of the eventlog file. Otherwise contact Oracle Customer Support.

EVM-00310: Invalid suppression filter for eventlog "*string*"

Cause: Invalid filter was used.

Action: Use a non null filter. Otherwise contact Oracle Customer Support.

EVM-00311: Invalid entry in eventlog "*string*" (*number events OK*)

Cause: Evmlgger found an invalid entry in eventlog.

Action: Check the eventlog file.

EVM-00312: Eventlog "*string*" disabled

Cause: Events could not be written to the eventlog file.

Action: Check the permissions,max size of the logfile.

EVM-00313: Eventlog "*string*" re-enabled

Cause: Events logging is reenabled.

Action: Not an error message.

EVM-00314: Forwarder "*string*" disabled

Cause: Forwarding is disabled by the evmlgger.

Action: Not an error message.

EVM-00315: Forwarder "*string*" re-enabled

Cause: Forwarding is disabled by the evmlogger.

Action: Not an error message.

EVM-00316: Suppression disabled for "*string*"

Cause: Error message filtering suppression disabled for this string.

Action: Not an error message.

EVM-00317: Suppression re-enabled for "*string*"

Cause: Error message filtering suppression reenabled for this string.

Action: Not an error message.

EVM-00318: Failed to open config info file "*string*"

Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00319: Keyword "*string*" is not allowed in a secondary config file

Cause: Invalid Keyword was used.

Action: Use a valid Keyword.

EVM-00323: Config file "*string*" has insecure write permission

Cause: The configuration file had write permissions for the group 'other'.

Action: Change the write permissions for the configuration file

EVM-00324: Config file "*string*" has incorrect ownership

Cause: Configuration file should be owned by root or bin.

Action: Change the owner of configuration file to root or bin.

EVM-00325: Config file "*string*" is not a regular file

Cause: Configuration file is not a regular file.

Action: Check the configuration file.

EVM-00401: Failed to open binary event library file

Cause: Binary event file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00601: Data read from the input stream is not a valid EVM event

Cause: evmshow tried to read an invalid EVM event.

Action: Check the logs for the evm daemon.

EVM-00701: Check that the event is registered and you are authorized to post it

Cause: Not authorized to post for certain events.

Action: Check evm.auth file to ensure the current user is authorized to post the specific event.

EVM-00702: Priority must be an integer in the range 0-*number*

Cause: Used an integer out of the range for priority.

Action: Use a valid integer.

EVM-00801: Missed *number* subscribed-to event(s)

Cause: Missed some events during the connection setup phase.

Action: Not an error message.

EVM-00802: Failed to reconnect within *number* seconds - terminating

Cause: Failed to establish a connection with EVM daemon.

Action: Check the logs for EVM daemon.

EVM-00901: Invalid sort specification "*string*"

Cause: Invalid sort specification used for evmsort.

Action: Use a valid sort specification. Look at documentation for evmsort using evmsort -h.

EXP-00000 to EXP-00114

EXP-00000: Export terminated unsuccessfully

Cause: Export encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

EXP-00001: data field truncation - column length=*number*, buffer size=*number* actual size=*number*

Cause: Export could not fit a column in the data buffer.

Action: Record the given size parameters and the accompanying messages and report this as an Export internal error to customer support. (Part of the table has been exported. Export will continue with the next table.)

EXP-00002: error in writing to export file

Cause: Export could not write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

EXP-00003: no storage definition found for segment(*number*, *number*)

Cause: Export could not find the storage definitions for a cluster, index, or table.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

EXP-00005: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

EXP-00006: internal inconsistency error

Cause: Export's data structure was corrupted.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00007: dictionary shows no columns for *string.string*

Cause: Export failed to gather column information from the data dictionary. The table may have been dropped.

Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.

EXP-00008: ORACLE error *number* encountered

Cause: Export encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00009: no privilege to export *string*'s table *string*

Cause: An attempt was made to export another user's table. Only a database administrator can export another user's tables.

Action: Ask your database administrator to do the export.

EXP-00010: *string* is not a valid username

Cause: An invalid username was specified.

Action: Shut down the utility, then restart and retry with a valid username.

EXP-00011: *string.string* does not exist

Cause: Export could not find the specified table.

Action: Retry with the correct table name.

EXP-00012: *string* is not a valid export mode

Cause: An invalid export mode was specified.

Action: Retry with a valid export mode.

EXP-00013: respond with either 'Y', 'N', RETURN or '.' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

EXP-00014: error on row *number* of table *string*\n

Cause: Export encountered an Oracle error while fetching rows.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00015: error on row *number* of table *string*, column *string*, datatype *number*

Cause: Export encountered an error while fetching or writing the column. An accompanying message gives more information.

Action: Correct the error and try again.

EXP-00016: ORACLE error encountered while reading default auditing options

Cause: Export encountered an Oracle error while reading the default auditing options (those for updates, deletes, and so on).

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00017: feature "*string*" is needed, but not present in database

Cause: The command entered requires the specified feature. Either that feature is not installed, or the row describing the feature is missing from table V\$OPTION

Action: Reinstall Oracle with the feature specified in the message.

EXP-00018: datatype (*number*) for column *string*, table *string.string* is not supported

Cause: Export does not support the referenced datatype.

Action: Retry with an acceptable datatype (CHAR, NUMBER, DATE, LONG, or RAW).

EXP-00019: failed to process parameters, type 'EXP HELP=Y' for help

Cause: Invalid command-line parameters were specified.

Action: Check the online help screen for the set of valid parameters, then retry.

EXP-00020: failed to allocate memory of size *number*

Cause: Export failed to allocate the necessary memory.

Action: Decrease the export buffer size so that less memory is required, or increase the runtime memory size for Export.

EXP-00021: can only perform incremental export in Full Database mode

Cause: USER or TABLE mode was specified when doing an incremental export.

Action: Specify FULL database mode (FULL=Y) and retry.

EXP-00022: must be SYS or SYSTEM to do incremental export

Cause: The privileges needed to do an incremental export do not exist. Only a data base administrator can do incremental exports.

Action: Ask the database administrator to do the incremental export.

EXP-00023: must be a DBA to do Full Database or Tablespace export

Cause: The privileges needed to do a FULL database export do not exist. Only a database administrator can do a FULL database export.

Action: Ask the database administrator to do the FULL database export.

EXP-00024: Export views not installed, please notify your DBA

Cause: The necessary Export views were not installed.

Action: Ask the database administrator to install the required Export views.

EXP-00025: dictionary shows no column for constraint *string.number*

Cause: Export failed to gather column information about the referenced constraint from the data dictionary. The constraint may have been altered.

Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.

EXP-00026: conflicting modes specified

Cause: Conflicting export modes were specified.

Action: Specify only one parameter and retry.

EXP-00027: failed to calculate ORACLE block size

Cause: Export failed to calculate the Oracle block size.

Action: Report this as an Export internal error to customer support.

EXP-00028: failed to open *string* for write

Cause: Export failed to open the export file for writing. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

EXP-00029: Incremental export mode and consistent mode are not compatible

Cause: Both consistent and incremental exports were specified.

Action: None. Consistent mode is turned off.

EXP-00030: Unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

EXP-00031: Arraysize not in valid range. Using arraysize=*number*

Cause: The arraysize value specified is not in the valid range.

Action: None

EXP-00032: Non-DBAs may not export other users

Cause: Only database administrators can export to other users. A non- database administrator attempted to specify owner=*user* where exporter is not the user.

Action: Request that this operation be performed by the database administrator.

EXP-00033: Could not find environment character set

Cause: The environment character set is missing or incorrectly specified.

Action: Ensure that the environment character set is correctly specified and is present.

EXP-00034: error on rowid: file# *number* block# *number* slot# *number*

Cause: Identifies the rowid on which an error occurred.

Action: This is an information message. No action is required.

EXP-00035: QUERY parameter valid only for table mode exports

Cause: You specified the QUERY parameter in an export command, but you are not performing a table mode export. The QUERY parameter cannot be used for a user mode export, a full export, nor a point in time recovery export.

Action: If you want to select a subset of rows for a table, you must export the table independently with a table mode export. Issue a table mode export command that specifies the table name and the query you want to execute during export.

EXP-00036: Object *number* non-existent in dictionary

Cause: The specified object could not be found in the dictionary. The object might have been dropped during the export

Action: The object no longer exists; no action is needed.

EXP-00037: Export views not compatible with database version

Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

EXP-00038: Bad Hash cluster id in clu\$

Cause: The function id in clu\$ is not a legal number. Clu\$ has become corrupted.

Action: Contact Worldwide Support

EXP-00039: export file *string* must be on a disk

Cause: On some platforms, export can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the export file. Remember that all export files can be either on disk or all files can be on tape, but not mixed both tape and disk.

EXP-00040: Dump file and log file must be different

Cause: The dump file and log file cannot be the same file.

Action: Specify different file names for the dump file and the log file, then retry the operation.

EXP-00041: INCTYPE parameter is obsolete

Cause: Export encountered the INCTYPE parameter when parsing Export options. Incremental Exports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Export will attempt to continue.

EXP-00042: Missing NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET in props\$

Cause: A value for NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET was not entered in the props\$ table"

Action: internal error.

EXP-00043: Invalid data dictionary information in the row where column "*string*" is "*string*" in table *string*

Cause: The export utility retrieved invalid data from the data dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00044: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

EXP-00045: Cannot export SYSTEM Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSTEM tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

EXP-00046: Tablespace named *string* does not exist

Cause: The specified tablespace does not exist in dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00047: Missing tablespace name(s)

Cause: Tablespace name(s) were not supplied

Action: Provide tablespace name(s)

EXP-00048: Cannot export SYSAUX Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSAUX tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

EXP-00049: *string* option is not compatible with Point-in-time Recovery or Transportable Tablespace Export

Cause: An option was specified incompatible with Point-in-time Recovery or Transportable Tablespace Export.

Action: Retry the Export without the displayed option.

EXP-00050: Cannot perform Partition Export "*string*" on non-partitioned table "*string*"

Cause: The table specified in this Partition Export is not a partitioned table.

Action: Use Table mode, or specify a non-partitioned table.

EXP-00051: "*string*" - given partition or subpartition name is not part of "*string*" table

Cause: The specified partition or subpartition name is not in the specified table.

Action: Check if the correct table, partition or subpartition name was specified.

EXP-00052: error on row *number* of partition *string*

Cause: Export encountered the referenced Oracle error while fetching rows.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00053: unable to execute QUERY on table *string* because the table has inner nested tables

Cause: You specified the QUERY parameter on a table that has one or more inner nested tables. The QUERY parameter cannot be specified on tables that have inner nested tables.

Action: Export the entire table by omitting the QUERY parameter.

EXP-00054: error on row *number* of subpartition *string*

Cause: Export encountered the referenced Oracle error while fetching rows.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00055: *string.string* is marked not exportable

Cause: An object was marked as non-exportable in the NOEXP\$ table.

Action: Consult your database administrator.

EXP-00057: Failure to initialize parameter manager

Cause: The parameter manager failed in initialization.

Action: Record the messages that follow and report this to Oracle Worldwide Support as an Export internal bug.

EXP-00058: Password Verify Function for *string* profile does not exist

Cause: Cannot find the function for the profile.

Action: Check if the profile was created properly.

EXP-00059: error converting an object type's identifier to characters

Cause: An invalid length of an object type identifier prevented its conversion.

Action: Contact Oracle Worldwide Support

EXP-00060: an object type had multiple TYPE BODYs

Cause: More than one TYPE BODY was found for an object type.

Action: Try dropping the TYPE BODY, if that is not successful, contact Oracle Worldwide Support

EXP-00061: unable to find the outer table name of a nested table

Cause: While exporting a bitmap index or posttable action on an inner nested table, the name of the outer table could not be located, using the NTAB\$ table.

Action: Verify the table is properly defined.

EXP-00062: invalid source statements for an object type

Cause: TYPE was not found in the statements in SOURCE\$ for an Object Type

Action: Contact Oracle Worldwide Support.

EXP-00063: error in changing language handle

Cause: Unable to change language handle.

Action: Contact Oracle Worldwide Support.

EXP-00064: *string* is an inner nested table and cannot be exported.

Cause: An attempt was made to export an inner nested table without its parent table.

Action: Export the parent of the inner nested table.

EXP-00065: Error writing lob to the dump file.

Cause: The current LOB could not be written to the dump file.

Action: Identify the cause of the write failure and fix it.

EXP-00066: Object table *string* is missing its object identifier index

Cause: All object tables must have an object identifier index, but the specified table was missing an index on its object identifier column.

Action: Recreate the type table and retry the operation.

EXP-00068: tablespace *string* is offline

Cause: Export failed to export tablespace (tablespace being offline).

Action: Make tablespace online and re export.

EXP-00070: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

EXP-00071: QUERY parameter not compatible with Direct Path export

Cause: You specified a value for the QUERY parameter for a direct path export. The QUERY parameter cannot be used with a direct path export.

Action: Re-issue the export command with DIRECT=N or omit the DIRECT parameter from the command line.

EXP-00072: error closing export file *string*

Cause: An error occurred while trying to close the export file.

Action: Contact Oracle Worldwide Support.

EXP-00073: dump file size too small

Cause: You specified either the FILESIZE parameter or the VOLSIZE parameter (if your platform supports it), and the value of the parameter is too small to hold the header information for the export file, plus any data.

Action: Increase the value of the FILESIZE or VOLSIZE parameter.

EXP-00074: rounding VOLSIZE down, new value is *string*

Cause: The VOLSIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for VOLSIZE does not meet this requirement. The value of VOLSIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the VOLSIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the VOLSIZE value reported by this message.

EXP-00075: rounding FILESIZE down, new value is *string*

Cause: The FILESIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for FILESIZE does not meet this requirement. The value of FILESIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the FILESIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the FILESIZE value reported by this message.

EXP-00076: multiple devices specified for tape output

Cause: You specified multiple file names when doing an export to a tape device. EXPORT uses the same device for writing all files, of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the EXPORT command, but specify only one tape device in the FILE parameter.

EXP-00077: multiple output files specified for unbounded export file

Cause: You specified multiple file names when doing an export and you also specified a value of 0 for the FILESIZE parameter. Note that 0 is the value used if FILESIZE is not specified on the command line. Since a value of 0 for FILESIZE means that only one file will be written and there is no size limit for that file, the other files you specified in the FILE parameter can never be used.

Action: If you intended to write multiple files, respecify the command but use the FILESIZE to specify the maximum number of bytes that EXPORT should write to each file. If you intended to write only one file with no limits on it's size, reissue the EXPORT command but specify only one file name for the FILE parameter.

EXP-00078: Error exporting metadata for index *string*. Index creation will be skipped

Cause: Domain indexes export private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. Export does this by calling the ODCIIndexGetMetadata method on the implementation type associated with the index. A problem occurred inside this routine. Because the metadata is considered an integral part of the index, the CREATE INDEX statement was not written to the dump file.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

EXP-00079: Data in table "*string*" is protected. Conventional path may only be exporting partial table.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to export a table that has access control. Since table owner is also subjected to access control, the owner may not be able to export all rows in the table, but only the ones he can see. Also, to preserve integrity of the table, user exporting the table should have enough privilege to recreate the table with the security policies at import time. Therefore, it is strongly recommended the database administrator should be handling exporting of this table. Granting the table owner execute privilege would also satisfy this security check, though it might have other security implications. If the table does not have objects, can use direct mode.

Action: Ask the database administrator to export/import this table/view.

EXP-00080: Data in table "*string*" is protected. Using conventional mode.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to direct export a table that has access control enabled. Using conventional export mode instead. Note that because of access control, only a partial table may be exported.

Action: Ask the database administrator to export/import this table/view.

EXP-00081: Exporting access control for table/view "*string*" as non-DBA.

Cause: A non-DBA user tries to export table/view and the associated fine grain access control policies. The user may not have enough privilege to recreate the access control policies when importing the table/view. And such an event may cause inconsistency in the security model of the table/view.

Action: Ask the database administrator to export/import this table/view.

EXP-00082: Invalid function name passed to procedural object support: *string*

Cause: Internal inconsistency error: The listed function is not a method on export's procedural object interface specification.

Action: Contact Oracle Worldwide Support

EXP-00083: The previous problem occurred when calling *string.string.string*

Cause: The listed package provides export/import support for procedural actions. The previously listed error occurred while calling the specified function.

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00084: Unexpected DbmsJava error *number* at step *number*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00085: The previous problem occurred when calling *string.string.string* for object *number*

Cause: The listed package provides export/import support for procedural objects, i.e., those whose DDL is supplied by stored procedures. The previously listed error occurred while calling the specified function.

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00086: Primary key REFs in table "*string*" may not be valid on import

Cause: The specified table contains primary key REFs which may not be valid in the import database.

Action: Do not use Export/Import to move Primary key REFs between databases having differing character sets.

EXP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

EXP-00089: invalid FILE_FORMAT specification

Cause: The FILE_FORMAT specification did not contain an instance of "%s". This wildcard string must be present.

Action: Correct the error and reenter the EXPORT command.

EXP-00090: cannot pin type "*string*". "*string*"

Cause: Export was unable to pin the specified type in the object cache. This is typically caused because a type could not be made valid (for example because of authorization violations in accessing subtypes).

Action: Fix the problem with the offending type until the type can be successfully compiled.

EXP-00091: Exporting questionable statistics.

Cause: Export was able export statistics, but the statistics may not be usable. The statistics are questionable because one or more of the following happened during export: a row error occurred, client character set or NCHARSET does not match with the server, a query clause was specified on export, only certain partitions or subpartitions were exported, or a fatal error occurred while processing a table.

Action: To export non-questionable statistics, change the client character set or NCHARSET to match the server, export with no query clause, export complete tables. If desired, import parameters can be supplied so that only non-questionable statistics will be imported, and all questionable statistics will be recalculated.

EXP-00092: Unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to ','.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00093: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00094: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00095: Flashback_time and Flashback_scn are not compatible

Cause: Both flashback_time and flashback_scn parameters were specified.

Action: Reissue command with only one flashback parameter.

EXP-00097: Object type "*string*".*string*" is not in a valid state, type will not be exported

Cause: The object type's status is invalid which may be caused by a dependant type's modification (or removal) without cascading the change.

Action: The type must be recompiled using ALTER TYPE COMPILE.

EXP-00098: Data in table has not been upgraded, table will not be exported

Cause: Export is attempting to process a table containing references to a type which has evolved. In order for Export to process the table successfully, all data within each table must be upgraded to the latest revision of each referenced type.

Action: The table must be updated using ALTER TABLE UPGRADE DATA.

EXP-00099: Table "*string*".*string*" is not in a valid state, table will not be exported

Cause: A table or one of its dependant types has modified without cascading the change. This left the table in an INVALID state.

Action: The table must be updated using ALTER TABLE UPDATE.

EXP-00100: error converting an object type's hashcode to characters

Cause: An invalid length of an object type identifier prevented its conversion.

Action: Contact Oracle Worldwide Support

EXP-00101: Version 1 extensible index "*string*".*string*" can not be included in Transportable Tablespace Export

Cause: Transportable Tablespace extensible indexes must be at least version 2.

Action: Upgrade extensible index implementation to version 2 specifications.

EXP-00102: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

EXP-00103: The FLASHBACK_TIME parameter was invalid

Cause: FLASHBACK_TIME did not contain a valid timestamp or an expression that yields a valid timestamp.

Action: Specify a timestamp value in the format of YYYY-MM-DD HH24:MI:SS or an expression that evaluates to a valid timestamp.

EXP-00104: datatype (string) of column string in table string.string is not supported, table will not be exported

Cause: The column is of a datatype which does not contain the required support. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00105: parameter string is not supported for this user

Cause: The user attempted to specify either CONSISTENT or OBJECT_CONSISTENT when connected as sysdba.

Action: If a consistent export is needed, then connect as another user.

EXP-00106: Invalid Database Link Passwords

Cause: Invalid Encoded Password for Database Link

Action: Please drop the Database Link and recreate it after import.

EXP-00107: Feature (string) of column string in table string.string is not supported. The table will not be exported.

Cause: Export does not contain the required support for this feature. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00108: NULL lob fetched

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00109: XSL delimiter not found

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00110: Tablespace string is encrypted and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this tablespace.

EXP-00111: Table string resides in an Encrypted Tablespace string and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this table.

EXP-00112: Index *string* is of XMLType and could not be exported

Cause: Export does not contain the required support for this feature. The index could not be exported.

Action: Use Oracle Data Pump Utility to export this index.

EXP-00113: Feature *string* is unsupported. *string string.string* could not be exported

Cause: Export does not contain the required support for this feature.

Action: Use Oracle Data Pump Utility

EXP-00114: Length of *string string* is exceeding the maximum limit

Cause: Provided length was more than the maximum limit allowed.

Action: Check the input value and provide the correct value.

GIPC-00000 to GIPC-00020

GIPC-00000: general success.

Cause: The operation succeeded.

Action: No action is required.

GIPC-00001: general failure.

Cause: A GIPC operation failed.

Action: Examine the trace and log files for the specific cause.

GIPC-00002: GIPC needs to be initialized.

Cause: The application failed to initialize GIPC prior to performing an operation.

Action: Initialize GIPC.

GIPC-00014: buffer not large enough to hold data.

Cause: The buffer provided by the application was not big enough to hold the data received.

Action: Use a larger buffer.

GIPC-00016: timeout waiting on request.

Cause: A wait call returned because the time expired.

Action: This error happens normally in most cases. If this error was not expected, examine the trace and log files for the reason.

GIPC-00017: waiting call has been posted.

Cause: A wait was interrupted by another thread posting it.

Action: This error happens normally in most cases. If this error was not expected, examine the trace and log files for the reason.

GIPC-00020: bind address already in use.

Cause: The application attempt to bind an endpoint to an address which has already been bound.

Action: Specify another address.

HAMI-00000 to HAMI-00093

HAMI-00000: *string* success

Cause: Normal status

Action: None

HAMI-00018: *string* permission denied: *string*

Cause: The operation was not allowed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00026: *string* expired

Cause: The object expired.

Action: Examine the trace file for details about the error.

HAMI-00027: *string* not valid yet: *string*

Cause: The object had not become valid yet.

Action: Examine the trace file for details about the error.

HAMI-00029: *string* startup in progress: *string*

Cause: The ensemble was starting.

Action: Normal status. No action necessary.

HAMI-00030: *string* shutdown pending

Cause: Ensemble shut down was pending.

Action: Normal status. No action necessary.

HAMI-00031: *string* shutdown normally: *string*

Cause: The ensemble was shutting down.

Action: Normal status. No action necessary.

HAMI-00034: *string* member is already in an ensemble

Cause: The specified member was already in the ensemble.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00035: *string* creation of directory "*string*" failed: *string* (*string*)

Cause: Creation of a directory failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00036: *string* opening of file "*string*" failed: *string* (*string*)

Cause: Opening of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00037: *string* reading of file "*string*" failed: *string* (*string*)

Cause: Reading of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00038: *string* writing to file "*string*" failed: *string* (*string*)

Cause: Writing to a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00039: *string* symbolic link creation from "*string*" to "*string*" failed: *string* (*string*)

Cause: Creation of a symbolic link failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00042: *string* operation must be retried

Cause: An operation could not be performed.

Action: Retry the operation.

HAMI-00050: *string* less data than expected was available: *string*

Cause: The operation failed because the expected data was not found.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00054: *string* creation of file '*string*' failed: *string* (*string*)

Cause: Creation of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00056: *string* seek into file "*string*" size: *string* from where: *string* failed: *string* (*string*)

Cause: Seeking into a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00057: *string* truncation of file "*string*" failed: *string* (*string*)

Cause: Truncation of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00058: *string* removal of file "*string*" failed: *string* (*string*)

Cause: Deletion of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00059: *string* opening of directory "*string*" failed: *string* (*string*)

Cause: Opening of a directory failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00060: *string* reading of directory entry "*string*" failed: *string* (*string*)

Cause: Reading of an entry in a directory failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00061: *string* directory removal "*string*" failed: *string* (*string*)

Cause: Deletion of a directory failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00062: *string* removal of symbolic link "*string*" failed: *string* (*string*)

Cause: Deletion of a symbolic link failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00063: *string* memory map of file "*string*" failed: *string* (*string*)

Cause: Mapping of a file to memory failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00064: *string* memory protect of file "*string*" failed: *string* (*string*)

Cause: Memory protection of a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00065: *string* synchronization of memory to file "*string*" failed: *string* (*string*)

Cause: Synchronization of memory to a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00066: *string* retrieving information about file "*string*" failed: *string* (*string*)

Cause: Retrieval of information about a file failed.

Action: Examine the error and the trace file for more information about the failure.

HAMI-00068: *string* invalid distinguished name: "*string*": *string*

Cause: The distinguished name provided was not in the correct format.

Action: Supply a distinguished name in the required format.

HAMI-00071: *string* Web server start failed. Address: *string*.

Cause: The web server was unable to start using the specified address.

Action: Examine the trace files for details about the failure.

HAMI-00072: *string* authentication of user "*string*" failed: *string*

Cause: Authentication of a user failed.

Action: Examine the accompanying message and the trace file for more information about the failure.

HAMI-00073: *string* authorization of user "*string*" failed: *string*

Cause: Authorization of a user failed.

Action: Examine the accompanying message and the trace file for more information about the failure.

HAMI-00074: *string* user '*string*' is not authorized to perform '*string*' operation on '*string*'

Cause: The required permissions were not granted to perform the specified operations on the specified path.

Action: Grant the required privileges to the user.

HAMI-00075: *string* Short write of file "*string*": write *string* bytes. Wanted *string* bytes.

Cause: A write to a file failed because not enough space was available on the file system.

Action: Examine the trace file for further information about the reasons for the failure.

HAMI-00076: *string* user "*string*" has expired: *string*

Cause: The operation could not be performed because validity period of the user passed.

Action: Perform the operation as another user or renew the validity.

HAMI-00077: *string* user "*string*" is not valid yet: *string*

Cause: The operation could not be performed because the user has not reached its validity period.

Action: Wait until the user is valid or change the validity period.

HAMI-00082: *string* user "*string*": number of authentication attempts exceeded limit

Cause: The limit on the number of failed authentication attempts was exceeded.

Action: Examine the accompanying message and the trace file for more information about the failure.

HAMI-00083: *string* invalid value specified for parameter "*string*": *string*

Cause: The value specified for the parameter was invalid.

Action: Specify a valid value.

HAMI-00085: *string string* not configured

Cause: The specified item or component was not configured.

Action: Configure the specified item or component.

HAMI-00086: In election for term *string*, operation may be degraded: *string*

Cause: The ensemble is determining a new leader for update operations.

Action: If this persists, the operator should check for network partitions, hosts that are down, or HAMI member processes that are down or hung.

HAMI-00087: No Quorum, operation may be degraded

Cause: The leader has lost commit quorum, and is no longer able to process updates.

Action: If this persists, the operator should check for network partitions, hosts that are down, or HAMI member processes that are down or hung.

HAMI-00088: *string* file "*string*": read of *string* bytes from offset *string* failed

Cause: The read of the specified number of bytes from the offset failed.

Action: Examine the accompanying system error for more information.

HAMI-00089: *string* short read of file "*string*" from offset *string*: read *string* bytes. wanted *string* bytes

Cause: The read of the specified number of bytes from the offset succeeded but the requested number of bytes were not retrieved.

Action: Examine the accompanying system error (if any) for more information.

HAMI-00090: *string* file "*string*": write of *string* bytes from offset *string* failed

Cause: The write of the specified number of bytes from the offset failed.

Action: Examine the accompanying system error for more information.

HAMI-00091: *string* file "*string*": short write from offset *string*): wrote *string* bytes. Wanted *string* bytes.

Cause: The write of the specified number of bytes from the offset succeeded but the requested number of bytes were not written.

Action: Examine the accompanying system error (if any) for more information.

HAMI-00092: *string* file "*string*": lock failed.

Cause: The lock of the file failed.

Action: Examine the accompanying system error for more information.

HAMI-00093: *string* file "*string*": unlock failed.

Cause: The unlock of the file failed.

Action: Examine the accompanying system error for more information.

IMP-00000 to IMP-00403

IMP-00000: Import terminated unsuccessfully

Cause: Import encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00001: respond with either *string*, *string*, RETURN or '.' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

IMP-00002: failed to open *string* for read

Cause: Import failed to open the export file for reading. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

IMP-00003: ORACLE error *number* encountered

Cause: Import encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

IMP-00005: all allowable logon attempts failed

Cause: An attempt was repeatedly made to log on with an invalid username or password.

Action: Retry with valid username and password.

IMP-00006: failed to allocate memory of size *number*

Cause: Import failed to allocate the necessary memory.

Action: Decrease the import buffer size so that less memory is required, or increase the runtime memory size for Import.

IMP-00007: must be a DBA to import objects to another user's account

Cause: The privileges needed to import into another user's account do not exist. Only a database administrator can import into another user's account.

Action: Ask the database administrator to do the import.

IMP-00008: unrecognized statement in the export file: *ln string*

Cause: Import did not recognize a statement in the export file. Either the export file was corrupted, or an Import internal error has occurred.

Action: If the export file was corrupted, retry with a new export file. Otherwise, report this as an Import internal error and submit the export file to customer support.

IMP-00009: abnormal end of export file

Cause: The export file is probably from an aborted Export session.

Action: If so, retry the export and import. Otherwise, report this as an Import bug and submit the export file that caused this error to customer support.

IMP-00010: not a valid export file, header failed verification

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this an Import bug and submit the export file to customer support.

IMP-00011: formatted table data not currently supported

Cause: You tried to import an export file that contains formatted table data. Import only supports export files containing binary table data. wher

Action: Retry using an export file that contains only binary table data.

IMP-00012: invalid export mode (*character*) in header

Cause: The Export mode specified in the export file header is invalid.

Action: Check the export file to see if it was corrupted. If it was not, report this as an Import bug and submit the export file to customer support.

IMP-00013: only a DBA can import a file exported by another DBA

Cause: The privileges needed to Import an export file generated by a database administrator do not exist. Only a database administrator can import such files.

Action: Ask the database administrator to do the import.

IMP-00014: option "*string*" is needed, but not present in database

Cause: The command entered requires the specified option. Either that option is not installed, or the row describing the option is missing from table V\$OPTION

Action: Reinstall Oracle with the option specified by the message.

IMP-00015: following statement failed because the object already exists:

Cause: Import failed to create an object because it already exists.

Action: Specify IGNORE=Y to ignore such errors and import rows even when tables are not created because they already exist.

IMP-00016: required character set conversion (type *number* to *number*) not supported

Cause: Import could not convert the character format of the export file into the native character format.

Action: Change the user character set by setting the NLS_LANG environment variable to match the character set of the export file.

IMP-00017: following statement failed with ORACLE error *number*:

Cause: Import failed to execute the statement from the export file because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00018: partial import of previous table completed: *number* rows imported

Cause: A table was only partially imported because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00019: row rejected due to ORACLE error *number*

Cause: Import encountered the referenced Oracle error while trying to import a row.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00020: long column too large for column buffer size (*number*)

Cause: The column buffer is too small. This usually occurs when importing LONG data.

Action: Increase the insert buffer size 10,000 bytes at a time (for example). Use this step-by-step approach because a buffer size that is too large may cause a similar problem.

IMP-00021: INCTYPE parameter is obsolete

Cause: Import encountered the INCTYPE parameter when parsing Import options. Incremental Imports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Import will attempt to continue.

IMP-00022: failed to process parameters, type 'IMP HELP=Y' for help

Cause: Invalid command-line parameters were specified.

Action: Check the online help screen for the set of valid parameters, then retry.

IMP-00023: Import views not installed, please notify your DBA

Cause: The necessary Import views were not installed.

Action: Ask your database administrator to install the required Import views.

IMP-00024: Only one mode (TABLES, FROMUSER, or FULL) can be specified

Cause: Parameters were specified that conflict with the import specification FULL=Y.

Action: Retry, making sure not to specify FULL=Y.

IMP-00025: for DBA export files, FROMUSER must be specified with TOUSER option

Cause: When importing a database administrator export file, you specified the TOUSER parameter but not the FROMUSER parameter.

Action: Specify the FROMUSER parameter so that Import knows which user's objects to import.

IMP-00027: failed to rollback partial import of previous table

Cause: Import encountered an Oracle error while trying to roll back a partial import.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, log on to Oracle and check that the partial import was not committed.

IMP-00028: partial import of previous table rolled back: *number* rows rolled back

Cause: Import encountered an Oracle error while trying to import a table.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, if necessary, re-import the table.

IMP-00029: cannot qualify table name by owner (*string*), use FROMUSER parameter

Cause: A table name was qualified with the name of its owner, as shown in the following example. This is not allowed. IMP SYSTEM/MANAGER TABLES=(SCOTT.EMP)

Action: Use the FROMUSER parameter to specify the table's owner, as shown in the following example: IMP SYSTEM/MANAGER FROMUSER=SCOTT TABLES=(EMP, DEPT)

IMP-00030: failed to create file *string* for write

Cause: Import was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

IMP-00031: Must specify FULL=Y or provide FROMUSER/TOUSER or TABLES arguments

Cause: The database administrator did not specify full or partial import.

Action: The database administrator must specify FROMUSER/TOUSER or table arguments if not a full import.

IMP-00032: SQL statement exceeded buffer length

Cause: The buffer was too small for the SQL statement being read.

Action: Rerun with a larger buffer. This can also be an indication of a corruption in the import datafile.

IMP-00033: Warning: Table "*string*" not found in export file

Cause: A table name was specified that does not exist in export file.

Action: Correct the table specification.

IMP-00034: Warning: FromUser "*string*" not found in export file

Cause: The user specified a FROMUSER name that does not exist in export file.

Action: Correct the FROMUSER specification.

IMP-00035: input file *string* must be on a disk

Cause: On some platforms, import can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the import file. Remember that all input files can be either on disk or all files can be on tape, but not mixed both tape and disk.

IMP-00036: Could not find environment character set

Cause: An environment character set was specified that was not recognized by the Import utility.

Action: Ensure that the spelling of the character set specified in the command line parameter CHARSET (for Release 6 only) or the environment variable NLS_LANG is correct.

IMP-00037: Character set marker unknown

Cause: The export file is corrupted.

Action: Try to obtain an uncorrupted version of the export file. If the export file is not corrupted, report this as an Import internal error and submit the export file to customer support.

IMP-00038: Could not convert to environment character set's handle

Cause: Internal error.

Action: Contact Worldwide Support.

IMP-00039: VOLSIZ does not match the value used for export: *string*

Cause: The value specified for VOLSIZ does not match the value specified during the creation of the export file.

Action: If you believe that the specified VOLSIZ value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify VOLSIZ=0.

IMP-00040: FILESIZE does not match the value used for export: *string*

Cause: The value specified for FILESIZE does not match the value specified during the creation of the export file.

Action: If you believe the specified FILESIZE value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify FILESIZE=0.

IMP-00041: Warning: object created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

IMP-00042: CHARSET used, but the export file has specific character set

Cause: The user requested that a specific character set be used to process an export file that has a specific embedded character set ID. The ID in the export file is accurate and should be used.

Action: Remove the CHARSET keyword from the command line.

IMP-00043: export file character set inconsistent

Cause: The character set of the export file and the environment character set (or the character set specified with the CHARSET keyword) are inconsistent. One character set is ASCII-based while the other is EBCDIC based.

Action: Specify the correct character set with the CHARSET keyword.

IMP-00044: unable to allocate enough memory for statement

Cause: Import was unable to allocate sufficient memory to read in the specified statement and execute it.

Action: Increase the allocation for database buffers, restart the instance, and reexecute the Import command.

IMP-00045: using VOLSIZ value from export file of *string*

Cause: Either you did not specify the VOLSIZ parameter in your IMPORT command, or you specified VOLSIZ=0 and the export was created with a non-zero value for VOLSIZ. Import will use the value specified in the export file.

Action: None required.

IMP-00046: using FILESIZE value from export file of *string*

Cause: Either you did not specify the FILESIZE parameter in your IMPORT command, or you specified FILESIZE=0 and the export file was created with a non-zero value for FILESIZE. Import will use the value specified in the export file.

Action: None required.

IMP-00047: unexpected file sequence number; expected *number* but found *number*

Cause: The header in the export file contains a sequence number that is used to track the order in which multiple export files are written. The first export file is assigned sequence number one, the second file is assigned sequence number two and so on. This message is displayed when a number other than the expected sequence number is found in the file header

Action: Execute the import command again, but specify the files in the order in which Export wrote them.

IMP-00048: mismatched file header

Cause: During verification of the 2nd or subsequent file in a multi-file export, Import found header fields in the file that did not match values in the first file.

Action: Check the names of the files created by Export and verify that you specified them correctly for the import operation.

IMP-00049: Unknown language specified in CHARSET

Cause: An unknown language was listed in the CHARSET option.

Action: Use a known character set.

IMP-00050: Dump file and log file cannot be identical

Cause: Identical names were given to the dump file and log file.

Action: Specify different names for the dump file and log file and retry the operation.

IMP-00051: Direct path exported dump file contains illegal column length

Cause: An invalid column length was encountered while processing column pieces."

Action: Check to make sure the export file is not corrupted, or else report this to Oracle Worldwide Support as an Import/Export internal bug and submit the export file.

IMP-00052: Warning: Unable to set event for freelist communication with server

Cause: An event could not be set for current the session.

Action: If Import fails, give the Import user ALTER SESSION PRIV and retry the operation.

IMP-00053: Import mode incompatible with Export dump file

Cause: The specified import option is incompatible with point-in-time- recovery dump file.

Action: Generate a proper dump file or use point-in-time-recovery import mode.

IMP-00054: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

IMP-00055: Warning: partition or subpartition "*string*":"*string*" not found in export file

Cause: A partition or subpartition name was specified that does not exist in export file.

Action: Check to make sure the partition or subpartition name belongs to the table.

IMP-00056: multiple devices specified for tape input

Cause: You specified multiple file names when doing an import from a tape device. Import uses the same device for reading all tapes, regardless of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the IMPORT command, but specify only one tape device in the FILE parameter.

IMP-00057: Warning: Dump file may not contain data of all partitions of this table

Cause: The dump file used for this Table Import might not contain all of the data belonging to the exported table.

Action: Check to see if the export was done as intended, or try performing a Partition Import.

IMP-00059: Failure to initialize parameter manager

Cause: Parameter manager failed in initialization.

Action: Report this to Oracle Worldwide Support as an Import internal bug.

IMP-00060: Warning: Skipping table "*string*"."*string*" because object type "*string*"."*string*" does not exist or has different identifier

Cause: An object type needed by the table, either does not exist on the * target system or, if it does exist, it has a different object identifier.

Action: Create the object type on the target system with a valid * identifier.

IMP-00061: Warning: Object type "*string*"."*string*" already exists with a different identifier

Cause: An object type cannot be created because it already exists on the * target system, but with a different identifier

Action: Drop the object type from the target system and retry the operation.

IMP-00062: Warning: The identifier on the dump file for object type "*string*"."*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted to an object identifier.

Action: Internal error.

IMP-00063: Warning: Skipping table "string"."string" because object type "string"."string" cannot be created or has different identifier

Cause: An error occurred creating an object type that is used by the * table.

Action: Examine the import log to determine why the object type could not * be created. If the object type already existed, with a * different object identifier, then drop the object type and * retry the import.

IMP-00064: Definition of LOB was truncated by export

Cause: While producing the dump file, Export was unable to write the * entire contents of a LOB. Import is therefore unable to * reconstruct the contents of the LOB. The remainder of the * import of the current table will be skipped.

Action: Delete the offending row in the exported database and retry the * export.

IMP-00065: Import is unable to recreate lobbs within objects.

Cause: An error occurred recreating a LOB within an imported object.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00066: Missing NLS_CHARACTERSET in props\$

Cause: No value for NLS_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00067: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00068: Could not find environment national character set

Cause: An environment national character set was specified that was not recognized by the Import utility.

Action: Ensure that the spelling of the national character set specified in the environment variable NLS_NCHAR is correct.

IMP-00069: Could not convert to environment national character set's handle

Cause: Internal error..

Action: Contact Worldwide support.

IMP-00070: Lob definitions in dump file are inconsistent with database.

Cause: The number of LOBS per row in the dump file is different than the * number of LOBS per row in the table being populated.

Action: Modify the table being imported so that it matches the column * attribute layout of the table that was exported.

IMP-00071: Object identifier of imported table mismatches object identifier of existing table

Cause: An attempt was made to import data into a table that was recreated under a different object identifier than the object identifier used for the exported object table. Under this situation, REF's to this table that are contained within the dump file will also be invalid.

Action: Drop the offending object table prior to import.

IMP-00072: Warning: The object table's object identifier is invalid.

Cause: The character string representing the table's object identifier could not be converted to an internal object identifier.

Action: Internal error.

IMP-00073: FILE locator "string" "string" is truncated to "string" "string" in server character set

Cause: The conversion of the specified directory and name strings for a file attribute or column from the export server's character set into the import server's character set exceeded the maximum string lengths allowed within FILE descriptors. The strings will be truncated to the maximum supported lengths.

Action: Rename the directory aliases and external filenames to match the truncated names in the specified FILE column or attribute.

IMP-00074: The constraints flagged by ALL_CONSTRAINTS.BAD will break in 2000 A.D.

Cause: Constraints exist in the data base that specify date values without fully specifying the year. These constraints could break in the year 2000 A.D.

Action: Query ALL_CONSTRAINTS and correct those constraints marked as bad.

IMP-00075: Warning: The nested table may contain partial rows or duplicate rows

Cause: An error occurred inserting data into an outer or inner nested table. If the error occurred in the outer table, rows are still inserted into the inner tables. If the error occurred in an inner table, data is still inserted into the outer table and other inner tables. This can result in duplicate inner table rows or partial logical rows.

Action: Examine the data in the tables. Delete the incorrect rows or drop the entire table and perform the import again.

IMP-00076: Missing NLS_NCHAR_CHARACTERSET in props\$

Cause: No value for NLS_NCHAR_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00077: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00078: Cannot translate FILE locator to "string" "string" in server character set

Cause: (1) The current export dump file was generated using Beta-2 of Oracle8.0 AND (2) there was a File that appeared as an attribute of an ADT within a table's column AND (3) the character set of the export server's database was different than the character set of the import server's database AND (4) when the filename or the aliasname of the File increased in size when it was translated to the character set of the import server. When all of these conditions are true, translation of the strings could yield corruption of the data in the column. Rather than proceeding with the translation, import will leave the character strings in the File in the old character set.

Action: After import completes, rename the directory aliases and external filenames to match the real names used for the target database.

IMP-00079: Warning: National character set data in this table may be incorrect

Cause: Due to a problem in 8.0.2 Export, national character data in NCHAR and NVARCHAR2 columns was incorrectly assumed to be in the export server's data base character set and was converted to the export client's data base character set. This conversion would only be correct if the export server's data base character set was the same as the export server's national character set and the export client's data base character set was the same as the export client's national character set. All other combinations would likely be incorrect. This export dump file was generated by 8.0.2 Export and the export client and server character sets did not fit that criteria.

Action: Examine the national character data. If incorrect, update the data with correct data.

IMP-00080: Error during character conversion of long column or long command

Cause: During piecewise character conversion of the data in a long column or of a long command, a fatal conversion error occurred. Either character truncation occurred or an invalid character set handle was used.

Action: Retry the import with a different character set.

IMP-00081: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

IMP-00082: Error during conversion ROWID from string format to internal

Cause: An error occurred while attempting to convert a ROWID from an export dump file into an internal format.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00083: dump file does not contain an incremental export

Cause: An incremental import was requested and the dump file specified for the import command is either a user or table export.

Action: Reissue the command import command but specify the name of a dump file containing an incremental export.

IMP-00084: attempt to mix incremental import with user or table import

Cause: An incremental import was requested along with the FROMUSER, TOUSER, or TABLE qualifier. An incremental import cannot be done if any of these other qualifiers are also specified.

Action: Determine whether you want to do an incremental import, full import, user import or table import and reissue the import command with the appropriate qualifiers.

IMP-00085: multiple input files specified for unbounded export file

Cause: You specified multiple file names for the FILE parameter when doing an import, but the header in the export file indicates that that the export operation could create only one file. Specifying multiple file names is valid for an import operation only if the export files were created by an export operation in which the user specified a non-zero value for the FILESIZE parameter.

Action: If you believe the export contains multiple files, verify that you have specified the correct files. If you believe the export should be in only one file then try the import operation again, but specify only one value for the FILE parameter.

IMP-00086: TOID "*string*" not found in export file

Cause: Import did not find the type identification specified in the TOID_NOVALIDATE parameter. The specified type identification does not exist in export file.

Action: Correct or omit the TOID_NOVALIDATE parameter.

IMP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

IMP-00088: Problem importing metadata for index *string*. Index creation will be skipped

Cause: Domain indexes import private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. The execution of one of these PL/SQL blocks failed. Because the metadata is considered an integral part of the index, the subsequent CREATE INDEX statement was skipped.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

IMP-00089: Fine grain policy "*string*" not recreated on table/view "*string*"

Cause: Import user fails to recreate fine grained policies of the table/view being imported. To recreate the policy, the user doing the import needs execute privilege on the package DBMS_RLS for access policies or DBMS_FGA for audit policies.

Action: Ask the database administrator to perform the export/import of this table/view.

IMP-00090: Unexpected DbmsJava error *number* at step *number* while creating *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Import internal error to customer support.

IMP-00091: Above error occurred on the following function and object: *string*. Remaining PL/SQL blocks for this object will be skipped.

Cause: An error occurred while executing a PL/SQL block that implements the DDL for the named function and procedural object. A procedural object is one whose DDL is implemented as stored procedures rather than as standard SQL statements.

Action: Contact Oracle Worldwide Support so they may determine the development group responsible for the package that failed.

IMP-00092: Java object "*string*". "*string*" already exists, cannot be created

Cause: Import failed to create the Java source, class or resource object because it already exists.

Action: Drop the object type from the target system and retry the operation.

IMP-00093: Inconsistency between dumpfile constraint definition for table *string* with columns (*string*)

Cause: Import failed to locate a base table for a constraint that was defined in the dump file and statistics were not imported.

Action: Check to see if the table and constraint exist. If the table and constraint exist, then report this to Oracle Support Services as an Import internal error.

IMP-00094: Warning: The identifier on the dump file for object type "*string*"."*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00095: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

IMP-00096: Warning: Skipping table "*string*"."*string*" because type synonym "*string*"."*string*" cannot be created

Cause: An error occurred creating a synonym for a type that is used by the * table.

Action: Examine the import log to determine why the type synonym could * not be created. If the synonym already existed, but is not * needed, then drop the synonym and retry the import. If the * synonym is PUBLIC but the importer does not have the * CREATE PUBLIC SYNONYM system privilege, then the import must * be done by someone possessing that privilege, or the importer * must be granted the privilege.

IMP-00097: \nSTREAMS_CONFIGURATION=Y ignored, only valid with FULL=Y

Cause: STREAMS_CONFIGURATION=Y can only be used * when FULL=Y is present on the command line

Action: Remove conflicting command arguments

IMP-00098: INTERNAL ERROR: *string*

Cause: An INTERNAL error occurred.

Action: Contact Oracle Worldwide Support.

IMP-00099: Warning: The typeid in the dump file for object type "*string*"."*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00400: Warning: Object type "*string*"."*string*" already exists with a different typeid

Cause: An object type could not be created because it already existed on the * target system, but with a different typeid

Action: Drop the object type from the target system and retry the operation.

IMP-00401: dump file "*string*" may be an Data Pump export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the Data Pump export utility. These dump files cannot be processed by the original import utility.

Action: Try using the Data Pump import utility to process this dump file.

IMP-00402: Invalid parameter "*string*" with data_only mode

Cause: Parameter provided along data_only is invalid.

Action: Remove the invalid parameter from command line.

IMP-00403: \n\nWarning: This import generated a separate SQL file "*string*" which contains DDL that failed due to a privilege issue.\n

Cause: The import failed because the DDL had insufficient privileges.

Action: Connect as SYSDBA and run the SQL file.

INS-00001 to INS-70008

INS-00001: Unknown irrecoverable error

Cause: No additional information available.

Action: Refer to the logs or contact Oracle Support Services *FQN:
oracle.install.commons.util.exception.CommonErrorCode.UNKNOWN_ERROR

INS-00002: Unhandled exception

Cause: No additional information available.

Action: Refer to the logs or contact Oracle Support Services *FQN:
oracle.install.commons.util.exception.CommonErrorCode.UNHANDLED_EXCEPTION

INS-00003: Application startup failed

Cause: An unexpected error occurred while loading the application configuration or other startup resources.

Action: Refer to the logs or contact Oracle Support Services *FQN:
oracle.install.commons.util.exception.CommonErrorCode.APPLICATION_STARTUP_FAILURE

INS-00004: Unable to load help

Cause: One or more help configuration files were not readable or not in the correct format.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.util.exception.CommonErrorCode.CORRUPT_APPLICATION_HELP

INS-00005: Invalid application configuration

Cause: The given application configuration is not compliant to the expected schema.

Action: Contact Oracle Support Services *FQN:
oracle.install.commons.util.exception.CommonErrorCode.INVALID_APPLICATION_CONFIG

INS-00006: No resource bundle is associated to the Resource instance

Cause: Specified resource bundle %s is not found in the classpath.

Action: Ensure that the required libraries are in the classpath. *FQN:
oracle.install.commons.util.exception.CommonErrorCode.RESOURCE_BUNDLE_NOT_FOUND

INS-00007: Help not available for this application

Cause: No additional information available.

Action: Contact Oracle Support Services support or refer software manual. *FQN:
oracle.install.commons.util.exception.CommonErrorCode.HELP_NOT_AVAILABLE

INS-00008: Help topic not found

Cause: The current user interface do not have help content associated with it.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.util.exception.CommonErrorCode.HELP_TOPIC_NOT_FOUND

INS-00009: Unable to create instance of *string*

Cause: n/a

Action: n/a *FQN:
oracle.install.commons.util.exception.CommonErrorCode.UNABLE_TO_CREATE_COMPONENT_INSTANCE

INS-01001: Failed to create parent directories while copying *string* to *string*

Cause: Unexpected error occurred while creating the nonexistent parent directories of the destination file %s

Action: Manually verify whether the destination directory is possible to be created.

*FQN:
oracle.install.commons.system.filemgmt.FileSystemErrorCode.PARENT_DIRECTORY_CREATION_FAILED

INS-01002: Copy failed as the source file *string* do not exist

Cause: No additional information available.

Action: Ensure that the source file exist. *FQN:
oracle.install.commons.system.filemgmt.FileSystemErrorCode.SOURCE_FILE_NOT_FOUND

INS-01003: Copy failed as the source path *string* do not correspond to a file.

Cause: Copy routine expects a source path, which represents a file.

Action: Ensure that the source is a file and destination is a file or a directory. Note: if the destination is a directory, then the source file will be copied in the same name, under the destination directory. *FQN:

oracle.install.commons.system.filemgmt.FileSystemErrorCode.NOT_A_FILE

INS-01004: *string* is not directory.

Cause: The archive extraction routine expects the destination to be a directory.

Action: Ensure that destination is a directory *FQN:
oracle.install.commons.system.filemgmt.FileSystemErrorCode.NOT_A_DIRECTORY

INS-01005: Failed to copy file from *string* to *string*

Cause: Unexpected error occurred while copying the file.

Action: Refer to the logs for more details. *FQN:
oracle.install.commons.system.filemgmt.FileSystemErrorCode.FILE_COPY_FAILED

INS-01006: The file *string* cannot be copied onto itself.

Cause: The source file and destination file are same.

Action: Ensure that the destination file is different from the source file. *FQN:
oracle.install.commons.system.filemgmt.FileSystemErrorCode.CANNOT_COPY_FILE_ONTO_ITSELF

INS-01007: The directory *string* cannot be copied onto itself

Cause: The source directory and destination directory are same.

Action: Ensure that the destination directory is different from the source directory. *FQN:
 oracle.install.commons.system.filemgmt.FileSystemErrorCode.CANNOT_COPY_DIRECTORY_ONTO_ITSELF

INS-01008: Copy failed as the destination file *string* already exists.

Cause: No additional information available.

Action: Ensure that the destination file do not exist or use overwrite option to overwrite the destination file. *FQN:
 oracle.install.commons.system.filemgmt.FileSystemErrorCode.TARGET_FILE_ALREADY_EXISTS

INS-01009: *string* is not valid archive.

Cause: The given archive path, either do not correspond to a file or do not exist.

Action: Ensure that the given source path correspond to a valid archive location. *FQN:
 oracle.install.commons.system.filemgmt.FileSystemErrorCode.INVALID_ARCHIVE

INS-01010: Unable to save file to the specified location.

Cause: The specified location may not be writable.

Action: Specify a location that is writable. *FQN:
 oracle.install.commons.system.filemgmt.FileSystemErrorCode.TARGET_DIR_NOT_WRITEABLE

INS-01011: Unable to save file to the specified location.

Cause: The specified location may not be executable.

Action: Specify a location that is executable. *FQN:
 oracle.install.commons.system.filemgmt.FileSystemErrorCode.TARGET_DIR_NOT_EXECUTABLE

INS-04001: Invalid command line arguments xml file (*string*). Either application could not detect command line arguments xml file or contains syntactically incorrect information.

Cause: n/a

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.INVALID_COMMANDLINE_ARG_XML

INS-04002: Application could not parse command line arguments xml file (*string*). Either XPathExpressionException or IOException occurred while parsing command line arguments xml file.

Cause: n/a

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.COMMAND_LINE_ARG_PARSE_EXCEPTION

INS-04003: Invalid argument passed from command line. Specified argument (*string*) is not a supported argument for this application.

Cause: n/a

Action: Specify valid set of command line arguments. Refer application help for more details.
 *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.UNSUPPORTED_ARGUMENT_PASSED_ERROR

INS-04004: Value is not specified for command line argument: *string*. Specify valid value for the mentioned argument. Refer application help for more details.

Cause: n/a

Action: n/a *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.VALUE_EXPECTED_ERROR

INS-04005: Invalid argument passed from command line: *string*. Specified argument is not a supported for the current operating system.

Cause: n/a

Action: Specify valid set of supported command line arguments. Refer application help for more details. *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.CMDLINE_ARG_NOT_SUPPORTED_ON_THIS_PLAT_ERROR

INS-04006: Invalid combination of arguments passed from command line. Arguments [*string,string*] cannot be passed together in the same application session.

Cause: n/a

Action: Specify valid set of supported command line arguments. Refer application help for more details. *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.MUTUAL_EXCLUSIVE_ARGUMENTS_PASSED_ERROR

INS-04007: Invalid argument passed from command line: *string*

Cause: n/a

Action: Specify valid set of supported command line arguments. *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.MANDATORY_DEPENDENT_ARGUMENTS_NOT_PASSED_ERROR

INS-04009: The argument [*string*] passed is not supported for the current context *string*

Cause: n/a

Action: Specify a supported command line argument for the current context. *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.ARGUMENT_NOT_SUPPORTED_IN_CURRENT_CONTEXT

INS-04010: Repetition of command line argument is not supported: *string* .

Cause: n/a

Action: n/a *FQN:

oracle.install.commons.base.util.cli.CommandLineArgErrorCode.ARGUMENT_MULTIPLE_USAGE_ERROR

INS-04011: Multiple usage for arguments is not allowed.

Cause: n/a

Action: Refer to application help for more details. *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.APPLICATION_ARGUMENT_MULTIPLE_USAGE_ERROR

INS-04012: There is a conflicting dependency rule on the command line arguments xml file. The key arguments are: *string*

Cause: n/a

Action: Review and correct the specified arguments or refer to application help for more details. *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.APPLICATION_CONFLICTING_ARG_DEPENDENCIES_ERROR

INS-04013: The argument [-deinstall] is not supported. Run *string* for deinstallation.

Cause: n/a

Action: n/a *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.INVALID_DEINSTALL_ARGUMENT_ERROR

INS-04014: Invalid argument passed from command line. Specified argument(s) (*string*) are not supported for the associated command.

Cause: n/a

Action: Specify valid set of command line arguments. Refer to command help for more details. *FQN:
 oracle.install.commons.base.util.cli.CommandLineArgErrorCode.UNASSOCIATED_ARGUMENT_PASSED_ERROR

INS-06001: Failed to perform operation due to internal driver error.

Cause: No additional information available.

Action: Refer to the logs or contact Oracle Support Services *FQN:
 oracle.install.commons.net.support.SSHSupportErrorCode.INTERNAL_DRIVER_ERROR

INS-06002: Authentication failed.

Cause: Failed to login into the selected nodes.

Action: Check shared unix password. Locked accounts or accounts with no password are not supported. Contact Administrator or refer logs for more details. *FQN:
 oracle.install.commons.net.support.SSHSupportErrorCode.AUTHENTICATION_FAILED

INS-06003: Failed to setup passwordless SSH connectivity with the following node(s): *string*

Cause: It is possible that the failed nodes are running different Operating System or not reachable. If they are reachable and running the same Operating System as the local machine, it is possible that the SSH daemon is not configured on the selected nodes.

Action: Ensure that the failed nodes are reachable, running the same Operating System and have support for SSH connectivity. *FQN:
 oracle.install.commons.net.support.SSHSupportErrorCode.FAILED_TO_ESTABLISH_SSH_CONNECTIVITY

INS-06004: File operation on users .ssh directory is not permitted.

Cause: Write permission not set for either users home directory or .ssh directory under users home directory.

Action: Ensure that .ssh directory is either allowed to be created under users home directory or .ssh directory allows files to be written into it. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.FILE_OPERATION_PER
MISSION_DENIED

INS-06005: Unable to get SSH connectivity details.

Cause: An unexpected error occurred while getting SSH connectivity details across the selected nodes.

Action: Refer to the logs for more details or contact Oracle Support Services. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.UNABLE_TO_GET_CON
NECTIVITY_DETAILS

INS-06006: Passwordless SSH connectivity not set up between the following node(s): *string*.

Cause: Either passwordless SSH connectivity is not setup between specified node(s) or they are not reachable. Refer to the logs for more details.

Action: Refer to the logs for more details or contact Oracle Support Services. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.PASSWORDLESS_SSH_
CONNECTIVITY_NOT_SETUP

INS-06007: SSH connectivity check operation disabled

Cause: Either the property named oracle.install.ssh.setupCheckEnabled is set to true in Java system properties or the internal driver had disabled this operation.

Action: Try setting oracle.install.ssh.setupCheckEnabled=true as Java system property or contact Oracle Support Services. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.SETUP_CHECK_DISABLE
D

INS-06008: SSH connectivity setup operation disabled

Cause: Either the property named oracle.install.ssh.setupEnabled is set to true in Java system properties or the internal driver had disabled this operation.

Action: Try setting oracle.install.ssh.setupEnabled=true as Java system property or contact Oracle Support Services. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.SETUP_DISABLED

INS-06009: SSH performance is detected to be slow, which may impact performance during remote node operations like copying the software and running prerequisite checks.

Cause: n/a

Action: Consider optimizing the ssh configuration. *FQN:
oracle.install.common.net.support.SSHSupportErrorCode.SLOW_SSH_PERFORMA
NCE

INS-06101: IP address of localhost could not be determined

Cause: The localhost is not mapped to a valid IP address in Hosts file (Eg. /etc/hosts in Unix).

Action: Assign a valid IP address for the localhost or set it to loopback IP address (127.0.0.1 in IPv4 or ::1 in IPv6). *FQN:
oracle.install.common.net.NetworkUtilityErrorCode.UNKNOWN_LOCALHOST

INS-07001: Value for property 'string' not found in the bean store.

Cause: No additional information available.

Action: It is not mandatory that all properties are to be in a given bean store. This error can be ignored if the given property is not expected to be in the bean store. *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNSPECIFIED_PROPERTY

INS-07002: Unable to get the type definition for property named 'string' of bean type 'string'

Cause: No additional information available.

Action: Ensure that the properties in the bean type are correctly defined. *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.INVALID_TYPE_DEFINITION

INS-07003: Unexpected error occurred while accessing the bean store

Cause: No additional information available.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNKNOWN_ERROR

INS-07004: Invalid bean store

Cause: Either the bean store is corrupt or it does not have access to the underlying data source.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.INVALID_BEANSTORE

INS-07005: The given beans cannot be written because there is no bean store assigned to the bean store writer.

Cause: No additional information available

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.BEANSTORE_NOT_ASSIGNED_TO_WRITER

INS-07006: Unable to save the bean store to the given target.

Cause: Either the target is not accessible or an unexpected error occurred while saving the bean store.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNABLE_TO_SAVE_BEANSTORE

INS-07007: Failed to open or create a bean store reader.

Cause: Either the bean store is corrupt or it does not have access to the underlying data source.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNABLE_TO_OPEN_BEANSTORE_READER

INS-07008: The format of the bean store is not specified

Cause: No additional information available.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNSPECIFIED_XML_BEANSTORE_FORMAT

INS-07009: Unable to load bean store

Cause: Unexpected error while loading the bean store.

Action: Refers logs or contact Oracle Support Services *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.UNABLE_TO_LOAD_BEANSTORE

INS-07010: Invalid argument *string*

Cause: The argument for a given property did not comply with either the specification, schema, or rules.

Action: Ensure that given arguments are of the expected data type or schema *FQN:
oracle.install.commons.bean.BeanStoreErrorCode.INVALID_ARGUMENT

INS-08001: Flow configuration is syntactically incorrect

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.INVALID_FLOW_CONFIG

INS-08005: View class may not exist or a fully qualified View class name is not given.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.INVALID_VIEW_DEFINITION

INS-08007: Fully qualified Action class name is not given.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.INVALID_ACTION_DEFINITION

INS-08011: Route identifier '*string*' mentioned in the transition may not exist.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.INVALID_ROUTE_IDENTIFIER

INS-08012: Unknown View Identifier '*string*' associated to a state.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.UNKNOWN_VIEW

INS-08013: Unknown Validator class '*string*' associated to a state.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.UNKNOWN_VALIDATOR

INS-08014: Fully qualified Condition class name is not given.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.INVALID_CONDITION_DEFINITION

INS-08015: No transition specified for condition defined at state '*string*'.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowConfigErrorCode.NO_TRANSITION_SPECIFIED_FOR_CONDITION

INS-08101: Unexpected error while running the action at state: '*string*'

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowErrorCode.ACTION_EXECUTION_FAILED

INS-08102: Unexpected error occurred while transitioning from state '*string*'

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowErrorCode.TRANSITION_FAILED

INS-08103: Null route returned by state '*string*'.

Cause: The route was not chosen from the current state in order to proceed further.

Action: No additional information available. *FQN:
oracle.install.commons.flow.FlowErrorCode.NULL_ROUTE

INS-08104: Route '*string*' returned by state '*string*' is not found in the flow configuration.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowErrorCode.UNKNOWN_ROUTE

INS-08106: Unexpected error occurred while loading the view '*string*' associated to state '*string*'.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowErrorCode.VIEW_LOADING_FAILED

INS-08107: Failed while processing user inputs at state '*string*'.

Cause: Unexpected error occurred while processing the inputs from view '%s' associated to state '%s'.

Action: No additional information available. *FQN:
oracle.install.commons.flow.FlowErrorCode.VIEW_PROCESSING_FAILED

INS-08108: Failed while localizing the view

Cause: Unexpected error occurred while localizing the view '%s' associated to state '%s'.

Action: No additional information available. *FQN:
oracle.install.commons.flow.FlowErrorCode.VIEW_LOCALIZATION_FAILED

INS-08109: Unexpected error occurred while validating inputs at state '*string*'.

Cause: No additional information available.

Action: Contact Oracle Support Services or refer to the software manual. *FQN:
oracle.install.commons.flow.FlowErrorCode.VALIDATION_FAILED

INS-08110: Invalid checkpoint file '*string*'.

Cause: Session restoration failed since the given checkpoint file may have been syntactically incorrect or did not exist.

Action: No additional information available. *FQN:
oracle.install.commons.flow.FlowErrorCode.INVALID_CHECKPOINT_FILE

INS-08801: View class referred by view ID '*string*' not found.

Cause: The given View class was not found in the classpath.

Action: No additional information available. *FQN:
oracle.install.commons.flow.ViewManagerErrorCode.VIEW_CLASS_NOT_FOUND

INS-08802: Unable to instantiate the View class referred by View ID '*string*'.

Cause: The given class do not represent a valid View class or an unexpected error occurred while instantiating it.

Action: No additional information available. *FQN:
oracle.install.commons.flow.ViewManagerErrorCode.INVALID_VIEW_CLASS

INS-10002: Inventory initialization failed

Cause: Inventory exists, but an unexpected error occurred while initializing it.

Action: Ensure that the inventory is not corrupt. Otherwise contact Oracle Support Services or refer logs. *FQN:
oracle.install.commons.base.driver.common.InstallEngineErrorCode.INVENTORY_INIT_FAILED

INS-10006: Scratch path '*string*' is not valid.

Cause: The specified scratch path is either not accessible or do not exists.

Action: Contact Oracle Support Services or refer logs *FQN:
oracle.install.commons.base.driver.common.InstallEngineErrorCode.INSTALL_COMMON_INVALID_SCRATCHPATH

INS-10008: Session initialization failed

Cause: An unexpected error occurred while initializing the session.

Action: Contact Oracle Support Services or refer logs *FQN:
oracle.install.commons.base.driver.common.InstallEngineErrorCode.INSTALL_COMMON_SESSION_INIT_FAILED

INS-10010: Scratch path not defined or set

Cause: Not additional information available

Action: Contact Oracle Support Services *FQN:
oracle.install.commons.base.driver.common.InstallEngineErrorCode.SCRATCHPATH_NOT_DEFINED

INS-10012: Setup driver initialization failed.

Cause: An unexpected error occurred while initializing the underlying setup driver.

Action: Contact Oracle Support Services or refer logs *FQN:

oracle.install.commons.base.driver.common.InstallEngineErrorCode.DRIVER_INIT_FAILED

INS-10013: The installer has detected that current home is not registered in the central inventory on this system.

Cause: This can happen for the following reasons - either %s has not been run or script failed to update the inventory.

Action: Run the script as a root user. *FQN:

oracle.install.commons.base.driver.common.InstallEngineErrorCode.INVENTORY_NOT_UPDATED_WITH_HOME

INS-10014: The installer has detected that current home is not registered in the central inventory on the node(s): *string*.

Cause: This can happen for the following reasons - either %s has not been run or script failed to update the inventory.

Action: Run the script as a root user. *FQN:

oracle.install.commons.base.driver.common.InstallEngineErrorCode.INVENTORY_NOT_UPDATED_WITH_HOME_MULTINODE_WARN

INS-10015: Argument (*string*) passed from the command line is invalid.

Cause: n/a

Action: n/a *FQN:

oracle.install.commons.base.driver.common.InstallEngineErrorCode.INVALID_COMMAND_LINE_ARG

INS-10016: Installer failed to update the cluster related details, for this Oracle home, in the inventory on all/some of the nodes

Cause: n/a

Action: You may chose to retry the operation, without continuing further. Alternatively you can refer to information given below and manually run the mentioned commands on the failed nodes now or later to update the inventory. *FQN:

oracle.install.commons.base.driver.common.InstallEngineErrorCode.UPDATENODELIST_FAILED

INS-10101: The given response file *string* is not found.

Cause: The given response file is either not accessible or do not exists.

Action: Give a correct response file location. (Note: relative path is not supported) *FQN:

oracle.install.commons.base.driver.common.InstallerErrorCode.RESPONSE_FILE_NOT_FOUND

INS-10102: Installer initialization failed.

Cause: An unexpected error occurred while initializing the Installer.

Action: Contact Oracle Support Services or refer logs *FQN:

oracle.install.commons.base.driver.common.InstallerErrorCode.INSTALLER_INIT_FAILED

INS-10103: Response file is not specified for this session.

Cause: Response file was not specified for this session. A silent session requires input from a response file or from the command line.

Action: Specify the response file and rerun the installer. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.RESPONSE_FILE_EXPECTED

INS-10104: The given response file is not accessible.

Cause: Current user may not have read permission.

Action: Ensure that the current user have permission to read the given response file.
 *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.RESPONSE_FILE_NOT_ACCESSIBLE

INS-10105: The given response file *string* is not valid.

Cause: Syntactically incorrect response file. Either unexpected variables are specified or expected variables are not specified in the response file.

Action: Refer the latest product specific response file template *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.INVALID_RESPONSE_FILE

INS-10106: The format of the given response file is not supported.

Cause: The response file format was incorrect or not supported.

Action: Use response files of type %s. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.UNKNOWN_RESPONSE_FILE_FORMAT

INS-10107: Argument *string* is not supported for this session.

Cause: Argument %s is specified for this session. This option is supported only in case of silent installation.

Action: Ensure that you have specified correct arguments to the installer. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.INVALID_USAGE_OF_SHOW_PROGRESS_ARGUMENT

INS-10108: The given response file name is not valid.

Cause: n/a

Action: Review the log file %s for further details on failure. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.ACTIONABLE_REMOTE_COPY_OPERATION_FAILED

INS-10110: Installer encountered errors while copying *string* to nodes *string*.

Cause: n/a

Action: Review the log file %s for further details on failure. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.REMOTE_COPY_OPERATION_FAILED

INS-10111: Installer encountered errors while copying *string* to nodes *string*.

Cause: n/a

Action: Review the log file %s for further details on failure. *FQN:
 oracle.install.commons.base.driver.common.InstallerErrorCode.CLUSTER_OPERATION_FAILED

INS-10112: Unexpected error occurred while copying *string* to remote nodes.

Cause: n/a

Action: Review the log file %s for further details on failure. *FQN:
oracle.install.commons.base.driver.common.InstallerErrorCode.ACTIONABLE_CLUSTER_O
PERATION_FAILED

INS-10114: Installer encountered an error while parsing the value *string* for the argument [*string*].

Cause: n/a

Action: Enter a valid value for the argument [%s]. Expected values are %s. *FQN:
oracle.install.commons.base.driver.common.InstallerErrorCode.INSTALLER_INVALID_ARG
UMENT_VALUE

INS-10115: All configuration tools were previously ran successfully, no further configuration is required.

Cause: n/a

Action: n/a *FQN:
oracle.install.commons.base.driver.common.InstallerErrorCode.INSTALLER_RUN_NO_CON
FIG_TOOLS

INS-10201: Script '*string*' failed.

Cause: n/a

Action: Review the log file for further details. *FQN:
oracle.install.commons.base.util.ScriptExecutionErrorCode.SCRIPT_EXECUTION_FAILED

INS-20701: Unexpected internal driver error

Cause: A call to internal Oracle cluster API failed.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users:
Launch the installer by passing the following flag '-ignoreInternalDriverError'. *FQN:
oracle.install.driver.oui.etc.InternalDriverErrorCode.SRVM_INTERNAL_ERROR

INS-20702: Unexpected internal driver error

Cause: A call to cluster verification utility failed.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users:
Launch the installer by passing the following flag '-ignoreInternalDriverError'. *FQN:
oracle.install.driver.oui.etc.InternalDriverErrorCode.CVU_INTERNAL_ERROR

INS-20801: Configuration Assistant '*string*' failed.

Cause: n/a

Action: Refer to the logs or the extra details from below for additional information. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.CONFIGURATION_FAILED

INS-20802: *string* failed.

Cause: The plug-in failed in its perform method

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.PERFORMED_FAILED

INS-20803: The optional tool named '*string*' failed.

Cause: Refer to the logs for additional information.

Action: Refer to the logs or contact Oracle Support Services. As '%s' is an optional tool, it is safe to ignore this failure and proceed with the installation. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.FAILED_NOTREQUIRED

INS-20804: *string* aborted.

Cause: No additional information available.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.WAS_ABORTED

INS-20805: *string* is not activated

Cause: No additional information available.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.INACTIVE_PLUGIN

INS-20806: *string* Was not run.

Cause: The plug-in was not run or unavailable

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.NOT_PERFORMED

INS-20807: *string* is not valid.

Cause: The action of the specified type could not be found in the referred aggregate

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.ACTION_NOT_FOUND

INS-20808: Action already referenced.

Cause: The action was already referred to by a previous micro step

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.ACTION_ALREADY_REFERENCED

INS-20809: Invocation of '*string*' not enabled

Cause: The invocation of plug-in %s is not active

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.INACTIVE_PLUGININVOCATION

INS-20810: Target or command for '*string*' not valid.

Cause: The specified external command or internal plug-in could not be run

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.driver.oui.config.ConfigManagerErrorCode.INVALID_TARGET

INS-20811: *string* parameters are not initialized

Cause: An argument of plug-in '%s' referenced an uninitialized Parameter

Action: Refer to the logs or contact Oracle Support Services. *FQN:
 oracle.install.driver.oui.config.ConfigManagerErrorCode.USE_OF_UNINITIALIZED_PARAMETER

INS-20812: Unexpected error while running '*string*'

Cause: An unspecified error occurred while attempting to perform the micro step.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
 oracle.install.driver.oui.config.ConfigManagerErrorCode.UNSPECIFIED_ERROR

INS-20813: *string* not found

Cause: The referred aggregate could not be found

Action: Refer to the logs or contact Oracle Support Services. *FQN:
 oracle.install.driver.oui.config.ConfigManagerErrorCode.AGGREGATE_NOT_AVAILABLE

INS-20814: The aggregate of '*string*' is not activated

Cause: The reference to the referred aggregate is set inactive

Action: Refer to the logs or contact Oracle Support Services. *FQN:
 oracle.install.driver.oui.config.ConfigManagerErrorCode.AGGREGATE_INACTIVE

INS-21001: ORACLE_HOME was not specified for clone.

Cause: n/a

Action: Ensure that ORACLE_HOME is passed. *FQN:
 oracle.install.driver.oui.resource.OUIErrorCode.CLONE_ORACLE_HOME_NOT_PASSED

INS-21002: ORACLE_BASE was not specified for clone.

Cause: n/a

Action: Ensure that ORACLE_BASE is passed. *FQN:
 oracle.install.driver.oui.resource.OUIErrorCode.CLONE_ORACLE_BASE_NOT_PASSED

INS-21003: Installer has detected that an invalid inventory pointer location file was specified.

Cause: Installer has failed to detect the inventory group owner from the inventory pointer location file.

Action: Ensure the Inventory location file oraInst.loc is corrected or specify a valid Inventory Pointer Location file *FQN:
 oracle.install.driver.oui.resource.OUIErrorCode.NO_INVENTORY_GROUP_PRESENT_ORA_INST_LOC_FILE

INS-22001: Installer has detected that Oracle home name (*string*) of local node does not match with Oracle home name (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle home name (%s) on node %s matches with Oracle home name (%s) of local node. *FQN:
 oracle.install.driver.oui.resource.InventoryErrorCode.ORACLE_HOME_NAME_INCONSISTENCY

INS-22002: Installer has detected that Oracle base location (*string*) of local node does not match with Oracle base location (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle base location (%s) on node %s matches with Oracle base location (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.ORACLE_BASE_WINDOWS_INCONSISTENCY

INS-22003: Installer has detected that Oracle base location (*string*) of local node does not match with Oracle base location (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle base location (%s) on node %s matches with Oracle base location (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.ORACLE_BASE_NON_WINDOWS_INCONSISTENCY

INS-22004: Installer has detected that Oracle home architecture (*string*) of local node does not match with Oracle home architecture (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle home architecture (%s) on node %s matches with Oracle home architecture (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.HOME_ARCHITECTURE_INCONSISTENCY

INS-22005: Installer has detected that ARU ID (*string*) of local node does not match with ARU ID (*string*) of remote node.

Cause: n/a

Action: Ensure that ARU ID (%s) on node %s matches with ARU ID (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.ARU_ID_INCONSISTENCY

INS-22006: Installer has detected that components of Oracle home (*string*) of local node does not match with components of Oracle home (*string*) of remote node.

Cause: n/a

Action: Ensure that components of Oracle home (%s) on node %s matches with components of Oracle home (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.ORACLE_HOME_INCONSISTENCY

INS-22007: Installer has detected that inventory (*string*) of local node does not match with inventory (*string*) of remote node.

Cause: n/a

Action: Ensure that inventory (%s) on node %s matches with inventory (%s) of local node. *FQN:
oracle.install.driver.oui.resource.InventoryErrorCode.ORACLE_HOME_INVENTORY_INCONSISTENCY

INS-22008: Installer has detected that one offs count (*string*) of Oracle home of local node does not match with one offs count (*string*) of Oracle home of remote node.

Cause: n/a

Action: Ensure that one offs count (%s) of Oracle home on node %s matches with one offs count (%s) of Oracle home of local node. *FQN:

oracle.install.driver.oui.resource.InventoryErrorCode.ONE_OFFS_COUNT_INCONSISTENCY

INS-22009: Installer has detected that the patches applied on the Oracle home of local node do not match with that of the remote node.

Cause: n/a

Action: Ensure that the Oracle home of the local node and that of the remote node %s have the same list of patches applied. *FQN:

oracle.install.driver.oui.resource.InventoryErrorCode.ONE_OFFS_INVENTORY_INCONSISTENCY

INS-30001: The *string* password is empty.

Cause: The %s password should not be empty.

Action: Provide a non-empty password. *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_IS_EMPTY_ERR

INS-30002: The *string* password and *string* confirm password are not same.

Cause: The %s password and %s confirm password should be the same.

Action: Ensure that %s password and %s confirm password are the same. *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORDS_NOT_SAME_ERR

INS-30003: The *string* password length is too long.

Cause: The %s password length cannot exceed %s characters.

Action: Provide a password lesser than %s characters. *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_EXCEED_LENGTH_ERR

INS-30004: The *string* password entered is invalid.

Cause: The following characters are not allowed: %s.

Action: Provide a password that does not contain the following characters: %s *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_INVALID_ERR

INS-30005: The *string* password entered is missing recommended characters.

Cause: The %s password entered is missing recommended characters. Oracle recommends that passwords contain at least one %s.

Action: Provide a password which contains at least one %s. *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_MISSING_CHAR_ERR

INS-30006: The password specified is too short.

Cause: Oracle recommends that the %s password entered should be at least %s characters in length.

Action: Provide a password which is at least %s characters in length. *FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_MIN_LENGTH_ERR

INS-30007: Unable to get the raw device partition size.

Cause: Unexpected error occurred while trying to get the raw device partition size.

Action: Refer to the logs for more details. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_GET_RAW_PARTITION_SIZE

INS-30008: Refer to the logs for more details.

Cause: Unexpected error occurred while trying to get the FS device partition size.

Action: Refer to the logs for more details. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_GET_FS_PARTITION_SIZE

INS-30009: Unable to get the FS partition free space size.

Cause: Unable to get the FS partition free space size.

Action: Unable to get the FS partition free space size. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_GET_FS_PARTITION_FREE_SIZE

INS-30010: Unable to get the file system type.

Cause: Unexpected error occurred while trying to get the file system type.

Action: Refer to the logs for more details. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_GET_FILESYSTEM_TYPE

INS-30011: The *string* password entered does not conform to the Oracle recommended standards.

Cause: Oracle recommends that the password entered should be at least %s characters in length, contain at least 1 uppercase character, 1 lower case character and 1 digit [0-9].

Action: Provide a password that conforms to the Oracle recommended standards.

*FQN:

oracle.install.library.resource.CommonErrorCode.PASSWORD_COMPLEXITY_ERR

INS-30013: Unable to check whether the partition is raw.

Cause: Unexpected error occurred while trying to check whether the partition is raw.

Action: Refer to the logs for more details. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_CHECK_WHETHER_PARTITION_ISRAW

INS-30014: Unable to check whether the location specified is on CFS.

Cause: The location specified might not have the required permissions.

Action: Provide a location which has the appropriate required permissions. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TO_CHECK_WHETHER_OH_ON_CFS

INS-30015: An error occurred during setting permission.

Cause: Unexpected error occurred during setting permission.

Action: Refer to the logs for more details. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_SETPERMISSION_EXCEPTION

INS-30016: Unable to load the install inventory.

Cause: Unable to lock or read the install inventory.

Action: Check the permissions on the inventory location. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_UNABLE_TO_LOAD_ERROR

INS-30017: Install inventory does not exist.

Cause: Install inventory does not exist.

Action: Ensure that the install inventory exists. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_DOES_NOT_EXIST_ERROR

INS-30018: Unable to get all the previously installed Oracle Home locations.

Cause: Error occurred while retrieving the oracle home locations.

Action: Check if the existing inventory location is accessible. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_GET_ALL_ORACLE_HOME_LOCS_ERROR

INS-30020: Unable to get the default oradata location.

Cause: Unexpected error occurred while trying to get the default oradata location.

Action: Refer to the logs for more details. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_UNABLE_TOGET_DEFAULT_ORADATA_LOCATION

INS-30021: Unable to get Oracle RAC databases info.

Cause: Unexpected error occurred while trying to get RAC databases info.

Action: Refer to the logs for more details. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_DB_UNABLE_TO_GET_RAC_DBB_INFO

INS-30022: Unable to get SIDs and DB Homes on remote nodes.

Cause: Unexpected error occurred while trying to get SIDs and DB Homes on remote nodes.

Action: Refer to the logs for more details. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_DB_UNABLE_TO_GET_SID_HOME_REMOTE_NODES

INS-30023: Unable to get SIDs and DB Homes on node *string*.

Cause: Unexpected error occurred while trying to get SIDs and DB Homes on node %s.

Action: Refer to the logs for more details. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_DB_UNABLE_TO_GET_SID_HOME_ON_NODE

INS-30024: Installer has detected that the location determined as Oracle Grid Infrastructure home (*string*), is not a valid Oracle home.

Cause: n/a

Action: Ensure that either there are no environment variables pointing to this invalid location or register the location as an Oracle home in the central inventory. Also, make sure that /etc/oracle path is cleaned up properly as part of previous Grid deinstall. *FQN:
 oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_NOT_FOUND_IN_INVENTORY

INS-30025: Installer has detected that the location determined as Oracle Grid Infrastructure home (*string*), is not a valid Oracle home.

Cause: n/a

Action: Ensure that either there are no environment variables pointing to this invalid location or register the location as an Oracle home in the central inventory. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WIN_ORACLE_HOME_NOT_FOUND_IN_INVENTORY

INS-30042: IO Exception occurred.

Cause: IO Exception occurred.

Action: Refer to the logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_IO_EXCEPTION

INS-30043: The Grid Infrastructure home *string* does not exist or is empty.

Cause: Installer has detected Grid Infrastructure home (%s) registered in the Inventory. But the home location does not exist or is empty.

Action: Check if the location specified is a valid Grid Infrastructure home. If not unregister the home from inventory using deinstall procedures. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_HOME_DOES_NOT_EXIST

INS-30044: Create Install Session Exception.

Cause: Refer to the logs for more details.

Action: Refer to the logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_CREATE_INSTALL_SESSION_EXCEPTION

INS-30045: Unable to find the specified Oracle Home.

Cause: Refer to the logs for more details.

Action: Refer to the logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_HOME_NOT_FOUND_EXCEPTION

INS-30046: Unable to find product in Oracle Inventory.

Cause: Refer to the logs for more details.

Action: Refer to the logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_PRODUCT_NOT_FOUND_EXCEPTION

INS-30047: Multiple versions of the product were found.

Cause: Refer to the logs for more details.

Action: Refer to the logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_MULTIPLE_VERSIONS_FOUND_EXCEPTION

INS-30048: Incorrect format used in the given cluster configuration file.

Cause: The content of cluster configuration file do not conform to the format recommended.

Action: Ensure that the contents of the cluster configuration file conform to the expected format. *FQN:

oracle.install.library.resource.CommonErrorCode.CCF_INCORRECT_FORMAT

INS-30049: The given cluster configuration file could not be read.

Cause: Unexpected error while reading the given cluster configuration file.

Action: Ensure that the given cluster configuration file exists and has the read permissions.

*FQN: oracle.install.library.resource.CommonErrorCode.CCF_READ_FAILED

INS-30051: Failed while checking for *string* directory existence on remote node (*string*).

Cause: User equivalence may not be setup between the local node and the remote nodes or sufficient file permissions are not set.

Action: Setup user equivalence or ensure sufficient file permissions are set. *FQN:

oracle.install.library.resource.CommonErrorCode.UNEXPECTED_REMOTE_DIR_CHECK_FAILURE

INS-30052: Check for free disk space across nodes failed.

Cause: Unexpected error occurred while trying to check free disk space across nodes.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users:

Launch the installer by passing the following flag -ignoreInternalDriverError. *FQN:

oracle.install.library.resource.CommonErrorCode.FREE_SPACE_CHECK_FAILED

INS-30053: Check for shared partitions across nodes failed.

Cause: Unexpected error occurred while trying to get shared partitions across nodes.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users:

Launch the installer by passing the following flag -ignoreInternalDriverError. *FQN:

oracle.install.library.resource.CommonErrorCode.SHARED_PARTITION_LIST_CHECK_FAILED

INS-30054: Check for file system type across nodes failed.

Cause: Unexpected error while detecting file system type across nodes.

Action: Refer to the logs or contact Oracle Support Services. *FQN:

oracle.install.library.resource.CommonErrorCode.FILE_SYSTEM_TYPE_CHECK_FAILED

INS-30055: Incorrect node role provided.

Cause: Node role %s provided on line number %s of the Cluster Configuration File is not valid.

Action: Specify a valid node role. *FQN:

oracle.install.library.resource.CommonErrorCode.CCF_INCORRECT_NODE_TYPE

INS-30056: Host name contains invalid characters.

Cause: The host name %s provided on line number %s of the Cluster Configuration File contains one or more invalid characters.

Action: Ensure that the host name contains only valid characters. Valid characters for host names can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-) and dot (.). *FQN:

oracle.install.library.resource.CommonErrorCode.CCF_NODE_HOSTNAME_BADCHAR

INS-30057: Virtual hostname is missing on line number *string*.

Cause: n/a

Action: Specify a valid virtual hostname for the node. *FQN:

oracle.install.library.resource.CommonErrorCode.CCF_NODE_PRIVATE_HOSTNAME_BLANK

INS-30060: Check for group existence failed.

Cause: Unexpected error occurred while trying to check for group existence.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users: Launch the installer by passing the following flag -ignoreInternalDriverError.

*FQN:

oracle.install.library.resource.CommonErrorCode.GROUP_EXISTENCE_CHECK_FAILED

INS-30061: Installer has detected that the OS group *string* does not exist on some of the remote nodes.

Cause: OS group %s does not exist on nodes: %s.

Action: Ensure that the specified OS group is configured on the remote nodes. *FQN:

oracle.install.library.resource.CommonErrorCode.GROUP_NOT_EXIST_ON_REMOTE_NODES

INS-30062: Installer was unable to verify if the specified OS group *string* exists on the remote nodes *string*.

Cause: n/a

Action: Refer to the logs or contact Oracle Support Services. *FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODES_GROUP_EXISTENCE_CHECK_FAILED

INS-30063: Installer encountered a problem while trying to verify if the specified OS group *string* exists on the remote nodes *string*.

Cause: n/a

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users: Launch the installer by passing the following flag -ignoreInternalDriverError.

*FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODES_GROUP_EXISTENCE_VERIFICATION_EXCEPTION

INS-30064: Installer has detected that user *string* does not belong to the OS group *string* on some of the remote nodes.

Cause: The OS group %s does not exist or user %s is not a member of the OS group %s, on remote nodes: %s.

Action: Ensure that OS group %s exists and add install user %s as a member of the OS group %s on nodes %s or specify a different OS group in which install user is a member. *FQN:

oracle.install.library.resource.CommonErrorCode.USER_NOT_MEMBER_REMOTE_NODES

INS-30065: Installer was unable to verify if the user *string* is a member of OS group *string* specified for *string* on remote nodes.

Cause: Installer was unable to verify if the user %s is a member of OS group %s on remote nodes: %s.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.library.resource.CommonErrorCode.REMOTE_NODES_GROUP_MEMBERSHIP_CHECK_FAILED

INS-30066: Installer encountered a problem while trying to verify if the user *string* is a member of OS group *string* on remote nodes.

Cause: n/a

Action: Ensure that user %s is member of OS group %s on remote nodes: %s. *FQN:
oracle.install.library.resource.CommonErrorCode.ACTIONABLE_REMOTE_NODES_GROUP_MEMBERSHIP_CHECK_FAILED

INS-30071: An error occurred while trying to determine the running processes or services.

Cause: A runtime error.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.library.resource.CommonErrorCode.RUNNING_PROCESSES_RUNTIME_EXCEPTION

INS-30072: There are services running from the currently selected Oracle Home.

Cause: Files that need to be reinstalled or upgraded in this home are currently in use by running services.

Action: Please stop the following services before continuing: %s. *FQN:
oracle.install.library.resource.CommonErrorCode.RUNNING_PROCESSES_SERVICES_FOUND

INS-30073: There is software running from the currently selected Oracle Home.

Cause: Files that need to be reinstalled or upgraded in this home are currently in use by one or more applications.

Action: Please close any running applications before continuing. *FQN:
oracle.install.library.resource.CommonErrorCode.RUNNING_PROCESSES_NO_SERVICE_EXCEPTION

INS-30074: There are processes running in the currently selected Oracle Home.

Cause: Software is already running from the home selected for the install.

Action: Shutdown the following processes before continuing: %s. *FQN:
oracle.install.library.resource.CommonErrorCode.RUNNING_PROCESSES_FOUND

INS-30080: *string* did not resolve to an IP address. Provide alternative name that resolves to an IP address.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_HOST_NAME_INVALID

INS-30081: *string* could not be resolved using TCP/IP host name lookup. Provide valid name that can be resolvable using TCP/IP host name lookup.

Cause: n/a

Action: n/a *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_HOST_NAME_NOT_RESOLVED

INS-30090: Check for connectivity across all nodes through the interface *string* has failed.

Cause: Unexpected error while checking connectivity of nodes through the interface.

Action: Refer to the logs or contact Oracle Support Services. *FQN:

oracle.install.library.resource.CommonErrorCode.NODE_CONNECTIVITY_CHECK_FAILED_FOR_INTERFACE

INS-30100: Insufficient disk space on the selected location (*string*).

Cause: Specified location is on a volume without enough disk space on nodes: %s.

Action: Choose a location that has enough space (minimum of %s) or free up space on the existing volume. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_INSUFFICIENT_SPACE_AVAILABLE_ERR

INS-30110: Installer has failed to perform status check on Oracle Clusterware configured.

Cause: Unexpected error occurred while trying to perform status check on existing Oracle Clusterware.

Action: Refer to the logs or contact Oracle Support Services. Note for advanced users: Launch the installer by passing the following flag -ignoreInternalDriverError.

*FQN:

oracle.install.library.resource.CommonErrorCode.CRS_INTEGRITY_CHECK_FAILED

INS-30120: Specified file (*string*) doesn't exist.

Cause: n/a

Action: n/a *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_FILE_DOESNOT_EXIST

INS-30131: Initial setup required for the installer validations failed.

Cause: Installation cannot proceed further since the system failed to meet the requirements for installation.

Action: n/a *FQN:

oracle.install.library.resource.CommonErrorCode.CVU_FRAMEWORK_INITIALIZATION_FAILED

INS-30132: Initial setup required for the installer validations failed on nodes: *string*

Cause: Indicated nodes were not reachable, or the user equivalence is not available for those nodes, or the user failed to access the temporary location on the indicated nodes.

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.ACTIONABLE_CVU_FRAMEWORK_INITI
ALIZATION_FAILED_REMOTELY

INS-30140: *string* Client data file is not specified.

Cause: n/a

Action: Specify a valid %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_PATH_E
MPTY

INS-30141: *string* Client data file is not a valid file.

Cause: Installer has detected that the specified %s client data file is not a valid file, or does not exist or is not a readable file.

Action: Specify a valid %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_INVALI
D

INS-30142: Specified *string* client data file is not a valid file.

Cause: Installer has detected that the specified %s client data file is not a valid file.

Action: Specify a valid %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_NOT_W
ELL_FORMED

INS-30143: Provided *string* client data file does not exist.

Cause: n/a

Action: Specify an existent %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_NOT_E
XIST

INS-30144: Provided *string* client data file is not a file.

Cause: n/a

Action: Specify a valid %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_NOT_FI
LE

INS-30145: Provided *string* client data file is not readable.

Cause: n/a

Action: Specify a readable %s client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_WRAPFILE_NOT_R
EAD

INS-30150: Installer has detected that the specified GNS client data file is invalid.

Cause: n/a

Action: Specify a valid GNS client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.GNSWRAPFILE_GET_GNSPROPERTIES
_EXCEPTION

INS-30151: An unexpected exception occurred while extracting Sub-domain info from GNS client data file.

Cause: n/a

Action: Check the installer logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.GNSWRAPFILE_GET_GNSSUBDO
MAIN_EXCEPTION

INS-30155: Host name contains invalid characters.

Cause: n/a

Action: Ensure that the host name contains valid characters. Valid characters for host names can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_NODE_NAME
_WITH_BAD_CHARACTERS

INS-30156: Host name cannot be in IP Address format.

Cause: n/a

Action: Provide the node name for the host. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_NODE_IN_IP

INS-30157: The following nodes cannot be clustered due to user equivalence issue: *string*.

Cause: The user performing this installation is not configured identically on all nodes. This may be due to differences in the user or group IDs, or to SSH configuration issues.

Action: If necessary, refer to the installation guide for information about how to set up user equivalence manually on cluster nodes. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_USER_EQUIV
ALLENCE_ERR

INS-30158: One or more host names you provided are invalid, as they do not resolve to a valid IP address.

Cause: n/a

Action: Enter valid host names. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_NODE_PUB_I
NVALID_ERR

INS-30159: Node information was entered for two or more nodes that belonged to different domains.

Cause: n/a

Action: Enter host names belonging to the same domain. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_NODE_DIFF_
DOMAIN_ERR

INS-30160: Installer has detected that the nodes *string* specified for addnode operation have uncleaned inventory.

Cause: n/a

Action: Ensure that the inventory location %s is cleaned before performing addnode procedure. *FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODE_HAS_STALE_INVENTORY

INS-30161: The local node cannot be specified in the list of new nodes.

Cause: n/a

Action: Remove the local node from the list of new nodes. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_ADDNODE_LOCAL_NODE_PROVIDED

INS-30162: No new nodes were specified.

Cause: n/a

Action: Ensure at least one new node is specified. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_ADDNODE_NO_NEW_NODES_PROVIDED

INS-30163: Installer has detected that the inventory location is not empty on node(s) *string* specified for addnode operation.

Cause: n/a

Action: Ensure that the inventory location %s is cleaned before performing addnode procedure. *FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODE_INVENTORY_NOT_EMPTY

INS-30164: Installer has detected that the inventory location is not writable on node(s) *string* specified for addnode operation.

Cause: n/a

Action: Ensure that the inventory location %s has write access before performing addnode procedure. *FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODE_INVENTORY_NOT_WRITABLE

INS-30165: Installer has detected that the parent directory of the inventory location is not writable on node *string* specified for addnode operation.

Cause: n/a

Action: Ensure that the inventory location %s has write access before performing addnode procedure. *FQN:

oracle.install.library.resource.CommonErrorCode.REMOTE_NODE_INVENTORY_PARENT_NOT_WRITABLE

INS-30201: The specified inventory locations parent directory {0} do not have proper permissions on the local node.

Cause: n/a

Action: Ensure that you have read and execute permissions on the parent directories of the inventory location. *FQN:

oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_LOCAL_INVENTORY_LOC_PERMISSION_ERR

INS-30202: The specified inventory locations parent directory {0} do not have proper permissions on the remote node(s): {1}.

Cause: n/a

Action: Ensure that you have read and execute permissions on the parent directories of the inventory location. *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_REMOTE_INVENTORY_LOC_PERMISSION_ERR

INS-30211: Installer has detected that the specified ASM client data file is invalid.

Cause: An error occurred while extracting details from ASM client data file.

Action: Check the installer logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.ASMWRAPFILE_GET_ASMPROPERTIES_EXCEPTION

INS-30212: An error occurred while extracting ASM Cluster name from ASM client data file.

Cause: n/a

Action: Check the installer logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.ASMWRAPFILE_GET_ASMCLUSTERNAME_EXCEPTION

INS-30213: An error occurred while extracting ASM client cluster name from ASM client data file.

Cause: n/a

Action: Check the installer logs for more details. *FQN:
oracle.install.library.resource.CommonErrorCode.ASMWRAPFILE_GET_CLIENTCLUSTERNAME_EXCEPTION

INS-30214: Installer was unable to verify if the Oracle Grid Infrastructure owner *string* is a member of OS group *string* on local node.

Cause: n/a

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.library.resource.CommonErrorCode.USER_GROUP_LOCAL_NODE_MEMBERSHIP_CHECK_FAILED

INS-30215: Installer has detected that Oracle Grid Infrastructure owner *string* does not belong to the OS group *string* on local node.

Cause: The OS group %s does not exist or Oracle Grid Infrastructure owner %s is not a member of the OS group %s on local node.

Action: Ensure that OS group %s exists and add Oracle Grid Infrastructure owner %s as a member of the OS group %s on local node or specify a different OS group in which Oracle Grid Infrastructure owner is a member. *FQN:
oracle.install.library.resource.CommonErrorCode.USER_NOT_MEMBER_ON_LOCAL_NODE

INS-30216: Installer has detected that the specified SCAN client data file is invalid.

Cause: Installer is unable retrieve SCAN related properties from the provided SCAN Client data file.

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_SCAN_PROPERTIES_EXCEPTION

INS-30217: SCAN section does not exist in the provided client data file.

Cause: n/a

Action: Specify a valid client data file that contains the SCAN section. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_SCAN_SECTION_NOT_EXISTS_EXCEPTION

INS-30218: Installer is unable to retrieve the SCAN name from the specified client data file.

Cause: n/a

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_SCAN_NAME_EXCEPTION

INS-30219: Installer is unable to retrieve the SCAN endpoints from the specified client data file.

Cause: n/a

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_SCAN_ENDPOINTS_EXCEPTION

INS-30220: Installer is unable to retrieve the SCAN Client Cluster name from the specified client data file.

Cause: n/a

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_SCANCLIENT_CLUSTER_NAME_EXCEPTION

INS-30221: Installer has detected that the specified SCAN client data file is invalid.

Cause: Installer is unable to retrieve ONS related properties from the provided SCAN Client data file.

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_ONS_PROPERTIES_EXCEPTION

INS-30222: ONS section does not exist in the provided client data file.

Cause: n/a

Action: Specify a valid client data file that contains the ONS section. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_ONS_SECTION_NOT_EXISTS_EXCEPTION

INS-30223: Installer is unable to retrieve the remote ONS port from the specified client data file.

Cause: n/a

Action: Specify a valid SCAN client data file. *FQN:
oracle.install.library.resource.CommonErrorCode.SCAN_WRAPFILE_GET_REMOTE_ONS_PORT_EXCEPTION

INS-30224: The Oracle Home is not set.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_EMPTY_ORACLE_H
OME

INS-30225: Too few arguments for function.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_MISSING_ARGUME
NTS

INS-30226: Unable to read the image information.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_CANNOT_READ_IM
AGE_INFO_FILE

INS-30227: Unable to write the image information.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_CANNOT_WRITE_I
MAGE_INFO_FILE

INS-30228: Failed to get the image information.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_CANNOT_READ_E
NCODE_FILE

INS-30229: Unable to get the image information.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_UNABLE_TO_DECO
DE_IMAGE_INFO

INS-30230: The string to encode is empty.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_EMPTY_ENCODE_
STRING

INS-30231: Failed to verify the image information.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_WRONG_CHECKSU
M

INS-30232: The argument (*string*) cannot be recognized.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_UNRECOGNIZED_ARGUMENT

INS-30233: The value for argument (*string*) is missing.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_MISSING_VALUE

INS-30234: Unable to read the additional image information in file *string*.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.IMAGE_INFO_CANNOT_READ_ADDITIONAL_INFO_FILE

INS-30240: Unable to read any passwords from the specified wallet file location (*string*). Ensure that the wallet file exists in the specified location.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.WALLET_NO_PASSWORDS_FOUND

INS-30241: Exception occurred while trying to read passwords from the specified wallet file location (*string*). Ensure that the wallet file exists in the specified location and is readable.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.WALLET_IOEXCEPTION_OCCURRED

INS-30242: Exception occurred while trying to read passwords from the specified wallet file location (*string*).

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.WALLET_PKI_EXCEPTION

INS-30243: No wallet files found in the specified location (*string*).

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.WALLET_FILE_NOT_FOUND

INS-30250: An error occurred during an internal Pilot operation.

Cause: n/a

Action: n/a *FQN:
oracle.install.library.resource.CommonErrorCode.INSTALL_COMMON_PILOT_EXCEPTION

INS-30280: Installer was unable to stop the database instance (*string*) on node (*string*).

Cause: n/a

Action: It is recommended to stop the database instance manually and retry the job or the out of place patching operation. *FQN:

oracle.install.library.resource.CommonErrorCode.UNABLE_TO_STOP_DB_INSTANCE_ERR

INS-30281: Installer was unable to stop the following database instance(s) from node (*string*) : (*string*)

Cause: n/a

Action: It is recommended to stop the databases instance(s) manually and retry the job or the out of place patching operation. *FQN:

oracle.install.library.resource.CommonErrorCode.UNABLE_TO_STOP_DB_INSTANCE_ERR

INS-30282: Installer was unable to start the database instance(s) (*string*).

Cause: n/a

Action: It is recommended to start the databases instance(s) manually and retry the job or the out of place patching operation. *FQN:

oracle.install.library.resource.CommonErrorCode.UNABLE_TO_START_DB_INSTANCE_ERR

INS-30501: Automatic Storage Management software is not configured on this system.

Cause: Prior to configuring a database to use Automatic Storage Management (ASM), you must install and configure Grid Infrastructure, which includes ASM software.

Action: Grid Infrastructure can be installed from the separate installation media included in your media pack. Alternatively, it can be downloaded separately from Electronic Product Delivery (EPD) or the Oracle Technology Network (OTN). This is typically installed as a separate operating system user than the Oracle database and may have been installed by your system administrator. See the installation guide for more details. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_INSTANCE_NOT_FOUND

INS-30502: No ASM disk group found.

Cause: There were no disk groups managed by the ASM instance %s.

Action: Use Automatic Storage Management Configuration Assistant to add disk groups. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.NO_ASM_DISKGROUP_FOUND

INS-30503: Unknown ASM disk group.

Cause: There was no disk groups named %s managed by ASM instance %s.

Action: Enter a valid existing ASM disk group or use Automatic Storage Management Configuration Assistant to add the desired ASM disk group. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.UNKNOWN_ASM_DISKGROUP

INS-30504: Missing ASM disk group name.

Cause: ASM disk group name was not specified.

Action: Enter a valid ASM disk group name. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_DISKGROUP_NAME_EXPECTED

INS-30505: Invalid disk group name.

Cause: The disk group name specified was invalid. It must start with an alphabetic character, and consist of up to 30 characters which are alphabetic, numeric, or the underscore character _.

Action: Enter a valid disk group name containing only alphanumeric characters and possibly a few special characters allowed by your platform. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INVALID_ASM_DISKGROUP_NAME

INS-30506: Invalid redundancy level.

Cause: Redundancy level was invalid.

Action: Choose a valid redundancy level: Extended, Flex, High, Normal or External. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INVALID_ASM_DISKGROUP_REDUNDANCY

INS-30507: Empty ASM disk group.

Cause: No disks were selected from a managed ASM disk group.

Action: Select appropriate number of disks from a managed ASM disk group. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EMPTY_ASM_DISKGROUP

INS-30508: Invalid ASM disks.

Cause: The disks %s were not valid.

Action: Please choose or enter valid ASM disks. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INVALID_ASM_DISKS

INS-30509: Insufficient space available in the selected disk group.

Cause: Insufficient space available in the selected disk group. At least, %s of space is required.

Action: Use Automatic Storage Management Configuration Assistant to add more disks to the selected disk group or create a new disk group with as least %s of space. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_SPACE_IN_ASM_DISKGROUP

INS-30510: Insufficient number of ASM disks selected.

Cause: The number of disks selected were insufficient for the selected redundancy level.

Action: For a disk group with redundancy level '%s', at least '%s' disks are recommended.

*FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_MEMBERS_DISKS

INS-30511: An older ASM instance was found.

Cause: Automatic Storage Management (ASM) %s instance is found.

Action: Upgrade the existing ASM instance to version %s. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.OLDER_ASM_INSTANCE_VERSION_FOUND

INS-30512: Automatic Storage Management software is not configured on this cluster.

Cause: Prior to configuring a cluster database to use Automatic Storage Management (ASM), you must configure ASM software in the Grid Infrastructure home.

Action: Grid Infrastructure installation on this cluster was only configured to run Oracle Clusterware. You will need to go back to the Grid Infrastructure home and configure ASM for storing database. Grid Infrastructure is typically installed as a separate operating system user than the Oracle database and may have been installed by your system administrator. See the installation guide for more details. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.RAC_ASM_INSTANCE_NOT_FOUND

INS-30513: ASM instance is not running on one or more nodes in the cluster.

Cause: The following nodes did not have an ASM instance running on them. Node list: %s.

Action: Before creating a database that uses ASM on all of the nodes chosen for this installation, you should extend the ASM cluster of instances using the Add Instance procedure to the desired set of nodes. Node list: %s. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.NODE_DOES_NOT_HAVE_ASM

INS-30514: The ASM diskgroup name has exceeded *string* characters.

Cause: n/a

Action: Specify diskgroupname lesser than %s characters. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.DISKGROUP_NAME_SIZE_EXCEEDED

INS-30515: Insufficient space available in the selected disks.

Cause: Insufficient space available in the selected Disks. At least, %s of free space is required.

Action: Choose additional disks such that the total size should be at least %s. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_SPACE_IN_ASM_DISKS

INS-30516: Please specify unique disk groups.

Cause: Installer has detected that the diskgroup name provided already exists on the system.

Action: Specify different disk group. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.NON_UNIQUE_ASM_DISKS

INS-30517: Automatic Storage Management software is not configured on this system.

Cause: n/a

Action: n/a *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_NOT_COMPATIBLE

INS-30518: Invalid Disk Discovery Path specified.

Cause: Blank space and the following list of characters are not allowed: (%s).

Action: Ensure Disk Discovery Path provided does not contain invalid characters. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INVALID_DISK_DISCOVERY_STRING

INS-30519: Allocation unit size can only be one of the following value set *string*.

Cause: The allocation unit size (AU Size) is set to an invalid number.

Action: Set the allocation unit size be one of the following value set %s. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_DISKGROUP_AUSIZE_NOT_VALID

INS-30520: Incorrect Disk Group name specified.

Cause: The Disk Group name specified is incorrect. Disk Group name cannot be a SQL reserved word.

Action: Enter a Disk Group name that is not a SQL reserved word. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INCORRECT_ASM_DISKGROUP_NAME

INS-30521: The size of disks selected is not the same so as to allow for equal number of *string* MB AU size blocks.

Cause: n/a

Action: Specify disks of same size, or consider changing the value for AU Size. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.DIFFERENT_ASM_MEMBER_DISK_SIZE

INS-30522: Selected Disk group can not be used as storage location.

Cause: Installer has detected that the value of ASM compatibility attribute of the diskgroup %s is %s. The value of the attribute should be at least %s to use it as storage location for the database.

Action: Update the value of ASM compatibility attribute of the diskgroup to %s. Refer to the Storage Administration documentation for further information. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INCORRECT_ASM_COMPATIBILITY_VERSION

INS-30523: Insufficient space available in the server clusters disk group.

Cause: The selected diskgroup does not have sufficient space. A minimum of %s MB is required.

Action: Add new disks to the disk group to meet the space requirement. Alternatively, select a new diskgroup with required space of %s MB. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_SPACE_IN_SERVER_CLUSTER_ASM_DISKGROUP

INS-30524: Installer has detected that failure group is not assigned to some of the disks.

Cause: n/a

Action: Either none or all the disks should have a failure group assigned. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_FAILURE_GROUPS_SPECIFIED

INS-30525: Insufficient number of failure groups specified for *string* Redundancy level.

Cause: n/a

Action: For a disk group storing OCR with %s redundancy level, at least %s unique failure groups should be configured. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_FAILURE_GROUPS_FOR_SELECTED_REDUNDANCY

INS-30526: Installer has detected that unequal number of disks assigned to some of the failure groups.

Cause: n/a

Action: The number of disks in each failure group should be equal. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_DISKS_IN_FAILURE_GROUPS

INS-30527: Selected disks cannot overlap between disk groups.

Cause: Installer has detected that the disk %s chosen is part of another diskgroup.

Action: Please choose a valid ASM disk. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.SELECTED_ASM_DISKS_OVERLAP

INS-30528: Invalid GIMR diskgroup name (*string*).

Cause: Installer has detected that GIMR diskgroup name (%s) is same as ASM diskgroup name %s.

Action: Provide a different diskgroup name. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_GIMR_DISK_GROUP_NAME_MATCH

INS-30529: Duplicate Failure group(s) (*string*) provided.

Cause: n/a

Action: Only Unique failure group(s) are allowed. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_DUPLICATE_FAILURE_GROUP_NAME_FOUND

INS-30530: Following specified disks have invalid header status: *string*.

Cause: n/a

Action: Ensure only Candidate or Provisioned disks are specified. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_DISKS_INVALID_HEADER_STATUS

INS-30531: No sites provided to create disk group for Extended cluster.

Cause: n/a

Action: Specify sites and failure groups to create disk group for Extended cluster.
*FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_NO_SITES_PROVIDED

INS-30532: Installer has detected that no site is marked as QUORUM. A site is identified as QUORUM only if all the failure groups assigned to it are QUORUM.

Cause: n/a

Action: Specify a QUORUM site to proceed. *FQN:
oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_NO_QUORUM_SITE_PROVIDED

INS-30533: Invalid number of data sites provided for creating disk group for Extended cluster.

Cause: n/a

Action: Specify only %s data sites to proceed. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_INSUFFICIENT_NUMBER_OF_DATA_SITES

INS-30534: Invalid number of sites provided for creating disk group for Extended cluster. Ensure that failure groups are assigned to sites.

Cause: n/a

Action: Specify only %s sites to proceed. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_INSUFFICIENT_NUMBER_OF_SITES

INS-30535: Incorrect number of failure groups specified per data site.

Cause: n/a

Action: Specify %s failure group(s) for each data site. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_FAILURE_GROUPS_IN_SITES

INS-30536: Insufficient number of failure groups specified per QUORUM site.

Cause: n/a

Action: Specify at least %s failure group(s) for the QUORUM site. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_FAILURE_GROUPS_IN_SITES_QUORUM

INS-30537: Insufficient Failure group names specified for disks.

Cause: The list of failure groups specified %s for the disk group does not match with the list of failure groups %s selected for the disks.

Action: All failure groups specified should have disk(s) assigned. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_ALL_SPECIFIED_FAILURE_GROUPS_NOT_SELECTED_FOR_DISKS

INS-30538: No Failure group is marked for disks.

Cause: n/a

Action: Assign a failure group for each selected disk. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_NO_FAILURE_GROUPS_SELECTED_FOR_DISKS

INS-30539: Insufficient number of cluster nodes assigned to sites.

Cause: Installer has detected that there is no cluster node assigned to site %s.

Action: It is recommended that at least 1 cluster node should be assigned to each site.

*FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_NODES_PER_SITE

INS-30540: Mixed failure group types are not permitted in a site.

Cause: Site %s has failure groups marked as quorum and regular (non-quorum).

Action: A site can have only Quorum failure groups or only Regular failure groups.

*FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_EXTENDED_CLUSTER_MIXED_FAILURE_GROUPS_SPECIFIED_PER_SITE_ERROR

INS-30541: Insufficient number of disks assigned to quorum failure group *string*.

Cause: n/a

Action: Specify at least one disk per QUORUM failure group. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_NUMBER_OF_DISKS_IN_QUORUM_FAILURE_GROUPS

INS-30542: Failure group name: *string* is invalid. It does not start with an alphabet.

Cause: n/a

Action: Provide a value for the failure group name that starts with an alphabet. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INVALID_FAILURE_GROUP_NAME

INS-30543: Installer has detected that one or more of the selected disk(s) is larger than *string* terabytes (TB). Because of this, the Oracle Database compatibility level (COMPATIBLE.RDBMS attribute) of the diskgroup (*string*) will be set to *string*. This means that, in order to use the diskgroup for data storage, the COMPATIBLE initialization parameter of the Oracle Database should be greater than or equal to *string*.

Cause: The following disks are larger than %s terabytes (TB): %s.

Action: n/a *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.ASM_DISK_SIZE_PASSES_RDBMS_COMPATIBILITY_LIMIT

INS-30544: Empty Disk Discovery Path.

Cause: The Disk Discovery Path was not specified.

Action: Specify a valid Disk Discovery Path. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EMPTY_DISK_DISCOVERY_STRING

INS-30545: Installer has detected that there are no ASM disk groups found with sufficient space for the Oracle Autostart Upgrade to continue. At least, one disk group is required with *string* of space.

Cause: n/a

Action: Use Automatic Storage Management Configuration Assistant to create disk group with at least %s of free space. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.NO_ASM_DISKGROUP_FOUND_WITH_SUFFICIENT_SPACE

INS-30546: Insufficient number of non-quorum (regular) failure groups specified for *string* Redundancy level.

Cause: n/a

Action: For a disk group with %s redundancy level at least %s unique non-quorum failure groups should be configured. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.INSUFFICIENT_REGULAR_FAILURE_GROUPS_FOR_SELECTED_REDUNDANCY

INS-30547: Installer has detected that the selected disks are not equally distributed among the cells.

Cause: n/a

Action: Ensure that equal number of disks from each cell is specified. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EXADATA_UNEQUAL_NUMBER_OF_DISKS_PER_CELL

INS-30548: n/a

Cause: n/a

Action: n/a *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EXADATA_DISK_CELL_AND_DISK_FG_MAPPING_ERROR

INS-30549: Installer has detected that the disk *string* is mapped to site *string*, however user specified an incorrect site name *string*.

Cause: n/a

Action: Ensure that the correct site name is specified. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EXADATA_EXTENDED_CRS_SITE_NAME_INVALID_ERR

INS-30550: Insufficient number of cells specified for *string* Redundancy level.

Cause: n/a

Action: For a disk group with %s redundancy level, disks from %s unique cells should be selected. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EXADATA_INSUFFICIENT_CELLS_FOR_SELECTED_REDUNDANCY

INS-30551: Insufficient number of non-quorum (regular) disks specified for *string* Redundancy level.

Cause: n/a

Action: For a disk group with %s redundancy level, at least %s unique non-quorum disks should be selected. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.EXADATA_INSUFFICIENT_NON_QUORUM_DISKS_FOR_SELECTED_REDUNDANCY

INS-30552: ASM disks could not be found in the provided Disk Discovery String Path.

Cause: n/a

Action: Specify ASM disks present in %s, or consider changing the value for Disk Discovery String Path. *FQN:

oracle.install.asm.bean.ASMInputValidationErrorCode.MISMATCH_DISKPATH_AND_DISK_DISCOVERY_STRING

INS-30601: File access permissions error encountered.

Cause: n/a

Action: Ensure proper file access permissions are granted. *FQN:

oracle.install.asm.util.ASMUtilityErrorCode.ASMUTILITY_INIT_FAILED

INS-30602: ASM access denied.

Cause: A connection to the Automatic Storage Management (ASM) instance on this system could not be established.

Action: To ensure a proper connection, the operating system user performing this installation must be a member of the OSDBA group of the ASM instance. See the installation guide for more information on the proper system setup required for running ASM and database instances as separate operating system users. Refer to Oracle error description for ORA-01031 for additional details. *FQN:
oracle.install.asm.util.ASMUtilityErrorCode.ASM_ACCESS_DENIED

INS-30603: Cluster Ready Services (CRS) is not running on local node.

Cause: n/a

Action: Perform a CRS, Grid Infrastructure, installation and configuration. *FQN:
oracle.install.asm.util.ASMUtilityErrorCode.INTERNAL_ERROR

INS-30604: Required drivers are not found to perform the operation.

Cause: n/a

Action: Ensure that all required drivers were installed. *FQN:
oracle.install.asm.util.ASMUtilityErrorCode.DRIVER_NOT_FOUND

INS-30605: The ASM instance is detected to be not running.

Cause: n/a

Action: Bring up the ASM instance in order to proceed. *FQN:
oracle.install.asm.util.ASMUtilityErrorCode.ASM_INSTANCE_DOWN

INS-30606: Partial installation of ASM home is detected.

Cause: n/a

Action: Clean up ASM home and reinstall ASM. *FQN:
oracle.install.asm.util.ASMUtilityErrorCode.CORRUPT_ASM_HOME

INS-30607: No ASM found on the box.

Cause: n/a

Action: n/a *FQN: oracle.install.asm.util.ASMUtilityErrorCode.NO_ASM_FOUND

INS-30608: Failed to export ASM credentials.

Cause: n/a

Action: Check if you have permissions to export ASM credentials stored in OCR.
*FQN: oracle.install.asm.util.ASMUtilityErrorCode.CREDENTIALS_EXPORT_FAILED

INS-32001: No value has been given for the Password field.

Cause: n/a

Action: Specify a value for the password field. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PASSWORD_IS_EMPTY_ER
R

INS-32002: The password entered in the Confirm password field did not match the password entered in the Password field.

Cause: n/a

Action: Enter the same password in both Password and Confirm password fields for confirmation purposes. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PASSWORDS_NOT_SAME_ERR

INS-32003: Passwords do not match for *string* user.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PASSWORDS_NOT_SAME_PROMPT

INS-32007: *string* contains invalid characters.

Cause: n/a

Action: Choose an %s that does not have invalid characters ('#','\$'). *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BASE_AND_HOME_INVALID_CHARS_ERR

INS-32008: Oracle base location cannot be same as the user home directory.

Cause: n/a

Action: Provide an Oracle base location other than the user home directory. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_USER_HOME_AS_ORACLE_BASE_LOCATION_WRN

INS-32009: The specified *string* '*string*' contains one or more non-ASCII characters.

Cause: n/a

Action: Ensure the %s only contains ASCII characters. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_CONTAINS_NON_ASCII_CHARS_ERR

INS-32010: The specified *string* contained one or more invalid characters.

Cause: n/a

Action: Choose a %s containing only alphanumeric characters and a few additional characters that are allowed for your platform. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_BADCHARS_ERR

INS-32011: The *string* that you have specified contains the space character.

Cause: n/a

Action: Specify a string containing only alphanumeric, and a few additional characters that are allowed for your platform. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_SPACECHAR_ERR

INS-32012: Unable to create directory: *string*, on this server.

Cause: Either proper permissions were not granted to create the directory or there was no space left in the volume.

Action: Check your permission on the selected directory or specify a different directory. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_DIRECTORY_CREATION_ERR

INS-32013: The *string* is empty.

Cause: n/a

Action: Specify a path for %s. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_LOC_EMPTY_ERR

INS-32014: The specified *string* (*string*) is invalid.

Cause: The %s cannot be placed directly on a drive.

Action: Specify a valid %s. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_LOCATION_ON_WIN_DRIVE

INS-32015: The location specified for *string* is invalid.

Cause: The specified location cannot be used for %s. Either the specified location is not found on the system or is detected to be a file.

Action: Specify a valid location for %s. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVALID_ORACLE_HOME_LOCATION_ERR

INS-32016: The selected Oracle home contains directories or files.

Cause: n/a

Action: To start with an empty Oracle home, either remove its contents or specify a different location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_SPECIFIED_NON_EMPTY_DIRECTORY_WRN

INS-32017: Invalid path specified for *string*.

Cause: Path specified for %s contains one or more folders which exceeds maximum folder name length.

Action: Specify the location which contains folders name length not more than %s characters. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_FOLDER_NAME_LENGTH_EXCEEDED_ERR

INS-32018: The selected Oracle home is outside of Oracle base.

Cause: n/a

Action: Oracle recommends installing Oracle software within the Oracle base directory. Adjust the Oracle home or Oracle base accordingly. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_HOME_NOT_IN_BASE_WRN

INS-32019: Insufficient disk space at the specified Oracle base location (*string*). *string* of free disk space is required for Oracle base.

Cause: The Oracle base will be used to store diagnostics data of the Oracle Member clusters that are configured to use the services of this Domain Services cluster.

Action: Provide a different location for Oracle base, that has enough space or free up space on the existing volume. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_CRSBASE_MIN_FREE_DISK_SPACE_FOR_DC_WRN

INS-32020: Installer has detected that the available disk space on the volume for the specified Oracle base location (*string*) is less than the recommended value.

Cause: n/a

Action: It is recommended that the volume for the Oracle base have at least %s of available disk space. Choose a location that has sufficient available disk space or free up space on the existing volume. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_CRS_BASE_MIN_FREE_DISK_SPACE_WRN

INS-32021: Installer has detected that the available disk space on the volume for Oracle home (*string*) is insufficient.

Cause: n/a

Action: Choose a location for Oracle home that has enough space (minimum of %s) or free up space on the existing volume. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_MIN_FREE_DISK_SPACE_ERR

INS-32022: Grid infrastructure software for a cluster installation must not be under an Oracle base directory.

Cause: Grid infrastructure for a cluster installation assigns root ownership to all parent directories of the Grid home location. As a result, ownership of all named directories in the software location path is changed to root, creating permissions errors for all subsequent installations into the same Oracle base.

Action: Specify software location outside of an Oracle base directory for grid infrastructure for a cluster installation. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_HOME_IN_BASE_WRN

INS-32023: Insufficient disk space on the volume for the specified Oracle base '*string*'.

Cause: n/a

Action: Choose a location for Oracle base that has enough space (minimum of %s) or free up space on the existing volume. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_CRS_BASE_MIN_FREE_DISK_SPACE_ERR

INS-32024: The specified location for Oracle base '*string*' is invalid.

Cause: The specified Oracle base location is identical to an existing Oracle home location.

Action: Specify a different location for Oracle base. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_AS_ORACLE_BASE_LOCATION_ERR

INS-32025: The chosen installation conflicts with software already installed in the given Oracle home.

Cause: n/a

Action: Install into a different Oracle home. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_NOT_COMPATIBLE_ERR

INS-32026: The Software location specified should not be under Oracle base location.

Cause: Grid Infrastructure for a Cluster installation will assign root ownership to all parent directories of Oracle Clusterware software location. As a result, all named directories in the software location path will acquire root ownership. This may create problems for subsequent installations into the same Oracle base.

Action: Specify software location outside of Oracle base. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_HOME_IN_BASE_ERR

INS-32027: The ORACLE_HOME environment variable is currently set and this value is not same as the specified path for software location. This may impact the proper configuration of software.

Cause: n/a

Action: Unset the ORACLE_HOME environment variable and then restart the installer.

*FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_ENV_SET_ERR

INS-32028: The Installer has detected that the Oracle base location is not empty in following nodes: *string*.

Cause: n/a

Action: Oracle recommends that the Oracle base location is empty. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BASE_NOT_EMPTY_IN_REMOTE_NODES

INS-32029: The Installer has detected that the Oracle base location is not empty.

Cause: n/a

Action: Oracle recommends that the Oracle base location is empty. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BASE_NOT_EMPTY

INS-32030: The location for Central Inventory was not specified.

Cause: n/a

Action: Provide a valid location for the inventory. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_LOC_EMPTY_ERR

INS-32031: Invalid inventory location.

Cause: n/a

Action: Specify a valid inventory location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_INVALID_INV_LOCATION_ERR

INS-32033: Central Inventory location is not writable.

Cause: n/a

Action: Ensure that the inventory location is writable. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_INV_NO_WRITE_PERMISSION_ERR

INS-32034: Invalid characters specified for the inventory directory '*string*'.

Cause: n/a

Action: The inventory directory can contain only alphanumeric, hyphen, and underscore characters. *FQN:

oracle.install.iww.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_INV_INVALID_CHARS

INS-32035: The location (*string*) specified for the central inventory is not empty.

Cause: The specified central inventory location is either locked by different install session, or the location specified does not have write permissions for the logs.

Action: Specify an empty location for the inventory. *FQN:

oracle.install.iww.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_LOC_DIRTY

INS-32036: It is not recommended to use the user home directory '*string*' as central inventory location.

Cause: User home directory has been chosen as inventory directory. Oracle recommends that the inventory directory is not user home directory, because members of inventory group will be given write permission to the inventory directory.

Action: Choose a directory other than users home as inventory location. *FQN:

oracle.install.iww.common.resource.CommonErrorCode.USER_HOME_NOT_ALLOWED_AS_INV_LOC

INS-32037: The operating system group for the Central Inventory (*oraInventory*) ownership was not specified.

Cause: n/a

Action: Specify an operating system group whose members should have write permission to the Central Inventory directory (*oraInventory*). *FQN:

oracle.install.iww.common.resource.CommonErrorCode.ORAINVENTORY_GROUP_NOT_SPECIFIED

INS-32038: The operating system group (*string*), specified for central inventory (*oraInventory*) ownership, is invalid.

Cause: The user performing the installation (%s) is not a member of the operating system group (%s).

Action: Specify an operating system group that the installing user (%s) is a member of. All the members of this operating system group will have write permission to the central inventory directory (*oraInventory*). *FQN:

oracle.install.iww.common.resource.CommonErrorCode.INVALID_ORAINVENTORY_GROUP

INS-32039: Inappropriate file permissions for the specified inventory location (*string*).

Cause: The installer user (%s) and the inventory group (%s) do not match with the current owner user %s and group %s of the inventory location.

Action: Ensure that the owner user and group of the inventory location are the same as the installer user and the inventory group, respectively. *FQN:

oracle.install.iww.common.resource.CommonErrorCode.INSTALL_COMMON_INV_USER_GROUP_MATCH_ERR

INS-32040: The central inventory location provided is not empty on remote nodes *string*.

Cause: n/a

Action: Please provide a different location for the inventory, or clean up the current location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_LOC_REMOTE_DIRTY

INS-32041: Unable to create a new central inventory directory: *string*.

Cause: The central inventory location provided is not empty or corrupted.

Action: Please clean up the inventory location: %s. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_WINDOWS_INVENTORY_LOC_DIRTY

INS-32042: The Installer has detected that the user (*string*) is not member of the central inventory group: *string*.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ACTIONABLE_INSTALL_COMMON_INVENTORY_LOC_REMOTE_DIRTY

INS-32043: The Installer has detected that remote nodes *string* have an existent central inventory in a different location than *string*.

Cause: Unexpected error occurred while trying to check free disk space across nodes.

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ACTIONABLE_FREE_SPACE_CHECK_OPERATION_FAILED

INS-32044: The Installer has detected that the inventory location *string* is not empty in following remote nodes: *string*.

Cause: Specified location is on a volume with insufficient disk space. Required disk space: %s.

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ACTIONABLE_INSTALL_COMMON_INSUFFICIENT_SPACE_AVAILABLE_ERR

INS-32045: The Installer has detected that the inventory location *string* is not writable in following remote nodes: *string*.

Cause: n/a

Action: Make sure that the inventory location is writable in the remote nodes. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.REMOTE_INVENTORY_NOWRITABLE_LOCATION

INS-32046: The Installer has detected that the home name (*string*) is already in use on following remote nodes: *string*.

Cause: n/a

Action: Detach the homes that are using the home name (%s) from the central inventory of such remote nodes. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.HOME_NAME_ALREADY_USED_I
N_REMOTE_INVENTORY

INS-32047: The location (*string*) specified for the central inventory is not empty.

Cause: n/a

Action: It is recommended to provide an empty location for the inventory. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_
LOC_DIRTY_WARN

INS-32048: Inappropriate user ownership of the specified inventory location (*string*).

Cause: The provided inventory location (%s) is owned by user (%s).

Action: Either ensure that user (%s) is the owner of the specified inventory location, remove
it, or specify a different valid location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_
WRONG_USER

INS-32049: Inappropriate group ownership of the specified inventory location (*string*).

Cause: The provided inventory location (%s) owner group is (%s).

Action: Either ensure that group (%s) is the owner group of the specified inventory location,
remove it, or specify a different valid location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_
WRONG_GROUP

**INS-32050: Install user (*string*) does not have sufficient access permissions for the
given central inventory.**

Cause: User does not have read or write permissions for %s under the central inventory.

Action: Ensure that all the folders under the central inventory has read and write permissions
for the install user. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_
PERMISSIONS_NOT_VALID

**INS-32051: Install user (*string*) does not have sufficient access permissions for the
given central inventory.**

Cause: User does not have read permission for %s under the central inventory.

Action: Ensure that all the files and folders under the central inventory have read permission
for the install user. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVENTORY_
NOTREADABLE_FILES_FOUND

INS-32052: Oracle base and Oracle home locations are same.

Cause: n/a

Action: Oracle base and Oracle home locations cannot be same. Oracle recommends
installing Oracle software within the Oracle base directory. Adjust the Oracle home or Oracle
base accordingly. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BA
SE_SAME_AS_ORACLE_HOME

**INS-32053: The specified Oracle home name (*string*) is already assigned to a different
Oracle home.**

Cause: n/a

Action: Abort this installation session and try again specifying an unique Oracle home name. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_HOME_NAME_ALREADY_EXISTS

INS-32054: The Central Inventory *string* is located on a shared file system.

Cause: n/a

Action: Oracle recommends placing this Central Inventory on a local file system that is not shared by other systems, because it is a server-specific inventory of the installation on this server. Oracle strongly recommends that you move the Central Inventory to a local disk so that installations from other servers do not corrupt the Central Inventory for this server. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INVENTORY_ON_SHARED_LOC

INS-32055: The Central Inventory is located in the Oracle base.

Cause: n/a

Action: Oracle recommends placing this Central Inventory in a location outside the Oracle base directory. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INVENTORY_IN_ORACLE_BASE

INS-32056: The specified Oracle base contains the existing Central Inventory location: *string*.

Cause: n/a

Action: Oracle recommends that the Central Inventory location is outside the Oracle base directory. Specify a different location for the Oracle base. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BASE_PARENT_OF_EXISTING_INVENTORY

INS-32060: Unable to create directory *string* on node(s) *string*.

Cause: n/a

Action: Ensure that you have the necessary permissions to create the directory on the specified node(s). *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.DIRECTORY_NOT_WRITABLE_ON_NODE

INS-32061: The selected ASM disk group is invalid or non-existent.

Cause: n/a

Action: Ensure that the selected ASM disk group exists and is valid. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVALID_DISKGROUP_ERR

INS-32062: Unable to create *string* location.

Cause: n/a

Action: Provide the absolute path for the %s location. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_NO_ABSOLUTE_PATH

INS-32063: Could not get the attributes from file (*string*).

Cause: n/a

Action: Ensure that you have the necessary permissions to create the directory on the specified node(s). *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ACTIONABLE_DIRECTORY_NOT_WRITABLE_ON_NODE

INS-32064: The specified path for *string* is not absolute: *string*.

Cause: n/a

Action: Provide a valid absolute path. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_PATH_NOT_ABSOLUTE

INS-32065: The specified path for *string* is not canonical: *string*.

Cause: The path should be provided in its canonical form: %s.

Action: Provide a valid canonical path. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_PATH_NOT_CANONICAL

INS-32066: Microsoft Transaction Services (MTS) port is blank or containing non-numeric character.

Cause: n/a

Action: Provide a valid value for MTS port. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INVALID_MTS_PORT

INS-32067: The value you have entered for Microsoft Transaction Services (MTS) Port, *string*, is already in use.

Cause: n/a

Action: Specify a valid port number. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.MTS_PORT_NOT_AVAILABLE

INS-32068: The value specified for Microsoft Transaction Services (MTS) Port number, *string*, is out of valid range.

Cause: n/a

Action: Enter a MTS Port number between 1024 and 65535. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.OUT_OF_RANGE_MTS_PORT

INS-32069: Could not determine if the specified path for *string* is canonical: *string*.

Cause: n/a

Action: Provide a valid path. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_PATH_CANNOT_GET_CANONICAL

INS-32070: Could not remove the nodes *string* corresponding to following error code: *string*.

Cause: Installer requires that a minimum of %s nodes remain for the Oracle Grid Infrastructure configuration to proceed.

Action: Ensure that at least %s nodes remain for the configuration to proceed, otherwise specify a single cluster node information. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ACTIONABLE_LEAVING_LESS_NODES_THAN_LIMIT

INS-32071: The specified location *string* on node *string*, contains the following files/directories, which are not writable by OS user *string*: *string*.

Cause: n/a

Action: Ensure that all the files/directories under path %s has read and write permissions for the install user, on the specified node(s). *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.DIRECTORY_NOT_ACCESSIBLE_ON_NODE

INS-32075: At least one product language must be selected.

Cause: No product language selected for installation.

Action: Select at least one product language for installation. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PRODUCT_LANGUAGES_SELECTED_IS_EMPTY

INS-32076: English cannot be removed from the selected languages list.

Cause: An attempt was made to remove English from the selected languages list.

Action: Select English as one of the selected product languages. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PRODUCT_LANGUAGE_ENGLISH_IS_MANDATORY

INS-32077: The following selected languages are not supported: *string*.

Cause: Not all selected product languages are supported.

Action: Refer to the sample response file for more information. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PRODUCT_LANGUAGES_UN_SUPPORTED

INS-32090: Software installation was unsuccessful.

Cause: n/a

Action: Refer to the log files for details or contact Oracle Support Services. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.SETUP_FAILED

INS-32091: Software installation was successful. But some configuration assistants failed, were cancelled or skipped.

Cause: n/a

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOL_FAILED

INS-32092: User Name is empty.

Cause: n/a

Action: Specify a value for the username field. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.USER_NAME_EMPTY

INS-32093: Virtual Account is not supported.

Cause: n/a

Action: Specify Oracle home User. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.VIRTUAL_ACCOUNT_USER_NOT_SUPPORTED

INS-32094: Specified Oracle home user has invalid characters.

Cause: n/a

Action: Make sure you specify a username with valid characters. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_USER_NAME_HAS_INVALID_CHAR_ERR

INS-32095: Specified user has administrative privileges.

Cause: You have selected a user which has administrative privileges to be the Oracle home user.

Action: Make sure you specify a non-administrative user or revoke the administrative privileges for this user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ADMINISTRATOR_USER

INS-32096: n/a

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_PASSWORD_DOESNOT_MATCH

INS-32097: The specified username and password are not valid.

Cause: n/a

Action: Specify a valid username and password combination. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_NOT_VALID_USER

INS-32098: The password field was not specified.

Cause: n/a

Action: Provide a non-empty password. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_NO_PASSWORD_SPECIFIED

INS-32099: The username field was not specified.

Cause: n/a

Action: Provide a valid username. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_NO_USERNAME_SPECIFIED

INS-32100: Specified Oracle home user is not domain User.

Cause: You have selected a local user to be the Oracle home user.

Action: Make sure you specify a domain user for Oracle home user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_NO_DOMAIN_USER

INS-32101: Specified Oracle home user does not exist.

Cause: n/a

Action: Make sure you specify an existing user for Oracle home user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_SPECIFIED_USER_DOESNOT_EXISTS

INS-32102: Specified Oracle home user already exist.

Cause: n/a

Action: Make sure you specify a non existing user for Oracle home user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_SPECIFIED_USER_EXISTS

INS-32103: Specified Oracle home user does not match with existing Home user you are trying to upgrade.

Cause: n/a

Action: Make sure you specify Oracle home user of Oracle home that you are trying to upgrade. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_EXISTING_HOME_USER_NOT_MATCHING

INS-32104: Specified Oracle home user is not the owner of the specified Oracle base.

Cause: n/a

Action: Make sure you specify Oracle home user who has ownership of the selected Oracle base. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_HOME_USER_NOT_OWNER_OF_SPECIFIED_OB

INS-32105: The specified password does not comply with Windows system policies.

Cause: You have selected a new user to be the Oracle home user, however password entered cannot be used because of Windows system policies.

Action: Specify a password which complies with Windows system policies. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_SPECIFIED_INVALID_PASSWORD

INS-32106: Specified user *string* cannot be designated as Oracle home User.

Cause: Installer has detected that the specified user has administrative privileges on the following nodes: %s.

Action: Specify a user without administrative privileges or revoke the administrative privileges for this user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ADMINISTRATOR_USER_NODE

INS-32107: Virtual Account is not supported on environments where Oracle Grid Infrastructure for a Cluster is configured.

Cause: n/a

Action: Specify a different account type. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.VIRTUAL_ACCOUNT_USER_NOT_SUPPORTED_CRS_CONFIGURED

INS-32108: The specified path *string* does not have a valid mountpoint.

Cause: n/a

Action: Specify a different path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_MOUNTPOINT_NOT_EXIST

INS-32109: The specified path *string* does not have a valid drive.

Cause: n/a

Action: Specify a different path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_DRIVE_NOT_EXIST

INS-32110: The password of Oracle home user was not specified.

Cause: n/a

Action: Provide a valid password. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_OHUSER_NO_PASSWORD_SPECIFIED

INS-32111: The patch download location provided is empty.

Cause: The patch download location cannot be empty.

Action: Provide the location where the updates have been downloaded. *FQN:
oracle.install.ivw.common.resource.AutoUpdatesErrorCode.PATCHDOWNLOAD_LOCATION_EMPTY

INS-32112: Unable to retrieve the details from the downloaded metadata.

Cause: The downloaded metadata for software updates is not properly formatted.

Action: Refer to the logs or contact Oracle Support Services. *FQN:
oracle.install.ivw.common.resource.AutoUpdatesErrorCode.METADATA_PARSE_FAILED

INS-32113: Unable to read the updates location.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.AutoUpdatesErrorCode.UPDATES_SECTION_MISSING

INS-32114: Check the My Oracle Support user name.

Cause: The user name provided is invalid. It either contains invalid characters or does not follow the standard e-mail address format.

Action: Specify an e-mail address that is consistent with RFC 2822 and RFC 2821 format.
*FQN:
oracle.install.ivw.common.resource.AutoUpdatesErrorCode.MYORACLESUPPORT_USERNAME_INVALID

INS-32115: Insufficient space in the download location provided.

Cause: The location provided does not have space for downloading all the updates.

Action: Choose a location with enough space or free up space on the existing volume.

*FQN:

oracle.install.ivw.common.resource.AutoUpdatesErrorCode.INSUFFICIENT_SPACE_I
N_DOWNLOAD_LOC

INS-32116: The location specified may contain already downloaded software updates. Downloading at this location will overwrite the existing software updates.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.AutoUpdatesErrorCode.EXISTENT_UPDATES_L
OCATION_PROVIDED

INS-32117: My Oracle Support credentials provided does not have download privileges.

Cause: n/a

Action: Provide My Oracle Support credentials with download privileges in order to check for latest updates. *FQN:

oracle.install.ivw.common.resource.AutoUpdatesErrorCode.NO_DOWNLOAD_PRIVI
LEGES

INS-32118: Proxy information required for the connection to My Oracle Support is not provided.

Cause: n/a

Action: Provide the proxy information required to connect to My Oracle Support.

*FQN:

oracle.install.ivw.common.resource.AutoUpdatesErrorCode.NO_PROXY_PROVIDED

INS-32121: Script '*string*' failed.

Cause: Script failed. This might be due to invalid parameters specified for running the script.

Action: Review the log file for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_CON
FIG_EXCEPTION

INS-32122: Script '*string*' failed.

Cause: Installer is unable to connect to a node for running the script using specified configuration method.

Action: Review the log file '%s' for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_CLU
STER_EXCEPTION

INS-32123: Script '*string*' failed on nodes: *string*.

Cause: Installer has failed to run the specified script on one or more nodes. This might be because of exception occurred while running the script on nodes.

Action: Review the log files '%s' and '%s' for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_COM
POSITE_OPERATION_EXCEPTION

INS-32124: Script '*string*' failed.

Cause: Installer has failed to run the specified script on the local node (first node). This might be because of exception occurred while running the script on the local node.

Action: Review the log file '%s' for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_FIRST_NODE_EXCEPTION

INS-32125: Script '*string*' failed.

Cause: Installer has failed to run the specified script on the last node. This might be because of exception occurred while running the script on the last node.

Action: Review the log file '%s' for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_LAST_NODE_EXCEPTION

INS-32126: Script '*string*' failed.

Cause: Configuration object which is used for running the script is not initialized.

Action: Review the log file for further details. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_CONFIG_OBJECT_NULL_EXCEPTION

INS-32127: '*string*' password is not specified. Specify a valid password.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_CONFIG_PASSWORD_EMPTY

INS-32128: Installer has failed to login as root user with the specified password. Specify a valid root user password.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_USER_PASSWORD_INVALID

INS-32129: Sudo program path is not specified for script configuration. Specify a valid Sudo program path.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.SUDO_LOCATION_EMPTY

INS-32130: Specified details for Sudo option are not valid.

Cause: Either Sudo program path or specified user credentials are invalid.

Action: Specify the valid details for Sudo option. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.SUDO_CONFIG_DETAILS_INVALID

INS-32131: Specified user ('*string*') does not have permission to run configuration script using Sudo option.

Cause: n/a

Action: Either select different configuration option or specify different user who has privilege to run the configuration scripts using Sudo program. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.SUDO_EXCECUTION_PER MISSION_ERROR

INS-32132: Power Broker program path is not specified for script configuration. Specify the valid Power Broker program path.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_LOCATION_EMPTY

INS-32133: Specified details for Power Broker option are invalid.

Cause: Either Power Broker program path or specified user credentials are invalid.

Action: Specify the valid details for Power Broker option. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_CONFIG_DETAILS_INVALID

INS-32134: Specified user ('string') does not have permission to run configuration script using Power Broker option.

Cause: n/a

Action: Either select different configuration option or specify different user who has privilege to run the configuration scripts using Power Broker program. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_EXCECUTION_PER MISSION_ERROR

INS-32135: Specified Sudo program path is not valid.

Cause: Sudo program path ('%s') is not a complete path. (Note: relative path is not supported).

Action: Specify the valid Sudo program path. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.SUDO_LOCATION_ABSOLUTE_PATH_NOT_SPECIFIED

INS-32136: Specified Sudo program name in the path is not valid.

Cause: Either Sudo program path ('%s') is not a complete path or Sudo program name is invalid.(Note: Sudo program name should be '%s').

Action: Specify the valid Sudo program path. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.SUDO_PROGRAM_NAME_INVALID

INS-32137: Specified Power Broker program path is not valid.

Cause: Power Broker program path ('%s') is not a complete path. (Note: relative path is not supported).

Action: Specify the valid Power Broker program path. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_LOCATION_ABSOLUTE_PATH_NOT_SPECIFIED

INS-32138: The root user password is not specified. Specify a valid password.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ROOT_CONFIG_ROOT_USER_PAS
 SWORD_EMPTY

INS-32139: User name is not specified for Sudo option. Specify the existing user who has privilege to run the configuration scripts using Sudo program.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.SUDO_USER_NAME_EMPTY

INS-32140: Specified Sudo user name ('string') doesnt exist on one or more nodes. Specify the existing user who has privilege to run the configuration scripts using Sudo program.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.SUDO_USERNAME_EXISTANCE_
 CHECK_ERROR

INS-32141: User name is not specified for Sudo option. Specify the existing user who has privilege to run the configuration scripts using Power Broker program.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_USER_NAME_EMPTY

INS-32142: Specified Power Broker user name ('string') does not exist on one or more nodes. Specify the existing user who has privilege to run the configuration scripts using Power Broker program.

Cause: User does not have Power Broker permission to run configuration scripts.

Action: Either select different configuration option or provide Power Broker permission for the user. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.PBRUN_USERNAME_EXISTANCE_
 _CHECK_ERROR

INS-32143: Script 'string' failed on nodes: string.

Cause: Installer has failed to run the specified script on one or more nodes. This might be because of either some of the nodes (%s) require a reboot to complete the configuration, or an exception occurred while running the script on nodes.

Action: Reboot the specified nodes and then rerun the script. Refer to the documentation for information about completing the configuration after node(s) reboot. Or review the log files '%s' and '%s' for further details on failure. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_REBOOT_
 REQUIRED_COMPOSITE_OPERATION_EXCEPTION

INS-32144: Script 'string' failed on one or more nodes (string). These nodes require a reboot to complete the configuration.

Cause: n/a

Action: Reboot the specified nodes and then rerun the script. Refer to the documentation for information about completing the configuration after node(s) reboot. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_REBOOT_
 REQUIRED_ERR

INS-32145: Sudo password was not specified. Passwordless sudo configuration is not supported.

Cause: n/a

Action: Please specify a valid password. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.SUDO_CONFIG_PASSWORD_EMPTY

INS-32146: Script '*string*' failed on nodes: *string*.

Cause: n/a

Action: For nodes %s, review the log files '%s' and '%s' for further details on failure.

For nodes %s, reboot the nodes and then rerun the script. Refer to the documentation for information about completing the configuration after node(s) reboot. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_FAILED_NODES_AND_REBOOT_REQUIRED_NODES_EXCEPTION

INS-32148: Script '*string*' failed on nodes: *string*.

Cause: n/a

Action: Review the log files '%s' and '%s' for further details on failure. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_FAILED_NODES_EXCEPTION

INS-32149: Following nodes require a reboot before proceeding: *string*.

Cause: n/a

Action: Reboot the specified nodes and then rerun the script. Refer to the documentation for information about completing the configuration after node(s) reboot. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_EXEC_REBOOT_REQUIRED_NODES_EXCEPTION

INS-32150: Script '*string*' failed on nodes: *string*.

Cause: n/a

Action: Review the log files '%s' and '%s' for further details on failure. Use the retry option, if you would like to retry the script on the failed nodes. Alternatively, you can continue running the script on the remaining nodes by using the skip option. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ROOT_SCRIPT_UPGRADE_FAIL

INS-32151: CLUSTER_NEW_NODES parameter was not specified for performing addnode operation.

Cause: n/a

Action: Ensure that the CLUSTER_NEW_NODES parameter is passed. Refer to installation guide for more information on the syntax of passing CLUSTER_NEW_NODES parameter. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ADD_NODE_CLUSTER_NEW_NODES_NOT_PASSED

INS-32152: Clusterware is not running on the local node.

Cause: n/a

Action: Ensure that the Clusterware is configured and is running on local node before performing the addnode. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ADD_NODE_CRS_NOT_RUNNING_ON_LOCAL_NODE

INS-32153: Public Hostname of node was not specified for performing addnode operation.

Cause: n/a

Action: Ensure that the public hostname is provided for each node on which addnode operation is being performed. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ADD_NODE_PUBLIC_HOSTNAME_NOT_SPECIFIED

INS-32154: Installing user cannot perform the addnode operation.

Cause: The addnode wizard detects that the existing oracle home was not installed or cloned using the current user id: %s.

Action: Either restart the addnode wizard as the user account that was used previously to configure the Oracle home, or re-clone the Oracle home using the current user account. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ADD_NODE_USER_NOT_SAME_AS_INSTALLING_USER

INS-32155: The Oracle home is not registered in the central inventory: *string*.

Cause: n/a

Action: Ensure the Oracle home is registered in the central inventory. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ADD_NODE_LOCAL_HOME_NOT_IN_INVENTORY

INS-32156: Installer has detected that there are non-readable files in oracle home.

Cause: Following files are non-readable, due to insufficient permission: %s.

Action: Ensure the above files are readable by %s. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.ORACLE_HOME_NON_READABLE_FILES

INS-32166: The current Oracle home is not registered in the central inventory on the following nodes: *string*.

Cause: The wizard does not find this Oracle home to be registered with the central inventory on some or all of the nodes specified.

Action: Register the Oracle home on the specified nodes with the central inventory, either by using a cloning operation, or by using an attach-home operation. Restart the wizard after fixing this issue. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_REMOTEHOME_NOT_REGISTERED

INS-32167: The Oracle home is inconsistent on the following nodes: *string*.

Cause: The wizard detects that the Oracle home is inconsistent on some or all of the nodes specified. Review the log file for further details.

Action: Ensure that the Oracle home is consistent on all nodes. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_REMOTEHOME_NOT_MATCHING

INS-32168: Installer has detected an invalid entry in the central inventory corresponding to this Oracle home in the following nodes: *string*.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_INVALID_REMOTE_HOME_REGISTERED

INS-32181: The local node was not specified in CLUSTER_NODES parameter for clone.

Cause: n/a

Action: Ensure that the local node is passed in the CLUSTER_NODES. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.CLONE_LOCAL_NODE_NOT_PASSED

INS-32182: The nodes *string* specified in CLUSTER_NODES parameter for cloning are not valid.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.CLONE_DEPRECATED

INS-32184: Standard Edition (SE) is not supported for this installation.

Cause: Standard Edition (SE) is not supported for Oracle Real Application Clusters database installation.

Action: Select a different Install Edition. If you intend to upgrade an existing Oracle Real Application Clusters Standard Edition database with Oracle Database 19c or later releases, then select Oracle Database Enterprise Edition to upgrade your database. If you plan to continue using Oracle Database Standard Edition without Oracle Real Application Clusters enabled, convert your database to a single instance Oracle Database before upgrading. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.CLONE_INSTALL_EDITION_SE_RAC_NOT_SUPPORTED

INS-32196: The script *string* was not run on the following nodes *string*.

Cause: n/a

Action: Ensure that the %s script is completed on the nodes specified. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORAINSTROOT_NOT_EXECUTED

INS-32250: ADR setup (diagsetup) tool failed. Check the install log for more details.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_DIAGSETUP_FAILED

INS-32251: Could not create the ADR (diagsetup) clients directory: *string*.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_DIAGSETUP_CLIENT_DIRECTORY_FAILED

INS-32301: *string* tool failed . Check the install log for more details.

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.ACTIONABLE_INSTALL_COMMON_INVALID_REMOTE_HOME_REGISTERED

INS-32500: *string* tool failed.

Cause: n/a

Action: Review %s for more details. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_PATCH_TOOL_FAILED

INS-32501: The *string* location provided has duplicate entries.

Cause: n/a

Action: Check the %s locations provided. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PATCH_LOCATION_HAS_DUPLICATES_ERR

INS-32502: No location is provided for *string*.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PATCH_LOCATION_EMPTY_ERR

INS-32503: The location provided for *string* is not a valid directory.

Cause: n/a

Action: Provide a valid %s location. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.PATCH_LOCATION_NOT_VALID_DIRECTORY_ERR

INS-32504: The file *string* under the location (*string*) is not readable.

Cause: In order to apply the opatch update to the Oracle home, all the files under the location provided should be readable.

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.FILE_NOT_READABLE_UNDER_DIRECTORY_ERR

INS-32505: The opatch location provided (*string*) is not valid.

Cause: The opatch location provided does not have the opatch files.

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.OPATCH_BINARY_NOT_EXISTS_ERROR

INS-32506: Multiple PSUs cannot be applied together.

Cause: n/a

Action: Provide a location which has single PSU. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.MULTIPLE_PSUS_NOT_ALLOWED_ERR

INS-32507: Installer is unable to determine the version of the OPatch software at (*string*).

Cause: n/a

Action: Review %s for more details. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_OPATCH_VERSION_CHECK_FAILED

INS-32508: Installer has detected that the version of the OPatch software available in oracle home is higher than version of the specified OPatch software.

Cause: The version of the OPatch software provide at %s is %s. The version of the OPatch software available at %s is %s.

Action: Ensure that the version of the OPatch software provided at %s is same or greater than the version of the OPatch software available at %s. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_OPATCH_VERSION_MISMATCH

INS-32600: The Installer has detected that the specified Oracle home is not registered in the central inventory.

Cause: The -executeConfigTools flag can only be used for an Oracle home software that has been already installed using the configure or upgrade options.

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOLS_COMMON_HOME_NOT_REGISTERED

INS-32601: The Installer has detected that there are no config tools to run for the specified Oracle home.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOLS_COMMON_NO_TOOLS_PENDING

INS-32602: Installer has detected that no root configuration method was defined.

Cause: n/a

Action: Specify a root configuration method. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOLS_COMMON_NO_ROOT_CONFIG_METHOD

INS-32603: The central inventory was not detected.

Cause: n/a

Action: The -executeConfigTools flag can only be used for an Oracle home software that has been already installed using the configure or upgrade options. Ensure that the oraInstRoot.sh script, from the inventory location, has been run. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOLS_COMMON_NO_INVENTORY_UNIX

INS-32604: The central inventory was not detected.

Cause: n/a

Action: The `-executeConfigTools` flag can only be used for an Oracle home software that has been already installed using the `configure` or `upgrade` options. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CONFIG_TOOLS_COMMON_NO_I
NVENTORY_WINDOWS

INS-32700: The gold image creation failed. Check the install log *string* for more details.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
CREATOR_JOB_FAILED

INS-32701: The specified source home path is empty.

Cause: n/a

Action: Provide a valid source home path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
SOURCE_HOME_PATH_EMPTY

INS-32702: The specified source home path (*string*) does not exist.

Cause: n/a

Action: Provide an existent source home path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
SOURCE_HOME_NOT_EXISTS

INS-32703: The specified source home path (*string*) is not a directory.

Cause: n/a

Action: Provide a valid source home directory path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
SOURCE_HOME_NOT_DIRECTORY

INS-32704: The specified source home path (*string*) contains the following files that are not owned by the current user (*string*): *string*.

Cause: n/a

Action: Ensure that all the files from the source home are owned by the current user. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
SOURCE_HOME_FILES_NOT_OWNED

INS-32705: The specified destination location path is empty.

Cause: n/a

Action: Provide a valid destination location path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_
DEST_LOC_PATH_EMPTY

INS-32706: The specified destination location (*string*) path is not writable.

Cause: n/a

Action: Provide a writable destination location path. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_DEST_LOC_NOT_WRITABLE

INS-32707: The specified destination location (*string*) does not have enough free space.

Cause: n/a

Action: Provide a destination location path with at least (%s) MB of free space. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_DEST_LOC_NOT_ENOUGH_FREE_SPACE

INS-32708: The file (*string*) already exists.

Cause: n/a

Action: Provide a different name or destination location for the goldimage. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_GOLDIMAGE_ALREADY_EXISTS

INS-32709: The zip utility (*string*) does not exist.

Cause: n/a

Action: Ensure the source home is valid. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_ZIP_NOT_EXISTS

INS-32710: The specified compression format (*string*) is invalid.

Cause: n/a

Action: Provide a valid compression format. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_INVALID_FORMAT

INS-32711: The tar utility location was not specified.

Cause: n/a

Action: Provide the tar utility location. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_UNDEFINED_TAR_LOCATION

INS-32712: The specified tar utility location (*string*) does not exist.

Cause: n/a

Action: Provide a valid tar utility location. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_TAR_LOCATION_NOT_EXISTS

INS-32713: The gzip utility location was not specified.

Cause: n/a

Action: Provide the gzip utility location. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COM
MON_UNDEFINED_GZIP_LOCATION

INS-32714: The specified gzip utility location (*string*) does not exist.

Cause: n/a

Action: Provide a valid gzip utility location. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_GZIP_LOCATION_NOT_EXISTS

INS-32715: The source home (*string*) is not registered in the central inventory.

Cause: n/a

Action: Ensure that the source home is registered in the central inventory. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_SOURCE_HOME_NOT_REGISTERED

INS-32716: The temporary location (*string*) does not have enough free space.

Cause: n/a

Action: Ensure that at least (%s) MB of free space is available at the temporary location. Alternately you can specify a different location to be used as temporary location by setting the TEMP environment variable. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_TMP_DEST_LOC_NOT_ENOUGH_FREE_SPACE

INS-32717: The specified destination location (*string*) cannot be created.

Cause: n/a

Action: Provide a valid destination location path. *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.CREATEGOLDIMAGE_COMMON_DEST_LOC_PATH_INVALID

INS-32800: Unable to apply the installer updates (*string*) because the home (*string*) is locked.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_HOME_IS_LOCKED

INS-32801: Cannot apply the installer update (*string*) because it contains the following nonreadable files: *string*.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_NON_READABLE_FILES

INS-32802: Cannot apply one off (*string*) with *string*. Use *string* instead.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_IS_ONE_OFF

INS-32803: Cannot apply installer update (*string*) because the destination path of following files is not writable: *string*.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_CANNOT_COPY

INS-32804: No value was provided for the (*string*) argument. Provide the complete absolute paths of the installer updates separated by comma.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_EMPTY_PATH

INS-32805: A path was provided empty for the (*string*) argument value. Provide the complete absolute paths of the updates separated by comma.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_EMPTY_UPDATE_PATH

INS-32806: The path (*string*) provided in the (*string*) argument value does not exist. Provide the complete absolute paths of the updates separated by comma.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_UPDATE_PATH_NOT_EXISTS

INS-32807: There are duplicate paths in the (*string*) argument value. Remove the duplicate paths.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_INSTALLER_UPDATES_DUPLICATE_UPDATE_PATHS

INS-32825: Applying PSU is not supported in this platform.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_PSU_NOT_SUPPORTED_PLATFORM

INS-32826: The software home (*string*) is already registered in the central inventory. Refer to patch readme instructions on how to apply.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.APPLY_PSU_HOME_REGISTERED

INS-32827: The path of the patch for the (*string*) argument value was not provided. Provide the complete absolute path of the patch.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_PSU_EMPTY_PATCH_PATH

INS-32828: It is not allowed to apply multiple PSU to a software home. Ensure that only one PSU is provided as the (*string*) argument value.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_PSU_MULTIPLE_PSU_PATCH_PATHS

INS-32829: The path (*string*) provided in the (*string*) argument value does not exist. Provide the complete absolute path of the patch.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_PSU_PATCH_PATH_NOT_EXISTS

INS-32850: The software home (*string*) is already registered in the central inventory. Refer to patch readme instructions on how to apply.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_ONEOFFS_HOME_REGISTERED

INS-32851: A path was provided empty for the (*string*) argument value. Provide the complete absolute paths of the patches separated by comma.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_ONEOFFS_EMPTY_PATCH_PATH

INS-32852: The path (*string*) provided in the (*string*) argument value does not exist. Provide the complete absolute paths of the patches separated by comma.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_ONEOFFS_PATCH_PATH_NOT_EXISTS

INS-32853: There are duplicate paths in the (*string*) argument value. Remove the duplicate paths.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.APPLY_ONEOFFS_DUPLICATE_PATCH_PATHS

INS-32875: The OPatch software can only be updated while applying a PSU or one offs.

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_NO_PSU_OR_ONEOFFS

INS-32876: No value was provided for the (*string*) argument.

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_EMPTY_OPATCH_PATCH

INS-32877: The path (*string*) provided in the (*string*) argument value does not exist. Provide the complete absolute path of the OPatch software.

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_PATH_NOT_EXISTS

INS-32878: The path specified in the (*string*) argument value should be a directory.

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_PATH_NOT_DIRECTORY

INS-32879: Could not locate the (*string*) file in the provided opatch location (*string*). Specify a valid OPatch location.

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_PATH_NOT_VALID

INS-32880: Unable to copy the OPatch software from (*string*). Ensure user (*string*) has read access over the OPatch location (*string*).

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_PATH_CONTAINS_NONREADABLE_FILES

INS-32881: Could not determine the version of OPatch software from (*string*).

Cause: n/a

Action: n/a *FQN:
oracle.install.iww.common.resource.CommonErrorCode.UPDATE_OPATCH_COULD_NOT_GET_VERSION

INS-32882: The version of the OPatch software provided (at *string*) is: *string*. This version should be same or greater than the version of the OPatch software available at *string* (*string*).

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.UPDATE_OPATCH_LOWER_VERSION

INS-32901: Read-only Oracle home initialization failed. Check the log for more details.
Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ROOHCTL_TOOL_FAILED

INS-32910: Specified sudo user name ('string') can not be used to run configuration script(s).

Cause: Only current installation user name is allowed to run configuration script(s) using sudo option.

Action: Ensure that you specify the sudo user name same as the current installation user name. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_ROOTCONFIG_INVALID_SUDOUSER_ERR

INS-32921: The specified Oracle base location is invalid since it contains one or more Oracle bases associated with other Oracle homes installed on this server.

Cause: The specified Oracle base location contains the following active Oracle bases: %s.

Action: Specify a location for Oracle base which is not a parent directory of an existing Oracle base. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_BASE_NOT_VALID

INS-32922: The detected Oracle home location string is invalid since it contains spaces.

Cause: n/a

Action: Use a location for Oracle home that does not contain spaces. *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_ORACLE_HOME_HAS_SPACES

INS-32923: Database file location contains invalid characters.

Cause: n/a

Action: Choose a database file location that does not have invalid characters ('#','\$'). *FQN:
oracle.install.ivw.common.resource.CommonErrorCode.INSTALL_COMMON_DATA_LOCATION_INVALID_CHARS_ERR

INS-35011: E-mail address cannot be empty.

Cause: E-mail address for database management using e-mail notifications was empty.

Action: Specify an e-mail address for notification functions. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_MANAGEMENT_OPTIONS_EMAIL_ADDRESS_EMPTY

INS-35012: Outgoing main (SMTP) server cannot be empty.

Cause: The value for the outgoing main (SMTP) server is empty. You must provide a SMTP server to enable database management with e-mail notifications.

Action: Specify an outgoing mail (SMTP) server for e-mail notifications. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_MANAGEMENT_OPTIONS
 _EMAIL_SERVER_EMPTY

INS-35013: Check e-mail address.

Cause: Either the e-mail address provided contains invalid characters, or it does not follow the standard e-mail address format.

Action: Specify an e-mail address that is consistent with RFC 2822 and RFC 2821 format. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_MANAGEMENT_OPTIONS
 _EMAIL_ADDRESS_INVALID

INS-35014: Outgoing mail (SMTP) server is invalid.

Cause: The provided outgoing mail (SMTP) server was not valid. You must specify a valid SMTP server to enable database management with e-mail notifications.

Action: Specify an outgoing mail (SMTP) server for e-mail notifications. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_MANAGEMENT_OPTIONS
 _EMAIL_SERVER_INVALID

INS-35015: Recovery location cannot be empty.

Cause: The database recovery backup location was empty.

Action: Specify a path for the database recovery backup location. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RECOVERY_OPTIONS_L
 OCATION_EMPTY

INS-35016: User name cannot be empty.

Cause: The database recovery user name text field was empty.

Action: Provide the user name permitted to perform database recovery. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RECOVERY_OPTIONS_U
 SERNAME_EMPTY

INS-35017: Password cannot be empty.

Cause: The database recovery password was empty.

Action: Enter a password for database recovery. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RECOVERY_OPTIONS_P
 ASSWORD_EMPTY

INS-35019: Invalid value specified for Management Service field.

Cause: The installer was unable to detect an agent home corresponding to the URL in the Management Service field.

Action: Specify a valid URL for Management Service field that has a corresponding agent configured on the host. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_EM_CONFIG_AGENT_INV
 ALID

INS-35020: Invalid value specified for Management Service field.

Cause: No value specified for Management Service field.

Action: Specify a valid Management service URL. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_EM_CONFIG_AGENT_EMPTY

INS-35021: The recovery location is on a file system that is not shared across the cluster.

Cause: The database recovery area is not located on a shared file system.

Action: Enter a recovery area that is located on a shared file system. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RECOVERY_OPTIONS_LOC_NOT_SHARED

INS-35022: Empty value provided for OMS Host.

Cause: n/a

Action: Specify a valid OMS port of the Enterprise Manager Cloud Control. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.EMPTY_OMS_HOST

INS-35023: Empty value provided for Enterprise Manager Admin user.

Cause: n/a

Action: Specify a valid value for Enterprise Manager Admin user of the Enterprise Manager Cloud Control. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.EMPTY_EM_ADMIN_USER

INS-35024: Empty value provided for Enterprise Manager Admin password.

Cause: n/a

Action: Specify a valid value for Enterprise Manager Admin password of the Enterprise Manager Cloud Control. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.EMPTY_EM_ADMIN_PASSWORD

INS-35025: Empty value provided for OMS Port.

Cause: n/a

Action: n/a *FQN: oracle.install.ivw.db.resource.DBErrorCode.EMPTY_OMS_PORT

INS-35026: Unable to connect to Enterprise Manager Cloud Control.

Cause: Invalid connection information specified.

Action: Specify valid connection information. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_OMS_CONNECTION_ERR

INS-35027: Selected storage type is not valid.

Cause: You cannot use file system storage for backup and recovery files, with Standard Edition 2 Oracle Real Application Clusters databases.

Action: Choose Oracle Automatic Storage Management for database backup and recovery files. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RECOVERY_OPTIONS_FS_NOT_ALLOWED_SE_RAC

INS-35071: Global database name cannot be left blank.

Cause: The Global database name was left blank.

Action: Specify a value for the Global database name. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_GDB_NAME_EMPTY_ERR

INS-35072: The SID cannot be left blank.

Cause: The Oracle system identifier (SID) was left blank.

Action: Specify a value for Oracle system identifier (SID). *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SID_EMPTY_ERR

INS-35073: Invalid global database name.

Cause: The value given for the name portion of Global database name exceeds 30 characters. The maximum length is 30 characters.

Action: Enter a legal Global database name not exceeding 30 characters. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_DBNAME_LENGTH_ERR

INS-35074: The specified SID is already in use.

Cause: The specified SID was already registered in the oratab file (%s) on the server. The oratab file is used by Oracle products to detect existing database instances.

Action: Specify a unique Oracle system identifier (SID). *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SID_ALREADY_EXISTS_UNIX_ERR

INS-35075: A database instance with the specified identifier already exists.

Cause: n/a

Action: Specify a unique Oracle system identifier (SID). *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SID_ALREADY_EXISTS_WIN_ERR

INS-35076: The specified SID exceeds the number of characters allowed on UNIX platforms.

Cause: n/a

Action: Specify an Oracle system identifier (SID) shorter than or equal to %s characters for single-instance installation or %s characters for Oracle RAC installation. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_SID_LENGTH_UNIX_ERR

INS-35077: The specified SID exceeds the number of characters allowed on Windows platforms.

Cause: n/a

Action: Specify a Windows Oracle system identifier (SID) shorter than or equal to %s characters for a single-instance installation or %s characters for an Oracle RAC installation. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_SID_LENGTH_WIN_ERR

INS-35081: The ORACLE_HOME environment variable is currently set.

Cause: The ORACLE_HOME environment variable was already set. This prevents proper use of multiple Oracle homes and, as it is not required for any Oracle products to function, it will be unset in your environment.

Action: The ORACLE_HOME environment variable will be unset automatically. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ORACLE_HOME_ENV_UNSET_I
NFO

INS-35082: Global database name did not begin with an alphabetic character.

Cause: The global database name began with a character that was not an alphabetic character.

Action: Specify a global database name that begins with an alphabetic character. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_GDB_STARTS_WITH_DIGIT_ER
R

INS-35083: The specified domain of the Global database name exceeds 128 characters.

Cause: The domain portion entered for Global database name exceeded 128 characters.

Action: Specify a domain for the Global database name that is less than 128 characters in length. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_DBNAME_DO
MAIN_LENGTH_ERR

INS-35084: The specified global database name contains invalid characters.

Cause: The specified domain portion of the global database name contained invalid characters.

Action: Specify a global database name that contains only alphanumeric, underscore (_), pound (#) and period (.) characters. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_DBNAME_DO
MAIN_NAME_ERR

INS-35085: Invalid value specified for *string*.

Cause: The %s derived from %s contains one or more invalid characters.

Action: Remove the invalid characters (%s) from the %s or select Advanced install flow to be able to specify different %s. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SID_BADCHARS_ERR

INS-35086: Invalid value specified for Global database name.

Cause: Database name cannot be empty.

Action: Enter a legal Global database name not exceeding 30 characters. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_DBNAME_ZE
RO_LENGTH_ERR

INS-35087: Invalid value specified for SID.

Cause: The system identifier (SID) that you entered begins with a non-alphabetic character.

Action: Enter a SID that begins with an alphabetic character. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SID_STARTS_WITH_DIGIT_ERR

INS-35088: The specified Global database name exceeds *string* characters.

Cause: The name and domain portion entered for Global database name exceeded %s characters.

Action: Specify the Global database name that is less than %s characters in length.

*FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_NAME_LENGTH_ERR

INS-35089: The specified domain of the Global database name exceeds *string* characters.

Cause: The domain portion entered for Global database name exceeded %s characters.

Action: Specify a domain for the Global database name that is less than %s characters in length. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_INVALID_GLOBAL_NAME_DOMAIN_LENGTH_ERR

INS-35090: The service name provided for RAC One is empty.

Cause: n/a

Action: Provide a value for the RAC One service name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.EMPTY_RACONE_SERVICE_NAME

INS-35091: The service name provided for RAC One did not begin with an alphabetic character.

Cause: The service name provided for RAC One began with a character that was not an alphabetic character.

Action: Provide a service name which begins with an alphabetic character. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RACONE_SERVICE_NAME_STARTS_WITH_DIGIT

INS-35092: The service name provided for RAC One cannot be the same as the global database name.

Cause: n/a

Action: Provide a service name that is different from the global database name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RACONE_SERVICE_NAME_SAME_AS_GDB

INS-35093: Invalid value provided for the RAC One service name.

Cause: The service name provided for RAC One may contain invalid characters.

Action: Provide a service name that consists of alphanumeric or underscore (_) characters. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RACONE_SERVICE_NAME_BADCHARS

INS-35094: Invalid value provided for Oracle RAC One service name.

Cause: The domain portion in the Oracle RAC One service name may contain invalid characters.

Action: Provide a service name whose network domain consists of alphanumeric characters or _ or \$ or #. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RACONE_DOMAIN_NAME_BADCHARS

INS-35095: The specified domain of the Oracle RAC One service name exceeds 128 characters.

Cause: The domain portion entered for Oracle RAC One service name exceeded 128 characters.

Action: Specify a domain for the Oracle RAC One service name that is less than 128 characters in length. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RACONE_DOMAIN_NAME_LENGTH_TOO_LONG

INS-35096: The pluggable database name did not begin with an alphabetic character.

Cause: n/a

Action: Provide a pluggable database name that begins with an alphabetic character. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.PDB_STARTS_WITH_DIGIT

INS-35097: The pluggable database name cannot be left blank.

Cause: n/a

Action: Specify a value for pluggable database name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.PDB_ZERO_LENGTH

INS-35098: The specified pluggable database name exceeds the number of characters allowed.

Cause: The length of the pluggable database name (%s) is %s. The limit is %s characters.

Action: Provide a value for pluggable database name not exceeding %s characters. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INVALID_PDB_LENGTH

INS-35099: The pluggable database name provided is same as the container database name.

Cause: n/a

Action: Provide a value for pluggable database name that is different from the container

database name. *FQN: oracle.install.ivw.db.resource.DBErrorCode.PDB_SAME_AS_CDB

INS-35100: The Oracle home location contains directories or files on following remote nodes: *string*.

Cause: n/a

Action: Please provide valid Oracle home location which is empty. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.RAC_NODE_LOCATION_NON_EMPTY_ON_REMOTE_NODES

INS-35101: Installer has detected that an Oracle Real Application Cluster (RAC) database with the given Global Database name (*string*) is already configured on this server.

Cause: n/a

Action: Specify an unique Global Database name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_GLOBAL_NAME_ALREADY_EXISTS

INS-35102: Invalid value specified for Pluggable Database name.

Cause: The Specified Pluggable Database name is same as RAC One database service name.

Action: Specify an unique Pluggable Database name. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INVALID_PDB_NAME_ERR

INS-35151: The current install user is not part of ORA_ASMADMIN group.

Cause: n/a

Action: Add the install user to ORA_ASMADMIN group. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_USER_NOT_IN_SYSASM_DE
FAULT_NAME

INS-35152: The current install user is not part of ORA_ASMDBA group.

Cause: n/a

Action: Add the install user to ORA_ASMDBA group. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_USER_NOT_IN_ASM_SYSD
BA

INS-35153: Virtual Account is not supported for Oracle Real Application Cluster Database.

Cause: n/a

Action: Select Existing/Built-In User option to configure Oracle Real Application Cluster Database. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_VIRTUAL_ACCOUNT_USER_
NOT_SUPPORTED_ON_RAC

INS-35154: Virtual Account is not supported on Windows 2008 Server.

Cause: n/a

Action: Select Existing/Built-In User option to continue with the installation. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_VIRTUAL_ACCOUNT_USER_
NOT_SUPPORTED_ON_WIN2008

INS-35155: Virtual Account is not supported on this version of Windows Operation System.

Cause: n/a

Action: Specify Existing or Built-In User option to continue with the installation. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_VIRTUAL_ACCOUNT_USER_
NOT_SUPPORTED_ON_CURRENT_OS

INS-35156: Virtual Account is not supported on Domain Controller.

Cause: n/a

Action: Specify a Windows User Account. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_VIRTUAL_ACCOUNT_NOT_S
UPPORTED_ON_DOMAIN_CONTROLLER

INS-35171: Target database memory (*string* MB) exceeds at least one of the selected nodes available shared memory (*string* MB).

Cause: The total available shared memory on at least one of the selected nodes (%s MB) was less than the chosen target database memory (%s MB).

Action: Enter a value for the target database memory less than %s MB. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_AUTO_MEM
ORY_CLUSTER_LESSER_ERR

INS-35172: Target database memory (*string* MB) exceeds available shared memory (*string* MB) on the system.

Cause: The total available shared memory (%s MB) on the system was less than the chosen target database memory (%s MB).

Action: Enter a value for target database memory that is less than %s MB. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_AUTO_MEMORY_SI_GREATER_ERR

INS-35173: Invalid value for allocated memory.

Cause: The allocated memory specified was greater than or equal to the total memory available on the system.

Action: Enter a value less than the total available memory on the system for target database memory. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_MEMORY_GREATER_ERR

INS-35174: A minimum of *string* MB (*string*% of total physical memory) is required.

Cause: Allocated memory was less than the required memory.

Action: Enter a memory value larger than %s MB. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_MEMORY_LESSER_ERR

INS-35175: No value given for the allocated memory of the database.

Cause: A value was not specified for the allocated memory of the database.

Action: Specify a value for the allocated memory of the database. This corresponds to the oracle.install.db.config.starterdb.memoryLimit variable in the response file. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_MEMORY_UNDEFINED_ERR

INS-35176: Invalid value for allocated memory.

Cause: The allocated memory specified was greater than 3GB.

Action: Enter a value less than 3GB for target database memory. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_MEMORY_GREATER_ERR_WIN32

INS-35177: The specified SGA size is greater than the shmmax on the system. This might make database creation to fail with ORA-27125 - Unable to create shared memory segment error.

Cause: n/a

Action: Specify SGA size lesser than or equal to the shmmax on the system. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_SGA_ALLOCATED_MEMORY_GREATER_ERR

INS-35178: The Automatic Memory Management option is not allowed when the total physical memory is greater than *string* GB.

Cause: The current total physical memory is %s GB.

Action: n/a *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ALLOCATED_AMM_PHYSICAL_MEMORY_GREATER_THAN_LIMIT_ERR

INS-35179: Current available memory is less than the required available memory (*string* MB) for creating the database.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_NOT_ENOUGH_MEMORY_AVAILABLE_WRN

INS-35180: Unable to check for available memory.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_COULD_NOT_VALIDATE_AVAILABLE_MEMORY_ERR

INS-35181: The specified SGA size is greater than the shmmax on the system. This might make database creation to fail with ORA-27125 - Unable to create shared memory segment error.

Cause: n/a

Action: Specify SGA size lesser than or equal to the shmmax on the system. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_SGA_ALLOCATED_MEMORY_GREATER_WRN

INS-35205: Specified data file storage location is invalid.

Cause: The data file storage location for Oracle Real Application Clusters was not on a shared file system.

Action: Specify a location on a shared file system to place the data files. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_LOCATION_NOT_SHARED_ERR

INS-35206: Directory is already in use.

Cause: The specified directory for the database files was already in use by the Global database name that was provided.

Action: Specify a different location or go to the previous screen and change the Global database name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_LOCATION_ALREADY_IN_USE_ERR

INS-35207: The location *string* you selected is on an Oracle Advanced Cluster File System (ACFS).

Cause: Oracle does not recommend placing Oracle Database files on ACFS. Oracle recommends that you place database files directly on the underlying Oracle ASM disk groups, as this provides optimal database performance.

Action: Specify a location that is not on ACFS. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.ACFS_LOCATION_NOT_ALLOWED_SI

INS-35208: The location *string* you selected is on an Oracle Advanced Cluster File System (ACFS).

Cause: You cannot use ACFS as shared storage for Oracle RAC.

Action: Specify an ASM diskgroup or any other supported shared storage location.

*FQN:

oracle.install.ivw.db.resource.DBErrorCode.ACFS_LOCATION_NOT_ALLOWED_RAC

INS-35209: Selected storage type is not valid.

Cause: You cannot use file system storage with Standard Edition 2 Oracle Real Application Clusters databases.

Action: Choose Oracle Automatic Storage Management for database storage. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.FS_NOT_ALLOWED_SE_RAC

INS-35210: Installing a database with storage on Oracle Automatic Storage Management (Oracle ASM) is not supported on this system.

Cause: Oracle Database 11g Release 2 and later supports Oracle ASM only on 64-bit Windows operating systems.

Action: Place database-related files on a supported file system. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ASM_NOT_SUPPORTED

INS-35211: Selected storage type is not valid.

Cause: n/a

Action: Choose Oracle Automatic Storage Management (ASM) or Oracle Advanced Cluster File System for Real Application Cluster database storage. For Single Instance databases, local file systems can be used. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.OCFS_STORAGE_NOT_ALLOWED

INS-35212: Insufficient disk space on this volume for the selected datafiles location.

Cause: The selected datafiles location was on a volume without enough disk space.

Action: Choose a location for datafiles that has enough space (minimum of %s) or free up space on the existing volume. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.FS_ORADATA_LOCATION_NOT_ENOUGH_SPACE

INS-35213: Insufficient disk space on this volume for the selected recovery backup location.

Cause: The selected recovery backup location was on a volume without enough disk space.

Action: Choose a location for recovery backup that has enough space (minimum of %s) or free up space on the existing volume. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.FS_RECOVERY_LOCATION_NOT_ENOUGH_SPACE

INS-35214: Oracle ACFS location (*string*) is not supported for data files and redo logs in an Oracle Restart (Standalone Server) configuration.

Cause: n/a

Action: Specify another location. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.ACFS_LOCATION_NOT_ALLOWED_IN_SIHA

INS-35255: Invalid password.

Cause: One of the Database Administrative account password was either CHANGE_ON_INSTALL or MANAGER or DBSNMP or SYSMAN or PDBADMIN.

Action: Enter a password that is not a former default password for these administrative users, such as CHANGE_ON_INSTALL, MANAGER, DBSNMP or SYSMAN or PDBADMIN. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SUPER_PASSWORD_NOT_ALLOWED_ERR

INS-35256: The password for account *string* is not allowed to be *string*.

Cause: The administrative account password you entered was %s which is not allowed for %s user.

Action: Enter a password that is not a former default password for the %s administrative user account. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_PASSWORD_NOT_ALLOWED_ERR

INS-35341: The installation user is not a member of the following groups: *string*.

Cause: The installation user account must be a member of all groups required for installation.

Action: Ensure that the installation user is a member of the system privileges operating system groups you selected. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ADVANCED_NONMEMBER_OS_GROUPS

INS-35342: The specified group for *string* may not be defined in the system.

Cause: The OS group you specified as %s may not be configured on the server, or in the Network Information Service (NIS).

Action: Check the group name you selected, and specify a different group, or create the group on the server or in the Network Information Service. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_ADVANCED_INVALID_OS_GROUP

INS-35343: Invalid value specified for *string*.

Cause: OS group %s specified for %s contains one or more invalid characters.

Action: Remove the invalid characters (%s) from %s or select an existing OS Group for %s. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_OSGROUP_BADCHARS_ERR

INS-35344: The value is not specified for *string*.

Cause: n/a

Action: Specify a valid group name for %s. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_GROUPS_CAN_NOT_BE_NULL

INS-35351: Inconsistent versions detected.

Cause: The active version of Oracle Clusterware detected on the system (%s) is lower than the version of Oracle Database that you were attempting to create (%s). This is not supported.

Action: Upgrade Oracle Clusterware to version %s or later. Alternatively, you can choose to just install the software of the Database now and configure it after upgrading Oracle Clusterware. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_LOWER_CRS_ACTIVEVERSION

INS-35352: There are no disk groups selected for storage and backup.

Cause: n/a

Action: Select at least one disk group for storage and backup. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.NO_ASM_DISKGROUP_SELECTED

INS-35354: The system on which you are attempting to install Oracle *string* is not part of a valid cluster.

Cause: Before you can install Oracle %s, you must install Oracle Grid Infrastructure (Oracle Clusterware and Oracle ASM) on all servers to create a cluster.

Action: Oracle Grid Infrastructure for Clusterware is not installed. Install it either from the separate installation media included in your media pack, or install it by downloading it from Electronic Product Delivery (EPD) or the Oracle Technology Network (OTN). Oracle Grid Infrastructure normally is installed by a different operating system user than the one used for Oracle Database. It may need to be installed by your system administrator. See the installation guide for more details. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.GRID_INFRASTRUCTURE_NOT_INSTALLED

INS-35355: The node *string* specified in response file is not part of the Oracle Clusterware detected.

Cause: The node list for the Oracle RAC database specified in the response file does not match the configuration stored in the OCR.

Action: Please specify a valid node or add this node %s to the cluster. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INCORRECT_NODE_LIST_PROVIDED

INS-35356: Oracle recommends that you install the database on all nodes that are part of the Oracle Grid Infrastructure cluster.

Cause: All Oracle Grid Infrastructure nodes were not selected for installing Oracle RAC.

Action: Oracle recommends that you deploy Oracle Real Application Clusters across all Oracle Grid Infrastructure cluster nodes. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.SUBSET_OF_NODES_SELECTED

INS-35357: Oracle RAC is not supported on this system.

Cause: Oracle Database 11g Release 2 and later supports Oracle RAC only on 64-bit Windows operating systems.

Action: Choose the option to install a single instance database on this system. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RACDB_NOT_SUPPORTED

INS-35358: Oracle RAC is not supported on this system.

Cause: Oracle Database 11g Release 2 and later supports Oracle RAC only on 64-bit Windows operating systems.

Action: Migrate your existing Oracle RAC installation to a 64-bit Windows platform before upgrading it. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RACUPGRADE_NOT_SUPPORTED

INS-35359: Only one node is selected for database creation.

Cause: Only one node is selected for database creation. To protect a database against node or instance failure, at least two nodes should be selected.

Action: Provide at least two nodes for database creation. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSUFFICIENT_NUM_OF_NODES_PROVIDED

INS-35360: No nodes are specified for RAC One Node install.

Cause: n/a

Action: Specify the nodes on which RAC One Node install has to be done. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.NO_CLUSTER_NODES_SPECIFIED

INS-35361: One or more selected nodes are down.

Cause: One or more selected nodes cannot be reached.

Action: Ensure that all the nodes selected for operation are reachable. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SELECTED_NODE_DOWN_ERR

INS-35362: Admin managed database can not be installed on following set of nodes: *string*.

Cause: Admin managed database can be created only on HUB nodes.

Action: Select only HUB nodes to create admin managed database. HUB nodes detected in your setup are as follows: %s. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.SELECTED_NODES_NOT_SUBSET_OF_ELIGIBLE_HUB_NODES

INS-35363: Incompatible version of Oracle Grid Infrastructure detected.

Cause: The active version of Oracle Grid Infrastructure detected on the system (%s), is lower than the version of Oracle Real Application Database software that you were attempting to install (%s). This is not supported.

Action: If Oracle Grid Infrastructure is of older version, only Oracle Single Instance Database software can be installed. If you want to install Oracle Real Application Database software, you should upgrade Oracle Grid Infrastructure to same or higher version first. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_RAC_DB_LOWER_CRS_ACTIVEVERSION

INS-35364: One or more nodes in the RAC have empty values as name.

Cause: One or more nodes in the RAC have empty values as name. A node cannot have an empty value as a name.

Action: Please specify a valid name for each node in the RAC. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_RAC_NODE_NAME_EMPTY_VALUES

INS-35371: Oracle RAC databases not detected.

Cause: The installer could not detect any Oracle Real Application Clusters databases that could be upgraded.

Action: None. *FQN:
oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_NO_DB_TO_UPGRADE

INS-35372: Oracle RAC databases not detected.

Cause: The installer could not detect any Oracle Real Application Clusters databases that could be upgraded on the selected nodes.

Action: None. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_FOUND_NOT_CONTAINED_ON_SELECTED_NODES

INS-35373: Single-instance database not detected.

Cause: The installer could not detect a single-instance database that could be upgraded.

Action: None. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_NO_SI_DBS_DETECTED

INS-35375: The installer detects an older version of Oracle ASM on the system. If you intend to upgrade a database using Oracle ASM for storage, then you must first upgrade Oracle ASM. Refer to Oracle Grid Infrastructure Installation Guide for further information.

Cause: An earlier release version of Oracle Automatic Storage Management (Oracle ASM) is detected on the server.

Action: To upgrade Oracle ASM, refer to installation guides for information about Oracle Grid Infrastructure upgrade. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_ONLY_UNUPGRADED_ASM_DETECTED

INS-35376: Password cannot be empty for the ASMSNMP user.

Cause: The ASMSNMP user password was not specified.

Action: Provide a password for the ASMSNMP user in the password field. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_ASMSNMP_PASSWORD_INVALID

INS-35377: An earlier release version of Oracle Automatic Storage Management (Oracle ASM) exists on this system. If you intend to upgrade an earlier release database that uses Oracle ASM to Oracle Database 11g Release 2, then the upgrade will fail on 32-bit systems.

Cause: Oracle Database 11g Release 2 and later supports Oracle ASM only on 64-bit Windows operating systems.

Action: Migrate database storage from Oracle ASM to a file system before upgrading, or migrate earlier release databases versions that use Oracle ASM storage to 64-bit Windows systems. See the upgrade guide for additional information. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_UPGRADE_ASM_NOT_SUPPORTED

INS-35378: The installer has detected that the configured Oracle Restart software is a release version earlier than the database release you want to install. Oracle Restart must be the same release or a later release than Oracle Database.

Cause: The active Oracle Restart release detected on the system (%s) is an earlier release than the Oracle Database release to which you want to upgrade (%s).

Action: Upgrade Oracle Restart software to version %s or later. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_UPGRADE_HA_NOT_UPGRADED_WARN

INS-35379: The installer has detected that configured Oracle Restart software is not upgraded to current install version.

Cause: The active version of Oracle Restart detected on the system (%s) is earlier than the version of Oracle Database that you are attempting to upgrade to (%s).

Action: Upgrade Oracle Restart software to version %s or later. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_UPGRADE_HA_NOT_UP
 GRADED_ERR

INS-35380: Installer has detected one or more policy managed databases eligible for upgrade. If you wish to upgrade one of these policy managed databases, it is recommended that you select all the nodes of the Clusterware. This will ensure the database software availability on all the nodes.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_PMDB_FOUND_SUBSET_OF_
 NODES_SELECTED

INS-35421: This option installs a single-instance database only.

Cause: You have chosen to perform a Desktop class install on a cluster. This option will not install Oracle RAC.

Action: If you want to install Oracle RAC, then choose to perform a Server class install. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_DESKTOP_CRIS_PRESEN
 T

INS-35422: The installer has detected that configured Oracle Restart software is not upgraded to current install version. This database installation does not register the database with lower version of High Availability service.

Cause: The active version of Oracle Restart detected on the system (%s) is lower than the version of Oracle Database that you are attempting to install to (%s).

Action: Upgrade Oracle Restart software to version %s or later. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_HA_NOT_UPGRADED

INS-35423: The installer has detected that Oracle Clusterware is not running on local node.

Cause: You have chosen to install Oracle RAC when Oracle Clusterware stack is not running on the local node.

Action: Start the Oracle Clusterware stack by running the following command as the root user from the Oracle Clusterware home (Grid home): /bin/crsctl start crs. When the Oracle Clusterware stack is running, restart the installer and continue with the Oracle RAC installation. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_CRIS_DOWN_ERR

INS-35431: Invalid Location Specified for Oracle home.

Cause: The installer detects that the location you specified for the Oracle home is under an Oracle Advanced Cluster File System (ACFS) mount point that is not registered with Oracle Grid Infrastructure on this server.

Action: Oracle Database homes can only be placed on ACFS locations registered with Oracle Grid Infrastructure software. Specify a different location for the Oracle home, or register this location with Oracle Grid Infrastructure software. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.HOME_SPECIFIED_ON_UNREGISTERED_
 ACFS

INS-35432: The installer has detected that the software location you have specified contains Oracle Database software version *string*. Oracle recommends that when upgrading to *string*, you perform an installation of the

software into a new Oracle home and then upgrade the database using the new software binaries.

Cause: n/a

Action: Perform an out-of-place upgrade. Out-of-place upgrades allow you to perform the upgrade with less downtime and more stability, due to the non-destructive nature of the software installation. You can perform the upgrade and maintain the existing Oracle home location by taking a backup of the prior release Oracle home before upgrading, and moving the prior release binaries to a different location before installing the new binaries into the existing Oracle home location. Refer to the documentation for a precise set of steps to follow in this case. *FQN:

```
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_HOME_REGISTERED_ERR
```

INS-35433: The installer has detected that the specified location *string* is on an Oracle Advanced Cluster File System that is not registered as a resource in Oracle Grid Infrastructure.

Cause: The specified location %s is on an Oracle Advanced Cluster File System that is not registered as a resource in Oracle Grid Infrastructure.

Action: Register the Oracle Advanced Cluster File System location that you want to use with Oracle Grid Infrastructure. *FQN:

```
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_ACFS_UNREGISTERED_WITH_SRVCTL
```

INS-35434: Oracle Home cannot be on Oracle Cluster File System.

Cause: Oracle Home provided was detected to be on Oracle Cluster File System.

Action: Provide a Oracle Home location which is not on Oracle Cluster File System. *FQN:

```
oracle.install.iww.db.resource.DBErrorCode.ORACLE_HOME_ON_OCFS
```

INS-35435: Oracle home of the Policy managed database on a Flex Cluster cannot be on Advanced Cluster File System.

Cause: Oracle home location specified was detected to be on Advanced Cluster File System.

Action: Specify an Oracle home location which is not on Advanced Cluster File System.

*FQN:

```
oracle.install.iww.db.resource.DBErrorCode.DB_HOME_ON_ACFS_ON_BC_AND_PMDB
```

INS-35436: Oracle home of a Software Only database installation cannot be on Advanced Cluster File System when LEAF type nodes are chosen for the installation.

Cause: Oracle home location specified was detected to be on Advanced Cluster File System and LEAF type nodes were chosen for the installation.

Action: Specify an Oracle home location which is not on Advanced Cluster File System or remove LEAF type nodes from the selected list of nodes. *FQN:

```
oracle.install.iww.db.resource.DBErrorCode.DB_HOME_OF_SWONLY_ON_ACFS_USING_RIM_NODES
```

INS-35437: Invalid location specified for Oracle home.

Cause: Installer has detected that the location specified for Oracle home is a sub directory under an Advanced Cluster File System (ACFS) mount point that does not provide permissions to your user id.

Action: Provide a different location for Oracle home or update the Access Control List (ACL) of the ACFS mount point. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_HOME_SPECIFIED_ON_A
CFS_USER_PERMISSION

INS-35438: The specified software location is found to be on Advanced Cluster File System (ACFS) configured to be available only on one node (*string*). Oracle RAC software can not be installed on a single-node ACFS.

Cause: n/a

Action: Specify a location that is on a clusterwide ACFS. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DB_HOME_NOT_SHARED_AND_ON_A
CFS

INS-35439: The specified base location is found to be on Advanced Cluster File System (ACFS) on node (*string*) and LEAF nodes were selected. Oracle RAC base location can not be installed on ACFS when LEAF nodes are selected.

Cause: n/a

Action: Specify a base location that is not on ACFS. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.LEAF_NODES_SELECTED_AND_ORAC
LE_BASE_ON_ACFS

INS-35440: The Oracle home location cannot be placed on Oracle Advanced Cluster File System (ACFS) when creating a database on an Oracle Restart (Standalone Server) environment.

Cause: The Oracle home location (%s) was detected to be on Oracle ACFS.

Action: Ensure the Oracle home location is not on Oracle ACFS. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.CREATE_DB_HOME_ON_ACFS_SIHA_
NOT_ALLOWED

INS-35441: The installer user does not have enough permissions to read and execute the Oracle base directory of the Oracle Grid Infrastructure.

Cause: n/a

Action: Ensure that the installer user %s has enough permissions to read and execute the Oracle base directory of the Oracle Grid Infrastructure: %s. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INVALID_ORACLE_BASE_PERMISSION
S_FOR_GI

INS-35461: Standard Edition One (SE One) is not supported for this installation.

Cause: Standard Edition One (SE One) is not supported for Oracle Real Application Clusters database installation.

Action: Select a different Install Edition. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_EDITION_SEONE_NOT_SUPP
ORTED

INS-35462: Personal Edition is not supported for this installation.

Cause: You selected an Install Edition that is not supported for UNIX operating systems, and for Oracle RAC installations.

Action: Select a different Install Edition. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_EDITION_PE_NOT_SUPPORT
ED

INS-35463: This option is not supported on Exadata configuration.

Cause: n/a

Action: Select Enterprise Edition option. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.NON_EE_NOT_SUPPORTED_EXADATA

INS-35464: The installer does not support installing the *string* of Oracle Database.

Cause: n/a

Action: Specify a valid choice for the Oracle Database Edition. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_EDITION_NOT_SUPPORTED

INS-35465: Standard Edition (SE) is not supported for this installation.

Cause: Standard Edition (SE) is not supported for Oracle Real Application Clusters database installation.

Action: Select a different Install Edition. If you intend to upgrade an existing Oracle Real Application Clusters Standard Edition database with Oracle Database 19c or later releases, then select Oracle Database Enterprise Edition to upgrade your database. If you plan to continue using Oracle Database Standard Edition without Oracle Real Application Clusters enabled, convert your database to a single instance Oracle Database before upgrading.

*FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_EDITION_SE_RAC_NOT_SUPPORTED

INS-35481: Server pool name is not specified.

Cause: You have not specified a valid name for the server pool.

Action: Specify a valid name for server pool. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SERVERPOOL_NAME_EMPTY

INS-35482: Server pool cardinality is invalid.

Cause: Server pool cardinality should be a number between %s and %s.

Action: Specify a valid number as Server pool cardinality. *FQN:
 oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SERVERPOOL_CARDINALITY_INVALID

INS-35483: Server pool name is invalid.

Cause: The specified Server pool name contains an invalid character.

Action: Specify a name for server pool that contains only alphabets, numbers, or the _, #, ., \$ characters. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SERVERPOOL_NAME_INVALID

INS-35484: The Installer has detected that there are no servers available for server pool creation.

Cause: n/a

Action: Ensure that you have free servers in your cluster so that you can create a new server pool. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_SERVERPOOL_NO_SERVER_AVAILABLE_FOR_SERVERPOOL_CREATION_ERROR

INS-35485: The Installer has detected that you may not have sufficient number of free servers to satisfy the cardinality specified to create a new server pool. Policy-managed database creation may fail.

Cause: n/a

Action: n/a *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_SERVERPOOL_NOT_ENOUGH_SERVERS_AVAILABLE_FOR_ALLOCATION_WARN

INS-35491: There are no Hub nodes detected in this cluster

Cause: Admin-managed Real Application Cluster database can be deployed only on Hub nodes.

Action: Choose Policy-managed Real Application Cluster database option if there are no Hub nodes in the cluster *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_NO_HUB_NODES

INS-35492: Local node is not a Hub node

Cause: Local Node has to be a Hub node in order to deploy a Admin-managed Real Application Cluster database.

Action: n/a *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_LOCALNODE_NOT_HUB_NODE

INS-35493: The selected node(s) are already assigned to existing server pool(s), which are currently hosting other Policy-managed Oracle Real Application Cluster databases configured on this cluster.

Cause: The node(s) %s are already part of a server pool(s).

Action: Specify a different node(s) for creating a database or add more node(s) to the cluster. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_NO_NODE_AVAILABLE_FOR_DATABASE_CREATION_ERROR

INS-35501: Nodes *string* specified for addnode are not part of the Clusterware yet. Ensure that the configuration scripts from the Grid Infrastructure home are completed after the database addnode is performed.

Cause: n/a

Action: n/a *FQN:
 oracle.install.iww.db.resource.DBErrorCode.DB_ADDNODE_NOT_PART_OF_THE_CLUSTER

INS-35502: Cluster nodes *string* are already having a database software in the same location as local node.

Cause: Nodes are already having a database software.

Action: Specify -noCopy option to addnode to have the configuration done without the software copy to these nodes. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.DB_ADDNODE_ALREADY_WITH_DATABASE_HOME

INS-35503: Nodes *string* are duplicately specified for addnode operation.

Cause: n/a

Action: Ensure that the duplicate entries of the specified nodes are removed. *FQN:
 oracle.install.iww.db.resource.DBErrorCode.DB_ADDNODE_DUPLICATE_NODE_ENTRIES

INS-35504: Node name cannot be left unfilled.

Cause: n/a

Action: Enter a valid node name. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DB_ADDNODE_NODE_NAME_BLANK

INS-35505: You have selected a non-secure installation and configuration of Oracle software on Windows. Starting with 12c version of Oracle Database, it is recommended to create a named user to be the owner of the Oracle home.

Cause: n/a

Action: Ensure that following nodes %s are configured, or meant to be later configured, as HUB nodes. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DB_ADDNODE_OH_ON_ACFS_AND_UNCONFIGURED_NODE_SELECTED

INS-35810: You have selected to use Built-in Account for installation and configuration of Oracle Home. Oracle recommends that you specify a Windows User Account with limited privilege to install and configure a secure Oracle Home.

Cause: n/a

Action: Specify a Windows User Account. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DB_BUILTIN_WRN

INS-35850: The installer has detected that you are trying to install a cluster database from a leaf node of a Flex cluster.

Cause: n/a

Action: Please install the cluster database from a hub node of this Flex cluster. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_LOCALNODE_LEAF_NODE

INS-35851: Oracle Database cannot be configured on Member Cluster for Applications.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_NOT_ALLOWED_ON_APP_CLUSTER

INS-35852: RAC One install option is not allowed.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RACONE_NOT_ALLOWED

INS-35853: Oracle RAC or RAC One Database option is not supported on Oracle Restart configurations.

Cause: n/a

Action: Choose the option to install a single instance database on this system. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.INSTALL_DB_RACDB_NOT_SUPPORTED_ON_SIHA_HOME

INS-35900: The specified source home path (*string*) does not correspond to a valid Oracle Database software home.

Cause: n/a

Action: Provide a valid Oracle Database software home as source home. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.CREATEGOLDIMAGE_DB_NOT_VALID_SOURCE_HOME

INS-35950: Installer has detected an invalid entry in the central inventory corresponding to Oracle home (*string*).

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_INVALID_HOME_REGISTERED

INS-35951: The installer has detected that there are files in the Oracle Database home (*string*) which are not owned by the user (*string*) or do not have the primary group (*string*).

Cause: Following files are not owned by the user (%s) or do not have the primary group (%s): %s.

Action: Ensure that the files listed above are owned by the user (%s) and have the primary group (%s). *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_GOLDIMAGE_FILES_OWNER_MISMATCH

INS-35952: The installer has detected that the Oracle Database home software at (*string*) is not complete.

Cause: Following files are missing: %s.

Action: Ensure that the Oracle Database home at (%s) includes the files listed above.

*FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_GOLDIMAGE_FILES_MISSING

INS-35953: The installer has detected that the Oracle home location provided in the command line is not correct.

Cause: The Oracle home value set in the command line %s is not textually the same as %s (identified by the installer from the DB Setup command).

Action: Specify the correct Oracle home location through the ORACLE_HOME command line variable. If you do not set it, the Installer will specify the right one.

*FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_WRONG_CMDLINE_HOME

INS-35954: The installer has detected that the Oracle home location provided in the response file is not correct.

Cause: The Database Oracle home is the location from where the installer is called. It has been detected that the value set in the response file is different (%s). Value expected is: %s.

Action: It is not required to specify ORACLE_HOME in the response file for Database installation. Alternatively, set it to the location of the installer (%s). *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_WRONG_RSPFILE_HOME

INS-35955: The Database software home (*string*) is already registered in the central inventory. This tool can only be used in a non-registered Database home.

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:

oracle.install.ivw.db.resource.DBErrorCode.DBSETUP_HOME_ALREADY_REGISTERED

INS-35956: The specified location (*string*) is not an Oracle Database home.

Cause: n/a

Action: Specify an Oracle Database home. *FQN:
oracle.install.iww.db.resource.DBErrorCode.DBSETUP_LOCATION_NOT_DBHOME

INS-35970: Specified install option (*string*) is invalid.

Cause: n/a

Action: Provide a valid install option. *FQN:
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_INSTALL_OPTION_INVALID

INS-35971: Specifying a list of cluster nodes is only applicable for software only installation option.

Cause: n/a

Action: Do not specify a list of cluster nodes. *FQN:
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_SELECTED_NODES_LIST_INVALID_ERR

INS-35972: Specifying a list of cluster nodes is only applicable for software only installation option. The provided list will be ignored and the selected install option will be performed on the local node only.

Cause: n/a

Action: Do not specify a list of cluster nodes. *FQN:
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_SELECTED_NODES_LIST_INVALID_WRN

INS-35980: Installer encountered an error while trying to read password from the wallet file in the location specified.

Cause: n/a

Action: Review the additional error information below and ensure a valid wallet file and/or wallet password is specified to the installer. *FQN:
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_WALLET_PASSWORD_INSTALL_EXCEPTION

INS-35990: The installer has detected that the root configuration scripts have not been run.

Cause: Incorrect ownership configuration detected for oradism.

Action: Run the root configuration scripts as the root user. *FQN:
oracle.install.iww.db.resource.DBErrorCode.INSTALL_DB_ROOT_CONFIG_NOT_EXECUTED

INS-40102: The software location for Oracle Grid Infrastructure is specified under the users home directory.

Cause: It is not recommended to put the software under users home directory as the product configuration may change the ownership of the software location to root user.

Action: Specify a location that is not under users home directory. *FQN:
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_HOME_IN_USER_HOME_WARN

INS-40103: The software location specified is on an OCFS2 formatted partition, which is not supported for product configuration.

Cause: n/a

Action: Specify a location that is not on an OCFS2 formatted partition. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_HOME_ON_OCFS2**INS-40104: The software location specified is on an OCFS2 formatted partition, which may not be a supported format for a clustered product configuration.**

Cause: n/a

Action: Specify a location that is not on an OCFS2 formatted partition. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.SOFTWARE_HOME_ON_OCFS2**INS-40105: The location specified for Oracle base is invalid.**

Cause: Oracle Grid Infrastructure software is already configured on this server, and the Oracle base you specified for this installation is not the same as the existing Oracle Grid Infrastructure software.

Action: Provide the same Oracle base location for this Oracle Grid Infrastructure installation that is used for the existing Oracle Grid Infrastructure. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BASE_INVALID_FOR_GI_UPGRADE_ERR**INS-40106: Invalid location specified for Grid home.**

Cause: The Oracle home location specified is on an Oracle Advanced Cluster File System (ACFS) mount point. You cannot place Oracle Grid Infrastructure binaries on an ACFS mount point.

Action: Specify a Grid home location that is on a location other than an ACFS mount point. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HOME_SPECIFIED_ON_ACFS**INS-40107: It is recommended that you choose a location with sufficient disk space to accommodate installation of future patches.**

Cause: The selected Oracle home was on a volume without enough disk space for future patching.

Action: Choose a location for Oracle home that has enough space (minimum of %s MB) or free up space on the existing volume. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HOME_NOT_ENOUGH_FREESPACE_WARN**INS-40108: The software location specified is on a temporary file system.**

Cause: n/a

Action: Specify a location that is not on a temporary file system. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_HOME_ON_TMPFS**INS-40109: The specified Oracle base location is not empty on this server.**

Cause: n/a

Action: Specify an empty location for Oracle base. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCALHOST_BASE_NOT_EMPTY

INS-40110: The specified Oracle base location is not empty on following nodes: *string*.

Cause: n/a

Action: Specify an empty location for Oracle base. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODES_BASE_NOT_EMPTY

INS-40111: The specified Oracle base location is not empty on following nodes: *string*.

Cause: n/a

Action: Specify an empty location for Oracle base. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ADDNODE_CRS_ORACLE_BASE_NOT_EMPTY_IN_NEW_NODES

INS-40112: The Oracle Grid Configuration Wizard has detected that the software location is on an OCFS2 formatted partition, which is not supported for product configuration.

Cause: n/a

Action: Install the software at location that is not on an OCFS2 formatted partition before proceeding with Oracle Grid Configuration Wizard. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_CONFIG_ON_OCFS2

INS-40113: The path specified for AHF install location [*string*] does not have enough free space.

Cause: n/a

Action: Please specify a path location for AHF install with at least %s MB of free space.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AHF_INSTALL_LOCATION_NOT_ENOUGH_FREESPACE_ERR

INS-40114: The path specified for AHF repository location [*string*] does not have enough free space.

Cause: n/a

Action: Please specify a path location for AHF repository with at least %s MB of free space.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AHF_REPOSITORY_LOCATION_NOT_ENOUGH_FREESPACE_ERR

INS-40115: The path specified for AHF install location [*string*] is the same as the Grid Infrastructure home.

Cause: n/a

Action: Please specify a different path location for AHF repository. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AHF_INSTALL_LOCATION_SAME_AS_GI_HOME

INS-40116: The path specified for AHF repository location [*string*] is the same as the Grid Infrastructure home.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AHF_REPOSITORY_LOCATION_SAME_AS_GI_HOME

INS-40401: Oracle Grid Infrastructure is already configured on the system.

Cause: Only one instance of Oracle Grid Infrastructure software can be configured on a system.

Action: One of the following actions may be considered. 1. Choose Upgrade option to upgrade Oracle Grid Infrastructure. 2. It is possible that previous configuration of Oracle Grid Infrastructure was not cleaned properly. Refer to documentation on how to deinstall the product. After performing the deinstall, Oracle Grid Infrastructure can be installed and configured. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ALREADY_PRESENT_ERR

INS-40404: Oracle Grid Infrastructure is already configured on the system.

Cause: Only one instance of Oracle Grid Infrastructure software can be configured on a system.

Action: One of the following actions may be considered. 1. Choose Upgrade option to upgrade Oracle Grid Infrastructure. 2. It is possible that previous configuration of Oracle Grid Infrastructure was not cleaned properly. Refer to documentation on how to deinstall the product. After performing the deinstall, Oracle Grid Infrastructure can be installed and configured. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.HA_CUR_GI_ALREADY_PRESENT_ERR

INS-40405: Oracle Grid Infrastructure is already configured on the system.

Cause: Only one instance of Oracle Grid Infrastructure software can be configured on a system.

Action: One of the following actions may be considered. 1. Choose Upgrade option to upgrade Oracle Grid Infrastructure. 2. It is possible that previous configuration of Oracle Grid Infrastructure was not cleaned properly. Refer to documentation on how to deinstall the product. After performing the deinstall, Oracle Grid Infrastructure can be installed and configured. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.HA_OLD_GI_ALREADY_PRESENT_ERR

INS-40406: Oracle Grid Infrastructure software is either not configured, or is already configured with the version that cannot be upgraded with this tool.

Cause: Unable to detect any existing Oracle Clusterware or Oracle ASM installation to upgrade.

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_NOT_PRESENT_ERR

INS-40407: Oracle ASM instance is already configured on the system.

Cause: Only one Oracle ASM instance can be configured on a system.

Action: Select the Software Only installation of Oracle Grid Infrastructure into a new home, and configure Oracle ASM in the new home after installation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HA_ASM_ALREADY_PRESENT_ERR

INS-40409: Local Cluster Synchronization Service (CSS) is already configured on this host. Local CSS is running from: *string*.

Cause: Configure an Oracle Grid Infrastructure installation (Oracle Clusterware and Oracle ASM) was chosen. However, Oracle Clusterware cannot be configured on a server with a configured CSS daemon.

Action: Deconfigure and delete the existing local CSS daemon, and then restart the installer.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.LOCAL_OLD_GI_CSS_ALREADY_PRESENT_ERR

INS-40410: Oracle Grid Infrastructure is already configured on the system.

Cause: Only one instance of Oracle Grid Infrastructure software can be configured on a system.

Action: One of the following actions may be considered. 1. Choose Upgrade option to upgrade Oracle Grid Infrastructure. 2. It is possible that previous configuration of Oracle Grid Infrastructure was not cleaned properly. Refer to documentation on how to deinstall the product. After performing the deinstall, Oracle Grid Infrastructure can be installed and configured. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.LOCAL_CUR_GI_CSS_ALREADY_PRESENT_ERR

INS-40412: This server does not meet network requirements to install and configure this product.

Cause: None of the network interfaces detected on this system supports IPv4 protocol.

Action: Configure at least one of the public interfaces available on this system to support IPv4. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_IPV4_NOT_PRESENT_ERR

INS-40413: Existing Oracle ASM instance detected.

Cause: An earlier version of Oracle ASM is configured on the server.

Action: If you intend to upgrade Oracle ASM as part of this installation, then you must shut down the Oracle ASM instance before proceeding. Shut down any database instances using Oracle ASM before shutting down the Oracle ASM instance. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.UPGRADE_CRS_ASM_SHUTDOWN

INS-40414: Unused Oracle Cluster Registry (OCR) location pointer file (*string*) on the system.

Cause: Oracle Cluster Registry (OCR) location pointer file (%s) is left behind from a previous installation.

Action: Delete the Oracle Cluster Registry (OCR) location pointer file (%s) and restart the installer. *FQN: oracle.install.ivw.crs.resource.CRSErrorCode.OCRLOC_FILE_FOUND

INS-40415: Upgrade database instances using Oracle Automatic Storage Management (Oracle ASM).

Cause: Oracle Database release %s instances detected.

Action: If you intend to upgrade Oracle ASM as part of this upgrade, then you must upgrade Oracle Database instances using Oracle ASM to release %s or later before proceeding with upgrading Oracle ASM. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ASM_NOT_COMPATIBLE_TO_UPGRADE

INS-40416: The version of the configured instance of Grid Infrastructure is not compatible for upgrading to this release of Grid Infrastructure.

Cause: Oracle Clusterware or Oracle ASM release %s or above is needed to upgrade to Oracle Grid Infrastructure.

Action: Install the patchset to upgrade the configured instance of Grid Infrastructure to version %s or higher. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_NOT_COMPATIBLE_TO_UPGRADE

INS-40417: Unused Oracle Cluster Registry (OCR) location registry key (*string*) on the system.

Cause: Oracle Cluster Registry (OCR) location registry key (%s) is left behind from a previous installation.

Action: Delete the Oracle Cluster Registry (OCR) location registry key (%s) and restart the installer. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.OCRLOC_REGISTRY_KEY_FOUND

INS-40418: Oracle Clusterware is not running on local node.

Cause: Oracle Clusterware stack on the local node is not running.

Action: Either run the installer on the node where Oracle Clusterware stack is running or open a terminal, log in as root or Administrator, change directory to the Oracle Clusterware home (Grid home), and start Oracle Clusterware by entering this command: crsctl start crs. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STACK_NOT_UP_ERR

INS-40419: The configured Oracle Automatic Storage Management (Oracle ASM) release is earlier than the Oracle Grid Infrastructure release.

Cause: The configured version of Automatic Storage Management software is lower than the Grid Infrastructure software version.

Action: Open a terminal, log in as the Grid Infrastructure installation owner, change directory to the Grid home, and run ASMCA to upgrade Oracle ASM. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_ASM_NOT_UPGRADED_ERR

INS-40420: The current installation user is not the same as the installation owner of the existing Oracle Grid Infrastructure software.

Cause: The current installation user (%s) is not the same as the existing Oracle Grid Infrastructure software user (%s). Run the installer as the user owning the Oracle Grid Infrastructure home.

Action: Restart the installation as the user that owns the existing Grid home. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.UPGRADE_GI_USER_MISMATCH_ERR

INS-40421: Failed to detect the owner of the existing Oracle Grid Infrastructure home (Grid home).

Cause: Cannot detect the owner of the existing Grid home. To upgrade the software, you must run the installer as the user owning the Grid home.

Action: Run the installer as the user owning the existing Grid home. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.UPGRADE_GI_UNABLE_TO_GET_CRS_USER_WARN

INS-40422: The configured instance of Grid Infrastructure is not compatible for upgrading to this release of Grid Infrastructure.

Cause: Patchset for the bug %s is not installed on the configured instance of the Grid Infrastructure home.

Action: Install the patchset for the bug %s on all the nodes to upgrade the configured instance of Grid Infrastructure to current version. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ONEOFF_NOT_INSTALLED_TO_UPGRADE

INS-40423: The Oracle Cluster Registry and the Voting file are located on an Oracle Cluster File System.

Cause: n/a

Action: Migrate the location of Oracle Cluster Registry and Voting file to Automatic Storage Management (ASM) storage before continuing with upgrade. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.OCR_VDSK_ON_OCFS

INS-40424: Oracle Cluster Registry (OCR) locations of existing clusterware configurations are either on a block or character storage device. The OCR locations cannot be on a block or character storage device during upgrade.

Cause: n/a

Action: Migrate the Oracle Cluster Registry (OCR) locations of existing clusterware configuration to one of the supported storage medium. Refer to the documentation for information about migrating the OCR to supported storage types. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_OCR_ON_RAW

INS-40425: Oracle Cluster Registry (OCR) is not managed through Automatic Storage management (ASM).

Cause: n/a

Action: Migrate the Oracle Cluster Registry (OCR) to be managed through ASM. Refer to the documentation for information about migrating the OCR to supported storage types. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_OCR_NOT_ON_ASM

INS-40426: Grid installation option has not been specified.

Cause: n/a

Action: Specify the valid installation option. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OPTION_NOT_SELECTED

INS-40427: Cannot upgrade from a leaf node of an Oracle Flex cluster.

Cause: The upgrade action of an Oracle Flex cluster is not allowed from a leaf node.

Action: Please upgrade from a hub node of this Oracle Flex cluster. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_FROM_LEAF_NODE

INS-40428: Oracle Grid Infrastructure of version *string* is already configured on this server.

Cause: Only a lower version of Oracle Grid Infrastructure can be upgraded to the current version.

Action: Select one of the other option to continue with the installation. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_SAME_VERSION_PRESENT_ERR

INS-40429: The Oracle Cluster Registry (OCR) and Voting Files locations of the existing Oracle Grid Infrastructure (GI) are not on Oracle Automatic Storage Management (Oracle ASM) storage.

Cause: n/a

Action: To upgrade the Oracle GI, the Oracle Cluster Registry (OCR) and Voting Files locations must be on Oracle ASM storage. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.UPGRADE_GI_CRS_IN_FS

INS-40430: Configured Oracle Grid Infrastructure version *string* does not match current home version *string*.

Cause: n/a

Action: Ensure the configured Oracle GI is valid. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_NOT_SAME_VERSION_PRESENT_ERR

INS-40431: Cannot add more nodes from a leaf node of an Oracle Flex cluster.

Cause: The add node action of an Oracle Flex cluster is not allowed from a leaf node.

Action: Please add more nodes from a hub node of this Oracle Flex cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADDNODE_FROM_LEAF_NODE

INS-40432: The current installation user is not the same as the installation owner of the existing Oracle Grid Infrastructure software.

Cause: The current installation user (%s) is not the same as the existing Oracle Grid Infrastructure software user (%s). To add more nodes to the existing cluster, run the installer as the user owning the Oracle Grid Infrastructure home.

Action: Restart the installation as the user that owns the existing Grid home. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ADDNODE_GI_USER_MISMATCH_ERR

INS-40433: Cannot detect the owner of the existing Oracle Grid Infrastructure home (Grid home).

Cause: Cannot detect the owner of the existing Grid home. To add more nodes to the existing cluster, you must run the installer as the user owning the Grid home.

Action: Run the installer as the user owning the existing Grid home. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ADDNODE_GI_UNABLE_TO_GET_CRS_USER_WARN

INS-40434: Oracle Clusterware stack from home (*string*) is down.

Cause: n/a

Action: To add more nodes, ensure the Oracle Clusterware stack from home (%s) is up. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ADDNODE_GI_NOT_RUNNING_IN_CURRENT_HOME

INS-40435: Cannot upgrade an Oracle Grid Infrastructure for a Cluster that is using client ASM storage.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HA_UPGRADE_ASM_SHUTDOWN

INS-40437: Oracle Grid Infrastructure is not supported on Windows domain controller.

Cause: Installing Oracle Grid Infrastructure software on servers that are configured as Windows domain controllers is not supported.

Action: Oracle Grid Infrastructure should not be installed on a Server that is configured as Windows domain controller. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_GI_NOT_SUPPORTED_ON_DOMA
IN_CONTROLLER

INS-40438: ASM Instance is not detected on this server.

Cause: n/a

Action: Use ASMCA (Automatic Storage Management Configuration Assistant) to configure ASM instance and create diskgroups for the upgrade to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_INSTANCE_NOT_FOU
ND

INS-40439: Following Oracle Member Clusters would be incompatible when this Oracle Domain Services Cluster (DSC) is upgraded: *string*.

Cause: n/a

Action: To proceed, either upgrade the Oracle Member Clusters or remove their configuration information from the Oracle Domain Services Cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DSC_UPGRADE_MC_NOT_
COMPATIBLE_ERR

INS-40440: The configured version *string* of Oracle clusterware is not matching with the current version *string*.

Cause: n/a

Action: To proceed with the remove node, ensure the active version of Oracle clusterware is same as the current version %s. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DELETE_NODE_NOT_COMP
ATIBLE_ERR

INS-40441: Oracle Clusterware stack from home (*string*) is down.

Cause: n/a

Action: To remove nodes, ensure the Oracle Clusterware stack from home (%s) is up. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DELETE_NODE_GI_NOT_R
UNNING_IN_CURRENT_HOME

INS-40442: The cluster contains active LEAF nodes. Upgrade cannot continue.

Cause: n/a

Action: A cluster with HUB nodes only can be upgraded. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_CLUSTER_WITH
_LEAF_NODES_NOT_ALLOWED

INS-40443: The following Member Clusters are of a lower version than the version you are upgrading this Domain Services Cluster to: *string*. It is recommended to first upgrade the Member Clusters, to this version, before proceeding with upgrading the Domain Services Cluster.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DSC_UPGRADE_WITH_OLDER_MC_NOT_ALLOWED

INS-40444: The version of the configured instance of Oracle Grid Infrastructure is not compatible for upgrading to this release of Oracle Grid Infrastructure.

Cause: n/a

Action: Refer to the additional details below. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NOT_COMPATIBLE_TO_UPGRADE

INS-40445: Application Member Cluster cannot be upgraded to this release of Oracle Grid Infrastructure.

Cause: n/a

Action: Member Clusters are no longer supported with this release of Oracle Grid Infrastructure. Cluster must be reconfigured manually. Contact Oracle Support for assistance. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBERAPP_CLUSTER_NOT_SUPPORTED_UPGRADE

INS-40601: The Intelligent Platform Management Interface (IPMI) driver is not installed on one or more of the following nodes: *string*.

Cause: Intelligent Platform Management Interface (IPMI) drivers were not installed on all the nodes that you indicated should be part of the cluster. Cluster Synchronization Service (CSS) requires this driver, as it interacts with the IPMI driver to ensure cluster integrity.

Action: Download the IPMI driver from the hardware vendor website, and ensure that the driver is installed and configured on all the nodes, so that installation can continue. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_DRV_NOT_CFG_ERR

INS-40602: Baseboard Management Controller (BMC) user name is not specified.

Cause: n/a

Action: The Baseboard Management Controller (BMC) user name is required to proceed with configuration. You have selected Intelligent Platform Management Interface (IPMI) to use for failure isolation support. Enter the BMC user name that has privileges to interact with the IPMI-compliant hardware. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_USERNAME_EMPTY_ERR

INS-40603: The specified value for the user name contained one or more invalid characters.

Cause: n/a

Action: Specify a valid BMC user name. The Baseboard Management Controller (BMC) user name can only contain lower or uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-), period (.), and underscore (_). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_USERNAME_BADCHAR_ERR

INS-40604: The Baseboard Management Controller (BMC) password is not specified.

Cause: Intelligent Platform Management Interface (IPMI) drivers were not installed on all the nodes that you indicated should be part of the cluster. Cluster Synchronization Service (CSS) requires this driver, as it interacts with the IPMI driver to ensure cluster integrity.

Action: n/a *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_INSTALL_CRS_IPMI_DRV_NOT_CFG_ERR
```

INS-40606: The Baseboard Management Controller (BMC) binary path is not specified.

Cause: n/a

Action: Specify the Baseboard Management Controller (BMC) binary path in order to configure IPMI for Failure Isolation for the cluster. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_BINPATH_EMPTY_ERR
```

INS-40607: The Baseboard Management Controller (BMC) binary file specified does not exist.

Cause: n/a

Action: Specify a correct Baseboard Management Controller (BMC) binary file in order to configure IPMI for Failure Isolation for the cluster. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_BINPATH_NOT_EXIST_ERR
```

INS-40608: The Baseboard Management Controller (BMC) binary file specified does not have the proper permissions.

Cause: n/a

Action: Ensure that the Baseboard Management Controller (BMC) binary file has the proper permissions in order to configure IPMI for Failure Isolation for the cluster. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IPMI_BINPATH_NOT_EXEC_PERMISSION_ERR
```

INS-40701: The specified value for the Grid Naming Service (GNS) subdomain contains one or more invalid characters.

Cause: n/a

Action: Enter a valid GNS subdomain name. Valid characters for the GNS subdomain can be any combination of lower or uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-), and period (.). *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_GNS_DOMAIN_ERR
```

INS-40702: Specify a value for Grid Naming Service (GNS) subdomain.

Cause: n/a

Action: A Grid Naming Service (GNS) subdomain is mandatory when configuring DHCP assigned virtual IPs to the nodes. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BLANK_GNS_DOMAIN_ERR
```

INS-40704: GNS subdomain cannot be resolved.

Cause: The GNS subdomain could not be resolved using TCP/IP host name lookup.

Action: Specify a subdomain that can be resolved. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_GNS_DOMAIN_ERR

INS-40705: Invalid characters in Grid Naming Service (GNS) Virtual IP Address.

Cause: The specified value for the GNS virtual IP address contained one or more invalid characters.

Action: Enter a valid value for the GNS virtual IP Address. Valid characters for GNS virtual IP addresses can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-), and period (.). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_GNS_VIP_ERR

INS-40706: Grid Naming Service (GNS) Virtual IP Address is blank.

Cause: n/a

Action: Provide a valid value for the GNS virtual IP address. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BLANK_GNS_VIP_ERR

INS-40707: Grid Naming Service (GNS) Virtual IP Address *string* cannot be resolved.

Cause: The GNS virtual IP address could not be resolved using TCP/IP host name lookup.

Action: Specify a valid GNS virtual IP address. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_GNS_VIP_ERR

INS-40708: Grid Naming Service (GNS) Virtual IP Address *string* already assigned to another system.

Cause: The specified GNS virtual host name could not be resolved to an IP address. This may occur if the IP address is in use on another cluster, or the IP address has not been registered to this name in the Domain Name System (DNS).

Action: Ensure that you have entered a virtual host name that is not in use. If you continue to receive an error, then contact your network administrator for assistance.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GNS_VIP_LIVE_ERR

INS-40709: The specified value for Cluster name (*string*) contains invalid characters.

Cause: n/a

Action: Specify a valid value for the cluster name. Valid characters can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9) and hyphen (-). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_CLUSTER_NAME_ERR

INS-40710: Specified cluster name (*string*) does not start with a letter.

Cause: n/a

Action: Specify a value for the cluster name that starts with a letter. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOESNOT_STARTWITH_ALPHABET_CLUSTER_NAME_ERR

INS-40711: Cluster Name is blank.

Cause: n/a

Action: Specify a valid value for the cluster name. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BLANK_CLUSTER_NAME_ERR

INS-40712: The specified value for the cluster name (*string*) is too long.

Cause: n/a

Action: Specify a cluster name that is %s or fewer characters in length. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXCEED_MAXSIZE_CLUSTER_NAME_ERR

INS-40713: Installer will use *string* as cluster name.

Cause: The cluster name cannot be longer than %s characters. With the Typical install type, the host portion of the SCAN is used as the cluster name. If that portion is longer than %s characters, the cluster name is truncated to %s characters.

Action: If you want to use a specific name for the cluster, then provide a name no greater than %s characters, or select the Advanced installation type. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXCEED_MAXSIZE_SCAN_NAME_TYPICAL_ERR

INS-40714: Single Client Access Name (SCAN) Name: *string* contains invalid characters.

Cause: The name you provided as the SCAN contained one or more invalid characters.

Action: Specify a valid name for the SCAN. Valid characters can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-), and period (.). *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_SCAN_NAME_ERR

INS-40715: Single Client Access Name (SCAN) Name: *string* contains invalid characters.

Cause: The name you provided as the SCAN contained one or more invalid characters. For the Typical installation type, invalid characters include those that are invalid for a cluster name, because the cluster name is derived from SCAN.

Action: Enter a valid name for the SCAN and for the cluster name. Valid characters can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), hyphen (-), and period (.). *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_SCAN_NAME_TYPICAL_ERR

INS-40716: Single Client Access Name (SCAN) Name *string* does not start with a letter.

Cause: The SCAN did not start with an alphabetic character.

Action: Provide a value for the SCAN that starts with an alphabetic character. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOESNOT_STARTWITH_ALPHABET_SCAN_NAME_ERR

INS-40717: Single Client Access Name (SCAN) is unfilled.

Cause: No name was provided as the SCAN.

Action: Provide a valid name to use for the SCAN. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BLANK_SCAN_NAME_ERR

INS-40718: Single Client Access Name (SCAN) *string* could not be resolved.

Cause: The name you provided as the SCAN could not be resolved using TCP/IP host name lookup.

Action: Provide name to use for the SCAN for which the domain can be resolved.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_SCAN_NAME_DOMAIN_ERR

INS-40719: IP address configured for Single Client Access Name (SCAN): *string* is already assigned to another system.

Cause: Unable to find the IP addresses you selected as SCAN addresses. This may be because they are assigned to another system, or because the IP addresses are not listed in the DNS or hosts files as assigned to this domain name.

Action: Enter resolvable IP addresses to use as SCAN addresses. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SCAN_VIP_LIVE_ERR

INS-40720: Single Client Access Name (SCAN) *string* is not associated with any IP address.

Cause: The name configured as the SCAN was not associated with an IP address.

Action: Ensure the names you provide as SCANS are associated with IP addresses.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_IP_FOR_SCAN_NAME_ERR

INS-40721: Single Client Access Name (SCAN) port is blank.

Cause: The SCAN port text field was empty.

Action: Provide a valid value for the SCAN port. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BLANK_SCAN_PORT_ERR

INS-40722: Single Client Access Name (SCAN) port: *string* contains non-numeric characters.

Cause: The value entered for the SCAN port contained one or more invalid characters. A valid SCAN port is a number.

Action: Enter a valid numeric value for the SCAN port. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_SCAN_PORT_ERR

INS-40723: Invalid Single Client Access Name (SCAN) port number: *string*.

Cause: The value entered for the SCAN Port was out of the valid range.

Action: Enter a SCAN port number between 1024 and 65535. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_SCAN_PORT_ERR

INS-40724: No locally defined network interface matches the SCAN subnet.

Cause: None of the locally defined network interfaces has a subnet matching the SCAN subnet.

Action: Define a public interface with a subnet matching the one you want to use for the SCAN. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_LOCAL_INTERFACE_SUBNET_MATCHING_SCAN_VIP

INS-40725: Unable to determine the existence of an interface with a subnet matching the SCAN subnet.

Cause: No interface was found with a subnet matching the subnet designated as the SCAN subnet.

Action: Define a public interface with a subnet matching the one you want to use for the SCAN. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_FAIL_LOCAL_INTERFACE_SUBNET_MATCHING_SCAN_VIP

INS-40726: Single Client Access Name (SCAN) string is not valid.

Cause: While configuring GNS on a dynamic network, the domain part of the SCAN should be in the *Cluster Name.GNS delegated domain* form.

Action: Ensure the domain part of the SCAN is not specified, or specified as: %s. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.SCAN_NAME_NOT_IN_GNS_DOMAIN_ERR

INS-40727: Single Client Access Name (SCAN) string is already associated with an IP address.

Cause: The name for the configured SCAN is already associated with an IP address.

Action: If you intend to use GNS resolution for your cluster, then ensure the names you provide for SCANS are not associated with IP addresses that are already in use. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.SCAN_NAME_IS_IP

INS-40728: Invalid Single Client Access Name (SCAN) port number: string.

Cause: The SCAN port number you provided is already in use. This can occur if Oracle9i RAC is installed on the server, and it is using the port.

Action: Provide a different SCAN port number in the range 1024 and 65535. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SCAN_PORT_NOT_AVAILABLE_ERR

INS-40729: Invalid Single Client Access Name (SCAN) specified:[string].

Cause: Single Client Access Name (SCAN) cannot have a domain name suffix when configuring cluster to use shared GNS.

Action: Remove the period (.) and any following text from the specified Single Client Access Name (SCAN). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.NO_FQDN_SCANNAME_FOR_SHARED_GNS

INS-40730: Hostname portion of the specified Single Client Access Name (SCAN) Name: string is longer than 63 characters.

Cause: n/a

Action: Specify a SCAN Name whose hostname portion is not longer than 63 characters. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXCEED_MAXSIZE_SCAN_NAME

INS-40731: SCAN name is invalid.

Cause: SCAN name (%s) cannot be same as the local node name.

Action: Specify an alternative SCAN name. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.SCAN_NAME_SAME_AS_LOCAL_NODE_FQDN

INS-40732: The specified SCAN name is invalid.

Cause: The hostname of the SCAN name (%s) cannot end with hyphen character (-).

Action: Specify a valid SCAN name. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SCANNAME_HOSTNAME_ENDS_WITH_HYPHEN

INS-40733: The specified cluster name is invalid.

Cause: The cluster name (%s) cannot end with hyphen character (-).

Action: Specify a valid cluster name. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLUSTERNAME_ENDS_WITH_HYPHEN

INS-40734: Shared SCAN option is not supported on this platform.

Cause: n/a

Action: Specify the Local SCAN option to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SHARED_SCAN_NOT_SUPPORTED_PLATFORM_ERR

INS-40735: The value specified for site name (*string*) contains invalid characters.

Cause: n/a

Action: Specify a valid value for the site name. Valid characters can be alphanumeric characters (a - z, A - Z, 0 - 9) and hyphen (-). *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_BAD_CHAR_SITE_NAME_ERR

INS-40896: The following hostnames have an invalid length: *string*.

Cause: The hostnames cannot have more than %s characters.

Action: Ensure that the hostnames are no more than %s characters long. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_INVALID_HOSTNAME_LENGTH_ERR

INS-40897: Host name or one of its components has an invalid length.

Cause: The name you provided as the host name or one of its domain components has an invalid length.

Action: Ensure that the host name is no more than 253 characters long in total and that each domain component is no more than 63 characters long. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_INVALID_LENGTH_ERR

INS-40898: Virtual IP name or one of its components has an invalid length.

Cause: The name you provided as the Virtual IP name or one of its domain components has an invalid length.

Action: Ensure that the Virtual IP name is no more than 253 characters long in total and that each domain component is no more than 63 characters long. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_VIP_INVALID_LENGTH_ERR

INS-40899: One or more nodes will not be added due a host name of invalid length.

Cause: One or more generated nodes contain a host name on which the name or one of its domain components has an invalid length.

Action: Ensure that the range expression generates host names which length is no more than 253 characters long in total and that each domain component is no more than 63 characters long. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_RANGE_INVALID_LENGTH_WARN

INS-40900: One or more nodes will not be added due a VIP name of invalid length.

Cause: One or more generated nodes contain a VIP name on which the name or one of its domain components has an invalid length.

Action: Ensure that the range expression generates VIP names which length is no more than 253 characters long in total and that each domain component is no more than 63 characters long. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_RANGE_VIP_INVALID_LENGTH_WARN

INS-40901: The cluster node information table is unfilled.

Cause: Values in the cluster node information table are unfilled.

Action: Provide valid data in the cluster node information table. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_TABLE_EMPTY_ERR

INS-40902: The information related to nodes is not specified completely.

Cause: Some fields pertaining to the nodes were empty.

Action: Ensure that all information related to the nodes are specified completely. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_EMPTY_FIELDS_ERR

INS-40903: Host name contains invalid characters.

Cause: The name you provided as the host name contains one or more invalid characters.

Action: Ensure that the host name contains valid characters. Valid characters for host names can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_BAD_CHARACTER_ERR

INS-40904: ORACLE_HOSTNAME does not resolve to a valid host name.

Cause: The value provided for ORACLE_HOSTNAME does not resolve to a valid host name.

Action: Provide a valid host name for ORACLE_HOSTNAME, and restart the installer.

*FQN: oracle.install.ivw.crs.resource.CRSErrorCode.ORACLE_HOSTNAME_INVALID

INS-40905: Unresolved host IP addresses.

Cause: One or more IP addresses do not resolve to valid host names.

Action: Enter valid IP addresses that resolve to hostnames before installation can continue. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INVALID_HOST_ERR

INS-40906: Duplicate host name(s) string provided for the Oracle Clusterware installation.

Cause: n/a

Action: Remove duplicate host name entries provided for the Oracle Clusterware installation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_DUPLICATE_ERR

INS-40907: Local node not included in the list of host names for grid installation.

Cause: The local node (the node where you are running the installer) was missing from the list of host names you provided.

Action: Include the local node in the list of host names for grid installation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_LOCAL_NOT_INCLUDED_ERR

INS-40908: Invalid host names.

Cause: One or more host names you provided are invalid, as they do not resolve to a valid IP address.

Action: Enter valid host names. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_PUB_INVALID_ERR

INS-40909: Host names from multiple domains entered.

Cause: Node information was entered for two or more nodes that belonged to different domains.

Action: Enter host names belonging to the same domain. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_DIFF_DOMAIN_ERR

INS-40910: Virtual IP: string entered is invalid.

Cause: The Virtual IP did not resolve to an IP address.

Action: Enter a valid name for the virtual IP that resolves to an IP address. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_VIP_INVALID_ERR

INS-40911: Some public node names could not be resolved.

Cause: Some public nodes either were unreachable, or they belonged to a different subnet.

Action: Ensure that nodes in the list are up and reachable, and ensure that the node addresses are all in the same subnet. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_PUB_NOTLIVE_ERR

INS-40912: Virtual host name: *string* is assigned to another system on the network.

Cause: One or more virtual host names appeared to be assigned to another system on the network.

Action: Ensure that the virtual host names assigned to each of the nodes in the cluster are not currently in use, and the IP addresses are registered to the domain name you want to use as the virtual host name. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_VIP_LIVE_ERR

INS-40913: The following nodes cannot be clustered due to user equivalence issue: *string*.

Cause: The user performing this installation is not configured identically on all nodes. This may be due to differences in the user or group IDs, or to SSH configuration issues.

Action: If necessary, refer to the installation guide for information about how to set up user equivalence manually on cluster nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_USER_EQUIVALENCE_ERR

INS-40914: Oracle9i RAC is already installed on the following nodes: *string*.

Cause: An Oracle9i RAC installation was present on the listed nodes, but not on the local node.

Action: To install on a set of nodes on which the Oracle9i release of Oracle RAC has been configured, run the installer on the node where Oracle9i RAC is installed and upgrade the existing installation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_REMOTE_92_ERR

INS-40915: Oracle Clusterware is already installed on the following nodes: *string*.

Cause: Oracle Clusterware may be running on the listed nodes, or previous installation of Oracle Clusterware is not completely deinstalled.

Action: For each node listed, ensure that existing Oracle Clusterware is completely deinstalled. Alternatively, do not to include the listed nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLUSTERWARE_DETECTED_ON_NODES_ERR

INS-40916: Single-instance versions of Cluster Synchronization Service (CSS) are detected.

Cause: Single-instance versions of Cluster Synchronization Service (CSS) on the following nodes: %s.

Action: Before proceeding with the installation, you must deconfigure CSS, shut down any Oracle Automatic Storage Management (Oracle ASM) instances, and shut down all databases that use Oracle ASM for storage on all of the listed nodes. Oracle Clusterware installation starts a cluster-wide version of CSS. After Oracle Clusterware installation is complete, you may start up any databases and Oracle ASM instances that previously used CSS. When they are brought back up, Oracle Clusterware provides CSS. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_LOCAL_CSS_ERR

INS-40917: Host name cannot be in IP Address format.

Cause: n/a

Action: Provide the host name for host name. *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_PUB_IN_IP_ER
R

INS-40918: Virtual IP name: *string* cannot be in IP Address format.

Cause: Virtual IP name cannot be in IP address format.

Action: Provide a valid virtual IP name. *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_VIP_IN_IP_ER
R

INS-40919: Hostname cannot be left unfilled.

Cause: Hostname for the node was not specified.

Action: Enter a valid hostname. *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_HOSTNA
ME_BLANK_ERR

INS-40920: No name was provided as the virtual IP name.

Cause: Virtual IP address name was not specified.

Action: Enter a valid virtual IP name. *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_VIP_BLA
NK_ERR

INS-40921: Virtual IP name contains invalid characters.

Cause: The name you provided for the virtual IP name contains one or more invalid characters.

Action: Provide a name to use for the virtual IP name that contains valid characters. Valid characters for virtual IP name can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9) and hyphen (-). *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_VIP_BA
D_CHAR_ERR

INS-40922: Invalid SCAN - unresolvable to an IP address.

Cause: SCAN provided does not resolve to an IP address.

Action: Ensure that the SCAN is valid, and that it is resolvable to an IP address.

*FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_SCAN_V
IP_INVALID

INS-40923: Unable to match a local interface or subnet with the SCAN.

Cause: No local network interface was found with an address matching the subnet for the SCAN.

Action: Ensure that the SCAN subnet matches the subnet configured on an existing local network interface. *FQN:

oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_FAIL_LO
CAL_SUBNET_MATCH

INS-40924: Failure while initializing search for common interface or subnets across cluster nodes.

Cause: Unable to locate common interfaces or subnets on all cluster member nodes.

Action: Ensure that the local node has valid network interfaces, with valid subnets that are the same on all cluster member nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_FAIL_INIT_COMMON_SUBNETS

INS-40925: One or more nodes have interfaces not configured with a subnet that is common across all cluster nodes.

Cause: One or more nodes have network interfaces configured with a subnet that is not common to all nodes in the cluster.

Action: Ensure all cluster nodes have a public interface that is defined with the same subnet, and accessible by all nodes in the cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODES_MISSING_COMMON_SUBNET

INS-40926: Cluster node interfaces are configured in subnets different from the SCAN subnet.

Cause: One or more nodes have interfaces configured with subnets that are different than the SCAN subnet.

Action: Ensure all nodes have a public interface configured with a subnet that matches the SCAN subnet. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODES_NOT_MATCHING_SCAN_VIP_SUBNET

INS-40927: The network interfaces with common subnets are assigned different names across nodes.

Cause: The following nodes have interfaces in common subnets that have different interface names: %s.

Action: Ensure that the names of interfaces defined on common subnets are the same on all cluster member nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_COMMON_NODES_NAME_MISMATCH

INS-40928: Failed to validate the network interface of cluster member nodes.

Cause: Failed to validate the addresses or subnets on cluster member nodes.

Action: Ensure network interfaces are configured correctly, and that subnets are available on all nodes of the cluster. Ensure all nodes have at least one public interface on a subnet available on all nodes, and ensure all nodes have one public interface on the same subnet.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_UNKNOWN_NODE_VALIDATION_ERROR

INS-40929: Oracle 9i Global Services Daemon (GSD) is running on the following nodes: *string*.

Cause: Oracle 9i Global Services Daemon (GSD) processes are detected on some or all of the nodes specified.

Action: To allow Oracle Clusterware to serve Oracle9i RAC databases, on each cluster member node you must shut down the Oracle9i Database GSD, and shut down any Oracle

RAC databases. GSD will be configured to run in the new grid Oracle home. After installation, you may restart all Oracle9i databases. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_GSD_ALREADY_RUNNING

INS-40930: The following nodes were not resolvable during host IP address lookup: *string*.

Cause: One or more node VIPs could not be resolved to a valid IP address.

Action: Be sure all node VIPs are resolvable to a valid IP address. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODE_VIP_UNKNOWN_HOST

INS-40931: The following nodes have interfaces that are configured on a subnet that is different from the SCAN subnet: *string*.

Cause: Some node VIPs are on subnets that are different from the SCAN subnet.

Action: For each cluster member node, ensure that the VIP is configured with the SCAN subnet. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODE_VIP_SCAN_VIP_MISMATCH

INS-40932: Failed to validate Node Virtual IPs: *string*.

Cause: n/a

Action: Ensure all node VIPs resolve to a valid IP address. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODE_VIP_UNKNOWN_ERR

INS-40933: Failed to retrieve network information on node *string*.

Cause: n/a

Action: Be sure all nodes are accessible and have valid network interfaces defined. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_NODE_COLLECTION_FAILED

INS-40934: A remote directory operation failed on node *string*. Message: *string*.

Cause: n/a

Action: Be sure all nodes are accessible across the network. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_REMOTE_DIR_OP_FAILED

INS-40935: A cluster operation (for example, copy file, file exists, or other operation) failed on node *string*. Message: *string*.

Cause: n/a

Action: Ensure that all cluster member nodes are accessible on the network. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_CLUSTER_OP_FAILED

INS-40936: A command tool operation failed on node *string*. Message: *string*.

Cause: A cluster operation (for example, list interfaces) failed.

Action: Ensure that all cluster member nodes are accessible on the network. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_CMD_TOOL_OP_FAILED

INS-40937: The following hostnames are invalid: *string*.

Cause: The hostname or names listed are invalid.

Action: Ensure that you are not providing aliases, and that the hostnames you provide are valid. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INVALID_ERR

INS-40938: Some or all cluster member nodes of the Oracle 9i RAC database are not included in the selected list of nodes.

Cause: Some of the nodes that are cluster members of the Oracle9i RAC database are not among the nodes you selected.

Action: In the list of nodes, specify all the cluster member nodes of the Oracle9i RAC database. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ALL_9IRAC_NODES_NOT_INCLUDED_ERR

INS-40939: Some of the nodes you selected are not members of the vendor cluster that is on the local server.

Cause: This node is a member of a vendor cluster, and that some of the nodes you selected to make members of the Oracle Clusterware cluster are not members of the vendor cluster.

Action: If you install Oracle Clusterware on a node that is a member of a vendor cluster, then all nodes that you select to be Oracle Clusterware nodes must also be members of the vendor cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ALL_NODES_NOT_PART_OF_VC_ERR

INS-40940: Nodes *string* are not in the domain: *string*.

Cause: Nodes are not configured on the same domain.

Action: Ensure that all nodes are configured on the same domain. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ALL_NODES_ARE_NOT_IN_SAME_DOMAIN_ERR

INS-40941: Unable to retrieve domain information on one or more nodes.

Cause: Unable to collect domain information from one or more nodes you selected.

Action: Before proceeding with the installation, ensure that all selected nodes are configured on the same domain. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ALL_NODES_ARE_NOT_IN_SAME_DOMAIN_WARN

INS-40942: Invalid value specified for Target Hub node size.

Cause: Target Hub node size for a cluster should be an integer value between %s and %s.

Action: Specify a valid value for Target Hub node size. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INCORRECT_TARGET_HUB_SIZE

INS-40943: No Hub nodes/Auto nodes specified.

Cause: A Flex Cluster type Oracle Clusterware can be configured only if there is at least one Hub node or Auto Node.

Action: Add a Hub node or Auto node to the configuration. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ZERO_HUB_AUTO_NODES
```

INS-40944: The length of upper bound and lower bound of ranges is not same.

Cause: n/a

Action: Specify equal length for upper bound and lower bound of ranges. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_UPPERBOUND_AND_LOWERBOUND_LEN_UNEQUAL
```

INS-40945: The value of upper bound is lesser than or equal to lower bound.

Cause: n/a

Action: Specify an upper bound value greater than lower bound. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_UPPERBOUND_LESSER_THAN_LOWERBOUND
```

INS-40946: The virtual hostname suffix provided has invalid characters.

Cause: The value provided for virtual hostname suffix has one or more invalid characters.

Action: Provide a value for the virtual hostname suffix that contains valid characters.

Valid characters for virtual hostname suffix can be any combination of lower alphanumeric characters (a - z, 0 - 9) and hyphen (-). *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_VIPSUFFIX_BAD_CHAR_ERR
```

INS-40947: No value was provided as the virtual hostname suffix.

Cause: A value for virtual hostname suffix was not specified.

Action: Enter a valid virtual hostname suffix for the node range. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_VIPSUFFIX_BLANK_ERR
```

INS-40948: The provided node range expression is not valid.

Cause: The provided node range expression does not comply with the allowed syntax to specify node ranges.

Action: Refer to the corresponding Oracle documentation for details on how to specify an expression to define a range of nodes for an Oracle cluster. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_INVALID_RANGE_EXPRESSION_ERR
```

INS-40949: Host Prefix cannot be left unfilled.

Cause: A host prefix for the node range was not specified.

Action: Enter a valid host prefix. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_HOSTPREFIX_BLANK_ERR
```

INS-40950: Host prefix contains invalid characters.

Cause: Host prefix provided contains one or more invalid characters.

Action: Ensure that the host prefix contains valid characters. Valid characters for host prefix can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_HOSTPREFIX_BAD_CHAR_ERR

INS-40951: The lower or upper bound of the range cannot be empty.

Cause: Either the lower or the upper bound of the node range is blank.

Action: Provide valid lower and upper bound of the node range you wish to configure. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_RANGE_BLANK_ERR

INS-40952: The lower or upper bound of the range contain invalid characters.

Cause: The lower or the upper bound of the node range contain one or more invalid characters.

Action: Ensure that the lower and upper bound of the node range contain valid numbers.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_RANGE_BAD_CHAR_ERR

INS-40953: Local node cannot be a Leaf node.

Cause: n/a

Action: Specify the node type of the local node to be Hub node. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCALNODE_IS_RIM

INS-40954: Local node *string* did not resolve to an IP address. Provide alternative name that resolves to an IP address.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCALNODE_CANNOT_RESOLVE_TO_IPADDR

INS-40955: Local node *string* could not be resolved using TCP/IP host name lookup. It is recommended that the local node is resolvable using TCP/IP lookup. This may avoid configuration failures at a later stage.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REVERSE_LOOKUP_NOT_WORKING_FOR_LOCALNODE

INS-40956: The specified public host *string* did not resolve to an IP address. Provide alternative name that resolves to an IP address.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PUBLIC_NODE_CANNOT_RESOLVE_TO_IPADDR

INS-40957: The specified public host *string* could not be resolved using TCP/IP host name lookup. It is recommended that the public host name is resolvable using TCP/IP lookup. This may avoid configuration failures at a later stage.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REVERSE_LOOKUP_NOT_WORKING_FOR_PUBLIC_NODE

INS-40958: Specified *string* (*string*) is configured with the dual stack addresses.

Cause: The specified %s is configured with both ipv4 and ipv6 addresses.

Action: Be sure to specify a %s which is configured with single IP address family.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DUAL_STACK_ADDRESSES_FOUND

INS-40959: Leaf nodes cannot be specified when the GNS configuration is of Shared type.

Cause: n/a

Action: Specify only HUB nodes to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SHARED_GNS_NOT_SUPPORTED_FOR_LEAF_NODES

INS-40960: Leaf nodes cannot be specified on this platform.

Cause: Oracle Grid Infrastructure does not support LEAF nodes to be part of Oracle FLEX cluster on this platform.

Action: Specify only HUB nodes to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_FLEX_CLUSTER_LEAF_NODES_NOT_SUPPORTED

INS-40961: Leaf nodes cannot be a part of the Flex Cluster without GNS.

Cause: LEAF nodes require GNS to be configured in an Oracle Flex Cluster.

Action: Specify only HUB nodes to proceed Or You can configure GNS and continue to specify LEAF nodes to be part of Flex Cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_FLEX_CLUSTER_LEAF_NODES_GNS_REQUIRED

INS-40962: Passwordless SSH configuration is not setup on this server.

Cause: n/a

Action: Setup passwordless SSH configuration on this server. You can refer to the documentation for the procedure to setup passwordless SSH configuration. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCALNODE_SSH_DOES_NOT_EXIST

INS-40963: Installer encountered exception while verifying passwordless SSH configuration.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_INSTALL_CRS_NODE_INFO_COMMON_NODES_NAME_MISMATCH

INS-40983: Leaf nodes cannot be configured as part of this Oracle Extended Cluster configuration.

Cause: n/a

Action: Remove the Leaf nodes from the specified nodes *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_LEAF_NODE_EXTENDED_CLUSTER

INS-40984: Site name is not assigned to one or more nodes.

Cause: n/a

Action: Assign a site name for every node specified for the configuration of Oracle Extended Cluster *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SITE_NOT_SPECIFIED_FOR_NODE

INS-40985: While configuring an Oracle Extended Cluster, it is not allowed to configure an ASM diskgroup with External redundancy.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_INVALID_EXTERNAL_REDUNDANCY

INS-40986: Site name is not assigned to one or more Failure Groups

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_FG_SITE_MISSING

INS-40987: While configuring an Oracle Extended Cluster the the diskgroup should be configured with Extended redundancy

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_INVALID_REDUNDANCY_BACKUPDG

INS-40988: Site name is not assigned to one or more Failure Groups

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_FG_SITE_MISSING_BACKUPDG

INS-40989: While configuring an Oracle Extended Cluster the the diskgroup should be configured with Extended redundancy

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_INVALID_REDUNDANCY

INS-40990: It is not allowed to specify failure groups for an ASM diskgroup with External redundancy.

Cause: n/a

Action: Change the redundancy or do not specify failure groups. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_FAILURE_GROUPS_I
 N_EXTERNAL_REDUNDANCY_DISKGROUP

INS-40991: Invalid Allocation Unit Size value specified.

Cause: n/a

Action: The minimum Allocation Unit Size for an ASM diskgroup with Extended
 redundancy is %s MB. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_REDUND
 ANCY_MINIMUM_AUSIZE

**INS-40992: Local node was included in the list of host names for Software Only
 setup.**

Cause: n/a

Action: Ensure the Oracle home is empty in the remote nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_NODE_HO
 ME_NOT_EMPTY

**INS-40997: Leaf nodes cannot be specified while configuring an Oracle Grid
 Infrastructure for a Cluster using client ASM storage.**

Cause: n/a

Action: Specify only HUB nodes to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LEAF_NODE_WITH_A
 SM_CLIENT

**INS-40998: The following nodes already have the same software home
 registered in their central inventory: *string*.**

Cause: n/a

Action: Remove these nodes from the specified list of nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_NODES_AL
 READY_HAVE_SAME_HOME_REGISTERED

**INS-40999: While configuring an Oracle Extended Cluster, it is not allowed to
 configure an ASM diskgroup with High redundancy.**

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER
 R_INVALID_HIGH_REDUNDANCY

**INS-41000: While configuring an Oracle Extended Cluster, it is not allowed to
 configure an ASM diskgroup with Extended redundancy.**

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER
 R_INVALID_EXTENDED_REDUNDANCY

**INS-41001: The software home *string* is already registered in the central
 inventory of the following remote nodes: *string*.**

Cause: n/a

Action: Re-launch the installer by passing the -noCopy flag for the installation to proceed without copying the software to the remote nodes, if the homes are identical on all remote nodes. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_NODES_HAVE_SAME_HOME_REGISTERED

INS-41002: At least one cluster node has to be specified for delete node operation.

Cause: n/a

Action: Specify one or more nodes that are part of the cluster to be deleted from the cluster. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_DELETE_NODES_NOT_EMPTY

INS-41003: Local node cannot be specified for delete node operation.

Cause: n/a

Action: Do not specify the local node. Specify one or more of the remaining nodes that are part of the cluster to be deleted. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_DELETE_NODES_LOCAL_NODE_NOT_ALLOWED

INS-41004: Public Hostnames are not specified for all the nodes.

Cause: n/a

Action: Specify a valid public hostname for each node. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_EMPTY_PUBLIC_HOSTNAME_ERR

INS-41005: Node type for the node *string* is not specified.

Cause: n/a

Action: Specify a valid node type or role for the node. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_EMPTY_NODE_TYPE_ERR

INS-41006: Virtual hostnames are not specified for all the nodes being configured.

Cause: n/a

Action: Virtual hostnames are optional. However, once specified for one node of the cluster, then configuration requires that you specify for all the nodes. *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_INFO_EMPTY_VIP_ERR

INS-41007: Local node does not have the software home registered, but following nodes already have the software home registered in their central inventory: *string*.

Cause: n/a

Action: n/a *FQN:
 oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_LOCALNODE_NOT_REGISTERED_REMOTES_ARE_ERR

INS-41008: Not all the remote nodes have the software home registered in their central inventory, but following nodes: *string*.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_NODES_PARTIALLY_REGISTERED

INS-41101: The specified interface information is incorrect.

Cause: Either the format of the information entered was incorrect, or the interface name or subnet information was incorrect.

Action: Enter the correct interface information before proceeding. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INCORRECT_INTERFACE_FORMAT_ERR

INS-41102: No public interface designated.

Cause: None of the network interfaces were designated as public.

Action: Designate at least one interface as a public interface. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_PUBLIC_INTERFACE_ERR

INS-41103: The network interface *string* has multiple subnets associated with it.

Cause: The network interface %s has been marked as both Public and Private.

Action: Designate interface %s either as Public or Private, but not both Public and Private. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_COMBINED_PRIVATE_PUBLIC_INTERFACE_WRN

INS-41104: No Private Interface designated.

Cause: There is no interface marked as Private.

Action: Ensure that at least one interface is designated as Private. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ONE_PRIVATE_INTERFACE_ERR

INS-41105: *string* on subnet *string* chosen as public does not match subnet of SCAN VIP.

Cause: The chosen public interface is not on the same subnet as the SCAN VIP.

Action: Ensure the chosen public interface is on the same subnet as the SCAN VIP subnet, and that the same subnet is configured for SCAN VIPs on all cluster nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PUBLIC_NOT_MATCH_SCAN

INS-41106: Invalid choice for public/private interface.

Cause: The chosen public or private interface subnet is not identical on all nodes.

Action: Ensure that the subnets configured for public and private interfaces are identical on all cluster nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PUBLIC_PRIVATE_NOT_ACROSS_NODES

INS-41107: The interface (*string*) chosen as Public or Private is not on a shared subnet. Nodes not defining are: *string*.

Cause: The Public or Private interface on the nodes indicated are on a different subnet than the ones used on other nodes.

Action: Ensure that the specified Public or Private interface share the same subnet across the nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INLINE_PUBLIC_PRIVATE_NOT_ACROSS_NODES

INS-41108: *string* on subnet *string* chosen as public does not match subnet of Grid Naming Service (GNS) VIP.

Cause: The chosen public interface is not on the same subnet as the GNS VIP.

Action: Be sure that the chosen public interface is on a subnet which matches the GNS VIP subnet and is common across all cluster nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PUBLIC_NOT_MATCH_GNS_VIP

INS-41109: Configured network mask *string* for the interface *string* is not same across all cluster nodes.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INTERFACE_LIST_TRANSFORMED_TO_DIFFERENT_FORMAT

INS-41111: Multiple interfaces are configured on the subnet (*string*), hence the generic name specified is ambiguous.

Cause: n/a

Action: Ensure that you have specified interface name appropriately. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MULTIPLE_INTERFACES_CONFIGURED_FOR_PARTICULAR_SUBNET

INS-41112: Selected interfaces are not configured properly.

Cause: n/a

Action: Review the additional information and modify the network interface configuration suitably. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INTERFACE_NOT_CONNECTED_ACROSS_NODES

INS-41113: Specified public and private interfaces are configured on the same subnet: *string*.

Cause: n/a

Action: Ensure that the public and private interfaces are configured on different subnets.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PUBLIC_PRIVATE_SUBNET_CONFIGURED_ON_SAME_SUBNET

INS-41114: The interface selected as Private (cluster interconnect) (*string*) is not configured with Internet Protocol version 4 (IPv4).

Cause: The interface (%s) is not configured with Internet Protocol version 4 (IPv4). Only those interfaces which are configured with Internet Protocol version 4 (IPv4) can be specified as Private (cluster interconnect) interface.

Action: Ensure that the interface selected for Private (cluster interconnect) is configured with IPv4. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PRIVATE_SUBNET_NOT_CONFIGURED_ON_IPV4

INS-41115: The number of selected Private and ASM & Private interfaces (*string*) exceeds the limit.

Cause: The Public or Private interface on the nodes indicated are on a different subnet than the ones used on other nodes.

Action: Ensure that the specified Public or Private interface share the same subnet across the nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_INSTALL_CRS_INLINE_PUBLIC_PRIVATE_NOT_ACROSS_NODES

INS-41119: No ASM or ASM & Private interface designated.

Cause: There is no interface marked as ASM or ASM & Private.

Action: Ensure that at least one interface is designated as ASM or ASM & Private.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_ASM_INTERFACE_ERR

INS-41120: The specified private interfaces are not of the same type.

Cause: n/a

Action: Ensure that all the specified private interfaces have the same type, IPV4 or IPV6. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PRIVATE_INTERFACES_MIXED_TYPES

INS-41121: The specified interface type number (*string*) in (*string*) is not valid.

Cause: n/a

Action: Ensure that all the specified interface type numbers are valid: - 1 : PUBLIC - 2 : PRIVATE - 3 : DO NOT USE - 4 : ASM - 5 : ASM and PRIVATE - 6 : ASM, PUBLIC and PRIVATE *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_WRONG_INTERFACE_TYPE_NUMBER

INS-41122: The specified Private, ASM or ASM & Private interfaces are not of the same type.

Cause: n/a

Action: Ensure that all the specified Private, ASM or ASM & Private interfaces have the same type, IPV4 or IPV6. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_PRIVATE_AND_ASM_INTERFACES_MIXED_TYPES

INS-41123: ASM interfaces cannot be specified while configuring a cluster that uses ASM Storage Service.

Cause: n/a

Action: Ensure that no ASM or ASM & Private interfaces are specified. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_INTERFACE_IN_CLIENT_ASM

INS-41124: Multiple network interfaces should not be designated for Private (cluster interconnect) usage.

Cause: On Windows operating system, Oracle Grid Infrastructure does not support designating multiple network interfaces for Private (cluster interconnect) usage as it does not provide failover capabilities during connectivity loss.

Action: Designate a single network interface for Private (cluster interconnect) usage. Additionally, you can setup NIC teaming to support failover capability during connectivity loss. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_MULTIPLE_PRIVATE_INTERFACES_FOR_WINDOWS

INS-41125: The current install user 'string' is not part of 'string' group.

Cause: In order to upgrade Grid Infrastructure, install user should be part of this group.

Action: Add the install user to group '%s'. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_USER_NOT_IN_ASM_SYSDBA_SYADMIN_GRP

INS-41126: The specified SCAN name and GNS VIP address do not resolve to be of the same IP network address type (IPv4 or IPv6).

Cause: n/a

Action: Ensure that SCAN name and GNS VIP address should be of the same IP network address type (IPv4 or IPv6). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SCANNAME_GNSVIP_MIXED_TYPES

INS-41127: No locally defined network interface matches the subnet address.

Cause: n/a

Action: Ensure that the subnet address %s from interface %s is correct. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_LOCAL_INTERFACE_SUBNET_MATCH

INS-41128: The specified selection of interfaces is not valid for the selected cluster usage.

Cause: n/a

Action: Ensure that all the specified interface type numbers are simultaneously allowed for the selected cluster usage. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_INTERFACE_COMBINATION

INS-41170: Opting out of configuring Grid Infrastructure Management Repository will permanently disable the Cluster Health Monitor, QoS Management, Memory Guard, and Fleet Patching and Provisioning features. Enabling of these features will require reinstallation of the Grid Infrastructure.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MGMT_DB_NOT_SELECTED_WARN

INS-41171: Configuring remote Grid Infrastructure Management Repository is not allowed in this platform.

Cause: n/a

Action: Select one of the alternate options. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_GIMR_NOT_SUPPORTED

INS-41172: The path for the Grid Infrastructure Management Repository (GIMR) remote credentials is empty. Specify a valid path for the GIMR remote credentials.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_GIMR_EMPTY

INS-41173: The path for the Grid Infrastructure Management Repository (GIMR) remote credentials does not exist (*string*). Specify a valid path for the GIMR remote credentials.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_REMOTE_GIMR_FILE_NOT_EXIST

INS-41174: Configuring local Grid Infrastructure Management Repository is not allowed for the selected cluster usage.

Cause: n/a

Action: Select one of the alternate options. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCAL_GIMR_NOT_SUPPORTED

INS-41204: No shared partition are available between nodes.

Cause: The specified nodes did not have at least one shared partition.

Action: Provide nodes that have at least one shared partition before proceeding with the installation. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_SHARED_PARTITION_ERR

INS-41205: Client ASM data file not specified.

Cause: To configure storage on a client ASM, a valid client data file has to be specified.

Action: Specify a valid client ASM data file to configure client ASM. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_DATAFILE_NOT_SPECIFIED

INS-41206: File name specified as client ASM data file is not a valid file.

Cause: The specified client ASM data file is not a valid file, or does not exist, or is not a readable file.

Action: Specify a valid client ASM data file to configure shared ASM. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_DATAFILE_INVALID

INS-41208: None of the available network subnets is marked for use by Oracle Automatic Storage Management (ASM).

Cause: At least one of the available network subnets should be configured for use by Oracle Automatic Storage Management (ASM).

Action: Configure one of the available network subnets for Oracle Automatic Storage Management (ASM) use if you intend to configure Near Oracle ASM or Client Oracle ASM.

*FQN: oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NO_ASM_NETWORK

INS-41210: One of the available network subnets is marked for use by Automatic Storage Management (ASM).

Cause: This storage option does not require configuring a network subnet for use by ASM.

Action: None of the interfaces should be marked for ASM usage if you want to store Oracle Cluster Registry (OCR) on shared file system or Local ASM. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_NETWORK_SELECTED

INS-41212: Specified ASM client data file is invalid.

Cause: The cluster name in the ASM client data file '%s' does not match with the cluster name specified '%s' for this installation.

Action: The cluster name retrieved from the specified ASM client data file should match the cluster name of the client cluster. Specify the correct ASM client data file. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_CLUSTERNAME_MISMATCH

INS-41213: Oracle Cluster File system is not supported on Windows.

Cause: n/a

Action: Use Oracle Automatic Storage Management for storing Oracle Cluster Registry / Voting files. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_STORAGEOPTION_SHARED_NOT_SUPPORTED_ON_WIN

INS-41214: Disk group name not specified.

Cause: n/a

Action: Specify a valid disk group name to store Oracle Cluster Registry (OCR) and Voting File. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_DISKGROUP_NOT_SPECIFIED

INS-41215: No Disk groups detected on remote cluster.

Cause: Cannot detect any diskgroups configured on the remote cluster.

Action: To configure the cluster to store Oracle Cluster Registry (OCR) and Voting File on remote cluster, a disk group available on the remote cluster should be specified. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_NO_REMOTE_DISKGROUPS

INS-41216: Specified disk group is not found on the remote cluster

Cause: n/a

Action: Installer is unable to detect the specified disk group on the remote cluster. Specify a disk group that is configured on the remote cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_DISKGROUP_NOT_MATCHED

INS-41217: Password for account *string* does not start with an alphabet.

Cause: n/a

Action: Provide a value for the password that starts with an alphabet. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_PASSWD_DOES_NOT_STARTWITH_ALPHABET_ERR

INS-41218: The password for account *string* is not allowed to be *string*.

Cause: The administrative account password you entered was %s which is not allowed for %s user.

Action: Enter a password that is not a former default password for the %s administrative user account. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_PASSWORD_NOT_ALLOWED_ERR

INS-41219: Invalid storage option selected.

Cause: The selected storage option is not supported for Oracle Flex Cluster with LEAF nodes.

Action: Choose an alternative storage option to proceed. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_NOT_SUPPORTED_FOR_LEAF_NODES

INS-41220: Invalid storage option selected.

Cause: Cannot configure an Oracle Flex Cluster with client ASM storage when configuring a GNS server.

Action: Choose an alternative storage option to proceed. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_NOT_ALLOWED_IN_GNS_SERVER

INS-41221: Cannot configure an Oracle Extended Cluster with client ASM storage.

Cause: n/a

Action: Choose an alternative storage option to proceed. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_NOT_ALLOWED_FOR_EXTENDED_CLUSTER

INS-41222: Specified cluster name is invalid.

Cause: The cluster name '%s' does not match with the cluster name specified in the Member Cluster Manifest file '%s' for this installation.

Action: Specify the correct cluster name. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_CLUSTERNAME_MISMATCH

INS-41223: ASM Filter Driver is not supported on this platform.

Cause: n/a

Action: To proceed, do not specify or select the Oracle ASM Filter Driver option.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AFD_NOT_SUPPORTED

INS-41224: Oracle ASM Filter Driver not supported on Member Cluster for Applications.

Cause: n/a

Action: Cannot choose to configure Oracle ASM Filter Driver for a Member Cluster for Applications. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APPLICATION_CLUSTER_AFD_NOT_SUPPORTED

INS-41225: Oracle ASM Filter Driver is not supported when IO service is specified.

Cause: n/a

Action: Cannot choose to configure Oracle ASM Filter Driver for a Member Cluster configured to use IO Service. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_IO_SERVICE_AFD_NOT_SUPPORTED

INS-41226: Oracle ASM Filter Driver cannot manage the selected devices since the devices are configured on NAS.

Cause: n/a

Action: In order to use Oracle ASM Filter Driver to manage the selected devices, they need to be attached locally. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_AFD_NOT_SUPPORTED_ON_NFS

INS-41227: Oracle Exascale feature is not enabled.

Cause: n/a

Action: Oracle Exascale feature must be enabled and Exadata must be supported. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_EXASC_ALE_NOT_ENABLED

INS-41228: The Exascale vault name *string* cannot include an @ char in the name.

Cause: n/a

Action: Please provide a valid vault name, the @ char will be automatically added at the beginning of the provided vault name. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.EXA_VAULT_NAME_CONTAIN_AT_CHAR

INS-41229: The selected vault name *string* is already in use.

Cause: n/a

Action: Please provide another vault name. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_EXASC_ALE_VAULT_IN_USE

INS-41230: The exascale wallet is not found in the system.

Cause: n/a

Action: Please ensure that exascale is configured correctly. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_EXASC_ALE_WALLET_NOT_FOUND

INS-41231: The exascale binary escli is not found in the system.

Cause: n/a

Action: Please ensure that exascale is configured correctly. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_E
XASCALE_BIN_NOT_FOUND

INS-41232: The exascale vault name is empty.

Cause: n/a

Action: Please select a valid name for the exascale vault. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_STORAGE_OPTION_E
XASCALE_VAULT_EMPTY

INS-41302: Normal redundancy requires three locations for the Oracle Cluster Registry.

Cause: Fewer than three locations were provided for the Oracle Cluster Registry.

Action: Specify three locations for the Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_NORMAL_REDU
NDANCY_ERR

INS-41303: External redundancy requires a location for the Oracle Cluster Registry.

Cause: A location for the Oracle Cluster Registry was not specified.

Action: Specify a location for the Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_EXTERNAL_RE
DUNDANCY_ERR

INS-41304: The allowed number of Oracle Cluster Registry locations is three or one. Oracle recommends three locations for the Oracle Cluster Registry.

Cause: Incorrect number of locations were provided for the Oracle Cluster Registry.

Action: Specify a valid number of locations for the Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_NORMAL_REDU
NDANCY_WRN

INS-41305: Invalid characters in one or more Oracle Cluster Registry (OCR) locations.

Cause: One or more Oracle Cluster Registry (OCR) locations contained bad characters.

Action: Provide an Oracle Cluster Registry (OCR) location that uses valid characters in the path. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_BAD_CHA
R_ERR

INS-41306: Invalid Oracle Cluster Registry (OCR) locations.

Cause: One or more Oracle Cluster Registry (OCR) locations are not valid.

Action: Provide valid Oracle Cluster Registry (OCR) locations. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_INVALID_E
RR

INS-41307: Insufficient space in shared file system for Oracle Cluster Registry (OCR).

Cause: Insufficient free space was available in the file system. Oracle Cluster Registry requires a minimum of %s MB of free space in the file system.

Action: Enter a shared file system that has at least %s MBs of free space. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_NOT_ENOUGH_FREE_SPACE_ERR

INS-41309: The Oracle Cluster Registry (OCR) cannot be placed on a block or character device.

Cause: The Oracle Cluster Registry (OCR) location you provided is on a block or character device.

Action: Select one of the following supported locations: OCFS2 partition, or a shared NFS partition. If you intend to use block or character device, choose Oracle Automatic Storage Management (Oracle ASM) as storage option for install. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_RAW_PARTITION_ERR

INS-41310: More than one Oracle Cluster Registry is in the same partition.

Cause: The Oracle Cluster Registry was located more than once on the same partition. For normal redundancy, Oracle recommends that you specify three locations on separate partitions for the Oracle Cluster Registry.

Action: Select separate partitions for each Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_MULTILOC_ON_SINGLE_PARTITION_ERR

INS-41311: One or more Oracle Cluster Registry (OCR) locations specified are in an existing OCR directory.

Cause: One or more Oracle Cluster Registry (OCR) locations specified were in directories with existing OCR files.

Action: Specify locations for Oracle Cluster Registry that are not in use. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_IS_DIR_ERR

INS-41312: One or more locations specified for the Oracle Cluster Registry (OCR) cannot be used.

Cause: One or more Oracle Cluster Registry (OCR) locations specified did not have proper permissions or ownership for the installation to proceed.

Action: Specify a location for Oracle Cluster Registry locations where the installation owner and oraInventory group members have read and write permissions. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_CREATION_ERR

INS-41313: Duplicate entries found in one or more Oracle Cluster Registry (OCR) locations.

Cause: One or more Oracle Cluster Registry locations specified were duplications.

Action: Specify a unique location for each Oracle Cluster Registry location. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_DUPLICATE_ERR

INS-41314: File *string* already exists. An attempt will be made to replace this file.

Cause: The specified Oracle Cluster Registry (OCR) file already exists.

Action: Choose a different location or let the installer replace this file. Replacing it will overwrite its current contents. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_EXISTS_WARN

INS-41315: File *string* already exists.

Cause: The specified Oracle Cluster Registry (OCR) file already exists.

Action: Ensure that the Oracle Cluster Registry (OCR) file you have specify is a nonexistent file. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_EXISTS_ERR

INS-41316: Unable to delete file: *string*.

Cause: The attempt to delete the file was not successful.

Action: Ensure that the user account running the installation has the permissions to replace the file. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_LOC_EXISTS_NO_DELETE_ERR

INS-41317: Invalid Oracle Cluster Registry (OCR) locations.

Cause: One or more Oracle Cluster Registry (OCR) locations were not valid.

Action: Provide valid Oracle Cluster Registry (OCR) locations. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.OCR_LOC_NOT_SHARED

INS-41318: One or more files *string* already exist. An attempt will be made to replace existing files.

Cause: One or more specified files already exist.

Action: Either choose a different storage location, or allow the installer to overwrite this location and remove any existing files. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_TYPICAL_OCR_VDSK_LOC_EXISTS_WARN

INS-41319: File(s) *string* already exist(s).

Cause: The specified shared location is in use.

Action: Ensure that the location you provided is not already in use, and that any past Oracle Clusterware configuration is completely removed from the partition. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_TYPICAL_OCR_VDSK_LOC_EXISTS_ERR

INS-41320: Unable to delete one or more files *string*.

Cause: The attempt to delete files was unsuccessful.

Action: Ensure that the user account running the installation has the permissions to replace files. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_TYPICAL_OCR_VDSK_LOC_EXISTS_NO_DELETE

INS-41321: Invalid Oracle Cluster Registry (OCR) location.

Cause: The storage type of the location (%s) is not supported for Oracle Cluster Registry.

Action: Provide a supported storage location for the Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OCR_FILE_SYSTEM_TYPE_ERR

INS-41322: The provided Oracle Cluster Registry (OCR) Location (*string*) cannot be configured.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_OCR_LOC_PARTIALLY_SHARED

INS-41324: The Oracle Cluster Registry (OCR) location [*string*] is invalid.

Cause: The storage type of the location (%s) is not supported for Oracle Cluster Registry.

Action: Provide a supported storage location for the Oracle Cluster Registry. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.OCR_FILE_SYSTEM_TYPE_ERR

INS-41325: The Oracle Cluster Registry (OCR) location *string* is not shared by the following nodes: *string*.

Cause: One or more nodes do not have access to the Oracle Cluster Registry (OCR) location.

Action: Provide an Oracle Cluster Registry (OCR) location that is shared by all the nodes.
*FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.OCR_FILE_SYSTEM_LOC_NOT_SHARED

INS-41502: Insufficient number of Voting File locations provided for normal redundancy configuration.

Cause: Enough separate locations for Voting Files were not specified. To provide normal redundancy, you must specify three separate locations for Voting Files.

Action: Specify three separate locations for Voting Files for normal redundancy. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_NORMAL_REDUNDANCY_ERR

INS-41503: Missing Voting File locations for external redundancy configuration.

Cause: A Voting File location was not specified. For external redundancy, you must specify a location for the Voting File.

Action: Specify one Voting File location for external redundancy. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_EXTERNAL_REDUNDANCY_ERR

INS-41504: The allowed number of Voting File locations is three or one. Oracle recommends three locations for the Voting Files.

Cause: Incorrect number of locations were provided for the Voting Files.

Action: Specify a valid number of locations for the Voting Files. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_NORMAL_REDUNDANCY_WRN

INS-41505: The Voting File locations contain one or more invalid characters.

Cause: n/a

Action: Specify Voting File location paths that do not contain illegal characters. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_BAD_CHARACTER_ERR

INS-41506: One or more Voting File locations are not valid.

Cause: One or more Voting File locations were not placed in an existing directory.

Action: Provide valid Voting File locations. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_INVALID_ERR

INS-41508: More than one Voting File is located on the same partition.

Cause: Normal redundancy for Voting Files requires that each file is placed on a different partition, to avoid a single point of failure.

Action: Specify three locations on separate physical partitions to configure normal redundancy for Voting Files. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_MULTILOC_ON_SINGLE_PARTITION_ERR

INS-41509: Duplicate locations used for one or more Voting File locations.

Cause: One or more Voting File locations you provide are duplicate. Each Voting File location must be on separate devices.

Action: Specify a location on separate devices for each Voting File. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_DUPLICATE_ERR

INS-41510: One or more Voting File locations are the same as an Oracle Cluster Registry (OCR) location.

Cause: One or more Voting File locations you provided are the same as an Oracle Cluster Registry (OCR) location. Voting Files cannot be on the same location as OCR locations.

Action: Specify Voting File locations that are different from Oracle Cluster Registry (OCR) locations. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_SAME_AS_S_OCR_ERR

INS-41511: One or more of the locations you specified for Voting Files are the same as an Oracle 9i quorum location.

Cause: Oracle 9i quorum disks are located on one or more of the locations you specified for Voting Files.

Action: Provide new locations for Voting Files. You cannot reuse an Oracle9i quorum disk location. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_QUORUM_LOC_ERR

INS-41512: Voting Files cannot be located on block or character devices.

Cause: The Voting File location you provided is on a block or character device.

Action: Select one of the following supported locations: Oracle Automatic Storage Management, an OCFS2 partition, or a shared NFS partition. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_RAW_PARTITION_ERR

INS-41513: Voting File locations cannot be in a directory with existing Voting Files.

Cause: One or more Voting File locations you provided have an existing Voting File.

Action: Specify a new Voting File location. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_IS_DIR_ERR

INS-41514: One or more locations you specified for Voting Files cannot be used.

Cause: One or more locations you specified for placing Voting Files did not have proper permissions or ownership for installation to proceed.

Action: Specify Voting File locations where the user account running the installation and oraInventory group members have read and write privileges. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_CREATION_ERR

INS-41515: Insufficient space in shared file system for Voting File.

Cause: Insufficient space was available in the storage location for a Voting File. Voting Files require a minimum of %s MB of free space.

Action: Enter a shared storage location that has at least %s MB of free space. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_NOT_ENOUGH_FREE_SPACE_ERR

INS-41516: File *string* already exists. An attempt will be made to replace this file.

Cause: The specified Voting File already exists.

Action: Choose a different location or let the installer replace this file. Replacing it will overwrite its current contents. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_EXISTS_WARN

INS-41517: File *string* already exists.

Cause: The specified Voting File already exists.

Action: Ensure that the location you specify for a Voting File does not already have a Voting File in that location. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_EXISTS_ERR

INS-41518: Unable to delete file: *string*.

Cause: The attempt to delete the file was not successful.

Action: Ensure that the user account running this installation has proper permissions in this storage area to replace the file. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_VDSK_LOC_EXISTS_NO_DELETE_ERR

INS-41519: One or more Voting File locations are not valid.

Cause: One or more Voting File locations may not be shared on all nodes.

Action: Provide valid Voting File locations on shared paths and directories. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.VDSK_LOC_NOT_SHARED

INS-41520: For high availability, Oracle recommends that you have this storage mirrored at the hardware level. Alternatively, you can select Normal Redundancy option and specify three locations that are on different disks.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.VDSK_EXTERNAL_REDUNDANCY_S
 ELECTED

INS-41521: Invalid Voting File location.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_VDSK_LOC_PARTIAL
 Y_SHARED

INS-41702: No nodes selected for upgrade.

Cause: Node selection was blank.

Action: Select a list of nodes to upgrade with the local node. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_NO_NODE
 S_SPECIFIED_ERR

INS-41703: The local node is not selected as one of the nodes for upgrade.

Cause: The nodes selected for upgrade did not include the local node.

Action: Select the local node (the node from which you are running the installer) as
 one of the nodes to upgrade. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_LOCAL_N
 ODE_MISSING_ERR

**INS-41704: Selected nodes should be members of the same cluster. The
 following nodes are not in the cluster: *string*.**

Cause: One or more nodes selected were not in the same cluster.

Action: Select nodes from the same cluster, or exclude the following nodes: %s.
 *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_NODE_NO
 T_IN_CLUSTER_ERR

INS-41705: One or more nodes (*string*) that are part of the cluster are down.

Cause: n/a

Action: Either select Ignore unreachable nodes option or ensure all the nodes of the
 cluster are up. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_NODE_DO
 WN_ERR

INS-41706: Only subset of nodes selected for upgrade.

Cause: A subset of the cluster nodes for the upgrade was chosen.

Action: During installation, the software will be copied to all cluster nodes. However,
 during installation setup, you are prompted to run the rootupgrade script only on the
 nodes you selected for upgrade. To complete the upgrade, run the rootupgrade script
 on the remaining nodes. You do not need to start the installer again to upgrade the
 remaining nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.SUBSET_NODES_SELECTED_FOR_
 UPGRADE_WARNING

INS-41707: Not all cluster member nodes are selected for upgrade.

Cause: This server has an earlier release of Oracle Grid Infrastructure software installed on this system. However, you have selected to upgrade a subset of the cluster nodes.

Action: To complete the upgrade, select all the nodes that are part of the Oracle Grid Infrastructure cluster. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SUBSET_NODES_SELECTED_FOR_UPGRADE_ERR
```

INS-41708: Oracle Automatic Storage Management (Oracle ASM) is not selected for upgrade.

Cause: An earlier release of Oracle ASM is installed on this server. Oracle ASM needs to be upgraded as part of this installation.

Action: Select Oracle ASM upgrade option to complete the installation. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_NOT_SELECTED_FOR_UPGRADE_ERR
```

INS-41709: Oracle Automatic Storage Management (Oracle ASM) is not installed on this server.

Cause: Upgrade Oracle ASM was selected. However, the installer does not detect Oracle ASM on this server.

Action: To continue with the installation, deselect the option to upgrade Oracle ASM. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_NOT_FOUND_ERR
```

INS-41710: Oracle Automatic Storage Management (Oracle ASM) configured in your cluster cannot be upgraded in a rolling manner. During the upgrade process, any databases using the active Oracle ASM will be forcibly shutdown.

Cause: The configured instance of Oracle ASM is not compatible for rolling upgrade to this release of Oracle Grid Infrastructure.

Action: All the databases using the active Oracle ASM will go down during this installation. Plan for databases to be unavailable during the time when the installer is running configuration tools. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_NOT_ROLLING_UPGRADABLE_WARN
```

INS-41711: The upgrade process upgrades the stack one node at a time, even though you selected to upgrade all nodes. Database service will be disrupted for any database that uses Oracle Automatic Storage Management (Oracle ASM), and that is not managed by Oracle Clusterware, or that uses Oracle Clusterware manual management policy. All other databases and services should not be affected, and should continue to function. If this is not desirable, then before proceeding with the upgrade, ensure that Oracle Clusterware manages databases using Oracle ASM, and set the automatic management policy on databases managed by Oracle Clusterware.

Cause: n/a

Action: n/a *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.ALL_NODES_UPGRADE_ON_WIN
```

INS-41712: Oracle Clusterware software is not functioning properly on the following nodes *string*.

Cause: The Oracle Clusterware software configured on the system is not in a suitable state to upgrade.

Action: Ensure that the Oracle Clusterware software is in a consistent state to perform an upgrade. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INTEGRITY_FAILED

INS-41713: One or more nodes (*string*) that are part of the cluster are down. Installer will perform upgrade of Grid Infrastructure only on the nodes that are up. The remaining nodes can be upgraded later, following the manual steps as detailed in the documentation.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_NODE_DOWN_WRN

INS-41714: The current state entails that the the upgrade will be performed in non-rolling. Oracle recommends that you perform rolling upgrade of Oracle Grid Infrastructure operated in Flex Cluster Mode.

Cause: n/a

Action: Ensure that the Oracle Clusterware stack, on all nodes in the cluster (Hub and Leaf nodes), is up and running prior to the upgrade. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_FLEX_NOT_ROLLING_UPGRADE_WARN

INS-41715: Performing a non-rolling upgrade and the Oracle Clusterware stack is running on one or more leaf node(s) selected for upgrade.

Cause: n/a

Action: Ensure that the Oracle Clusterware stack is down on all the leaf nodes in the cluster, prior to the upgrade. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_NON_ROLLING_LEAF_NODES_NOT_DOWN_ERR

INS-41716: One or more nodes (*string*) that are part of the cluster are down.

Cause: n/a

Action: Either run crsctl delete on the unreachable nodes or ensure all the nodes of the cluster are up. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DELNODESEL_NODE_DOWN_ERR

INS-41717: The following list of node(s) are still part of the cluster even though they are unreachable: *string*.

Cause: n/a

Action: Either the clusterware stack should be offline on the node(s) so they would not be considered for upgrade or the node(s) need to be online and reachable. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODESEL_NODE_DOWN_ACTIVE_CSS_ERR

INS-41718: Delete or downgrade Clusterware-managed Oracle databases and de-install Clusterware-managed Oracle homes before attempting to remove the Oracle Clusterware home on nodes *string*.

Cause: An attempt was made to deconfigure the Oracle Clusterware when one or more Clusterware-managed Oracle databases still exist.

Action: Run the Oracle Clusterware deconfiguration tool from Clusterware-managed Oracle homes on nodes %s to delete, deconfigure or downgrade Oracle database and then run the same tool from Oracle Clusterware home to deconfigure Clusterware. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DELNODESEL_RAC_DB_EXI
 STS_ERR

INS-41719: Unable to detect if CRS is running on one or more of the remote nodes.

Cause: n/a

Action: Refer to the additional details below. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_REMOTE_NODE
 _CRS_STACK_NOT_RUNNING

INS-41802: Unable to determine release of Oracle Automatic Storage Management running from home *string*.

Cause: An Oracle Automatic Storage Management (Oracle ASM) home was found, but the Oracle ASM instance was down. Unable to determine the Oracle ASM release.

Action: Ensure that the Oracle ASM instance installed in home %s is up, and then retry the installation. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HA_ASM_HOME_FOUND_E
 RR

INS-41803: An entry for Oracle ASM is found in the system registry or oratab, but it is not associated with a software home location.

Cause: An Oracle ASM entry was listed in the system registry or oratab, but Oracle ASM home %s was missing.

Action: Ensure that either the oratab or the system registry is correct, or that the inventory is not corrupted. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HA_ASM_ENTRY_FOUND_E
 RR

INS-41804: An instance of a prior release Oracle ASM is running.

Cause: There is an Oracle ASM instance already running on the server.

Action: Upgrade the existing Oracle ASM instance to the current release. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_HA_UPGRADE_ASM_ERR

INS-41806: Virtual IP name cannot be the same as the Single Client Access Name (SCAN): *string*.

Cause: The name you provided for the virtual IP name is the same name used as the SCAN.

Action: Enter a name for the virtual IP that is different from the name you entered for the SCAN. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_NODE_VIP_SAME_AS_SCA
 N_ERR

INS-41807: Oracle Clusterware is not running on the following nodes: *string*.

Cause: Either there was an error in starting the Oracle Clusterware stack on the specified nodes, or the root scripts on the specified nodes were not run.

Action: Run the root scripts on the nodes listed. If root scripts have already been run on these nodes, then examine the log file %s on each failed node to determine the reason for the Oracle Clusterware stack not starting. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CHECK_IF_ROOT_SCRIPT_INVOKED

INS-41808: Possible invalid choice for OSASM Group.

Cause: The name of the group you selected for the OSASM group is commonly used to grant other system privileges (For example: asmdba, asmoper, dba, oper).

Action: Oracle recommends that you designate asmadmin as the OSASM group.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_INVALID_SYSASM_GROUP

INS-41809: Possible invalid choice for OSDBA Group.

Cause: The group name you selected as the OSDBA for ASM group is commonly used for Oracle Database administrator privileges.

Action: Oracle recommends that you designate asmdba as the OSDBA for ASM group, and that the group should not be the same group as an Oracle Database OSDBA group. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_INVALID_DBA_GROUP

INS-41810: Possible invalid choice for OSOPER Group.

Cause: The group name you selected as the OSOPER for ASM group is commonly used for Oracle Database administrator privileges.

Action: Oracle recommends that you designate asmoper as the OSOPER for ASM group, and that the group should not be the same group as an Oracle Database OSOPER group. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_INVALID_OPER_GROUP

INS-41811: OSDBA for ASM and OSOPER for ASM groups are the same OS group.

Cause: The groups you selected granting the OSDBA for ASM and OSOPER for ASM system privileges are the same group.

Action: Oracle recommends that you designate different OS groups to grant the OSDBA for ASM and OSOPER for ASM system privileges. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_SAME_DBA_AND_OPER

INS-41812: *string* and OSASM are the same OS group.

Cause: The chosen values for %s group and the chosen value for OSASM group are the same.

Action: Select an OS group that is unique for ASM administrators. The OSASM group should not be the same as the OS groups that grant privileges for Oracle ASM access, or for database administration. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_DBA_OR_OPER_SAME_AS_ASM

INS-41813: OSDBA for ASM, OSOPER for ASM, and OSASM are the same OS group.

Cause: The group you selected for granting the OSDBA for ASM group for database access, and the OSOPER for ASM group for startup and shutdown of Oracle ASM, is

the same group as the OSASM group, whose members have SYSASM privileges on Oracle ASM.

Action: Choose different groups as the OSASM, OSDBA for ASM, and OSOPER for ASM groups. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_DBA_AND_OPE
R_SAME_AS_ASM
```

INS-41814: Some of the services of Oracle Grid Infrastructure are not running on this system.

Cause: There may have been an error in starting the Oracle Grid Infrastructure services, or you may not have run the root scripts starting these services on this server.

Action: Confirm that you have run the root scripts on this server. If the root scripts have been run, then examine the log file %s to determine the reason for the services failing to start.

*FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_CHECK_IF_ROOT_SCRIPT_IN
VOKED
```

INS-41815: Oracle Clusterware is not upgraded to *string* version.

Cause: Either there was an error in starting the Oracle Clusterware stack on some of the nodes, or the root scripts on some nodes were not run. If the Clusterware is upgraded from earlier versions, root upgrade script might not be run successfully on the specified nodes.

Action: Run the root scripts on the nodes listed. If root scripts have already been run on these nodes, then examine the log file %s on each failed node to determine the reason for the Oracle Clusterware stack not starting. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_CHECK_IF_ROO
T_SCRIPT_INVOKED
```

INS-41816: Oracle Clusterware is not upgraded to *string* version.

Cause: There might be an error in starting the Oracle Clusterware stack on the some of the nodes or there might be unreachable node(s) which are part of Oracle Clusterware.

Action: Examine the log file %s on each failed node to determine the reason for the Oracle Clusterware stack not upgraded to current release version. The unreachable nodes can be upgraded by following the manual steps as detailed in the documentation. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_CHECK_IF_WIN_
ROOTCRS_INVOKED
```

INS-41817: Oracle Clusterware is not running on the following nodes: *string*.

Cause: There may have been an error in starting the Oracle Clusterware stack on the specified nodes.

Action: Examine the log file %s on each failed node to determine the reason for the Oracle Clusterware stack not starting. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CHECK_IF_WIN_ROOTCRS_
INVOKED
```

INS-41818: Some of the services of Oracle Grid Infrastructure are not running on this system.

Cause: There may have been an error in starting the Oracle Grid Infrastructure services.

Action: Examine the log file %s to determine the reason for the services failing to start.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_CHECK_IF_WIN_ROOT
HAS_INVOKED

INS-41871: The user account you are using to install the software is not a member of the following OS groups: *string*.

Cause: The installation user account must be a member of all groups required for installation.

Action: Change the installation users group memberships to include the required OS system privileges groups, or select system privileges OS groups in which the installation owner is a member. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_NONMEMBER_OS_GROUPS

INS-41872: The OS group you selected as the ASM Administration Operator Group (ASMOPER) may not exist on the server.

Cause: Cannot find the group you selected to be the ASMOPER group in the groups defined on the server, or in the Network Information Service (NIS).

Action: Confirm that the group you want to use as the ASMOPER group exists on the server, or in NIS. Create or specify another group if it does not exist. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADVANCED_INVALID_OS_GROUP

INS-41873: Invalid value specified for OSOPER Group.

Cause: OS group %s specified for OSOPER Group contains one or more invalid characters.

Action: Remove the invalid characters (%s) from %s or select an existing OS Group for OSOPER Group. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OSGROUP_BADCHARS_ERR

INS-41874: Oracle ASM Administrator (OSASM) Group specified is same as the inventory group.

Cause: Operating system group %s specified for OSASM Group is same as the inventory group.

Action: It is not recommended to have OSASM group same as inventory group. Select any of the group other than the inventory group to avoid incorrect configuration. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_SAME_AS_INVENTORY_GROUP

INS-41875: Oracle ASM Administrator (OSASM) Group specified is same as the users primary group.

Cause: Operating system group %s specified for OSASM Group is same as the users primary group.

Action: It is not recommended to have OSASM group same as primary group of user as it becomes the inventory group. Select any of the group other than the primary group to avoid misconfiguration. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_SAME_AS_PRIMARY_GROUP

INS-41876: The node listener user name provided cannot be root.

Cause: n/a

Action: Provide a non root user for the node listener user. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_CANNOT_BE_ROOT

INS-41877: The node listener user name provided cannot be same as the installing user.

Cause: n/a

Action: Provide a user other than the installing user. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_SAME_AS_INSTALL_USER

INS-41878: The node listener user ('string') provided does not exist on nodes which are provided for cluster configuration.

Cause: n/a

Action: Ensure that a user who is existing on nodes is provided for node listener. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_DOES_NOT_EXIST

INS-41879: User name for node listener was not provided for clusterware configuration.

Cause: n/a

Action: Ensure that a valid user name is provided for node listener. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_NOT_PROVIDED

INS-41880: User for node listener cannot be a member of Oracle ASM Administrator (OSASM) group.

Cause: n/a

Action: Ensure that the user is not a member of OSASM group specified. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_MEMBER_OF_OSASM_GROUP

INS-41881: The group specified for *string* is not same as the group '*string*' retrieved from the current configuration of grid software. The operation will not be successful if the same group name is not selected.

Cause: n/a

Action: Select the same group and proceed further. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OPERATION_OS_GROUP_NOT_MATCH

INS-41882: The node listener user name provided cannot be nobody.

Cause: n/a

Action: Provide a valid username for the node listener user. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LISTENER_USER_CANNOT_BE_NOBODY

INS-41883: The value is not specified for *string*.

Cause: n/a

Action: Specify a valid group name for %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GROUPS_CAN_NOT_BE_NULL

INS-41884: The *string* group could not be retrieved from the existent Oracle Grid Infrastructure configuration.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CANNOT_RETRIEVE_GROUP_FOR_OPERATION

INS-41901: The Oracle Grid Infrastructure Typical installation cannot be performed on this system.

Cause: Vendor-specific clusterware detected. The typical Oracle Grid Infrastructure installation is a simplified configuration that is not designed to co-exist with clusterware other than Oracle Clusterware.

Action: Select Advanced Installation for Oracle Grid Infrastructure. This option allows you to specify configuration information required for Oracle Clusterware to operate with other vendor clusterware. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_TYPICAL_INSTALL_DISALLOWED_VENDOR

INS-41902: The Oracle Grid Infrastructure Typical installation cannot be performed on this system.

Cause: Oracle RAC 9i release 9.x is already installed on this server. The Oracle Grid Infrastructure Typical installation is a simplified configuration that is not designed to support older versions of Oracle RAC.

Action: Select Advanced Installation for Oracle Grid Infrastructure. This option allows you to specify configuration information required for Oracle Clusterware to operate with Oracle RAC release 9.x. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_TYPICAL_INSTALL_DISALLOWED_COEX

INS-42001: The same drive letter *string* cannot be assigned to more than one partition.

Cause: n/a

Action: Provide different drive letters to each partition. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.DRIVE_LETTER_ALREADY_ASSIGNED

INS-42002: The specified partition cannot be used.

Cause: The specified partition was selected for storing the software binaries.

Action: Instead, choose a location that is formatted for storing data files. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.SOFTWARE_PARTITION_NOT_RECOMMENDED

INS-42003: No partitions selected.

Cause: No partitions were selected or partition details provided were incomplete.

Action: Specify one or more partitions. For each partition, select the format option and drive letter you want to have assigned to that partition. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.NO_PARTITION_SELECTED

INS-42004: No free drive letters available.

Cause: The local server did not have any available drive letters to assign to partitions.

Action: Make drive letters available on the server, and then restart the installer. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.DRIVE_LETTERS_NOT_AVAILABLE

INS-42005: The drive letter is not assigned to one or more partitions.

Cause: Each partition you select must have an assigned drive letter.

Action: Ensure all partitions you want to use are configured with drive letters. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.DRIVE_LETTER_NOT_SELECTED

INS-42006: Selected drive letter (*string*) is invalid or not available for usage.

Cause: Either the drive letter is invalid, or it is already assigned to an existing partition.

Action: Select a valid drive letter. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.DRIVE_LETTER_NOT_VALID

INS-42011: The operating system group specified for oraInventory group is invalid.

Cause: The user account running the installation must have the oraInventory group as its primary group.

Action: Change the oraInventory group to the primary group of the installation owner account, or change the installation owner groups so that the group you want to use for the oraInventory group is the primary group of the installation owner. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.ORAINVENTORY_GROUP_NOT_SAME_AS_PRIMARY_GROUP

INS-42012: The current Grid home is not registered in the central inventory on this host.

Cause: The wizard finds that this Grid home is not registered in the central inventory.

Action: Register the Grid home in the central inventory by using a cloning operation, or by using an attach-home operation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_HOME_NOT_REGISTERED

INS-42013: Installation user cannot configure the Grid home.

Cause: The wizard has detected that the existing Grid home was not installed or cloned using the current user id: %s.

Action: Either restart the wizard as the user account that was used previously to install the Grid home, or re-clone the Grid home using the current user account. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_USER_INVALID

INS-42014: Oracle Grid Infrastructure cannot be configured.

Cause: The wizard has detected that Oracle Grid Infrastructure is already configured on this server.

Action: Before you can proceed, you must completely remove the configured instance.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_HA_ALREADY_CONFIGURED

INS-42015: File missing from Grid home: *string*.

Cause: Unable to find the specified file in the Grid home. The wizard requires this file to be present in the Grid home before it can proceed.

Action: Restore the home by re-cloning the home, or re-install the software from installation media. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_HOME_CRITICAL_FILE_MISSING
```

INS-42016: The Oracle Grid Infrastructure home '*string*' is not registered in the central inventory on the following nodes: *string*.

Cause: It is required that the Oracle Grid Infrastructure target home is registered in the central inventory before the patch operation is performed.

Action: Perform a software only installation on home '%s'. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_REMOTEHOME_NOT_REGISTERED
```

INS-42017: The Grid home is inconsistent on the following nodes: *string*.

Cause: The wizard has detected that the Grid home is inconsistent on some or all of the nodes specified. Review the log file for further details.

Action: Ensure that the Grid home is consistent on all nodes. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_REMOTEHOME_NOT_MATCHING
```

INS-42018: Specified disk group is invalid.

Cause: The specified disk group is not on the discovery path you provided.

Action: For the selected disks, specify a valid disk group name, to which these disk previously were assigned. Also ensure that the discovery path you provide includes the disks. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_ASM_DISKGROUP_NOT_FOUND
```

INS-42019: The wizard is unable to detect a configured prior release instance of Oracle Grid Infrastructure for a cluster or Cluster Ready Services.

Cause: Oracle Grid Infrastructure Configuration Wizard can only be used to upgrade earlier releases of Oracle Grid Infrastructure for a cluster or Cluster Ready Services.

Action: Ensure Oracle Grid Infrastructure for a cluster or Cluster Ready Services is configured properly before using the configuration wizard. To perform any other upgrade, use the Oracle Grid Infrastructure installer, or run root configuration scripts directly. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_SIHA_UPGRADE_INVALID_OPTION
```

INS-42020: The Wizard is unable to detect the user of Grid home.

Cause: The wizard is not able to detect the user of the existing Grid home. This might be because configuration file (%s) is modified/corrupted in the Grid home.

Action: Verify the correctness of the configuration file. If the file is corrupted, either restore the home by re-cloning the home or re-install the software from installation media. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_UNABLE_TO_DETECT_INSTALL_USER
```

INS-42021: Multibyte characters in SCAN Name.

Cause: In Typical install SCAN Name is also used as Cluster Name. The SCAN name contains multibyte characters which are invalid for Cluster Name.

Action: Ensure that SCAN Name contains valid characters for Cluster Name. Valid characters for Cluster Name can be lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MULTIBYTE_CHARS_IN_SCANNAME_ERR

INS-42022: Multibyte characters in Cluster Name.

Cause: Multibyte characters are not allowed in Cluster Name.

Action: Ensure the Cluster Name contains valid characters. Valid characters for Cluster Name can be lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MULTIBYTE_CHARS_IN_CLUSTERNAME_ERR

INS-42023: Invalid option specified for Oracle Grid Infrastructure Wizard.

Cause: The Oracle Grid Infrastructure Wizard only supports Configuring Oracle Grid Infrastructure for a cluster or Upgrading an existing Grid Infrastructure.

Action: Ensure that you select one of the supported options. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_INVALID_CONFIG_OPTION

INS-42024: The group configured for *string* privilege in the current home does not match with the group name retrieved (*string*) from the home where earlier version of Oracle Clusterware is configured presently.

Cause: n/a

Action: Reinstall the software in a different home, selecting the correct group for %s . Alternatively you can modify the group configured for the current home by making suitable modification to the software. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_UPGRADE_OS_GROUP_NOT_MATCH

INS-42025: Grid Infrastructure Home is not suitable to be configured on this cluster.

Cause: The Grid Infrastructure Home is registered with the local user. Configuration cannot continue.

Action: Ensure that the Grid Infrastructure Home is registered with a secure domain user for configuration to continue. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_LOCAL_USER_INVALID

INS-42026: Configuring GNS on a dynamic network (DHCP) is not supported for servers managed by operating system provided clustering software.

Cause: n/a

Action: Ensure DHCP option is not chosen as enabled while configuring clusterware on servers managed by operating system provided clustering software. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DHCP_IN_VENDOR_CLUSTER_ERR

INS-42027: The specified Oracle base location is not correct.

Cause: The Oracle base location %s specified in the response file or passed through command line is not the same as %s that is associated with the Oracle home %s.

Action: Specify the correct Oracle base location to proceed through the ORACLE_BASE response file variable. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRSCONFIG_ORACLE_BASE_MISMATCH_ERR

INS-42028: The software of this home is already set up in this server.

Cause: n/a

Action: Choose a different install option. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_SWONLY_ALREADY_REGISTERED

INS-42099: Oracle home user is not specified.

Cause: n/a

Action: Specify a non-administrator user for the Oracle home. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_COMMON_NO_SVCUSERNAME_SPECIFIED

INS-42100: GNS Client data file not specified.

Cause: To configure Shared GNS, a GNS Client data file has to be specified.

Action: Specify a valid GNS Client data file to configure shared GNS. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EMPTY_GNS_CLIENT_DATAFILE

INS-42101: File name specified as GNS Client data file is not a valid file.

Cause: The specified GNS Client data file is not a valid file, or does not exist, or is not a readable file.

Action: Specify a valid GNS Client data file to configure shared GNS. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_GNS_CLIENT_DATAFILE

INS-42102: The configuration of Grid Naming Service (GNS) has not been chosen

Cause: Configuring Grid Naming Service (GNS) is mandatory to configure an Oracle Domain Services Cluster.

Action: Choose to configure GNS. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GNS_NOT_SELECTED

INS-42103: Configuring Grid Infrastructure with shared GNS option is not supported.

Cause: n/a

Action: n/a *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SHARED_GNS_NOT_SUPPORTED

INS-42104: Configure DHCP option is not supported for IPV6 GNS VIP.

Cause: The specified value for the GNS virtual IP address is IPV6, for which DHCP is not supported.

Action: Ensure that the option to Configure DHCP assigned Virtual IPs to the nodes is deselected. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_DHCP_NOT_SUPPORTED_F
OR_IPV6
```

INS-42105: Specified Grid Naming Service (GNS) subdomain is not valid.

Cause: The subdomain (%s) does not follow the standard format for domain name labels. A valid GNS subdomain consists of two or more alphanumeric labels separated by the dot (.) character. The GNS subdomain cannot start nor end with a dot character. Labels can contain the hyphen (-) character, but cannot start nor end with it. There cannot be two consecutive hyphen characters in a label.

Action: Specify a valid Grid Naming Service (GNS) subdomain. It is mandatory when configuring DHCP assigned virtual IPs to the nodes. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_GNS_DOMAIN_NOT_VALID_
FORMAT
```

INS-42106: The provided *string* file location is not supported.

Cause: The %s file location should not be a UNC path.

Action: Provide the %s file location which is not on a UNC path. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_DATA_UNC_PATH_
NOT_SUPPORTED
```

INS-42107: Installer was unable to verify the GNS client data file.

Cause: n/a

Action: Ensure that the GNS server is reachable for verification of client data file, and the client data file is valid. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_UNABLE_TO_VALIDATE_GN
S_CLIENTDATAFILE
```

INS-42108: Configuring Grid Infrastructure with shared GNS is not supported for Oracle Domain Services Cluster.

Cause: n/a

Action: Choose to configure a new GNS for this cluster. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_DOMAIN_CLUSTER_SHARE
D_GNS_NOT_ALLOWED
```

INS-42109: It is not allowed to configure an Oracle Member Cluster with multiple manifest files for Cluster Domain Services.

Cause: n/a

Action: Ensure that only one Member Cluster Manifest file is specified for all the required Cluster Domain Services. *FQN:

```
oracle.install.iww.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_DIFF_
DATA_FILE
```

INS-42501: This Oracle home is already registered in the central inventory.

Cause: An Oracle home can only be registered once.

Action: If you want to configure Oracle Grid Infrastructure for a Cluster or Upgrade Oracle GI or Oracle ASM, you can run the Config Wizard: %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_ALREADY_REGISTERED_HOME

INS-42502: The Oracle home location provided in the command line is not correct.

Cause: The Oracle home value set in the command line %s is not textually the same as %s (identified by the installer from the Grid Setup command).

Action: Specify the correct Oracle home location through the ORACLE_HOME command line variable. If you do not set it, the installer will specify the right one.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_WRONG_CMDLINE_HOME

INS-42503: The Oracle home location provided in the response file is not correct.

Cause: The Grid Infrastructure Oracle home is the location from where the gridSetup script is called. It has been detected that the value set in the response file is different (%s). Expected value: %s.

Action: It is not required to specify ORACLE_HOME in the response file for Grid Infrastructure installation. Alternatively, set it to the location of the gridSetup script (%s). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_WRONG_RSPFILE_HOME

INS-42504: Could not validate the Oracle Grid Infrastructure home contents.

Cause: Some files are missing from the Oracle Grid Infrastructure home.

Action: Ensure that the Oracle Grid Infrastructure home is not corrupt. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_GOLDIMAGE_FILES_LIST_FILE_MISSING

INS-42505: Oracle Grid Infrastructure home software at (*string*) is not complete.

Cause: Following files are missing: %s.

Action: Ensure that the Oracle Grid Infrastructure home at (%s) includes the files listed above. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_GOLDIMAGE_FILES_MISSING

INS-42506: There are files in the Oracle Grid Infrastructure home (*string*) which are not owned by the user (*string*) or do not have the primary group (*string*).

Cause: Following files are not owned by the user (%s) or do not have the primary group (%s): %s.

Action: Ensure that the files listed above are owned by the user (%s) and have the primary group (%s). *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_GOLDIMAGE_FILES_OWNER_MISMATCH

INS-42507: Invalid entry in the central inventory corresponding to Oracle home (*string*).

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.GRIDSETUP_INVALID_HOME_REGISTERED

INS-43001: Cluster type not specified.

Cause: Either cluster type is not specified or invalid value is specified.

Action: Specify a valid cluster type. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_CLUSTERTYPE

INS-43002: Leaf nodes cannot be configured as part of this Oracle Flex Cluster configuration.

Cause: Oracle Real Application Cluster 9i Database is configured on this host. Leaf nodes cannot be configured as part of Oracle Flex Cluster configuration, on a host that has 9i Oracle RAC database configured on it.

Action: Configure Oracle Flex cluster without including Leaf nodes. Alternatively, you can configure Oracle Flex cluster with leaf nodes after removing 9i Oracle RAC Database. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_LEAF_NODE_92RAC

INS-43003: Leaf nodes cannot be configured as part of this Oracle Flex Cluster configuration.

Cause: Operating system provided clustering software is configured on this host. Leaf nodes cannot be configured as part of Oracle Flex cluster configuration, on a host that is managed by operating system provided clustering software.

Action: Configure Oracle Flex cluster without including Leaf nodes on hosts managed by operating system provided clustering software. Alternatively, you can configure Oracle Flex Cluster with leaf nodes after disabling the operating system provided clustering software. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_LEAF_NODE_VC

INS-43004: Oracle Flex Cluster cannot be configured on this host.

Cause: Oracle Flex Cluster cannot be configured on a host that already has Oracle Clusterware installed.

Action: Remove the existing Oracle Clusterware software before choosing to configure Oracle Flex Cluster. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_BIG_CLUSTER_UPGRADE

INS-43005: Specify a list of Site names for your Oracle Extended Cluster configuration

Cause: n/a

Action: To configure an Oracle Extended Cluster, you need to specify %s to %s site names, where your servers will be located. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SITES_NOT_SPECIFIED

INS-43006: The number of site names specified is invalid.

Cause: n/a

Action: Specify %s to %s site names only. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_NUM_OF_SITES

INS-43007: The specified site name contains invalid characters.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_SITE_NAME

INS-43008: Oracle Extended Cluster cannot be configured on this server, since it is managed by operating system provided clustering software.

Cause: n/a

Action: Choose an alternate type of configuration or remove the operating system provided clustering software to proceed with this configuration *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_EXTENDED_CLUSTER_VC

INS-43009: 9i Oracle Real Application Cluster Database is configured on this host. Oracle Extended Cluster cannot be configured on a host that has 9i Oracle RAC database configured on it

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_EXTENDED_CLUSTER_92RAC

INS-43010: Site Name *string* is too long.

Cause: The specified site name was too long.

Action: Provide a site name that is 15 or fewer characters in length. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SITE_NAME_EXCEED_MAXSIZE_ERR

INS-43011: Duplicate site name(s) (*string*) provided.

Cause: n/a

Action: Only unique site name(s) are allowed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_SITE_NAME_DUPLICATE_ERR

INS-43012: Configuring an Oracle Member Cluster for Applications is not allowed in this platform.

Cause: n/a

Action: Specify a different cluster configuration. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBERAPP_CLUSTER_NOT_SUPPORTED_PLATFORM_ERR

INS-43013: Configuring an Oracle Cluster as an extended cluster is not allowed in this platform.

Cause: n/a

Action: Do not choose to configure this cluster as an extended cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_EXTENDED_CLUSTER_NOT_SUPPORTED_PLATFORM_ERR

INS-43014: Configuring an Oracle Domain Services Cluster is not allowed in this platform.

Cause: n/a

Action: Specify a different cluster configuration. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOMAIN_CLUSTER_NOT_SUPPORTED_PLATFORM_ERR

INS-43015: Leaf nodes are not supported in an Oracle Domain Services Cluster.

Cause: n/a

Action: Specify only Hub nodes to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOMAIN_CLUSTER_LEAF_NODES_NOT_SUPPORTED

INS-43016: Configuring an Oracle Domain Services Cluster as an extended cluster is not supported.

Cause: n/a

Action: Do not choose to configure this cluster as an extended cluster. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DISALLOW_EXTENDED_DOMAIN_CLUSTER

INS-43017: Configuring an Oracle Member Cluster is not allowed in this platform.

Cause: n/a

Action: Specify a different cluster configuration. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_NOT_SUPPORTED_PLATFORM_ERR

INS-43018: Leaf nodes are not supported in an Oracle Member Cluster.

Cause: n/a

Action: Specify only Hub nodes to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_LEAF_NODES_NOT_SUPPORTED

INS-43019: Configuring an general purpose cluster is not allowed in this platform.

Cause: n/a

Action: Specify a different cluster usage. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GENERAL_PURPOSE_CLUSTER_NOT_SUPPORTED_PLATFORM_ERR

INS-43021: All the nodes (*string*) are down in the last batch.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_NODES_UNREACHABLE_WARN

INS-43024: n/a

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_AUTO_ROOT_EXECUTION_LAST_BATCH

INS-43025: There are nodes with different roles in batch (*string*).

Cause: n/a

Action: Define batches such that they have nodes with the same role. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_AUTO_ROT_EXECUTION_BATCH_MULTIPLE_NODE_ROLES

INS-43026: Batch (*string*) contains LEAF nodes and batch (*string*) contains HUB nodes.

Cause: n/a

Action: Reorder the batches such that batch with HUB nodes is processed first. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_AUTO_ROT_EXECUTION_LEAF_BATCH_BEFORE_HUB_BATCH

INS-43027: Unable to detect if the Oracle Clusterware stack is running on the following nodes: *string*.

Cause: The Oracle Clusterware stack is not running on the local node.

Action: Open a console, log in as root or Administrator and start the Oracle Clusterware stack with this command: %scrscctl start crs. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_LOCAL_CRS_STACK_NOT_UP_FOR_INTEGRITY_CHECK

INS-43041: CLUSTER_NEW_VIRTUAL_HOSTNAMES parameter was not specified.

Cause: The CLUSTER_NEW_VIRTUAL_HOSTNAMES parameter was not provided for performing addnode operation.

Action: Ensure that CLUSTER_NEW_VIRTUAL_HOSTNAMES parameter is passed. Refer to installation guide for more information on the syntax of passing CLUSTER_NEW_VIRTUAL_HOSTNAMES parameter. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_CLUSTER_VIRTUAL_IP_NOT_PASSED

INS-43042: The cluster nodes *string* specified for addnode is already part of a cluster.

Cause: Cluster nodes specified already has clusterware configured.

Action: Ensure that the nodes that do not have clusterware configured are provided for addnode operation. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_ALREADY_PART_OF_CLUSTER

INS-43043: Parameters specified for addnode operation are missing details for nodes.

Cause: Some of the parameters passed for addnode operation have incomplete details of the node to be added.

Action: Ensure that the nodes details are appropriately specified and each node have the associated details in parameters. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_PARAMETERS_MISSING

INS-43044: Addnode operation cannot be performed from a Leaf node.

Cause: Leaf node cannot be local node while performing addnode operation.

Action: Ensure that the addnode operation is performed from a Hub node. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_CANNOT_BE_PERFORMED

INS-43045: *string* parameter was not specified.

Cause: The %s parameter was not provided for performing addnode operation.

Action: Ensure that %s parameter is passed. Refer to installation guide for more information on the syntax of passing CLUSTER_NEW_VIRTUAL_HOSTNAMES parameter. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_NEW_NODE_ROLES_NOT_SPECIFIED

INS-43046: The Oracle home location contains directories or files on following remote nodes: *string*.

Cause: n/a

Action: The Oracle home location would be overwritten with new software. If you want to retain the software on remote nodes, use -noCopy option for addnode operation. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_LOCATION_NON_EMPTY_ON_REMOTE_NODES

INS-43047: Clusterware configured in Auto mode cannot have nodes of type HUB or LEAF.

Cause: n/a

Action: Ensure that the nodes provided for addnode configuration are of type Auto. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NON_AUTO_NODE_NOT_ALLOWED_FOR_AUTO_CLUSTER

INS-43048: An Auto node cannot be added to a cluster having only Hub and Leaf nodes.

Cause: n/a

Action: Ensure that the nodes provided for addnode configuration are of type HUB or LEAF. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_AUTO_NODE_NOT_ALLOWED_FOR_MANUAL_CLUSTER

INS-43049: Hub nodes cannot be added to the cluster as it is already having *string* Hub nodes which is the maximum number of Hub nodes for an Oracle Flex cluster.

Cause: n/a

Action: Ensure that the nodes of type other than Hub are provided for addnode configuration. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_HUB_NODE_NOT_ALLOWED_FOR_MXHUBSIZE_CLUSTER

INS-43050: Oracle Clusterware is not configured from the grid home on which addnode is being performed.

Cause: n/a

Action: Ensure that the clusterware is configured and is running from the home on which the addnode is being performed. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_CLUSTERWARE_NOT_RUNNING_FROM_HOME

INS-43051: Virtual Hostname was not specified for performing addnode operation.

Cause: n/a

Action: Ensure that the Virtual Hostname is provided for each node on which addnode operation is being performed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_VIRTUAL_HOSTNAME_NOT_SPECIFIED

INS-43052: The Oracle home location contains directories or files on following remote nodes: *string*.

Cause: n/a

Action: Please provide valid Oracle home location which is empty. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_NODE_LOCATION_NON_EMPTY_ON_REMOTE_NODES

INS-43053: Leaf nodes cannot be added to this Oracle Cluster configuration.

Cause: Oracle Grid Infrastructure does not allow LEAF nodes to be configured as part of this Oracle Cluster configuration.

Action: Specify only HUB nodes to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_LEAF_NODE_NOT_ALLOWED

INS-43054: Public hostname is same as the SCAN name: *string*.

Cause: n/a

Action: Provide the SCAN name that does not match the hostname OR public hostname that does not match the SCAN name. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.SCAN_NAME_IS_SAME_AS_PUBLIC_HOSTNAME

INS-43055: The Oracle home location is not registered in the central inventory and is not empty in following remote nodes: *string*.

Cause: n/a

Action: Ensure the Oracle home location is empty in such nodes. If not, the Oracle home location would be overwritten with new software. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_ORACLE_HOME_NOT_EMPTY_ON_REMOTE_NODES

INS-43056: Leaf nodes cannot be added to this Oracle cluster configuration.

Cause: Oracle Grid Infrastructure does not support LEAF nodes to be part of this Oracle cluster configuration on this platform.

Action: Specify only HUB nodes to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_LEAF_NODE_NOT_SUPPORTED

INS-43057: Leaf nodes cannot be added to this Oracle cluster configuration.

Cause: Leaf nodes cannot be part of an Oracle cluster configuration on a host that is managed by operating system provided clustering software.

Action: Specify only HUB nodes to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_LEAF_NODE_NOT_SUPPORTED_VC

INS-43058: The specified site name *string* is not part of the already configured list of sites *string*.

Cause: n/a

Action: Specify site name(s) which are already configured as part of this Oracle Extended cluster configuration. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_EXT_CLUSTER_SITES_NOT_CONFIGURED

INS-43059: Site names are not specified.

Cause: n/a

Action: To add nodes to a Oracle Extended cluster, you need to specify site names, where your servers or nodes are located. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_EXT_CLUSTER_SITES_NOT_SPECIFIED

INS-43060: Virtual hostname(s) are not required to be specified for adding a node to a VIP-less cluster.

Cause: n/a

Action: Do not specify the virtual hostname(s). *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_VIPLESS_CLUSTER_VIP_PROVIDED

INS-43066: Oracle Clusterware is not running on the following nodes: *string*. Ignore the warning if any policy managed databases software are not extended to new nodes yet.

Cause: Either there was an error in starting the Oracle Clusterware stack on the specified nodes, or the root scripts on the specified nodes were not run.

Action: Run the root scripts on the nodes listed. If root scripts have already been run on these nodes, then examine the log file %s on each failed node to determine the reason for the Oracle Clusterware stack not starting. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ADDNODE_CHECK_IF_ROOT_SCRIPT_INVOKED

INS-43080: Some of the configuration assistants failed, were cancelled or skipped.

Cause: n/a

Action: Refer to the logs or contact Oracle Support Services. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_CONFIG_TOOL_FAILED

INS-43100: The free space available in the ASM diskgroup *string* is *string*, and it is insufficient to proceed with the upgrade. To upgrade Oracle Grid Infrastructure you should have at least *string* free space in this diskgroup.

Cause: n/a

Action: Add additional disks to the diskgroup such that the total size should be at least %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSUFFICIENT_SPACE_IN_ASM_DISKS_UPGRADE

INS-43101: Insufficient space available in shared file system for the Voting File Location *string*.

Cause: n/a

Action: Ensure that the shared file system has at least %s of free space. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_OCR_NOT_ENOUGH_FREESPACE_ERR**INS-43102: Cannot upgrade Oracle Grid Infrastructure as Built-In Account.**

Cause: The Oracle home user of the active Oracle Grid Infrastructure home is (%s). Oracle GI cannot be upgraded using Built-In Account for the current installation.

Action: Specify (%s) as the Oracle home user to perform the upgrade. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_OH_USER_MISMATCH_ERR**INS-43103: Oracle Grid Infrastructure Home is not suitable for upgrade.**

Cause: The wizard has detected that the Oracle home user of the active Oracle Grid Infrastructure home is %s, whereas the Oracle home user of the current home is Built-In Account.

Action: Re-install the Oracle Grid Infrastructure software using the appropriate Oracle home user to perform the upgrade. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_UPGRADE_OH_USER_MISMATCH_ERR**INS-43104: If you intend to use this Oracle Grid Infrastructure home to upgrade the active instance of Oracle Grid Infrastructure, then the specified user is invalid.**

Cause: The specified Oracle home user does not match the Oracle home user of the active Oracle Grid Infrastructure home (%s).

Action: Specify (%s) as the Oracle home user to be able to upgrade the active Oracle GI to this home. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_SWONLY_OH_USER_MISMATCH_WRN**INS-43105: Specified Oracle home user (*string*) is invalid.**

Cause: The specified Oracle home user does not match the Oracle home user of the active Oracle Grid Infrastructure home (%s).

Action: Specify (%s) as the Oracle home user to perform the upgrade. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_UPGRADE_DOMAIN_USER_MISMATCH_ERR**INS-43106: Oracle Grid Infrastructure Home is not suitable for upgrade**

Cause: The wizard has detected that the Oracle home user of this home (%s) does not match the Oracle home user of the active Oracle Grid Infrastructure home (%s).

Action: Re-install the Oracle Grid Infrastructure software using the appropriate Oracle home user to perform the upgrade. *FQN:
oracle.install.ivw.crs.resource.CRSErrorCode.CRS_UPGRADE_DOMAIN_USER_MISMATCH_ERR

INS-43107: Invalid storage option selected.

Cause: Oracle Cluster storage cannot be configured to be on a remote cluster if the storage for Oracle Grid Infrastructure Management Repository (GIMR) is configured to be on local cluster.

Action: Choose an alternate storage option that would be configured on local cluster to proceed further. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_LOCAL_GIMR_CLIENT_ASM_INCOMPATIBLE
```

INS-43108: Invalid Grid Infrastructure Management Repository (GIMR) option specified.

Cause: Oracle GIMR cannot be configured to be on a local cluster if the Oracle Cluster storage is configured to be on a remote cluster.

Action: Specify remote GIMR option to proceed further. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_CLIENT_ASM_LOCAL_GIMR_INCOMPATIBLE
```

INS-43110: Empty value provided for OMS Host.

Cause: n/a

Action: Specify a valid OMS host name of the Enterprise Manager Cloud Control. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OMS_HOST_EMPTY
```

INS-43111: Empty value provided for Enterprise Manager Admin password.

Cause: n/a

Action: Specify a valid value for Enterprise Manager Admin password of the Enterprise Manager Cloud Control. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OMS_PASSWORD_EMPTY
```

INS-43112: Empty value provided for Enterprise Manager Admin user.

Cause: n/a

Action: Specify a valid value for Enterprise Manager Admin user of the Enterprise Manager Cloud Control. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OMS_USERNAME_EMPTY
```

INS-43113: Empty value provided for OMS Port.

Cause: n/a

Action: Specify a valid OMS port of the Enterprise Manager Cloud Control. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OMS_PORT_INVALID
```

INS-43114: Unable to connect to Enterprise Manager Cloud Control.

Cause: Invalid connection information specified.

Action: Specify valid connection information. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_OMS_CONNECTION_ERR
```

INS-43201: Virtual Hostname *string* cannot be in IP Address format.

Cause: n/a

Action: Provide a valid virtual Hostname. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_VIP_IN_IP_ERR
```

INS-43202: Hostname *string* is assigned to another system on the network.

Cause: n/a

Action: Ensure that the virtual hostname specified is not assigned to any other system on the network. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_VIP_LIVE_ERR

INS-43203: Hostname *string* could not be resolved to a valid IP address.

Cause: n/a

Action: Ensure that the Virtual Hostname is resolvable to a valid IP address. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_VIP_UNKNOWN_HOST

INS-43204: Virtual Hostname *string* does not start with a letter.

Cause: n/a

Action: Provide a value for the virtual hostname that starts with an alphabetic character. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_VIP_DOESNOT_STARTWITH_ALPHABET_ERR

INS-43205: Value not specified for ACFS mount size.

Cause: n/a

Action: Provide a value for the ACFS mount size. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_STORAGE_ACF_S_MOUNT_SIZE_EMPTY

INS-43206: Provided storage option is not supported in Member Cluster for applications.

Cause: n/a

Action: Select an alternate storage option for Member Cluster for applications. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_CLUSTER_STORAGE_LOCAL_OR_NEAR_ASM

INS-43207: No Public interface is designated for Member Cluster for applications.

Cause: n/a

Action: Specify at least one interface as Public. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_VIP_NOT_CONFIGURED

INS-43208: *string* on subnet *string* chosen as public does not match subnet of Application VIP.

Cause: The chosen public interface is not on the same subnet as the Application VIP.

Action: Ensure the chosen public interface is on the same subnet as the Application VIP subnet, and that the same subnet is configured for Application VIPs on all cluster nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_PUBLIC_NOT_MATCH_APP_VIP

INS-43209: Specified shared storage path is invalid.

Cause: n/a

Action: Specify a valid location on a shared file system. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_SHARED_LOCATION_VALIDATION

INS-43210: Value is not specified for Cluster name.

Cause: n/a

Action: Provide a valid Cluster name. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_APP_CLUSTER_NAME_EMPTY

INS-43301: The specified *string* path is empty.

Cause: n/a

Action: Provide a valid %s. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_CREDENTIALS_FILE_EMPTY

INS-43302: The I/O Storage Service is not supported in this platform.

Cause: n/a

Action: Do not specify to use the I/O Storage Service. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_IO_SERVICE_NOT_SUPPORTED

INS-43303: The I/O Storage Service can only be selected when the ASM Storage Service is chosen.

Cause: n/a

Action: If I/O Storage Service is required, ensure that the ASM Storage Service is enabled; otherwise, do not select the I/O Storage Service. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_IO_SERVICE_WITHOUT_ASM_SERVICE

INS-43304: The Grid Names Service cannot be chosen for Oracle Member Cluster for Applications.

Cause: n/a

Action: Do not specify to use the Grid Names Service. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBERAPP_CLUSTER_GNS_SERVICE_NOT_ALLOWED

INS-43305: The Grid Names Service will be chosen.

Cause: The specified Member Cluster Manifest File contains GNS data.

Action: If the Grid Names Service is not required, specify a Member Cluster Manifest File that does not contain GNS data. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_GNS_DATA_IN_MEMBER_CLUSTER_DATA_FILE

INS-43306: The following Cluster Domain Service will be chosen: *string*.

Cause: The service data is available in the specified Member Cluster Manifest file.

Action: If the service is not required, specify a Member Cluster Manifest file that does not contain its data. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_SERVICE_IN_MEMBER_CLUSTER_DATA_FILE
```

INS-43307: The following Cluster Domain Service cannot be chosen: *string*.

Cause: The service data is not available in the specified Member Cluster Manifest file.

Action: If the service is required, specify a Member Cluster Manifest file that contains its data. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_SERVICE_NOT_IN_MEMBER_CLUSTER_DATA_FILE
```

INS-43308: The Management Repository Service is not supported in this platform.

Cause: n/a

Action: Specify a Member Cluster Manifest file that does not contain data for the Management Repository Service. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_GIMR_SERVICE_NOT_SUPPORTED
```

INS-43309: The following Cluster Domain Service is mandatory: *string*.

Cause: The service data is not available in the specified Member Cluster Manifest file.

Action: Specify a Member Cluster Manifest file that contains data for this Cluster Domain Service. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_MANDATORY_SERVICE_NOT_AVAILABLE
```

INS-43310: The I/O Storage Service cannot be chosen for Oracle Member Cluster for Applications.

Cause: n/a

Action: Do not specify to use the I/O Storage Service. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBERAPP_CLUSTER_IO_SERVICE_NOT_ALLOWED
```

INS-43311: The provided *string* location is not supported.

Cause: The %s location should not be a UNC path.

Action: Provide the %s location which is not on a UNC path. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_DATA_FILE_UNC_PATH_NOT_SUPPORTED
```

INS-43312: The specified *string* does not exist.

Cause: n/a

Action: Ensure that the %s exists. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_DATA_FILE_NOT_EXISTS
```

INS-43313: The specified Member Cluster Manifest file is not valid.

Cause: n/a

Action: Ensure that the provided Member Cluster Manifest file is valid. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_DATA_FILE_NOT_VALID

INS-43314: Could not validate the Management Repository Service connectivity.

Cause: n/a

Action: Ensure the Management Repository Service is available on the Domain Services Cluster. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_GIMR_SERVICE_CONNECTIVITY_CHECK_FAILED

INS-43315: Specified *string* is not a valid file.

Cause: Unable to read the specified file. Check the permissions of the file.

Action: Ensure that the %s has proper permissions for the installation to proceed. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_MEMBER_CLUSTER_DATA_FILE_PERMISSION_NOT_VALID

INS-43400: The specified source home path (*string*) does not correspond to a valid Oracle Grid Infrastructure software home.

Cause: n/a

Action: Provide a valid Oracle GI software home as source home. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CREATEGOLDIMAGE_CRS_NOT_VALID_SOURCE_HOME

INS-43401: The specified Oracle Grid Infrastructure source home is locked.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.ACTIONABLE_CRS_NODE_LOCATION_NO_N_EMPTY_ON_REMOTE_NODES

INS-44003: Upgrade of Grid Infrastructure has failed.

Cause: Upgrade of Grid Infrastructure has failed on the following nodes: %s.

Action: Sever the failed nodes from the cluster and complete the upgrade by clicking Yes. Alternatively, you may click on No if you want to retry the root configuration script on the failed nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_FORCE_UPGRADE

INS-44004: Local node is not specified in batch 1.

Cause: n/a

Action: Specify the local node in batch 1. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_UPGRADE_LOCAL_NODE_NOT_BATCH_ONE

INS-44005: Batch number is missing for some of the nodes selected for upgrade.

Cause: Batch number is not specified for the following nodes selected for upgrade: %s.

Action: Specify a batch number for the above nodes selected for upgrade. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_UPGRADE_BATCH_NUM_MISSING

INS-44006: Oracle Fleet Patching and Provisioning (FPP) Server cannot be configured for the chosen cluster type.

Cause: n/a

Action: Oracle Fleet Patching and Provisioning Server configuration is supported only for Oracle Domain Services Cluster. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_RHPSERVER_NOT_SUPPORTED_CLUSTERTYPE

INS-44007: Oracle Clusterware is not running on local node (*string*).

Cause: n/a

Action: Perform one of the following, before running the configuration tools - Run the installer on the node where Oracle Clusterware is running from this Oracle home -

Open a terminal, log in as root or Administrator, change directory to this Oracle Clusterware home, and start Oracle Clusterware by entering this command: crsctl

start crs. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_STACK_NOT_ACTIVE_LOCAL_NODE

INS-44008: Oracle Grid Infrastructure is not upgraded to current release version (*string*).

Cause: n/a

Action: Ensure that the Oracle Grid Infrastructure upgrade procedure is completed on all nodes before running the configuration tools. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_STACK_UPGRADE_FAILED_LOCAL_NODE

INS-44009: Installer is unable to detect if Oracle Grid Infrastructure is upgraded to current release version (*string*).

Cause: n/a

Action: Review the log file %s on the local node. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_STACK_UPGRADE_CHECK_UNEXPECTED_ERROR

INS-44010: Oracle Restart is not running.

Cause: n/a

Action: Perform one of the following, before running the configuration tools - Run the installer on the node where Oracle Restart is running from this Oracle home - Open a

terminal, log in as root or Administrator, change directory to this Oracle Restart home, and start Oracle Restart by entering this command: crsctl start has. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.SIHA_STACK_NOT_ACTIVE_LOCAL_NODE

INS-44011: Oracle Restart is not upgraded to current release version (*string*).

Cause: n/a

Action: Ensure that the Oracle Restart upgrade procedure is completed on the local node before running the configuration tools. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.SIHA_STACK_UPGRADE_FAILED_LOCAL_NODE

INS-44012: Installer is unable to detect if Oracle Restart is upgraded to current release version (*string*).

Cause: n/a

Action: Review the log file %s on this machine. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.SIHA_STACK_UPGRADE_CHECK_UNEXPECTED_ERROR

INS-44013: Domain Services Cluster mandates creation of separate diskgroup for storing Oracle Cluster Registry (OCR) backup, Fleet Patching and Provisioning data, and Trace File Analyzer data. Specify the required details to create a new diskgroup for this purpose.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOMAIN_SERVICES_CLUSTER_GIMR_DISKGROUP_MANDATORY

INS-44014: Configuring a cluster with one hub node and one or more leaf node(s) is not supported.

Cause: At least two hub nodes are required while configuring the cluster with leaf node(s).

Action: Add additional hub node to the cluster configuration, or configure cluster without any leaf nodes. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_INVALID_COMBINATION_FOR_HUB_AND_LEAF_NODES

INS-44015: Passwordless SSH connectivity is not setup from the local node *string* to itself.

Cause: n/a

Action: Verify that the passwordless SSH of the local node to itself has been setup. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_BAD_LOCAL_NODE_NO_SSH

INS-45001: Location for *string* is not specified.

Cause: n/a

Action: Specify a valid location for %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_NOT_PROVIDED_ERR

INS-45002: The location *string* specified for *string* is invalid. Either the specified location is not found on the system or is detected to be a file.

Cause: n/a

Action: Specify a valid location for %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_LOCATION_ERR

INS-45003: The location *string* specified for *string* contains one or more invalid characters.

Cause: n/a

Action: Specify a valid location for %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_BAD_CHAR_ERR

INS-45004: Unable to create directory specified for *string*. Either proper permissions were not granted to create the directory or there was no space left in the volume.

Cause: n/a

Action: Check the permissions on the selected directory or choose another directory.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_NOT_WRITEABLE_ERR

INS-45005: The location *string* specified for *string* contains directories or files.

Cause: n/a

Action: Choose another location for %s or empty contents under %s to proceed.

*FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_NOT_EMPTY_ERR

INS-45006: Insufficient space available in location *string*.

Cause: n/a

Action: Choose a location that has at least %s MB of free space. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_INSUFFICIENT_FREESPACE_ERR

INS-45007: Invalid location specified for *string*. The location *string* is not shared across all nodes.

Cause: n/a

Action: Specify a valid location for %s that is shared across all nodes. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_NOT_SHARED_ERR

INS-45008: The location *string* specified for *string* is not valid. Only locations on NAS are supported for the chosen ASM configuration type.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_NOT_NFS_TYPE_ERR

INS-45009: Specified location for GIMR diskgroup is same as the location specified for Oracle Cluster Registry (OCR) diskgroup.

Cause: n/a

Action: Specify different locations for Oracle Cluster Registry (OCR) and GIMR diskgroups to proceed. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_OCR_GIMR_MOUNT_POINT_SAME

INS-45010: Fleet Patching and Provisioning Server (FPPS) cannot be configured on this cluster.

Cause: Configuring FPPS requires Oracle Advanced Cluster File System (ACFS) to be configured. ADVN/ACFS volumes cannot be configured on a diskgroup that includes thin-provisioned NFS files as disks.

Action: Do not select to configure FPPS or choose only locally attached disks for the diskgroup configuration. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_RHPSERVER_SUPPORTED_ONLY_ON_REAL_DISKS

INS-45011: The location *string* specified for *string* does not exist.

Cause: n/a

Action: Ensure that the location for %s exists or choose a location that exists. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_ASM_ON_NAS_MOUNT_POINT_DOES_NOT_EXISTS

INS-45012: Fleet Patching and Provisioning Server (FPPS) configuration is not supported on this cluster.

Cause: Configuring Fleet Patching and Provisioning Server (FPPS) requires Oracle Advanced Cluster File System (ACFS) drivers to be supported. ACFS drivers are not supported on this server.

Action: To proceed, do not specify or select the Configure FPPS option as part of this cluster configuration. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_RHPSERVER_CONFIGURATION_NOT_SUPPORTED

INS-45101: Clusterware is not running on the local node.

Cause: n/a

Action: Ensure that the Clusterware is configured and is running on local node before proceeding. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_CRS_NOT_RUNNING

INS-45102: The operation of patching Oracle Grid Infrastructure cannot be performed from the active clusterware Oracle home (*string*).

Cause: n/a

Action: Launch the installer from a Oracle Grid Infrastructure software location that is not configured still. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_NOT_NEW_HOME

INS-45103: The following node(s) cannot be added as they are already included in the table: *string*.

Cause: n/a

Action: n/a *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_ADD_NODE_DUPLICATE_HOSTNAMES

INS-45105: The patching of the Oracle Grid Infrastructure cannot be performed from the current home.

Cause: n/a

Action: The target Grid Infrastructure home should be at the same release level as that of the source home. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_HOME_NOT_COMPATIBLE

INS-45106: Oracle Restart is not running on the local node.

Cause: n/a

Action: Ensure that Oracle Restart is configured and is running on local node before proceeding. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_SIHA_NOT_RUNNING
```

INS-45107: The cluster does not satisfy the conditions to patch the home in zero-downtime mode.

Cause: n/a

Action: Please check the logs for further details. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ZDOGIP_NOT_SUPPORTED
```

INS-45109: The specified options for patching the Oracle Grid Infrastructure are not compatible.

Cause: n/a

Action: Ensure that the zero downtime option is passed along with the do not update ACFS driver option. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_INVALID_OPTIONS
```

INS-45110: The zero downtime option is not compatible with this patching operation.

Cause: n/a

Action: Do not specify the zero downtime option for this operation. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ZDOGIP_NOT_ALLOWED_FOR_MOVE
```

INS-45111: Oracle Grid Infrastructure software is not configured. Installer cannot patch this environment.

Cause: Cannot detect any existing Oracle Clusterware or Oracle ASM installation to patch.

Action: n/a *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_GRID_NOT_CONFIGURED_ERR
```

INS-45112: Out of place patching is not supported for the current platform.

Cause: n/a

Action: n/a *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_NOT_SUPPORTED_PLATFORM
```

INS-45113: The cluster is not in a suitable state.

Cause: n/a

Action: Ensure that the cluster state is '%s'. *FQN:

```
oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_CLUSTER_IN_BAD_STATE
```

INS-45114: There is no Grid Infrastructure configured in the system.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_CRS_NOT_PRESENT_ERR

INS-45115: Run the rollback of the patch operation from the current active Grid Infrastructure home '*string*'.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_ACTIVE_AND_LAUNCHED_HOME_NOT_THE_SAME_ERR

INS-45116: The current Grid Infrastructure configured is in normal state, rollback is only allowed for failed patch operations.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_CLUSTER_IN_NORMAL_STATE_ERR

INS-45117: Rollback is not allowed if the destination home is the same as the current active Grid Infrastructure home '*string*'.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_DESTINATION_AND_ACTIVE_HOME_ARE_THE_SAME_ERR

INS-45118: Rollback is not allowed if the destination home is the same as the one running the installer '*string*'.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_DESTINATION_AND_LAUNCHED_HOME_ARE_THE_SAME_ERR

INS-45119: Oracle base of the destination home '*string*' is different to the Oracle base from the current active Grid Infrastructure home '*string*'.

Cause: n/a

Action: Use a destination home with the same Oracle base as the current active Grid Infrastructure home '%s'. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ORACLE_BASE_IS_DIFFERENT_ERR

INS-45120: The drain timeout option is not compatible with Oracle Restart configuration.

Cause: n/a

Action: Do not specify the drain timeout option for this operation. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_SIHA_DRAIN_TIMEOUT_NOT_SUPPORTED

INS-45121: The node list was not specified in the command line. Cannot determine the node list automatically because the Grid Infrastructure is not running.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_GRIDPATCH_ROLLBACK_NODE_LIST_ERR

INS-45201: n/a

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_MEMBER_RESTART_CREDENTIALS_FILE_EMPTY

INS-45202: n/a

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_MEMBER_RESTART_DATA_FILE_NOT_EXISTS

INS-45203: n/a

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_MEMBER_RESTART_DATA_FILE_UNC_PATH_NOT_SUPPORTED

INS-45204: Configuring an Oracle Member Autostart is not allowed in this platform.

Cause: n/a

Action: To proceed, do not specify or select the Oracle Member Autostart configuration option. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_HA_MEMBER_AUTOSTART_NOT_SUPPORTED_PLATFORM_ERR

INS-45500: Installer is unable to detect the pre-upgraded oracle home.

Cause: n/a

Action: Review the log file %s for more details. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_EMPTY_OLD_HOME

INS-45501: Installer is unable to detect the version of the pre-upgraded oracle home.

Cause: n/a

Action: Review the log file %s for more details. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_EMPTY_OLD_HOME_VERSION

INS-45502: Installer is unable to detect the oracle base for the pre-upgraded oracle home.

Cause: n/a

Action: Review the log file %s for more details. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_EMPTY_OLD_BASE

INS-45503: Installer is unable to detect the cluster name.

Cause: n/a

Action: Review the log file %s for more details. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_EMPTY_CLUSTER_NAME

INS-45504: Installer is unable to detect the asm disk group name.

Cause: n/a

Action: Review the log file %s for more details. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_EMPTY_ASM_DISK_GROUP

INS-45505: The current Oracle home is not registered in the central inventory on this server.

Cause: Installer does not find this Oracle home to be registered with the central inventory on this server.

Action: Register the Oracle home on this server with the central inventory, either by using a cloning operation, or by using an attach-home operation. Restart the installer after fixing this issue. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_HOME_NOT_REGISTERED_IN_INVENTORY_ON_LOCAL_NODE

INS-45506: Insufficient permissions to write to directory *string* on this server.

Cause: n/a

Action: Ensure that you have the required write permissions for directory %s on this server. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_DIRECTORY_NOT_WRITEABLE_ON_LOCAL_NODE

INS-45507: Insufficient permissions to write to directory *string* on some of the nodes.

Cause: n/a

Action: Ensure that you have the required write permissions for directory %s on node(s) %s. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_DIRECTORY_NOT_WRITEABLE_ON_NODE

INS-45508: Downgrade cannot be performed.

Cause: Neither downgrade user is same as grid user, nor downgrade user is member of the group to which grid user belongs.

Action: Ensure that downgrade user is same as grid user or downgrade user is a member of the group to which grid user belongs. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_USER_IS_NOT_GRID_USER

INS-45509: User is not member of group *string*.

Cause: n/a

Action: Ensure that downgrade user is member of group %s. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_USER_MEMBER
 SHIP_ERR

INS-45510: Oracle Clusterware is not downgraded to *string* version.

Cause: Either there was an error in starting the Oracle Clusterware stack on some of the nodes, or the root scripts failed on some nodes.

Action: Review the log file %s for downgrade failure. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DOWNGRADE_CRS_
 CHECK_FAILED

INS-45511: Oracle Grid Infrastructure home (*string*) is marked incorrectly as a configured home in the central inventory.

Cause: n/a

Action: As the Oracle Grid Infrastructure is not configured in the home, the central inventory should be updated to indicate the same. Run the following command on the nodes where the home exists to update the central inventory, and then continue with the install: %s. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_DUPLICATE_CRS_ENTRY_I
 N_INVENTORY_FILE

INS-45512: Oracle Grid Infrastructure home (*string*) path does not exist.

Cause: n/a

Action: For more details, contact Oracle Support Services. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_INVENTORY_CLEANUP_NO
 T_PROPER

INS-45513: The upgrade of Oracle Clusterware was successful.

Cause: n/a

Action: Oracle Clusterware downgrade is allowed only on failed upgrades. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.CRS_DOWNGRADE_NOT_ALLOWED

INS-45514: Required arguments are not passed with `-executeConfigTools` flag.

Cause: n/a

Action: Specify the response file used for installation with `-responseFile` flag for running config tools. *FQN:
 oracle.install.ivw.crs.resource.CRSErrorCode.EXECUTECONFIGTOOLS_ARG_MISS
 ING

INS-45515: The GI downgrade has detected that the Oracle Clusterware stack is not running on the local node.

Cause: n/a

Action: Either run the GI downgrade on the node where Oracle Clusterware stack is running or open a terminal, log in as root or Administrator, change directory to the Oracle Clusterware home (%s), and start Oracle Clusterware by entering this command: `crsctl start crs`. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.CRS_STACK_NOT_UP_DOWNGRADE_ERR

INS-45516: There is no active Oracle Clusterware home on the cluster.

Cause: n/a

Action: In order to perform dry run upgrade, Oracle Clusterware needs to be configured and running. *FQN:

oracle.install.ivw.crs.resource.CRSErrorCode.INSTALL_CRS_DRY_RUN_ALLOWED_ONLY_FOR_CRS_UPGRADE

INS-45600: Unable to detect the inventory.

Cause: n/a

Action: Make sure that inventory files exist and have read permission. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.INVENTORY_DOES_NOT_EXIST_ERR

INS-45601: Oracle home with the path '*string*' not found in the inventory on node '*string*'.

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ORACLE_HOME_NOT_FOUND_ON_NODE_ERR

INS-45602: Oracle home name (*string*) of local node does not match with Oracle home name (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle home name (%s) on node %s matches with Oracle home name (%s) of local node. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ORACLE_HOME_NAME_INCONSISTENCY

INS-45603: Oracle base location (*string*) of local node does not match with Oracle base location (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle base location (%s) on node %s matches with Oracle base location (%s) of local node. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.ORACLE_BASE_NON_WINDOWS_INCONSISTENCY

INS-45604: Oracle home architecture (*string*) of local node does not match with Oracle home architecture (*string*) of remote node.

Cause: n/a

Action: Ensure that Oracle home architecture (%s) on node %s matches with Oracle home architecture (%s) of local node. *FQN:

oracle.install.ivw.common.resource.CommonErrorCode.HOME_ARCHITECTURE_INCONSISTENCY

INS-45605: ARU ID (*string*) of local node does not match with ARU ID (*string*) of remote node.

Cause: n/a

Action: Ensure that ARU ID (%s) on node %s matches with ARU ID (%s) of local node.

*FQN: oracle.install.ivw.common.resource.CommonErrorCode.ARU_ID_INCONSISTENCY

INS-45606: Components of Oracle home (*string*) of local node does not match with components of Oracle home (*string*) of remote node.

Cause: n/a

Action: Ensure that components of Oracle home (%s) on node %s matches with components of Oracle home (%s) of local node. *FQN:
 oracle.install.iww.common.resource.CommonErrorCode.ORACLE_HOME_INCONSISTENCY

INS-45607: One offs count (*string*) of Oracle home of local node does not match with one offs count (*string*) of Oracle home of remote node.

Cause: n/a

Action: Ensure that one offs count (%s) of Oracle home on node %s matches with one offs count (%s) of Oracle home of local node. *FQN:
 oracle.install.iww.common.resource.CommonErrorCode.ONE_OFFS_COUNT_INCONSISTENCY

INS-45608: Patch (*string*) is installed on local node does not exist on remote node '*string*' for Oracle home '*string*'.

Cause: Local node has patch '%s' installed for bug fixes '%s'. However the same patch is not found on remote node (%s) for the Oracle home '%s'.

Action: Ensure that all nodes have the same set of patches installed for Oracle home before proceeding with new a patch installation. *FQN:
 oracle.install.iww.common.resource.CommonErrorCode.LOCAL_NODE_ONE_OFFS_INVENTORY_INCONSISTENCY

INS-45609: Patch (*string*) installed on node '*string*' does not exist on local node for Oracle home '*string*'.

Cause: Remote node (%s) has patch '%s' installed for bug fixes '%s'. However the same patch is not found on local node for the Oracle home '%s'.

Action: Ensure that all nodes have the same set of patches installed for Oracle home before proceeding with a new patch installation. *FQN:
 oracle.install.iww.common.resource.CommonErrorCode.REMOTE_NODE_ONE_OFFS_INVENTORY_INCONSISTENCY

INS-50000: No component selected for installation.

Cause: n/a

Action: Select at least one component for installation. *FQN:
 oracle.install.iww.client.resource.ClientErrorCode.EMPTY_COMPONENTS_LIST

INS-50001: Built-In User is not supported on Domain Controller.

Cause: n/a

Action: Specify a Windows User Account. *FQN:
 oracle.install.iww.client.resource.ClientErrorCode.CLIENT_CUSTOM_INSTALL_NOT_SUPPORTED_ON_DOMAIN_CONTROLLER

INS-50004: Oracle Database Scheduler Agent port is blank or containing non-numeric character.

Cause: n/a

Action: Provide a valid value for Scheduler Agent port. *FQN:
 oracle.install.iww.client.resource.ClientErrorCode.INVALID_SCH_AGT_PORT

INS-50005: The value you entered for Oracle Database Scheduler Agent port, *string*, is already in use.

Cause: n/a

Action: Specify a valid port number. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.SCH_AGT_PORT_NOT_AVAILABLE

INS-50006: The value specified for Oracle Database Scheduler Agent port number, *string*, is out of valid range.

Cause: n/a

Action: Enter a port number between 1024 and 65535. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.OUT_OF_RANGE_SCH_AGT_PORT

INS-50007: Oracle Database Scheduler Agent host name cant be empty.

Cause: n/a

Action: Provide a valid text in Scheduler Agent host name field. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.INVALID_SCH_AGT_HOST

INS-50008: The currently selected software location cannot be upgraded.

Cause: The selected software location does not meet the criteria for a client upgrade.

Action: Only client homes of version 12.1.0.1.0 or higher containing only client software may be upgraded. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.INVALID_HOME_FOR_UPGRADE

INS-50009: Could not resolve the Scheduler Agent host name specified.

Cause: n/a

Action: Provide valid local host name. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.SCH_AGT_HOST_NOT_REACHABLE

INS-50010: Scheduler Agent host name specified does not match with local hosts name.

Cause: n/a

Action: Scheduler Agent host name must be a local host name. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.HOST_NAME_DOES_NOT_MATCH

INS-50011: Invalid characters found in Scheduler Agent host name.

Cause: n/a

Action: Ensure host name contains valid characters. Valid characters for host names can be any combination of lower and uppercase alphanumeric characters (a - z, A - Z, 0 - 9), and hyphen (-). *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.BAD_CHARS_IN_HOSTNAME

INS-50012: localhost and 127.0.0.1 are invalid inputs for Scheduler Agent Host Name.

Cause: n/a

Action: Enter host name which can be recognized by other hosts on the network. *FQN:

oracle.install.ivw.client.resource.ClientErrorCode.LOCALHOST_LOOPBACK_IP_INVALID_INPUT

INS-50013: *string* is either empty or containing non-numeric character.

Cause: n/a

Action: Provide a valid value for %s. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.INVALID_PORT

INS-50014: The value specified for *string* Listener Port number, *string*, is out of valid range.

Cause: The value you have entered for %s Listener Port is out of the valid range.

Action: Enter a port number between 1024 and 65535. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.OUT_OF_RANGE_PORT

INS-50015: *string* is empty.

Cause: n/a

Action: Enter a valid value for %s. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.EMPTY_FIELD

INS-50016: *string* is not a valid Install Type.

Cause: n/a

Action: Specify a valid Install Type. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.UNSUPPORTED_INSTALL_TYPE

INS-50100: Installer has detected an invalid entry in the central inventory corresponding to Oracle home (*string*).

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_INVALID_HOME_REGISTERED

INS-50101: The installer has detected that there are files in the Oracle Database Client home (*string*) which are not owned by the user (*string*) or do not have the primary group (*string*).

Cause: Following files are not owned by the user (%s) or do not have the primary group (%s): %s.

Action: Ensure that the files listed above are owned by the user (%s) and have the primary group (%s). *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_GOLDIMAGE_FILE_S_OWNER_MISMATCH

INS-50102: The installer has detected that the Oracle Database Client home software at (*string*) is not complete.

Cause: Following files are missing: %s.

Action: Ensure that the Oracle Database Client home at (%s) includes the files listed above. *FQN:
 oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_GOLDIMAGE_FILE_S_MISSING

INS-50103: The installer has detected that the Oracle home location provided in the command line is not correct.

Cause: The Oracle home value set in the command line %s is not textually the same as %s (identified by the installer from the Client Setup command).

Action: Specify the correct Oracle home location through the ORACLE_HOME command line variable. If you do not set it, the Installer will specify the right one.

*FQN:

oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_WRONG_CMDLINE_HOME

INS-50104: The installer has detected that the Oracle home location provided in the response file is not correct.

Cause: The Client Oracle home is the location from where the installer is called. It has been detected that the value set in the response file is different (%s). Expected value: %s.

Action: It is not required to specify ORACLE_HOME in the response file for Client installation. Alternatively, set it to the location of the installer (%s). *FQN:
oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_WRONG_RSPFILE_HOME

INS-50105: The Client software home (*string*) is already registered in the central inventory. This tool can only be used in a non-registered Client home.

Cause: n/a

Action: Choose a different location as Oracle home. *FQN:
oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_HOME_ALREADY_REGISTERED

INS-50106: The installer has detected that the install type provided in the command line is not correct.

Cause: The install type value set in the command line %s is not the same as %s (identified by the installer from the Client image software).

Action: It is not required to specify the install type through the command line, the Installer will identify the right one. *FQN:
oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_WRONG_CMDLINE_INSTALLTYPE

INS-50107: The installer has detected that the install type provided in the response file is not correct.

Cause: The install type value set in the response file %s is not the same as %s (identified by the installer from the Client image software).

Action: It is not required to specify the install type through the response file, the Installer will identify the right one. *FQN:
oracle.install.ivw.client.resource.ClientErrorCode.CLIENTSETUP_WRONG_RSPFILE_INSTALLTYPE

INS-50150: The specified source home path (*string*) does not correspond to a valid Oracle Database Client software home.

Cause: n/a

Action: Provide a valid Oracle Database Client software home as source home. *FQN:
oracle.install.ivw.client.resource.ClientErrorCode.CREATEGOLDIMAGE_CLIENT_NOT_VALID_SOURCE_HOME

INS-52001: Oracle Database Examples can only be installed into an existing Oracle Database Home of version *string*.

Cause: n/a

Action: Choose an existing Oracle Database Home of version %s for the installation. *FQN:
oracle.install.ivw.demos.resource.DemosErrorCode.INSTALL_DEMOS_NON_DB_ORACLE_HOME

INS-70000: n/a

Cause: n/a

Action: n/a *FQN:

oracle.install.ivw.tg.resource.TGErrorCode.EMPTY_COMPONENTS_LIST

INS-70002: *string* is either empty or containing non-numeric character.

Cause: n/a

Action: Provide a valid value for %s. *FQN:

oracle.install.ivw.tg.resource.TGErrorCode.INVALID_PORT

INS-70003: The value specified for *string* Listener Port number, *string*, is out of valid range.

Cause: The value you have entered for %s Listener Port is out of the valid range.

Action: Enter a port number between 1024 and 65535. *FQN:

oracle.install.ivw.tg.resource.TGErrorCode.OUT_OF_RANGE_PORT

INS-70008: *string* is empty.

Cause: n/a

Action: Enter a valid value for %s. *FQN:

oracle.install.ivw.tg.resource.TGErrorCode.EMPTY_FIELD

JMS-00101 to JMS-00273

JMS-00101: Invalid delivery mode {0}

Cause: The delivery mode is not supported

Action: The valid delivery mode is `AQjmsConstants.PERSISTENT` or `AQjmsConstants.NON_PERSISTENT`

JMS-00102: Feature not supported {0}

Cause: This feature is not supported in the current release

Action: n/a

JMS-00104: Message Payload must be specified

Cause: The message payload was null

Action: Specify a non-null payload for the message

JMS-00105: Agent must be specified

Cause: `AQjmsAgent` object was null

Action: Specify a valid `AQjmsAgent` representing the remote subscriber

JMS-00106: Cannot have more than one open Session on a JMSConnection

Cause: There is already one open jms session on the connection Cannot have more than one open session on a connection

Action: Close the open session and then open a new one

JMS-00107: Operation not allowed on {0}

Cause: The specified operation is not allowed on this object

Action: n/a

JMS-00108: Messages of type {0} not allowed with Destinations containing payload of type {1}

Cause: There was a mismatch between the message type being used and the payload type specified for the destination

Action: Use the message type that maps to the payload specified for the queue table that contains this destination

JMS-00109: Class not found: {0}

Cause: The specified class was not found

Action: Make sure your `CLASSPATH` contains the class

JMS-00110: Property {0} not writeable

Cause: An attempt was made to update a read-only message header field or property

Action: n/a

JMS-00111: Connection must be specified

Cause: The connection object was null

Action: Specify a non-null jdbc connection

JMS-00112: Connection is invalid

Cause: The jdbc connection is invalid

Action: Specify a non-null oracle jdbc connection

JMS-00113: Connection is in stopped state

Cause: An attempt was made to receive messages on a connection that is in stopped state

Action: Start the connection

JMS-00114: Connection is closed

Cause: An attempt was made to use a Connection that has been closed

Action: Create a new connection

JMS-00115: Consumer is closed

Cause: An attempt was made to use a Consumer that has been closed

Action: Create a new Message Consumer

JMS-00116: Subscriber name must be specified

Cause: Subscriber name was null

Action: Specify a non-null subscription name

JMS-00117: Conversion failed - invalid property type

Cause: An error occurred while converting the property to the requested type

Action: Use the method corresponding to the property data type to retrieve it

JMS-00119: Invalid Property value

Cause: The property value specified is invalid

Action: Use an appropriate type of value for the property being set

JMS-00120: Dequeue failed

Cause: An error occurred while receiving the message

Action: See message inside the JMSEException and linked SQLException for more information

JMS-00121: DestinationProperty must be specified

Cause: A null AQjmsDestinationProperty was specified while creating a queue/topic

Action: Specify a non-null AQjmsDestinationProperty for the destination

JMS-00123: Interval must be at least {0} seconds

Cause: An invalid interval was specified

Action: Specify an interval value that is greater than or equal to 1 second

JMS-00124: Invalid Dequeue mode

Cause: Invalid dequeue mode was specified

Action: Valid Dequeue modes are AQConstants.DEQUEUE_BROWSE, AQConstants.DEQUEUE_REMOVE, AQConstants.DEQUEUE_LOCKED, AQConstants.DEQUEUE_REMOVE_NODATA

JMS-00125: Invalid Queue specified

Cause: An invalid Queue object was specified

Action: Specify a valid Queue handle

JMS-00126: Invalid Topic specified

Cause: An invalid Topic object was specified

Action: Specify a valid Topic handle

JMS-00127: Invalid Destination

Cause: An invalid destination object was specified

Action: Specify a valid destination (Queue/Topic) object

JMS-00128: Invalid Navigation mode

Cause: An invalid navigation mode was specified

Action: The valid navigation modes are AQjmsConstants.NAVIGATION_FIRST_MESSAGE, AQjmsConstants.NAVIGATION_NEXT_MESSAGE, AQjmsConstants.NAVIGATION_NEXT_TRANSACTION

JMS-00129: Invalid Payload type

Cause: There was a mismatch between the message type being used and the payload type specified for the destination

Action: Use the message type that maps to the payload specified for the queue table that contains this destination. For ADT messages, use the appropriate CustomDatum/ORADData factory to create the message consumer

JMS-00130: JMS queue cannot be multi-consumer enabled

Cause: An attempt was made to get an AQ multi-consumer queue as a JMS queue

Action: JMS queues cannot be multi-consumer enabled

JMS-00131: Session is closed

Cause: An attempt was made to use a session that has been closed

Action: Open a new session

JMS-00132: Maximum number of properties (100) exceeded, message has {0} properties

Cause: Maximum number of properties (100), including provider-specific properties, for the message has been exceeded

Action: Reduce the number of user defined properties

JMS-00133: Message must be specified

Cause: Message specified was null

Action: Specify a non-null message

JMS-00134: Name must be specified

Cause: Queue or Queue table Name specified was null

Action: Specify a non-null name

JMS-00135: Driver {0} not supported

Cause: The specified driver is not supported

Action: Valid drivers are oci8 and thin. To use the kprb driver get the kprb connection using getDefaultConnection() and use the static createTopicConnection and createQueueConnection methods

JMS-00136: Payload factory can only be specified for destinations with ADT payloads

Cause: A CustomDatumFactory/ORADDataFactory was specified for consumers on destinations not containing ADT payloads

Action: This field must be set to null for destinations containing payloads of type SYS.AQ\$_JMS_TEXT_MESSAGE, SYS.AQ\$_JMS_BYTES_MESSAGE, SYS.AQ\$_JMS_MAP_MESSAGE, SYS.AQ\$_JMS_OBJECT_MESSAGE, SYS.AQ\$_JMS_STREAM_MESSAGE

JMS-00137: Payload factory must be specified for destinations with ADT payloads

Cause: CustomDatumFactory/ORADDataFactory was not specified for destinations containing ADT payloads

Action: For destinations containing ADT messages, a CustomDatumFactory/ORADDataFactory for a java class that maps to the SQL ADT type of the destination must be specified

JMS-00138: Producer is closed

Cause: An attempt was made to use a producer that has been closed

Action: Create a new Message Producer

JMS-00139: Property name must be specified

Cause: Property name was null

Action: Specify a non-null property name

JMS-00140: Invalid System property

Cause: Invalid system property name specified.

Action: Specify one of the valid JMS system properties

JMS-00142: JMS topic must be created in multi-consumer enabled queue tables

Cause: An attempt was made to create a JMS topic in a single-consumer queue table

Action: JMS topics can only be created in queue tables that are multi-consumer enabled

JMS-00143: Queue must be specified

Cause: Null queue was specified

Action: Specify a non-null queue

JMS-00144: JMS queue cannot be created in multi-consumer enabled queue tables

Cause: An attempt was made to create a JMS queue in a multi-consumer queue table

Action: JMS queues can only be created in queue tables that are not multi-consumer enabled

JMS-00145: Invalid recipient list

Cause: The recipient list specified was empty

Action: Specify a recipient list with at least one recipient

JMS-00146: Registration failed

Cause: An error occurred while registering the type in the type map

Action: n/a

JMS-00147: Invalid ReplyTo destination type,

Cause: The ReplyTo destination object is invalid

Action: The ReplyTo destination must be of type AQjmsAgent, or AQjmsDestination. If AQjmsAgent is used, its "name" must not be "JMSReplyTo" (which is considered a reserved name to be used for AQjmsDestination objects). If AQjmsDestination is used, it must be serializable into a string (and vice-versa).

JMS-00148: Property name size exceeded

Cause: The property name is greater than the maximum size allowed

Action: Specify a property name that is less than 100 characters

JMS-00149: Subscriber must be specified

Cause: Subscriber specified was null

Action: Specify a non-null subscriber

JMS-00150: Property not supported

Cause: An attempt was made to use a property that is not supported

Action: n/a

JMS-00151: Topics cannot be of type EXCEPTION

Cause: Topics cannot be of type AQjmsConstants.EXCEPTION

Action: Specify topics to be of type AQjmsConstants.NORMAL

JMS-00153: Invalid System property type

Cause: The type of the value specified does not match the type defined for the system property being set

Action: Use the correct type for the setting the system property

JMS-00154: Invalid value for sequence deviation

Cause: The sequence deviation is invalid

Action: Valid values are AQEnqueueOption.DEVIATION_BEFORE, AQEnqueueOption.DEVIATION_TOP

JMS-00155: AQ Exception {0}

Cause: An error occurred in the AQ java layer

Action: See the message inside the JMSEException and the linked exception for more information

JMS-00156: Invalid Class {0}

Cause: Class specified is invalid

Action: make sure your CLASSPATH has the specified class

JMS-00157: IO Exception {0}

Cause: IO exception

Action: See message is JMSEException for details

JMS-00158: SQL Exception {0}

Cause: SQL Exception

Action: See message inside linked SQLException for details

JMS-00159: Invalid selector {0}

Cause: The selector specified is either invalid or too long

Action: Check the syntax of the selector

JMS-00160: EOF Exception {0}

Cause: EOF exception occurred while reading the byte stream

Action: n/a

JMS-00161: MessageFormat Exception: {0}

Cause: An error occurred while converting the stream data to specified type

Action: check the type of data expected on the stream and use the appropriate read method

JMS-00162: Message not Readable

Cause: Message is in write-only mode

Action: Call the reset method to make the message readable

JMS-00163: Message not Writeable

Cause: Message is in read-only mode

Action: Use the clearBody method to make the message writeable

JMS-00164: No such element

Cause: Element with specified name was not found in the map message

Action: n/a

JMS-00165: Maximum size of property value exceeded

Cause: The property value exceeded the maximum length allowed

Action: Value for JMS defined properties can have a maximum length of 100, value for User defined properties can have a maximum length of 2000

JMS-00166: Topic must be specified

Cause: Topic specified was null

Action: Specify a non-null topic

JMS-00167: Payload factory or Sql_data_class must be specified

Cause: Payload factory or Sql_data_class not specified for queues containing object payloads

Action: Specify a CustomDatumFactory/ORADDataFactory or the SQLData class of the java object that maps to the ADT type defined for the queue.

JMS-00168: Cannot specify both payload factory and sql_data_class

Cause: Both CustomDatumFactory/ORADDataFactory and SQLData class were specified during dequeue

Action: Specify either the CustomDatumFactory/ORADDataFactory or the SQLData class of the java object that maps to the ADT type defined for the queue.

JMS-00169: Sql_data_class cannot be null

Cause: SQLData class specified is null

Action: Specify the SQLData class that maps to the ADT type defined for the queue

JMS-00171: Message is not defined to contain {0}

Cause: Invalid payload type in message

Action: Check if the queue is defined to contain RAW or OBJECT payloads and use the appropriate payload type in the message

JMS-00172: More than one queue table matches query {0}

Cause: More than one queue table matches the query

Action: Specify both owner and queue table name

JMS-00173: Queue Table {0} not found

Cause: The specified queue table was not found

Action: Specify a valid queue table

JMS-00174: Class must be specified for queues with object payloads\n Use dequeue(deq_option, payload_fact) or dequeue(deq_option, sql_data_cl)

Cause: This dequeue method cannot be used to dequeue from queues with OBJECT payloads

Action: use the either dequeue(deq_option, payload_fact) or dequeue(deq_option, sql_data_cl)

JMS-00175: DequeueOption must be specified

Cause: DequeueOption specified is null

Action: Specify a non-null dequeue option

JMS-00176: EnqueueOption must be specified

Cause: EnqueueOption specified is null

Action: Specify a non-null enqueue option

JMS-00177: Invalid payload type: Use dequeue(deq_option) for raw payload queues

Cause: This method cannot be used to dequeue from queues with RAW payload

Action: use the dequeue(deq_option) method

JMS-00178: Invalid Queue name - {0}

Cause: The queue name specified is null or invalid

Action: Specify a queue name that is not null. The queue name must not be qualified with the schema name. The schema name must be specified as the value of the owner parameter

JMS-00179: Invalid Queue Table name - {0}

Cause: The queue table name specified is null or invalid

Action: Specify a queue table name that is not null. The queue table name must not be qualified with the schema name. The schema name must be specified as the value of the owner parameter

JMS-00180: Invalid Queue Type

Cause: Queue type is invalid

Action: Valid types are AQConstants.NORMAL or AQConstants.EXCEPTION

JMS-00181: Invalid value for wait_time

Cause: Invalid value for wait type

Action: Wait time can be AQDequeueOption.WAIT_FOREVER, AQDequeueOption.WAIT_NONE or any value greater than 0

JMS-00182: More than one queue matches query

Cause: More than one queue matches query

Action: Specify both the owner and name of the queue

JMS-00183: No AQ driver registered

Cause: No AQDriver registered

Action: Make sure that the AQ java driver is registered. Use Class.forName("oracle.AQ.AQOracleDriver")

JMS-00184: Queue object is invalid

Cause: The queue object is invalid

Action: The underlying JDBC connection may have been closed. Get the queue handle again

JMS-00185: QueueProperty must be specified

Cause: AQQueueProperty specified is null

Action: Specify a non-null AQQueueProperty

JMS-00186: QueueTableProperty must be specified

Cause: QueueTableProperty specified is null

Action: Specify a non-null AQQueueTableProperty

JMS-00187: Queue Table must be specified

Cause: Queue Table specified is null

Action: Specify a non-null queue table

JMS-00188: QueueTable object is invalid

Cause: The queue table object is invalid

Action: The underlying JDBC connection may have been closed. Get the queue table handle again

JMS-00189: Byte array too small

Cause: The byte array given is too small to hold the data requested

Action: Specify a byte array that is large enough to hold the data requested or reduce the length requested

JMS-00190: Queue {0} not found

Cause: The specified queue was not found

Action: Specify a valid queue

JMS-00191: sql_data_cl must be a class that implements SQLData interface

Cause: The class specified does not support the java.sql.SQLData interface

Action: n/a

JMS-00192: Invalid Visibility value

Cause: Visibility value specified is invalid

Action: Valid values are AQConstants.VISIBILITY_ONCOMMIT, AQConstants.VISIBILITY_IMMEDIATE

JMS-00193: JMS queues cannot contain payload of type RAW

Cause: An attempt was made to create a JMS queue with RAW payload

Action: JMS queues/topics cannot contain RAW payload

JMS-00194: Session object is invalid

Cause: Session object is invalid

Action: The underlying JDBC connection may have been closed. Create a new session

JMS-00195: Invalid object type: object must implement CustomDatum/OracleData or SQLData interface

Cause: Invalid object type specified

Action: object must implement CustomDatum/ORADData or SQLData interface

JMS-00196: Cannot have more than one open QueueBrowser for the same destination on a JMS Session

Cause: There is already one open QueueBrowser for this queue on this session

Action: There cannot be more than one queue browser for the same queue in a particular session. Close the existing QueueBrowser and then open a new one

JMS-00197: Agent address must be specified for remote subscriber

Cause: Address field is null for remote subscriber

Action: The address field must contain the fully qualified name of the remote topic

JMS-00199: Registration for asynchronous receipt of messages failed

Cause: Registration with the database for asynchronous receipt of messages for the consumer failed

Action: See error message in linked Exception for details

JMS-00200: Destination must be specified

Cause: Destination is null

Action: Specify a non-null destination

JMS-00201: All Recipients in recipient_list must be specified

Cause: One or more elements in the recipient list are null

Action: All AQjmsAgents in the recipient list must be specified

JMS-00202: Unregister for asynchronous receipt of messages failed

Cause: An error occurred while removing the registration of the consumer with the database for asynchronous receipt

Action: n/a

JMS-00203: Payload Factory must be specified

Cause: Null Payload Factory was specified

Action: n/a

JMS-00204: An error occurred in the AQ JNI layer

Cause: JNI Error

Action: Check error message in linked exception for details

JMS-00205: Naming Exception

Cause: Naming exception

Action: n/a

JMS-00207: JMS Exception {0}

Cause: An error occurred in the JMS layer

Action: See the message inside the linked JMSEException for more information

JMS-00208: XML SQL Exception

Cause: An error occurred in the XML SQL layer

Action: See the message inside the linked AQxmlException for more information

JMS-00209: XML SAX Exception

Cause: An error occurred in the XML SAX layer

Action: See the message inside the linked AQxmlException for more information

JMS-00210: XML Parse Exception

Cause: An error occurred in the XML Parser layer

Action: See the message inside the linked AQxmlException for more information

JMS-00220: Connection no longer available

Cause: Connection to the database no longer available.

Action: n/a

JMS-00221: Free physical database connection unavailable in connection pool

Cause: A free physical database connection was not available in the OCI connection pool in order to perform the specified operation.

Action: Try performing the operation later

JMS-00222: Invalid Payload factory type

Cause: Payload factory should be of CustomDatumFactory or ORADDataFactory type.

Action: Use one of CustomDatumFactory/ORADDataFactory types.

JMS-00223: Payload factory must be null for destinations with Sys.AnyData payload - use typemap instead

Cause: A CustomDatumFactory/ORADDataFactory was specified for consumers on destinations containing SYS.ANYDATA payloads

Action: This field must be set to null for destinations containing payloads of type SYS.AnyData. The ORADDataFactory(s) must be registered in the session's typemap

JMS-00224: Typemap is invalid - must be populated with SQLType/OraDataFactory mappings to receive messages from Sys.AnyData destinations

Cause: The typemap of the session is null or empty. For destinations of type Sys.AnyData, the typemap must contain OraDataFactory objects for all possible types that may be stored in the queue/topic

Action: Use the AQjmsSession.getTypeMap() method get the typemap. Then use the put() method to register SQLType names and their corresponding OraDataFactory objects

JMS-00225: Invalid JDBC driver - OCI driver must be used for this operation

Cause: Operations on Sys.AnyData queues/topics are not supported using this JDBC driver

Action: Use the JDBC OCI driver to receive messages from Sys.AnyData queues/topics

JMS-00226: Header-only Message does not have a body

Cause: Header-only message does not have a body; the body cannot be cleared, changed, or queried.

Action: Do not access or modify the body of a read-only message.

JMS-00227: Illegal attempt to commit on a non transacted JMS Session

Cause: Illegal attempt to invoke the commit method on a non transacted JMS Session

Action: Remove invocation of the commit method on the current JMS Session

JMS-00228: Illegal attempt to rollback on a non transacted JMS Session

Cause: Illegal attempt to invoke the rollback method on a non transacted JMS Session

Action: Remove invocation of the rollback method on the current JMS Session

JMS-00229: {0} must be specified

Cause: The specified parameter was null

Action: Specify a non-null value for the parameter

JMS-00230: Illegal operation on durable subscription with active TopicSubscriber

Cause: Try to unsubscribe, change or create durable subscription while it has an active TopicSubscriber.

Action: Close the active TopicSubscriber and try again.

JMS-00231: Consumers on temporary destination must belong to the same

Cause: The specified parameter was null

Action: Specify a non-null value for the parameter

JMS-00232: An invalid user/password was specified for the JMS connection

Cause: Invalid user/password specified for connection

Action: Specify valid user/password for connection

JMS-00233: The required subscriber information is not available

Cause: Try to retrieve subscriber information from a subscriber which was obtained with getDurableSubscriber method and had no corresponding information in the in-memory map.

Action: Do not retrieve subscriber information from such a subscriber

JMS-00234: This operation is not allowed in the current messaging domain

Cause: Perform an operation that is not allowed in the current messaging domain

Action: Do not perform the operation in the current messaging domain

JMS-00235: Can not link the durable subscriber name with a topic in unsubscribe method.

Cause: OJMS is unable to link the supplied durable subscriber name with a topic. This causes unsubscribe method to fail.

Action: Use other unsubscribe methods which the user can provide topic name.

JMS-00236: OJMS encountered invalid OCI handles.

Cause: OJMS encountered invalid OCI handles when using JDBC OCI driver .

Action: Make sure the underlying JDBC connection is not closed while OJMS is still operating.

JMS-00237: Can not start thread for message listener.

Cause: OJMS is unable to start a new thread for message listener.

Action: Check the thread proxy code if the thread was started by a user provided thread proxy.

JMS-00238: Illegal attempt to recover on a transacted JMS Session

Cause: Illegal attempt to invoke the recover method on a transacted JMS Session

Action: Use rollback method instead of recover method on transacted JMS session.

JMS-00239: Illegal attempt to call {0} method on a XASession.

Cause: Illegal attempt to invoke the commit or rollback method on a XASession

Action: Use JTA to commit or rollback a distributed transaction

JMS-00240: Illegal attempt to call setClientID after other actions.

Cause: Illegal attempt to call Connection.setClientID method after other actions has been taken on this Connection

Action: set client ID before any other action on the Connection

JMS-00241: Illegal attempt to delete temporary destination when there are consumers using it.

Cause: Illegal attempt to delete temporary destination while there are existing consumers still using it.

Action: close the consumers before deleting the temporary destination

JMS-00242: Illegal attempt to enqueue message with both immediate visibility and three phase enqueue process.

Cause: Illegal attempt to enqueue message with both immediate visibility and three phase enqueue process.

Action: turn on the system property oracle.jms.useTemplobsForEnqueue

JMS-00243: Topic {0} not found

Cause: The specified topic was not found

Action: Specify a valid topic

JMS-00244: {0} is an invalid operation with the Sharded Queue.

Cause: The operation is not valid with the Sharded Queue

Action: Specify a valid operation for the Sharded Queue

JMS-00245: JMS Streaming support is available only for Sharded Queues.

Cause: JMS Streaming is supported with Sharded Queues only

Action: Use JMS Streaming APIs with Sharded Queue

JMS-00246: JMS Streaming support is not available for {0} driver.

Cause: JMS Streaming is supported with thin driver only

Action: Use JMS Streaming APIs with thin driver

JMS-00247: NON_PERSISTENT message delivery is not supported with JMS Streaming.

Cause: The NON_PERSISTENT delivery mode is not supported with JMS Streaming

Action: Specify PERSISTENT message delivery mode

JMS-00248: Illegal attempt to use JMS Streaming API when streaming is disabled.

Cause: Illegal attempt to use JMS Streaming API when streaming is disabled

Action: Turn on the system property oracle.jms.useJmsStreaming

JMS-00249: InputStream representing the message data must be specified.

Cause: InputStream is null

Action: Specify a valid InputStream representing the message data

JMS-00250: OutputStream must be specified to write the message data.

Cause: OutputStream is null

Action: Specify a valid OutputStream to write the data from the received message

JMS-00251: Illegal attempt to set message data using both write method(s) and Streaming API.

Cause: Illegal attempt to set message data using both write methods and Streaming API

Action: Specify either an InputStream or write method to set the message data

JMS-00252: Illegal attempt to read the data using {0} when the streaming is used with dequeue.

Cause: Illegal attempt to read the message data using read methods when the dequeue used streaming

Action: Call receiveData() to read the message data

JMS-00253: Operation {0} not allowed on a Message with null JMSMessageID.

Cause: The operation is not allowed on a Message with null JMSMessageID

Action: Use this operation on a Message with valid JMSMessageID

JMS-00254: Streaming is not used with dequeue, please use standard JMS API to read the message data.

Cause: Streaming is not used with dequeue operation

Action: Use standard JMS API to read the message data

JMS-00255: JMS Streaming support is available in a Session with acknowledge mode +

Cause: Invalid acknowledgement mode used with JMS Streaming

Action: Valid acknowledgement modes are Session.CLIENT_ACKNOWLEDGE and Session.SESSION_TRANSACTED

JMS-00256: stop() of javax.jms.Connection timed out.

Cause: stop() of javax.jms.Connection timed out

Action: A default timeout of 10 minutes is set to disable the registrations, and allow the onMessage() to process the message. Set a higher value in milli seconds for this timeout using the system property oracle.jms.notificationTimeout

JMS-00257: receive(long timeout) of javax.jms.MessageConsumer took more time than the network timeout configured at the java.sql.Connection. },

Cause: receive(long timeout) of javax.jms.MessageConsumer timed out.

Action: Please set a higher value in milliseconds for the system property 'oracle.jms.networkTimeout' or disable network timeout on java.sql.Connection by setting system property 'oracle.jms.setNetworkTimeout' to false.

JMS-00258: Invalid Saga Opcode {0} },

Cause: An invalid saga opcode was specified.

Action: No action required.

JMS-00259: Maximum Length of a Saga Participant cannot exceed 107 },

Cause: The length of the saga participant used exceeded the maximum allowable length.

Action: Retry the operation after reducing the length of the saga entity.

JMS-00260: Invalid SQL Name {0} },

Cause: An invalid SQL name is used to reference a saga participant

Action: Retry the operation with a valid saga name.

JMS-00261: Missing or Invalid Saga Message Listener },

Cause: Saga Message Listener was removed was not found.

Action: Retry the operation after registering a valid saga message listener.

JMS-00262: Saga {0} is already timed out },

Cause: An attempt was made to begin/commit/rollback an already timed out saga.

Action: No action required.

JMS-00263: Invalid Saga Id {0} },

Cause: An attempt was made to perform a saga operation with an invalid saga id.

Action: Retry the operation after specifying the correct saga id.

JMS-00264: Parameter {0} was not set for saga operation {1} },

Cause: An attempt was made to perform a saga operation with a critical saga parameter missing.

Action: Retry the operation after specifying the correct saga parameter.

JMS-00265: Saga object is already associated with saga {0} },

Cause: An attempt was made to perform a begin saga on an already started saga.

Action: No action required.

JMS-00266: Minimum number of saga listeners or producers cannot be less than 1 },

Cause: An attempt was made to set less than 1 saga listener for a saga participant.

Action: Retry the operation after specifying the correct number of saga listeners

JMS-00267: Unable to create saga sessions to add consumers or producers },

Cause: An attempt was made to add saga listeners or consumers while more sessions cannot be created using the given connection.

Action: Retry the operation after creating saga factory with a different option.

JMS-00268: Unable to remove saga producer },

Cause: An attempt was made to remove a saga publisher when no publishers were available.

Action: Retry the operation after creating saga publishers.

JMS-00269: Missing or Invalid Saga Message Producer },

Cause: An attempt was made to perform a saga operation when no producers were available.

Action: Retry the operation after creating saga publishers.

JMS-00270: Saga Operation {0} not allowed inside callback },

Cause: An attempt was made to perform an invalid saga operation inside the user defined callback.

Action: Retry the operation without providing the session parameter.

JMS-00271: Invalid Saga Initiator {0}. },

Cause: An attempt was made to add a saga initiator which does not exist.

Action: Retry the operation with a valid initiator.

JMS-00272: Saga {0} is already finalized. },

Cause: An attempt was made to perform an action on already finalized saga.

Action: No action required.

JMS-00273: Saga Operation {0} is disallowed. }

Cause: An attempt was made to perform an action which is not supported or disallowed.

Action: No action required.

JMS-00400 to JMS-00448

JMS-00400: Destination name must be specified

Cause: A null Destination name was specified

Action: Specify a non-null destination name

JMS-00402: Class not found: {0}

Cause: The specified class was not found

Action: Make sure your CLASSPATH contains the class

JMS-00403: IO Exception {0}

Cause: IO exception

Action: See message is AQxmlException for details

JMS-00404: XML Parse Exception

Cause: An error occurred in the XML Parser layer

Action: See the message inside the linked AQxmlException for more information

JMS-00405: XML SAX Exception

Cause: An error occurred in the XML SAX layer

Action: See the message inside the linked AQxmlException for more information

JMS-00406: JMS Exception {0}

Cause: An error occurred in the JMS layer

Action: See the message inside the linked JMSEException for more information

JMS-00407: Operation not allowed on {0}

Cause: The specified operation is not allowed on this object

Action: n/a

JMS-00408: Conversion failed - invalid property type

Cause: An error occurred while converting the property to the requested type

Action: Use the method corresponding to the property data type to retrieve it

JMS-00409: No such element

Cause: Element with specified name was not found in the map message

Action: n/a

JMS-00410: XML SQL Exception

Cause: An error occurred in the JDBC SQL layer

Action: See the message inside the linked SQLException for more information

JMS-00411: Payload body cannot be null

Cause: An invalid body string or document was specified

Action: Specify a non-null body string or document

JMS-00412: Byte conversion failed

Cause: An invalid username/password was specified

Action: Specify a non-null username and password

JMS-00413: Autocommit not allowed for operation

Cause: The autocommit flag cannot be set for this operation

Action: Do not set the autocommit flag

JMS-00414: Destination owner must be specified

Cause: A null Destination owner was specified

Action: Specify a non-null destination name

JMS-00415: Invalid Visibility value

Cause: Visibility value specified is invalid

Action: Valid values are `AQxmlConstants.VISIBILITY_ONCOMMIT`,
`AQxmlConstants.VISIBILITY_IMMEDIATE`

JMS-00416: Invalid Dequeue mode

Cause: Invalid dequeue mode was specified

Action: Valid Dequeue modes are `AQxmlConstants.DEQUEUE_BROWSE`,
`AQxmlConstants.DEQUEUE_REMOVE`, `AQxmlConstants.DEQUEUE_LOCKED`,
`AQxmlConstants.DEQUEUE_REMOVE_NODATA`

JMS-00417: Invalid Navigation mode

Cause: An invalid navigation mode was specified

Action: The valid navigation modes are
`AQxmlConstants.NAVIGATION_FIRST_MESSAGE`,
`AQxmlConstants.NAVIGATION_NEXT_MESSAGE`,
`AQxmlConstants.NAVIGATION_NEXT_TRANSACTION`

JMS-00418: Invalid value for wait_time

Cause: Invalid value for wait type

Action: Wait time can be `AQDequeueOption.WAIT_FOREVER`,
`AQDequeueOption.WAIT_NONE` or any value greater than 0

JMS-00419: invalid ConnectionPoolDataSource

Cause: A null or invalid ConnectionPoolDataSource was specified

Action: Specify a valid OracleConnectionPoolDataSource object with the correct url
and user/password

JMS-00420: Invalid value for cache_size

Cause: An invalid cache_size was specified

Action: Cache size must be greater than 0

JMS-00421: Invalid value for cache_scheme

Cause: An invalid cache scheme was specified

Action: The valid cache schemes are OracleConnectionCacheImpl.DYNAMIC_SCHEME
OracleConnectionCacheImpl.FIXED_WAIT_SCHEME

JMS-00422: Invalid tag - {0}

Cause: An invalid tag was encountered in the XML document

Action: Verify that the XML document conforms to the AQ schema

JMS-00423: Invalid value

Cause: An invalid value was specified

Action: Verify that the value specified in the XML document conforms to those specified in the AQ schema

JMS-00424: Invalid message header

Cause: The message header specified is null or invalid

Action: Specify a valid message header

JMS-00425: Property name must be specified

Cause: Property name was null

Action: Specify a non-null property name

JMS-00426: Property does not exist

Cause: Invalid property name specified. The property does not exist

Action: The property does not exist

JMS-00427: Subscriber name must be specified

Cause: Subscriber name was null

Action: Specify a non-null subscription name

JMS-00428: Valid message must be specified

Cause: message was null

Action: Specify a non-null message

JMS-00429: Register Option must be specified

Cause: Register option is null

Action: Specify a non-null Register Option

JMS-00430: Database Link must be specified

Cause: DB Link is null

Action: Specify a non-null Register Option

JMS-00431: Sequence Number must be specified

Cause: Register option is null

Action: Specify a non-null Register Option

JMS-00432: Status must be specified

Cause: status option is null

Action: Specify a non-null Register Option

JMS-00433: User not authenticated

Cause: User is not authenticated

Action: Specify an authenticated user

JMS-00434: Invalid data source

Cause: Data source is null or invalid

Action: Specify a valid data source

JMS-00435: Invalid schema location

Cause: Schema location is null or invalid

Action: Specify a valid URL for the schema

JMS-00436: AQ Exception

Cause: An error occurred in the AQ java layer

Action: See the message inside the AQxmlException and the linked exception for more information

JMS-00437: Invalid Destination

Cause: An invalid destination object was specified

Action: Specify a valid destination (Queue/Topic) object

JMS-00438: AQ agent {0} not mapped to a valid database user

Cause: The AQ agent specified does not map to a database user which has privileges to perform the requested operation

Action: Use `dbms_aqadm.enable_db_access` to map the agent to a database user with the required queue privileges

JMS-00439: Invalid schema document

Cause: The schema document specified is not valid

Action: Specify a valid URL for the schema document

JMS-00440: Invalid operations - agent {0} maps to more than one database user

Cause: The aq agent mapped to more than one database user in the the same session

Action: Map the aq agent to only one database user Check the `aq$internet_users` view for database users that map to this agent

JMS-00441: {0} cannot be null

Cause: The specified parameter was null

Action: Specify a non-null value

JMS-00442: Name and Address for Agent cannot be null

Cause: Both the name and address parameters were specified as null

Action: Specify a non-null value for the name or address

JMS-00443: IMMEDIATE visibility mode not supported for this queue/topic

Cause: IMMEDIATE visibility mode not supported for JMS type queue/topic

Action: Use ON_COMMIT or the default visibility mode for JMS type queue/topic

JMS-00444: This feature is not supported yet

Cause: The requested feature is not yet supported

Action: wait for future releases that support the feature.

JMS-00445: Destination alias must be specified

Cause: A null Destination alias was specified

Action: Specify a non-null destination alias

JMS-00446: Agent alias must be specified

Cause: A null Agent alias was specified

Action: Specify a non-null agent alias

JMS-00447: error in accessing LDAP server

Cause: error in accessing the LDAP server

Action: check the LDAP server is up and the environment parameters provided to the servlet are correct

JMS-00448: Invalid Content-Type

Cause: Invalid Content-Type

Action: Content-Type must be "text/xml" or "application/x-www-form-urlencoded" with parameter name "aqxmlDoc"

JZN-00000 to JZN-00733

JZN-00000: Normal, successful completion

Cause: The operation completed successfully.

Action: No action required.

JZN-00001: End of input

Cause: Processing has reached the end of available input.

Action: No action required.

JZN-00002: Invalid argument

Cause: The input argument was not a buffer, file, or stream.

Action: This is a programming error by the caller of the JavaScript Object Notation (JSON) facility. Contact Oracle Support Services.

JZN-00003: Input not specified

Cause: A parse or decode operation was requested without specifying input.

Action: Specify a buffer, file, or stream as input before attempting to parse or decode the input.

JZN-00004: Cannot open input file

Cause: The requested input file could not be found, or was not readable.

Action: Ensure that the file exists and that read permission is available.

JZN-00005: Syntax error

Cause: The JavaScript Object Notation (JSON) parser encountered syntactically invalid JSON.

Action: Correct the JSON input document.

JZN-00006: Invalid escape sequence

Cause: The JavaScript Object Notation (JSON) parser encountered an invalid sequence of characters following a backslash character.

Action: Correct the JSON input and remove or correct the invalid escape sequence.

JZN-00007: Object member key '-s' is not unique

Cause: The JavaScript Object Notation (JSON) parser detected a duplicate member key.

Action: Correct the JSON input and remove the duplicate key.

JZN-00008: Parse already in progress

Cause: An attempt was made to begin parsing an input while a parsing operation was already in progress.

Action: Close the previous parsing operation before beginning a new one.

JZN-00009: Unsupported encoding

Cause: The requested character encoding was not supported by JavaScript Object Notation (JSON).

Action: Convert the input to Unicode.

JZN-00010: Invalid byte sequence in character data

Cause: The parser encountered a sequence of bytes that were invalid for the specified character set.

Action: Correct the input source or ensure that the character encoding is correctly specified.

JZN-00011: Error reading input

Cause: An I/O error was encountered while reading input for parsing or decoding.

Action: None

JZN-00012: Premature end of input

Cause: The parser or decoder encountered the end of the input source while still expecting more data.

Action: None

JZN-00013: Stack overflow

Cause: The internal depth limit on the JavaScript Object Notation (JSON) hierarchy of containers (which may be objects, arrays, or both) was exceeded during a Document Object Model (DOM) read or write operation.

Action: None

JZN-00014: Stack underflow

Cause: An event sequence to render the JavaScript Object Notation (JSON) included a closing event for an unknown object or array.

Action: The input source is bad, likely due to a programming error.

JZN-00015: Name too long

Cause: The JavaScript Object Notation (JSON) parser encountered a member key name that exceeded the internal maximum.

Action: Parse the input without duplicate key checks.

JZN-00016: Serializer stream error

Cause: An I/O error was encountered while writing to the output stream.

Action: None

JZN-00017: Serializer buffer error

Cause: The data overflowed the fixed-size output buffer.

Action: Specify a larger output buffer consistent with the input supplied.

JZN-00018: Input to serializer is too large

Cause: The data overflowed the fixed-size output buffer.

Action: Specify a larger output buffer consistent with the input supplied.

JZN-00019: Cannot print without array wrapper

Cause: The result of the JavaScript Object Notation (JSON) expression could not be rendered without an array wrapper.

Action: If the expression results in a sequence of multiple results, the array wrapper option is required.

JZN-00020: Empty result

Cause: The path expression resulted in a null result.

Action: None

JZN-00021: Value to be printed was not scalar

Cause: An operation requested a scalar value, but the selected value was an object, array, or sequence and could not be returned.

Action: None

JZN-00022: Extra data after end of input

Cause: Additional data bytes were encountered after the expected end of input.

Action: None

JZN-00023: Length does not match data

Cause: The binary decoder encountered a data length that exceeded or did not match the actual data value.

Action: The input is corrupt.

JZN-00024: Unrecognized data type or code

Cause: The binary decoder encountered an unrecognized operation code.

Action: The input is corrupt.

JZN-00025: Invalid binary data

Cause: The binary decoder encountered invalid or inconsistent data while reading the input.

Action: The input is corrupt.

JZN-00026: Too many levels of nesting

Cause: The internal depth limit on the JavaScript Object Notation (JSON) hierarchy of containers (which may be objects, arrays, or both) was exceeded.

Action: None

JZN-00027: Internal error

Cause: An internal error occurred in the code.

Action: Contact Oracle Support Services.

JZN-00028: Out of memory

Cause: The operating system ran out of memory.

Action: Increase the memory available to the program.

JZN-00029: Data member too large

Cause: A data value in a Document Object Model (DOM) was too large to be encoded in binary form.

Action: None

JZN-00030: NULL pointer for required context

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the JavaScript Object Notation (JSON) facility. Contact Oracle Support Services.

JZN-00031: Invalid path expression

Cause: The JavaScript Object Notation (JSON) path expression could not be successfully parsed.

Action: Correct the invalid syntax.

JZN-00032: Invalid array position in path expression

Cause: The specified array position was invalid.

Action: Array positions must be non-negative integers.

JZN-00033: Invalid order of array indexes

Cause: In a comma-delimited set of array indexes, the array indexes were in descending order.

Action: Correct the array indexes so that they appear in ascending order.

JZN-00034: Field name too long

Cause: The field name exceeded 256 bytes.

Action: Select a shorter name for the field.

JZN-00035: Total field names too long

Cause: The total length of all field names exceeded the 65536 byte limit.

Action: None

JZN-00036: Array position out of bounds

Cause: An attempt was made to access an element outside of the array bounds.

Action: None

JZN-00037: Invalid number

Cause: The string could not be interpreted as a numeric value.

Action: None

JZN-00038: Invalid date/time

Cause: The string could not be interpreted as a date or date/time.

Action: The data/time string must be in accordance with ISO-8601.

JZN-00039: Size overflow for JSON set encoding

Cause: The total size of the JavaScript Object Notation (JSON) objects exceeded the maximum allowed for JSON set-oriented storage.

Action: None

JZN-00040: Invalid specification

Cause: The Query-By-Example (QBE) specification was invalid.

Action: Correct the specification.

JZN-00041: JSON Patch operation could not be completed

Cause: The JavaScript Object Notation (JSON) Patch operation encountered an infeasible operation and could not be completed.

Action: None

JZN-00042: Modification not allowed on read-only object

Cause: Read-only JavaScript Object Notation (JSON) objects could not be modified by Document Object Model (DOM) operations.

Action: This is a programming error. Correct the error by copying the DOM to a read/write DOM and then executing the modification.

JZN-00043: Feature not implemented

Cause: This feature was not implemented yet.

Action: None

JZN-00044: Type conversion failed

Cause: A type conversion requested for JavaScript Object Notation (JSON) Path output could not be performed.

Action: None

JZN-00045: Invalid sequence of events

Cause: The JavaScript Object Notation (JSON) serializer encountered an incorrect event sequence and could not serialize the result.

Action: This is a programming error by the caller of the JSON facility. Contact Oracle Support Services.

JZN-00046: Requested key does not exist

Cause: An attempt was made to read a key from a Document Object Model (DOM) object node, but the key was not present in the DOM object node.

Action: This is a programming error.

JZN-00047: Cyclic reference to DOM node is not allowed

Cause: A Document Object Model (DOM) node could not be inserted below one of its own descendant nodes.

Action: This is a programming error.

JZN-00048: Multiple references to DOM node are not allowed

Cause: A Document Object Model (DOM) node could not be inserted because it is already present in the document node tree.

Action: This is a programming error.

JZN-00049: Input to JSON parser is empty

Cause: The input provided to the JSON parser was empty.

Action: This is an internal error message not visible to user.

JZN-00050: Character set conversion failed

Cause: The string could not be converted to or from UTF-8.

Action: This is an internal error message not visible to user.

JZN-00051: Invalid regular expression

Cause: The string supplied to 'eq_regex' or 'like_regex' could not be interpreted as a regular expression.

Action: Correct the expression.

JZN-00052: no cached value found for this column

Cause: Internal code signals that a call to get a JSON_TABLE column value found no pre-generated value in the cache.

Action: Call the generation function to get and cache the value.

JZN-00053: target of DOM operation must be an object node

Cause: A DOM operation that requires an object node was given an array or scalar node as the target.

Action: Correct the code to use an operation appropriate to the node type.

JZN-00054: target of DOM operation must be an array node

Cause: A DOM operation that requires an array node was given an object or scalar node as the target.

Action: Correct the code to use an operation appropriate to the node type.

JZN-00055: target of DOM operation is not scalar

Cause: A DOM operation that requires a scalar node was given an object object or array node as the target.

Action: Correct the code to use an operation appropriate to the node type.

JZN-00056: numeric overflow

Cause: A string representaion of a number was too large to be converted to an Oracle number.

Action: Use a smaller number or do not convert to Oracle number format.

JZN-00057: cannot convert BOOLEAN value to number

Cause: An attempt was made to convert a BOOLEAN value that was selected by a JavaScript Object Notation (JSON path) expression to a number with a number() or numberOnly() function.

Action: Remove the number()/numberOnly() function from the JSON path expression.

JZN-00058: JavaScript Object Notation (JSON) value is scalar

Cause: A scalar JavaScript Object Notation value was encountered where a non-scalar value (JSON object or JSON array) was expected.

Action: Check the JSON data or SQL or JSON operation.

JZN-00059: invalid scalar data type

Cause: The input scalar data type could not be processed by the JSON operator.

Action: Cast or convert the scalar value to a data type supported by the JSON operator.

JZN-00060: The specified node is a freed node.

Cause: The input node to a Document Object Model (DOM) operation was previously freed and could be used again.

Action: Ensure that your program is not using stale pointer references.

JZN-00061: operation not allowed

Cause: The Document Object Model (DOM) operation was not allowed. Operations that remove, unlink, rename, replace, or move DOM nodes were not allowed.

Action: Avoid disallowed operations and duplicated field names.

JZN-00062: ~u duplicate element(s) in array

Cause: Items in the document array were not unique.

Action: Ensure items in the document array are unique.

JZN-00063: non-object element in array for sort or pivot operation

Cause: Some items in the target array were not JSON objects.

Action: Ensure all array items are JSON objects.

JZN-00064: name element not found or not a string

Cause: The name needed for a pivot operation was not found or not a JSON string.

Action: Ensure all array elements have a JSON string name field.

JZN-00065: value element not found

Cause: The value needed for a pivot operation was not found.

Action: Ensure all array elements have a value field.

JZN-00066: invalid cast operation requested

Cause: An invalid cast operation was requested.

Action: Ensure the cast operation requested is valid. For numeric cast, ensure the value is not out of range.

JZN-00067: invalid comparison

Cause: An attempt was made to compare nodes of dissimilar types.

Action: None

JZN-00068: exponent out of range

Cause: An attempt was made to convert a string to a number with an exponent that was too small or too large to represent without losing all precision.

Action: None

JZN-00070: comma not preceded or followed by field or item

Cause: An unexpected or superfluous comma was encountered while parsing an object or array.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00071: missing comma in object or array

Cause: A comma was expected between members of an object, or between items in an array.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00072: object member is missing value

Cause: An object member name and colon was not followed by a member value.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00073: missing colon in member:value pair

Cause: An object member name was not followed by a colon.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00074: member name not enclosed in double quotation marks

Cause: An object member name was not enclosed in double quotation marks, and either contained or started with a character that was not allowed.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00075: string value not enclosed in double quotation marks

Cause: A string value was not enclosed in double quotation marks.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00076: number could not be parsed

Cause: A JavaScript Object Notation (JSON) number was encountered that

Action: This is an error in the JSON input.

JZN-00077: invalid ASCII control character

Cause: An invalid byte value was read from the JavaScript Object Notation (JSON) input. ASCII control characters are not allowed in JSON text.

Action: This is an error in the JSON input.

JZN-00078: Invalid JSON keyword '~s'

Cause: A literal value was encountered that could not be interpreted as a JSON literal. Allowed JSON literals are 'true', 'false', and 'null'.

Action: This is an error in the JSON input.

JZN-00079: missing quotation mark at end of string

Cause: A member name or string value beginning with a quotation mark did not have a closing quotation mark.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00080: not feasible to perform partial update on OSON bytes

Cause: Unsupported modifications were attempted on a JSON Document Object Model (DOM) document backed by an OSON binary.

Action: Ensure that the modifications are supported by OSON partial update, or convert the OSON to an in-memory mutable DOM before performing the modifications.

JZN-00081: invalid hexadecimal string

Cause: A string was encountered that could not be interpreted as a hexadecimal representation of a binary value.

Action: Ensure that the the string contains only valid hexadecimal characters (0-9,a-f,A-F) and that it contains an even number of characters (2 characters per byte of the binary value).

JZN-00082: unexpected JSON syntax character '~s'

Cause: An unexpected or superfluous syntactic character was encountered while parsing an object or array.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00083: unclosed array

Cause: An array was not closed with a ']'.
'

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00084: unclosed object

Cause: An object was not closed with a '}'.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00085: JSON unintelligible

Cause: A JSON contained invalid or unexpected characters and could not be interpreted.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00086: missing next item

Cause: An array or object contained a comma but no subsequent element or member was found.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00087: unexpected characters

Cause: Unexpected non-whitespace characters were encountered following the end of the JSON document.

Action: This is an error in the JavaScript Object Notation (JSON) input.

JZN-00090: Invalid binary JSON (~s)

Cause: The binary JSON image was invalid or corrupt.

Action: If the binary JSON comes from an external source, check the encoder or source for errors.

JZN-00091: Binary JSON encoding ended prematurely

Cause: The binary JSON image was incomplete or corrupt.

Action: If the binary JSON comes from an external source, check the encoder or source for errors.

JZN-00092: JSON too large for binary encoding

Cause: The binary JSON exceeded the maximum supported size.

Action: None

JZN-00093: binary output requested on scalar of unsupported type

Cause: A SQL operator requesting a BLOB or RAW output type was applied to a scalar value that is not convertible to binary form.

Action: None

JZN-00094: JSON parser cannot be used on binary JSON input

Cause: A binary JSON was given as the input to the textual JSON parser.

Action: Use the binary JSON directly, or serialize it to textual JSON before giving it as input to a parse operation.

JZN-00200: (line ~1s, position ~2s)

Cause: This is the location of the error within the JSON document.

Action: None

JZN-00201: Unquoted punctuation in step

Cause: A path step contained punctuation characters.

Action: Enclose the step in double quotation marks.

JZN-00202: Escape sequence must be in quotation marks

Cause: A backslash escape sequence was not enclosed in quotation marks.

Action: Enclose the string in double quotation marks.

JZN-00203: Invalid escape sequence

Cause: An escape sequence beginning with a backslash contained invalid characters.

Action: Correct the invalid escape sequence.

JZN-00204: Invalid surrogate pair

Cause: The surrogate pair was invalid. A surrogate pair must consist of a high surrogate followed by a low surrogate.

Action: Correct the invalid surrogate pair.

JZN-00205: Array subscript too long

Cause: A subscript within an array step was too long to be interpreted.

Action: Shorten the array step.

JZN-00206: Array subscript invalid range

Cause: An array range subscript was missing a start or end position.

Action: Correct the start or end position to create a valid range.

JZN-00207: Variable name is invalid.

Cause: The variable name was invalid. A variable name must be alphanumeric and cannot start with a number. A variable name must not use non-ASCII characters.

Action: Correct the variable name.

JZN-00208: Path must start with a dollar sign (\$) character

Cause: A path did not start with a dollar sign (\$) character.

Action: Start the path with a dollar sign (\$) character.

JZN-00209: Unexpected characters after end of path

Cause: Trailing characters followed the end of the path.

Action: Remove the trailing or corrupted characters.

JZN-00210: Empty array subscript

Cause: An array step was empty.

Action: Specify a subscript, range, or series of entries.

JZN-00211: Invalid array subscript

Cause: The specified array position was invalid.

Action: Array positions must be non-negative integers.

JZN-00212: Array wildcard must be used alone

Cause: The array wildcard (*) character was not specified by itself in an array subscript.

Action: Remove all other parts of the subscript.

JZN-00213: Object key wildcard must be used alone

Cause: The key wildcard (*) character did not appear by itself in a key step.

Action: Remove extraneous characters from the key step.

JZN-00214: Missing square bracket in array step

Cause: An array step had mismatching square bracket ([]) characters.

Action: Add the missing closing square bracket character.

JZN-00215: Array step contains unexpected characters

Cause: An array step contained invalid characters and could not be interpreted.

Action: Array steps must contain numbers, ranges, or comma-delimited numbers and ranges.

JZN-00216: Unclosed quoted step

Cause: A step beginning with a quotation mark did not have a closing quotation mark.

Action: Add the missing quotation mark.

JZN-00217: Key step contains unexpected characters

Cause: A key step contained invalid characters and could not be interpreted.

Action: Unquoted key steps must be alphanumeric and begin with an alphabetic character. Otherwise, enclose the step in quotation marks.

JZN-00218: Invalid JSON literal

Cause: A JavaScript Object Notation (JSON) literal must be 'true', 'false', or 'null'.

Action: None

JZN-00219: Literal contains unexpected characters

Cause: A JavaScript Object Notation (JSON) literal must be 'true', 'false', or 'null'.

Action: None

JZN-00220: Invalid number

Cause: The value could not be interpreted as a number.

Action: None

JZN-00221: Numeric overflow

Cause: The numeric value could not be converted to binary because of an overflow.

Action: None

JZN-00222: Invalid regular expression

Cause: The expression supplied to 'eq_regex' or 'like_regex' was not a valid regular expression.

Action: Correct the expression.

JZN-00223: Unsupported operator

Cause: The 'not_in' operator was specified in an expression.

Action: Use a logical not surrounding an 'in' expression instead.

JZN-00224: Unexpected characters in comparison operator

Cause: Unexpected characters were present in the expression.

Action: Remove the unexpected characters from the expression.

JZN-00225: Comparison with expression must involve a path

Cause: A comparison operation with an expression did not involve a path.

Action: None

JZN-00226: Not operator must be followed by parenthetical expression

Cause: The expression after a not operator was not enclosed in parentheses.

Action: Enclose the expression in parentheses.

JZN-00227: Comparison must be against 'true' or 'false'

Cause: The comparison was not against a JavaScript Object Notation (JSON) 'true' or 'false' literal.

Action: None

JZN-00228: Question mark must be followed by parenthetical expression

Cause: A question mark introduced a filter that was enclosed in parentheses.

Action: Enclose the filter condition in parentheses.

JZN-00229: Missing parenthesis in parenthetical expression

Cause: A parenthetical expression was missing a closing parenthesis.

Action: Append a closing parenthesis to close the expression.

JZN-00230: Unexpected characters in expression

Cause: Unexpected characters were present in the expression.

Action: Remove the unexpected characters from the expression.

JZN-00231: Unquoted Unicode character

Cause: A Unicode character appeared outside of quotation marks.

Action: Surround the path step or value with quotation marks.

JZN-00232: Expected a '.' following step

Cause: After a path step, a '.' separator was expected.

Action: None

JZN-00233: Invalid character at start of step

Cause: The next path step started with an invalid character.

Action: None

JZN-00234: Invalid '@' outside of predicate

Cause: An '@' character appeared in the path outside of a predicate clause.

Action: None

JZN-00235: Invalid '\$' inside of predicate

Cause: A '\$' appeared in the path inside of a predicate clause.

Action: None

JZN-00236: missing or invalid function or operator

Cause: A predicate expression was missing an operator or specified a function that was not valid.

Action: None

JZN-00237: invalid comparison of two path expressions

Cause: A predicate expression contained a path expression on both the left and right sides of the operator.

Action: None

JZN-00238: path expression has more than one predicate

Cause: A path expression had more than one predicate expression at the top level. At most, one predicate expression is allowed at the top level.

Action: None

JZN-00239: predicate expression before final path step

Cause: A path expression contained a predicate expression prior to the final step in the path. If an expression has a predicate at the top level, it must be the final step in the path.

Action: None

JZN-00240: invalid characters in array range subscript

Cause: The specified array range contained invalid characters. Array ranges are specified using the keyword 'to' between the start and end of the range.

Action: Array positions must be non-negative integers.

JZN-00241: invalid function at the end of path

Cause: The specified function is not valid.

Action: None

JZN-00242: parentheses nested too deeply

Cause: A path expression contained too many levels of nested parentheses.

Action: None

JZN-00243: type incompatibility for comparison

Cause: The domain of a type comparison cannot be determined because the types are incompatible and cannot be converted.

Action: Add a type casting function to the comparison expression.

JZN-00244: wrong argument data type for function call

Cause: The argument to a function call does not have the correct data type and cannot be converted to the correct data type.

Action: Use an argument of an allowed data type.

JZN-00245: can not convert literal to the required data type

Cause: The JSON literal value cannot be converted to the data type required by the operation or comparison.

Action: Use a literal value within the domain of the datatype.

JZN-00246: expression types used by in/not_in sequence must be uniform

Cause: The values used for an in or not_in sequence must be of a uniform data type.

Action: Do not mix JSON literals or bind variables of different data types in the sequence given to an in or not_in clause.

JZN-00247: Array subscript or range out of order

Cause: An array subscript appeared in a comma-separated list after a higher subscript or range.

Action: Reverse the order of the list items and ensure that ranges do not overlap.

JZN-00248: Character not escaped

Cause: A character appeared in a quoted path step or literal string without being escaped as required.

Action: Escape the character with a backslash sequence. Control characters, including whitespace characters such as the horizontal tab (\t), the carriage return (\r), and the newline (\n) must be escaped. Other control characters can be escaped with Unicode \uXXXX sequences.

JZN-00249: Unquoted empty step not allowed

Cause: A zero length step appeared in a path without being enclosed in quotes. The sequence '..' implies a descendant that may not be an immediate child of the previous step.

Action: Enclose the zero-length step with backquote (`) characters.

JZN-00250: JSON Patch specification must be an array of operations

Cause: The JavaScript Object Notation (JSON) Patch specification was not an array. A JSON Patch specification must be an array, listing an ordered series of operations to be performed.

Action: Refer to the JSON Patch standard.

JZN-00251: JSON Patch operations must be objects

Cause: The JavaScript Object Notation (JSON) Patch specification array contained some non-object members. Each element of the JavaScript Object Notation (JSON) Patch specification array must be an object describing a patch operation to be performed.

Action: Refer to the JSON Patch standard.

JZN-00252: No 'op' code for patch operation

Cause: An object in a JavaScript Object Notation (JSON) Patch specification was missing an 'op' code.

Action: Refer to the JSON Patch standard.

JZN-00253: Invalid path for patch operation

Cause: The 'path' or 'from' clause in a patch operation could not be parsed.

Action: Refer to the JavaScript Object Notation (JSON) Pointer specification.

JZN-00254: Invalid 'op' code for patch operation

Cause: The 'op' code could not be interpreted.

Action: An 'op' code must be a string and must be one of the standard JavaScript Object Notation (JSON) Patch operators.

JZN-00255: Unknown key name in patch operation

Cause: The operation contained a key that is not specified by JavaScript Object Notation (JSON) Patch.

Action: Remove the invalid key.

JZN-00256: Patch operation requires a path

Cause: The target path for an operation was not specified.

Action: Ensure that all operations have a valid target path.

JZN-00257: 'path' or 'from' key must have a string value

Cause: The path specified for a 'path' or 'from' field was not a string.

Action: Ensure that all operations have a valid target path.

JZN-00258: From path not allowed for operation

Cause: The 'from' path was specified for an operation that does not allow it. 'from' is only allowed in the 'move' and 'copy' operations.

Action: Remove the 'from' path.

JZN-00259: 'value' is not allowed for operation

Cause: A 'value' was specified for an operation that does not allow it. A 'value' is not allowed in 'remove', 'move', and 'copy'.

Action: Remove the 'value' field.

JZN-00260: 'from' path is required for operation

Cause: A 'move' or 'copy' operation was missing a 'from' path.

Action: Specify a 'from' path in those operations.

JZN-00261: 'value' is required for operation

Cause: An 'add', 'replace', or 'test' operation was missing a target value.

Action: Specify a 'value' in those operations.

JZN-00262: Cyclic 'move' requested

Cause: The target 'path' specified is a child of the 'from' path.

Action: Correct the paths.

JZN-00263: Target field for patch is not an object.

Cause: During a JSON patch operation, an object modifier is being applied to a field that is not an object node.

Action: Ensure that the metadata is consistent for the patch and the target of the patch.

JZN-00264: Target field for patch is not an array.

Cause: During a JSON patch operation, an array modifier is being applied to a field that is not an array node.

Action: Ensure that the metadata is consistent for the patch and the target of the patch.

JZN-00265: Target field for patch is missing.

Cause: During a JSON patch operation, an operation is failing to match a node in the target document.

Action: None

JZN-00266: Patch comparison failed.

Cause: During a JSON patch operation, a 'test' operation is failing to compare as equal to the node in the target document.

Action: None

JZN-00270: malformed variable key step

Cause: A variable object step does not have a variable reference.

Action: Add the missing variable reference between the curly brace ({}) characters.

JZN-00271: missing curly brace in variable key step

Cause: A variable object step has mismatching curly brace ({}) characters.

Action: Add the missing closing curly brace character.

JZN-00272: empty variable key step

Cause: A variable object step has no variable references.

Action: Add a variable reference between the curly braces.

JZN-00273: too many keys in variable key step

Cause: A variable object step has too many subscripts.

Action: Use only one subscript in the variable key step.

JZN-00274: wrong number or types of arguments to function

Cause: A trailing function was passed an incorrect number of arguments, or arguments of the wrong scalar type.

Action: Correct the arguments or argument types in the expression.

JZN-00280: Invalid comparison to root path in predicate

Cause: A predicate used a disallowed comparison operator for a path beginning with root ('\$'). Root paths cannot be used with 'in' statements and cannot be used with string matching operators such as 'like', 'starts with', 'has substring', and regular expression patterns.

Action: Use a relative path expression beginning with '@', or use a simple equality or inequality comparison.

JZN-00281: unexpected arithmetic expression

Cause: An arithmetic expression was encountered where a boolean expression was expected.

Action: Surround the arithmetic expression with a comparison expression.

JZN-00282: expression is not a comparison

Cause: A path, variable, or literal expression was encountered where a boolean expression was expected.

Action: Surround the expression with a comparison expression.

JZN-00283: closing parenthesis was expected for function

Cause: A function call expression was missing a closing parenthesis.

Action: Ensure that all opening parentheses are followed by matching closing parentheses in function call expressions.

JZN-00284: expression is not a variable or literal

Cause: An 'in' or 'not in' list contained an expression that was not a literal or variable.

Action: Do not use path expressions, calculations, or boolean expressions in lists.

JZN-00285: parentheses were expected

Cause: The expression after an 'in' or 'not in' operator was not enclosed in parentheses.

Action: Enclose the expression in parentheses.

JZN-00286: invalid inequality expression

Cause: A comparison expression involving boolean arguments was not '==' or '!='.

Action: Remove the invalid inequality expression.

JZN-00287: duplicate predicate identifier

Cause: A predicate identifier was used more than once in a filter expression.

Action: Ensure that each predicate identifier is unique.

JZN-00288: unknown predicate identifier

Cause: A context item was followed by an identifier that did not match any predicate identifier in the surrounding filter expression.

Action: Ensure that the content item references a valid predicate identifier.

JZN-00289: invalid string inequality expression

Cause: A comparison expression used a string operator that required a literal or variable pattern string.

Action: Replace the pattern side of the expression with a string literal or string variable.

JZN-00290: incomplete path expression

Cause: A path expression string ended with incomplete syntax.

Action: Ensure that all operators have both a left and right hand expression, and that all open parentheses are closed.

JZN-00291: invalid type for subscript

Cause: A variable used as a subscript was not an integer or string.

Action: Use an integer valued variable for a singleton or range subscript of an array. Use a string valued variable for an object field name subscript.

JZN-00292: variable reference not allowed

Cause: A variable reference was used in a calculation expression.

Action: Remove the variable reference.

JZN-00293: function not allowed

Cause: A transformation function was used in a calculation expression.

Action: Remove the disallowed transformation function.

JZN-00294: path may not start with variable reference

Cause: A path expression started with a variable reference in an operation where a document path starting with '\$' is required.

Action: Remove the variable from the start of a selection path.

JZN-00295: invalid JSON string literal

Cause: A JavaScript Object Notation (JSON) string literal must be enclosed in double quotes.

Action: Replace the single quotes with double quotes.

JZN-00296: invalid quoted function name

Cause: A JavaScript Object Notation (JSON) string literal was found where a function name was expected.

Action: Remove the double quotes around the function name.

JZN-00297: missing exists() around predicate path

Cause: A predicate contained a path expression without a corresponding comparison operator or existence check.

Action: Enclose the path expression in an exists() operator to check for the existence of instances matching the path.

JZN-00298: type incompatibility for arithmetic

Cause: An argument to an arithmetic expression was non-numeric and could not be converted to a numeric type.

Action: Add a type casting function to the arithmetic expression.

JZN-00299: function not allowed for path-to-path comparison

Cause: An unsupported item function was used in a path-to-path comparison.

Action: None

JZN-00300: Conflicting inclusion or exclusion rules

Cause: The including rule for a parent node conflicted with the explicit rule asserted for a child node. The projection specification is invalid.

Action: Remove the child node, or change the child node to match any sibling nodes.

JZN-00301: Projection specification must be an object

Cause: A projection specification was an array or JavaScript Object

Action: Ensure that the specification root is an object node.

JZN-00302: Include or exclude rule could not be interpreted

Cause: The rule did not use 'true', 'false', 1, 0, "include", or "exclude".

Action: Correct the invalid rule.

JZN-00303: NULL or invalid path

Cause: A path was either invalid or NULL.

Action: None

JZN-00304: Keys must be numbers or strings

Cause: An argument to \$id was not a number or string.

Action: Do not use null, booleans, objects, or arrays in a \$id expression.

JZN-00305: Array of values was empty

Cause: An array of values for \$in, \$nin, \$all, or \$id did not any values. The array of values must have at least one value.

Action: Do not pass an empty array to the operators.

JZN-00306: Array must contain only scalar values

Cause: An array of values for \$in, \$nin, \$all, or \$id contained object or array members. The array of values must contain only scalar values.

Action: Do not use objects or arrays within an array of values.

JZN-00307: \$between must have two values in array

Cause: A minimum and maximum value were not specified for the \$between operator. The \$between operator must be given an array with a minimum and a maximum value.

Action: Use a null for the minimum or maximum value to indicate that the range is open on one end. The values must be scalars, and at least one of the two values must not be null.

JZN-00308: Spatial operators must be at the outermost level

Cause: The \$near, \$within, and \$intersect operators were not used at the outermost level of the Query-By-Example (QBE).

Action: None

JZN-00309: Spatial operators must specify \$geometry

Cause: The \$near, \$within, and \$intersect operators were not given a GeoJSON object as the value of the \$geometry key.

Action: None

JZN-00310: \$distance parameter is not allowed

Cause: The \$distance parameter was used with an operator other than \$near. Only the \$near operator may include values for \$distance and \$unit.

Action: None

JZN-00311: \$distance parameter must be numeric

Cause: The \$distance parameter was specified with a value that was not a JavaScript Object Notation (JSON) number.

Action: None

JZN-00312: \$unit parameter must be a string

Cause: The \$unit parameter was not a JavaScript Object Notation (JSON) string. The \$unit parameter should be a string specifying a unit of measure such as 'mile'. It may not be a number or JSON literal, nor an object or array.

Action: None

JZN-00313: Unknown key found in spatial operator

Cause: The spatial operator contained a key that did not match the expected values. All spatial operators must have a \$geometry value, and the \$near operator may have \$distance and \$unit values. Other keys are not allowed.

Action: None

JZN-00314: \$distance parameter is required

Cause: The \$near operator did not specify a value for \$distance.

Action: None

JZN-00315: Empty objects not allowed

Cause: An empty object was found in the filter specification. An empty object is meaningless and not allowed in the filter specification.

Action: None

JZN-00316: Object with at least one field object must follow modifier

Cause: A modifier operator was not followed by an object, or was followed by an object with no fields. Modifiers include \$not, datatype casts such as \$number, simple conversions such as \$upper, and structural operators such as \$type.

Action: None

JZN-00317: Target of spatial operation must be an object

Cause: A \$near, \$within, or \$intersect operator was not followed by an object containing the spatial parameters.

Action: None

JZN-00318: Invalid operator within modifier

Cause: A modifier operator (such as \$not) was used around a \$and, \$or, \$nor, \$id, or another modifier operator. Modifiers may not be used around those operators.

Action: None

JZN-00319: Value of string matching operator must be a string

Cause: The value supplied to the \$regex, \$hasSubstring, \$startsWith, or \$like operators was not a JavaScript Object Notation (JSON) string.

Action: None

JZN-00320: Value of comparison operator must be a scalar

Cause: The value supplied to an operator was not a JavaScript Object Notation (JSON) scalar value.

Action: Use only strings, numbers, or JSON literals; do not use an object or array.

JZN-00321: Value of the operator must be a string or number

Cause: The value supplied to \$eq, \$ne, or \$exists was not a JavaScript Object Notation (JSON) string or number.

Action: Use only strings or numbers; do not use an object or array, and do not use the JSON literals 'true', 'false', or 'null'.

JZN-00322: Value of set comparison operator must be an array

Cause: The value supplied to \$in, \$all, \$id, or \$between was not an array.

Action: None

JZN-00323: Elements in a conjunction array must be objects

Cause: An element of an array for \$and, \$or, or \$nor was not an object.

Action: None

JZN-00324: \$id operator must be at the outermost level

Cause: The \$id operator supplying document keys was not used at the outermost level of the Query-By-Example (QBE).

Action: None

JZN-00325: Cannot combine sub-expression with other filters

Cause: A downscoped sub-expression was used in the same scope as a normal filter condition.

Action: None

JZN-00326: Values for \$orderby conditions must be integers

Cause: An order by condition did not give an integer value. Objects, arrays, strings, and other literals are not allowed to specify ordering criteria.

Action: Use only positive and negative integer values for the ordering criteria. Use negative values for descending order and positive values for ascending order.

JZN-00327: Query specification must be an object

Cause: The query specification root was an array or scalar. A query specification must be an object.

Action: Ensure that the specification root is an object node.

JZN-00328: Order by specification must be an object or array

Cause: A \$orderby specification was not an object or array. It may not be a JavaScript Object Notation (JSON) scalar.

Action: Ensure that the specification root is an object or array node.

JZN-00329: Order by field must specify a path

Cause: A field of a \$orderby array must specify a path.

Action: Ensure that all field objects in the array specify a path.

JZN-00330: Order by array contained invalid item

Cause: The items in a \$orderby array must be sort field specification objects. The objects must contain only fields for 'path', 'datatype', 'maxLength', and 'order'.

Action: Ensure that all items in the array are valid field specification objects.

JZN-00331: \$sqlJson operator must be at the outermost level

Cause: The \$sqlJson was not used at the outermost level of the Query-By-Example (QBE).

Action: None

JZN-00332: Value of \$sqlJson operator must be an object

Cause: The value supplied to \$sqlJson was not an object.

Action: None

JZN-00333: Items in a \$sqlJson object must be field paths

Cause: The fields of a \$sqlJson operator must all be path strings.

Action: None

JZN-00334: \$id operator cannot appear more than once

Cause: The \$id operator supplying document keys was used multiple times in the Query-By-Example (QBE).

Action: Consolidate the key values into a single \$id operator.

JZN-00335: Parameter '~s' must be a boolean

Cause: The parameter value was not a JSON literal 'true' or 'false'.

Action: Use a JSON boolean value for this parameter.

JZN-00336: Parameters '~1s' and '~2s' conflict

Cause: Two parameters were used together that are either disallowed in combination, or had conflicting values specified.

Action: Remove one of the parameters or change them to have compatible values.

JZN-00337: Logical operator '~s' must have at least one target

Cause: An array of target values for the logical operator was empty.

Action: Do not use an empty array as target for the logical operator.

JZN-00338: Order by path must not have array steps

Cause: A path used in an order by path expression used an array step. Order by path expressions use lax semantics and must not have explicit array steps.

Action: Remove the array steps from the order by path expression.

JZN-00339: Invalid array element match clause

Cause: An array element matching clause for a path was specified incorrectly. The criteria must follow a path and be followed by an object. The criteria must appear by itself and may not be nested under another array element matching clause.

Action: Remove or correct the array element matching clause.

JZN-00340: QBE feature unimplemented

Cause: An attempt was made to use a query construct that is not implemented.

Action: Replace the unimplemented query construct with a supported construct.

JZN-00350: invalid transformation

Cause: The transformation specification was invalid and could not be interpreted.

Action: None

JZN-00351: did not have exactly one of '\$keep', '\$remove', or '\$modify'

Cause: A transformation block does not have a single projection or modification operation. The block has no target operation or has multiple conflicting operations.

Action: Ensure that the transformation block has exactly one of the projection or modification operations.

JZN-00352: specification of '~s' was a scalar

Cause: A scalar value was provided as the specification of an operation that requires an object or array specification.

Action: Do not use a scalar value as the operation specification.

JZN-00353: specification of '~s' was empty

Cause: An empty object or array was provided as the specification an operation that must have at least one entry.

Action: Specify at least one transformation, modification, or projection.

JZN-00354: specification of '~s' was not an object

Cause: An array or scalar was provided for an operation that requires an object.

Action: None

JZN-00355: path for operation '~s' was not a string

Cause: One or more paths for an operation was not a scalar string. Projection and selection paths cannot be objects, arrays, or other scalar types.

Action: Use a scalar string for the path.

JZN-00356: path reference expression for '~s' was not a string

Cause: The value of a path reference in an update expression was not a scalar string.

Action: None

JZN-00357: path step cannot start with a '\$'

Cause: A path step string started with an unquoted '\$' character. The leading '\$' character is reserved for update operators and modifiers.

Action: Enclose path steps that start with '\$' in quotes.

JZN-00358: argument must be a scalar

Cause: An argument to a calculation expression was not a scalar value.

Action: Do not use objects or arrays as calculation arguments.

JZN-00359: argument must be an array

Cause: The calculation was not followed by an operand array.

Action: A calculation must be followed by an array with two operands.

JZN-00360: invalid projection

Cause: The projection contained a modification operation or calculation that is only valid for updating documents.

Action: Restrict the projection to '\$keep' and '\$remove'.

JZN-00361: unknown operator '~s'

Cause: The expression could not be interpreted as an operator for a calculation, modifier, or conversion function.

Action: None

JZN-00362: match condition must be a Query By Example (QBE)

Cause: A scalar comparison was used when a full Query By Example (QBE) clause was required.

Action: A '\$match' condition should be a full QBE clause.

JZN-00363: required field '~s' missing

Cause: A required field was missing from a query, update, or aggregation specification.

Action: Specify the required field.

JZN-00364: node of type '~1s' is not allowed for '~2s'

Cause: A node of an incorrect type was found for a field in a query, update, or aggregation specification.

Action: Specify the correct type of node for the field.

JZN-00365: too many fields or elements for '~s'

Cause: A node with too many member fields or array elements was found in a query, update, or aggregation specification.

Action: Specify the correct number of members.

JZN-00366: not enough fields or elements for '~s'

Cause: A node with insufficient member fields or array elements was found in a query, update, or aggregation specification.

Action: Specify the correct number of members.

JZN-00367: no match for '~1s' referenced from list '~2s'

Cause: An unknown column alias appeared on a reference list and could not be matched to a defined column.

Action: Define a column for the alias, or remove the unmatched reference.

JZN-00368: column alias '~1s' used too many times on list '~2s'

Cause: A column alias appeared more than once on a reference list.

Action: Specify the column alias only ones on the list.

JZN-00369: column '~1s' cannot be used for operation '~2s'

Cause: An invalid column was used for a \$group or \$distinct operation. Constant columns, aggregation results, and non-scalar columns may not be used for \$group or \$distinct.

Action: Remove the column from the list of targets for the operation.

JZN-00370: value of '~s' expression must be a number

Cause: The value of an expression was expected to be a number.

Action: None

JZN-00371: scalar type mismatch for '~s'

Cause: The set of scalar values for an expression contained some values that were not of compatible types.

Action: Ensure that all the scalar values in the expression are, numbers, strings, or date/timestamp values.

JZN-00372: literal value '~1s' not allowed for '~2s'

Cause: The JSON literal value was not allowed as a value for a comparison operator.

Action: Use only numbers, strings, or date/timestamp values.

JZN-00373: operation '~1s' cannot be used on '~2s'

Cause: An operation was specified against an incompatible target expression.

Action: None

JZN-00374: value of field name for '~s' was not a string

Cause: The value of a field name reference must be a string matching a defined \$fields source column.

Action: None

JZN-00375: '~s' operator must be at the outermost level

Cause: A disallowed operator was used at a nested level in a Query-By-Example (QBE).

Action: Place the operator at the outer level of the query specification.

JZN-00376: invalid combination of '\$textContains' with ~s

Cause: The \$textContains operator could not be used with the other operator or query construct.

Action: Use \$textContains as the sole operator in the query.

JZN-00377: aggregation is missing '\$sort'

Cause: An aggregation used '\$first' or '\$last' without a '\$sort'.

Action: Specify an ordering criteria using '\$sort' to provide the context for identifying the '\$first' or '\$last' item.

JZN-00378: unknown aggregation operator '~s'

Cause: The aggregation specification contained an unknown operator.

Action: Remove the unknown operator from the specification.

JZN-00379: aggregation stage is indeterminant

Cause: A stage in an aggregation pipeline specification could not be determined from the specified fields.

Action: Aggregation pipeline stages must contain one of the following identifying fields: '\$select', '\$query', '\$orderby', '\$group', '\$distinct', '\$agg'

JZN-00380: invalid use of ~s at nested query level

Cause: A geo-spatial, full text, or key match operation was attempted within a nested query scope.

Action: Move the special-purpose query criteria to the outermost scope of the query.

JZN-00381: unclosed quotation mark

Cause: An input column value began with an opening quotation mark but had no closing quotation mark.

Action: Correct the input CSV file.

JZN-00382: unescaped quotation mark

Cause: An unquoted input column value contains a quotation mark.

Action: Correct the input CSV file.

JZN-00383: missing delimiter

Cause: A column value contained a quoted value and another quoted or unquoted value, but had no delimiter separating the values.

Action: Correct the input CSV file.

JZN-00384: unquoted spaces

Cause: A quoted column value had space characters before the opening quotation mark or after the closing quotation mark.

Action: Correct the input CSV file.

JZN-00390: path reference not allowed in value

Cause: An expression used in an unordered transformation block contained a path reference to a node within the target document.

Action: Use an array to strictly order the transformation block containing any path reference in a value expression.

JZN-00391: argument to function '~s' was not a number

Cause: An argument to a function was not a scalar constant number.

Action: Use a numeric constant for the second or third argument of the function.

JZN-00392: variable name is invalid

Cause: A variable name used disallowed characters.

Action: Correct the variable name to use only ASCII alphanumeric characters or the '_', and to start with an alphabetic character.

JZN-00393: array cannot be sorted

Cause: A request was made to sort an array within a binary JSON into an ascending or descending order.

Action: Remove the requested sort or use the in-memory JSON DOM.

JZN-00394: wrong number or types of arguments to function

Cause: A function was passed an incorrect number of arguments, or arguments of the wrong scalar type.

Action: Correct the arguments or argument types in the expression.

JZN-00400: JSON_TRANSFORM operation encountered missing field for path '~s'

Cause: A JSON_TRANSFORM operation did not find a field value where one was expected.

Action: Check the path expressions or change the ON MISSING handler.

JZN-00401: JSON_TRANSFORM operation encountered an existing field

Cause: A JSON_TRANSFORM operation encountered an existing field where none was expected.

Action: Check the path expressions or change the ON EXISTING handler.

JZN-00402: JSON_TRANSFORM operation did not match JSON array

Cause: A JSON_TRANSFORM operation that expected an array did not match an array.

Action: Check the path expression.

JZN-00403: field name existing in JSON_TRANSFORM operation

Cause: A JSON_TRANSFORM operation could not be executed because a field name already existed.

Action: Check the path expression.

JZN-00404: field name missing in JSON_TRANSFORM operation

Cause: A JSON_TRANSFORM operation could not be executed because a field name was missing.

Action: Check the path expression.

JZN-00405: JSON_TRANSFORM cannot remove root value

Cause: An attempt was made to remove the root value of the JSON data.

Action: Change the path expression to not remove the root value.

JZN-00406: JSON_TRANSFORM operation not supported

Cause: An attempt was made to use a JSON_TRANSFORM operation that was not supported.

Action: Remove the operation from the JSON_TRANSFORM statement.

JZN-00407: JSON_TRANSFORM operation cannot select multiple values

Cause: A path expression was used that selected more than one value in an operation where only one value can be modified.

Action: Modify the path expression to only select one value.

JZN-00408: JSON_TRANSFORM operation called with NULL input

Cause: A JSON_TRANSFORM operation was called with an input value that was NULL and the operation had ERROR ON NULL handling specified.

Action: Ensure that the provided value is not NULL or remove the ERROR ON NULL option.

JZN-00409: JSON_TRANSFORM cannot update root value

Cause: An attempt was made to update the root value of the JSON data.

Action: Change the path expression to not update the root value.

JZN-00410: JSON_TRANSFORM operation did not match JSON object

Cause: A JSON_TRANSFORM operation that expected an object did not match an object.

Action: Check the path expression.

JZN-00411: JSON_TRANSFORM invalid append operation

Cause: An attempt was made to append to an array that did not exist.

Action: None

JZN-00412: JSON_TRANSFORM invalid key name

Cause: An attempt was made to rename an object node using an empty key string.

Action: Provide a name string that has at least one character.

JZN-00413: JSON_TRANSFORM called with '..' path step

Cause: An attempt was made to evaluate the '..' descendant axis on the target side of a JSON_TRANSFORM operation. The descendant axis was not allowed because its

use may lead to target nodes that are not disjoint subtrees of the document being modified.

Action: Remove the '..' step from the target path.

JZN-00414: JSON_TRANSFORM operation with no target path

Cause: An attempt was made to evaluate an operation without specifying a path to the target of the operation.

Action: Specify a valid target path or variable for the operation.

JZN-00415: JSON_TRANSFORM operation with disallowed target variable

Cause: An attempt was made to perform an operation against a prohibited target variable.

Action: Avoid specifying a target variable that is actively referenced in a NESTED PATH operation.

JZN-00416: JSON_TRANSFORM cannot MOVE source

Cause: An attempt was made to perform a MOVE operation using a source value that was not a document node.

Action: Ensure that the source value is a single node in the document being transformed and not a SQL value or calculation expression.

JZN-00417: target of LET must be a dynamic variable

Cause: An attempt was made to perform a LET operation against a document node path or PASSING clause variable.

Action: Ensure that the target is a dynamic variable reference without a path.

JZN-00418: check condition failed: ~s

Cause: A CHECK operator condition evaluated to false.

Action: None

JZN-00430: parallel arrays in cross product

Cause: A cross product operation could not be performed on a JSON document because it contained parallel arrays within the same sub-object node.

Action: None

JZN-00431: conflicting keys in cross product

Cause: A cross product operation could not be performed on a JSON document because it contained conflicting values for a column in a single result.

Action: None

JZN-00435: no paths for cross product

Cause: A cross product operation was requested with no specified paths.

Action: Specify at least one path expression for the cross product operation.

JZN-00436: array step in cross product

Cause: A cross product operation contained a path with an array step.

Action: Remove array steps from path expressions specified for the cross product operation.

JZN-00437: invalid path step for cross product

Cause: A cross product operation contained a path with disallowed step constructs.

Action: Remove variable steps, wildcard steps, and descendant steps from all path expressions specified for the cross product operation.

JZN-00438: duplicate path in cross product

Cause: A cross product operation contained the same path more than once.

Action: Remove redundant path expressions from the cross product operation.

JZN-00439: too many steps in cross product

Cause: The input paths to a cross product operation contained more than the maximum number of steps allowed by the path engine.

Action: None

JZN-00450: not found

Cause: Evaluation returned no value. This is an advisory status and not a hard error.

Action: None

JZN-00451: JSON calculation references a missing field

Cause: A path expression in a calculation could not be evaluated to a node in the instance document.

Action: None

JZN-00452: JSON calculation reference matches too many values

Cause: A path expression in a calculation matched more than one node in the instance document.

Action: n/a

JZN-00453: JSON calculation reference is not a number

Cause: A path expression in a calculation matched a node in the instance document that was an object, array, or a non-numeric scalar.

Action: None

JZN-00454: JSON calculation reference is not a string

Cause: A path expression in a calculation matched a node in the instance document that was an object, array, or a non-numeric scalar.

Action: None

JZN-00455: JSON calculation literal is of the wrong type

Cause: A calculation literal value was not of a suitable type for the calculation operator.

Action: Ensure that only numeric literals are used with arithmetic calculations, and string literals are used with concatenations.

JZN-00456: JSON calculation failed

Cause: A calculation failed or could not be performed. A value of an incorrect scalar value was referenced or produced.

Action: Avoid dividing by zero or doing computations involving Nan or infinity values as operands. Avoid bitwise operations on non-integral values.

JZN-00457: JSON calculation type conversion failed

Cause: A calculation attempted a type conversion that failed or could not be performed.

Action: Avoid converting strings of an incorrect format to numbers, dates, or binaries. Avoid converting out-of-range values to numbers or dates. Avoid converting large binary values to hexadecimal strings.

JZN-00458: numeric calculation attempted on non-numeric value

Cause: A numeric calculation could not be performed because the operand was not a number and could not be converted to a number.

Action: None

JZN-00459: computation attempted on value of wrong type

Cause: A computation could not be performed because the operand was of the incorrect type and conversion is not allowed.

Action: Avoid performing string operations on non-string operands.

JZN-00460: variable is uninitialized

Cause: A read was attempted on a JSON variable that had not been assigned a value.

Action: Ensure that all variables are initialized before using them in path expressions.

JZN-00461: function argument is not a document node

Cause: A document operation was attempted on a value that was not a document node.

Action: Ensure that scalar values are not supplied as arguments to functions that perform document operations.

JZN-00462: variable path root is not a document node

Cause: A JSON variable was used as the root of a path expression but contained a scalar value instead of a document node.

Action: Ensure that variable-based path expressions use only document node values for the variable value.

JZN-00463: unrecognized date/time format element

Cause: The date/time format string contained an invalid or unrecognized element.

Action: Ensure that the date format string is valid.

JZN-00464: date/time format not matched

Cause: The input string did not match the date format string and could not be converted to a date or timestamp.

Action: Ensure that the date format string is valid and contains elements for year, month, and day.

JZN-00465: variable is undefined

Cause: A read or write was attempted on an unknown or unmatched variable.

Action: None - this is an internal error.

JZN-00466: invalid function argument value

Cause: An argument to a function had an invalid or out of range type.

Action: Ensure that arguments that must be positive numeric values are not negative, and are not strings or other datatypes.

JZN-00467: invalid path argument

Cause: An argument to a function was not a path as required by the function.

Action: Ensure that the argument is a path and not a scalar value, and that the path does not have a disallowed item function or contain a disallowed step construct.

JZN-00468: invalid date/time object

Cause: An argument to a function was not a valid date/time object structure.

Action: Ensure that structures carrying a date contain at least the year, month, and day, or day-of-year. Ensure that structures carrying a date/time difference do not have conflicting signs on the component fields and do not mix year/month differences with day/time differences.

JZN-00469: JSON calculation reference is not a date/time

Cause: A path expression in a calculation matched a node in the instance document that was an object, array, or scalar value that was not a date or timestamp.

Action: None

JZN-00470: JSON calculation reference is not a scalar

Cause: A path expression in a calculation matched a node in the instance document that was an object or array, when a scalar value was expected.

Action: None

JZN-00471: input argument to function '-s' is not a valid type

Cause: A function in a calculation was passed a value of an unsupported type.

Action: Ensure that the argument value is a scalar of a type acceptable to the function.

JZN-00472: argument ~d to function '-s' is not a string

Cause: A function in a calculation was passed an invalid value.

Action: Ensure that the argument value is a string.

JZN-00473: argument ~d to function '-s' is not a number

Cause: A function in a calculation was passed an invalid value.

Action: Ensure that the argument value is a number.

JZN-00474: argument ~d to function '-s' is not a date/time

Cause: A function in a calculation was passed an invalid value.

Action: Ensure that the argument value is a date or timestamp.

JZN-00475: argument ~d to function '-s' has invalid value

Cause: A function in a calculation was passed a value that is out of range or not allowed.

Action: Ensure that the argument value is one of the allowed values or is in the proper range.

JZN-00476: input to function '~s' is not an object

Cause: A calculation function was passed an input that was not the expected type of JSON object.

Action: Ensure that the function argument is a JSON object.

JZN-00477: input to function '~s' is not an array

Cause: A calculation function was passed an input that was not the expected type of JSON array.

Action: Ensure that the function argument is a JSON array.

JZN-00478: field value not a number

Cause: The value for a field was not a number as expected.

Action: Ensure that all input fields have the correct value types.

JZN-00479: field value not a string

Cause: The value for a field was not a string as expected.

Action: Ensure that all input fields have the correct value types.

JZN-00480: invalid field value

Cause: The value for a field was out of range, not allowed, or not found.

Action: Ensure that all input fields are defined and have allowed values.

JZN-00481: argument ~d to function '~s' is not an integer

Cause: A function in a calculation was passed an invalid value.

Action: Ensure that the argument value is an integer.

JZN-00482: JSON calculation references a missing or null value

Cause: An expression in a calculation could not be evaluated to a node in the instance document, or evaluated to null.

Action: Ensure that functions and expressions that require a value do not reference missing or null values.

JZN-00497: invalid key binding

Cause: A variable object key had an invalid value.

Action: Ensure that the variable value is a string.

JZN-00498: invalid subscript value

Cause: A variable array subscript had an invalid or out of range value.

Action: Ensure that the variable value is a value 32-bit signed integer.

JZN-00499: ('~1s' at step ~2s)

Cause: This is the location of the error within the transformation.

Action: None

JZN-00500: invalid JSON schema document

Cause: An invalid JavaScript Object Notation (JSON) schema document was used.

Action: Correct the JSON schema document.

JZN-00501: JSON schema validation failed

Cause: The input JSON document instance failed schema validation.

Action: Correct the JavaScript Object Notation (JSON) document.

JZN-00502: JSON boolean schema was false

Cause: The input JavaScript Object Notation (JSON) boolean schema was false.

Action: None

JZN-00503: invalid type found, actual: ~1s, expected: ~2s

Cause: The type of the element was not valid.

Action: Use a valid type as specified in the schema.

JZN-00504: invalid type found, actual: ~1s, expected one of: ~2s

Cause: The type of the element was not valid.

Action: Use a valid type as specified in the schema.

JZN-00505: element was not equal to any of the enumerated values

Cause: The element was not equal to any of the enumerated values.

Action: Use one of the allowed values from the enumerated array in the schema.

JZN-00506: element was not equal to specified constant value

Cause: The element was not equal to the specified constant value in the schema.

Action: Use the constant value specified in the schema.

JZN-00507: value less than minimum value, actual: ~1s, expected: ~2s

Cause: The specified value was neither greater than nor equal to the expected minimum value specified in the schema.

Action: Specify a value that is greater than or equal to the specified minimum value in the schema.

JZN-00508: value greater than maximum value, actual: ~1s, expected: ~2s

Cause: The specified value was neither greater than nor equal to the expected maximum value specified in the schema.

Action: "Specify a value that is greater than or equal to the specified maximum value in the schema.

JZN-00509: value not greater than minimum value, actual: ~1s, expected: ~2s

Cause: The specified value was not greater than the expected minimum value specified in the schema.

Action: Specify a value that is greater than the specified minimum value in the schema.

JZN-00510: value not less than maximum value, actual: ~1s, expected: ~2s

Cause: The specified value was not less than the specified maximum value in the schema.

Action: Specify a value that is less than the specified maximum value in the schema.

JZN-00511: value ~1s not a multiple of ~2s

Cause: The specified value was not a multiple of the specified value in the schema.

Action: Specify a value that is a multiple of the specified value in the schema.

JZN-00512: string length shorter, actual: ~1s, expected: ~2s

Cause: The specified string value was shorter than expected.

Action: Specify a longer string value.

JZN-00513: string length longer, actual: ~1s, expected: ~2s

Cause: The specified string value was longer than expected.

Action: Specify a shorter string value.

JZN-00514: invalid properties: ~s

Cause: The specified properties in the document object were not valid.

Action: Ensure that the specified properties in the document object are valid.

JZN-00515: required properties not found: ~s

Cause: The required properties in the document object were not found.

Action: Ensure that the required properties in the document object are present.

JZN-00516: fewer than required properties found: actual: ~1s, expected ~2s

Cause: Fewer than the required properties were found in the document object.

Action: Ensure that there are a minimum number of properties in the document object.

JZN-00517: more than required properties found: actual: ~1s, expected ~2s

Cause: More than the required properties were found in the document object.

Action: Do not exceed the maximum number of properties in the document object.

JZN-00518: invalid additional properties: ~s

Cause: The additional properties in the document object were not valid.

Action: Ensure that the additional properties in the document object are valid.

JZN-00519: invalid items at index: ~s

Cause: Items in the document array were not valid.

Action: Ensure that the items in the document array are valid.

JZN-00520: duplicate items at index: ~1u, ~2u

Cause: Items in the document array were not unique.

Action: Ensure that the items in the document array are unique.

JZN-00521: valid item not found

Cause: Items in the document array were all invalid.

Action: Ensure that at least one of the items in the document array is valid.

JZN-00522: fewer than required items found: actual: ~1s, expected ~2s

Cause: Fewer than the required number of items were found in the document array.

Action: Ensure that the minimum number of items are in the document array.

JZN-00523: more than required items found: actual: ~1s, expected ~2s

Cause: More than the required items were found in the document array.

Action: Do not exceed the maximum number of items in the document array.

JZN-00524: invalid additional items at index: ~s

Cause: The additional items in the document array were not valid.

Action: Ensure that the additional items in the document array are valid.

JZN-00525: element was valid

Cause: The element succeeded the schema validation.

Action: Correct the JavaScript Object Notation (JSON) document.

JZN-00526: element was not valid against any of the schemas

Cause: The element failed validation against all of the schemas.

Action: Ensure that the element is valid against at least one of the schemas.

JZN-00527: element was not valid against schema at index: ~s

Cause: The element failed validation against some of the schemas.

Action: Ensure that the element is valid against all of the schemas.

JZN-00528: element was valid against more than one schema at index: ~s

Cause: The element was valid against more than one schema.

Action: Ensure that the element is valid against only one of the schemas.

JZN-00529: invalid property names: ~s

Cause: The property names in the document object were not valid against the schema.

Action: Ensure that the property names are valid.

JZN-00530: fewer than required items valid: actual: ~1s, expected ~2s

Cause: Fewer than the required number of items were valid.

Action: Ensure that the minimum number of valid items are in the document array.

JZN-00531: more than required items valid: actual: ~1s, expected ~2s

Cause: More than the required number of items were valid.

Action: Ensure that the maximum number of valid items are in the document array.

JZN-00532: invalid unevaluated properties: ~s

Cause: Unevaluated properties in the document object were not valid.

Action: Ensure that unevaluated properties in the document object are valid.

JZN-00533: invalid unevaluated items at index: ~s

Cause: Unevaluated items in the document array were not valid.

Action: Ensure that unevaluated items in the document array are valid.

JZN-00534: required properties for dependents not found: ~s

Cause: The required properties for dependents in the document object were not found.

Action: Ensure that the required properties for the dependents in the document object are present.

JZN-00535: schema validation for dependent properties failed: ~s

Cause: The schema validation for dependent properties in the document object failed.

Action: Ensure that the schemas for the dependent properties in the document object are valid per schema specification.

JZN-00536: conditional schema validation for the 'then' condition failed

Cause: The schema validation for the "then" condition failed.

Action: Ensure that the validation succeeds for the then conditions.

JZN-00537: conditional schema validation of both 'if' and 'else' failed

Cause: The schema validation for both "if" and "else" conditions failed.

Action: Ensure that the validation succeeds for one of the two conditions.

JZN-00538: value did not match the expected pattern

Cause: The string value did not match the specified pattern.

Action: Ensure that the string value matches the specified pattern.

JZN-00539: invalid '~s' format value

Cause: The specified string value was not in an expected format.

Action: Ensure that the string value is in expected format.

JZN-00600: the object view is invalid: ~s

Cause: The object view specification is invalid.

Action: Correct the problem with the specification.

JZN-00601: unknown table number '~d'

Cause: The table specified does not exist or is invalid.

Action: Ensure that a valid table number is specified.

JZN-00602: invalid empty column list for '~s'

Cause: The specified list of columns is empty.

Action: Ensure that the list has at least one column.

JZN-00603: more than '~d' columns in list for '~s'

Cause: The number of columns in a list exceeded the maximum allowed.

Action: Ensure that the list is of a suitable size.

JZN-00604: '~s' does not have '~d' columns in list

Cause: The number of columns in a list did not match a covariant list.

Action: Ensure that the lists is of identical size.

JZN-00605: column position '~d' invalid for list of size '~d'

Cause: The column specified did not exist or was invalid.

Action: Ensure that the column positions are in bounds.

JZN-00606: unable to find column '~s' for table '~s'

Cause: The column name did not match any column of the specified table.

Action: Ensure that a valid column name is used.

JZN-00607: nested links must have a key name

Cause: A nested link must have a key name specified for the JSON array.

Action: Specify a JSON key name for the nested table array.

JZN-00608: property '~s' already specified

Cause: The property was already specified for the target object.

Action: Remove the redundant property setting.

JZN-00609: property '~s' has invalid value '~s'

Cause: The value of a property was out of range or invalid.

Action: Correct the property setting.

JZN-00610: property '~s' has invalid value '~d'

Cause: The value of a property was out of range or invalid.

Action: Correct the property setting.

JZN-00611: field '~s' is not specified

Cause: The required field was not specified.

Action: Ensure that the required field has a value.

JZN-00612: unnesting link specification is invalid

Cause: The link for an unnesting operation had an invalid specification.

Action: Ensure that the unnesting link has a key name, has no join columns, and has the target table number equivalent to the referring table number.

JZN-00613: field '~s' is not an array

Cause: The field was specified using an incorrect node type.

Action: Ensure that the field is an array.

JZN-00614: field '~s' is not an object

Cause: The field was specified using an incorrect node type.

Action: Ensure that the field is an object.

JZN-00615: field '~s' is not a scalar

Cause: The field was specified using an incorrect node type.

Action: Ensure that the field is an scalar.

JZN-00616: field '~s' is not a string

Cause: The field was specified using an incorrect data type.

Action: Ensure that the field is a string.

JZN-00617: field '~s' is not a number

Cause: The field was specified using an incorrect data type.

Action: Ensure that the field is numeric.

JZN-00618: field '~s' is not a boolean

Cause: The field was specified using an incorrect data type.

Action: Ensure that the field is a either 'true' or 'false'.

JZN-00620: element of '~s' is not an object

Cause: The array element was specified using an incorrect node type.

Action: Ensure that the element is an object.

JZN-00621: element of '~s' is not a scalar

Cause: The array element was specified using an incorrect node type.

Action: Ensure that the element is an scalar.

JZN-00622: element of '~s' is not a string

Cause: The array element was specified using an incorrect data type.

Action: Ensure that the element is a string.

JZN-00623: too many links to target table

Cause: A table was specified as the target of more than one link.

Action: Ensure that each table is the target of at most one link.

JZN-00624: target of link is the root table

Cause: A link specified the root table as the target table.

Action: Ensure that the root table (0) of the JSON-relational duality view is not specified as the target of a linking relationship.

JZN-00625: column is used in multiple structures

Cause: A column was used in more than one structure definition.

Action: Ensure that each column is nested under at most one structure.

JZN-00626: invalid empty JSON object specification

Cause: The specified list of fields for a JSON object was empty.

Action: Ensure that the object has at least one scalar field or nested link field.

JZN-00627: conflicting usages of table '~1s' in schema '~2s'

Cause: A table was used inconsistently in a JSON-relational duality view.

Action: Ensure that all usage of the table within the JSON-relational duality view have identical column lists and identical writing properties unless they are read-only.

JZN-00628: column mapped to array with key name

Cause: A column with a key name was mapped to an array. Key names must be contained with object mappings.

Action: Ensure that the column is mapped to an object, or is not assigned a key name.

JZN-00629: invalid or unknown domain

Cause: A domain was referenced that was unspecified or specified incorrectly.

Action: Ensure that the domain is specified with a schema name and a domain name.

JZN-00630: conflicting ETAGs for table '~1s' in schema '~2s'

Cause: A table was used inconsistently in a JSON-relational duality view.

Action: Ensure that all usage of the table within the JSON-relational duality view use the same entity tag (ETAG) unless they are read-only.

JZN-00631: conflicting primary keys for table '~1s' in schema '~2s'

Cause: A table was used inconsistently in a JSON-relational duality view.

Action: Ensure that all usage of the table within the JSON-relational duality view use the same primary key.

JZN-00632: field '~s' is already used for the target container

Cause: The field name was already specified for the target object.

Action: Change one of the conflicting names to a unique name.

JZN-00633: column '~1s' of table '~2s' schema '~3s' is already used

Cause: The column is already selected for the table and cannot be selected more than once.

Action: Remove one of the redundant usages of the column.

JZN-00634: column '~1s' of table '~2s' has conflicting write properties

Cause: The column is used with both 'update' and 'noupdate' specified in different instances of the table.

Action: Ensure that all usages of the column have matching write properties.

JZN-00635: column '~s' is already mapped to the output

Cause: The column is already mapped to a field in the JSON output.

Action: Ensure that each column is mapped at most once to the JSON output.

JZN-00636: table '~s' cannot be flexible and unnested

Cause: The table has a flexible column and is linked unnested to a parent table.

Action: Ensure that flexible columns are used only with tables that are explicitly nested under parent tables.

JZN-00637: table '~s' has too many flexible columns

Cause: The table has more than one flexible column defined.

Action: Ensure that at most one flexible column is defined for each table.

JZN-00638: flexible column '~1s' of table '~2s' is not JSON

Cause: The column is not of the correct data type for flexible storage.

Action: Ensure that flexible columns use the JSON data type.

JZN-00639: flexible column '~s' cannot be mapped to the output

Cause: The column is marked as flexible and cannot be directly mapped to a field in the JSON output.

Action: Ensure that flexible columns are not mapped to the JSON output.

JZN-00640: table names do not match

Cause: A pair of JSON-relational duality view definitions failed to match because they reference different tables at the same location.

Action: Ensure that the schema and table names are identical for each matching component of a JSON-relational duality view.

JZN-00641: table properties do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the tables have different properties at the same location.

Action: Ensure that the tables have the same primary keys, the same eTag columns, and, if specified, the same order by and unique key columns. Ensure that read/write properties are identical.

JZN-00642: table columns do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the tables have different sets of columns at the same location.

Action: Ensure that the sets of columns included are identical.

JZN-00643: table descendants do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the tables have different child table references.

Action: Ensure that the link relationships and any sub-structures are identical.

JZN-00644: columns do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the columns have different data types or other properties.

Action: Ensure that the columns used for the same table reference are identical.

JZN-00645: column lists do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the columns listed for a primary key, eTag, order by, unique key, or linking relationship were not identical.

Action: Ensure that the column lists for the same table reference are identical.

JZN-00646: key names do not match

Cause: A pair of JSON-relational duality view definitions failed to match because the key names used for columns or descendants were not identical.

Action: Ensure that all key names used to map columns and descendant links are identical for a given usage.

JZN-00647: mapped value must have a key name

Cause: A column or calculation did not have a key name to map it as a field in a JSON object.

Action: Specify a JSON key name for the column or calculation.

JZN-00650: element of array '~s' is not an object

Cause: An element of the business object required to be an object was an array or scalar.

Action: Ensure that all elements of nested arrays are JSON objects.

JZN-00651: field '~s' is unknown or undefined

Cause: A field was read that was not defined in the JSON-relational duality view specification.

Action: Remove the field or change the specification to define the field or to permit unknown fields to be discarded.

JZN-00652: field '~s' is not an object

Cause: A field required to be a nested sub-object was found to be a scalar or array.

Action: Correct the invalid field.

JZN-00653: field '~s' is not an array

Cause: A field required to be a nested array of objects was found to be a scalar or object.

Action: Correct the invalid field.

JZN-00654: field '~s' is not a scalar

Cause: A field mapped to a column was found to be an object or array. Fields mapped to a column must be JSON scalars.

Action: Correct the invalid field.

JZN-00655: field '~s' is not the correct data type

Cause: A field mapped to a column was found to be a scalar of an invalid or unconvertible type.

Action: Correct the invalid field.

JZN-00656: field '~s' not found

Cause: A field defined in the JSON-relational duality view specification was not found, leaving a required column undefined.

Action: Specify the required field.

JZN-00657: field '~s' is too large

Cause: A field mapped to a string or binary column is too large for the column.

Action: Ensure that the field value is within the maximum length for the column.

JZN-00658: object has duplicate key for table '~1s' schema '~2s'

Cause: An object element had a primary key that is identical to another object element in the same context but did not have matching values for all other fields.

Action: Ensure that each row in an array has a unique primary key. Ensure that referenced rows have matching values for all fields.

JZN-00659: table column has no match

Cause: A duplicate table definition had a column that could not be matched to a column of the original table definition.

Action: Ensure that the columns of all duplicate table definitions proper subsets of the columns of the original table definition.

JZN-00660: row has conflicting writable state for table '~1s' schema '~2s'

Cause: A duplicate table row has a writable state that conflicts with the writable state of the original table row.

Action: Ensure that all instances of the same table row have compatible operations and that there are no conflicting modified values for any columns in the row.

JZN-00661: link rows have conflicting column values

Cause: A row had a value for a link column that did not match the corresponding column in the linked row.

Action: Ensure that columns involved in a linking relationship have identical values in both the source and target rows.

JZN-00662: business object contains no root row

Cause: A business object row set did not have a root row.

Action: Ensure that the business object exists and is a JSON object.

JZN-00663: array element of field '~s' is not a scalar

Cause: An array element mapped to a column was found to be an object or array. Elements mapped to a column must be JSON scalars.

Action: Correct the invalid element.

JZN-00664: array '~s' contains elements that do not have column mappings

Cause: An array contained more elements than the available column mappings.

Action: Remove the excess elements from the array.

JZN-00665: row not present in all nested contexts

Cause: A row was missing from a parent row where the linking columns had matching values.

Action: Ensure that the row is present in all nested contexts where is it linked.

JZN-00671: value of field '~s' can not be converted to a number

Cause: A field mapped to a numeric column was a string that could not be converted to a number.

Action: Correct the invalid field.

JZN-00672: value of field '~s' can not be converted to a date/time

Cause: A field mapped to a date or timestamp column was a string that could not be interpreted as an ISO date/time value.

Action: Correct the invalid field.

JZN-00673: value of field '~s' can not be converted to a duration

Cause: A field mapped to a duration column was a string that could not be interpreted as an ISO duration value.

Action: Correct the invalid field.

JZN-00674: value of field '~s' was not a valid hexadecimal string

Cause: A field mapped to a binary column was a string that could not be interpreted as hexadecimal.

Action: Correct the invalid field.

JZN-00675: value of field '~s' was not a valid binary string

Cause: A field mapped to a binary column was a string that could not be interpreted as hexadecimal or base-64.

Action: Correct the invalid field.

JZN-00676: value of field '~s' was not a possible binary string format

Cause: A field mapped to a binary column was a string that did not contain a complete hexadecimal or base-64 representation of a binary value.

Action: Ensure that the field contains 2 hexadecimal characters per binary byte, or a multiple of 4 characters for base-64.

JZN-00677: reference to deleted row for table '~1s' schema '~2s'

Cause: A row that was removed and marked for deletion is still referenced by another instance of the table.

Action: Ensure that all instances of the same table row are removed for any removal that implies a deletion, or avoid removing a row that is referenced, changed, or added in another instance of the table.

JZN-00678: row has conflicting columns for table '~1s' schema '~2s'

Cause: A table row exists multiple times but with conflicting column values.

Action: Ensure that all instances of the same table row have matching column values.

JZN-00679: flexible column '~s' cannot be nested in a sub-structure

Cause: The column is marked as flexible and cannot be mapped to a field the JSON output.

Action: Ensure that flexible columns are not mapped to the JSON output.

JZN-00680: field '~s' cannot be changed or removed

Cause: The field is not marked computed or hidden.

Action: Ensure that directive code only modifies fields that are virtual or removable.

JZN-00681: flexfield for table '~1s' schema '~2s' is not an object

Cause: A row from the table contains an invalid flexfield value.

Action: Correct the row and ensure that any flexfield value is an object, not an array or scalar.

JZN-00682: flexfield value for '~s' will overwrite column value

Cause: A row from the table contains a flexfield with a key name that conflicts with a key name used for a column value.

Action: Remove the conflicting key and value from the flexfield.

JZN-00701: duplicate key in array

Cause: During a JSON difference operation, a keyed array has multiple elements with identical keys.

Action: Correct the array to ensure every element object has a unique key.

JZN-00702: Key field is missing or invalid.

Cause: During a JSON difference operation, a keyed object has a key field that is missing or has a non-scalar value.

Action: Add or correct the key field.

JZN-00703: Array element is not an object.

Cause: During a JSON difference operation, a keyed array has an element that is not a JSON object.

Action: Ensure that all elements of a keyed array are JSON objects.

JZN-00704: Path expression too long for JSON Patch.

Cause: During a JSON difference operation, the length of a path expression is too long for JSON Patch.

Action: None

JZN-00720: cannot apply difference to the target document

Cause: The target document does not match the difference specification because a node in the target document is not of the correct type or cannot be matched with the specification.

Action: Ensure that the difference is applied to the correct version of the target document.

JZN-00721: Object field '~s' cannot be not matched in target object.

Cause: During an attempt to apply a JSON difference, an object field cannot be matched to an element of the target object.

Action: None

JZN-00722: Array operation in field '~s' does not match target array.

Cause: During an attempt to apply a JSON difference an array operation cannot be matched to an element of the target array.

Action: None

JZN-00723: Array position in field '~s' is out of bounds.

Cause: During an attempt to apply a JSON difference, an array operation is specifying a position outside the bounds of the target array.

Action: None

JZN-00724: Object field '~s' already exists.

Cause: A JSON difference attempted to create a field that already exists in the target document.

Action: Use the \$replace operator instead of the \$set operator to change the field value.

JZN-00730: invalid difference specification

Cause: The JSON difference specification is invalid.

Action: Correct the specification.

JZN-00731: Array '~s' difference mixes positional and keyed operations.

Cause: An array difference contains a combination of keyed and positional operations in a single array context.

Action: Correct the difference specification to use keyed or positional matching consistently within every array context.

JZN-00732: invalid use of difference operator '~s'

Cause: The JSON difference specification contains an operator that is invalid in the context.

Action: Correct the specification to avoid using array-specific operators in object contexts and object-specific operators in array contexts.

JZN-00733: invalid value for difference operator '~s'

Cause: The JSON difference specification contains an invalid scalar value for an operator.

Action: Operators that accept a scalar value must use a JSON literal true, false, or null.

KBHS-00100 to KBHS-07508

KBHS-00100: Parameter *string* value *string* is not a multiple of BLKSIZE *string* specified in SBT parms

Cause: CHUNK_SIZE specified in configuration was not a multiple of BLKSIZE.

Action: Change BLKSIZE or CHUNK_SIZE configuration and retry the command.

KBHS-00101: file *string* already exists; use FORMAT '*number_%U*' option for unique name

Cause: An attempt was made to create a file with a name that is already used.

Action: Use %d_%U in the FORMAT option of the BACKUP command and retry the command.

KBHS-00103: Version *string* of *string* is not licensed

Cause: The indicated version of the library was not licensed.

Action: Contact Oracle Support Services for assistance.

KBHS-00104: License of *string* version *string* expired on *string*

Cause: The indicated version of the library has expired.

Action: Renew your license. Contact Oracle Support Services for assistance.

KBHS-00200: Product *string* is not licensed

Cause: The system backup tape (SBT) library was not licensed.

Action: Contact Oracle Support Services for assistance.

KBHS-00201: The license of *string* expired on *string*

Cause: The system backup tape (SBT) library license has expired.

Action: Renew your license. Contact Oracle Support Services for assistance.

KBHS-00202: cannot create log bucket *string*; retry after library registration

Cause: An attempt was made to re-create the log bucket specified in the license file. This attempt failed.

Action: Retry the command after library registration.

KBHS-00203: maximum number of session licenses (*string*) exceeded

Cause: All licenses were in use.

Action: Increase the value of the LICENSE_MAX_SESSIONS parameter.

KBHS-00204: data bucket *string* location conflicts with log bucket *string* location

Cause: Log and Data buckets were in different geographic location.

Action: Delete the bucket that is in conflict and retry the command.

KBHS-00205: location of bucket *string* is *string*, which conflicts with location *string* specified

Cause: Log or Data bucket were in different geographic location specified.

Action: Re-run installer with location and reRegister option to change geographic location and retry the command.

KBHS-00206: file *string* already exists; use AS option to rename the piece

Cause: An attempt was made to create a file with a name that is already used.

Action: Use AS *backuppiece name'* option to rename the backup piece and retry the command.

KBHS-00207: parameter *string* value *string* conflicts with bucket/container *string* property *string*

Cause: Bucket/Container with different property specified.

Action: Check the specified parameter in the configuration file.

KBHS-00208: server side encryption container *string* is not supported

Cause: Container specified has server side encryption enabled. This is not supported.

Action: Disable server side encryption or retry the command with different container name.

KBHS-00209: lifecycle tiering policy for container *string* must exclude XML objects

Cause: The specified tiering-enabled container would archive XML objects. This is not supported.

Action: Exclude XML objects in the container LTP.

KBHS-00400: NETTEST BACKUP: *number* bytes sent in *number* microseconds

Cause: Displays NETTEST BACKUP result.

Action: This is an undocumented output for internal usage only. No action required.

KBHS-00401: NETTEST RESTORE: *number* bytes received in *number* microseconds

Cause: Displays NETTEST RESTORE result.

Action: This is an undocumented output for internal usage only. No action required.

KBHS-00402: NETTEST successfully completed

Cause: NETTEST command returns successfully.

Action: This is an undocumented output for internal usage only. No action required.

KBHS-00600: internal error, arguments [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An internal error in Oracle HTTP SBT occurred.

Action: Contact Oracle Customer Support.

KBHS-00601: fatal error in Oracle HTTP SBT

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error. See SBTIO.LOG file for more information.

KBHS-00700: HTTP response error '*string*'

Cause: An HTTP operation returned an error.

Action: See accompanying error messages for more information.

KBHS-00701: no host name or port number or hostname too long

Cause: Hostname absent or too long, port number absent or invalid.

Action: Ensure the hostname is correct and the port number is valid.

KBHS-00702: connect failed because host *string* is unreachable

Cause: The address specified was unreachable or not valid, or the service at the address was unavailable.

Action: Verify that HOST and PROXY parameters are valid.

KBHS-00703: unable to connect to HTTP server *string*; received ORA-*string*

Cause: Connect to HTTP server failed or timed out.

Action: Verify HOST and PROXY parameter values. See ORA error description for more information.

KBHS-00704: unable to do register connection; received ORA-*string*

Cause: Registering the connection failed.

Action: See ORA error description for more information.

KBHS-00705: connection closed or lost contact; received ORA-*string*

Cause: HTTP server has disconnected.

Action: See ORA error description for more information.

KBHS-00706: unable to wait for notification; received ORA-*string*

Cause: Wait for event notification on registered connection failed.

Action: See ORA error description for more information.

KBHS-00707: HTTP response timed out; waited *string* seconds

Cause: The HTTP server did not respond within the specified timeout.

Action: This is usually a HTTP server issue. Contact HTTP server administrator or increase the timeout value.

KBHS-00708: unable to receive data from HTTP server; error ORA-*string*

Cause: Receive from HTTP server failed.

Action: See ORA error description for more information.

KBHS-00709: unable to send data to HTTP server; error ORA-*string*

Cause: HTTP send operation to server failed.

Action: See ORA error description for more information.

KBHS-00710: unable to flush data from buffer; error ORA-string

Cause: Flushing data from local buffer to HTTP server failed.

Action: See ORA error description for more information.

KBHS-00711: unable to close HTTP session; error ORA-string

Cause: HTTP close session operation failed.

Action: See ORA error description for more information.

KBHS-00712: ORA-string received from local HTTP service

Cause: An error occurred during HTTP processing.

Action: See accompanying error messages for more information.

KBHS-00713: HTTP client error 'string'

Cause: The HTTP response indicated an HTTP client error.

Action: Fix the HTTP client error and retry the HTTP request.

KBHS-00714: HTTP server error 'string'

Cause: The HTTP response indicated an HTTP server error.

Action: Fix the HTTP server error and retry the HTTP request. Contact the administrator of the HTTP server when necessary.

KBHS-00715: HTTP error occurred 'string'

Cause: The specified HTTP protocol error happened.

Action: See accompanying error messages for more information.

KBHS-00717: file name string contains an illegal character string

Cause: The specified file name contained a character that was not allowed within an SBT backup file name.

Action: Use a file name that does not contain the specified illegal character and retry the command.

KBHS-00718: operation failed, retry possible

Cause: A HTTP HEAD, DELETE, PUT or GET operation failed with an error. The operation may be retried.

Action: This message is used by SBT HTTP API to decide whether or not to retry the operation.

KBHS-00719: Error 'string'; string

Cause: Description of error returned by HTTP operation.

Action: See accompanying error messages for more information.

KBHS-00720: bucket cannot be accessed using end-point for request string

Cause: The end-point specified in the HOST parameter was not the home location for the bucket in the URL.

Action: Change HOST to the home location of the bucket.

KBHS-00721: resource busy, retry possible

Cause: An HTTP HEAD, DELETE, PUT or GET operation failed because the resource was busy. The operation may be retried.

Action: This message is used by SBT HTTP API to decide whether or not to retry the operation.

KBHS-00722: missing or invalid EC2 instance metadata for IAM role *string*

Cause: The metadata corresponding to the specified IAM role does not exist or the temporary security credentials are invalid.

Action: Verify IAM role name.

KBHS-00723: missing header *string* in HTTP response

Cause: The expected header is not available in the HTTP response.

Action: Check if the submitted HTTP request is appropriate.

KBHS-00724: invalid value *string* for header *string*

Cause: header value is invalid

Action: Check if the submitted HTTP request is appropriate.

KBHS-00900: virtual file initialization failed

Cause: Unable to initialize virtual file.

Action: Contact Oracle Customer Support.

KBHS-01000: value of parameter *string* must be a number; specified *string*

Cause: The value given for the specified parameter was not numeric.

Action: Change the value of the parameter to numeric and retry the command.

KBHS-01001: value of parameter *string* must be TRUE or FALSE; specified *string*

Cause: The value given for the specified parameter was not TRUE or FALSE.

Action: Change the parameter to TRUE or FALSE and retry the command.

KBHS-01002: unable to open *string* parameter file *string*

Cause: Encountered an error while trying to open the parameter file.

Action: Ensure that the specified file exists and has read permission.

KBHS-01003: *string*

Cause: An error occurred when parsing a parameter.

Action: See accompanying error messages indicating the cause of error.

KBHS-01004: LRM-*string* occurred when parsing a parameter

Cause: An error occurred when parsing a parameter.

Action: See accompanying error messages indicating the cause of error.

KBHS-01005: syntax error was encountered while parsing *string* parameter file *string*

Cause: An error occurred when parsing parameter file.

Action: See accompanying error messages for more information.

KBHS-01006: Parameter *string* was not specified

Cause: Failed to specify the indicated parameter.

Action: Specify the value of the parameter and retry the command.

KBHS-01008: syntax error was encountered while parsing *string* parameter *string string*

Cause: An error occurred when parsing parameter string.

Action: See accompanying error messages for more information.

KBHS-01009: Parameter *string* must not be specified as sub-domain format

Cause: The specified parameter cannot be used in sub-domain.

Action: Remove the sub-domain format and retry the command.

KBHS-01010: username or password was not specified in the wallet

Cause: username or password specified in the wallet was null.

Action: Ensure that username and password is not null and retry the command.

KBHS-01012: ORA-*string* occurred during wallet operation; WRL *string*

Cause: An operation on the wallet failed due to indicated error.

Action: Refer to indicated oracle message for more information.

KBHS-01013: specified *string* alias *string* not found in wallet

Cause: The specified WALLETS alias did not appear in the wallet.

Action: Check the WALLETS alias or create an alias in the wallet for the specified attribute and retry the command.

KBHS-01014: Parameter *string* must contain *string* attribute

Cause: The WALLETS parameter was missing the mandatory attribute.

Action: Add the missing attribute and retry the command.

KBHS-01015: value of parameter *string* is out of range (*string* - *string*)

Cause: The value given for the specified parameter was not valid.

Action: Change the value of the parameter within the range and retry the command.

KBHS-01016: syntax error was encountered while parsing parameter *string*

Cause: An error occurred when parsing parameter.

Action: See accompanying error messages for more information.

KBHS-01017: Parameter *string* value *string* contains too many attributes

Cause: The WALLETS parameter contains many attributes.

Action: Check the syntax of WALLETS parameter and retry the command.

KBHS-01018: parameter *string* must not be specified

Cause: The indicated parameter should not be specified.

Action: Remove the indicated parameter and retry the command.

KBHS-01019: value of parameter *string* is invalid; specified *string*

Cause: The value given for the specified parameter was not valid.

Action: Change the parameter to valid value and retry the command.

KBHS-01020: value of parameter *string* must be TRUE for authentication *string*

Cause: The value given for the specified parameter was not valid.

Action: Change the parameter to valid value and retry the command.

KBHS-01021: AWS region could not be determined

Cause: AWS region could not be determined.

Action: Change authentication scheme and retry the command.

KBHS-01022: endpoint to restore archive objects cannot be constructed

Cause: HOST parameter is not under the v1 namespace.

Action: Use HOST parameter under v1 namespace.

KBHS-01023: Either parameter *string* or parameter *string* must be specified

Cause: Specifying one of the parameter is mandatory.

Action: Specify one of the parameter and retry the command.

KBHS-01024: invalid credential object [schema = *string*, name = *string*]

Cause: username or password not specified in the credential object.

Action: Ensure that the credential object is valid and retry the command.

KBHS-01025: Parameter *string* and *string* cannot both be specified

Cause: Cannot specify both parameter.

Action: Specify only one of the parameter and retry the command.

KBHS-01026: SSLWallet location could not be retrieved from database

Cause: SSLWallet location was not found in database.

Action: Ensure that SSLWallet location is specified in database and retry the command.

KBHS-01100: end-of-file for backup piece *string*

Cause: There were no more chunks for this backup piece to read or read bytes specified in the metadata file.

Action: If the end-of-file was reached prematurely, check if all the chunks are present in the backup piece.

KBHS-01102: unable to read backup piece *string* because of missing chunk *string*

Cause: Unable to read the backup piece because the specified chunk was found to be missing.

Action: Retry the command after restoring the chunk file in the specified location.

KBHS-01103: backup piece *string* missing

Cause: Unable to read the backup piece because the specified piece was found to be missing.

Action: Retry the command after restoring the file in the specified location.

KBHS-01104: file *string* is not in backup piece format

Cause: Unable to read the backup piece header because the specified file was not in backup piece format.

Action: Retry the command after restoring the file in the specified location.

KBHS-01105: Block Pool format restore does not support password decryption

Cause: When a backup is performed using RA_FORMAT=TRUE and encryption, the restore requires Transparent Data Encryption/Decryption.

Action: Retry the command without password.

KBHS-01300: unable to read backup piece *string* because of missing metadata file *string*

Cause: The backup piece could not be read because the metadata file was missing.

Action: Retry the command after restoring the metadata file in the specified location.

KBHS-01400: Unable to load message file from virtual file system

Cause: Unable to find the message file in virtual file system.

Action: Contact Oracle Customer Support.

KBHS-01401: memory allocation failure

Cause: Insufficient memory available to satisfy requested allocation.

Action: Terminate other processes to free up memory or add memory to the system.

KBHS-01402: Oracle error occurred while converting a date: ORA-number: *string*

Cause: An internal error occurred while converting a date.

Action: Contact Oracle Support Services.

KBHS-01403: could not open trace file *string*

Cause: An error occurred when trying to open the trace file.

Action: Check that the directory exists and that the file has write permissions.

KBHS-01404: See trace file *string* for details

Cause: This is an informational message only.

Action: No action is required.

KBHS-01405: Automatic retry wait time limit *string* reached

Cause: An attempt was made to automatically retry the operation but the configured wait time limit was reached.

Action: Retry the operation manually.

KBHS-01406: value of parameter *string* must be between *string* and *string*; specified *string*

Cause: The length of the parameter was not within the limits.

Action: Specify a value of length within the limits and retry the command.

KBHS-01407: bucket name *string* contains an illegal character *string*

Cause: One of the following restrictions were not followed in the specified bucket name. 1) Can only contain lowercase letters, numbers, periods(.) and dashes(-). 2) Must start with a number or letter. 3) Should not end with a dash(-). 4) Cannot have dashes appear next to periods. 5) Cannot be in an IP address style (eg. 192.168.5.4)

Action: Use a bucket name that follows the restriction and retry the command.

KBHS-01408: login to Recovery Appliance failed with Oracle error:*string*

Cause: An Oracle error was reported while attempting to log in to the Recovery Appliance.

Action: Follow the actions for the specified Oracle error.

KBHS-01409: Oracle error reported from Recovery Appliance while executing *string*

Cause: An Oracle error was reported when executing an Oracle Call Interface (OCI) operation in Recovery Appliance.

Action: Follow the actions for the specified Oracle error.

KBHS-01410: Oracle HTTP Server not running in Recovery Appliance

Cause: Oracle HTTP Server was not running in Recovery Appliance.

Action: Start the HTTP Server in Recovery Appliance and retry the command.

KBHS-01411: Recovery Appliance access was not granted

Cause: Recovery Appliance access was not granted to this user.

Action: Grant database access to this user and then retry the command.

KBHS-01412: failed for connection *string* (@*string*)

Cause: This is an informational message. This precedes error 1410 or 1411.

Action: No action is required.

KBHS-01413: connect *string* could not be resolved

Cause: The specified host is not resolvable.

Action: Check the spelling of the host name or the IP address. Make sure that the host name or the IP address is resolvable on the Recovery Appliance.

KBHS-01500: syntax error was encountered while parsing SBT command *string*

Cause: An error occurred when parsing SBT command.

Action: See accompanying error messages for more information.

KBHS-01600: backup piece *string* header validation failed

Cause: The header was not recognized as a valid backup piece header. One reason could be that the backup piece was converted at the target and a converted backup piece cannot be transmitted.

Action: Ensure the backup piece is not converted and retry the backup operation.

KBHS-01601: Data Pump dump file backup piece *string* is not supported

Cause: Data Pump dump file backup was requested. This cannot be transmitted and is not supported.

Action: Ensure the backup piece does not include a Data Pump dump file and retry the backup operation.

KBHS-01602: backup piece *string* is not encrypted

Cause: Backups sent to Oracle Public Cloud Storage was not encrypted. Only encrypted backups can be stored in Oracle Public Cloud Storage.

Action: Configure RMAN to create encrypted backups and retry the command.

KBHS-01603: Incremental backups that include control or sp file not supported

Cause: Backups with RA_FORMAT=TRUE do not support mixing data files with either control or sp files.

Action: Configure RMAN to use AUTOBACKUP ON when using RA_FORMAT=TRUE.

KBHS-01605: The current ZDLRA version does not support RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, the ZDLRA needs to be patched to accept the new formatted backups.

Action: Update the ZDLRA software to the appropriate version.

KBHS-01606: Invalid compression algorithm when using RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, the only supported compression algorithm is LOW.

Action: Set the RMAN compression algorithm to LOW.

KBHS-01607: Password encryption is not supported when using RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, the only supported encryption method is Transparent Data Encryption.

Action: Use Transparent Data Encryption instead of password encryption.

KBHS-01608: Previously compressed backups not supported with RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, backups that are already compressed are not supported.

Action: Take the initial backup without compression.

KBHS-01609: Previously encrypted backups not supported with RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, backups that are already encrypted are not supported.

Action: Take the initial backup without encryption.

KBHS-01610: MAXPIECESIZE backups not supported

Cause: Backups with RA_FORMAT=TRUE do not support backups that also have MAXPIECESIZE.

Action: If you need maxpiecesize backups, configure RMAN without RA_FORMAT=TRUE.

KBHS-01700: Error occurred in XML processing\nstring

Cause: An error occurred when processing the XML document.

Action: Check the given error message and fix the appropriate problem.

KBHS-01701: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

KBHS-01800: unmatched quote in parameter string

Cause: Missing close quote was encountered.

Action: Add missing quote and retry command.

KBHS-01801: invalid keyword (*string*)

Cause: This is an informational message indicating unrecognized keyword was encountered.

Action: Correct the syntax and retry the command.

KBHS-01802: incomplete/malformed command

Cause: This is an informational message indicating the command was not complete.

Action: Correct the syntax and retry the command.

KBHS-01803: invalid parameter (*string*)

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: Correct the syntax and retry the command.

KBHS-07112: The current RDBMS version does not support RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, RDBMS needs to be patched to support the new formatted backups.

Action: Update the RDBMS software to the appropriate version.

KBHS-07113: Auto allocated buffers required when using RA_FORMAT=TRUE.

Cause: When RA_FORMAT=TRUE is set, auto allocated buffers are required.

Action: Change parameters to either remove RA_FORMAT=TRUE or set auto allocated buffers.

KBHS-07114: RA_REPLICATION and RA_FORMAT cannot both be set to true.

Cause: RA_REPLICATION and RA_FORMAT are both set to true.

Action: Change one or both of the parameters to false.

KBHS-07115: Kernel version is incompatible with the SBT library.

Cause: This System Backup Tape (SBT) library requires a higher kernel version.

Action: Either upgrade the kernel or use an older SBT library.

KBHS-07508: aborting *string* due to signal: *string*

Cause: MMS received a signal, hence need to abort current operation.

Action: Determine the cause of the signal, rectify it and retry the command.

KFED-00323 to KFED-00403

KFED-00323: Header for device *[string]* has an invalid block checksum.

Cause: The disk header had corrupted data. The block checksum was invalid.

Action: Contact Oracle Support Services.

KFED-00324: Header for device *[string]* has an invalid label checksum.

Cause: The label block had corrupted data. The label checksum was invalid.

Action: Contact Oracle Support Services.

KFED-00325: Disk *[string]* belongs to disk group *[string]*.

Cause: The disk to be stamped was part of an ASM disk group.

Action: Drop the disk from the disk group or use the `-force` option to overwrite the labels.

KFED-00326: Disk *[string]* has a label *[string]*. Use `-force` to overwrite.

Cause: The disk label was not blank.

Action: Use the `-force` option to overwrite the disk label.

KFED-00327: Disk *[string]* has a site label *[string]*. Use `-force` to overwrite.

Cause: The site label was not blank.

Action: Use the `-force` option to overwrite the site label.

KFED-00328: Disk *[string]* has a fail group label *[string]*. Use `-force` to overwrite.

Cause: The fail group label was not blank.

Action: Use the `-force` option to overwrite the fail group label.

KFED-00329: Specified disk label *[string]* is greater than the maximum size *[number]*.

Cause: The disk label provided was too large.

Action: Provide a shorter disk label.

KFED-00330: The site label *[string]* is invalid.

Cause: An invalid site label was supplied.

Action: Specify a site name which is at least one character but no more than 15 characters in length. A site name consists of alphanumeric characters plus the hyphen character (a..z, A..Z, 0..9, -). It cannot begin with a numeric character. It cannot begin or end with the hyphen (-) character.

KFED-00331: Specified fail group label *[string]* is greater than the maximum size *[number]*.

Cause: The fail group label provided was too large.

Action: Provide a shorter fail group label.

KFED-00332: Device [*string*] is not formatted as an ASM disk.

Cause: The device provided was not recognized as an ASM disk.

Action: Add the disk to the ASM discovery path.

KFED-00333: Device [*string*] is an Exadata disk.

Cause: An attempt was made to stamp an Exadata disk.

Action: Specify a device that is not managed by an Exadata.

KFED-00334: Error discovering disk *string*

Cause: kfed was unable to complete disk discovery based on provided discovery string.

Action: See accompanying error message for details.

KFED-00400: Operating system dependent operation: *string* failed with status: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00401: Operating system failure message: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00402: failure occurred at: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00403: additional information: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFNDG-00200 to KFNDG-00701

KFNDG-00200: invalid syntax

Cause: Invalid syntax for renamedg was specified.

Action: Try renamedg -help for more information.

KFNDG-00201: invalid arguments

Cause: Invalid key or value was specified for renamedg.

Action: Try renamedg -help for more information.

KFNDG-00202: invalid value (*string*) for parameter phase

Cause: Incorrect value for parameter PHASE was specified.

Action: Valid values for parameter PHASE are ONE, TWO, BOTH. Retry with correct values.

KFNDG-00203: disk group name (*string*) exceeds maximum allowed length *number*

Cause: Invalid disk group name was specified.

Action: Disk group name can be a maximum of 32 characters.

KFNDG-00204: disk group name *string* has invalid characters

Cause: Invalid disk group name was specified.

Action: Disk group name can only contain alphabetic, numeric and the underscore (_) characters.

KFNDG-00205: failed to interpret configuration file name

Cause: Invalid configuration file name was specified.

Action: Verify configuration file name and folder permissions and retry renamedg.

KFNDG-00301: new disk group (*string*) already exists, ignoring renamedg

Cause: disk group specified in NEWDGNAME already exists.

Action: None

KFNDG-00302: disk (*string:string*) does not contain a valid header

Cause: Device header could not be located or corrupt.

Action: Verify if the device mentioned is an ASM disk device.

KFNDG-00303: failed to update disk group name for *string*

Cause: Insufficient privileges or write error in disk.

Action: Verify disk permissions and retry renamedg. Also, see log for additional information.

KFNDG-00304: unable to access heartbeat block of the device *string:string*

Cause: Heartbeat block of the disk was corrupt.

Action: Verify disk header with ASM utilities, retry renamedg.

KFNDG-00305: failed to create configuration file

Cause: Insufficient privileges or invalid path.

Action: Verify folder permissions and retry the command.

KFNDG-00306: unable to write to configuration file

Cause: Insufficient privileges.

Action: Check file permissions and retry renamedg.

KFNDG-00307: unable to read configuration file

Cause: Insufficient privileges or disk read error.

Action: Check file permissions and retry renamedg.

KFNDG-00308: failed to process configuration file entry: *string*

Cause: Configuration file was corrupt.

Action: Check file information and retry renamedg.

KFNDG-00401: allocation unit size conflict (*number, number*)

Cause: Allocation unit size of disk group and the disk did not match.

Action: Verify that the device is not corrupt and retry renamedg.

KFNDG-00402: ASM metadata block size conflict (*number, number*)

Cause: Metadata block size of the disk group and disk did not match.

Action: Verify if the device is not corrupt and retry renamedg.

KFNDG-00403: not all disks of disk group *string* were discovered

Cause: Offline disks were present in the specified disk group.

Action: Refer to Oracle Database Storage Administrator's Guide for more details.

KFNDG-00404: disk group *string* contains offline disks, ignoring renamedg

Cause: Disk group with offline disks could not be renamed.

Action: Refer to Oracle Database Storage Administrator's Guide for more details.

KFNDG-00405: specified disk group *string* appears to be mounted

Cause: Disk group was mounted.

Action: Unmount the disk group and retry renamedg.

KFNDG-00406: disk group (*string*) is in use by CSS

Cause: Cluster Synchronization Service(CSS) was using the disk group to be renamed.

Action: Refer to crsctl command to relocate voting disks from disk group.

KFNDG-00407: Could not find disks for disk group *string*

Cause: No disks were discovered for disk group.

Action: Try renamedg with a different discovery string.

KFNDG-00408: disk (*string:string*) could not be discovered

Cause: Disk was either deleted or moved.

Action: None

KFNDG-00409: disk (*string*) doesn't belong to disk group (*string*)

Cause: Disk is not part of the specified disk group.

Action: None

KFNDG-00410: failed to discover devices in folder *string*

Cause: Insufficient privileges or invalid discovery string.

Action: See log for additional details.

KFNDG-00600: internal error *string*

Cause: An internal error occurred while executing renamedg.

Action: Contact Oracle Support Services.

KFNDG-00601: fatal error *string*

Cause: A fatal error occurred while executing renamedg.

Action: Contact Oracle Support Services.

KFNDG-00603: failed to initialize device discovery

Cause: Error occurred while communicating with generic services layer.

Action: Contact Oracle Support Services.

KFNDG-00700: system dependent error (*number, string, string, string*) occurred

Cause: Internal system error occurred.

Action: Contact Oracle Support Services.

KFNDG-00701: Error *number* while performing I/O

Cause: I/O failure.

Action: Contact Oracle Support Services.

KFOD-00106 to KFOD-00403

KFOD-00106: Option 'cell=true' is only supported on Oracle Exadata.

Cause: An attempt was made to run an operation with an option that is only supported on Oracle Exadata.

Action: Retry the operation without the 'cell=true' option.

KFOD-00302: Error encountered in device access layer: *string*

Cause: The device access layer failed with the included error message.

Action: See the returned error message for details.

KFOD-00316: Error acquiring ASM discovery string: *string*

Cause: Call to the Grid Plug and Play service to request disk discovery string failed.

Action: Ensure that the Grid Plug and Play component of Cluster Ready Services is available. If Grid Plug and Play is operational and command still fails, contact Oracle Support Services.

KFOD-00317: error returned from Patch Query API: *string*

Cause: A call to the Patch Query API returned unsuccessfully.

Action: See the returned error message for details.

KFOD-00318: unable to retrieve error message from Patch Query API: *string*

Cause: A call to the Patch Query API returned unsuccessfully.

Action: See the returned error message for details.

KFOD-00320: Invalid operation or option for this cluster type

Cause: This operation is invalid for this cluster type

Action: Retry the operation with cluster=true

KFOD-00321: failed to read the credential file *string*

Cause: The credential file was not valid.

Action: Verify that the credential file is valid and accessible. Ensure that the user has read access permission on the credential file. Rerun the command.

KFOD-00322: credential file not specified

Cause: The previous 'kfod' command was rejected because it did not include a valid credential file name.

Action: Reexecute the 'kfod' command providing a valid credential file name. Refer to the command line help for information.

KFOD-00323: Member cluster version '*string*' in the credential file does not match software version '*string*'.

Cause: There was a version mismatch between the member cluster version in the credential file and the software version.

Action: Install a version of the member cluster that matches the version in the credential file.

KFOD-00324: The member cluster version '*string*' is incompatible with the storage server version '*string*'.

Cause: The member cluster installation or upgrade was not supported by the storage server configured at the version listed in the message.

Action: Install or upgrade the member cluster to a version that is compatible with the storage server. Refer to the product documentation for information.

KFOD-00325: failed to verify member cluster '*string*'\n*nstring*

Cause: The member cluster installation verification failed. The possible causes are: - A member cluster with the same name was already configured. - A member cluster with the same name was deinstalled, but the member cluster's configuration was not removed at the Storage Server.

Action: Verify if there is already a member cluster with the name listed in the message by executing the 'asmcmd lsc' command on the storage server. If the member cluster is configured and in use, execute the 'asmcmd mkcc' command on the storage server, and provide an unused member cluster name to generate a new credential file. Retry the Grid Infrastructure installation using the new credential file. If the member cluster is configured and not in use, deinstall the existing member cluster. Execute the 'asmcmd rmcc' command on the storage server to delete the member cluster configuration. Retry the Grid Infrastructure installation. If the member cluster is not configured or if the error persists, contact Oracle Support Services.

KFOD-00326: Member cluster(s) '*string*' will be incompatible if the storage server is upgraded to version '*string*'.

Cause: Storage server upgrade to the listed version failed because the listed member cluster will become incompatible.

Action: Upgrade the storage server to a version that is compatible with all of the configured member clusters. If the storage server could not be upgraded to a compatible version, forcibly upgrade the Storage Server using the procedure documented in the product documentation.

KFOD-00327: failed to delete member cluster '*string*'\n*nstring*

Cause: There was a failure in deleting the member cluster configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00328: Member cluster installation or upgrade failed because the storage server is in the 'In Rolling Upgrade' or the 'In Rolling Patch' state.

Cause: The member cluster installation or upgrade was rejected because the storage server was in the 'In Rolling Upgrade' or the 'In Rolling Patch' state.

Action: Retry the installation or upgrade procedure after the Storage Server upgrade or patching has completed.

KFOD-00329: no cluster name specified

Cause: The previous 'kfod' command was rejected because it did not include a cluster name.

Action: Reexecute the 'kfod' command providing a valid cluster name. Refer to the command line help for information.

KFOD-00330: invalid cluster name '*string*' specified

Cause: An invalid cluster name was supplied to the 'kfod' utility.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

KFOD-00331: forcibly deleted member cluster '*string*'

Cause: The configuration for the member cluster listed in the message was forcibly deleted.

Action: The member cluster listed in the message will no longer be able to access the storage server. Follow the steps to enable access from the member cluster. - Delete all the Oracle Clusterware files in the '+<diskgroup_name>/<client_cluster_name>/' directory in all disk groups. - Deinstall the member cluster. - Install the member cluster.

KFOD-00334: failed to list the configured member clusters\n*string*

Cause: A failure occurred while attempting to display the member cluster configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00335: command not supported

Cause: An attempt was made to run an operation that is not supported by the configured cluster.

Action: Refer to the command line help for usage.

KFOD-00336: failed to enable Oracle Flex ASM\n*string*

Cause: There was a failure in enabling the Oracle Flex ASM configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00337: failed to create member cluster '*string*'\n*string*

Cause: There was a failure in creating the member cluster configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00338: failed to get OS user; failing function: '*string*'\n

Cause: There was an error retrieving the operating system user. The named function did not succeed.

Action: Contact Oracle Support Services

KFOD-00340: incompatible input arguments '*string*' and '*string*'

Cause: A command line argument was specified that was incompatible either with another argument or with the current cluster type.

Action: Refer to the command line help for usage.

KFOD-00341: Oracle ASM File Security operation failed

Cause: This is an internal error.

Action: Contact Oracle Support Services.

KFOD-00342: Site GUID for disk '*string*' is invalid.

Cause: This is an internal error.

Action: Examine the Globally Unique Identifier for the site using the command 'cellcli -e list cell attributes siteld'. Contact Oracle Support Services.

KFOD-00343: Rack GUID for disk '*string*' is invalid.

Cause: This is an internal error.

Action: Examine the Globally Unique Identifier for the rack using the command 'cellcli -e list cell attributes rackId'. Contact Oracle Support Services.

KFOD-00344: unable to access credential file '*string*'

Cause: The specified credential file could not be read.

Action: Ensure that the specified credential file can be read.

KFOD-00400: Operating system dependent operation: *string* failed with status: *string*

Cause: Operating system call error.

Action: Contact Oracle Support Services.

KFOD-00401: Operating system failure message: *string*

Cause: Operating system call error.

Action: Contact Oracle Support Services.

KFOD-00402: failure occurred at: *string*

Cause: Operating system call error.

Action: Contact Oracle Support Services.

KFOD-00403: additional information: *string*

Cause: Operating system call error.

Action: Contact Oracle Support Services.

KUP-00552 to KUP-14003

KUP-00552: internal XAD package failed to load

Cause: An error was encountered while attempting to initialize the XAD package.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00554: error encountered while parsing access parameters

Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00561: invalid length for binary integer field *stringn***

Cause: An integer field was specified with an invalid length. The only supported lengths for binary integer fields are 1, 2, 4, and 8.

Action: n/a

KUP-00562: unknown escape sequence*n*

Cause: An unknown escape sequence was specified to the parser. An escape sequence is a backslash followed by a character.

Action: Consult documentation for list of allowable control characters.

KUP-00600: internal error, arguments [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An internal XAD error occurred.

Action: Contact Oracle Support.

KUP-00601: fatal XAD error

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01006: error signalled during parse of access parameters

Cause: An error was signalled during parsing of the access parameters.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01007: at line *number* column *number*

Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: n/a

KUP-01008: the bad identifier was: *string*

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: n/a

KUP-02000: wrong message file version (msg *number* not found)

Cause: The kupxx.msb file is not the correct version.

Action: Check that the installation was done correctly.

KUP-02001: unrecognized punctuation symbol "*string*"

Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

KUP-02002: unexpected end of input file reached

Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

KUP-02003: unrecognized character: *string*

Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

KUP-02004: quoted string too big

Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

KUP-02005: token too big

Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

KUP-02006: script line too long

Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

KUP-03001: fatal error during library cache pre-loading

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

KUP-03002: end position (*number*) <= start position (*number*) for field: *string*

Cause: Error in specifying position for the specified field in the access parameters."

Action: Check that the specified end position is greater than the specified start position.

KUP-03003: absolute end(*number*) - start(*number*) != fieldlength (*number*) for field *string*

Cause: The number of bytes occupied by the field as specified by the starting offset and ending offset of the field is not the same as the number of bytes specified for the datatype of the field.

Action: Verify the absolute begin/end position(s) specified match the length of the field.

KUP-03004: absolute end (*number*) specified with relative start (*number*) for field *string*

Cause: The position of field was specified with a relative start and an absolute end.

Action: Use relative end with relative start

KUP-03005: relative end (*number*) specified does not match fieldlen(*number*) for field *string*

Cause: The number of bytes specified by the relative end position for the field does not match the number of bytes in the datatype.

Action: Correct either the datatype length or the relative end position.

KUP-03006: error initializing handle for character set *string*

Cause: Error attempting to retrieve information for the character set.

Action: Verify that the character set name is valid.

KUP-03007: end position (*number*) is less than start position (*number*) for range

Cause: A byte range specified a start position that comes after the end position.

Action: Verify the start and end positions are correctly specified.

KUP-03008: OCI error getting column parameters.

Cause: An error occurred while trying to obtain column parameters.

Action: Contact Oracle Support.

KUP-03009: OCI error getting column name.

Cause: An error occurred while trying to obtain column name.

Action: Contact Oracle Support.

KUP-03010: OCI error getting database column type.

Cause: An error occurred while trying to obtain database column type.

Action: Contact Oracle Support.

KUP-03011: OCI error getting database column size.

Cause: An error occurred while trying to obtain database column size.

Action: Contact Oracle Support.

KUP-03012: OCI error getting database column precision.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03013: OCI error getting database column scale.

Cause: An error occurred while trying to obtain database column scale.

Action: Contact Oracle Support.

KUP-03014: OCI error getting datetime fsprecision.

Cause: An error occurred while trying to obtain a datetime column precision value."

Action: Contact Oracle Support.

KUP-03015: OCI error getting datetime lfpresicion.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03016: length specified for FIXED records must be greater than 0\n

Cause: A record format of FIXED was specified with a length of 0.

Action: n/a

KUP-03017: length specified for VARIABLE records must be greater than 0\n

Cause: A record format of VARIABLE was specified with a length of 0.

Action: n/a

KUP-03018: invalid date mask "*string*" specified for column *string*\n

Cause: The date mask for the specified column is invalid.

Action: n/a

KUP-03019: directory object not specified in LOBFILE clause for field *string*\n

Cause: A LOBFILE clause was specified for the field, but no directory object was specified. When no directory object is specified, then the default directory specified for the external table is used, but no default directory was specified.

Action: Specify a directory object in the LOBFILE clause or specify a default directory for the external table.

KUP-03020: empty delimiter specified for record\n

Cause: An empty delimiter string was specified for a record delimiter.

Action: Specify the string used to delimiter records.

KUP-03021: clause references unknown field *string*\n

Cause: A WHEN, NULLIF or DEFAULTIF clause referenced a field that doesn't exist in the data file.

Action: n/a

KUP-03022: lob data could not be found for field *string*\n

Cause: The field specified in the data source that contains the name of the lob file for the record could not be identified.

Action: n/a

KUP-03023: string for TERMINATED BY or ENCLOSED BY clause for record is longer than maximum number

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03024: string for TERMINATED BY or ENCLOSED BY clause for column string is longer than maximum number

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause for the columns is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03025: For CSV format files, field string is not delimited.

Cause: The comma-delimited value (CSV) format files did not have all delimited fields. CSV format files must have all delimited fields so that the access driver can process the fields.

Action: Make all of the fields delimited or remove the CSV specification and retry.

KUP-03026: For FIELD NAMES, field string is not delimited.

Cause: The data files with a FIELD NAMES record did not have all delimited fields. Data files with a FIELD NAMES record must have all delimited fields so that the access driver can process the field names.

Action: Make all of the fields delimited and retry.

KUP-03027: NULLIF at field level not allowed with NO NULLIF for field string.

Cause: The field had both NULLIF and NO NULLIF specified. You must specify one or the other.

Action: Remove one of the specifications and retry.

KUP-03028: Field name string in field list does not match the name of any table column.

Cause: The ALL FIELDS OVERRIDE THESE clause was specified and there was a field name in the field list in the access parameters that did not match the name of a column in the table definition. Only names that match the name of columns in the table may be specified in the field list.

Action: Verify that the correct names are used for the columns in the table and for the fields in the field list.

KUP-03029: Invalid value specified for parameter string.

Cause: The access parameter contained an invalid value for the parameter specified in the error message.

Action: Update the access parameters to have a valid value.

KUP-03030: Invalid value specified for EXTERNAL MODIFY access parameter.

Cause: An invalid access parameter was specified in the EXTERNAL MODIFY clause.

Action: The only valid values for access parameters in the EXTERNAL MODIFY clause are: logfile, nologfile, badfile, nobadfile, discardfile, nodiscardfile.

KUP-03031: Invalid value specified for EXTERNAL MODIFY access parameter.

Cause: An invalid access parameter was specified in the EXTERNAL MODIFY clause.

Action: The only valid value for access parameters in the EXTERNAL MODIFY clause is "logfile".

KUP-03032: No directory object for a file in the LOB LOCATION SPECIFIER clause.\n

Cause: The directory object was not specified for a file in the LOB LOCATION SPECIFIER clause and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Ensure that the directory object is specified for all the files in the LOB LOCATION SPECIFIER clause and include the DEFAULT DIRECTORY clause for the external table. Note that the directory object in the DEFAULT DIRECTORY clause is used for all the files that are specified without a directory object and not just the files from the LOB LOCATION SPECIFIER clause.

KUP-03033: Values cannot be specified for both SKIP and IGNORE_HEADER.

Cause: The access parameters specified values greater than 0 for the SKIP and IGNORE_HEADER clauses. Only one of these clauses can be specified in the access parameters.

Action: Remove one of the clauses from the access parameters.

KUP-03034: The IGNORE_HEADER clause cannot be specified along with any of the FIELD NAMES clauses.

Cause: The access parameters specified values greater than 0 for the IGNORE_HEADER clause and specified one of the following clauses: FIELD NAMES FIRST FIELD NAMES FIRST IGNORE FIELD NAMES ALL FIELD NAMES ALL IGNORE FIELD NAMES NONE

Action: Remove the IGNORE_HEADER clause or the FIELD NAMES clause.

KUP-03035: The IGNORE_HEADER clause cannot be specified with XMLTAG clause.

Cause: The access parameters specified values greater than 0 for the IGNORE_HEADER clause and the XMLTAG clause was specified.

Action: Remove the IGNORE_HEADER clause.

KUP-03036: CSV format or enclosing delimiters are not allowed with REMOVE_QUOTES.

Cause: The access parameters specified comma-separated value (CSV) format or enclosing delimiters and also specified the REMOVE_QUOTES clause.

Action: Do not specify the REMOVE_QUOTES clause with CSV format or enclosing delimiters.

KUP-03037: Links may exist in the Oracle directory object path.\n

Cause: The Oracle directory object used by the external table may contain links in the path.

Action: Ensure that the Oracle directory object does not contain any links in any of the path components.

KUP-03038: Access parameter *string* was specified multiple times.\n

Cause: The access parameter was specified more than once.

Action: Remove duplicate access parameter specifications and try the operation again.

KUP-03992: invalid size for character length *number* specified for field *string*\n

Cause: The data type for the field was VARCHARC or VARRAWC. Each instance of these data types starts with a fixed length portion of numeric characters containing the length of the data for the field. The default length was 5 bytes, however the access parameters can specify a different length. If the access parameters specify a value, the minimum value was 1 and the maximum value was either 10 for data sources with character length semantics or 20 for data sources with byte length semantics.

Action: Make sure the access parameters have the correct size specified for the length component of these data types.

KUP-03993: invalid size for binary length *number* specified for field *string*\n

Cause: The data type for the field was VARCHAR or VARRAW. Each instance of these data types starts with a binary field containing the length of the data for the field. The default size of this binary length was 2 bytes. However, the access parameters can specify a different length. The valid lengths are 1, 2, 4 and 8 bytes.

Action: Make sure the access parameters have the correct size specified for the length component of these data types. Also, verify that the size is specified in binary and not in numeric characters. If the size is specified as numeric characters, then use the corresponding data types that use character sizes. These are VARCHARC and VARRAWC.

KUP-03994: record size *number* is larger than the maximum size allowed on this platform, *number*\n

Cause: The value specified for the READSIZE parameter was too large.

Action: Specify a value that is smaller than maximum size allowed for the platform.

KUP-03995: LOCAL TIME_ZONE not allowed with DATE_FORMAT TIME\n

Cause: LOCAL can only be specified with TIMESTAMP, not with TIME.

Action: Remove LOCAL or change TIME to TIMESTAMP and try the operation again.

KUP-03996: multiple DATE_FORMAT *string* masks specified at table level for table *string*\n

Cause: Multiple date format masks were specified for the listed datetime or interval data type at the table level for the listed table.

Action: Remove one of the datetime mask specifications and try the operation again.

KUP-03997: invalid DATE_FORMAT *string* mask ("*string*") specified for table *string*\n

Cause: The date format mask for listed datetime type for the specified table was invalid.

Action: Fix the mask and try the operation again.

KUP-03998: error *number* formatting KUP message *number*\n

Cause: error occurred while attempting to format a KUP message.

Action: contact Oracle support.

KUP-03999: error occurred while processing a date format: ORA-number: string

Cause: Error converting a date format string into an internal representation.

Action: Verify that the date format strings specified in the access parameters are valid.

KUP-04000: error initializing I/O state for file string\n

Cause: An unexpected error occurred while preparing the file.

Action: Contact Oracle Support Services.

KUP-04001: error opening file string\n

Cause: An error occurred while attempting to open the specified file. This message should be followed by another message with more information about the error.

Action: See the error that follows to determine the action to be taken.

KUP-04002: error getting file size for file string\n

Cause: An error occurred while retrieving the number of bytes in the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04003: error while closing file string\n

Cause: An error occurred while closing the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04004: error while reading file string\n

Cause: An error occurred while reading the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04005: error while accessing file string\n

Cause: An error occurred while accessing the specified file.

Action: Ensure that the path to the file exists and the user has the correct permissions to access the file.

KUP-04006: error locating granule number: number\n

Cause: An attempt to locate the specified granule failed.

Action: Ensure that the path to the file exists and that the user has the correct permissions to access the file. This error may also occur in a Oracle RAC environment where the directory paths are not shared.

KUP-04007: The subdirectory string was not found in path string.\n

Cause: The specified subdirectory is not found in the path.

Action: Make sure the subdirectory exists.

KUP-04008: The path string is not a subdirectory to the parent directory path.\n

Cause: The specified subdirectory expanded to a an invalid path relative to the directory path defined in the database.

Action: Make sure the subdirectory wildcard expands to a valid directory.

KUP-04009: The specified file *string* is not a valid data source.\n

Cause: The file specified in the location clause was invalid.

Action: Ensure sure that all files in the location clause are valid data sources.

KUP-04017: OS message: *string*\n

Cause: An error occurred. This message contains the message associated with this error that was returned by the operating system. The message displayed before this one should indicate the operation that failed.

Action: n/a

KUP-04018: partial record at end of file *string*\n

Cause: An incomplete record was found at the end of the file.

Action: Verify the file is not corrupt or missing data.

KUP-04019: illegal length found for VAR record in file *string*\n

Cause: A record in a VAR file has an length field with either no numeric characters in it or with non numeric characters in it.

Action: Verify the records in the file have the correct length specified for them.

KUP-04020: found record longer than buffer size supported, *number*, in *string* (offset=*number*)\n

Cause: a record in the data source was longer than the maximum data size supported. The number reported is the maximum supported size of a record.

Action: n/a

KUP-04021: field formatting error for field *string*\n

Cause: There was an error trying to find the contents of the specified field in a record.

Action: This message should be followed by another message containing more specific information about the cause of the error.

KUP-04022: field start is before start of record\n

Cause: The position of the start of a field is before the start of a record. This can occur if a negative number is used to indicate the relative start of a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04023: field start is after end of record\n

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct. If it is valid for fields at the end of the record to be missing, use the MISSING FIELD VALUES ARE NULL clause in the access parameters.

KUP-04024: field end is before field start\n

Cause: The end of the field comes after the start of the field. This can happen if the field is defined with a relative start position and an absolute end position.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04025: field extends beyond end of record\n

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04026: field too long for datatype\n

Cause: The character field in the record is larger than the maximum length specified.

Action: Make sure the definition of the layout of the fields in the data file is correct. Also make sure the correct maximum size was specified for a character datatype.

KUP-04027: file name check failed: *string*\n

Cause: The check of the filename failed. These checks are platform specific, but they can include verifying that there are no hard links in the file path, the file is not a soft link, the file specification includes a parent reference (".." on Unix), or the file was modified between the time the check was made and the file was opened.

Action: Use a file location that does not violate any of the checks.

KUP-04028: conversion of character length to a number failed\n

Cause: The character length portion of the field could not be converted to a number. This message is followed by another message with information on why the conversion failed.

Action: Make sure the data is correct. Also verify the datatypes specified for the fields are correct.

KUP-04029: numeric field overflowed\n

Cause: An attempt to convert a character string to number failed because the value of the number in the string was too large.

Action: n/a

KUP-04030: invalid numeric data\n

Cause: An attempt to convert a character string to a number failed because non-numeric characters were found.

Action: n/a

KUP-04031: empty filename specified for LOB file in column *string*\n

Cause: The field in the data file that was supposed to contain the name of a LOB file was empty.

Action: Correct the data so that it contains a valid file name.

KUP-04032: internal error *string* while parsing field *string*:\n

Cause: An internal error occurred while parsing a field.

Action: Contact Oracle support.

KUP-04035: beginning enclosing delimiter not found\n

Cause: The beginning enclosure was not found for a field that is enclosed by delimiters.

Action: Verify that the data is correct. Also verify that the correct enclosing delimiters were specified and whether the enclosing delimiter should be optional.

KUP-04037: terminator not found\n

Cause: The terminator for the field is missing.

Action: Verify that the records are formatted correctly.

KUP-04038: internal error: *string*\n

Cause: an unexpected error condition was detected.

Action: contact Oracle customer support

KUP-04039: unexpected error while trying to find file *string* in *string*\n

Cause: An error occurred while trying to find path containing the file.

Action: This message should be followed by another message with more information about the error.

KUP-04040: file *string* in *string* not found\n

Cause: The file was not found in the directory specified

Action: Verify the correct file and directory names were specified.

KUP-04041: error generating full file name for *string* in *string*\n

Cause: Unexpected error occurred while trying to form a file name.

Action: n/a

KUP-04043: table column not found in external source: *string*\n

Cause: A column in the external table was not found in the access parameters that define the contents of the data source.

Action: Verify that the external table is defined correctly and that the access parameters are also correct.

KUP-04044: error positioning file *string*\n

Cause: An attempt to position a file to an absolute file offset failed.

Action: See messages that follow for more information.

KUP-04045: unexpected OCI status *string*

Cause: An OCI call returned a status that cannot be handled.

Action: Contact Oracle support.

KUP-04047: error parsing record from external data source\n

Cause: An error occurred while trying to extract a record from the data source.

Action: Look in the log file for more messages about the error.

KUP-04048: internal error parsing record from external data source\n

Cause: An unexpected or unhandled error occurred while getting a record from the data source

Action: Contact Oracle support.

KUP-04049: record *number* discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: None

KUP-04050: error while attempting to allocate *number* bytes of memory\n

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

KUP-04051: error processing column *string* in row *number* for datafile *string*\n

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04052: Inerror processing column *string* in a row for datafile *string*\n

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04053: record number *number*\n

Cause: This message identifies a record number in a file for a record that had an error. The message preceding this one contains information about the error and the name of the file.

Action: n/a

KUP-04054: internal error: invalid bad row *number* identified for bad column *number*\n

Cause: This is an internal error.

Action: Contact Oracle support.

KUP-04055: column *string* is both a field in the data file and a column transform\n

Cause: The specified column was in the list of fields in the data file and in the list of column transforms. The column should be in one list or the other, but not both.

Action: Determine whether the value for the field in the data file or the value for the field in the column transform should be loaded in to the table. If the value for the data file is to be loaded, then remove the column transform. If the value for the column transform is to be loaded, then rename the field in the data file so that it does not match the name of a field in the table.

KUP-04056: internal error: OCI error while fetching record: *number*\n

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04057: internal error: OCI error while fetching record.\n

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04058: unrecoverable error occurred, operation aborted.\n

Cause: An unrecoverable error occurred during processing.

Action: See preceding error messages for more information.

KUP-04059: found EOF in length portion of VARIABLE record in file *string*\n

Cause: The record parser was looking for the size portion of a file a record format of VARIABLE. It found EOF before finding all the bytes for the length.

Action: Correct the corruption in the file.

KUP-04060: field *string* referenced by lobfile column *string* not found\n

Cause: The LOBFILE transform for the named column referenced a field for either the directory object portion or the name portion of the LOBFILE. However, that field did not exist anywhere in the definition of the data file.

Action: Verify that the LOBFILE clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04061: directory object *string* specified for LOBFILE column *string* is not valid\n

Cause: The column being loaded from a LOBFILE specified the directory object containing the LOBFILE through another field in the data file. In this case, the LOBFILE clause in the access parameters must specify a list of all directory objects that will be used for this field. This error occurs because a field contains the name of a directory object that is not in this list.

Action: Verify that the data file contains the correct directory object and verify that the list of valid directory objects in the LOBFILE clause for this column is complete.

KUP-04062: no data source specified\n

Cause: No location for the data source of the external table was specified when the external table was created. An empty string is not valid.

Action: Specify the name of the data source in the LOCATION clause when creating an external table.

KUP-04063: unable to open log file *string*\n OS error *string*\n

Cause: An attempt to open the log file failed.

Action: Specify a different log file or use NO LOGFILE to disable logging.

KUP-04064: fatal error during initialization\n

Cause: An unexpected error occurred while initializing access to an external table.

Action: Contact Oracle support.

KUP-04065: error processing LOBFILE for field *string*\n

Cause: An error occurred while opening or reading a LOBFILE for a column in a row.

Action: See message in log file for more information about the error.

KUP-04066: error initializing access to external table source\n

Cause: An error occurred while attempting to retrieve information about a data source.

Action: See messages preceding this one for more information about the error.

KUP-04067: internal error allocating handle type *string*\n

Cause: An attempt to create an internal object failed.

Action: Contact Oracle support.

KUP-04068: internal error fetching attribute *string*\n

Cause: An attempt to fetch information about an internal object failed.

Action: Contact Oracle support.

KUP-04069: error fetching data for external table\n

Cause: An error occurred while attempting to fetch data from an external table.

Action: See messages the precede this one for more information.

KUP-04070: field *string* referenced by column transform *string* not found\n

Cause: The column transform for the named column references a field that did not exist anywhere in the definition of the data file.

Action: Verify that the column transform clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04071: record discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file. The record number in the source data file is not known because multiple servers are loading from the file.

Action: n/a

KUP-04072: error writing to file *string*\n

Cause: An error occurred while attempting to write to the named file.

Action: See messages that follow this message for more information about the error.

KUP-04073: record ignored because all referenced fields are null for a record\n

Cause: A record was rejected because all fields in the data file referenced by the query were NULL.

Action: n/a

KUP-04074: no write access to directory object *string*\n

Cause: The user does not have write access to the directory object used for a log, bad or reject file.

Action: n/a

KUP-04075: no read access to directory object *string*\n

Cause: The user does not have read access to the directory object used for a data file.

Action: n/a

KUP-04076: file name cannot contain a path specification: *string*\n

Cause: The name of a data file, log file, bad file or reject file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

KUP-04077: unknown format specifier in file name *string*\n

Cause: A format specifier is a percent sign followed by a character. The percent sign and character are replaced by a value depending on the character. This error occurs when the character following the percent sign is not defined to have a value.

Action: See the documentation for information on valid format specifiers. If the file to be opened needs to have a percent sign in its name then use two percent signs. They will get replaced by a single percent sign in the resulting file name.

KUP-04078: invalid file name specified: *string*

Cause: Attempt to parse the file name failed.

Action: Specify a valid file name.

KUP-04079: error fetching list of valid directories: *number*\n

Cause: An attempt to retrieve a list of valid directories that can be used by the user to open files failed. The number is an Oracle error code.

Action: Contact Oracle Support Services.

KUP-04080: directory object *string* not found\n

Cause: The directory object specified for an input file or a log, bad or discard file does not exist in the database or the user has no privileges to access this directory.

Action: n/a

KUP-04081: field *string* used in concatenation for column *string* is not a character type\n

Cause: The specified field was part of a concatenation of strings used to create the value for the names column. However, the field was not of a character datatype. Only character fields may be used as part of concatenating fields.

Action: Verify the correct field was used in the CONCAT clause. Also verify that the correct datatype is specified for the field in the field list.

KUP-04082: error converting field *string* for LOBFILE column *string*\n

Cause: The LOBFILE column had either its directory object name or filename specified by a field in the data file and that field needed to be converted to the server's character set before it could be used. This message indicates that an attempt to convert the field failed.

Action: Verify that the data file has the correct value for the fields. Also verify that the correct character set was specified for the data file.

KUP-04083: no directory object specified in LOBFILE clause for column *string*\n

Cause: There was no directory object specified for the LOB files used to populate the named column and no default directory was specified for the external table.

Action: Either specify a directory name, or the name of a data field containing the name of the directory object that contains the files.

KUP-04084: unknown reader *string* specified\n

Cause: The access parameters specified an unknown reader in the com.oracle.bigdata.reader access parameter.

Action: Ensure that the value specified in the access parameter is correct.

KUP-04085: duplicate directory object *string* and file *string* specified for unload

Cause: A CREATE TABLE AS SELECT statement was executed for an external table of type ORACLE_DATAPUMP and the same directory object and filename combination was specified multiple times.

Action: Issue the CREATE TABLE AS SELECT command again but make sure the combination of directory objects and filenames is unique.

KUP-04086: length of file name exceeds platform maximum of *number*

Cause: The length of a filename is longer than the maximum length supported by Oracle on the server platform.

Action: Verify that the name is correct. If so, use a shorter file name.

KUP-04087: no execute access to directory object *string*

Cause: Execute access to the directory object used for a preprocessor file was not granted.

Action: Grant execute privilege on the directory object or specify a different directory which already has execute privilege enabled.

KUP-04088: data sampling is not supported by this access driver

Cause: A query of an external table requested a sample of the data returned. The access driver for the external table does not support sampling.

Action: Do not try to use sampling for this external table.

KUP-04089: column transform *string* is not the name of a table column

Cause: The specified column was in the list of column transforms but a column by that name does not exist in the table

Action: Verify that the correct name was specified in the column transform.

KUP-04090: big endian byte order mark found when little endian expected in *string*

Cause: A big endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in little endian order or the byte order mark for a previous file was little endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be big endian.

KUP-04091: little endian byte order mark found when big endian expected in *string*

Cause: A little endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in big endian order or the byte order mark for a previous file was big endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be little endian.

KUP-04092: attempt to audit directory object *string* returned internal error *number*

Cause: An error occurred while attempting to enable auditing for the specified directory object.

Action: Contact Oracle Support Services.

KUP-04093: error processing the FIELD NAMES record in data file *string*\n

Cause: An error occurred while processing the FIELD NAMES record for the data file.

Action: See the messages that precede this one for more details. Fix the error and retry the operation.

KUP-04094: not authorized to perform preprocessing with Oracle Database Vault enabled\n

Cause: The Oracle Database Vault option did not permit the execution a program from an Oracle directory object.

Action: If preprocessing must be performed, then grant PREPROCESSOR authorization to the user in the Oracle Database Vault.

KUP-04095: preprocessor command *string* encountered error "*string*"\n

Cause: The specified preprocessor command encountered an error during execution.

Action: Verify that the preprocessor command along with any arguments are correct.

KUP-04096: Warning: lobfile column transform ignored with PREPROCESSOR option.\n

Cause: The specified column was in the list of lobfile column transforms but the PREPROCESSOR option was also specified. The PREPROCESSOR option does not work in conjunction with lobfile column transforms.

Action: Do not use column transforms with the PREPROCESSOR option.

KUP-04097: RECORDS clause specified without a record format\n

Cause: The RECORDS clause was part of the external table access parameters but no record format type was provided.

Action: If the RECORDS clause is used, then it must be followed by one of the VARIABLE, FIXED, or DELIMITED BY clauses.

KUP-04098: empty field name for field *number* in the FIELD NAMES record in data file\n

Cause: The field name for the listed field number in the FIELD NAMES record was empty.

Action: Specify a valid field name in the data file and retry the operation.

KUP-04099: Missing one or more field names in the FIELD NAMES record in the data file. Found *number* fields, there should be *number* fields.\n

Cause: One or more field names was not listed in the FIELD NAMES record. However, it was listed in the access parameter list for the external table.

Action: Include all field names in the data file and retry the operation.

KUP-04100: record rejected in file *string*\n

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used. The record number in the source data file is not known because multiple servers are loading from the file.

Action: n/a

KUP-04101: record *number* rejected in file *string*\n

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used.

Action: n/a

KUP-04102: record *number* discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: n/a

KUP-04103: error converting zoned decimal field to number for *string*\n

Cause: An error occurred converting a zoned decimal number to an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04104: zoned decimal field has bad values for *string*\n

Cause: A zoned decimal number has an invalid format.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04105: zoned decimal to number conversion caused overflow for *string*\n

Cause: A zoned decimal number could not be converted to an Oracle number because the number is too big for an oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04106: precision for zoned decimal number is too large for *string*\n

Cause: The precision of a zoned decimal number is larger than the precision that can be stored in an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04107: substring of field *string* for column *string* is not a character type\n

Cause: A substring was specified for a field that which is not a character datatype. Only character fields may be used when specifying the substring transform.

Action: Verify the correct field was used in the STARTOF clause. Also verify that the correct datatype is specified for the field in the field list.

KUP-04108: unable to reread file *string*\n

Cause: The query that is executing requires that a data source for an external table be read multiple times. However, the data source is a sequential device that cannot be reread. Examples of this type of data source is a tape or pipe.

Action: There are a few ways around this problem. One is to rewrite the query so that the external table is referenced only once. Another option is to move the data source to a rereadable device such as a disk file. A third option is to load the data for the external table into a temporary table and change the query to reference the temporary table.

KUP-04109: specified path for directory object "*string*" is invalid

Cause: The default directory or a directory object specified for an input data file or an output dump, log, bad or discard file contains an invalid path name.

Action: Specify a valid path name for the directory object.

KUP-04116: Field name *stringstringstring* in the FIELD NAMES record in the data file is too long.

Cause: The field name exceeded the maximum of 128 characters.

Action: Specify at most 128 characters.

KUP-04117: Field name *stringstringstring* was not found in the access parameter field list or table.

Cause: The listed field name in the FIELD NAMES record of the data file was not found in the access parameter field list or in the table columns. The next error message, if any, lists the name of the data file where the error was found.

Action: Verify that the field name in the FIELD NAMES record is correct. If that is correct, verify that the external table is defined correctly and that the access parameter field list is also correct.

KUP-04118: operation "*string*", location "*string*"

Cause: This message provides information about the previous messages.

Action: Refer to the help for the previous message for more information.

KUP-04119: Error *number* opening directory for wild card search: *string*

Cause: An error occurred while trying to open a directory to look for files that match a wild card specification.

Action: See messages that follow for more details.

KUP-04120: Error *number* fetching count of files for wild card search in directory *string*

Cause: An error occurred while trying to retrieve the count of files matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-04121: Error *number* fetching file names for wild card search in directory *string*

Cause: An error occurred while trying to retrieve the names of files matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-04122: Error *number* finishing wild card search in directory *string*

Cause: An error occurred while trying to finish a search for files that match a wild card specification the directory. matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-04123: ending XML tag *string* was not found before end of file

Cause: A corresponding XML end tag was not found before the end of file.

Action: Add the missing XML end tag.

KUP-04124: no file name specified for location *number* in LOCATION clause

Cause: An empty string was specified for a file name in the LOCATION clause.

Action: Either specify a valid file name or remove that entry from the LOCATION clause.

KUP-04125: no directory object specified for location *number* in LOCATION clause

Cause: An empty string was specified for a directory object in the LOCATION clause and the DEFAULT DIRECTORY clause was not specified.

Action: Either specify the name of a valid directory object or specify the DEFAULT DIRECTORY clause.

KUP-04126: invalid CREDENTIAL parameter *string* specified

Cause: An invalid name for the CREDENTIAL parameter was specified.

Action: Specify a valid CREDENTIAL parameter in the external table access parameters. A schema name cannot be specified as part of a CREDENTIAL name.

KUP-04127: invalid URI *string* specified in LOCATION clause

Cause: An invalid URI was specified in the LOCATION clause.

Action: Verify that each URI specified in the LOCATION clause is valid.

KUP-04128: An unknown error occurred while retrieving URI objects.

Cause: This is an internal error.

Action: Contact Oracle Support Services.

KUP-04129: no file name specified in LOCATION clause

Cause: An empty string was specified for a file name in the LOCATION clause.

Action: Either specify a valid file name or remove that entry from the LOCATION clause.

KUP-04130: The NUMBER FORMAT clause was specified multiple times.

Cause: The NUMBER FORMAT clause was specified more than once.

Action: Do not specify the NUMBER FORMAT clause more than once.

KUP-04131: The NUMBER FORMAT clause is not supported for column *string*.

Cause: An attempt was made to specify the NUMBER FORMAT clause for a column that did not involve a character to Oracle NUMBER conversion.

Action: Do not specify the NUMBER FORMAT clause unless conversion from a character value to Oracle NUMBER is required.

KUP-04132: Decompression failed for file *string/string*.

Cause: Decompression failed for the specified file.

Action: Check the compression type access parameter to be sure compression specified for the file is correct.

KUP-04133: invalid string specified for NUMERIC_CHARACTERS clause

Cause: The string specified for the NUMERIC_CHARACTERS clause was converted to the character set of the data files. The resulting string must consist of two single-byte characters.

Action: Specify two single byte characters in the NUMERIC_CHARACTERS clause.

KUP-04134: The NUMERIC_CHARACTERS clause was specified multiple times

Cause: The NUMERIC_CHARACTERS clause was specified more than once.

Action: Do not specify the NUMERIC_CHARACTERS clause more than once.

KUP-04135: insufficient privileges on CREDENTIAL string

Cause: An attempt was made to access an external table without the required EXECUTE privileges on the credential object.

Action: Ask your database administrator to grant you the necessary EXECUTE privileges on credential objects and retry the operation.

KUP-04136: invalid combination of disk and Uniform Resource Identifier (URI) file types in location clause

Cause: An attempt was made to use both disk and URI files in the external table location clause.

Action: Use either disk or URI files only.

KUP-04137: invalid JSON document(string): string

Cause: An attempt was made to specify file name columns with an invalid JavaScript Object Notation (JSON) document."

Action: Specify a valid JSON document.

KUP-04138: invalid datatype found for column: string

Cause: An invalid datatype was specified for a file name or hidden column.

Action: Specify a valid datatype.

KUP-04200: unable to connect to Kafka 'cluster': string

Cause: An attempt to create a connection to a Kafka 'cluster' failed.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Common failures include a bad bootstrap_servers argument or security information if connected to a secure Kafka 'cluster'.

KUP-04201: Unable to get Kafka record key associated with a Kafka record. The internal error message is [number: string]

Cause: An attempt to get a record key failed while reading Kafka records from a Kafka 'topic' on behalf of a DBMS_KAFKA application.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER.

KUP-04202: Unable to get Kafka record value associated with a Kafka record. The internal error message is [number: string]

Cause: An attempt to get a record value failed while reading Kafka records from a Kafka 'topic' on behalf of a DBMS_KAFKA application.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER.

KUP-04203: composite size of Kafka record *number* exceeded buffer size limit *number*

Cause: The composite size of a Kafka record exceeded the size of the external table buffer limit.

Action: The composite size of a Kafka composite record includes the size of the Kafka record 'key' and 'value', Kafka metadata fields, and field and record terminators. See the documentation about the limitations of composite record size specific to the type of records (e.g. JSON, AVRO, DSV) retrieved from a Kafka 'cluster'.

KUP-04204: Unable to fetch 'topic' metadata from a Kafka 'cluster'. The internal error message is [*number: string*].

Cause: An attempt to retrieve 'topic' metadata from a Kafka 'cluster' failed when retrieving Kafka 'topic' and 'partition' information.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER.

KUP-04205: polling for a Kafka record exceeded time out limit *number* seconds, poll count *number*

Cause: Retrieval of a record from a Kafka 'cluster' timed out.

Action: Check for network performance issues, also check for Kafka 'cluster' availability, and for Kafka 'broker' performance issues.

KUP-04206: Unable to create a channel to read Kafka rows in *string* 'topic'. The internal error message is [*number: string*].

Cause: An attempt to open a channel to read Kafka records belonging to a 'topic' failed.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the 'topic' exists in the 'cluster'.

KUP-04207: Unable to read Kafka high and low 'watermarks' for *string* 'topic' in *number* 'partition' in *string* 'cluster'. The internal error message is [*number: string*].

Cause: An attempt to query Kafka to retrieve high and low 'watermarks' related to a specific Kafka 'topic' 'partition' failed.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the 'topic' exists in the Kafka 'cluster'.

KUP-04208: Unable to compute Kafka 'offset' for start epoch time *number* for *string* 'topic' in *number* 'partition'. The internal error message is [*number: string*].

Cause: An attempt to establish the Kafka 'offset' associated with a starting epoch time failed when initializing by time.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the 'topic' and 'partition' exist.

KUP-04209: Unable to compute the 'offset' for seek by epoch time *number* for string 'topic' in *number* 'partition'. The internal error message is [number: string].\n

Cause: An attempt to establish the Kafka 'offset' associated with a seek by epoch time failed.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the Kafka 'topic' and 'partition' exist.

KUP-04210: Unable to set position for reading Kafka records for string 'topic', *number* 'partition', at *number* 'offset'. The internal error message is [number: string].\n

Cause: An attempt to establish the first Kafka 'offset' for streaming records from a specific 'topic' 'partition' failed.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the Kafka 'topic' and 'partition' exist.

KUP-04211: Unable to retrieve list of Kafka 'topics' living in string 'cluster'. The internal error message is [number: string].\n

Cause: At attempt to get list of Kafka 'topics' living in a Kafka 'cluster' failed.

Action: Check the status of the Kafka cluster associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER.

KUP-04212: Unable to compute the end Kafka 'offset' for seek by epoch time *number* for string 'topic' in *number* 'partition'. The internal error message is [number: string].\n

Cause: An attempt to establish the end 'offset' of a Kafka 'topic' 'partition' failed when seeking by time.

Action: Check the status of the Kafka 'cluster' associated with the DBMS_KAFKA application by calling DBMS_KAFKA_ADM.CHECK_CLUSTER. Check to see if the Kafka 'topic' and 'partition' exist.

KUP-04213: DBMS_KAFKA generated views and external tables can only be queried by a DBMS_KAFKA application.\n

Cause: A query was executed against a DBMS_KAFKA table or view that was not a DBMS_KAFKA application.\n"

Action: Refer to DBMS_KAFKA documentation or contact Oracle Support.

KUP-04214: There is a failure to configure the Kafka session parameters for cluster string. The internal error message is [number: string].\n

Cause: There was an internal error configuring the Kafka session parameters.\n"

Action: Contact Oracle Support.

KUP-04215: There is a failure to connect to the cluster string. The internal error message is [number: string].\n

Cause: There was an error attempting to establish a connection to the Kafka cluster.\n"

Action: Check the availability of the Kafka cluster or contact Oracle Support.

KUP-04216: There is a failure to reconnect to the cluster string. The internal error message is [number: string].\n

Cause: There was an error attempting to join to an existing connection to the Kafka cluster.\n"

Action: Check the availability of the Kafka cluster or contact Oracle Support.

KUP-04217: There is a failure to join a connection to the cluster *string*. The internal error message is [number: string].\n

Cause: There was an error attempting to join to an existing connection to the Kafka cluster.\n"

Action: Check the availability of the Kafka cluster or contact Oracle Support.

KUP-04218: There is a failure to disconnect from the cluster *string*. The internal error message is [number: string].\n

Cause: There was an error attempting to drop a connection to the Kafka cluster.\n"

Action: Check the availability of the Kafka cluster or contact Oracle Support.

KUP-04219: There is a failure to retrieve any records from the cluster. The internal error message is [number: string].\n

Cause: There was an error attempting to fetch a record from the Kafka cluster.\n"

Action: Check the availability of the Kafka cluster. Check that the Kafka topic does not contain large records that exceed the default allowed size. Contact Oracle Support.

KUP-05001: shift based character sets not supported with CSV format files\n

Cause: Comma-separated value (CSV) was being used with a shift based character set.

Action: Either use a non-shift based character set or do not use CSV format files.

KUP-05002: There are no matching files for any file specification in the LOCATION clause.\n

Cause: One or more file specifications including wild cards were specified in the LOCATION clause, but none of the files matched any of the specifications.

Action: Check to make sure that the file specifications are correct and that one or more files match the file specifications and then try the operation again.

KUP-05003: Warning: There are no matching files for this specification.\n

Cause: No matching files were found for the LOCATION clause specification listed in the previous error message.

Action: No action is required. However, if you expected the LOCATION clause specification to match one or more files, check the specification and the files in the directory to make sure that they are correct. If needed, try the operation again.

KUP-05004: Warning: Intra source concurrency disabled because parallel select was not requested.\n\n

Cause: Intra source concurrency can only be used when parallel select has been requested.

Action: No action is required this message is informational.

KUP-05005: Warning: Intra source concurrency disabled because a field of type RECNUM exists.\n\n

Cause: Intra source concurrency cannot be used with RECNUM fields.

Action: No action is required this message is informational.

KUP-05006: Warning: Intra source concurrency disabled because a complex terminator string is being used.\n\n

Cause: Intra source concurrency cannot be used with terminators where replicated substrings in the terminator could cause ambiguity during record parsing.\n\n"

Action: No action is required this message is informational.

KUP-05007: Warning: Intra source concurrency disabled because the preprocessor option is being used.\n\n

Cause: Intra source concurrency cannot be used with the PREPROCESSOR option.

Action: No action is required this message is informational.

KUP-05008: Warning: Intra source concurrency disabled because the input data is in DELIMITED record format and the character set is neither fixed width nor UTF8.\n\n

Cause: Intra source concurrency cannot be used with the DELIMITED record format if the character set is neither fixed width or UTF8.

Action: No action is required this message is informational.

KUP-05009: Warning: Intra source concurrency disabled because the input data is in VARIABLE record format.\n\n

Cause: Intra source concurrency cannot be used with the VARIABLE record format.

Action: No action is required this message is informational.

KUP-05010: Warning: Intra source concurrency disabled because the input data is in CSV format with embedded record delimiters/terminators.\n\n

Cause: Intra source concurrency cannot be used with the CSV record format that has embedded record delimiters/terminators.

Action: No action is required this message is informational.

KUP-05011: Size of file *string* in directory *string* has changed from *number* to *number*.\n

Cause: While executing a query against an external table, the size of one of the files changed. Changing the data in a file during execution can cause incorrect or inconsistent results.

Action: Do not modify the data files for an external table while querying the table.

KUP-05012: File *string* in directory *string* is no longer a sequential file.\n

Cause: While executing a query against an external table, the file went from being a sequential file at the beginning of the query to a non-sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

KUP-05013: File *string* in directory *string* is now a sequential file.\n

Cause: While executing a query against an external table, the file went from not being a sequential file at the beginning of the query to being a sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

KUP-05014: Warning: Intra source concurrency disabled because the URLs specified for the Cloud Service map to compressed data.\n\n

Cause: Intra source concurrency was used with a Cloud Service URL that maps to compressed data.

Action: No action is required, this message is informational.

KUP-05015: Shift-based character sets not supported with TRUNCATE_COLUMNS option.\n

Cause: TRUNCATE_COLUMNS option was being used with a shift-based character set.

Action: Either use a nonshift-based character set or do not use a larger field width for the columns and do not use TRUNCATE_COLUMNS option.

KUP-05016: Error in character set translation from *string* to UTF8 at byte range [number-number] in *string*

Cause: Source character set cannot be translated to UTF8.

Action: Make sure source data has valid character set and it is not corrupt.

KUP-06000: Unable to process LOB Location Specifier field.\n

Cause: The LOB Location Specifier field was not processed correctly.

Action: Make sure the LOB Location Specifier is formatted correctly.

KUP-06001: LOB Location Specifier for column *string* - invalid offset or length.\n

Cause: The LOB Location Specifier contained an invalid offset or length.

Action: The offset must not be a negative value. The length can only be negative if a value of -1 (for a NULL LOB) is specified.

KUP-06002: LOB Location Specifier for column *string* must be loaded into a LOB column.\n

Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the destination column is a LOB data type.

KUP-06003: LOB Location Specifier file name cannot contain a directory path.\n

Cause: The file name for a LOB Location Specifier field contained a directory path.

Action: Make sure the file name specified does not contain any forward slash or backslash characters.

KUP-06004: The CREDENTIAL access parameter must accompany COMPRESSION access parameter.\n

Cause: The COMPRESSION access parameter was specified but the CREDENTIAL access parameter was not present.

Action: Specify the CREDENTIAL access parameter in addition to the COMPRESSION access parameter.

KUP-06005: The CREDENTIAL access parameter was specified multiple times.\n

Cause: The CREDENTIAL access parameter was specified more than once.

Action: The CREDENTIAL access parameter should only be specified once. specified.

KUP-11000: file truncated error\n

Cause: A truncated file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11001: files not from the same unload operation

Cause: Files used for the load operation were not from the same unload operation.

Action: Verify the files used are from the same unload operation.

KUP-11002: unable to read data chunk *string*

Cause: A read or seek to this data chunk was not possible. This chunk may not have existed.

Action: Verify the files used for the load operation are correct.

KUP-11003: bad data encountered while reading from file *string*

Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table. The message that follows this one displays the name of the column and the start of the data for the column that could not be converted. The row containing the bad data is rejected and not included as a row in the external table.

Action: If the row containing the bad data should not be filtered out, then modify the definition of the external table so that the datatypes of the columns match the datatypes of the fields in the data file.

KUP-11004: requested version *string* not supported by ORACLE_DATAPUMP

Cause: This database version (defaulted to COMPATIBLE if not user-specified) was not supported by ORACLE_DATAPUMP external table access driver. Note: Database versions before 9.2 were not supported.

Action: Specify a supported version and rerun the operation.

KUP-11005: error seeking in file: *string*

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

KUP-11006: file truncated error in *string*

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11007: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11008: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11009: data for row: *string* \n

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

KUP-11010: unable to open at least one dump file for fetch\n

Cause: None of the files in the LOCATION clause can be opened for a fetch on an external table.

Action: A fetch operation on an external table in SQL mode requires that at least one file could be opened. Check that the directory object and file names to the dump files are correct.

KUP-11011: the following file is not valid for this load operation\n

Cause: This file could not be used for this load operation. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from the same unload operation and that the unload was successful.

KUP-11012: file *string* in *string* already exists\n

Cause: The specified file could not be used for this unload because that would mean overwriting an existing file.

Action: Specify a file that does not currently exist.

KUP-11013: internal number in header in file *string* is not valid\n

Cause: The specified file could not be used for this operation because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

KUP-11014: internal metadata in file *string* is not valid\n

Cause: The specified file could not be used for this operation because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the LOCATION clause are the correct dump files to use.

KUP-11015: error in unloading or loading data\n

Cause: An error has occurred in a stream unload or load operation.

Action: Contact Oracle Support Services.

KUP-11016: database version in file *string* is not valid\n

Cause: The specified file could not be used for this fetch because its database version was not compatible with the database version in the other files in the LOCATION clause.

Action: Verify all the files in the LOCATION clause were populated with compatible database versions.

KUP-11017: file *string* not found

Cause: The file was not found.

Action: Verify the correct file (path and file name) was specified.

KUP-11018: file *string* not a valid dump file

Cause: This file did not have the correct file format. It could not be used for an external table fetch operation.

Action: Verify this file is from a SQL mode external table populate operation and that the operation was successful.

KUP-11019: the following file is not valid for this fetch operation

Cause: A file could not be used for this fetch. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from successful populate operations. If the files were generated from various populate operations, then verify that those were done with common attributes such as with the same tables and compatible database versions.

KUP-11020: header in file *string* may not contain correct information

Cause: The header for ORACLE_DATAPUMP file was invalid.

Action: Ensure that you have specified the correct file.

KUP-11021: header in file *string* has an incompatible version number

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

KUP-11023: specified path for directory object "*string*" is invalid

Cause: The default directory or a directory object specified for a dump or log file contained an invalid path name or was null.

Action: Specify a valid path name for the directory object.

KUP-11024: This external table can only be accessed from within a Data Pump job.

Cause: An attempt was made to access a temporary external table that was created by Data Pump to be used internally during the execution of an export or import job.

Action: None

KUP-11025: LOCATION clause is not allowed for ORACLE_HIVE external tables.

Cause: The LOCATION clause was specified for an ORACLE_HIVE access driver. The ORACLE_HIVE access driver gets LOCATION information from the metadata in the Hive catalog.

Action: Omit the LOCATION clause when creating an external table using the ORACLE_HIVE access driver.

KUP-11026: bad header format at start of granule [number] detected

Cause: The granule header was read but did not appear to be formatted correctly. The incorrect format could be due to a dump file corruption.

Action: Contact Oracle Support Services.

KUP-11027: A stream format internal error was detected unloading data "string".ln

Cause: An error occurred in a stream unload operation.

Action: Contact Oracle Support Services.

KUP-11028: Data load operation detected data stream format error number for granule number.ln

Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

KUP-11029: Data load operation detected data stream format error for granule number, attempting to continue.ln

Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

KUP-11030: ambiguous filename column "string" found in string

Cause: A filename column was ambiguous when a comparison found multiple matches with column names in the table or location clause.

Action: Change the case of the filename column to match the case of its associated table or location column name.

KUP-11031: duplicate file name column "string" found

Cause: A duplicate filename column was found in the filename columns access parameter.

Action: Remove the duplicate filename column from the filename columns access parameter.

KUP-11032: invalid file name columns, string

Cause: The path in the location clause either contained mixed file name column formats ("/key=value/" and "/value/") or there were not enough elements in the path to support the file name columns specified.

Action: Use only a single type of file name column format or correct the element mismatch between the file name column definition and the location path name.

KUP-11501: ORACLE_BIGDATA access driver does not support modifying access parameters

Cause: A select of an ORACLE_BIGDATA external table used the EXTERNAL MODIFY clause to specify additional access parameters. An ORACLE_BIGDATA external table does not support modification of access parameters.

Action: Remove the EXTERNAL MODIFY clause from the SELECT statement.

KUP-11502: unexpected error loading Java Virtual Machine

Cause: The external procedure agent for the external table access driver was unable to load the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11503: cannot access cluster

Cause: An attempt was made to access table data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Contact the database administrator about gaining access to ORACLE_HIVE and ORACLE_HDFS external data sources.

KUP-11504: error from external driver: *string*

Cause: An error occurred while attempting to access data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11505: invalid value "*string*" specified for access parameter "*string*"

Cause: A NULL or invalid value was supplied for the access parameter.

Action: Correct the invalid value and retry the operation.

KUP-11506: cannot change cluster in the same session

Cause: An attempt was made to change the cluster in the same session. The first access to an Oracle BigData external table within a database session establishes the cluster for that session. This is determined by the cluster specified in the table's access parameters or, if no cluster was specified in the table's access parameters, by the default cluster set in the Oracle Big Data configuration file. Accessing an Oracle BigData external table in a different cluster within the same database session is not allowed.

Action: Establish a new database session and retry the operation.

KUP-11507: missing separator at offset *number* in line "*string*"

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases where a value must be supplied with the property name, the two must be separated by an equal sign (=) or a colon (:).

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11508: invalid character at offset *number* in line "*string*"

Cause: An invalid multibyte UTF character was encountered in the access parameters of an Oracle Big Data external table.

Action: Contact Oracle Support Services.

KUP-11509: invalid escape sequence at offset *number* in line "*string*"

Cause: An invalid escape sequence was encountered in the access parameters of an Oracle Big Data external table. This may be caused by \unnnn Unicode code point that does not generate a valid Unicode character.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11510: missing value at offset *number* in line "*string*"\n

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases, where a value must be supplied with the property name, the two must be separated by an equal sign (=) or a colon (:). In this instance, a property name and a separator were found without a corresponding value.

Action: Correct the problem as suggested by the error message and retry the operation. Supply a value if the property name requires one. Otherwise, remove the separator and supply only the property name.

KUP-11511: failed to initialize logging in external driver\n

Cause: The external driver code could not initialize a context for logging messages. This usually indicates a problem with the value of the Java classpath used by the external driver.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11516: memory allocation error while initializing the Java Virtual Machine\n

Cause: An error occurred while trying to allocate memory in order to initialize the Java Virtual Machine in the external driver.

Action: Contact your system administrator.

KUP-11521: invalid value when attempting to modify access parameter "*string*"\n

Cause: An attempt was made to modify an invalid access parameter.

Action: The only valid access parameters which can be modified are:
"com.oracle.bigdata.log.qc" "com.oracle.bigdata.log.exec"
"com.oracle.bigdata.log.opt" "com.oracle.bigdata.debug"
"com.oracle.bigdata.datamode" Correct the invalid access parameter and retry the operation.

KUP-11523: external driver failed with unexpected error: *string*\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error condition.

Action: Contact Oracle Support Services.

KUP-11524: initialization failure for Java Native Interface (JNI) call\n

Cause: The external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11525: The external driver was unable to attach to the Java Virtual Machine.

Cause: The external driver encountered an unexpected error while trying to attach a thread to the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11526: memory allocation failure for Java Native Interface (JNI) call

Cause: An error occurred while trying to allocate memory in order to make a Java Native Interface (JNI) call in the external driver.

Action: Contact your system administrator.

KUP-11527: The external driver was unable to attach to shared memory.

Cause: The external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11528: access to cluster "string" is not properly defined

Cause: Access to an ORACLE_HIVE or ORACLE_HDFS external data source was not defined as documented.

Action: Contact the database administrator.

KUP-11529: class "string" is invalid for string external tables

Cause: An invalid value was specified for the COM.ORACLE.BIGDATA.CLASS access parameter for an ORACLE_HIVE or ORACLE_HDFS external table access driver. The ORACLE_HIVE and ORACLE_HDFS access drivers use a built-in class in order to access their data source.

Action: Omit the COM.ORACLE.BIGDATA.CLASS access parameter when creating an external table using the ORACLE_HIVE or ORACLE_HDFS access driver. Alternatively, the builtin class names, COM.ORACLE.BIGDATA.AD.HIVE and COM.ORACLE.BIGDATA.AD.HDFS, may be used when creating an external table using the ORACLE_HIVE or ORACLE_HDFS access driver.

KUP-11530: value for com.oracle.bigdata.bufferize larger than maximum allowed value number

Cause: The com.oracle.bigdata.bufferize was specified for the external table and the value specified was larger than the maximum allowed value.

Action: Change the value specified for com.oracle.bigdata.bufferize to be smaller than the maximum value reported in the message.

KUP-11531: missing mandatory property "string" in the Oracle Big Data configuration file

Cause: A mandatory property was not found in the Oracle Big Data configuration file.

Action: Contact your system administrator to modify the Oracle Big Data configuration file so that it contains all of the required information.

KUP-11532: duplicate property "string" in the Oracle Big Data configuration file

Cause: A duplicate property was found in the Oracle Big Data configuration file.

Action: Contact your system administrator to remove all duplicate properties from the Oracle Big Data configuration file.

KUP-11533: error collecting JVM information: *string*\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to collect information such as memory usage from the Java Virtual Machine (JVM).

Action: Contact your system administrator.

KUP-11534: external driver JNI initialization failure: *string*\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator.

KUP-11535: XAD version "*string*" incompatible with JXADProvider version "*string*"\n

Cause: A version mismatch between the ORACLE_HIVE or ORACLE_HDFS access driver and the external driver Java components has been detected.

Action: Contact your system administrator.

KUP-11536: external driver MTA initialization failure: *string*\n

Cause: The ORACLE_HIVE or ORACLE_HDFS multithreaded external agent encountered an initialization failure that prevented it from starting.

Action: Contact your system administrator.

KUP-11542: error initializing dynamic-link librarian: *string*\n

Cause: An error occurred while trying to initialize the dynamic-link librarian needed to access the Java Virtual Machine library.

Action: Contact Oracle Support Services.

KUP-11543: error accessing the Java Virtual Machine library: *string*\n

Cause: An error occurred while trying to open the Java Virtual Machine library in the external driver.

Action: Contact your system administrator.

KUP-11544: error locating symbol address in the Java Virtual Machine library: *string*\n

Cause: An error occurred while trying to locate a symbol address in the Java Virtual Machine library.

Action: Contact your system administrator.

KUP-11545: unable to set NLS *string* to required value *string*

Cause: An error occurred while the ORACLE_HIVE or ORACLE_HDFS external agent was trying to set up its NLS environment.

Action: Contact Oracle Support Services.

KUP-11546: external driver unable to attach to shared memory: [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11547: external driver unable to detach from shared memory: [string] [string] [string] [string] [string] [string]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to detach from a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11548: error encountered creating shared memory: [string] [string] [string] [string] [string] [string]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to create a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11549: error encountered destroying shared memory: [string] [string] [string] [string] [string] [string]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to destroy a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11550: invalid JNI version "string" encountered while initializing the Java Virtual Machine\n

Cause: A Java Native Interface (JNI) version error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11551: error generating file name for file "string" in directory "string": string\n

Cause: An error occurred while trying to generate a full file name specification.

Action: Contact your system administrator.

KUP-11552: error initializing the Java Virtual Machine: string\n

Cause: An error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11553: The Oracle Big Data configuration file "string" is empty.\n

Cause: There was no content in the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11554: error accessing the Oracle Big Data configuration file "string": string\n

Cause: A file I/O error occurred while attempting to access the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11555: error opening the Oracle Big Data configuration file "string": string\n

Cause: A file I/O error occurred while trying to open the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11556: error reading the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while trying to read from the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11557: error closing the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while trying to close the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11558: invalid cluster name "*string*"\n

Cause: An invalid cluster name was specified for the external table in the com.oracle.bigdata.cluster access parameter. The name must contain only alphanumeric characters or the underscore character. In Oracle Database 12c release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Correct the cluster name for the external table and retry the operation.

KUP-11559: invalid default cluster name "*string*"\n

Cause: An invalid cluster name was specified for the bigdata.cluster.default property in the Oracle Big Data configuration file. The name must contain only alphanumeric characters, the hyphen or underscore character. In Oracle Database 12c release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Contact your system administrator to correct the value of the bigdata.cluster.default property in the Oracle Big Data configuration file and retry the operation.

KUP-11560: error accessing the Oracle Big Data cluster directory "*string*": *string*\n

Cause: A file I/O error occurred while attempting to access the Oracle Big Data cluster directory file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11561: error while attempting to allocate Java memory: *string*\n

Cause: An error occurred while trying to allocate Java memory to the external driver.

Action: Examine the accompanying text in the error message and contact your system administrator.

KUP-11562: error while attempting to allocate *string* bytes of native memory\n

Cause: An error occurred while trying to allocate native memory to the external driver.

Action: Contact your system administrator.

KUP-11600: unable to find first record in a split with I/O buffer size of *number* kilobytes

Cause: The access driver was unable to find the first record in the split for a Hadoop Distributed File System (HDFS) file.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

KUP-11601: record exceeded the maximum record size of *number* kilobytes

Cause: The access driver found a record in a Hadoop Distributed File System (HDFS) file that is longer than the largest size allowed for this table.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

KUP-11602: conversion error for column *string* in column array row *number*

Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Make sure the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11603: no directory object specified for bad file

Cause: The file name in the BADFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the BADFILE clause or specify the DEFAULT DIRECTORY clause.

KUP-11604: no directory object specified for log file

Cause: A log file for an external table did not have a directory object.

Action: Either specify a directory object as part of the log file name in the ACCESS PARAMETERS or query, or specify the DEFAULT DIRECTORY clause in the ACCESS PARAMETERS or query. ORACLE_LOADER and ORACLE_DATAPUMP access drivers will create a log file by default. If you do not want a log file, then use the NOLOG clause in the access parameters.

KUP-11605: no directory object specified for discard file

Cause: The file name in the DISCARDFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the DISCARDFILE clause or specify the DEFAULT DIRECTORY clause.

KUP-11606: no directory object specified for PREPROCESSOR file

Cause: The file name in the PREPROCESSOR clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the PREPROCESSOR clause or specify the DEFAULT DIRECTORY clause.

KUP-11607: sequential data files were not supported by BIGDATA access driver, string\n

Cause: The file names in the message was a sequential file. The BIGDATA access driver does not support sequential files.

Action: Modify the files listed in the LOCATION clause to omit the sequential file.

KUP-11608: conversion error for column string in file string\nstring row number\n

Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Ensure that the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11609: conversion error for column string in file string\nstring\n

Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Ensure that the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11610: field setting error for column string in file string\nstring row number\n

Cause: There was a field setting error while attempting to parse the data in the data file.

Action: Ensure that the data format for the field is correct.

KUP-11611: field setting error for column string in file string\nstring\n

Cause: There was a field setting error while attempting to parse the data in the data file.

Action: Ensure that the data format for the field is correct.

KUP-11612: quoting error\n

Cause: The field was not properly quoted.

Action: Ensure that the use of quotes for the field is correct.

KUP-11613: character overflow error\n

Cause: The character field size was exceeded.

Action: Reduce the data size or increase the field size.

KUP-13000: compression type string not supported\n

Cause: File compression codec cannot be decompressed by Oracle.

Action: Specify a supported compression codec.

KUP-13001: unable to read string file string: string

Cause: Trying to open the big data file failed. The file either was not a big data file or it was corrupted.

Action: Ensure that the files named in the location clause are valid big data files.

KUP-13002: invalid value *string* for access parameter *string*\n

Cause: The value given to the access parameter was not valid.

Action: Try another value.

KUP-13003: cannot retrieve metadata for column *string*\n

Cause: This problem might be caused by corrupted column metadata.

Action: None

KUP-13004: unsupported column type encountered for column *string*\n

Cause: The data type of the indicated column is currently not supported.

Action: None

KUP-13005: cannot fetch access parameter *string*\n

Cause: An unknown error was encountered while trying to fetch the value of the specified parameter.

Action: Check the access parameter syntax in the table definition.

KUP-13006: encountered a file with unspecified URI\n

Cause: A file was defined with an empty URI.

Action: Check whether all files in the table definition have URIs.

KUP-13007: cannot open file *string*\n

Cause: This problem might occur for several reasons.

Action: Check whether the file exists and look for additional logs and tracing information.

KUP-13008: cannot set iterator to vector in file *string*\n

Cause: This might be an indication of a corrupted big data file.

Action: Look for additional logs and tracing information.

KUP-13009: cannot initialize IO context\n

Cause: This is an internal error. It might occur when there is limited available memory.

Action: None

KUP-13010: cannot retrieve granule information\n

Cause: This could happen due to an internal error.

Action: Look for additional logs and tracing information.

KUP-13011: encountered a vector in file *string* with more than %li rows\n

Cause: A vector exceeded the maximum supported number of rows.

Action: Create file with smaller vectors.

KUP-13012: cannot configure granules, no input files\n

Cause: No bigdata files found.

Action: Please verify files in the table definition.

KUP-13014: HTTP request for *string* failed: *string*, reference: *string*

Cause: An HTTP request for a given URL failed.

Action: Ensure the URL is correct, that the credential used is valid or required, that the proxy, if necessary, is correctly set, and that proper ACLs are in place to allow access.

KUP-13015: failed to get an HTTP response for *string*: *string*, reference: *string*

Cause: An HTTP response for a specified URL could not be retrieved. The server may have disconnected or sent some data that could not be understood.

Action: Check the error reason which indicates the operation can be tried again later, or that a configuration issue is apparent. Use the reference code if set for any inquiries.

KUP-13016: unexpected HTTP response status for *string*: *string*, reference: *string*

Cause: The HTTP request returned an unexpected response.

Action: Ensure that the URL is in compliance if the response status code is in the 300 range. If the response status code is in the 400 range, ensure that the correct credentials are applied and that the object is accessible on the remote server. If the response status code is in the 500 range, ensure that the remote service is available, that the proxy server is working correctly, and that the remote bandwidth quotas are sufficient. Use the reference code if set for any inquiries.

KUP-13017: invalid URI for service *string*: *string* is required in *string*

Cause: The specified universal resource identifier (URI) was incorrectly formulated for the targeted service.

Action: Ensure that the URI is formulated correctly.

KUP-13018: IO read failed for *string*: *string*, reference: *string*

Cause: Read returned less bytes than expected.

Action: Check the (remote) service is up and reachable, and that the requested resource is complete and undamaged.

KUP-13019: IO read failed for *string*: *string*, reference: *string*

Cause: An attempt was made to request more data than what was available.

Action: Ensure that the object being read is not modified while reading.

KUP-13020: IO read failed for *string*: *string*, reference: *string*

Cause: Positioning the file stream to return a location failed.

Action: Check the requested resource is complete and undamaged and that positionings are supported by the (remote) service.

KUP-13021: IO read failed for *string*: *string*, reference: *string*

Cause: The underlying read function returned an error.

Action: Ensure that the network is working properly, and that the requested resource is available.

KUP-13022: requested object *string* not found

Cause: The LOCATION clause pointed to a remote object that did not exist.

Action: Check whether the object exists in the remote storage or that its name is entered correctly.

KUP-13023: nothing matched wildcard query *string*

Cause: The LOCATION clause used a wildcard expression that failed to match any objects on the remote storage.

Action: Check whether the expression is correct and that the objects exist on the remote storage.

KUP-13024: incompatible URIs *string* and *string* found in LOCATION clause

Cause: At least one of the specified universal resource identifiers (URI) was incorrectly formulated. All URIs in the location clause must be the same type.

Action: Ensure that the URIs specified are all of the same type.

KUP-13025: failed to begin HTTP request for *string*: *string*, reference: *string*

Cause: A configuration problem prevented the request to be made.

Action: The given ORA error code describes the problem encountered, refer to the error cause and action.

KUP-13026: failed to establish connection for *string*: *string*, reference: *string*

Cause: A configuration problem prevented the request to be made.

Action: The given ORA error code describes the problem encountered, refer to the error cause and action.

KUP-13027: unable to establish connection for *string*: *string*, reference: *string*

Cause: A problem occurred while attempting to connect.

Action: Ensure the URL is correct, that the proxy, if necessary, is correctly set, and that proper ACLs are in place to allow access.

KUP-13028: cannot write POST data for *string*: *string*, reference: *string*

Cause: Sending the POST data for the HTTP request failed.

Action: Ensure the URL is correct and that the remote system is available and configured to accept POST requests.

KUP-13029: cannot create request, network library unavailable

Cause: The system is improperly configured.

Action: Ensure the system is properly installed, all libraries relinked and installation files are undamaged.

KUP-13030: cannot create request, setting proxy configuration failed

Cause: The system is improperly configured.

Action: Verify the values for the HTTP_PROXY and NO_PROXY properties are valid.

KUP-13031: cannot create request, setting wallet configuration failed

Cause: The system is improperly configured.

Action: Verify the wallet property points to a valid wallet file.

KUP-13032: IO read failed for *string*: *string*, reference: *string*

Cause: The underlying read function returned an error.

Action: Ensure that the network is working properly, and that the requested resource is available.

KUP-13033: timeout waiting for available resources to offload query, reference: *string*

Cause: The pool of available offload servers is empty.

Action: Ensure offload servers are available. Check resource limits and other pending queries offload server usage.

KUP-13034: remote host appears not to be a supported offload server, reference: *string*

Cause: The remote contacted host did not identify itself as an offload server, or as a supported offload server.

Action: Ensure access to the remote host is permitted and possible by e.g. proxy servers, and that a correct tracker url is setup.

KUP-13035: problem handling offload server response, reference: *string*

Cause: The interaction between database and offload server went wrong. The database could not understand or handle the message received.

Action: Verify the health of the offload server, use the given reference for further support.

KUP-13036: offload server failed to execute task, reference *string*

Cause: The offload server could not complete the request because one of the sub-tasks failed after repeated tries.

Action: Retry the query, if the issue persists, use the reference given when asking for support.

KUP-13037: wildcard listing not supported on non-REST or non-ObjectStorage uri *string*

Cause: The LOCATION does not point to a REST target, or a REST target that is not of ObjectStorage type.

Action: Ensure that the LOCATION is of type REST, and that it is pointing to a supported ObjectStorage endpoint.

KUP-13038: IO read failed for *string*: maximum IO budget exceeded

Cause: An attempt to read more data failed because an IO budget was set and the read exceeded the limit.

Action: Evaluate the budget and the source files to see if the budget needs increasing.

KUP-13039: timeout waiting for available resources to execute query on offload server, reference: *string*

Cause: The pool of available offload servers was empty.

Action: Ensure offload servers are available. Check resource limits and other pending queries offload server usage.

KUP-13040: execution of *string* aborted: query timeout exceeded

Cause: Executing the query took longer than the set timeout.

Action: Evaluate the budget and the source files to see if the budget needs increasing.

KUP-13041: execution of *string* aborted: maximum IO budget exceeded

Cause: Executing the query took more bytes than the set IO limit.

Action: Evaluate the budget and the source files to see if the budget needs increasing.

KUP-13042: An error occurred during JSON reader initialization: *string*

Cause: Internal system error.

Action: Evaluate the health of the executing node and available memory.

KUP-13043: JSON reader parsing error: *string*

Cause: JSON file contains syntax errors.

Action: Evaluate the file and correct errors.

KUP-13044: invalid or unsupported traceflag: *string*

Cause: A provided traceflag could not be recognized as valid or supported.

Action: Check the traceflag or flags for their validity.

KUP-13045: Out of memory

Cause: System run out of memory

Action: Evaluate the health of the executing node and available memory.

KUP-13046: offload server was shut down, reference *string*

Cause: The offload server could not complete the request because it was explicitly shut down.

Action: Retry the query. If the issue persists, contact Oracle Support Services and supply the given reference.

KUP-13047: failed to start Transport Layer Security (TLS) for HTTP connection: *string*

Cause: Starting an HTTP connection failed to complete the security handshake.

Action: Ensure that the certificates match and can be verified, and that the client supports the necessary ciphers for the connection.

KUP-13048: tracker URL must be set for offloading via BDCell

Cause: The com.oracle.bigdata.tracker.url parameter was empty or unset.

Action: Define the parameter for the ORACLE_BIGDATA external table.

KUP-13049: delta sharing profile invalid: *string*

Cause: The delta sharing profile retrieved was invalid.

Action: Ensure that the profile is a valid JSON document conforming to the profile file format specification of delta sharing.

KUP-13051: Column *string* does not exist in source *string*

Cause: Requested column that did not exist in the file.

Action: Request an existing column.

KUP-13052: Cannot evaluate condition *string string string: string*

Cause: Cannot evaluate condition in predicates.

Action: Give a valid condition.

KUP-13053: Attempting to allocate memory beyond configured limit of *number bytes (number bytes in use)*.

Cause: More memory than allowed was requested to be allocated.

Action: Review the memory limit, and possibly increase it to allow completion of processing.

KUP-13054: Internal error: attempting to free a previously freed object.

Cause: The program tried to free a previously freed object. This is an internal error.

Action: Contact Oracle Support Services.

KUP-13055: Internal error: attempting to free an invalid or corrupted object.

Cause: The program tried to free an invalid or corrupted memory block. This is an internal error.

Action: Contact Oracle Support Services.

KUP-13056: Internal error: attempting to allocate 0 bytes.

Cause: The program tried to allocate 0 bytes of memory. This is an internal error.

Action: Contact Oracle Support Services.

KUP-13057: Implicit partitioning failed: *string*.

Cause: There was an error during implicit partitioning.

Action: Specify a query with valid location.

KUP-13058: Error while processing at offload server *string*.

Cause: There was an error raised during processing at the given offload server.

Action: Consult the follow-on error messages in the stack for details.

KUP-13059: Cannot open file *string*: explicit file format is required.

Cause: Only BigData file formats are auto detected.

Action: Use the com.oracle.bigdata.fileformat access parameter to specify the file type.

KUP-14000: invalid query: *string*

Cause: The specified query had invalid syntax.

Action: Specify valid syntax for the query.

KUP-14001: invalid or missing token

Cause: The specified query has an invalid token.

Action: Specify a valid token for the query.

KUP-14002: token is not supported: *string*

Cause: The specified token is not supported.

Action: Specify only supported tokens for the query.

KUP-14003: type mismatch in values provided in IN operator, expecting *string* and got *string*

Cause: The specified query had an IN operator with values of different type.

Action: Use the same type for all values in the IN operator.

LCD-00100 to LCD-00219

LCD-00100: internal error, argument [number]

Cause: An internal error has occurred

Action: Report it to your System Administrator immediately

LCD-00111: value not in legal range [string]

Cause: The value of the parameter is outside bounds

Action: Refer to the manual for the bounds on the parameter

LCD-00112: illegal integer radix specification [string]

Cause: Self Explanatory

Action: valid characters are 'd', 'h', 'D' and 'H'

LCD-00113: integer conversion error or negative integer [string]

Cause: A bad or negative integer was assigned to an integer parameter

Action: Self explanatory

LCD-00114: illegal boolean response [string]

Cause: You a value than TRUE or FALSE to a boolean parameter

Action: Boolean parameters only take TRUE or FALSE

LCD-00122: unrecognized keyword [string]

Cause: You have misspelled the parameter name

Action: Spell the parameter name correctly

LCD-00128: invalid positional parameter value [string]

Cause: An invalid positional parameter value has been entered

Action: Remove the invalid positional parameter

LCD-00161: ORACLE error (possible syntax error) parameter [string]

Cause: Possible syntax error. Additional messages follow.

Action: Correct the parameter in error.

LCD-00201: could not open specified filename [string]

Cause: The file specified does not exist

Action: Create an appropriate parameter file

LCD-00203: missing keyword [string]

Cause: A keyword is expected but none was found

Action: Add a keyword followed by an '=' sign and a parameter value

LCD-00204: left parenth and no parameter specified [string]

Cause: A parameter list was started but no parameter was specified

Action: Add an appropriate list of values and close the parameter list

LCD-00205: unbalanced parentheses [string]

Cause: Self explanatory

Action: Balance the parentheses

LCD-00206: positional parameter entered after keyword [string]

Cause: An '=' sign is missing

Action: All keywords must be followed by '=' signs

LCD-00207: nested parentheses encountered [string]

Cause: Only one set of parentheses is permitted

Action: Remove the nested parentheses

LCD-00208: unexpected keyword in value list [string]

Cause: A keyword was found instead of a value

Action: Insert an appropriate value for the given parameter

LCD-00209: missing value for keyword at end of string [string]

Cause: A keyword is specified with no value

Action: Specify a valid value for the keyword

LCD-00210: illegal assignment operator [string]

Cause: You used a sign other than '=' to assign a keyword a value

Action: Use only the '=' sign

LCD-00211: unexpected delimiter [string]

Cause: An invalid delimiter was found between values

Action: A comma or a space is a valid delimiter

LCD-00212: runaway quoted string [string]

Cause: The parameter value was quoted on the left side but not on the right

Action: Quote the parameter value on both sides

LCD-00215: parameter files nested too deep [string]

Cause: Too many levels of indirection of file parameters. Maximum is 3.

Action: Reduce the level of indirection to less than 3

LCD-00217: failure while processing file parameter [string]

Cause: An error occurred while processing the specified file parameter

Action: Specific details will appear in other messages

LCD-00218: error in file [string]

Cause: An error occurred in the particular file.

Action: Refer to the other messages for the specific error.

LCD-00219: nested include file [*string*] is too large

Cause: There is a limit on the size of a parameter file, and it was exceeded. This limit is now 8192 bytes.

Action: Remove characters from the file to make it smaller, or use another level of nesting.

LFI-00002 to LFI-01525

LFI-00002: Out of memory. *string*

Cause: The File IO package failed in trying to dynamically allocate memory. function name is used for additional comments to indicate where, when and why the error occurred.

Action: Perform whatever actions necessary to make more memory available to the executing program.

LFI-00003: Internal exception code. icode = [*string*], [*string*].

Cause: Unknown - indicated by parameters. The first '%s' gives the internal exception code; the second is for any other additional comments.

Action: Report to the appropriate development group

LFI-00004: Call to *string* failed.

Cause: A function call has failed. This error is a generic message to show that the exception has occurred in a particular function function name. This allows the client to know the trace runtime calling sequence by examining the exception stack.

Action: See the accompanying error messages for more information.

LFI-00005: Free some memory failed in *string*.

Cause: A call to free some memory in function function name has failed.

Action: See the accompanying error messages for more information and contact Oracle Worldwide Support immediately.

LFI-00006: Invalid parameter to function *string*.

Cause: The function was called with an invalid parameter.

Action: Check the function call to make sure that the correct parameters are being passed.

LFI-00007: NLSRTL's call failed. *string*.

Cause: LX calls return failure

Action: Check if our parameters are correct. Contact the appropriate group immediately if we parameters are valid.

LFI-00008: SLTS's initializing/terminating mutex failed for *string*.

Cause: SLTS's call return failure in function '%s'.

Action: Contact the appropriate development group.

LFI-00100: Unable to perform operation, file not opened in *string*.

Cause: The file has not been successfully opened at the time the operation is attempted.

Action: Check to make sure that the file exists (for read) or that the program has access to the write a file (for write). It is also possible that the file was just never opened

LFI-00101: Write failed, file cannot be written to.

Cause: The buffer write operation failed. Possibly due to incorrect parameters being passed in.

Action: Check the underlying error for more information.

LFI-00102: Unable to seek in sequentially accessed file.

Cause: The file was opened with the flag `LFILFA_SEQ` for sequential file operations. Use `seek` only on files that are opened with the `LFILFA_RANDOM` flag for random access.

Action: Check to see how the file is being opened and accessed and make the two operations consistent (that is, make them both operations either sequential or random).

LFI-00103: Seek operation failed.

Cause: The buffer seek operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the seek command and retry the operation.

LFI-00104: Read operation failed.

Cause: The buffer read operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the read command and retry the operation.

LFI-00105: Unable to add path.

Cause: One of the following might have caused the error: the current path might not be in the proper format the directory might not be in the proper format the name object might not have been initialized properly

Action: Check the format of the current path and the new directory; check that the name object was initialized properly.

LFI-00106: Path object holds more than one path.

Cause: The path object passed to `lfippth()` holds more than one path.

Action: Make sure that the path object used in `lfippth()` holds only one path.

LFI-00107: Open does not expect the file [*string*][*string*] to exist.

Cause: The flags specified for the open indicate that the file does not exist. However, the file does exist.

Action: Check to make sure that the options that were specified for the file are correct and that you do not expect that the file should exist. If so then find out why the file does exist.

LFI-00108: Open expect the file [*string*][*string*] to exist.

Cause: The flags specified for the open indicate that the file the file to exist and it does not.

Action: Check to make sure that the options that were specified for the file are correct and that you expect that the file should exist. If so then find out why the file doesn't.

LFI-00109: Unable to open file [string][string]. string.

Cause: Either: the process does not have the proper access rights to open the file the file is already open

Action: Check to make sure the proper access permissions are assigned. If they are and the file still cannot be opened, then contact Oracle Worldwide Support.

LFI-00110: Unable to initialize the Buffer Manager.

Cause: The Buffer Manager initialization routine failed; probably because memory was exhausted.

Action: See the accompanying error messages for more information.

LFI-00111: No other flags allowed in fixed length format.

Cause: The function lfigfo() was called with an invalid File ID Descriptor. The valid File ID Descriptors are LFISTDIN, LFISTDOUT, and LFISTDERR.

Action: Check the call to lfigfo() to make sure it is correct.

LFI-00113: Unable to initialize the Standard File object string.

Cause: The call to open the standard file object failed.

Action: Check the underlying errors for more information.

LFI-00114: Append is not allowed with string.

Cause: Attempting to append using certain options.

Action: Check the flag options to verify its usage.

LFI-00115: Buffer free failed.

Cause: Probably do to the buffer flush failing.

Action: See the accompanying error messages for more information.

LFI-00116: Unable to close file in operation string.

Cause: The file close operation failed.

Action: See the accompanying error messages for more information.

LFI-00117: Unable to rename file.

Cause: The rename operation failed. Rename is called when we are protecting a file by operating on a temp file.

Action: Check to make sure that the process has the correct access rights to perform a rename.

LFI-00118: Unable to change type to Unknown.

Cause: The function lfichty() was called to change the file extension to LFIEXUNK (Unknown). This is not a valid operation.

Action: Check why you are doing this. If the extension is already unknown then you do not need to do this. If you just want no extension then use the extension type LFIEXNONE.

LFI-00119: Unable to Abort an Unprotected file.

Cause: The Abort function lfiabt() was called on a file that was not opened as a protected file. As such the abort operation is not valid.

Action: Check to see if you intended to open the file as a protected file.

LFI-00120: Unable to parse root filename *string*.

Cause: The root filename that was given to `lfimknam()` is not in a format that this platform understands.

Action: Check the format of the filename and retry the operation.

LFI-00121: Only one of REPLACE, or PROT allowed for *opty*.

Cause: Two or more of the following open type options were specified for the `lfilini()` function: `LFILOPTY_REPLACE`, or `LFILOPTY_PROT`.

Action: Remove one or more the of options such that you are only passing in one of the three.

LFI-00122: Can only delete a file if we create it.

Cause: The delete file flag was specified for a file that was not created by this file operation. The ability to delete a file is not portable. As such the only deletion that is allowed by this package is if we know we want to delete the file when we create it.

Action: You can only delete a file that you create. If you need to delete a file that you do not create then you will have to find another means of doing so.

LFI-00123: Cannot access file Sequentially and Randomly.

Cause: Both the `LFILFA_SEQ` (sequential) and `LFILFA_RANDOM` (random) flags were specified during the file object creation. This is not allowed. Only one of the two may be specified.

Action: Choose how you wish to access the file. If you choose random you can still access sequentially by just not using the repositioning functions.

LFI-00124: No access mode was specified, default is sequential.

Cause: Neither `LFILFA_SEQ` (sequential) or `LFILFA_RANDOM` (random) were specified during file object creation.

Action: The default is sequential but this should be explicitly set.

LFI-00125: Random access only allowed on fixed length record files.

Cause: The `LFILFA_RANDOM` flag was specified on a file that was not organized into fixed-length records. Random access is only allowed on fixed-length record files.

Action: Determine if the organization of your data needs to be in variable-length records and if you need to have random access to the file. If both conditions are true then you might need to buffer the entire file or enough of it to remove your need for random access. Another option is to close and rescan the file although this is not the optimal solution.

LFI-00126: Record format can only be one of Fixed or Variable.

Cause: Both `LFILRF_FIXED` (fixed) and `LFILRF_VAR` (variable) were specified during file object creation. Only one of the two is allowed for a given file.

Action: Determine how the file is organized and choose the option that matches.

LFI-00127: No Record Format was specified, default is variable.

Cause: Neither `LFILRF_FIXED` (fixed) or `LFILRF_VAR` (variable) were specified for record format. One of the two must be specified for each file.

Action: The default is LFILRF_VAR, but this should be explicitly set during file object creation.

LFI-00128: Carriage Control is only valid for Standard file objects.

Cause: The Carriage Control option is only valid for the standard file objects (LFISTDIN, LFISTDOUT, LFISTDERR). You may not specify this option for any other type of file.

Action: Choose between LFILRF_FIXED and LFILRF_VAR for the record format.

LFI-00129: Invalid option *string* were specified on an input only file.

Cause: The file was opened as input only but the output mode option LFILRF_WR_ASIS or delete option LFLOPTY_DELETE was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00130: Input option specified on output only file.

Cause: The file was opened as output only but one of the input mode options (LFILRF_READ_NL or LFILRF_FORCE_NL) or was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00131: No open type specified.

Cause: The file object was created without an open type (that is, LFILOPTY_INPUT, LFILOPTY_OUTPUT, etc.).

Action: Decide how the file should be accessed and specify one of the open types.

LFI-00132: Record length *string* is greater than max length of *string*.

Cause: The record length specified for the file is greater than the max supported by this platform.

Action: Decrease the record length.

LFI-00133: Trying to create file *string* that already exists.

Cause: The file object was initialized with LFILOPTY_OUTPUT and without LFILOPTY_REPLACE and yet a file by this name already exists.

Action: Check to make sure that you are creating the right file. If you intend to overwrite the file if it exists that specify the replace option LFILOPTY_REPLACE when initializing the file object.

LFI-00134: Unable to protect a file for an append operation.

Cause: The LFILOPTY_APPEND and LFILOPTY_PROT options were both specified for the file. This is currently not allowed because it would require copying the entire file at open time.

Action: Decide if you really need to protect the file for append. If so then think about making a copy of it before appending.

LFI-00135: Unable to remove temporary file.

Cause: A temporary file was created to protect a file and when the the tempfile was no longer needed it LFI attempted to remove it and was unable to do so.

Action: Check the permissions and where the temp files are being created.

LFI-00136: Unable to change type of open file.

Cause: The function lfichty() was called on an opened file.

Action: This is a bug in the client code. `lficity()` cannot be used in this case.

LFI-00137: Unable to perform *string* on a file object that is *string*.

Cause: Unable to perform an LFI operation on a file object for the given reason.

Action: Take the appropriate corrective measure. For example if a file is supposed to be opened before the operation can be performed, client code will need to open the file first.

LFI-00138: Unable to perform *string* on a name object that is *string*.

Cause: Unable to perform an LFI operation on a name object for the given reason.

Action: Take the appropriate corrective measure.

LFI-00139: Option *string* cannot be used with option *string* in calling *string*.

Cause: First option cannot be used with second option in such a function call.

Action: Re-examine code to determine which option is needed.

LFI-00140: Invalid option *string* were specified on input-output file.

Cause: The file was opened as input-output and one of the mode options (LFIPTY_DELETE or non-LFIPTY_RANDOM) was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00141: Unable to abort file in operation *string*.

Cause: The abort operation failed.

Action: Check the underlying errors for more information.

LFI-00142: Unable to delete an existing file [*string*][*string*] not owned by Oracle.

Cause: The file was not created by Oracle.

Action: Change owner of file to Oracle or give Oracle access privileges to delete it.

LFI-00143: Unable to delete non-existent file *string*.

Cause: The file to be deleted does not exist.

Action: Check the underlying errors for more information.

LFI-00144: File [*string*][*string*] does not exist

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00145: User buffer too short.

Cause: The buffer that was passed is not large enough.

Action: Allocate a larger buffer and retry the operation.

LFI-00146: copy does not expect the file *string.string* to exist

Cause: We are expecting the destination file not to exist and it does.

Action: Find out why the file does exist.

LFI-00147: File *string.string* does not exist

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00148: *string* can be called only on files opened in byte mode

Cause: A routine that should be used only for files in byte mode was called for a file that was opened in record mode

Action: In order to use this function, the file should be opened in byte mode.

LFI-00149: Error on destroying hash table in function *string*

Cause: We were expecting the cache path object and it does not.

Action: In order to use this function, the path object should be cache path object.

LFI-00150: Error on creating hash table in function *string*

Cause: routine failed to create path object hash table

Action: make sure that startsize <= LHTQMAXSLOTS

LFI-00151: Error on inserting into hash table in function *string*

Cause: routine failed to insert into hash table

Action: make sure there is enough memory for allocation and that the hash table exists.

LFI-00152: Read operation (byte mode) failed.

Cause: Byte mode read operation failed. Probably due to incorrect parameters or flags, or trying to read beyond end of file.

Action: Check syntax of the read command and size of file.

LFI-01000: Unable to write line to file.

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01001: Unable to write *string* bytes to file.

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01002: Unable to read line from file.

Cause: The file being read from may no longer be open.

Action: Examine underlying errors for more information.

LFI-01003: Unable to read *string* bytes from file.

Cause: The file being read from may no longer be open.

Action: See the accompanying error messages for more information.

LFI-01004: Unable to empty buffer.

Cause: The buffer manager is probably unable to write to the underlying file.

Action: Examine underlying errors for more information.

LFI-01005: Unable to fill buffer.

Cause: The buffer manager is probably unable to read from the underlying file.

Action: See the accompanying error messages for more information.

LFI-01006: File ends in partial character in *string*.

Cause: A line ends in a partial character.

Action: Examine underlying errors for more information.

LFI-01007: Line is too long; encountered in function *string*.

Cause: The length of the line exceeds the maximum length.

Action: Examine underlying errors for more information.

LFI-01500: Error condition on call to OSD function *string*.

Cause: An error condition arises in calling an OSD function. This message occurs if calls to malloc or free functions failed.

Action: Contact Oracle Worldwide Support.

LFI-01501: tmpnam() fails to generate temporary file name.

Cause: Operating system was unable to create temporary file name.

Action: Contact the development organization.

LFI-01502: Base filename does not exist.

Cause: The filename that was parsed had no base file. It was either all path or extension.

Action: Check the filename being passed in to make sure it is correct.

LFI-01503: Max filename size exceeded generating filename.

Cause: While building a filename we exceeded the buffer allocated to hold the new filename.

Action: Contact the development organization.

LFI-01504: fseek() failed(OSD return value = *string*) in *string*.

Cause: The function fseek() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01505: fclose() failed(OSD return value = *string*) in *string*.

Cause: The function fclose() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01506: fflush() failed(OSD return value = *string*).

Cause: The function fflush() returned an error condition.

Action: Contact the development organization.

LFI-01507: fwrite() failed(OSD return value = *string*) in *string*.

Cause: File pointer may be null or may not be opened for write.

Action: Contact the development organization.

LFI-01508: access() failed.

Cause: Call to access() failed.

Action: Contact the development organization.

LFI-01509: fopen() failed(OSD return value = *string*).

Cause: Call to fopen() failed.

Action: Contact Oracle Worldwide Support.

LFI-01510: fread() failed(OSD return value = *string*) in *string*.

Cause: Call to fread() failed.

Action: Contact Oracle Worldwide Support.

LFI-01511: unlink() failed(OSD errno = *string*) in *string*.

Cause: Call to unlink() failed.

Action: Contact the development organization.

LFI-01512: stat() failed

Cause: Call to stat() failed.

Action: Contact Oracle Worldwide Support.

LFI-01514: ftell() failed in *string*

Cause: The ftell() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01515: truncate() failed.

Cause: The function truncate() returned an error condition.

Action: Contact the development organization.

LFI-01516: read() failed (OSD return value = *string*) in *string*.

Cause: Call to read() failed.

Action: Contact the development organization.

LFI-01517: open() failed(OSD return value = *string*).

Cause: Call to open() failed.

Action: Contact the development organization.

LFI-01518: write() failed(OSD return value = *string*) in *string*.

Cause: Call to write() failed.

Action: Contact the development organization.

LFI-01519: lseek() failed(OSD return value = *string*) in *string*.

Cause: The lseek() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01520: close() failed(OSD return value = *string*) in *string*.

Cause: The function close() returned an error condition.

Action: Contact the development organization.

LFI-01521: fsync() failed(OSD return value = *string*) in *string*.

Cause: The function fsync() returned an error condition.

Action: Contact the development organization.

LFI-01522: opendir() failed.

Cause: The function opendir() returned an error condition.

Action: Contact the development organization.

LFI-01523: rename() failed.

Cause: The function rename() returned an error condition.

Action: Contact the development organization.

LFI-01524: fdopen() failed(OSD return value = *string*).

Cause: Call to fdopen() failed.

Action: Contact the development organization.

LFI-01525: setvbuf() failed.

Cause: A call to lficstd() had failed.

Action: Contact development service

LPX-00000 to LPX-01160

LPX-00000: normal, successful completion

Cause: Normal exit

Action: No action required.

LPX-00001: NULL pointer

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the XML parser. Please contact someone who can fix the problem.

LPX-00002: out of memory

Cause: The operating system has run out of memory.

Action: Make more memory available to the program.

LPX-00003: duplicate entry in hash table

Cause: An internal error has occurred (a key was requested to be placed in a hash table but was already there).

Action: Contact Oracle Support Services and report the error.

LPX-00004: internal error "~s"

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00005: ~1s buffer overflow, maximum size is ~2u bytes

Cause: A name, quoted string, URL, or other document component was too long.

Action: Restrict the component to the maximum size shown.

LPX-00006: invalid child type for parent node

Cause: An attempt was made to add an invalid node-type to a parent node.

Action: Correct the code.

LPX-00007: unexpected end-of-file encountered

Cause: The document ended unexpectedly, perhaps due to truncation.

Action: Verify that the document is complete.

LPX-00008: invalid memory callback

Cause: The memory callback structure passed to xmlinit was missing the allocate or free functions (or both).

Action: Provide both functions in the callback structure.

LPX-00011: In line ~1u of ~2s [general entity ~3S]:

Cause: Error message prefixes, not errors themselves. These are the possible banner messages which appear before an XML error to describe the position (line#) and source (buffer or URI) in which the error occurred, as well as the entity's name (if the source is an entity). Parameter entity banner must be at +1 to non-entity banner, general entity at +2 (see lpxerr.c).

Action: No action required. This is not an error message.

LPX-00012: Unicode data alignment error

Cause: An input Unicode (UCS2) datum was not aligned properly.

Action: UCS2 data consists of an array of shorts (ub2) which must be aligned on an even-byte boundary.

LPX-00013: wrong node type

Cause: The wrong node type was given as argument to a DOM call.

Action: Review the failing function call, consult the documentation, and make sure the node types passed as correct.

LPX-00014: context is not clean

Cause: An operation was performed on a context that has already been used (so is not "clean").

Action: Some functions must be performed on a newly initialized context before being used for parsing. For example, setting a shared DTD. Change the code and do the call before parsing.

LPX-00017: ~1sNodeName: <~2S>

Cause: More error message boilerplate.

Action: No action required. This is not an error message.

LPX-00018: internal error "nested open strings"

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00019: property "~s" unknown

Cause: An unexpected error has occurred in a subsystem used by XML. Subcode is the error code returned by that failing subsystem.

Action: Contact Oracle Support Services and report the error and subcode.

LPX-00024: QName prefix too long

Cause: The specified QName prefix exceeded the maximum length of 255.

Action: Use a shorter prefix.

LPX-00050: initialization error: NLS mismatch

Cause: A language ID was specified without the matching global area.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00051: NLS initialization failed

Cause: The NLS (National Language Support) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00052: LEH initialization failed

Cause: The LEH (Library Exception Handling) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00053: LML initialization failed

Cause: The LML (Low-Level Memory manager) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00054: LPU initialization failed, error ~u

Cause: The LPU (URL Parser/Loader) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00100: root element "~1S" does not match DTD root "~2S"

Cause: Validity Constraint 2.8 failed: "The Name in the document type declaration must match the element type of the root element." *Example: `<?xml version="1.0"?> <!DOCTYPE greeting [<!ELEMENT greeting (#PCDATA)>]> salutationHello!/salutation` *Explanation: The document's root element, salutation, does not match the root element declared in the DTD (greeting).

Action: Correct the document.

LPX-00101: parameter-entity markup cannot be split up

Cause: Validity Constraint 2.8 failed: "Parameter-entity replacement text must be properly nested with markup declarations." *Example: `<?xml version="1.0"?> <!DOCTYPE greeting [<!ENTITY % e "<!ELEMENT "> %e; greeting (#PCDATA)>]> greetingHello!/greeting` *Explanation: The parameter entity 'e' contains markup which may not be split up; the entire ELEMENT (or ATTLIST or ENTITY) definition must be present in one piece.

Action: Correct the document.

LPX-00102: standalone document declaration should be "no"

Cause: Validity Constraint 2.9 failed: "Standalone document declaration must have the value 'no' if any external markup declarations contain declarations of: * attributes with default values - or - * entities - or - * attributes with values subject to normalization - or - * element types with element content"

Action: Correct the document.

LPX-00103: document structure does not match DTD

Cause: Validity Constraint 3 failed: "An element is valid if there is a declaration matching elementdecl where the Name matches the element type, and one of the following holds: * The declaration matches EMPTY and the element has no content * The declaration matches children and the sequence of child elements belongs to the language generated by the regular expression in the content model, with optional white space (characters matching the nonterminal S) between each pair of child elements. * The declaration matches Mixed and the content consists of character data and child elements whose types match names in the content model. * The declaration matches ANY, and the types of any child elements have been declared."

Action: Correct the document.

LPX-00104: element "~S" is not declared in the DTD

Cause: Validity Constraint 3 failed: The named element has no matching elementdecl in the DTD

Action: Correct the document.

LPX-00105: element "~S" is not empty as required by the DTD

Cause: Validity Constraint 3 failed: The named element is declared as EMPTY in the DTD but contains sub-elements in the document.

Action: Correct the document.

LPX-00106: attribute "~1S" of element "~2S" is undefined

Cause: Validity Constraint 3.1 failed:

Action: Correct the document.

LPX-00107: element "~S" has multiple declarations

Cause: Validity Constraint 3.2 failed: "No element type may be declared more than once."

Action: Correct the DTD.

LPX-00108: parameter-entity parenthetical cannot be split up

Cause: Validity Constraint 3.2.1 failed: "Parameter-entity replacement text must be properly nested with parenthesized groups. For interoperability, if a parameter-entity reference appears in a choice, seq, or Mixed construct, its replacement text should not be empty, and neither the first nor last non-blank character of the replacement text should be a connector (| or ,). *Example: <?xml version="1.0"?> <!DOCTYPE foo [<!ELEMENT greeting (#PCDATA)> <!ENTITY % e "(#PCDATA|)"> <!ELEMENT foo %e; greeting)>]> *greeting*Hello!*greeting* *Explanation: The parenthetical content of the 'e' entity may not be split up into sections: both open and close parentheses must be in the same declaration.

Action: Correct the DTD.

LPX-00109: duplicate name "~S" in mixed-content declaration

Cause: Validity Constraint 3.2.2 failed: "The same name must not appear more than once in a single mixed-content declaration." *Example: <!ELEMENT p (#PCDATA|a|b|c|d|a)> *Explanation: 'a' occurs more than once in the mixed-content declaration.

Action: Correct the DTD.

LPX-00110: invalid ~1s "~2S" (not a Name)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Name

Action: Correct the document.

LPX-00111: invalid ~1s "~2S" (not a Nmtoken)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Nmtoken

Action: Correct the document.

LPX-00112: element "~S" has multiple ID attributes

Cause: Validity Constraint 3.3.1 failed: "No element type may have more than one ID attribute specified."

Action: Correct the document.

LPX-00113: element "~1S" ID attribute "~2S" must be #IMPLIED or #REQUIRED

Cause: Validity Constraint 3.3.1 failed: "An ID attribute must have a declared default of #IMPLIED or #REQUIRED."

Action: Correct the document.

LPX-00114: element "~1S" attribute "~2S" has invalid enumeration value "~3S"

Cause: Validity Constraint 3.3.1 failed: "Values of this type must match one of the Nmtoken tokens in the declaration."

Action: Correct the document.

LPX-00115: element "~1S" is missing required attribute "~2S"

Cause: Validity Constraint 3.3.2 failed: "If the default declaration is the keyword #REQUIRED, then the attribute must be specified for all elements of the type in the attribute-list declaration."

Action: Correct the document.

LPX-00116: element "~1S" attribute "~2S" has invalid value "~3S", must be "~4S"

Cause: Validity Constraint 3.3.2 failed: "If an attribute has a default value declared with the #FIXED keyword, instances of that attribute must match the default value."

Action: Correct the document.

LPX-00118: undefined entity "~S"

Cause: Validity Constraint 4.1 failed: "In a document with an external subset or external parameter entities with "standalone='no'", the Name given in the entity reference must match that in an entity declaration."

Action: Correct the document.

LPX-00119: element "~1S" attribute "~2S" must be an unparsed entity

Cause: The attribute value must be an unparsed entity.

Action: Correct the document.

LPX-00120: entity "~1S" NDATA (notation) "~2S" is undefined

Cause: Entity's NDATA (notation) is undefined

Action: Correct the document.

LPX-00121: undefined notation "~S"

Cause: Notation is not known.

Action: Correct the document.

LPX-00122: undefined ID "~S" in IDREF

Cause: Validity Constraint 3.3.1 failed: "A name must not appear more than once in an XML document as a value of this type; i.e., ID values must uniquely identify the elements which bear them."

Action: Correct the document.

LPX-00123: duplicate ID "~S"

Cause: An ID was used twice, they must be unique.

Action: Correct the document.

LPX-00124: attribute value should be one or more tokens

Cause: An attribute with tokenized type (IDREFS, ENTITIES, NMTOKENS) did not contain any tokens.

Action: Value must contain one or more tokens, separated by spaces.

LPX-00125: duplicate entity "~S" (ignored)

Cause: Warning returned by XmlDomGetDecl when original document did not contain an XMLDecl

Action: This is a warning, not an error. The value XMLERR_NO_DECL is used by the programmer to detect whether a document had an XMLDecl or not. It does not indicate a problem.

LPX-00200: could not convert from encoding ~1s to ~2s

Cause: The conversion cannot be made between the specified encodings.

Action: Choose a data encoding which can represent all expected input encoding (such as a Unicode-based encoding, UTF-8 or UTF-16).

LPX-00201: unknown encoding "~s"

Cause: The specified encoding was not known. It should be an IANA or Oracle encoding name.

Action: Use an appropriate encoding.

LPX-00202: could not open "~s" (error ~u)

Cause: The named input (file, URL, etc) does not exist.

Action: Make sure the named input is available and can be opened.

LPX-00203: could not read from "~s" (error ~u)

Cause: Data could not be read from the named input.

Action: Take appropriate action to allow data to be read.

LPX-00204: syntax error

Cause: A syntax error was found.

Action: Check the XML document line and correct it.

LPX-00205: expected "<!--" at the start of comment

Cause: Bad syntax detected when processing a comment.

Action: Fix the comment syntax.

LPX-00206: invalid CDATA section

Cause: Bad syntax detected when processing CDATA. Proper format is '<![CDATA[data]]>'.
</br>

Action: Correct the CDATA syntax.

LPX-00207: expected "[" at the start of conditional section

Cause: Bad syntax detected when processing a conditional section.

Action: Fix the conditional section syntax.

LPX-00208: unknown DTD keyword "~s"

Cause: An unknown keyword was found in the DTD.

Action: Use a proper keyword.

LPX-00209: PI names starting with XML are reserved

Cause: Processing instruction starting with XML was found.

Action: Use another name for the processing instruction.

LPX-00210: expected '~1c' instead of '~2c'

Cause: A syntax error was detected.

Action: Use proper syntax.

LPX-00211: attribute default must be REQUIRED, IMPLIED, or FIXED

Cause: Attribute default was invalid.

Action: Default must be REQUIRED, IMPLIED, or FIXED.

LPX-00212: comment must not contain "--"

Cause: A syntax error was detected in the comment.

Action: Use '--' only when specifying the end of the comment.

LPX-00213: comment did not end in "-->"

Cause: A syntax error was detected in the comment.

Action: Be sure to end the comment with '-->'.
</br>

LPX-00214: CDATA section did not end in "]]>"

Cause: A syntax error was detected in the CDATA section.

Action: Be sure to end the CDATA section with ']]>'.
</br>

LPX-00215: processing instruction did not end in "?>"

Cause: A syntax error was detected in the PI section.

Action: Be sure to end the PI with '?>'.
</br>

LPX-00216: invalid character ~1u (~2X)

Cause: An invalid multibyte character was found.

Action: Use only characters allowed by the XML specification.

LPX-00217: invalid character ~1u (~2x)

Cause: An invalid Unicode character was found.

Action: Use only characters allowed by the XML specification.

LPX-00218: invalid character ~1u ('~2c')

Cause: An invalid native (ASCII/EBCDIC) character was found.

Action: Use only characters allowed by the XML specification.

LPX-00219: invalid digit '~c' in character reference

Cause: An invalid digit was found in a character reference.

Action: Character references are either `&#DDD;` where D's are decimal digits, or `&#xHHH;` where H's are hexadecimal digits.

LPX-00220: the string "]]>" cannot occur in character data

Cause: Found ']]>' in character data.

Action: Do not use ']]>' in character data.

LPX-00221: the character "<" cannot occur in attribute values

Cause: Found '<' in an attribute value.

Action: Do not use '<' in attribute values.

LPX-00222: error received from SAX callback function

Cause: An error was received from the SAX callback function.

Action: Examine the additional error messages and take corrective action.

LPX-00223: external entity "~s" found in an attribute value

Cause: An external entity reference was found in an attribute value.

Action: Use only references to internal or character entities in attribute values.

LPX-00224: multiple occurrences of attribute "~S" found

Cause: An attribute occurred multiple times in the same start-tag or empty-element tag.

Action: Make sure that the attributes are unique.

LPX-00225: end-element tag "~1S" does not match start-element tag "~2S"

Cause: An element tag was not ended properly.

Action: Make sure that the correct end element tag is used.

LPX-00226: entity "~S" is not declared

Cause: An entity is not declared.

Action: Declare the entity before referencing it.

LPX-00227: entity "~S" is not a parsed entity

Cause: An entity reference contained the name of an unparsed entity.

Action: Only reference parsed entities.

LPX-00228: entity reference "~S" refers to itself

Cause: An entity reference contains a recursive reference to itself.

Action: Modify the contents of the entity reference to remove this recursion.

LPX-00229: input source is empty

Cause: An XML input file has no contents.

Action: The XML file representing a document must contain at least one element.

LPX-00230: invalid character ~1u (~2x) found in a Name or Nmtoken

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00231: invalid character ~1u ('~2c') found in a Name or Nmtoken

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00232: invalid use of a parameter entity reference

Cause: A parameter entity reference was found in an improper location in the internal DTD subset.

Action: Use a parameter entity reference only where markup declarations can occur in the internal DTD subset, in the external DTD subset, or in an external entity.

LPX-00233: namespace prefixes starting with "xml" are reserved

Cause: Namespace prefix starting with XML was found.

Action: Use another name for the namespace prefix.

LPX-00234: namespace prefix "~S" is not declared

Cause: Namespace prefix is not declared.

Action: Declare the prefix in an attribute list.

LPX-00235: invalid XML version, must be 1.0 or 1.1

Cause: An invalid XML version was specified. Only version 1.0 of the XML specification is supported. Version 1.1 may be specified but will be treated as version 1.0.

Action: Use the 1.0 or 1.1 specification and set the version number accordingly.

LPX-00236: invalid character ~1u ('~2c') found in public identifier

Cause: An invalid character was found in a public identifier.

Action: Use only the characters allowed for public identifiers by the XML specification.

LPX-00237: invalid condition section keyword, must be INCLUDE or IGNORE

Cause: A conditional section <![keyword [markup]]> had invalid keyword, must be either "IGNORE" or "INCLUDE"

Action: Correct condition section usage in document.

LPX-00238: unterminated conditional section

Cause: A conditional section was not properly terminated with `]]>`.

Action: Verify conditional nesting in document and correct.

LPX-00239: invalid attribute type "~s"

Cause: The attribute type is not valid. Options are CDATA, ID, IDREF, IDREFS, ENTITY, ENTITIES, NMTOKEN, or NMTOKENS.

Action: Check and correct attribute declaration.

LPX-00240: element-start tag is not well formed

Cause: A start-element tag was improperly formed.

Action: Check and correct the start-element syntax.

LPX-00241: entity reference is not well formed

Cause: An entity reference (general or parameter) was not formed properly.

Action: Form entity reference correctly as `&name;` or `%name;`.

LPX-00242: invalid use of ampersand ('&') character (use &)

Cause: The ampersand character is used only to start entity or character references.

Action: To include an ampersand character as data, use the built-in `&` general entity.

LPX-00243: element attribute value must be enclosed in quotes

Cause: An attribute defined in an element's start-tag must be enclosed in single (') or double (") quotes.

Action: Enclose the attribute value in quotes.

LPX-00244: invalid use of less-than ('<') character (use <)

Cause: The less-than character ('<') is not permitted as data.

Action: Use the built-in entity `<` instead. Check for mismatched quotes (") in case the '<' is part of subsequent markup.

LPX-00245: extra data after end of document

Cause: After the close of the top-level element, more data was found.

Action: The end-element tag for the top-level element must be the last thing in the document.

LPX-00246: missing system ID after public ID

Cause: In an external ID declaration, the public ID literal was not followed by the system ID literal as required.

Action: Provide with public *and* system IDs for 'PUBLIC' type.

LPX-00247: invalid Document Type Declaration (DTD)

Cause: Problems were encountered in the DTD declaration.

Action: Review the DTD and correct the problems.

LPX-00248: invalid entity declaration

Cause: Problems were encountered parsing an entity declaration.

Action: Check and correct the declaration syntax.

LPX-00249: invalid external ID declaration

Cause: Problems were encountered parsing an external ID declaration.

Action: Check and correct the declaration syntax.

LPX-00250: invalid attribute declaration

Cause: Problems were encountered parsing an attribute declaration.

Action: Check and correct the declaration syntax.

LPX-00251: conditional sections are valid only in external DTDs

Cause: A condition section is not permitted in internal DTDs.

Action: Remove the condition section.

LPX-00252: invalid entity replacement-text nesting

Cause: Markup included from an entity must nest/group properly. That is, open/close markup must occur within the same entity. For example, `<!DOCTYPE doc [<!ENTITY e "/foofoo">]> docfoo&e;/foo/doc` is invalid since foo's start-tag occurs in the top-level document, but the close-tag is provided by the "e" entity. Both start and end must be provided by the same source.

Action: Examples, such as the ones above, are not permitted.

LPX-00253: missing required version number in XML declaration

Cause: An XML declaration was missing the required version#.

Action: Always provide a version#, which must come first in the declaration. XML is case sensitive, so only "version" (not "Version", and so on) is valid.

LPX-00254: invalid XML declaration

Cause: Problems were encountered parsing an XML declaration.

Action: Check and correct the declaration syntax.

LPX-00255: XML standalone declaration must be "yes" or "no"

Cause: The "standalone" parameter in the XML declaration had an invalid value.

Action: standalone must be set to either "yes" or "no". Case is sensitive, so "Yes", "YES", and so on, are invalid.

LPX-00256: invalid element declaration

Cause: Problems were encountered parsing an element declaration.

Action: Check and correct the declaration.

LPX-00257: invalid children specification in element declaration

Cause: The 'children' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00258: invalid "Mixed" specification in element declaration

Cause: The 'Mixed' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00259: invalid notation declaration

Cause: Problems were encountered parsing a notation declaration.

Action: Check and correct the declaration syntax.

LPX-00260: invalid xml:space attribute declaration

Cause: The xml:space attribute must be declared as an enumeration with choices "default" and "preserve". For example, <!ATTLIST foo xml:space (default|preserve) 'preserve').

Action: Declare the special attribute as above.

LPX-00261: invalid URL ~s

Cause: The specified URL was invalid and could not be parsed.

Action: Correct the URL; consult RFC-2396.

LPX-00262: unsupported protocol ~s

Cause: An URL was encountered which requested a protocol not supported by the XML parser. Only HTTP and file are currently allowed.

Action: Make the data available through the filesystem or HTTP.

LPX-00263: couldn't connect to host ~s port ~d

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00264: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00265: read failed from to host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00266: invalid language specification ~s

Cause: The given language specification was invalid.

Action: Language specification has the format *language_territory.character set*. For example, "French_France".

LPX-00267: could not resolve relative URL ~s

Cause: The named relative URL couldn't be resolved against its parent.

Action: Make sure the relative makes sense in relation to its parent URL; see RFC-2396 sections 4, 5, and appendix C.

LPX-00268: invalid access method ~1d, must be 0 to ~2d

Cause: The provided access code was not in the valid range.

Action: The code should be one of the XMLACCESS_XXX codes defined in oraxml.h, in the range shown in the error message.

LPX-00269: all three access functions (open/close/read) must be provided

Cause: An attempt was made to set the access method callbacks, but all three functions were not provided.

Action: All three callback functions (open, close, and read) are required. They must all be provided, even if they are stub functions which do nothing.

LPX-00270: FTP error: ~s

Cause: An error was returned from the FTP server while trying to retrieve a file. See the specific message for details.

Action: Corrective action depends on the error.

LPX-00271: FTP login failed: ~s

Cause: The username/password combination was invalid for FTP login.

Action: Specify a valid pair.

LPX-00272: FTP server unavailable: ~s

Cause: The FTP server is unavailable for use.

Action: No action is possible from the client side. See server's error message.

LPX-00273: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00274: can't import node type

Cause: Some node types (DOCUMENT_NODE & DOCUMENT_TYPE_NODE) cannot be imported with importNode().

Action: No action required.

LPX-00275: can't set output/data encoding AFTER parsing

Cause: Output/data encoding must be set after initialization but BEFORE any parsing has taken place.

Action: Set encoding before parsing any documents.

LPX-00276: bad HTTP/Mime header

Cause: An HTTP reply contained an invalid Mime header.

Action: Verify HTTP reply for accuracy. See RFC 2616.

LPX-00277: no closing quote was seen

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LPX-00278: invalid ~s proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00279: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct it. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00280: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error..

LPX-00281: unsupported encoding "~s"

Cause: The specified encoding is known but not supported by the parser.

Action: Try a different encoding.

LPX-00282: document cannot have both internal/external and shared DTDs

Cause: A parser context which had a shared DTD set was used to parse a document which also contained a DTD. You cannot use both a shared DTD and an internal/external one.

Action: If a shared DTD is to be used, then the documents parsed must not contain or reference a DTD.

LPX-00283: document encoding is ~s-based but default input encoding is not

Cause: The input document was detected to be ASCII (or EBCDIC) based, but no encoding was specified in the XMLDecl and the default input coding was not ASCII (or EBCDIC) based, so could not be applied.

Action: Add an explicit encoding specification to the XMLDecl so the default input encoding is not needed, or pick a default encoding which matches the input document.

LPX-00284: namespace prefix to NULL URI is not allowed

Cause: An element's namespace prefix declarations was for a NULL URI, e.g. <foo xmlns:bar=""/> This is illegal presently in XML 1.0, but will be legal in XML 1.1

Action: Remove erroneous prefix definition.

LPX-00285: invalid Unicode surrogate ~X ~X

Cause: A Unicode document contained an invalid surrogate. If the first (high) surrogate is in the correct range 0xD800 to 0xDBFF, then the second (low) surrogate must be in the range 0xDC00 to 0xDFFF.

Action: Correct the document.

LPX-00286: Exceeded max depth for recursion

Cause: The depth of embedded elements in the document exceeded the limit of 2000.

Action: Correct the document.

LPX-00287: Max limit of ~1d exceeded for ~s

Cause: Max limit exceeded

Action: Correct the document.

LPX-00288: CDATA-section-close delimiter is prohibited in element content

Cause: Element content contained CDATA-section-close delimiter.

Action: Correct the document.

LPX-00289: invalid redefinition of xmlns URI

Cause: The XML namespace Uniform Resource Identifier 'http://www.w3.org/2000/xmlns/' must not be assigned a prefix.

Action: Correct the document.

LPX-00290: invalid use of xmlns as a prefix

Cause: The prefix 'xmlns' was reserved and could not be used as a prefix.

Action: Correct the document.

LPX-00291: too many template patterns

Cause: The style sheet had too many template match patterns, or the total length of all template match patterns in the style sheet was too long.

Action: Reduce the number of template match conditions and shorten the template match patterns.

LPX-00300: no name in attribute set

Cause: The name attribute was not found in the attribute-set element.

Action: Add a name attribute for this element.

LPX-00301: error in XPATH evaluation

Cause: The XPATH evaluation returns an error.

Action: Check specified XPATH expression to determine the error.

LPX-00302: Incorrect stylesheet. The node is not valid.

Cause: The child node is of invalid type or has invalid name for this particular location in stylesheet, rendering the stylesheet as invalid XSLT.

Action: Fix the stylesheet by using valid nodes only.

LPX-00303: attribute value "~S" not expected for ~S

Cause: Attribute is found but its value is not the expected value.

Action: Set the attribute value to the correct value.

LPX-00304: input parameter to function is null

Cause: An input parameter passed into this function is null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00305: missing token

Cause: An expected token is not found.

Action: Check the input string to make sure the expected token is present.

LPX-00306: inputted string ended with no corresponding closing '}'

Cause: A closing '}' is expected.

Action: Add the closing '}' to the input string or remove the extra opening '{'.

LPX-00307: namespace prefix ~S used but not declared

Cause: Namespace prefix is used but not declared.

Action: Either declare the namespace or don't use this namespace prefix.

LPX-00308: attribute ~S not found in ~S

Cause: The expected attribute for this node is not found.

Action: Need to add this attribute to the node.

LPX-00309: cannot initialize XPATH

Cause: XPATH context could not be initialized.

Action: Check the initialization function LpxsutInitXPathCtx().

LPX-00310: element ~S not found in ~S

Cause: The expected element is not found.

Action: Check the initialization function LpxsutInitXPathCtx().

LPX-00311: unsupported feature: ~s

Cause: This feature is not supported.

Action: Do not use this feature.

LPX-00312: cannot construct XML PI with content: ~S

Cause: The content of XML PI node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00313: cannot construct XML comment with content: ~S

Cause: The content of XML comment node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00314: an internal failure occurred

Cause: An internal error occurred in the code.

Action: Contact appropriate developer.

LPX-00315: extension function ~S not supported

Cause: This extension function is not supported.

Action: Either contact appropriate developer for more information or don't use this extension function.

LPX-00316: invalid value ~S for ~S attribute ~S

Cause: The value for the specified attribute is invalid.

Action: Consult the XSL spec, use only legal values.

LPX-00317: undefined decimal-format "~S"

Cause: The named decimal-format is undefined (the name "#default" means the default format).

Action: Define the desired decimal-format before trying to use it.

LPX-00318: duplicate xsl:decimal-format "~S"

Cause: The named decimal-format was declared more than once.

Action: Make sure there is only a single declaration.

LPX-00319: The node specified is not valid

Cause: The node specified is not of expected type.

Action: Use only the nodes of legal type.

LPX-00320: No more attributes can be added to a non empty element

Cause: The element to which an attribute was being added is non empty and hence can not add anymore attributes to it.

Action: Modify the XSLT stylesheet so that all the attributes are added to an element before anything else is added to it. If you absolutely can not do that then select your output method to be DOM based rather than a stream or SAX based output which you are using presently.

LPX-00321: None of the output method (DOM, SAX, Stream) is selected

Cause: User is trying to process an XML file with out selecting any mechanism for output.

Action: User must select one of the output mechanisms (SAX/DOM/Stream) before attempting to process the XML file.

LPX-00322: A doc referred by XSLT stylesheet could not be opened : ~s

Cause: Either an import,include or document() function tried to open a document and failed.

Action: Make sure that document is present and can be opened.

LPX-00323: illegal apply-imports because of no current template: ~s

Cause: apply-imports was used even when there was no current template possibly with in for-each.

Action: Make sure that apply-imports are invoked only if there is a current template and it is not in a xsl:for-each.

LPX-00324: "~S" is not a valid value for the lang attribute of xsl:sort

Cause: An invalid language name was specified for sorting.

Action: Provide a valid value for the lang attribute of xsl:sort.

LPX-00327: unknown or undefined parameter for style sheet

Cause: A named parameter supplied to a style sheet did not match any parameters defined for the style sheet.

Action: This is a warning, not an error. Omit the parameter or use a correct name for the parameter.

LPX-00328: style sheet parameter was previously set

Cause: A style sheet parameter was previously set and already had a value; the value cannot be changed.

Action: This is a warning, not an error. The previous value will be used. Avoid setting the parameter multiple times.

LPX-00400: an internal error has occurred in XPATH

Cause: An internal error has occurred in XPATH.

Action: Contact the appropriate developer.

LPX-00401: invalid QName in the XSL file

Cause: An invalid QName was passed to the XPATH parser.

Action: See whether there are any invalid QNames in the XSL file.

LPX-00402: invalid axisname in the XSL file

Cause: An invalid axis name was passed to the XPATH parser.

Action: See whether all axis names in the XSL file are correct.

LPX-00403: unmatched quote in the XSL file

Cause: An unmatched quote was found in the XSL file.

Action: Check for unmatched quotes in the XSL file.

LPX-00404: unable to resolve namespace URI

Cause: The namespace URI may not be valid.

Action: Make sure that the name space URIs are valid.

LPX-00405: unable to allocate memory

Cause: May be out of memory.

Action: Try increasing virtual memory.

LPX-00406: object of incorrect type passed to the function

Cause: An object of incorrect type was passed to the XPATH/XSL function.

Action: Do the required conversion before passing in an object of type which is different from the expected type.

LPX-00407: right square bracket missing in the XSL file

Cause: Right square bracket missing in the XSL file.

Action: Check for unmatched square bracket in the XSL file.

LPX-00408: right parenthesis missing in the XSL file

Cause: Right parenthesis missing in the XSL file.

Action: Check for unmatched parenthesis in the XSL file.

LPX-00409: incorrect token encountered while parsing

Cause: An unexpected token encountered while parsing the expression/ pattern.

Action: Check the syntax of the expressions/patterns.

LPX-00410: unable to resolve the variable reference

Cause: Variable reference may not be valid.

Action: Check whether the variable references are valid.

LPX-00411: unknown function name encountered

Cause: The function is not supported at this time or the name is invalid.

Action: Check the function names. If valid and this error occurs, then avoid using them at this time.

LPX-00413: loss of precision due to excessively large numerical constant

Cause: The numerical constant in the XPath expression is too big.

Action: n/a

LPX-00601: Invalid token in: '~S'

Cause: Invalid token in XPath expression.

Action: Check the expression.

LPX-00602: Invalid child element '~1S' of element '~2S'.

Cause: Invalid child element in this stylesheet context.

Action: Check the stylesheet.

LPX-00603: Invalid attribute value '~1S': {element '~2S', attribute '~3S'}.

Cause: Invalid attribute value in this stylesheet context.

Action: Check the stylesheet.

LPX-00604: Invalid attribute value '~1S', for attribute '~2s'.

Cause: Invalid attribute value for this attribute.

Action: Check the stylesheet.

LPX-00605: Invalid attribute '~1S' in element '~2S'.

Cause: Invalid attribute for this element.

Action: Check the stylesheet.

LPX-00606: Missing attribute '~1s' in element '~2S'.

Cause: Missing attribute for this element.

Action: Check the stylesheet.

LPX-00607: Invalid reference: '~S'.

Cause: Invalid variable or parameter or template reference.

Action: Check the stylesheet.

LPX-00608: Repeated declaration of '~1S' in element '~2S'.

Cause: Only one declaration is allowed at this level.

Action: Check the stylesheet.

LPX-00609: Function call with invalid number of arguments in '~1S'.

Cause: Invalid number of arguments.

Action: Check the function signature.

LPX-00610: NULL pointer or XML node

Cause: A NULL pointer was detected as an internal error condition.

Action: Contact the appropriate developer.

LPX-00650: Template call chain too deep.

Cause: The nested series of template calls is too deep.

Action: Check for a recursive dependency between templates.

LPX-00651: VM Stack overflow.

Cause: The XML data is too large.

Action: Increase the size of VM stacks in XmlXslVMCreate().

LPX-00652: SAX callback returns with error.

Cause: SAX callback returns an error.

Action: Check the callback function.

LPX-00653: Output attribute '~S' doesn't have a parent element.

Cause: Attribute is generated in a wrong context.

Action: Check the XSLT stylesheet.

LPX-00654: Output namespace attribute '~S' doesn't have a parent element.

Cause: Attribute generated in the wrong context.

Action: Check the XSLT stylesheet.

LPX-00655: Invalid output comment '~S'.

Cause: Invalid comment node.

Action: Check the XSLT stylesheet.

LPX-00656: XSLTVM terminate.

Cause: VM terminates.

Action: No action.

LPX-00657: Invalid output PI '~S'.

Cause: Invalid PI node.

Action: Check the XSLT stylesheet.

LPX-00658: Invalid XSLT object type.

Cause: Invalid object type in XPath evaluation.

Action: Check the XSLT stylesheet.

LPX-00659: Output write failed.

Cause: Write operation failed.

Action: Check the write method.

LPX-00660: Not a well-formed document or external entity.

Cause: The generated document is not well-formed.

Action: Check the XSLT stylesheet.

LPX-00661: Failed to load: '-s'.

Cause: Failed to load a document.

Action: Check the XSLT stylesheet.

LPX-00662: Invalid encoding.

Cause: Invalid encoding specified.

Action: Check the encoding string.

LPX-00663: VM String-Stack overflow.

Cause: The string data is too large.

Action: Increase the size of VM StringStack in XmlXsIVMCreate().

LPX-00664: VM Node-Stack overflow.

Cause: Too many XML nodes.

Action: Increase the size of VM NodeStack in XmlXsIVMCreate().

LPX-00690: Invalid argument.

Cause: Invalid or missing argument.

Action: Check the function signature.

LPX-00700: invalid SOAP context

Cause: The SOAP context passed to an XmlSoap function was invalid.

Action: Make sure the context passed is an xmlsoapctx and is still valid (has not been destroyed).

LPX-00701: invalid SOAP role

Cause: An invalid SOAP role was specified.

Action: Only xmlsoaprole enum values should be used (see xml.h).

LPX-00702: invalid SOAP connection binding

Cause: An invalid SOAP connection binding was specified.

Action: Only xmlsoapbind enum values should be used (see xml.h).

LPX-00703: SOAP POST failed

Cause: A SOAP message sent with an HTTP binding failed.

Action: See the returned HTTP error to determine the problem.

LPX-00704: elem has no mustUnderstand

Cause: Header block does not have a mustUnderstand attribute.

Action: This is legal, no action required.

LPX-00705: elem has no role

Cause: Header block does not have a role attribute.

Action: This is legal, no action required.

LPX-00706: message has no fault

Cause: Message body has no Fault child.

Action: This is legal, no action required.

LPX-00707: no Fault reason w/given language

Cause: Fault element does not have a reason with given language.

Action: This is legal, no action required.

LPX-00708: SOAP failed to make HTTP connection

Cause: SOAP failed to make an HTTP connection to the given URL.

Action: Possible cause is invalid URL or memory exhaustion.

LPX-00709: SOAP reply not valid XML

Cause: The reply to a SOAP call was not a valid XML document.

Action: Check the calling URL for validity; otherwise the problem is likely to be on the reply side.

LPX-00711: invalid SOAP version

Cause: The version string specified at SOAP creation time was invalid.

Action: Specify a valid version string, either '1.1' or '1.2'.

LPX-00712: failed to set HTTP header

Cause: Connection does not exist, or header is badly formed, or maximum number of headers is exceeded.

Action: Check that connection exists, header has ':', decrease number of headers.

LPX-00713: body has more than one fault

Cause: Message body has multiple Fault children.

Action: Most likely bug in the server.

LPX-00714: fault is not a single child

Cause: Message body has additional children besides Fault.

Action: Most likely bug in the server.

LPX-00715: badly formed fault element

Cause: Fault element does not have one of mandatory children or has children, which are not allowed.

Action: Most likely bug in the server.

LPX-00716: badly formed Text subelement

Cause: Mandatory text child is missing from the requested message subelement.

Action: Most likely bug in the server.

LPX-00717: badly formed Value subelement

Cause: Mandatory Value child of the Code child of the Fault badly formed or absent.

Action: Most likely bug in the server.

LPX-00718: message has no envelope

Cause: The message has no envelope element child.

Action: Most likely bug in the server.

LPX-00719: prefix too long

Cause: The maximum size of encoded namespace attribute name is 1022.

Action: Use shorter prefix.

LPX-00720: envelope has no header

Cause: The message envelope does not have header.

Action: This is legal, no action required

LPX-00721: envelope has no body

Cause: The message envelope does not have body.

Action: Most likely bug in the server.

LPX-00722: elem has no relay

Cause: Header block does not have a relay attribute.

Action: This is legal, no action required.

LPX-00723: no such element

Cause: The element with requested namespace name and local part does not exist.

Action: This is legal, no action required.

LPX-00750: arguments "~1s" to function "~2s" are null

Cause: Input arguments passed into this function are null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00751: arguments "~s" are exclusive

Cause: Input arguments passed into this function are exclusive. Specify only one of them.

Action: Specify only one of the exclusive arguments.

LPX-00752: invalid ~1s, must be ~2s

Cause: Invalid value was specified for attribute.

Action: Correct the value with one of the suggested values.

LPX-00753: invalid proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00754: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct the specification. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00755: missing required argument "~s"

Cause: A required argument was missing.

Action: Provide the missing argument to the function.

LPX-00756: Etags and tokens must be either all tagged or all untagged

Cause: The list of condition factors need to be either all tagged with absoluteURI's or all untagged with absoluteURI's.

Action: If all condition factors were applied to the resource receiving the request, make them all untagged. Otherwise, make them all tagged with appropriate resource's URI's.

LPX-00757: maximum XML document size (~s bytes) exceeded

Cause: The input XML document's size exceeded the limit set by "max_xml_size" attribute set in XmlDavCreate().

Action: Raise the value set for max_xml_size attribute in XmlDavCreate() if this does not create problems with security.

LPX-00758: user-provided callback returns null

Cause: Null was returned from user-provided callback function.

Action: Check error(s) encountered within the callback function.

LPX-00759: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with your system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00760: couldn't connect to host ~s port ~u

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00761: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity.

LPX-00762: read failed from host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity.

LPX-00763: exceeded maximum TCP connections

Cause: The maximum allowable number of TCP connections were exceeded. This happens only if too many pending HTTP responses have not been properly ended or destroyed.

Action: End a pending response session or destroy response objects that have been processed.

LPX-00764: TCP connection was broken

Cause: Either the server terminated the TCP connection or the TCP connection is in a bad state.

Action: Analyze the error. After cleanup, retry the method.

LPX-00765: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error.

LPX-00766: unsupported transfer-coding values: ~s

Cause: Only "chunked" and "identity" transfer-coding values are supported.

Action: This is WebDAV implementation's shortfall. There is no workaround for this problem.

LPX-00767: not a text media type

Cause: A text media type was expected. But other media types were found.

Action: Since this data cannot be read as a text type, use another routine to read it.

LPX-00768: no entity body found

Cause: No entity body was found when it was read.

Action: Check the HTTP status code and headers to see why the entity body was not found.

LPX-00769: not xml media type

Cause: An XML media type was expected. But other media types were found.

Action: Since this data cannot be read as an XML type, use another routine to read it.

LPX-00770: missing lock token in lock refresh request

Cause: A LOCK request to refresh a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00771: missing lock token in UNLOCK request

Cause: An UNLOCK request to remove a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00772: wrong object type

Cause: The wrong object type was given as argument to a WebDAV call.

Action: Review the failing function call, consult the documentation, and make sure the object types pass as correct.

LPX-00773: protocol violation: ~s

Cause: The entity body sent by the server in Chunked Transfer Encoding violated protocol.

Action: Either this is an internal implementation error or a server implementation error. Users should file a bug against either the server's or the client's implementation.

LPX-00800: XQuery invalid token

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00801: XQuery syntax error at

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00802: Too many arguments

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00803: Too few arguments

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00804: Invalid token: '~S'

Cause: Invalid program.

Action: Correct the program.

LPX-00805: Syntax error at '~S'

Cause: Invalid program.

Action: Correct the program.

LPX-00806: Invalid token in the pattern

Cause: The program was invalid.

Action: Correct the program.

LPX-00807: Invalid range

Cause: The program was invalid.

Action: Correct the program.

LPX-00808: internal error, invalid OPCODE

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00809: Invalid subexpression reference

Cause: The replacement string was invalid.

Action: Correct the replacement string.

LPX-00825: Can't compile the element:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00826: Can't compile the attribute:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00827: Namespace conflict for prefix:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00903: Invalid flags specified for XmlDiff or XmlPatch

Cause: Invalid value supplied to flags parameter for XmlDiff or XmlPatch functions.

Action: Specify valid flags (see xmldf.h).

LPX-00904: Invalid inputs were supplied to XmlDiff or XmlPatch

Cause: Data could not be read from inputs to XmlDiff or XmlPatch functions.

Action: Specify valid inputs (see xmldf.h).

LPX-00910: The root nodes in input documents to XmlDiff did not match

Cause: The root nodes in input documents do not match.

Action: Make sure the root nodes have same qualified name in both input documents. XmlDiff can be called only if the root nodes are same in input documents.

LPX-00913: XmlPatch could not process the XML PI oracle-xmldiff

Cause: The diff document either did not specify the XML Processing Instruction "oracle-xmldiff" or did not specify all data required by XmlPatch. The PI should be the first child of the top-level xdiff element. This error is also thrown when the output-model is 'snapshot' and operations-in-docorder is 'false'.

Action: Specify the "oracle-xmldiff" PI correctly. See documentation for XmlPatch C function in xmldf.h.

LPX-00918: XmlPatch encountered an error in translating XPATH using XmlIXVM

Cause: XmlPatch encountered an invalid XPATH in the diff document.

Action: If you handcoded the diff document, make sure all the XPATHs in the diff document are valid.

LPX-00950: JSON path processing error

Cause: The JavaScript Object Notation (JSON) path engine encountered a fatal condition.

Action: Contact Oracle Support Services and report the error.

LPX-01001: [XPST0001] Static context component '~S' has no value

Cause: It is a static error if analysis of an expression relies on some component of the static context that has not been assigned a value.

Action: n/a

LPX-01002: [XPDY0002] Dynamic context component '~S' has no value

Cause: It is a dynamic error if evaluation of an expression relies on some// part of the dynamic context that has not been assigned a value.

Action: n/a

LPX-01003: [XPST0003] Syntax error at '~s'

Cause: It is a static error if an expression is not a valid instance of the grammar defined in A.1 EBNF

Action: n/a

LPX-01004: [XPTY0004] Expression type does not match a required type

Cause: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Action: Check the expression type.

LPX-01005: [XPST0005] Invalid empty-sequence() expression

Cause: During the analysis phase, it is a static error if the static type assigned to an expression other than the expression () or data() is empty-sequence().

Action: n/a

LPX-01006: [XPTY0006]

Cause: Not currently used.

Action: n/a

LPX-01007: [XPTY0007]

Cause: Not currently used.

Action: n/a

LPX-01008: [XPST0008] Invalid reference

Cause: It is a static error if an expression refers to an element name, attribute name, schema type name, namespace prefix, or variable name that is not defined in the static context, except for an ElementName in an ElementTest or an AttributeName in an AttributeTest.

Action: n/a

LPX-01009: [XQST0009] Schema Import Feature not supported

Cause: An implementation that does not support the Schema Import Feature must raise a static error if a Prolog contains a schema import.

Action: n/a

LPX-01010: [XPST0010] Axis '~S' not supported

Cause: An implementation must raise a static error if it encounters a reference to an axis that it does not support.

Action: n/a

LPX-01012: [XQST0012] Invalid XML schema

Cause: It is a static error if the set of definitions contained in all schemas imported by a Prolog do not satisfy the conditions for schema validity specified in Sections 3 and 5 of [XMLSchema] Part 1 i.e., each definition must be valid, complete, and unique

Action: n/a

LPX-01013: [XQST0013] Invalid pragma content

Cause: It is a static error if an implementation recognizes a pragma but determines that its content is invalid.

Action: n/a

LPX-01014: [XPTY0014] Too many levels of nesting

Cause: An expression contained too many levels of nested parentheses.

Action: n/a

LPX-01015: [XQST0015]

Cause: Not currently used.

Action: n/a

LPX-01016: [XQST0016] Module Feature not supported

Cause: An implementation that does not support the Module Feature raises a static error if it encounters a module declaration or a module import.

Action: n/a

LPX-01017: [XPST0017] Invalid function call

Cause: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Action: n/a

LPX-01018: [XPTY0018] Path last step contains both nodes and atomic values

Cause: It is a type error if the result of the last step in a path expression contains both nodes and atomic values.

Action: n/a

LPX-01019: [XPTY0019] Path step contains atomic values

Cause: It is a type error if the result of a step (other than the last step) in a path expression contains an atomic value.

Action: n/a

LPX-01020: [XPTY0020] The path step context item is not a node

Cause: It is a type error if, in an axis step, the context item is not a node.

Action: n/a

LPX-01021: [XPDY0021]

Cause: Not currently used.

Action: n/a

LPX-01022: [XQST0022] The value of a namespace must be a URILiteral.

Cause: It is a static error if the value of a namespace declaration attribute is not a URILiteral.

Action: n/a

LPX-01023: [XPDY0023]

Cause: Not currently used.

Action: n/a

LPX-01024: [XQTY0024] Attribute node out of context

Cause: It is a type error if the content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01025: [XQDY0025] Repeated attribute name

Cause: It is a dynamic error if any attribute of a constructed element does not have a name that is distinct from the names of all other attributes of the constructed element.

Action: n/a

LPX-01026: [XQDY0026] Processing instruction content contains '?>'

Cause: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string '?>'.

Action: n/a

LPX-01027: [XQDY0027] Invalid PSVI validity property of the root element

Cause: In a validate expression, it is a dynamic error if the root element information item in the PSVI resulting from validation does not have the expected validity property: valid if validation mode is strict, or either valid or notKnown if validation mode is lax.

Action: n/a

LPX-01028: [XQDY0028]

Cause: Not currently used

Action: n/a

LPX-01029: [XQDY0029]

Cause: Not currently used

Action: n/a

LPX-01030: [XQTY0030] Expression should evaluate to exactly one node

Cause: It is a type error if the argument of a validate expression does not evaluate to exactly one document or element node.

Action: n/a

LPX-01031: [XQST0031] Version not supported by the implementation

Cause: It is a static error if the version number specified in a version declaration is not supported by the implementation.

Action: n/a

LPX-01032: [XQST0032] Repeated base URI declaration

Cause: A static error is raised if a Prolog contains more than one base URI declaration.

Action: n/a

LPX-01033: [XQST0033] Multiple bindings for the namespace prefix '~s'

Cause: It is a static error if a module contains multiple bindings for the same namespace prefix.

Action: n/a

LPX-01034: [XQST0034] Repeated function declaration

Cause: It is a static error if multiple functions declared or imported by a module have the number of arguments and their expanded QNames are equal (as defined by the eq operator).

Action: n/a

LPX-01035: [XQST0035] Repeated schema components

Cause: It is a static error to import two schema components that both define the same name in the same symbol space and in the same scope.

Action: n/a

LPX-01036: [XQST0036] Importing module should import schema '~s'

Cause: It is a static error to import a module if the importing module's in-scope schema types do not include definitions for the schema type names that appear in the declarations of variables and functions (whether in an argument type or return type) that are present in the imported module and are referenced in the importing module.

Action: n/a

LPX-01037: [XQST0037]

Cause: Not currently used

Action: n/a

LPX-01038: [XQST0038] Invalid collation

Cause: It is a static error if a Prolog contains more than one default collation declaration, or the value specified by a default collation declaration is not present in statically known collations.

Action: n/a

LPX-01039: [XQST0039] Repeated parameter name

Cause: It is a static error for a function declaration to have more than one parameter with the same name.

Action: n/a

LPX-01040: [XQST0040] Repeated attribute name

Cause: It is a static error if the attributes specified by a direct element constructor do not have distinct expanded QNames.

Action: n/a

LPX-01041: [XQDY0041] Expression can't be cast to the type xs:NCName

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor cannot be cast to the type xs:NCName.

Action: n/a

LPX-01042: [XQST0042]

Cause: Not currently used.

Action: n/a

LPX-01043: [XQST0043]

Cause: Not currently used.

Action: n/a

LPX-01044: [XQDY0044] Invalid attribute namespace

Cause: It is a dynamic error if the node-name property of the node constructed by a computed attribute constructor is in the namespace <http://www.w3.org/2000/xmlns/> (corresponding to namespace prefix xmlns), or is in no namespace and has local name xmlns.

Action: n/a

LPX-01045: [XQST0045] Invalid function namespace

Cause: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/namespace>, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/xpath-functions>.

Action: n/a

LPX-01046: [XQST0046] Invalid URILiteral

Cause: An implementation MAY raise a static error if the value of a URILiteral is of nonzero length and is not in the lexical space of xs:anyURI.

Action: n/a

LPX-01047: [XQST0047] Repeated import module target namespace

Cause: It is a static error if multiple module imports in the same Prolog specify the same target namespace.

Action: n/a

LPX-01048: [XQST0048] Namespace should be as the module target namespace

Cause: It is a static error if a function or variable declared in a library module is not in the target namespace of the library module.

Action: n/a

LPX-01049: [XQST0049] Repeated variable declaration

Cause: It is a static error if two or more variables declared or imported by a module have equal expanded QNames (as defined by the eq operator.)

Action: n/a

LPX-01050: [XPDY0050] Invalid dynamic type

Cause: It is a dynamic error if the dynamic type of the operand of a treat expression does not match the sequence type specified by the treat expression. This error might also be raised by a path expression beginning with "/" or "/" if the context node is not in a tree that is rooted at a document node. This is because a leading "/" or "/" in a path expression is an abbreviation for an initial step that includes the clause treat as document-node().

Action: n/a

LPX-01051: [XPST0051] AtomicType not defined

Cause: It is a static error if a QName that is used as an AtomicType in a SequenceType is not defined in the in-scope schema types as an atomic type.

Action: n/a

LPX-01052: [XQDY0052]

Cause: Not currently used.

Action: n/a

LPX-01053: [XQDY0053]

Cause: Not currently used.

Action: n/a

LPX-01054: [XQST0054] The variable depends on itself

Cause: It is a static error if a variable depends on itself.

Action: n/a

LPX-01055: [XQST0055] Repeated copy-namespaces declaration

Cause: It is a static error if a Prolog contains more than one copy-namespaces declaration.

Action: n/a

LPX-01056: [XQST0056]

Cause: Not currently used.

Action: n/a

LPX-01057: [XQST0057] Missing schema import target namespace

Cause: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string.

Action: n/a

LPX-01058: [XQST0058] Repeated schema import target namespace

Cause: It is a static error if multiple schema imports specify the same target namespace.

Action: n/a

LPX-01059: [XQST0059] Can't find schema or module with namespace '~s'

Cause: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace.

Action: n/a

LPX-01060: [XQST0060] Function name should have a namespace

Cause: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI).

Action: n/a

LPX-01061: [XQDY0061] Invalid document node

Cause: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order.

Action: n/a

LPX-01062: [XQDY0062]

Cause: Not currently used.

Action: n/a

LPX-01063: [XQST0063]

Cause: Not currently used.

Action: n/a

LPX-01064: [XQDY0064] Processing instruction name contains 'XML'

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case).

Action: n/a

LPX-01065: [XQST0065] Repeated ordering mode declaration

Cause: A static error is raised if a Prolog contains more than one ordering mode declaration.

Action: n/a

LPX-01066: [XQST0066] Repeated default declaration

Cause: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration.

Action: n/a

LPX-01067: [XQST0067] Repeated construction declaration

Cause: A static error is raised if a Prolog contains more than one construction declaration.

Action: n/a

LPX-01068: [XQST0068] Repeated boundary-space declaration

Cause: A static error is raised if a Prolog contains more than one boundary-space declaration.

Action: n/a

LPX-01069: [XQST0069] Repeated empty order declaration

Cause: A static error is raised if a Prolog contains more than one empty order declaration.

Action: n/a

LPX-01070: [XQST0070] Invalid (prefix, URI) combination

Cause: A static error is raised if a namespace URI is bound to the predefined prefix xmlns, or if a namespace URI other than `http://www.w3.org/XML/1998/namespace` is bound to the prefix xml, or if the prefix xml is bound to a namespace URI other than `http://www.w3.org/XML/1998/namespace`.

Action: n/a

LPX-01071: [XQST0071] Repeated namespace attribute

Cause: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names.

Action: n/a

LPX-01072: [XQDY0072] Element content contains invalid hyphens combination

Cause: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen.

Action: n/a

LPX-01073: [XQST0073] Cyclic import sequence

Cause: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules $M_1 \dots M_n$ such that each M_i imports M_{i+1} and M_n imports M_1), unless all the modules in the cycle share a common namespace.

Action: n/a

LPX-01074: [XQDY0074] Invalid element or attribute QName

Cause: It is a dynamic error if the value of the name expression in a computed element or attribute constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Action: n/a

LPX-01075: [XQST0075] Validate expression not supported

Cause: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression.

Action: n/a

LPX-01076: [XQST0076] Invalid collation

Cause: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations.

Action: n/a

LPX-01077: [XQST0077]

Cause: Not currently used.

Action: n/a

LPX-01078: [XQST0078]

Cause: Not currently used.

Action: n/a

LPX-01079: [XQST0079] Invalid extension expression

Cause: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces.

Action: n/a

LPX-01080: [XPST0080] Invalid target type

Cause: It is a static error if the target type of a cast or castable expression is xs:NOTATION or xs:anyAtomicType.

Action: n/a

LPX-01081: [XPST0081] Invalid prefix

Cause: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Action: n/a

LPX-01082: [XQST0082]

Cause: Not currently used.

Action: n/a

LPX-01083: [XQST0083]

Cause: Not currently used.

Action: n/a

LPX-01084: [XQDY0084] Missing top-level element declaration

Cause: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict.

Action: n/a

LPX-01085: [XQST0085] The namespace URI shouldn't be a zero-length string

Cause: It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Action: n/a

LPX-01086: [XQTY0086] No-preserve mode conflict

Cause: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve.

Action: n/a

LPX-01087: [XQST0087] Invalid encoding

Cause: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0].

Action: n/a

LPX-01088: [XQST0088] Target namespace string shouldn't be of zero length

Cause: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length.

Action: n/a

LPX-01089: [XQST0089] Repeated variable name

Cause: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames).

Action: n/a

LPX-01090: [XQST0090] Invalid character reference

Cause: It is a static error if a character reference does not identify a valid character in the version of XML that is in use.

Action: n/a

LPX-01091: [XQDY0091] Invalid xml:id

Cause: An implementation MAY raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id.

Action: n/a

LPX-01092: [XQDY0092] Invalid xml:space value

Cause: An implementation MAY raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default.

Action: n/a

LPX-01093: [XQST0093] Module depends on itself

Cause: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Action: n/a

LPX-01094: [FORG0003] fn:zero-or-one called with a sequence containing more than one item

Cause: It is a dynamic error if fn:zero-or-one is called with a sequence containing more than one item

Action: n/a

LPX-01095: [FORG0004] fn:one-or-more called with a sequence containing no items

Cause: It is a dynamic error if fn:one-or-more is called with a sequence containing no items

Action: n/a

LPX-01096: [FORG0005] fn:exactly-one called with a sequence containing zero or more than one item

Cause: It is a dynamic error if fn:exactly-one is called with a sequence containing zero or more than one item

Action: n/a

LPX-01097: [FORG0006] Invalid argument type

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument type.

Action: n/a

LPX-01098: [FOCA0002] Invalid lexical value

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument value.

Action: n/a

LPX-01099: [FOCA0001] Input value too large for decimal

Cause: It is a dynamic error if the Input value too large for decimal

Action: n/a

LPX-01100: [FOCA0003] Input value too large for integer

Cause: It is a dynamic error if the Input value too large for integer

Action: n/a

LPX-01101: External Error '~s' occurs

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

LPX-01102: [FORG0008] both arguments to fn:dateTime have a specified timezone

Cause: It is an error to pass arguments to fn:dateTime having a specified timezone

Action: n/a

LPX-01105: [FOAR0001] Division by zero

Cause: It is an error to divide by zero

Action: n/a

LPX-01106: [FOAR0002] Numeric operation overflow/underflow

Cause: Numeric operations causes overflow/underflow

Action: n/a

LPX-01107: [FORG0002] invalid argument to fn:resolve-uri()

Cause: Wrong argument to fn:resolve-uri() function

Action: n/a

LPX-01108: [FORG0009] error in resolving a relative URI against a base URI in fn:resolve-uri()

Cause: Error resolving relative URI in fn:resolve-uri() function

Action: n/a

LPX-01109: [FOCA0005] NaN supplied as float/double value

Cause: NaN supplied as float/double value

Action: n/a

LPX-01110: [FOCA0006] String to be cast to decimal has too many digits of precision

Cause: String to be cast to decimal has too many digits of precision

Action: n/a

LPX-01111: [FOCH0002] Unsupported collation

Cause: Unsupported collation

Action: n/a

LPX-01112: [FOCH0003] Unsupported normalization form

Cause: Unsupported normalization form

Action: n/a

LPX-01113: [FOCH0004] Collation does not support collation units

Cause: Collation does not support collation units

Action: n/a

LPX-01114: [FODC0001] No context document

Cause: No context document

Action: n/a

LPX-01115: [FODC0002] Error retrieving resource

Cause: Error retrieving resource

Action: n/a

LPX-01116: [FODC0003]

Cause: Function stability not defined

Action: Function stability not defined

LPX-01117: [FODC0004] Invalid argument to fn:collection

Cause: Invalid argument to fn:collection

Action: n/a

LPX-01118: [FODC0005] Invalid argument to fn:doc or fn:doc-available

Cause: Invalid argument to fn:doc or fn:doc-available

Action: n/a

LPX-01119: [FODT0001] Overflow/underflow in date/time operation

Cause: Overflow/underflow in date/time operation

Action: n/a

LPX-01120: [FODT0002] Overflow/underflow in duration operation

Cause: Overflow/underflow in duration operation

Action: n/a

LPX-01121: [FODT0003] Invalid timezone value

Cause: Invalid timezone value

Action: n/a

LPX-01122: [FONS0005] Base-uri not defined in the static context

Cause: Base-uri not defined in the static context

Action: n/a

LPX-01123: [FORG0001] Invalid value for cast/constructor

Cause: Invalid value for cast/constructor

Action: n/a

LPX-01124: [FORX0001] Invalid regular expression flags

Cause: Invalid regular expression flags

Action: n/a

LPX-01125: [FORX0002] Invalid regular expression

Cause: Invalid regular expression

Action: n/a

LPX-01126: [FORX0003] Regular expression matches zero-length string

Cause: Regular expression matches zero-length string

Action: n/a

LPX-01127: [FORX0004] Invalid replacement string

Cause: Invalid replacement string

Action: n/a

LPX-01128: [FOTY0012] Argument node does not have a typed value

Cause: Argument node does not have a typed value

Action: n/a

LPX-01129: [XUST0001] Updating expression in a wrong position

Cause: It is a static error if an updating expression is used in any position other than one of the following: 1. The topmost expression in the body of a query. 2. The modify clause of a transform expression. 3. The return clause of a FLWOR expression. 4. The return clauses of a typeswitch expression in which every return clause contains an updating expression, an empty expression (), or a call to the fn:error function. 5. The then and else clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression (), or a call to the fn:error function. 6. An operand of a comma expression in which each operand is either an updating expression, an empty expression (), or a call to the fn:error

function. 7. The content of a parenthesized expression. 8. The body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01130: [XUST0002] Non-updating expression in a wrong position

Cause: It is a static error if a non-updating expression other than an empty expression () or a call to the fn:error function is used in one of the following positions: 1. The modify clause of a transform expression. 2. The top-level expression in the body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01131: [XUST0003] Repeated revalidation declaration

Cause: It is a static error if a Prolog contains more than one revalidation declaration.

Action: n/a

LPX-01132: [XUTY0004] Invalid attribute node in the insertion sequence

Cause: It is a type error if the insertion sequence of an insert expression contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01133: [XUTY0005] Invalid target expression for 'insert'

Cause: In an insert expression where into, as first into, or as last into is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element or document node.

Action: n/a

LPX-01134: [XUTY0006] Invalid target expression for 'insert'

Cause: In an insert expression where before or after is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element, text, comment, or processing instruction node.

Action: n/a

LPX-01135: [XUTY0007] Invalid target expression for 'delete'

Cause: It is a type error if the target expression of a delete expression does not return a sequence of zero or more nodes.

Action: n/a

LPX-01136: [XUTY0008] Invalid target expression for 'replace'

Cause: In a replace expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, text, comment, or processing instruction node.

Action: n/a

LPX-01137: [XUDY0009] Invalid target expression for 'replace'

Cause: In a replace expression where value of is not specified, it is a dynamic error if the node returned by the target expression does not have a parent.

Action: n/a

LPX-01138: [XUTY0010] Invalid replacement sequence for 'replace'

Cause: In a replace expression where value of is not specified and the target is an element, text, comment, or processing instruction node, it is a type error if the replacement sequence does not consist of zero or more element, text, comment, or processing instruction nodes.

Action: n/a

LPX-01139: [XUTY0011] Invalid replacement sequence for 'replace'

Cause: In a replace expression where value of is not specified and the target is an attribute node, it is a type error if the replacement sequence does not consist of zero or more attribute nodes.

Action: n/a

LPX-01140: [XUTY0012] Invalid target expression for 'rename'

Cause: In a rename expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, or processing instruction node.

Action: n/a

LPX-01141: [XUTY0013] Invalid copy expression for transform

Cause: In a transform expression, it is a type error if a source expression in the copy clause does not return a single node.

Action: n/a

LPX-01142: [XUDY0014] Modified node was not created by the copy clause

Cause: In a transform expression, it is a dynamic error if the modify clause modifies any node that was not created by the copy clause.

Action: n/a

LPX-01143: [XUDY0015] Duplicate 'rename' for the same target node

Cause: It is a dynamic error if any node is the target of more than one rename expression within the same query.

Action: n/a

LPX-01144: [XUDY0016] Duplicate 'replace' for the same target node

Cause: It is a dynamic error if any node is the target of more than one replace expression (without value of being specified) within the same query.

Action: n/a

LPX-01145: [XUDY0017] Duplicate 'replace' for the same target node

Cause: It is a dynamic error if any node is the target of more than one replace value of expression within the same query.

Action: n/a

LPX-01146: [XUDY0018] External not updating function returns an updated value

Cause: It is a dynamic error if a function that was declared to be external but not updating returns a non-empty pending update list.

Action: n/a

LPX-01147: [XUDY0019] External updating function returns an invalid value

Cause: It is a dynamic error if a function that was declared to be both external and updating returns a non-empty data model instance.

Action: n/a

LPX-01148: [XUDY0020] Deleted node has no parent

Cause: An implementation may (but is not required to) raise a dynamic error if a node is deleted that had no parent before execution of the query began.

Action: n/a

LPX-01149: [XUDY0021] The result XDM instance violates XDM constraints

Cause: It is a dynamic error if the XDM instance that would result from applying all the updates in a query violates any constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query are made effective.

Action: n/a

LPX-01150: [XUTY0022] Invalid attribute insertion into a document node

Cause: It is a type error if an insert expression specifies the insertion of an attribute node into a document node.

Action: n/a

LPX-01151: [XUDY0023] Updating expression introduces a namespace conflict

Cause: It is a dynamic error if an insert, replace, or rename expression affects an element node by introducing a new namespace binding that conflicts with one of its existing namespace bindings.

Action: n/a

LPX-01152: [XUDY0024] Updating expression introduces a namespace conflict

Cause: It is a dynamic error if the effect of a set of updating expressions is to introduce conflicting namespace bindings into an element node.

Action: n/a

LPX-01153: [XUDY0025] Invalid QName for processing instruction rename

Cause: It is a dynamic error if the target of a rename expression is a processing instruction node, and the new name expression returns a QName with a non-empty namespace prefix.

Action: n/a

LPX-01154: [XUST0026] Revalidation mode '~s' is not supported

Cause: It is a static error if a revalidation declaration in a Prolog specifies a revalidation mode that is not supported by the current implementation.

Action: n/a

LPX-01155: [XUDY0027] Invalid target expression

Cause: It is a dynamic error if the target expression of an insert, replace, or rename expression evaluates to an empty sequence.

Action: n/a

LPX-01156: [XUST0028] Updating function should not have a return type

Cause: It is a static error if a function declaration specifies both updating and a return type.

Action: n/a

LPX-01157: [XUDY0029] Insert expression target node doesn't have a parent

Cause: In an insert expression where before or after is specified, it is a dynamic error if node returned by the target expression does not have a parent.

Action: n/a

LPX-01158: [XUDY0030] Invalid insertion of an attribute node

Cause: It is a dynamic error if an insert expression specifies the insertion of an attribute node before or after a child of a document node.

Action: n/a

LPX-01159: [FOUP0001] Invalid 'fn:put' first operand

Cause: It is a dynamic error if the first operand of fn:put is not a node of a supported kind.

Action: n/a

LPX-01160: [FOUP0002] Invalid 'fn:put' second operand

Cause: It is a dynamic error if the second operand of fn:put is not a valid lexical representation of the xs:anyURI type.

Action: n/a

LRM-00100 to LRM-00127

LRM-00100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LRM-00101: unknown parameter name '*string*'

Cause: The parameter name was misspelled.

Action: Spell the parameter name correctly.

LRM-00102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

LRM-00103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

LRM-00104: '*string*' is not a legal integer for '*string*'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

LRM-00105: '*string*' is not a legal Boolean for '*string*'

Cause: The value is not a valid Boolean.

Action: Refer to the manual for allowable Boolean values.

LRM-00106: out of memory

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

LRM-00107: parameter name abbreviation '*string*' is not unique

Cause: The given abbreviation was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

LRM-00108: invalid positional parameter value '*string*'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

LRM-00109: could not open parameter file '*string*'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

LRM-00110: syntax error at '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00111: no closing quote for value '*string*'

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LRM-00112: multiple values not allowed for parameter '*string*'

Cause: An attempt was made to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

LRM-00113: error when processing file '*string*'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

LRM-00114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

LRM-00115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

LRM-00116: syntax error at '*string*' following '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

LRM-00120: '*string*' is not a legal Oracle number for '*string*'

Cause: The value is not a valid Oracle number.

Action: Refer to the manual for allowable Oracle number values.

LRM-00121: 'string' is not an allowable value for 'string'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

LRM-00122: value 'string' for 'string' must be between 'number' and 'number'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

LRM-00123: invalid character *number* found in the input file

Cause: A character that is invalid was found in the input file.

Action: Specify an input file that contains only valid characters.

LRM-00124: Circular dependency error while evaluating parameter 'string'

Cause: One or more of the parameters used in the expression value was dependent on the parameter being set.

Action: Identify the parameter dependency or provide an absolute value for the parameter.

LRM-00125: Maximum dependency depth detected while evaluating parameter 'string'

Cause: Interdependence of the parameters has reached the maximum depth.

Action: Reduce the dependency among the parameters.

LRM-00126: error in fetching the data from URL 'string'

Cause: Fetching the data from this URL failed.

Action: Check the URL and network connectivity.

LRM-00127: Invalid protocol in URL 'string'

Cause: Protocol in URL is not supported.

Action: Refer to manual for supported protocol.

LSX-00001 to LSX-00347

LSX-00001: NULL pointer

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the Schema processor. Contact someone who can fix the problem.

LSX-00002: root element is not *schema*

Cause: The top-level element of an XML Schema must be *schema*.

Action: Correct the Schema; consult the Schema specification.

LSX-00003: invalid attribute "~1S" for element "~2S"

Cause: The named Schema element had an invalid attribute.

Action: Correct the Schema; consult the Schema specification.

LSX-00004: unexpected XML node type

Cause: Schema contains an XML node other than element, text (or CDATA),

Action: Other node types are not permitted; remove them.

LSX-00008: feature "~s" is not implemented

Cause: An attempt was made to use a feature that is not yet implemented.

Action: Make an enhancement request for the feature.

LSX-00009: data missing for type "~S"

Cause: Data is missing for an element or attribute of a simple type.

Action: Add data in the element or attribute.

LSX-00010: extra element(s) at end of "~S"

Cause: Extra elements exist at the end of schema component declarations.

Action: Remove the extra elements.

LSX-00011: internal error: ~sln

Cause: Implementation error.

Action: File a bug.

LSX-00013: element "~S" not from Schema of Schemas

Cause: An invalid element existed in the schema file. The name was not from Schema of Schemas.

Action: Remove the invalid element.

LSX-00014: empty instance document

Cause: Instance document to be Schema validated was empty (no top-level element).

Action: Provide a complete XML instance document.

LSX-00015: failed to parse document

Cause: Failed to parse the schema document using the given URI.

Action: Provide the correct URI and make sure that the schema document is valid.

LSX-00016: schema and instance document have incompatible character sets

Cause: Parsed schema components were in a simple-type character set while the parsed instance document data was not. A simple-type character set is single-byte, not shift sensitive, and has no linguistic specials in use.

Action: Reinitialize the schema global context with appropriate parser context settings, i.e. pass a parser context with its output encoding set to be a multibyte or Unicode character set.

LSX-00018: invalid schema context

Cause: An invalid schema context was provided to the processor. Multiple schema documents were loaded and assembled into the schema context. At least one of them is not fully valid with respect to a schema corresponding to the Schema for Schemas.

Action: Check the errors reported when schema documents were loaded, mapped, or validated. Correct errors found in the identified schema documents and reload them into a new schema context. Then provide the new schema context to the processor.

LSX-00020: unknown type "~S"

Cause: A specified type was unknown (not defined in any loaded Schemas).

Action: Make sure the type was defined and that the type usage referenced the correct Schema.

LSX-00021: undefined element "~S"

Cause: Element is undefined in the specified namespace.

Action: If the element name is misspelled, correct the spelling.

LSX-00022: unknown namespace prefix "~S"

Cause: Prefix in a QName is undefined in the current scope.

Action: Correct the prefix name if it's misspelled.

LSX-00023: unknown namespace URI "~S"

Cause: Namespace URI is unknown to the schema processor.

Action: Correct the namespace URI if it's misspelled.

LSX-00024: unknown attribute group "~S"

Cause: The name of attribute group is unknown to the schema processor in the current scope.

Action: Correct the name of attribute group if it's misspelled.

LSX-00025: unknown group "~S"

Cause: The name of group is unknown to the schema processor in the current scope.

Action: Correct the name of group if it's misspelled.

LSX-00026: unknown attribute "~S"

Cause: The name of attribute is unknown to the schema processor in the current scope.

Action: Correct the name of attribute if it's misspelled.

LSX-00027: property "~s" unknown

Cause: The named validation property was unknown.

Action: Refer to the documentation for the complete list of validation properties.

LSX-00102: duplicate element "~S"

Cause: Element declaration is not unique within its scope.

Action: Rename the element.

LSX-00103: duplicate group "~S"

Cause: Group declaration is not unique within its scope.

Action: Rename the group.

LSX-00104: duplicate type "~S"

Cause: Type definition is not unique within its scope.

Action: Rename the type.

LSX-00105: duplicate attribute group "~S"

Cause: Attribute group declaration is not unique within its scope.

Action: Rename the attribute group.

LSX-00106: duplicate attribute "~S"

Cause: Attribute declaration is not unique within its scope.

Action: Rename the attribute.

LSX-00110: facet "~S" should have single value attribute

Cause: A facet declaration did not have a value attribute.

Action: Each facet declaration must contain one and only one value attribute.

LSX-00111: type "~S" contains invalid facets

Cause: A specified facet was invalid for a type. Each datatype has a different set of facets which may apply.

Action: Use only applicable facets for the type.

LSX-00112: facet "~S" duplicated

Cause: A facet (other than "enumeration") was specified more than once.

Action: Only the enumeration facet may be used more than once for a type.

LSX-00113: facet "~1S" has invalid value "~2S"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00114: facet "~S" not in schema schema

Cause: Facets are not defined in the XMLSchema namespace.

Action: Remove illegal facet declarations.

LSX-00116: mutually exclusive facets are not allowed

Cause: Mutual exclusiveness violations were found for facets. For example, both "length" and either "minLength" or "maxLength" are not allowed to be facets.

Action: Remove the facets that are at fault.

LSX-00117: "minLength" should not be greater than "maxLength"

Cause: The value of "minLength" must be less than or equal to the value of "maxLength".

Action: Correct either "minLength" or "maxLength".

LSX-00118: fixed facet value cannot be changed

Cause: The value of a fixed facet in the base type definition should remain the same.

Action: Remove the fixed facet specification in the parent's type for the erroneous facet component.

LSX-00119: value is not valid restriction of parent's minLength

Cause: There was an error in that minLength was among the members of {facets} of {base type definition} and {value} was less than the {value} of the parent minLength.

Action: Increase the {value} of minLength.

LSX-00120: value is not valid restriction of parent's maxLength

Cause: There was an error in that maxLength was among the members of {facets} of {base type definition} and {value} was greater than the {value} of the parent maxLength.

Action: Increase the {value} of maxLength.

LSX-00121: value is not valid restriction of parent's length

Cause: There was an error in that length was among the members of {facets} of {base type definition} and {value} was not equal to the {value} of the parent length.

Action: Make {value} the same as parent's.

LSX-00122: value is not valid restriction of parent's whiteSpace

Cause: There was an error in that whiteSpace was among the members of {facets} of {base type definition} and at least one of the following conditions was true: 1 {value} is replace or preserve and {value} of the parent whiteSpace is collapse 2 {value} is preserve and the {value} of the parent whiteSpace is replace

Action: Change the {value} of whiteSpace.

LSX-00123: base type is required

Cause: Missing base type declaration in the type definition.

Action: Define a base type.

LSX-00124: "list" element is improperly defined

Cause: A "list" element either must have its "itemType" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00125: "restriction" element is improperly defined

Cause: A "restriction" element either must have its "base" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00126: facet "~1S" has invalid value "~u"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00127: totalDigits must be greater than or equal to fractionDigits

Cause: The value of the facet totalDigits is less than the value of the facet fractionDigits.

Action: Ensure that totalDigits is greater than or equal to fractionDigits.

LSX-00128: facet "~1S" has invalid value "~s"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00130: attribute "processContents" has invalid value "~S"

Cause: Attribute "processContents" in the "any" element or "anyAttribute" declaration has an invalid value.

Action: Specify one of the following values: lax, skip, or strict.

LSX-00132: attribute "~1S" has invalid occurrences value "~2S"

Cause: A minOccurs or maxOccurs attribute had an invalid value (not a integer or less than zero).

Action: Use a legal "occurs" value.

LSX-00133: attribute "use" has invalid value "~S"

Cause: A "use" attribute had an invalid value. Choices for "use" are "default", "fixed", "optional", "prohibited", or "required".

Action: Change the attribute to one of the above values.

LSX-00134: attribute "~1S" has invalid qualification "~2S"

Cause: An attribute that specifies qualification (form, attributeFormDefault, elementFormDefault) was invalid; it must be one of "qualified" or "unqualified".

Action: Change the attribute to one of the above values.

LSX-00135: invalid min/max Occurs for all element, must be 0/1

Cause: "minOccurs" has a value other than 0/1 or "maxOccurs" has a value other than 1.

Action: Specify 0/1 for "minOccurs" or "maxOccurs".

LSX-00136: "maxOccurs" is less than "minOccurs"

Cause: The value of the "maxOccurs" specification is less than the value of the "minOccurs" specification.

Action: Correct "minOccurs" or "maxOccurs".

LSX-00141: ID type may only be used in attributes

Cause: For backward compatibility with DTD, ID type may only be used in attributes.

Action: Remove the ID type.

LSX-00142: invalid sub-element "~1S" for element "~2S"

Cause: There was an invalid sub-element in the content of either the attribute or the element declaration. This was because the sub-element was either at the wrong position or out of context.

Action: Remove the sub-element or move it to the correct position.

LSX-00143: element "~S" must have type or ref

Cause: A Schema element was declared but was neither type or reference.

Action: One of type or reference must be specified.

LSX-00144: attribute "~1S" invalid derivation-restriction value "~2S"

Cause: An attribute which specifies a derivation-restriction setting (block, content, final) had an invalid value. Choices are "#all", "extension", or "restriction".

Action: Change the attribute to one of the above values.

LSX-00145: attribute "~1S" invalid derived value "~2S"

Cause: A derivedBy attribute had an invalid value. Choices are "extension" or "restriction".

Action: Change the attribute to one of the above values.

LSX-00146: element or attribute is improperly defined

Cause: An element or attribute definition must have either its "type" attribute set or must have one of its children be a "simpleType" or "complexType" element but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00147: "~1S" cannot contain "~2S"

Cause: An invalid schema component exists in the current declaration.

Action: Remove the schema component.

LSX-00148: annotation must come first in "~S"

Cause: "annotation" element must be the first in the content.

Action: Make "annotation" the first element.

LSX-00149: duplicated ID specified in "~S"

Cause: An attempt was made to specify two distinct members of {attribute uses}with {attribute declaration}s, both of whose {type definition}s are from ID or are derived from ID.

Action: Declare only one member of the {attribute uses} whose {type definition} is from ID or will be derived from ID.

LSX-00150: attributeGroup reference shouldn't have children

Cause: A reference-to-attributeGroup element has children. It is suppose to be empty except for annotations.

Action: Remove the children.

LSX-00151: invalid combination of attributes "ref" and "name"

Cause: If the item's parent is not *schema*, then either the "ref" or the "name" attribute must be present, but not both. Top-level elements or attributes must have a name.

Action: Specify either the "ref" or "name" attribute.

LSX-00152: only "minOccurs", "maxOccurs", or "id" is allowed

Cause: If the item's parent is not *schema* and "ref" is present, then "complexType", "simpleType", "key", "keyref", "unique", "nillable", "default", "fixed", "form", "block", and "type" must be absent.

Action: Remove the prohibited attribute.

LSX-00153: invalid combination of default and fixed attributes

Cause: It is an error for a declaration to contain both fixed and default attributes.

Action: Remove either the default or the fixed attributes.

LSX-00154: attribute "use" must have its value set to "optional"

Cause: If "default" and "use" are both present, use must have its value set to "optional".

Action: Remove the default attribute or change the value of the "use" attribute.

LSX-00155: invalid use of attribute "ref"

Cause: If the item's parent is not *schema* and the attribute "ref" is present, then the element "simpleType" and the attributes "form" and "type" must be absent.

Action: Remove the prohibited items.

LSX-00156: type is final and no derivations are allowed

Cause: Derivation from a type that is declared to be final occurred.

Action: Remove the final declaration from the base type.

LSX-00157: "~S" is abstract and cannot be used in an instance document

Cause: The element declaration or the type definition was abstract.

Action: When an element is declared to be abstract, a member of that element's substitution group must appear in the instance document. When an element's corresponding type definition is declared as abstract, all instances of that element must use `xsi:type` to indicate a derived type that is not abstract.

LSX-00158: base type of "~S" must be simple type or primitive datatype

Cause: The derivation constraint was violated.

Action: Use `complexType` instead of `simpleType`.

LSX-00159: list content of multiple simple types is not allowed

Cause: Two or more simple types were specified within the list content .

Action: Specify only one simple type.

LSX-00160: invalid substitution group affiliation between "~S" and "-S"

Cause: There was an error in that {substitution group exclusions} prevented substitution group affiliation by type restriction or type extension.

Action: Remove the offending deriving method from the {substitution group exclusions} list.

LSX-00161: disallowed type substitution between "~S" and "-S"

Cause: There was a substituted type whose deriving method falls in the union of the {disallowed substitutions} and the {type definition}'s {prohibited substitutions}.

Action: Remove the offending deriving method from the element's {disallowed substitutions} list or the {type definition}'s {prohibited substitutions} list.

LSX-00162: string "~S" is an invalid default for the complex type

Cause: If the {content type} is a simple type definition, then the string must be valid with regard to the simple type definition as defined by String Valid (3.14.4). If the {content type} is mixed, then the {content type}'s particle must be emptiable as defined by Particle Emptiable (3.9.6). However, one of these conditions was not met, resulting in this error.

Action: Make the default string a valid default with regard to the complex type definition.

LSX-00163: duplicated content specification in "~S"

Cause: There was a duplicate content specification in the children of complexType.

Action: Remove the duplicate content specification.

LSX-00164: no content specified in "~S"

Cause: In a simpleContent specification, either "restriction" or "extension" was not specified as a child.

Action: Add either a "restriction" or an "extension" element information item.

LSX-00165: content type of "~S" must be simple type

Cause: The content type of the type definition was not a simple type definition.

Action: Use complexContent instead of simpleContent .

LSX-00166: both content types must be mixed or both must be element-only

Cause: If the content types of the derived type and base type are not the same simple type definition and the content type of the base type is not empty, then both content types must be mixed or both must be element-only. This was not the case, resulting in this error.

Action: Add attribute mixed="true" or remove it.

LSX-00167: defining form of "~S" must occur at the top level

Cause: The defining form did not occur at the top level of a schema.

Action: Move attributeGroup or group definition to the top level of the schema.

LSX-00168: referring form of "~S" must NOT occur at the top level

Cause: The referring form did not occur within a complex type definition or an attribute group definition.

Action: Move the attributeGroup definition to within a complex type definition or an attribute group definition. Or, move the group definition to within a complex type, restriction, extension, choice, or sequence.

LSX-00169: circular group reference is disallowed outside *redefine*

Cause: There was a circular group reference.

Action: One of the group references needs to be changed to a group definition.

LSX-00170: union must have memberTypes attribute or some simpleType children

Cause: There was no member type definition for the union declaration.

Action: Add memberTypes attribute or simpleType children.

LSX-00171: missing required sub-element "~S"

Cause: The sub-element specified in the error message was required.

Action: Add the required sub-element.

LSX-00172: "~S" is not a valid restriction of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, Complex) or Particle Valid (Restriction), was violated.

Action: Modify the base type (particle) or the restricted type (particle) definition.

LSX-00173: ~S of ~S type is not a valid restriction of ~S of ~S type

Cause: The schema component constraint, Particle Restriction OK (Elt:Elt -- NameAndTypeOK), was violated.

Action: Modify either or both element declaration particles.

LSX-00174: "~S" is not a valid derivation of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, simple), (Restriction, complex) or (Extension), was violated.

Action: Modify the base type or the derived type definition.

LSX-00175: a complex base within "simpleContent" must have simple content

Cause: A complex base within "simpleContent" was not restricted to contain only simple content.

Action: Modify the base type or the derived type definition.

LSX-00176: circular reference detected in schema component named "~S"

Cause: An attempt was made to use a circular reference. This is not allowed. For example, it is not possible to return to an element declaration by repeatedly following the {substitution group affiliation} property. Or, within the {particles} of a group there must not be at any depth a particle whose {term} is the group itself.

Action: Modify one of the schema components in the loop.

LSX-00200: element "~S" not empty

Cause: Content of the element must be empty.

Action: Remove any schema components in the content.

LSX-00201: contents of "~S" should be elements only

Cause: Node with type other than "element", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00202: contents of "~S" should be text only

Cause: Node with type other than "text", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00204: extra data at end of complex element

Cause: Extra nodes exist at the end of an element with a complex type definition.

Action: Remove the offending nodes or check the definition of the complex type.

LSX-00205: element "~1S" value "~2S" is wrong (must be "~3S")

Cause: The element had a value other than its fixed value.

Action: Use the fixed value as its value.

LSX-00206: substitution for element "~S" is disallowed

Cause: An attempt was made to substitute an element that violated a constraint.

Action: Change to a valid new element that can be substituted for the headElement.

LSX-00207: empty list is disallowed

Cause: An empty list was supplied where at least one value is required.

Action: Specify at least one valid list item.

LSX-00208: circular type reference disallowed

Cause: A type referenced itself as a member type, either directly or indirectly using other types.

Action: Remove the circular type dependency.

LSX-00209: fixed or default not allowed on ID-based type

Cause: A type derived from the ID type specified a fixed value or a default value.

Action: Remove the fixed or default value from the type.

LSX-00210: value "~1S" out of range for type "~2S"

Cause: Value is out of range for the data with a specific type.

Action: Fix the value.

LSX-00211: value "~1S" whose fractional digits exceeds ~2d

Cause: Too many fractional digits after the decimal point.

Action: Remove the extra fractional digits.

LSX-00212: value "~1s" whose total digits exceeds ~2d

Cause: Too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00213: only ~1d occurrences of particle "~2S", minimum is ~3d

Cause: Too few occurrences of particles in the node.

Action: Specify more particles.

LSX-00214: too many occurrences of particle "~1S", maximum is ~2d

Cause: Too many occurrences of particles in the node.

Action: Remove extra ones.

LSX-00215: value "~1S" whose total digits exceeds ~2d

Cause: There were too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00220: "~1S" is wrong length, should be ~2d

Cause: Data of simple type has invalid length.

Action: Fix the length of the data.

LSX-00221: "~1S" is too short (minimum length is ~2d)

Cause: The length of the data is too short.

Action: Prepend extra characters (such as zeros or blank characters) to make the data longer.

LSX-00222: "~1S" is too long (maximum length is ~2d)

Cause: The length of the data is too long.

Action: Remove extra characters from the data.

LSX-00229: item type is not a valid type for a list simple type

Cause: The specified item type must not itself be a list type, and must be one of the types identified in [XML Schemas: Datatypes] as a suitable item type for a list simple type.

Action: Change the list schema component's declaration.

LSX-00230: invalid integer "~S"

Cause: Illegal characters exist in the "integer" or its derivative type declarations.

Action: Remove illegal characters.

LSX-00231: invalid unsigned integer "~S"

Cause: Illegal characters exist in the "unsignedLong", "unsignedInt", "unsignedShort", or "unsignedByte" declarations.

Action: Remove illegal characters.

LSX-00232: invalid unsigned long "~S"

Cause: Illegal characters exist in the "unsignedLong" declaration.

Action: Remove illegal characters.

LSX-00233: invalid long "~S"

Cause: Illegal characters exist in the "long" declaration.

Action: Remove illegal characters.

LSX-00234: invalid decimal "~S"

Cause: Illegal characters exist in the "decimal" declaration.

Action: Remove illegal characters.

LSX-00235: invalid URI "~S"

Cause: Invalid URI specification for data of "anyURI" type.

Action: Remove illegal characters.

LSX-00237: invalid Name "~S"

Cause: Invalid XML name.

Action: Remove illegal characters.

LSX-00238: invalid Nmtoken "~S"

Cause: Invalid Nmtoken.

Action: Remove illegal characters.

LSX-00240: bad float "~S"

Cause: Invalid value for "float" type data.

Action: Remove illegal characters.

LSX-00241: bad double "~S"

Cause: Invalid value for "double" type data.

Action: Remove illegal characters.

LSX-00242: bad Boolean "~S"

Cause: Boolean data must have a value from the following set: "1", "0", "true", or "false".

Action: Specify one of "1", "0", "true", or "false".

LSX-00243: invalid date "~S"

Cause: Invalid value for data of "date" type.

Action: Remove illegal characters.

LSX-00244: invalid NCName "~S"

Cause: Invalid value for data of "NCName" type.

Action: Remove illegal characters.

LSX-00245: invalid ID "~S"

Cause: Data specified is not of "NCName" type.

Action: Remove illegal characters.

LSX-00246: invalid QName "~S"

Cause: Invalid value for data of "QName" type.

Action: Remove illegal characters.

LSX-00247: invalid language specification "~S"

Cause: Invalid value for data of "language" type.

Action: Remove illegal characters.

LSX-00248: invalid duration "~S"

Cause: Invalid value for data of "duration" type.

Action: Remove illegal characters.

LSX-00249: invalid date or time "~S"

Cause: Invalid value for data of "dateTime", "time", "gYearMonth", "gYear", "gMonthDay", "gDay", or "gMonth" type.

Action: Remove illegal characters.

LSX-00250: invalid normalizedString "~S"

Cause: Invalid value for data of "normalizedString" type.

Action: Remove illegal characters.

LSX-00251: invalid token "~S"

Cause: Invalid value for data of "token" type.

Action: Remove illegal characters.

LSX-00252: invalid union "~S"

Cause: Data of simple type is not one of the union type.

Action: Use one of the union type as its type.

LSX-00253: branch is empty

Cause: The pattern specification "branch1 | branch2" has either "branch1" or "branch2" missing.

Action: Remove '|' or add either "branch1" or "branch2".

LSX-00255: mismatched parentheses

Cause: ")" found without a matching "(" in a pattern specification.

Action: Add "(" to the pattern specification.

LSX-00256: empty character class expression

Cause: "[]" found when processing a character class expression.

Action: Specify the character group within the brackets.

LSX-00257: atom specification is missing

Cause: A quantifier was found without an atom specification.

Action: Add an atom specification in front of the quantifier.

LSX-00258: invalid escape character

Cause: "x" in "\x" is not a valid escape character.

Action: Change "x" to a valid escape character.

LSX-00259: invalid character found in the pattern

Cause: An unexpected character was found in the pattern.

Action: Fix the pattern.

LSX-00260: unexpected end of pattern

Cause: Something is missing at the end of the pattern.

Action: Fix the pattern.

LSX-00261: invalid character property

Cause: An error occurred when processing the character property. For example, "{" is missing after "\p" or "\P".

Action: Fix the character property.

LSX-00262: attribute "~1S" cannot have complex type "~2S"

Cause: The type of the attribute is "complex".

Action: Specify the type of the attribute to be "simple".

LSX-00263: undefined attribute "~S"

Cause: Violating attribute is not defined in the current scope.

Action: Correct the attribute name if it's misspelled.

LSX-00264: attribute "~S" is prohibited (may not occur)

Cause: Global declarations cannot contain the attributes "ref", "minOccurs", or "maxOccurs", or the use of this attribute is explicitly declared as "prohibited" by the schema.

Action: Remove the attribute.

LSX-00265: attribute "~1S" value "~2S" is wrong (must be "~3S")

Cause: Attribute has a value other than its fixed value.

Action: Use fixed value as its value.

LSX-00266: missing required attribute "~S"

Cause: A required attribute is missing.

Action: Add the required attribute.

LSX-00270: hex-encoded binary has odd length

Cause: Data of "hexBinary" type has odd number of digits.

Action: Add missing digits as appropriate.

LSX-00271: invalid character "~c" in hex-encoded binary

Cause: Data of "hexBinary" type has invalid characters.

Action: Remove illegal characters.

LSX-00272: BASE64-encoded binary grouped improperly (not 4's)

Cause: Number of digits is not a multiple of four.

Action: Add missing digits as appropriate.

LSX-00273: invalid character "~c" in base64-encoded binary

Cause: Data of "base64Binary" type has invalid characters.

Action: Remove illegal characters.

LSX-00274: invalid padding in base64-encoded binary

Cause: Invalid padding characters at the end of data.

Action: Use "=" as the padding characters.

LSX-00280: duplicate ID "~S"

Cause: ID name is not unique within the schema scope.

Action: Rename the ID.

LSX-00281: referenced ID "~S" is not defined

Cause: Referenced ID name is not defined within the schema scope.

Action: Define the ID.

LSX-00282: duplicate notation name "~S"

Cause: The name of the "notation" element is not unique within the schema scope.

Action: Rename the element.

LSX-00283: referenced notation "~S" is not defined

Cause: Referenced notation name is not defined within the schema scope.

Action: Define the element.

LSX-00284: duplicate constraint name "~S"

Cause: Each constraint declaration has a name which exists in a single symbol space for constraints.

Action: Choose a different name.

LSX-00285: referenced key "~S" is not defined

Cause: Referenced key name is not defined within the schema scope.

Action: Define the key.

LSX-00286: duplicate key "~S" for {"~S"}~S"

Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00287: duplicate key "~S"

Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00290: invalid enumeration choice "~S"

Cause: The value of the data is not one of the enumeration choice.

Action: Select one of the enumeration choice as its value.

LSX-00291: value "~1S" is less than minimum "~2S" (~3S)

Cause: Data has a value less than required minimum.

Action: Increase the value.

LSX-00292: value "~1S" is greater than maximum "~2S" (~3S)

Cause: Data has a value greater than maximum.

Action: Decrease the value.

LSX-00293: missing one or more fields from element "~S"

Cause: The required fields were missing from the content of the element.

Action: Add the fields.

LSX-00294: field "~S" produced multiple hits

Cause: XPath expressions relative to each element selected by a {selector} are specified by {fields}. These XPath expressions must identify a single node (element or attribute) whose content or value was used in the constraint. This content or value must be of a simple type.

Action: Remove duplicate elements or attributes.

LSX-00295: field element "~S" is not a simple type

Cause: The field element evaluated to a node-set with a member that was not a simple type.

Action: Change the field element's type.

LSX-00296: field value "~S" could not be compared to facet

Cause: The value of the data could not be compared to the facet value because one value had a time zone while the other did not.

Action: Correct the data to add the necessary time zone or to remove the unnecessary time zone.

LSX-00300: group must have name or ref but not both

Cause: "ref" or "name" attributes are either both missing or have both been specified.

Action: Specify either "ref", "name", but not both.

LSX-00310: local element or attribute should be namespace qualified

Cause: Element or attribute name is not namespace qualified.

Action: Add prefix or default namespace URI declaration.

LSX-00311: local element or attribute shouldn't be namespace qualified

Cause: Element or attribute name is namespace qualified.

Action: Remove prefix or default namespace URI declaration from itself or ancestors.

LSX-00320: missing required elements in all

Cause: Some required elements in "all" particle are missing.

Action: Add the missing elements.

LSX-00330: missing range start character

Cause: Missing range start character in a character range specification.

Action: Add the missing characters.

LSX-00331: missing comma

Cause: A comma is missing in a range specification.

Action: Add the missing characters.

LSX-00332: bad decimal digits in a quantifier specification

Cause: Quantifier has invalid characters.

Action: Remove illegal characters.

LSX-00333: literal "~S" is not valid with respect to the pattern

Cause: Literal is not valid with respect to the pattern.

Action: Choose correct characters in the literal.

LSX-00340: improper namespace value for the imported element

Cause: If the namespace attribute is present, then its actual value must not match the actual value of the enclosing schema's targetNamespace attribute. If the namespace attribute is not present, then the enclosing schema must have a targetNamespace attribute.

Action: Match namespace value.

LSX-00341: ENTITY or ENTITIES type may only be used in attributes

Cause: For compatibility, ENTITY or ENTITIES should be used only on attributes.

Action: Remove the ENTITY or ENTITIES.

LSX-00342: value of attribute "base" must be a complex type definition

Cause: If the "complexContent" alternative is chosen, then the type definition resolved to by the actual value of the attribute "base" must be a complex type definition.

Action: Choose a complex type definition as its base type.

LSX-00343: "~S" is not nillable

Cause: Attribute nillable was set to be "false" in element's declaration.

Action: Remove attribute xsi:nil from the instance document.

LSX-00344: namespace values "~1S" and "~2S" differ

Cause: The targetNamespace specified in the schema document differed from either: a) the value of the enclosing schema's namespace attribute, or b) the value of the namespace attribute identified in the import element information item.

Action: Match the namespace value to the enclosing schema's targetNamespace attribute or the actual value of the namespace attribute identified in the import element information item.

LSX-00345: Element ("~1S") from "~2S" namespace is unexpected. Expecting element from "~3S" namespace

Cause: The namespace of the Xml Node in the instance document does not match with the expected element definition namespace

Action: n/a

LSX-00346: pattern too long or complex

Cause: The pattern facet was too long or too complex and exceeded the maximum size allowed after compilation as a regular expression.

Action: Simplify the pattern expression.

LSX-00347: search of pattern contains too many branches

Cause: Evaluation of the string value versus the pattern resulted in too many branches and was prematurely terminated.

Action: Simplify the pattern expression.

NCR-00001 to NCR-04028

NCR-00001: NCR: Could not allocate memory

Cause: Insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-00002: NCR: Invalid usage

Cause: Bad function parameter.

Action: Check function call.

NCR-00003: NCR: Initialization failure

Cause: Usually insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-01003: NCRS: Read error.

Cause: Failed to read data from an input device.

Action: Check the input device driver return code for further information.

NCR-01004: NCRS: Write error.

Cause: Failed to write data to an output device.

Action: Check the output device driver return code for further information.

NCR-01005: NCRS: Failed to flush the output buffer.

Cause: Failed to write data in the output buffer to an output device.

Action: Check the output device driver return code for further information.

NCR-01006: NCRS: Data buffer overflow.

Cause: An attempt to read or write data outside of a given data buffer.

Action: Check data buffer size.

NCR-01007: NCRS: Operation is not supported in a given mode.

Cause: Attempt to perform an operation which is not supported for the current mode.

Action: See documentation for a list of work modes and supported operations.

NCR-01008: NCRS: Failed to obtain transport parameters.

Cause: Could not identify transport layer parameters.

Action: Check the transport layer return code for further information.

NCR-01009: NCRS: Record handling error.

Cause: Encountered an invalid record or an attempt to read beyond last record.

Action: See documentation for description of record handling methods.

NCR-01010: NCRS: Invalid network address length.

Cause: Network address size is set to 0.

Action: See documentation for valid network address sizes.

NCR-01011: NCRS: Send message failure.

Cause: Failed to send a message over network.

Action: Check the network interface return code for further information.

NCR-01012: NCRS: Receive message failure.

Cause: Failed to receive a network message.

Action: Check the network interface return code for further information.

NCR-01013: NCRS: Unvalid connection type.

Cause: Connection type is other than stream or message.

Action: See documentation for description of connection types.

NCR-01018: NCRS: Encryption failure.

Cause: Can not do the encryption for the data.

Action: See the SNS documentation for more information.

NCR-01019: NCRS: Checksumming failure.

Cause: Can not add the checksumming for the data.

Action: See the SNS documentation for more information.

NCR-01020: NCRS: Operation would block.

Cause: An I/O operation returned with no data read/written because the transport connection is "non-blocking" and, to succeed, the operation would have needed to block.

Action: This is a soft error; retry the operation.

NCR-02003: NCRF: Invalid type passed to format interpreter.

Cause: The format interpreter was given a data type it did not recognize.

Action: Check the types returned to the interpreter from either the type callback routine or from the type context structure.

NCR-02004: NCRF: Invalid format interpreter type context

Cause: The format interpreter was given an invalid type context.

Action: This error usually happens due to an improperly described aggregate. For example, declaring `NCRF_END_STRUCT_DATA_TYPE` within a context, without a complementary `NCRF_STRUCT_DATA_TYPE`, is invalid.

NCR-02005: NCRF: Invalid session mode

Cause: The data format layer received a session mode other than GET,PUT or FREE.

Action: None

NCR-02006: NCRF: Invalid floating point representation received

Cause: The data format layer received a floating point representation it did not recognize.

Action: Check incoming format descriptor for errors.

NCR-02007: NCRF: Invalid format descriptor received

Cause: The data format layer received an improperly formed format descriptor. Subsequent data could not be formatted.

Action: Check for data integrity on receipt from remote host.

NCR-02008: NCRF: Error within stream processing in format interpreter

Cause: An error occurred while the interpreter was processing an NCRF_STREAM_DATA_TYPE.

Action: Check for data integrity, or for stream existence.

NCR-02009: NCRF: Unable to open trace file

Cause: Failure to open tracing file.

Action: Make sure that this is a legal file name and that the user has write access.

NCR-02010: NCRF: Call context is not available

Cause: Call context not passed to format context.

Action: Make sure that create call context has been called.

NCR-02011: NCRF: Exceeded maximum number of rfids.

Cause: Exceeded maximum number of rfids.

Action: Call Oracle Support.

NCR-03002: NCRO: Maximum number of contexts has been reached

Cause: An attempt to create either a call context or a service context has failed because all context slots are in use.

Action: Free-up context slots by destroying those contexts no longer required, or, reconfigure NCRO with more context slots.

NCR-03003: NCRO: Unexpected message

Cause: Message read from service connection is not of the expected type.

Action: Application error - debug and fix.

NCR-03004: NCRO: Unknown message

Cause: Message read from service connection is of unknown type.

Action: Internal error - contact customer support.

NCR-03005: NCRO: Orphan message

Cause: Message read from service connection is for a call context that no longer exists.

Action: Application error - debug and fix.

NCR-03006: NCRO: Invalid operation

Cause: Attempted operation over call context is invalid. For example, attempting to send IN args for a procedure which is defined to have none.

Action: Application error - debug and fix.

NCR-03007: NCRO: Context is busy

Cause: Attempted operation failed because service/call context is busy performing a previous operation.

Action: Application error - debug and fix.

NCR-03008: NCRO: Call rejected

Cause: An attempt to execute a remote procedure has failed because the server has rejected the procedure id.

Action: If wrong procedure id, send the correct one. If wrong server was contacted, then contact the right one.

NCR-03009: NCRO: Protocol version mismatch

Cause: Client and server NCRO layers are at incompatible versions levels.

Action: Upgrade to latest NCRO version.

NCR-03010: NCRO: Transfer callback error

Cause: Application transfer callback function has returned a "FAILED" status.

Action: Debug the transfer callback function.

NCR-03012: NCRO: Invalid session mode

Cause: Attempted operation has failed because the session context is in an invalid state.

Action: Internal error - contact customer support.

NCR-03013: NCRO: Operation not supported

Cause: Attempted operation is not supported on this service connection because it is incompatible with the NCRO version level of the remote application.

Action: Link remote application with latest NCR library.

NCR-03014: NCRO: Bad transport address

Cause: A service context cannot be created because the transport address descriptor (contained in the binding context) is invalid.

Action: Application error - initialize the transport address descriptor correctly.

NCR-03015: NCRO: No transport address

Cause: A service context cannot be created because no transport address was provided (in the binding context) and the transport protocol uses datagrams.

Action: Application error - provide a transport address.

NCR-03016: NCRO: Message has bad address

Cause: Message read from service connection has bad address information.

Action: Internal error - contact customer support.

NCR-03017: NCRO: Transport type RSLV not supported

Cause: Support for transport type RSLV has not been built.

Action: Re-compile NCR library with NCR_USE_RSLV defined.

NCR-03018: NCRO: Failed to make RSLV connection

Cause: Failure to make RSLV connection usually means that the name resolution failed or the resolved TNS address is bad.

Action: Make sure that the name is in TNSNAMES.ORA and that it is set to the correct TNS address.

NCR-03019: NCRO: Unable to initialize thread support

Cause: Attempt to initialize the Core thread package has failed.

Action: Internal error - contact customer support.

NCR-03020: NCRO: Invalid call context

Cause: The call context is not a valid call context.

Action: Call context was destroyed, probably because the Break was received

NCR-03021: NCRO: Reset the in-band line

Cause: Our partner is asking to reset the in-band line, after receiving a break

Action: The in-band line is required to be reset

NCR-03022: NCRO: Cannot send the break

Cause: There is an error occur when sending the break using the side-band channel

Action: Read the documentation regarding to side-band break support issues

NCR-03023: NCRO: Cannot receive the break

Cause: There is an error occur when receiving the break using the side-band channel

Action: Read the documentation regarding to side-band break support issues

NCR-03024: NCRO: Transport type LIST not supported

Cause: Support for transport type LIST has not been built.

Action: Re-compile NCR library with NCR_USE_LIST defined.

NCR-03025: NCRO: Failed to make LIST connection(s)

Cause: Failure to make LIST connection(s) usually means one of two things: (1) Address list syntax error, (2) Could not connect with supplied addresses

Action: Check address list syntax and make sure that there is a 'listener' process for each (or some) of the supplied addresses.

NCR-03026: NCRO: The result buffer has overflowed

Cause: The result buffer for holding the pickling result is too small.

Action: Please enlarge the result buffer and try again.

NCR-03027: NCRO: No remote service session set up yet.

Cause: Sender-makes-right needs the remote FID.

Action: Please set up the remote session before using the Send Make's Right option.

NCR-03028: NCRO: Partner refused request for sender-makes-right.

Cause: Sender-makes-right was requested by the current side, yet refused by the server.

Action: Check the server side to see why it refused SMR.

NCR-04002: NCRR: Invalid interface descriptor

Cause: An attempt to register an interface has failed because of an invalid interface descriptor.

Action: Check interface descriptor passed into the ncrri_register_interface call.

NCR-04003: NCRR: Interface exists

Cause: An attempt to register an interface has failed because an interface already exists.

Action: Application error - register a new interface, destroy the old one, or indicate that the old one must be replaced.

NCR-04004: NCRR: Invalid interface instance handle

Cause: A service registration API call has failed because of an invalid instance handle.

Action: Application error - debug and fix.

NCR-04005: NCRR: Invalid procedure handle

Cause: A procedure/object registration has failed because of an invalid procedural handle.

Action: Application error - debug and fix.

NCR-04006: NCRR: Invalid argument descriptor

Cause: A procedure registration has failed because of an invalid argument descriptor.

Action: Application error - debug and fix.

NCR-04007: NCRR: Invalid object handle

Cause: A service registration API call failed because of an invalid object handle, for example, one that does not exist.

Action: Application error - debug and fix.

NCR-04008: NCRR: Procedure exists

Cause: An attempt to register a remote procedure has failed because the procedure already exists in this interface.

Action: Application error - register a new procedure, destroy the old one, or indicate that the old one must be replaced.

NCR-04009: NCRR: Object exists

Cause: An attempt to register an object has failed because the object already exists in this interface.

Action: Application error - register a new object, destroy the old one, or indicate that the old one must be replaced.

NCR-04010: NCR: Unable to contact Oracle Internet Directory Server

Cause: Service export or import failed to contact Oracle Internet Directory Server.

Action: Ensure Oracle Internet Directory configuration is correct. Otherwise, turn on tracing and/or contact customer support.

NCR-04011: NCR: Oracle Internet Directory error

Cause: Service export or import failed during interaction with Oracle Internet Directory Server.

Action: Either wrong parameters with respect to the Remote Operations Service Registration Schema were passed in and/or the Oracle Internet Directory server refused to perform the requested operation. Refer the Remote Operations Service Registration Schema and/or turn on Oracle Internet Directory tracing and/or contact customer support.

NCR-04012: NCR: Invalid address descriptor

Cause: An `ncrrej_export_interface` call failed because of an invalid address descriptor.

Action: Application error - debug and fix.

NCR-04013: NCR: Insufficient authorization

Cause: Attempted Oracle Internet Directory Server operation has failed because of insufficient authorization.

Action: Contact customer support.

NCR-04014: NCR: Invalid instance name

Cause: Service export or import failed because of an invalid instance name

Action: Application error - debug and fix.

NCR-04015: NCR: Invalid interface name

Cause: Service export or import failed because of an invalid interface name

Action: Application error - debug and fix.

NCR-04016: NCR: Last interface instance handle

Cause: The instance handle passed in is the last instance handle in the list.

Action: Not an error - means reaching the end of the list.

NCR-04017: NCR: Unable to find the interface instance handle

Cause: The instance handle corresponding to the instance name was not found.

Action: Application error - debug and fix.

NCR-04018: NCR: Unable to create the TNS address list

Cause: Unable to create the TNS address list from the interface instance list.

Action: Application error - debug and fix.

NCR-04019: NCR: Interface or instance name already exists

Cause: Service export failed because the name already exists with the Oracle Internet Directory server

Action: Application error - debug and fix.

NCR-04020: NCRR: Interface or instance name does not exist

Cause: Service expunge/query failed because the name does not exist with the Oracle Internet Directory server

Action: Use Oracle Internet Directory tools on the relevant Oracle Internet Directory instance to verify the same. Otherwise turn on tracing and/or contact customer support

NCR-04021: NCRR: Pickler errors

Cause: Service export/query failed because of pickler errors

Action: Contact customer support

NCR-04022: NCRR: Invalid procedure descriptor

Cause: A procedure registration has failed because of an invalid procedural descriptor.

Action: Application error - debug and fix.

NCR-04023: NCRR: Invalid object descriptor

Cause: An object registration has failed because of an invalid object descriptor.

Action: Application error - debug and fix.

NCR-04024: NCRR: Maximum number of procedures reached

Cause: A procedure registration has failed because the procedures array is filled up.

Action: Re-register the interface increasing the maximum # of procedures.

NCR-04025: NCRR: Operation timed out

Cause: An operation for the Oracle Internet Directory server failed because it exceeded the timeout period.

Action: Retry the operation and/or turn on Oracle Internet Directory tracing.

NCR-04026: NCRR: Operation not supported

Cause: An operation for the Oracle Internet Directory server failed because it met with a server referral to another instance.

Action: Unify the Remote Ops registration entries into the Oracle Internet Directory instance and/or turn on Oracle Internet Directory tracing.

NCR-04027: NCRR: Operation failed

Cause: An operation for the Oracle Internet Directory server failed because the Service Registration interfaces met with invalid parameters.

Action: Contact customer support.

NCR-04028: NCRR: Operation failed

Cause: An operation for the Oracle Internet Directory server failed because the data involved exceeds the maximum allowed size.

Action: Check the entries in the Oracle Internet Directory instance with tools available from Oracle Internet Directory and/or turn on Oracle Internet Directory tracing.

NDFN-00020 to NDFN-00026

NDFN-00020: missing IPMI userid

Cause: Required user name argument was not specified.

Action: Reissue command with correct arguments.

NDFN-00021: missing node list

Cause: Required node list was not supplied.

Action: Re-issue command with correct arguments.

NDFN-00022: unrecognized command option: '*string*'

Cause: Operation type missing or mis-spelled.

Action: Re-issue command with correct arguments.

NDFN-00023: no password read. Re-issue request

Cause: Required administrator password was not read in response to the password prompt before finding end-of-line.

Action: Re-issue command and be sure to type the password immediately following the prompt.

NDFN-00024: caught I/O exception: *string*

Cause: Unexpected I/O exception was encountered while attempting to read the password. Exception string should indicate the precise cause.

Action: Re-issue command after repairing root cause.

NDFN-00025: *string* failed for node *string*

Cause: The indicated operation could not be completed for the specified node. The lower-level error messages attached should indicate the root cause.

Action: Re-issue command after repairing the condition indicated.

NDFN-00026: missing path to binary

Cause: Required path to binary was not supplied.

Action: Re-issue command with correct arguments.

NID-00001 to NID-00604

NID-00001: Illegal command line syntax - parse error = (number)

Cause: Illegal operand on command line.

Action: Remove illegal operand.

NID-00002: Parse error: *string*

Cause: An error was encountered while parsing the command line.

Action: Remove offending operand.

NID-00010: Password:

Cause: Password was not specified in command line.

Action: Type password at this prompt.

NID-00100: Cannot open datafile "*string*"

Cause: The specified datafile could not be opened.

Action: Ensure that the specified datafile exists and is writable.

NID-00101: LOGFILE (*string*) not accessible

Cause: The specified log file could not be opened.

Action: Specify a log file that is writable.

NID-00102: Garbled target string

Cause: The supplied connect string could not be parsed. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00103: Missing password in connect string "*string*"

Cause: Could not find the password in the supplied connect string. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00104: Need to specify TARGET connection parameter in command line

Cause: The mandatory parameter TARGET was not specified.

Action: Specify TARGET=*username/password* when invoking this utility.

NID-00105: Need to specify "LOGFILE=*logfile*" when using APPEND=YES option

Cause: The APPEND parameter was specified without a LOGFILE.

Action: Specify APPEND=YES only when LOGFILE is also specified.

NID-00106: LOGIN to target database failed with Oracle error:\n*string*

Cause: An Oracle error was reported while attempting to log in to the target database.

Action: Follow the actions for the specified Oracle error.

NID-00107: File I/O error on datafile "*string*" during *string* operation (*number*/*string*)

Cause: An operating system error was reported while performing the specified operation in the specified file.

Action: Verify the datafile and check for operating system errors.

NID-00109: DBNAME string length *number* exceeds maximum length of *number*

Cause: The specified new database name exceeded the maximum size.

Action: Specify a shorter, valid name.

NID-00110: Cannot use REVERT and specify a database name at the same time

Cause: Conflicting options were specified in the command line.

Action: Choose only one of the options.

NID-00111: Oracle error reported from target database while executing *nstringnstring***

Cause: An Oracle error was reported when executing an OCI operation.

Action: Follow the actions for the specified Oracle error.

NID-00112: unsupported connection mode

Cause: A mode different than SYSDBA or SYSBACKUP was specified for the connection to the target.

Action: Specify only AS SYSDBA or AS SYSBACKUP.

NID-00113: Error reading answer - aborting

Cause: Response caused an error.

Action: Retry the operation.

NID-00114: Must specify new database name when SETNAME is used

Cause: SETNAME=YES was specified but no DBNAME was provided.

Action: Specify DBNAME or remove the SETNAME=YES option.

NID-00115: Database should be mounted

Cause: The database was not mounted.

Action: Mount the database.

NID-00116: The Oracle Pluggable Database option specified is invalid.

Cause: The Oracle Pluggable Database option specified was not valid.

Action: Remove the Oracle Pluggable Database option, or specify ALL or NONE options.

NID-00120: Database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

NID-00121: Database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shutdown the database and mount it in exclusive mode.

NID-00122: Database should have no offline immediate datafiles

Cause: The database has one or more datafiles that are in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

NID-00123: Magic number for datafile "*string*" is incorrect

Cause: Block 0 header has an incorrect magic number for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00124: Mismatched dbid for datafile *string*, expected *number*, found *number*

Cause: The dbid of the datafile does not match the 'old' DBID or the 'new' DBID.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00125: Database should have no disabled datafiles

Cause: The database has one or more datafiles that are disabled.

Action: Drop the datafiles or recover them and bring them online.

NID-00126: Database should have no datafiles in unknown state

Cause: The database has one or more datafiles that are in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

NID-00127: All online files in the database must have the same checkpoint SCN

Cause: The database has one or more datafiles that have a checkpoint SCN that does not match the database checkpoint SCN.

Action: Restart the database and shut it down cleanly, then retry the operation.

NID-00128: Cannot revert change of database, change not in progress

Cause: The REVERT option was used, but the control file does not show that a change of DBID was in progress.

Action: Do not use the REVERT option, or possibly restore the control file that was in place when the utility was started.

NID-00129: Invalid DBID for datafile "*string*", expecting *number*, found *number*

Cause: A datafile header shows a different DBID from the rest of the database files.

Action: Ensure that the file belongs to this database.

NID-00130: Mismatched CHECKPOINT_CHANGE# in datafile "*string*", expecting *string*, found *string*

Cause: The datafile header does not match information in the control file.

Action: Revert the change, open the database, and verify that all datafiles are consistent. Then, shut down the database and retry the operation.

NID-00131: Control file is not current

Cause: A non-current control file is currently mounted.

Action: Perform necessary actions to make the control file current and retry.

NID-00132: CHECKPOINT_CHANGE# in datafile "*string*": *string* in the future of controlfile: *string*

Cause: The checkpoint in the datafile header is ahead of the checkpoint in the control file.

Action: Make the database consistent and retry.

NID-00133: Database should have only consistent datafiles

Cause: The database has one or more datafiles that are marked FUZZY in the control file.

Action: Restart the database and shut down consistently, then retry the operation.

NID-00134: Datafile "*string*" is not consistent

Cause: The datafile is marked as fuzzy in its header.

Action: Restart the database and shut down cleanly, then retry the operation.

NID-00135: There are *number* active threads

Cause: There are active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

NID-00137: All datafiles that are not dropped should be readable

Cause: The database had one or more files that could not be read.

Action: Restore the missing files and retry the operation.

NID-00138: Block verification failed for datafile *string* (*number*)

Cause: Block header checksum yields a nonzero value for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00139: Mismatched dbname for datafile *string*, expected *string*, found *string*

Cause: The dbname of the datafile does not match the 'old' dbname or the 'new' dbname.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00140: Specified database name *string* does not match previous name used *string*

Cause: This is a continuation of a failed attempt. However in the failed attempt, the database name is different than the one used in the last attempt.

Action: Retry the command using the original database name.

NID-00141: No database name specified, previous attempt used *string*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, a database name was provided.

Action: Retry the command using the original database name.

NID-00142: Only changing database name, previous attempt changed dbid to *number*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, the database id was also being changed.

Action: Retry the command removing SETNAME=YES.

NID-00143: Mismatched controlfile *string*

Cause: A controlfile did not have the correct status.

Action: Shutdown the database, remove the mismatched controlfile, mount the database, and retry the operation.

NID-00144: New name for database *string* is the same as current name *string*

Cause: The specified name is the same as the current name of the database.

Action: Specify a different name or do not use the DBNAME option.

NID-00145: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

NID-00300: Connected to database *string* (DBID=*number*)

Cause: Informational message.

Action: No action required.

NID-00301: Datafile *string* - dbid changed, wrote new name

Cause: Informational message.

Action: No action required.

NID-00302: Datafile *string* - dbid changed

Cause: Informational message.

Action: No action required.

NID-00303: Datafile *string* - wrote new name

Cause: Informational message.

Action: No action required.

NID-00304: Datafile *string* - reverted

Cause: Informational message.

Action: No action required.

NID-00305: Datafile *string* - already changed

Cause: Informational message.

Action: No action required.

NID-00600: Internal Error - [number] [number] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00601: Internal Error - [number] [string] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00602: Could not allocate *number* bytes for "*string*"

Cause: Memory allocation failed.

Action: Free memory at the operating system level and retry operation.

NID-00603: No datafiles found in database

Cause: Controlfile has not datafiles recorded

Action: Report as a bug - the first argument is the internal error number

NID-00604: No control files found in database

Cause: Instance has no control files recorded

Action: Report as a bug - the first argument is the internal error number

NMP-00001 to NMP-00011

NMP-00001: value too big

Cause: The SNMP program interface received a value too large for it to process. This error is usually displayed underneath an error which describes in more detail the value which caused the problem.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00002: no such SNMP variable name

Cause: An SNMP request was not processed because the one or more of the variable names in the request does not exist. This error is not normally visible to the user except in a trace file, where it is usually part of a "soft" error condition which is normal.

Action: The error may indicate that a managed server does not support an operation requested by its control program, perhaps because of version incompatibility. For further details, turn on tracing and re-execute the failing operation. If the error persists, and does not occur as part of a "soft" error condition as noted in the trace file, contact Worldwide Customer Support.

NMP-00003: bad SNMP variable value

Cause: The SNMP program interface received a variable value which has an unsupported data type. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00004: SNMP variable is read only

Cause: The user attempted to change a variable value at a remote server, and that variable is read-only. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Read-only variables may never be modified.

NMP-00005: general SNMP error

Cause: an SNMP error occurred which did not fall under the heading of any other more specific error condition. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00006: uninitialized SNMP context

Cause: An internal function attempted to use an uninitialized SNMP handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00007: I/O failure

Cause: The SNMP program interface attempted to send or receive an SNMP request and was unable to do so because of a network failure of some sort. This error is usually displayed underneath an error which describes the problem in more detail. The problem typically occurs when a control program is attempting to communicate with a service and either that service has unexpectedly terminated or the network path between the control program and the service has been interrupted.

Action: n/a

NMP-00008: SNMP message has incorrect version, version 0 is required

Cause: The SNMP program interface received a protocol request with an illegal version number. This error may occur if a standard SNMP network monitor is sending malformed requests to an Oracle service through an SNMP-to-TNS gateway.

Action: Ensure that the management platform in question is sending SNMP requests with the correct version number. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00009: SNMP initialization failure

Cause: The SNMP program interface could not be initialized, either because its error message file could not be found, or because there is a malformed snmp.communities parameter value in the parameter table.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations. Turn on tracing and look for parameter table load errors.

NMP-00010: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NMP-00011: internal SNMP program interface error

Cause: An internal error occurred inside the SNMP program interface. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00001 to NNC-00501

NNC-00001: maximum number of connections already open

Cause: All available name service connections are handling requests.

Action: If the problem occurs when running a name server, increase the values of `names.max_open_connections`. If the problem occurs in a client program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00002: error listening on stream *string*

Cause: The name server was asked to listen on the specified address, and failed, probably because the address is malformed, or because it uses a SQL*Net protocol adaptor which has not been installed.

Action: Make sure the address is properly formed, and that it uses a protocol adaptor which has been installed on your system.

NNC-00003: error opening stream *string*

Cause: A name server or client program attempted to open a connection to another server and failed, either because the server is down, or because the network path to that server is not working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is listening on the address used, and that there is network connectivity between the two end-points.

NNC-00004: connection is broken

Cause: The connection from a name server or client program to another server has been broken, either because that server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00005: cannot initialization stream subsystem

Cause: The name service stream subsystem could not be started, probably because of a missing TNS error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00050: message format error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00051: message content error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00052: client and server protocol versions are incompatible

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00053: ASN.1 error encountered while sending or receiving message

Cause: The name server or the name server program interface attempted to send or receive a message and failed because of an ASN.1 error.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00400: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NNC-00401: program interface initialization failed

Cause: The name server program interface could not be initialised, probably because of a missing TNS or name server error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00402: program interface de-initialization failed

Cause: An internal error occurred while the name server program interface was being de-initialised by an internal function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00403: program interface has not been initialised

Cause: An internal function has attempted to de-initialise the name service program interface when it has not yet been initialised.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00404: supplied buffer of size *string* is smaller than minimum size *string*

Cause: A caller supplied the name server program interface with a memory buffer too small for the interface's requirements. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00405: network failure

Cause: The network connection between the client program and the name server has failed, either because the server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Contact your name server administrator to make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00406: name "*string*" does not exist

Cause: The user asked for information associated with a global name that does not exist.

Action: Re-try the failing operation with a global name that exists.

NNC-00407: alias loop in name request

Cause: The name service detected an "alias loop" when trying to retrieve information associated with a global name. An alias loop occurs when an alias name X points to another alias name Y, which in turn points back to X, rather than eventually to a global name which contains data.

Action: Contact your name server administrator to have the alias loop investigated and fixed.

NNC-00408: name "*string*" exists but desired data does not

Cause: The user asked for information associated with a global name. The name in question exists, but does not contain the desired type of information.

Action: Re-try the failing operation with a type which the desired name does contain.

NNC-00409: temporary name service failure

Cause: There are no name servers available to handle a client request, or a name server was temporarily unable to handle a client request. This situation is almost always temporary, and occurs when the program interface has issued a name server request and not received a timely response from any of its preferred servers. Such delays can occur due to transient network or name server outages or heavy load.

Action: Re-try the failing operation. If the error persists, make sure there is network connectivity between the client and its preferred name servers, and contact your name server administrator to make sure that those name servers are running.

NNC-00410: invalid preferred server address list

Cause: The names.preferred_servers parameter in sqlnet.ora is malformed.

Action: Make sure the address list is properly formatted.

NNC-00411: invalid default domain name "*string*"

Cause: The names.default_domain parameter in sqlnet.ora is invalid.

Action: Make sure the parameter value is a valid global name. See your documentation for the characters which may be used in a global name.

NNC-00412: invalid name "*string*"

Cause: The name server program interface was given an invalid global name to process.

Action: Supply a valid domain name. If the error is caused by an internal function, contact Worldwide Customer Support.

NNC-00413: general failure

Cause: A name server program interface error occurred which did not fall under the heading of any other more specific error condition. The error will usually be followed by more specific lower-level information.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00414: invalid name-value binding string "*string*"

Cause: A caller provided the name server program interface with an invalid name-value binding string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid name-value binding string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00415: section identifier *string* is invalid, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00416: user callback function returned error number *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00417: name "*string*" already exists

Cause: A caller has attempted to create a new global name, and that name already exists.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that does not already exist. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00418: name "*string*" cannot be modified because it has children

Cause: A caller has attempted to delete or rename a global name, and that name cannot be modified because it has child names underneath it in the name space.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that is a leaf node. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00419: authoritative server is unreachable

Cause: A name server request cannot be processed because the server which received the operation does not own the name specified in the request and cannot locate the server which does own the name. The error is almost always transient, and occurs either because the path between the server receiving the request and the request's final destination has been interrupted, or because the final destination is down.

Action: Not normally visible to the user, except when using the name server control program. Because the error is typically a transient one, retrying the failing operation will usually work. If the failure persists, the name server which is allowed to process the failing operation is probably shut down or unreachable. Contact your name server administrator to make sure that your site's name servers are running, and are properly configured.

NNC-00420: operation not allowed

Cause: A name server request cannot be processed because the server which received the operation is not allowed to process it. The problem typically occurs when an administrator has disabled request processing at a particular server for some reason.

Action: Contact your name server administrator to determine why server request processing has been disabled.

NNC-00421: invalid modification directive *string*, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00422: invalid data type name "*string*"

Cause: A caller has provided an invalid data type name to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00423: invalid data item syntax code *string*

Cause: A caller has provided an invalid data type code to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00424: invalid address "string"

Cause: A caller provided the name server program interface with an invalid address value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid address argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00425: meta-data violation

Cause: A caller issued a name server modification request and that request cannot be processed because it would violate data type meta-data constraints.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, examine the meta-data constraints for the data type being operated upon and don't violate them. Examples of typical constraint violations are attempts to add a new data item to a name which already contains alias information, or attempts to add alias information to a name which already contains other data, or attempts to replace a data item with another item that has the wrong syntax. If the error occurs outside the control program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00426: no such data type

Cause: A caller attempted to create a data item, and could not because the data item's type does not exist.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the operation with an existent data type. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00427: server does not support this version of the protocol

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00428: invalid meta-data data item

Cause: A caller provided the name server program interface with an invalid meta-data data item.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid meta-data argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00429: invalid octet string literal "string"

Cause: A caller provided the name server program interface with an invalid octet string string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid octet string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00430: Database not accessible

Cause: When a database is used for consistency between different nameservers, any modify operation should not only modify the cache but also the database. And if the database is not accessible, this error occurs.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, make sure database is available and then re-execute the operation. If error persists, contact Worldwide Customer Support.

NNC-00431: NS address does not match any of the current addresses

Cause: When delegating a domain, the address of the Nameserver is provided by the client. If the nameserver already exists, then it already has address(es) associated with it. So, the address supplied by the client must match one of them. Otherwise, this error occurs.

Action: Not normally visible to the user, except when using name server control program. If the error occurs when using the control program, either provide an one of the existing addresses of the name server or delegate the domain to a new nameserver.

NNC-00500: warning: "string" parameter value is illegal, setting to string

Cause: The named parameter value is invalid.

Action: Make sure the parameter value is formatted correctly. Valid choices for boolean parameter values are TRUE, FALSE, YES, NO, ON, and OFF.

NNC-00501: warning: "string" parameter value must be between *number* and *number*, setting to *number*

Cause: The named parameter value is invalid or outside legal boundary values.

Action: Make sure the parameter value is a number, and falls between valid minimum and maximum values, as specified in the error text.

NNF-00001 to NNF-04009

NNF-00001: Not a TNS address

Cause: While asking to read an address the name service returned a record which was not an address.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00002: Invalid value passed to function call

Cause: An invalid value was passed to an interface function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00003: Naming adapter *string* does not exist

Cause: The requested name service adapter was not found in the current adapter table.

Action: Check the spelling of the adapter requested. Verify that the adapter runs on this platform, and the adapter is compiled into the adapter table linked into the executable.

NNF-00004: Operation not supported in *string*

Cause: The operation requested is not supported under this adapter.

Action: Verify that the operation being performed is not under restriction, such as writing to read-only name service. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00005: Functionality not implemented

Cause: The operation requested is not supported in this implementation.

Action: If this is retrieved from a production release, contact Worldwide Customer Support. Otherwise, check the release notes as to the restrictions in this release.

NNF-00110: no values exist

Cause: Test program help text.

Action: None

NNF-00540: Failed to insert name: *string*

Cause: Failed to insert name into the native service.

Action: Verify that the name is not already in the native namespace and the appropriate access permissions are set for the namespace.

NNF-01001: ds_initialize: workspace initialization failed

Cause: The DCE workspace as setup by ds_initialize() failed to initialize.

Action: Verify that conditions necessary for a successful ds_initialize() call are present on this platform (e.g is there enough memory?). Check that there is not another workspace user in

this program. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01002: DCE could not open configuration file

Cause: A DCE call returned an error that it could not access its configuration file.

Action: Check that the DCE configuration file for this platform is present, and accessible. On Unix this file is `dce_cf.db`. Check if a simple call to `dce_cf_get_cell_name()` succeeds.

NNF-01003: DCE could not find cell name

Cause: A DCE call returned an error that it could not find the cell name in its configuration file.

Action: Check that this machine has been configured for a DCE cell. Check that the DCE configuration file is not corrupted. On Unix, this file is `dce_cf.db`. Check if a simple call to `dce_cf_get_cell_name()` succeeds.

NNF-01004: DCE returned unspecified error *string*

Cause: A DCE call returned a status that was not in this implementation's list of possible status values for this DCE call.

Action: Verify that this platform's DCE release is not beyond those supported by this Oracle application. If the error persists, contact Worldwide Customer Support.

NNF-01005: Internal XOM class violation

Cause: A DCE XOM call returned statuses inconsistent with the class definitions in the DCE documentation.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01006: Attribute *string* not available

Cause: An insertion call attempted to use an attribute which did not have a translation to a DCE attribute.

Action: Use another attribute, or insert the translation into DCE.

NNF-01007: DCE long strings are not supported

Cause: A query returned an object which has a XOM `OM_S_LONG_STRING`. The current implementation does not support such objects.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01008: XDS attribute syntax *string* incorrect for Oracle Names syntax *string*

Cause: The syntax as specified in the XDS object is different than that which is expected for the given Oracle names syntax.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-02001: NIS client error string: *string*

Cause: A call to an NIS (YP) function failed. This message contains the text of the NIS error code returned.

Action: Should only be visible when returned as part of another error. If the error persists, contact Worldwide Customer Support.

NNF-02002: NIS value does not conform to adapter schema: *string*

Cause: The values in the maps used by the NIS adapter must conform to a specific set of internal formatting rules. This value returned did not conform to those rules.

Action: Should not be visible, unless you are attempting to create your own maps. If the error persists, contact Worldwide Customer Support.

NNF-02003: Unknown NIS error code: *string*

Cause: An error code returned by a NIS (YP) function was not in the list expected by this program.

Action: Verify that the error is generated by the YP functions on this platform. Notify Worldwide Customer Support of the error.

NNF-02004: NIS map *string* does not exist

Cause: The requested attribute does not exist.

Action: For an unused attribute, no action is required, as this is the expected error. Otherwise, add the attribute and reload the NIS (YP) maps.

NNF-02005: NIS key *string* does not exist in map *string*

Cause: The requested name was not found.

Action: For an unused name, no action is required, as this is the expected error. Otherwise, add the name to the map and reload the NIS (YP) maps.

NNF-03002: Unknown BIND error code: *string*

Cause: The return code in the BIND (DNS) query response did not conform to those values listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03003: Format error parsing server response

Cause: The query response packet returned from the BIND (DNS) API did not conform to the format listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03004: DNS Class mismatch (*string*)

Cause: The query response packet returned a class different from the ones expected by the interface.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-04000: File successfully converted

Cause: The requested conversion is performed.

Action: Normal condition, no action necessary.

NNF-04001: Error converting input file

Cause: The input file contains lines that cannot be converted by the conversion program.

Action: Check that the syntax of the input file is correct.

NNF-04002: Outputfile already exists

Cause: An old output file already exists in the current directory

Action: Remove the existing file, and restart the conversion tool

NNF-04003: Entry in inputfile is too long

Cause: The makedbm program, limits entries in mapfiles to 1017 characters. Therefor, the conversion tool will not process TNS addresses which are longer than 1017 characters.

Action: Shorten the offending entry.

NNF-04004: Invalid string in inputfile

Cause: the input file contains invalid lines.

Action: Check that the syntax of the input file is correct.

NNF-04005: Cannot open inputfile

Cause: The specified input file could not be found.

Action: restart the conversion tool with the correct input file.

NNF-04006: Could not create outputfile

Cause: An output file could not be created in the current working directory

Action: Change the permissions of the current directory and restart the conversion tool.

NNF-04007: Error reading input file

Cause: A problem while reading the input file. This could be caused by an unexpected end of file in the input file.

Action: Check that the file is intact and that the syntax of the input file is correct.

NNF-04008: Error writing outputfile

Cause: An error occured while writing to the output file.

Action: Check available disk space. If the error persists, contact Worldwide Customer Support.

NNF-04009: Usage: tns2nis filename

Cause: The conversion tool was not invoked properly. The filename should either be tnsnames.ora or native.ora

Action: Restart the conversion tool with the proper parameter.

NNL-00001 to NNL-01078

NNL-00001: request argument "string" is invalid

Cause: The user entered an invalid request command argument.

Action: Supply a valid argument.

NNL-00002: request argument "string" is not allowed with this operation

Cause: The user entered a request command argument which is not valid with the particular request command.

Action: Supply a valid argument.

NNL-00003: memory exhausted

Cause: The program has run out of memory

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

NNL-00004: invalid command argument "string"

Cause: The user entered an invalid command argument.

Action: Supply a valid argument.

NNL-00005: no server has been set. Use the "SET SERVER" command first

Cause: The user attempted to issue a command which requires that a default managed Oracle Names server be set first.

Action: Use the SET SERVER command to set your default server, then reissue the command. Alternatively, if the command allows, re-issue it with a specific server name so the control program does not need to use the default.

NNL-00006: timeout, server is not responding

Cause: The control program issued a request to an Oracle Names server and no response arrived in a timely fashion. The network connection between the control program and the server may be faulty, the server may be very heavily loaded, or there may be substantial network delays between the control program and the server. The latter is especially true for WAN links.

Action: Reissue the command; if it continues to fail, check to see that the server being managed is running correctly and that the network connection between the server and the control program is working correctly.

NNL-00007: server responded with an error

Cause: The control program issued a request to an Oracle Names server and the server responded with an error.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00008: request not understood by server

Cause: The control program issued a request to an Oracle Names server and the server did not understand the request.

Action: If the server and the control program have different versions, they may be unable to communicate. Check your documentation for version compatibility constraints. If the server and control program are compatible, turn on tracing for further details, and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00009: encryption of server password failed

Cause: The control program attempted and failed to encrypt a server password, supplied either through the SET PASSWORD command or the namesctl.server_password configuration parameter.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00010: error getting address for server "*string*"

Cause: The control program attempted to translate a server name to its corresponding address, and failed. There are a large number of possible causes for the failure. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. If the user has changed managed servers with the SET SERVER command, the new server must be running, and must be able to resolve the address or forward the request to another server which can resolve the address. Alternatively, a TNSNAMES.ORA file with valid name server names and addresses must exist in the correct system-specific location.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00011: no server with name "*string*" exists

Cause: The user issued a SET SERVER request and the current managed Oracle Names server was unable to translate that name into an address. Alternatively, the user issued a control program request to a specific server, and that server's name could not be translated into an address. Both problems are almost always caused by mis-typing the server name.

Action: Re-issue the request with a valid server name.

NNL-00012: invalid "*string*" value "*string*"

Cause: The first argument is a data type, the second is a value. The user supplied an invalid data value of the specified type.

Action: Re-issue the failing operation with correct data.

NNL-00013: not performed, permission denied for supplied password

Cause: The user issued a request to an Oracle Names server, and the password supplied with the request was incorrect.

Action: Check to see that the password sent by the control program to the server is correct for that server. You can set a new password with the SET PASSWORD control program command.

NNL-00014: unknown data type "string"

Cause: The user issued a name server request which contained an unknown data type.

Action: It is possible that the server had no information on the type, but automatically fetched it in response to the failing request. Re-issue the failing request; if the server has in the meantime fetched the appropriate data type information, the error will go away. If the error persists, the data type is probably invalid.

NNL-00015: type "string" has "string" syntax, which has no textual representation

Cause: Not all data type syntaxes can be represented as text. This message indicates that the user issued a name server request for a type with a non-textual representation.

Action: Re-issue the operation with a data type that has a syntax with a textual representation.

NNL-00016: cannot start server, error getting program directory's name

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the name of the directory where the server executable resides.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00017: cannot start server, program "string" does not exist

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the server executable.

Action: Make sure that a copy of the server executable exists in your system's oracle executable directory.

NNL-00018: warning: could not contact default name server

Cause: The control program was unable to contact its default name server during startup. There are a number of possible causes for this error. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server.

Action: Check to see that all of the above are true. If the control program is still unable to contact its default server, turn on tracing and restart the control program. If the error persists, contact Worldwide Customer Support.

NNL-00019: warning: server either changed or ignored your request

Cause: The user issued a request to an Oracle Names server and that request was altered in some way. Typically the user specified an invalid argument of some sort, and the server either ignored the request, or replaced the invalid argument with a reasonable default.

Action: Use the control program to check the current state of the value that you attempted to change. The server's log file may also contain information about the exact cause of the problem. Re-issue the operation with correct arguments.

NNL-00020: warning: no TNSNAMES.ORA file and no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find a TNSNAMES.ORA file and was unable to find a default name server in SQLNET.ORA. The control program will operate in this state,

but will be unable to resolve any names until a default server has been set, and that server must be set using its raw TNS address.

Action: The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server. Alternatively, a TNSNAMES.ORA file with valid name server information must exist in the correct system-specific location.

NNL-00022: error changing trace level from *string* to *string*, level change ignored

Cause: The user attempted to change the control program's local trace level, and the program encountered an error while changing the level. Usually the problem is that tracing was enabled for the first time (by changing the trace level from OFF to something else) and the trace file is not writeable by the control program.

Action: Check to see that the trace file is writeable. Your documentation will tell you the name of the trace file.

NNL-00023: SET command is missing an argument

Cause: The user attempted to issue a SET command with no argument.

Action: Supply a valid argument to the SET command.

NNL-00024: warning: no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find any preferred name servers in SQLNET.ORA, and will therefore not connect to a default server.

Action: Make sure that the SQLNET.ORA file contains a valid names.preferred_servers entry.

NNL-00035: File *string* or nested IFILEs not found.

Cause: Error in loading from the tnsfile.

Action: None

NNL-00036: No records loaded

Cause: No loadable data.

Action: None

NNL-00037: Error *number* while sequencing through parameter table.

Cause: The NL Parameter system reported an error while retrieving the next name from the table.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00038: Distinguished Name syntax error

Cause: Distinguished Name incorrectly specified.

Action: Supply a valid DN.

NNL-00039: no RRs

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00040: Distinguished Name exceeds buffer length: *string*

Cause: Distinguished Name derived from Domain Name is too long.

Action: Either move the object to a domain whose name is shorter or manually update the LDAP object.

NNL-00041: Object *string* not in domain *string*

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00042: LDAP bind failure: *number, string*

Cause: Call to ldap_bind failed with return set to given number.

Action: Correct user/pwd parameters or definitions.

NNL-00043: LDAP open failure

Cause: LDAP server could not be contacted.

Action: Correct connect info or server unavailability.

NNL-00044: Unsupported data type *string* not mapped

Cause: ONames data type could not be mapped to LDAP attributes

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00045: No host given for LDAP server

Cause: LDAP open will dump core without a host.

Action: Provide appropriate host with '-h' option.

NNL-00046: Name *string* exceeds DN template depth

Cause: There are more domains in the name than are specified in the DN template.

Action: Add fields to the template or migrate subdomains with separate dump operations.

NNL-00047: LDAP modify returned error: *0xnumber, string*

Cause: LDAP failed with the return code shown.

Action: Refer to LDAP documentation for the meaning of the error.

NNL-00048: Error opening file: *string*

Cause: Named file cannot be opened.

Action: Provide for access to file.

NNL-00049: Output in *string* cannot be renamed to *string*

Cause: The given file cannot be created.

Action: Insure that the file specified can be created before running the command. Or use the temporary file itself.

NNL-00201: Shutdown occurs in *string*

Cause: Control program general message.

Action: None

NNL-00202: No shutdown currently scheduled

Cause: Control program general message.

Action: None

NNL-00203: Scheduled shutdown to occur in *string*

Cause: Control program general message.

Action: None

NNL-00204: Cancelled shutdown

Cause: Control program general message.

Action: None

NNL-00205: Reload check occurs in *string*

Cause: Control program general message.

Action: None

NNL-00206: No reload check currently scheduled

Cause: Control program general message.

Action: None

NNL-00207: Scheduled reload check to occur in *string*

Cause: Control program general message.

Action: None

NNL-00208: Cancelled reload check

Cause: Control program general message.

Action: None

NNL-00209: Cache checkpoint interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00210: Cache checkpointing is currently disabled

Cause: Control program general message.

Action: None

NNL-00211: Cache checkpoint interval is now *string*

Cause: Control program general message.

Action: None

NNL-00212: Cache checkpointing is now disabled

Cause: Control program general message.

Action: None

NNL-00213: No entry with specified index number, try "SHOW SYSTEM_QUERIES"

Cause: Control program general message.

Action: None

NNL-00214: Next auto-refresh for specified index number occurs in *string*

Cause: Control program general message.

Action: None

NNL-00215: Scheduled specified index number's next auto-refresh to occur in *string*

Cause: Control program general message.

Action: None

NNL-00216: Disabled auto-refresh for specified index number

Cause: Control program general message.

Action: None

NNL-00217: Controller is sleeping for *number* seconds

Cause: Control program general message.

Action: None

NNL-00218: Ignoring spurious trailing text "*string*"

Cause: Control program general message.

Action: None

NNL-00219: Statistic counter logging interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00220: Statistic counter logging is currently disabled

Cause: Control program general message.

Action: None

NNL-00221: Statistic counter logging interval is now *string*

Cause: Control program general message.

Action: None

NNL-00222: Statistic counter logging is now disabled

Cause: Control program general message.

Action: None

NNL-00223: Statistic counters are next logged in *string*

Cause: Control program general message.

Action: None

NNL-00224: Scheduled statistic counters to be logged in *string*

Cause: Control program general message.

Action: None

NNL-00225: Currently managing name server "*string*"

Cause: Control program general message.

Action: None

NNL-00226: Current request-processing delay is *string*

Cause: Control program general message.

Action: None

NNL-00227: Request-processing delay is currently disabled

Cause: Control program general message.

Action: None

NNL-00228: Request-processing delay is now *string*

Cause: Control program general message.

Action: None

NNL-00229: Request-processing delay is now disabled

Cause: Control program general message.

Action: None

NNL-00230: Controller NOCONFIRM mode is currently *string*

Cause: Control program general message.

Action: None

NNL-00231: Controller NOCONFIRM mode is now *string*

Cause: Control program general message.

Action: None

NNL-00232: Auto-refresh failure-retry interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00233: Auto-refresh failure-retry interval is now *string*

Cause: Control program general message.

Action: None

NNL-00234: Auto-refresh failure-retry expiration period is currently *string*

Cause: Control program general message.

Action: None

NNL-00235: Auto-refresh failure-retry expiration period is now *string*

Cause: Control program general message.

Action: None

NNL-00236: Statistic counter reset interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00237: Resetting of statistic counters is currently disabled

Cause: Control program general message.

Action: None

NNL-00238: Statistic counter reset interval is now *string*

Cause: Control program general message.

Action: None

NNL-00239: Resetting of statistic counters is now disabled

Cause: Control program general message.

Action: None

NNL-00240: Starting "*string*"...

Cause: Control program general message.

Action: None

NNL-00241: Processing of modification requests is currently enabled

Cause: Control program general message.

Action: None

NNL-00242: Processing of modification requests is currently disabled

Cause: Control program general message.

Action: None

NNL-00243: Processing of modification requests is now enabled

Cause: Control program general message.

Action: None

NNL-00500: Shows information on domains served by this server

Cause: Control program help text.

Action: None

NNL-00501: `set|show log_stats_interval [seconds] [<server_list>] :\nset|show the server's statistic counter logging interval`

Cause: Control program help text.

Action: None

NNL-00502: Shows, sets, or cancels when the server next dumps its statistic counters

Cause: Control program help text.

Action: None

NNL-00503: `repeat number command [args] : repeat a command number times`

Cause: Control program help text.

Action: None

NNL-00505: `log_stats [<server_list>] : write Names server statistics to the log file`

Cause: Control program help text.

Action: None

NNL-00506: `reset_stats [<server_list>] : reset Names server statistics`

Cause: Control program help text.

Action: None

NNL-00507: Shows, sets, or cancels the time when an auto-refresh query is next issued

Cause: Control program help text.

Action: None

NNL-00508: `show system_queries [<server_list>] : show system query information`

Cause: Control program help text.

Action: None

NNL-00509: `set|show cache_checkpoint_interval [seconds] [<server_list>] :\nset|show the server's cache checkpoint interval`

Cause: Control program help text.

Action: None

NNL-00510: Adds a data record to an existing name

Cause: Control program help text.

Action: None

NNL-00511: Shows or sets the server's system query authority requirements

Cause: Control program help text.

Action: None

NNL-00512: Shows or sets the server's auto-refresh expiration period

Cause: Control program help text.

Action: None

NNL-00513: Shows or sets the server's auto-refresh failure retry interval

Cause: Control program help text.

Action: None

NNL-00514: Creates a new name with a default TTL

Cause: Control program help text.

Action: None

NNL-00515: Deletes a name and its data

Cause: Control program help text.

Action: None

NNL-00516: Displays complete server status

Cause: Control program help text.

Action: None

NNL-00517: Insert-replaces a data item under an existing name

Cause: Control program help text.

Action: None

NNL-00518: Shows or sets the maximum number of times a server can reforward a request

Cause: Control program help text.

Action: None

NNL-00519: Shows, enables, or disables modification request processing

Cause: Control program help text.

Action: None

NNL-00520: Changes an existing name's TTL

Cause: Control program help text.

Action: None

NNL-00521: Shows or sets the server's system query forwarding requirements

Cause: Control program help text.

Action: None

NNL-00522: Removes a data item from a name by value or by type

Cause: Control program help text.

Action: None

NNL-00523: Renames an existing name

Cause: Control program help text.

Action: None

NNL-00524: Replaces a data item with another data item

Cause: Control program help text.

Action: None

NNL-00525: Shows or sets the server's default-forwarding status

Cause: Control program help text.

Action: None

NNL-00526: Starts a server using a non-standard executable and optional arguments

Cause: Control program help text.

Action: None

NNL-00527: Shows, sets, or cancels the time when the server next checkpoints its cache

Cause: Control program help text.

Action: None

NNL-00528: [set] password *password* : set the password for subsequent calls

Cause: Control program help text.

Action: None

NNL-00529: set|show default_domain [<domain_name>] : set|show the current default domain

Cause: Control program help text.

Action: None

NNL-00530: quit|exit : exit the names control program

Cause: Control program help text.

Action: None

NNL-00531: flush_name *name* :\nremoves a name from caches along a route to an authoritative server

Cause: Control program help text.

Action: None

NNL-00532: set|show forwarding_available [<on|off>] [<server_list>] :\nenable, disable or show server request forwarding

Cause: Control program help text.

Action: None

NNL-00533: ping [<server_list>] : ping one or more Names servers

Cause: Control program help text.

Action: None

NNL-00534: query name [type] : query for a desired name and RR type

Cause: Control program help text.

Action: None

NNL-00535: reload [<server_list>] : reload server cache data if there are changes

Cause: Control program help text.

Action: None

NNL-00536: set|show requests_enabled [<on|off>] [<server_list>] : \nenable, disable or show server request processing

Cause: Control program help text.

Action: None

NNL-00537: set|show server [<server_name>] : set|show the currently managed server

Cause: Control program help text.

Action: None

NNL-00538: stop|shutdown [<server_list>] : stop one or more Names servers

Cause: Control program help text.

Action: None

NNL-00539: start|startup [args] : start the Names server with optional arguments

Cause: Control program help text.

Action: None

NNL-00540: [show] status [<server_list>] : display server status summary

Cause: Control program help text.

Action: None

NNL-00541: set|show trace_level [/eve/] [<server_list>] : \nset|show the server's tracing level

Cause: Control program help text.

Action: None

NNL-00542: restart [<server_list>] : restart one or more Names servers

Cause: Control program help text.

Action: None

NNL-00543: [show] version [<server_list>] : \nshow the name and version of one or more Names servers

Cause: Control program help text.

Action: None

NNL-00544: Displays operations statistics

Cause: Control program help text.

Action: None

NNL-00545: Displays query request statistics

Cause: Control program help text.

Action: None

NNL-00546: Displays delete request statistics

Cause: Control program help text.

Action: None

NNL-00547: Displays rename request statistics

Cause: Control program help text.

Action: None

NNL-00548: Displays update request statistics

Cause: Control program help text.

Action: None

NNL-00549: Displays stream usage statistics

Cause: Control program help text.

Action: None

NNL-00550: flush [<server_list>] : flush one or more servers' cache(s)

Cause: Control program help text.

Action: None

NNL-00551: Displays cache statistics

Cause: Control program help text.

Action: None

NNL-00553: Displays forwarding statistics

Cause: Control program help text.

Action: None

NNL-00555: Displays meta data statistics

Cause: Control program help text.

Action: None

NNL-00556: set|show reset_stats_interval [seconds] [<server_list>] :\nset|show server statistic counter reset interval

Cause: Control program help text.

Action: None

NNL-00557: Causes the controller to sleep for N seconds

Cause: Control program help text.

Action: None

NNL-00558: set|show namesctl_trace_level : set|show the controller's tracing level

Cause: Control program help text.

Action: None

NNL-00559: Shows, sets, or cancels the time for the next cache dump to the trace file

Cause: Control program help text.

Action: None

NNL-00560: Shows or sets the server's request-processing delay

Cause: Control program help text.

Action: None

NNL-00561: register name [-ttype] [-daddress] [-hostname] [-<listener_name>] :\nregister an object with Oracle Names

Cause: Control program help text.

Action: None

NNL-00562: unregister name [-daddress] [-<listener_name>] :\nunregister an object with Oracle Names

Cause: Control program help text.

Action: None

NNL-00563: timed_query [timestamp] : query all objects in the Names server's cache

Cause: Control program help text.

Action: None

NNL-00565: set trace_file_name [filename] [<server_list>] :\nset|show the server's trace file name

Cause: Control program help text.

Action: None

NNL-00566: set|show log_file_name [filename] [<server_list>] :\nset|show the log file name on one or more servers

Cause: Control program help text.

Action: None

NNL-00567: reorder_ns [<server_address>] : Generate the enhanced discovery file

Cause: Control program help text.

Action: None

NNL-00568: delegate_domain <domain_name> <NS_name> <NS_Addr> : Delegate the given domain to the given nameserver

Cause: Control program help text.

Action: None

NNL-00569: domain_hint <domain_name> <NS_name> <NS_Addr> : Provide hint of a nameserver for a given domain

Cause: Control program help text.

Action: None

NNL-00570: save_config [<server_list>] : saves server configuration to parameter file

Cause: Control program help text.

Action: None

NNL-00571: set|show save_config_on_stop [<on|off>]

Cause: Control program help text.

Action: None

NNL-00572: set|show save_config_interval [<seconds>] [<server_list>] : set time of next config save

Cause: Control program help text.

Action: None

NNL-00573: load_tnsnames [<file, ... >] : load tnsnames into ONames

Cause: Control program help text.

Action: None

NNL-00574: dump_tnsnames [<file>] : dump ONames addresses into tnsnames file

Cause: Control program help text.

Action: None

NNL-00575: list_objects: list all objects in a domain or subtree

Cause: Control program help text.

Action: None

NNL-00576: list_delegated: list all delegated domains in the region or subtree

Cause: Control program help text.

Action: None

NNL-00577: list_domains: list authoritative domains in the region or subtree

Cause: Control program help text.

Action: None

NNL-00578: dump_ldap: dump addresses in the domain or region to LDAP

Cause: Control program help text.

Action: None

NNL-00579: _scan: find objects/records matching the given types

Cause: Control program help text.

Action: None

NNL-00580: register_ns: name server address domain

Cause: Control program help text.

Action: None

NNL-00581: unregister_ns: name server domain

Cause: Control program help text.

Action: None

NNL-00582: dump_alias: dump aliases in the domain or region to LDAP

Cause: Control program help text.

Cause: Failed to access/create named file or its backup File due to incorrect permissions

Action: Provide correct access to file.

NNO-00050 to NNO-00854

NNO-00050: serious errors in configuration data, server cannot run

Cause: The server's configuration data has a problem of some sort which prevents the server from starting.

Action: Previous error messages in the log file will specify the exact problems leading to the shutdown. The problem most frequently occurs when the network is broken up into multiple administrative regions and the delegation points are incorrect. Read the Oracle Names documentation sections on region delegation and ensure that their directions are being followed correctly.

NNO-00051: domain count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: The server's configuration contains more domains than the server can support.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00052: invalid domain description list

Cause: The server's configuration contains an invalid domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00053: duplicate domain description for domain "*string*"

Cause: The server's configuration contains duplicate domain descriptions in the domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00054: invalid domain name "*string*"

Cause: The server's configuration contains a domain description with an invalid name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00055: invalid domain minimum TTL "*string*"

Cause: The server's configuration contains a domain description with an invalid minimum TTL.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00056: warning: domain minimum TTL must be between *number* and *number*, set to *number* seconds

Cause: The server's configuration contains a domain description with an invalid minimum TTL. This error is not fatal; the server will automatically set the TTL to a default value which is suitable for most uses.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00057: loading and verifying topology data

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00058: cannot load topology data from configuration database

Cause: An error was encountered while trying to load the server's topology data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00059: cannot construct topology checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00060: loading server topology from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent topology checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00061: loading data for domain "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00062: cannot load domain data from configuration database

Cause: An error was encountered while trying to load the server's domain data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00063: cannot construct domain checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00064: loading domain data from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent domain checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00065: loading cached data from checkpoint file "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00066: server will perform reload check of administrative region in *number* seconds

Cause: An informational message written to the log file whenever the Oracle Network Manager or the Oracle Names control program send a reload request to the server.

Action: None

NNO-00067: server reload check countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a reload request previously sent to the server

Action: None

NNO-00068: warning: administrative region check failed, next check in *number* seconds

Cause: this warning is issued whenever the server fails to connect to the configuration database to see if any configuration data has changed. The server will automatically begin reissuing reload checks more frequently, and will eventually give up if connections fail continuously for three days.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database.

NNO-00069: warning: too many administrative region check failures, checking disabled

Cause: a warning issued whenever the server has continuously failed for three days in its attempts to connect to the configuration database. The server disables reload checking. Reload checking can later be re-enabled from the Oracle Network Manager or the Oracle Names control program.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00070: administrative region has changed, reloading domain data

Cause: An informational message written to the log file whenever the server's configuration has changed, and the server is reloading the new configuration from the configuration database.

Action: None

NNO-00071: cannot construct cache checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00072: loading from region database

Cause: normal

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00073: loading server config from region database

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00074: downloading region from server *string*

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00080: domain "*string*" cannot be delegated because its parent is already delegated

Cause: an internal delegation error has occurred. Delegation is controlled by the Oracle Network Manager, which enforces correct delegation rules.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00081: domain "*string*" has no name servers

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00082: domain "*string*" is missing my name "*string*" as a name server

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00083: domain "*string*" server "*string*" has no addresses

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00084: domain "*string*" is not in the authoritative domain list

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00104: line *string*: syntax error, data ignored

Cause: the server found a syntax error its domain data. This message will also appear if the server's internal checkpoint files become corrupted. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00105: line *string*: invalid name "*string*", data ignored

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00106: line *string*: invalid TTL "*string*", data ignored

Cause: the server found an invalid TTL in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00107: line *string*: ignoring stale checkpoint data

Cause: an informational message which appears during server startup when the server detects out-of-date cached data in its cache checkpoint file. The message is part of normal server startup.

Action: None

NNO-00108: line *number*: TTL of *number* seconds below domain minimum *number*, using minimum

Cause: the server found an invalid TTL value in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00109: line *string*: invalid data type name "*string*", data ignored

Cause: the server found an invalid data type name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00110: line *string*: unknown data type "*string*", data ignored

Cause: the server found an unknown data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00111: line *string*: data type "*string*" has syntax "*string*", should be "*string*", data ignored

Cause: the server found an invalid data type syntax in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00112: line *string*: ignored duplicate data of type "*string*"

Cause: the server found a duplicate record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00113: line *string*: alias data already exists, all other data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00114: line *string*: other data exists, alias data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00115: line *string*: single-value data type "*string*", other instances ignored

Cause: the server found more than one record with the same name and type, when the type allows only a single record with a particular name. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00116: warning: data type "*string*" in *string* load

Cause: the server found a record with an invalid data type in its domain data.

Action: No action required; adjustments to data will eliminate warning.

NNO-00117: line *string*: missing data type, data ignored

Cause: the server found a record with a missing data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00118: line *string*: data length *string* exceeds maximum of *string*, data ignored

Cause: the server found a record whose length exceeds an internal limit. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00119: line *string*: server not authoritative for name "*string*", data ignored

Cause: the server found a global name in its domain data for which it is not authoritative. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00120: line *string*: topology name "*string*" not allowed here

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00121: LDIF file *string* open failed: error = *number*

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00122: invalid name, data ignored: entry:\n*string*

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00123: node "*string*" has no authoritative parent, data ignored

Cause: an object in the domain data is apparently not in the domain(s) which the server is authoritative for. The record in question is not loaded, but the server continues to load data.

Action: Check for inconsistencies in the data and correct any errors in topology definition or domain data outside of authoritative domains.

NNO-00150: warning: invalid hint list, no hints loaded

Cause: The server's configuration contains an invalid hint description list. The server will continue to run, but will not load any hints.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00151: warning: ignoring hint for domain "*string*", server is authoritative

Cause: the server's configuration contained a hint for a domain in the server's administrative region. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00152: warning: hint count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: There are too many hints in the server's hint list. The server will load a specified maximum number of hints, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00153: warning: hint domain *number* has invalid name "*string*", hint domain ignored

Cause: The server's configuration contains a hint domain with an invalid name. The domain is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00154: warning: hint *number* has invalid server name "*string*", hint ignored

Cause: The server's configuration contains a hint with an invalid server name. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00155: warning: hint *number* has missing address, hint ignored

Cause: The server's configuration contains a hint with no server address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00156: warning: hint *number* address length *number* exceeds maximum of *number*, hint ignored

Cause: The server's configuration contains a hint whose address length exceeds an internal limit. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00157: warning: hint *number* has invalid address, hint ignored

Cause: The server's configuration contains a hint with an invalid address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00158: warning: hint domain count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: The server's hint domain list is too long. The server will load a specified maximum number of hint domains, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00159: warning: ignoring duplicate hint domain *number* name "*string*"

Cause: The server's hint domain list contains a duplicate domain. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00160: warning: ignoring duplicate hint server "*string*"

Cause: The server's hint server list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00250: invalid administrative region description

Cause: The server encountered an invalid administrative region description during startup. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00251: missing administrative region parameter *string*

Cause: The server's administrative region description is missing a required parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00252: invalid administrative region parameter *string* value "*string*"

Cause: The server encountered an invalid administrative region parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00253: administrative region parameter *string* length *string* exceeds maximum of *string*

Cause: The server encountered an administrative region parameter whose length exceeds an internal limit. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00254: warning: parameter *string* value must be between *number* and *number*, set to *number* seconds

Cause: The server encountered an administrative region parameter with an invalid value. The value is set to a default suitable for most applications, and the server continues running. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the `names.admin_region` parameter in `names.ora` is correct. The `names.ora` file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00255: cannot initialize ROS

Cause: The server was unable to initialize ROS during startup. The error prevents the server from running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00256: using administrative region "*string*"

Cause: an informational message which appears during server startup, and notes the name of the administrative region for future diagnostic use by administrators. The message is part of normal server startup.

Action: None

NNO-00257: warning: cannot get serial number from region store

Cause: The server encountered an error while trying to get the configuration database's serial number. The error occurs almost always because time the server is unable to access the configuration database. If the error occurs during server startup, the server will shut down. If the error occurs during server operation (the server checks the serial number periodically to see if it should reload itself), then the server assumes a transient failure has occurred and repeats the operation a short while later. If the repetitions continue to fail for three days, the server will log another error and stop issuing the serial number load operation.

Action: First make sure that the Netadmin program has exported a server configuration for this name server. Next, make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. If the error occurs during server startup, you can force startup anyway, with checkpoint data, by starting the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00258: cannot load configuration from configuration database

Cause: An error was encountered while trying to load the server's configuration from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00259: configuration tables have not been installed or are inaccessible

Cause: The configuration database has not been properly installed.

Action: Make sure the Oracle Network Manager and its database have been properly installed

NNO-00260: loading configuration data from checkpoint file "string"

Cause: An informational message written to the log file when the server has been forced to load from its most recent configuration checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00261: cannot construct configuration checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00262: warning: cannot write checkpoint file "string"

Cause: the server was unable to write the named checkpoint file. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not create any checkpoint data. Note, however, that if the configuration database is ever unavailable during a future server startup, the lack of checkpoint data means you will be unable to force a startup from checkpoint data with the `names.no_region_database` parameter.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00263: error from configuration database

Cause: the server encountered an error while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00264: configuration database query returned no data

Cause: the server attempted to fetch data from the configuration database and no data was found.

Action: The error generally appears underneath a more specific error which will tell you the exact nature of the problem.

NNO-00265: warning: cannot load data from checkpoint file

Cause: the server was started using checkpoint data, and was unable to read that data. The remaining errors below this one on the error stack provide more specific information about the problem.

Action: Check to see that the named file exists and that the server has permission to read it.

NNO-00266: cannot find document "string" in configuration database

Cause: The server encountered an error while trying to get its configuration ID from the configuration database. The error can occur any time the server is unable to access the configuration database. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between

the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to `TRUE`. If no checkpoint data is available, the server will shut down.

NNO-00267: warning: configuration database contains no data for server "*string*"

Cause: the server successfully contacted the configuration database, but was unable to find any configuration information associated with the server's name. The name is specified in the server's `names.ora` configuration file. The error occurs almost always because the server configuration has not been exported from the Netadmin program.

Action: Make sure that the Netadmin program has exported a server configuration for this name server.

NNO-00268: warning: configuration database is not used, using checkpoint data instead

Cause: An informational message indicating that the server has been started with the `names.no_region_database` parameter set to `TRUE`, and that it will use checkpoint data rather than attempting to contact the configuration database.

Action: None

NNO-00269: configuration database is version *string*, server requires at least version *string*

Cause: The server cannot use the specified configuration database because it is of an incorrect version.

Action: Run the document conversion utility supplied with the Network Manager and re-export your network. The conversion utility will upgrade old documents to a version which can be understood by the name server.

NNO-00270: ORACLE error *string*

Cause: An ORACLE error was encountered while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to `TRUE`. If no checkpoint data is available, the server will shut down.

NNO-00271: warning: names.ora region is version *string*, network definition is version *string*

Cause: The region description in `names.ora` is out of synch with the network definition.

Action: No action is required unless the name server cannot run with the network definition. To be safe `names.ora` should be updated with one which is consistent with the network definition.

NNO-00272: line *string*; invalid DIT/DN

Cause: There is a syntax error in the DIT/DN provided in the region description.

Action: Correct the error and restart the server.

NNO-00300: no listen addresses specified, at least one is required

Cause: the server's configuration is missing addresses on which to listen.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00301: server will shut down in *number* seconds

Cause: An informational message written to the log file when the server receives a shutdown request from the Oracle Names control program.

Action: None

NNO-00302: server stopped

Cause: An informational message written to the log file when the server shuts down.

Action: None

NNO-00303: server "*string*" started with process ID *number*

Cause: An informational message written to the log file when the server successfully starts up.

Action: None

NNO-00304: listen address *string* length *string* exceeds maximum of *string*

Cause: the length of one of the server's listen addresses exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00305: trace level changed from *number* to *number*

Cause: An informational message written to the log file when the server changes its trace level in response to a request from the Oracle Names control program.

Action: None

NNO-00306: server shutdown countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a shutdown request previously sent to the server

Action: None

NNO-00307: invalid server name "*string*"

Cause: the server's name is invalid. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00308: server will restart in *number* seconds

Cause: An informational message written to the log file when the server receives a restart request from the Oracle Names control program.

Action: None

NNO-00309: server restarting

Cause: An informational message written to the log file when the server restarts.

Action: None

NNO-00310: server restart countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a restart request previously sent to the server

Action: None

NNO-00311: invalid listen address list

Cause: the server's configuration contains an invalid listen address list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00312: listen address *string* is invalid

Cause: the server's configuration contains an invalid listen address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00313: server password length *string* exceeds maximum of *string*

Cause: the server's password length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00314: error changing trace level from *number* to *number*, level change ignored

Cause: the server encountered an error while changing its trace level in response to a request from the Oracle Names control program.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00315: server is listening on address *string*

Cause: An informational message written to the log file during server startup.

Action: None

NNO-00316: statistic counter reset disabled

Cause: An informational message written to the log file when the server disables statistic counter resetting in response to a request from the Oracle Names control program.

Action: None

NNO-00317: statistic counter reset interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its statistic counter reset interval in response to a request from the Oracle Names control program.

Action: None

NNO-00318: overriding next statistic counter reset, resetting in *number* seconds

Cause: An informational message written to the log file when the server resets its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00320: missing server name parameter

Cause: the server could not find a names.server_name parameter. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00321: statistic counter dump disabled

Cause: An informational message written to the log file when the server disables statistics dumping in response to a request from the Oracle Names control program.

Action: None

NNO-00322: statistic counter dump interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its statistic dump interval in response to a request from the Oracle Names control program.

Action: None

NNO-00323: overriding next statistic counter dump, dumping in *number* seconds

Cause: An informational message written to the log file when the server dumps its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00326: server statistic counter dump follows

Cause: An informational message written to the log file at the beginning of a statistic dump. The message is followed by a set of server statistics, and ends with another informational message indicating the dump has finished.

Action: None

NNO-00327: server statistic counter dump ends

Cause: An informational message written to the log file at the end of a statistic dump. The message is preceded by a set of server statistics.

Action: None

NNO-00328: server has reset statistic counters to zero

Cause: An informational message written to the log file when the server resets its statistic counters to zero in response to a request from the Oracle Names control program.

Action: None

NNO-00329: server will save the config file in *number* seconds

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00330: server saved the config file "*string*".

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00331: error saving new value *string* of *string* to the save config table.

Cause: An informational message written to the log file when the a set operation is performed and the change cannot be saved in the save config ptable, but should be.

Action: None

NNO-00332: warning: region store serial number reduced from *number* to *number*

Cause: An informational message written to the log file when the server finds the region database has its serial number set lower than it was when the server previously loaded the region data. This is an unnatural condition- every update to the region should increment the serial number so a reduction of the serial number might reflect tampering or accidental manual alteration this and possibly other region tables.

Action: Administrators should find out how/why the serial number decreased.

NNO-00333: warning: ROS admin_region types obsolete; using SQL

Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00334: region load failure: ROS admin_region type *number* unsupported

Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00600: warning: forwarder count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: the server's configuration contains too many default forwarders. The server loads a specified maximum number of forwarders, ignores the rest, and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00601: warning: no forwarders, DEFAULT-FORWARDERS-ONLY mode ignored

Cause: the server's configuration enables DEFAULT-FORWARDERS-ONLY mode but the configuration contains no default forwarders. The server ignores the request and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00602: warning: forwarder *number* has invalid address, forwarder ignored

Cause: One of the forwarders in the default forwarder list has an invalid address. The forwarder definition is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00603: enabling all request processing

Cause: An informational message written to the log file when the server enables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00604: disabling all request processing

Cause: An informational message written to the log file when the server disables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00605: enabling modification requests

Cause: An informational message written to the log file when the server enables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00606: disabling modification requests

Cause: An informational message written to the log file when the server disables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00607: server will forward to default forwarders only

Cause: An informational message written to the log file when the server's configuration enables DEFAULT-FORWARDERS-ONLY mode.

Action: None

NNO-00608: received corrupted message

Cause: The server received a corrupted request. The request is ignored.

Action: corrupted requests are usually caused by transient network problems. If many corrupted messages are received, turn on tracing for further information. If the errors persist, contact Worldwide Customer Support.

NNO-00609: warning: forwarder *number* address length *number* exceeds maximum of *number*, ignored

Cause: the server's configuration contains a forwarder address whose length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00610: detected possible alias loop involving name "*string*"

Cause: the server detected an alias loop involving the specified name. An alias loop occurs when an alias "X" points to another alias "Y", which points back to "X" rather than to an address or other name server data. The loop can contain more hops but the basic idea remains the same. Loops occur when administrators mis-enter network data, particularly when an alias in one administrative region points to data in another administrative region.

Action: Use the Oracle Names control program to query for the specified name. The control program will describe the alias path, and you can use that information to find which names are incorrect and what administrative regions the incorrect data belongs to.

NNO-00611: disabling request forwarding

Cause: An informational message written to the log file when the server disables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00612: enabling request forwarding

Cause: An informational message written to the log file when the server enables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00613: disabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server disables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00614: enabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server enables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00615: disabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server disables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00616: enabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server enables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00617: enabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server enables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00618: disabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server disables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00622: warning: too many auto-refresh failures for name "*string*", query expired

Cause: If an auto-refresh query is issued and continuously returns an error for three days, the query is removed from the auto-refresh queue and a warning logged. The query can be restarted from the Oracle Names control program.

Action: this message will be preceded by numerous warnings that the query in question is failing. Use the Oracle Names control program to describe the failing query. Make sure the server being queried is running and that there is network connectivity between the querying server and the server being queried.

NNO-00623: setting auto-refresh retry interval to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh retry interval in response to a request from the Oracle Names control program.

Action: None

NNO-00624: setting auto-refresh expiration period to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh expiration period in response to a request from the Oracle Names control program.

Action: None

NNO-00625: overriding auto-refresh of name "*string*", type "*string*", refresh in *number* seconds

Cause: An informational message written to the log file when the server changes the time when an auto-refresh query is next issued. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00626: cannot enable DEFAULT-FORWARDERS-ONLY mode, no default forwarders exist

Cause: the Oracle Names control program issued a request to enable DEFAULT-FORWARDERS-ONLY mode, and the request was ignored because the server has no default forwarders.

Action: None

NNO-00627: cancelling auto-refresh of name "*string*", type "*string*"

Cause: An informational message written to the log file when the server removes a query from the auto-refresh queue in response to a request from the Oracle Names control program.

Action: None

NNO-00628: setting maximum reforwarders per query to *number*

Cause: An informational message written to the log file when the server changes its maximum-reforward count in response to a request from the Oracle Names control program.

Action: None

NNO-00629: warning: invalid forwarder list, no default forwarders loaded

Cause: The server's configuration contains an invalid forwarder description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00630: setting request-processing delay to *number* seconds

Cause: An informational message written to the log file when the server sets an artificial request-processing delay in response to a request from the Oracle Names control program.

Action: None

NNO-00631: warning: forwarder *number* has invalid name "*string*", forwarder ignored

Cause: The server's configuration contains a forwarder description with an invalid server name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00632: warning: forwarder *number* has missing address, forwarder ignored

Cause: The server's configuration contains a forwarder description with a missing address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00633: detected fatal delegation loop involving server "*string*"

Cause: the server detected a fatal delegation loop while forwarding a request. A loop occurs when the server's topology data indicates that it should forward a request to itself. The server immediately shuts down in response to this error.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00634: received authoritative name "*string*" when we are its authority

Cause: a server "X" received authoritative data from another server "Y" when server "X" is also authoritative for the data. Such situations should never arise because if server "X" is authoritative for the requested data, it should never forward the request to another server.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00635: warning: ignoring duplicate forwarder "*string*"

Cause: The server's default forwarder list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00700: warning: cannot checkpoint the cache, trying again in *number* seconds

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00701: warning: cannot construct checkpoint file name, checkpointing disabled

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00702: cache checkpointing disabled

Cause: An informational message written to the log file when the server disables cache checkpointing in response to a request from the Oracle Names control program.

Action: None

NNO-00703: checkpoint interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its cache checkpoint interval in response to a request from the Oracle Names control program.

Action: None

NNO-00705: warning: cannot open checkpoint file "*string*", checkpointing disabled

Cause: the server was unable to open the named checkpoint file for writing. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not checkpoint its cache.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00706: overriding next cache checkpoint, checking in *number* seconds

Cause: An informational message written to the log file when the server checkpoints its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00707: server's cache will be flushed in *number* seconds

Cause: An informational message written to the log file when the server flushes its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00708: cache flush countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache flush request previously sent to the server

Action: None

NNO-00709: failed delete of cache checkpoint file "*string*", cache flush may not work

Cause: the server attempted to flush its cache, which also deletes the cache checkpoint file. The file deletion failed, although the rest of the cache flush succeeded. Succeeding errors describe the reason for the deletion failure.

Action: This error typically occurs when two cache-flush operations are issued in succession without an intervening cache checkpoint operation (which would recreate the file). The first deletes the cache file, the second attempts to do so, but fails since the file has already been deleted. In such cases, the message is harmless and can be ignored. If, however, the error occurs because the server lacks permission to delete the file, then you must change the file system permissions so the server is allowed to delete the file.

NNO-00710: server's cache will be dumped to the trace file in *number* seconds

Cause: An informational message written to the log file when the server dumps its cache to the trace file in response to a request from the Oracle Names control program.

Action: None

NNO-00711: cache dump countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache dump request previously sent to the server

Action: None

NNO-00712: warning: group *string* cache checkpoint failed

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00800: Error: cannot read version from config database

Cause: The query for the region database version failed. The database may be shut down, or the tables may not exist in the schema specified in names.ora.

Action: Correct any access problems accordingly.

NNO-00801: Error: OCI_SUCCESS_WITH_INFO: *string*

Cause: Diagnostic information was returned from OCI during region database access.

Action: None

NNO-00802: Error: OCI_NEED_DATA

Cause: The server did not provide sufficient data to the OCI interface while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00803: Error: OCI_INVALID_HANDLE

Cause: The server called OCI with an invalid handle while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00804: Error: OCI_STILL_EXECUTE

Cause: An OCI operation between the server and the database is still in progress.

Action: None

NNO-00805: Error: OCI_CONTINUE

Cause: Not possible.

Action: None

NNO-00806: Error: OCI_ERROR: *string*

Cause: An OCI occurred accessing the region database. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00807: End of Fetch: OCI_NO_DATA

Cause: All rows have been returned from the region table.

Action: None

NNO-00808: Error connecting to region database

Cause: Not possible.

Action: None

NNO-00809: Unknown OCI error: *number*

Cause: Not possible.

Action: None

NNO-00850: Error: LDAP query returns *string*

Cause: The LDAP API returned an error. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00851: LDAP open/bind failed: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00852: failed to get LDAP entry: error = *number*

Cause: the server could not retrieve query entries from the LDAP API.

Action: Find the cause of the error and correct it and restart the server.

NNO-00853: failed to get LDAP attribute/value: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00854: error unbinding LDAP: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NPL-00100 to NPL-00420

NPL-00100: cannot initialize ASN.1 context

Cause: The ASN.1 program interface could not be initialized, probably because its error message file could not be found.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NPL-00101: uninitialized ASN.1 context

Cause: The ASN.1 program interface received an uninitialized ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00102: missing stream functions in ASN.1 context initialization

Cause: An internal function improperly attempted to initialize an ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00103: unusable ASN.1 context

Cause: The ASN.1 program interface received an unusable ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00300: maximum ASN.1 element nesting depth *string* exceeded on read

Cause: An ASN.1 construct is too complex for the program interface to read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00301: maximum ASN.1 element nesting depth *string* exceeded on write

Cause: An ASN.1 construct is too complex for the program interface to write.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00302: ASN.1 type tag is greater than maximum of 16383

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00303: uninitialized ASN.1 class attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00304: uninitialized ASN.1 tag attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00305: unsupported ASN.1 "UNIV" type string

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00307: ASN.1 sequence has already been ended on write

Cause: An internal function attempted to end an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00308: requested ASN.1 class string does not match received class string

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00309: requested ASN.1 type tag string does not match received type tag string

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00310: ASN.1 sequence has already been ended on read

Cause: An internal function attempted to finish reading an ASN.1 construct which has already been completely read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00311: cannot end constructed ASN.1 encoding, string encoding octets unread

Cause: An internal function attempted to finish reading an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00312: attempt to put ASN.1 "UNIV" type with illegal tag *string*

Cause: An internal function attempted to create an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00313: requested form *string* does not match actual form *string*

Cause: An internal function received an ASN.1 construct different from that expected.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00410: incoming ASN.1 value too large (*string* octets) to store locally

Cause: The ASN.1 protocol engine was unable to translate an ASN.1 construct to its host representation because the construct was too big.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00411: incoming ASN.1 NULL encoding has nonzero length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00412: incoming ASN.1 BOOLEAN encoding has incorrect length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00413: incoming ASN.1 encoding has length *string*, maximum allowed is *string*

Cause: The ASN.1 protocol engine received an ASN.1 construct too large for it to process.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00414: incoming ASN.1 type tag is greater than maximum of 16383

Cause: The ASN.1 protocol engine received an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00415: received unsupported ASN.1 INDEFINITE-LENGTH encoding

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00416: received illegal ASN.1 encoding length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00417: received ASN.1 length octet count greater than maximum of *string*

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00418: received malformed ASN.1 object identifier

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00419: received ASN.1 object identifier with sub-identifier that is too large

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00420: received ASN.1 object identifier with more than 256 sub-identifiers

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NZE-28750 to NZE-29249

NZE-28750: unknown error

Cause: An Oracle Security Server error of an unspecified type occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28751: memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28752: data source initialization failure

Cause: A data source failed to initialize. Frequently, this error is caused by insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28753: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, among other things.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28755: object retrieval failure

Cause: The system failed to retrieve information from a file or a database.

Action: Check if the data source exists, or check to ensure that the correct information exists.

NZE-28756: callback failure to allocate memory

Cause: A function supplied by the caller failed to allocate memory. This error could have been caused by system memory exhaustion.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28757: system attempt to allocate 0 bytes of memory

Cause: The system attempted to allocate 0 bytes of memory because there was no available memory left to allocate. This error could have been caused by insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28758: memory release failure

Cause: The release of a memory fragment failed. This may be due to memory corruption either within the application or in the Oracle Security Server library.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28759: failure to open file

Cause: The system could not open the specified file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28763: Invalid parameter type found in configuration file.

Cause: A parameter in the sqlnet.ora file may have been specified incorrectly.

Action: Check the sqlnet.ora file for this parameter value.

NZE-28764: failure to retrieve a configuration parameter

Cause: The system failed to retrieve a configuration parameter from the sqlnet.ora file. This error may have occurred because a necessary configuration parameter was not specified in the sqlnet.ora file.

Action: Supply the needed configuration parameter in the sqlnet.ora file.

NZE-28766: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28767: invalid version number

Cause: Version number of the wallet was incorrect. A corrupt wallet or an incompatible wallet was provided.

Action: Ensure that proper wallet is being used.

NZE-28768: integrity check error

Cause: An invalid magic number was found in the H_INDEX file. This could have been caused by a corrupt disk or by some other process overwriting the file.

Action: Contact Oracle Support.

NZE-28769: Specified method does not exist.

Cause: The data access method that was specified in the configuration file is not supported.

Action: Specify a supported method. Consult the Oracle Security Server documentation to determine the supported types.

NZE-28770: Data source is already initialized.

Cause: The caller attempted to initialize a data source which was already initialized.

Action: This is a programming error. An application should not attempt to initialize a data source more than once.

NZE-28771: Data source is not yet initialized.

Cause: The caller attempted to use a data source which had not yet been initialized.

Action: This is a programming error. The application must always initialize the data source before it can be used.

NZE-28773: failure to write magic and version numbers

Cause: Both the magic and version numbers failed to write. This usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28774: file cannot write to disk

Cause: The output of a file failed. This error usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28775: file cannot close

Cause: Failed to close a file which is used by a data access method. This error usually indicates memory corruption or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28776: Output buffer supplied is too small.

Cause: The data returned by a function was too large for the supplied buffer.

Action: Call the routine again with a larger buffer.

NZE-28777: binding creation failure

Cause: Failed to create a binding for use in the parsing of a parameter value. This error can be caused by the parameter value being in an incorrect format, such as a right parenthesis was not supplied where expected, or due to insufficient system memory.

Action: Make sure that the parameter is specified in the correct format. If the format is correct, free up system memory by terminating processes or adding more memory.

NZE-28778: Configuration parameter is not specified in the proper format.

Cause: The configuration parameter was not specified in the proper format.

Action: Consult the Oracle Security Server documentation for a description of the proper format for this parameter.

NZE-28779: no data access method specified in parameter

Cause: No method for data access was specified in the parameter value.

Action: Specify a method for data access in the parameter. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

NZE-28780: invalid data access method specified by the parameter

Cause: The data access method specified by the parameter value is not supported.

Action: Specify a supported data access method. Consult the Oracle Security Server documentation for the supported data access methods for this data data type.

NZE-28781: No data for the access method is specified in the parameter.

Cause: No data was specified in the parameter for use with the specified access method.

Action: Consult the Oracle Security Server documentation for the data that must be specified for the access method.

NZE-28782: data source is not allocated

Cause: No memory was allocated for a data source.

Action: Ensure that the application calls in the data source initialization function.

NZE-28783: invalid parameter

Cause: There was no match for the parameter name that was used in the configuration file.

Action: Check your sqlnet.ora file for the correct parameter name.

NZE-28784: file name translation failure

Cause: The translation of a file name from Oracle format to native format has failed.

Action: Specify a correct file name. Consult your Oracle documentation for the correct file name format.

NZE-28785: parameter does not exist

Cause: A necessary configuration parameter was not found in the parameter file.

Action: Supply the required parameter.

NZE-28786: decryption of encrypted private key failure

Cause: An incorrect password was used to decrypt an encrypted private key.

Action: Enter the correct password.

NZE-28787: private key encryption failure

Cause: This may have been caused by an error in the mkwallet parameter of the sqlnet.ora file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28788: user provided invalid information, or an unknown error

Cause: User may have responded to a prompt with unexpected input, or an unknown error occurred.

Action: Enter correct input, or enable tracing to check the trace file for errors.

NZE-28790: NLS string open failure

Cause: The opening of a string for use by the NLS subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28791: certificate verification failure

Cause: Verification of the certificate, which the user supplied, failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28794: data type attribute did not initialize

Cause: The initialization of the attribute data type failed. This error may be due to insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28795: data type attribute did not terminate

Cause: The termination of the use of the attribute data type subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28796: access method is not supported

Cause: The method specified to access data is not supported.

Action: Use a supported access method. Consult your Oracle documentation to determine which access methods are supported.

NZE-28797: invalid key data type

Cause: The type specified for a key is not supported.

Action: Correct the key type. Consult your Oracle documentation to determine which key types are supported.

NZE-28800: data source failed to open

Cause: A data source (a file or a database) failed to open.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28802: invalid mode or data source in configuration file

Cause: An invalid mode or data source has been specified in the configuration file (sqlnet.ora).

Action: Check the method parameter in the sqlnet.ora file. If the parameter value is correct, then enable tracing to determine the exact error.

NZE-28803: I/O operation failure

Cause: The system or application failed to access a data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28804: Data source cannot close.

Cause: The data source, which could be either a file or a database), failed to close.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28805: Cannot retrieve information from the data source.

Cause: The system or application failed to retrieve information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28806: Cannot write to the data source.

Cause: The system or application failed to write to the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28807: Cannot update the data source.

Cause: The system or application failed to update the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28808: Cannot retrieve method information from the configuration file.

Cause: The system or application failed to retrieve method information from the sqlnet.ora configuration file.

Action: Check the method configuration parameters in the sqlnet.ora file. If the method configuration parameters are correct, then enable tracing to determine the exact error.

NZE-28809: Cannot delete information from the data source.

Cause: The system or application failed to delete information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28810: Cannot create key descriptor.

Cause: The system failed to create a key descriptor.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28814: Cannot convert a number in Oracle format to native format.

Cause: Failed to convert a number from Oracle format to native format.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28815: Cannot convert a number in native format to Oracle format.

Cause: Failed to convert a number from native format to Oracle portable format failed.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28818: No package context provided.

Cause: The context that holds the state of the security package was not passed to a function or procedure that was expecting it.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28836: Wallet is not open.

Cause: The wallet to be used has not yet been opened.

Action: Call the function that opens the wallet.

NZE-28840: Wallet is already open.

Cause: An attempt was made to open a wallet that was already open.

Action: This is a programming error. A wallet should only be opened once.

NZE-28841: Operation is not supported.

Cause: An attempt was made to perform an operation that is not supported.

Action: This is a programming error. Please refer to Oracle documentation to determine which operations are supported.

NZE-28842: Incorrect file permissions

Cause: The subject file did not have the correct permissions for the operation.

Action: Ensure that the file permissions allow the current operation.

NZE-28843: Operating system error while creating/opening file

Cause: An operating system dependent error occurred while trying to create/ open the file or while trying to set the appropriate permissions on the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28844: No wallet present

Cause: There was no wallet in the location specified.

Action: Check to ensure that the wallet is in the correct directory location.

NZE-28845: Trusted certificate was not found in the specified wallet.

Cause: The command required a trusted certificate to validate the endpoint of the request. The system could not locate all of the required trusted certificates in the specified wallet.

Action: Ensure that all trusted certificates have been added to the specified wallet and retry the request.

NZE-28846: No private key

Cause: Either there is no private key or the system cannot find it.

Action: Check to ensure that the private key is in the specified wallet.

NZE-28847: No clear private key file

Cause: Failed to retrieve private key from SSO wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28848: No encrypted private key file

Cause: Failed to retrieve private key from the wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28849: No Trustpoints

Cause: The wallet does not have any trusted certificates

Action: Ensure that the wallet/keystore has trusted certificates.

NZE-28853: Initialization failure

Cause: Either initialization or module loading has failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28854: Memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28855: Unsupported SSL operation

Cause: An unsupported operation was attempted, for example, an attempt was made to select a mode of operation that is not allowed.

Action: Refer to the SSL chapter in the product's documentation.

NZE-28857: Unknown SSL error

Cause: An unknown SSL error occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28858: SSL protocol error

Cause: An error occurred while negotiating the SSL handshake between two processes.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28859: SSL negotiation failure

Cause: An error occurred during negotiation between two processes as part of the SSL protocol. This error will occur if the two sides to the connection do not support a common cipher suite.

Action: Configure each process so they support a common cipher suite. Then attempt the connection again. If error occurs again, enable tracing and retry the connection. Then contact Oracle customer support with the trace output.

NZE-28860: Fatal SSL error

Cause: An error occurred during the SSL connection to the peer. It is likely that this side sent data which the peer rejected.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28861: SSL connection would block

Cause: This error is informational. It should never be communicated to the user.

Action: Enable tracing and retry the connection to determine the exact cause of the error. Contact Oracle Support if needed.

NZE-28862: SSL connection failed

Cause: This error occurred because the peer closed the connection.

Action: Enable tracing on both sides and examine the trace output. Contact Oracle Support with the trace output.

NZE-28863: SSL session not found

Cause: This error is informational. It indicates that a specified session does not exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-28864: SSL connection closed gracefully

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28865: SSL connection has closed.

Cause: The Secure Sockets Layer (SSL) connection closed because of an error in the underlying transport or because the peer process quit unexpectedly.

Action: Enable tracing and retry the connection. The trace output should indicate how the failure occurred.

NZE-28866: Invalid peer certificate encoding

Cause: A field from a certificate in the peer's certificate chain could not be recognized.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28867: Integer value is too big.

Cause: The certificate presented had an integer field whose value was too large.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28868: Peer certificate chain check failed.

Cause: The check of the certificate list presented by the peer failed. Possible causes include: 1. the expiration of one of the certificates; 2. a certificate authority in a certificate was not recognized as a trust point; 3. the signature in a certificate could not be verified.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. all of the certificates installed in your wallet are current 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28869: Peer's certificate is expired.

Cause: The certificate being used to authenticate a client or server has expired.

Action: Obtain a new certificate, which is unexpired, and attempt the connection again.

NZE-28870: Name comparison failure

Cause: A comparison of the names contained in two certificates failed.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28871: Peer certificate chain is incomplete.

Cause: The peer certificate chain presented was incomplete because it did not end with a self-signed root certificate.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. the certificate authority's root certificate is self-signed. 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28872: Invalid peer certificate format

Cause: The peer certificate does not conform to the X.509v3 standard.

Action: Refer to Oracle Wallet Manager documentation to find out how to get the peer certificate. Then contact Oracle customer support with the peer's certificate.

NZE-28874: SSL: I/O closed - override goodbye kiss

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28875: SSL: use server-gated cryptographic suites

Cause: This is used as a internal status indicator and not really an error.

Action: This message is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28876: Internet Explorer SGC Error

Cause: An error occurred when processing a certificate sent from Microsoft Internet Explorer.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28877: Parameter tag is not valid.

Cause: The tag parameter was not specified for Galois/Counter Mode (GCM), or the tag parameter was specified for non-GCM mode.

Action: For GCM mode, specify the tag parameter and retry the operation. For non-GCM mode, remove the tag parameter and retry the operation.

NZE-28878: parameter AAD is not valid

Cause: The Additional Authenticated Data (AAD) was specified while the mode was not Galois/Counter Mode (GCM). AAD should only be used for GCM.

Action: Remove the AAD parameter and retry the operation.

NZE-28884: invalid cipher suite

Cause: An invalid cipher suite string has been specified in the product's configuration file.

Action: Refer to the product documentation for information about supported cipher suites.

NZE-28885: No certificate with the required key usage found.

Cause: Certificate not created with the appropriate X509v3 key usage extension.

Action: Refer to Oracle Wallet Manager documentation to find out the supported key usages.

NZE-28890: Entrust Login Failed

Cause: An application failed to log in to an Entrust Profile. Possible causes include: 1. Entrust Admin/Authority was not online. 2. Invalid password for Entrust profile was specified. 3. Invalid path to Entrust profile was specified 4. Invalid Entrust initialization file was specified. 5. Entrust Server Login program was not executed (server-side only).

Action: Make sure that: 1. Entrust Authority is online; 2. Password for Entrust profile is specified correctly; 3. Path to Entrust profile is specified correctly; 4. A valid Entrust initialization file is provided; 5. Entrust Server Login program is run before the database startup. For more information, enable tracing and examine the trace output to get exact the Entrust failure codes.

NZE-28900: Failed To Open Windows Certificate Store

Cause: An application failed to open the Windows certificate store. Possible causes include: 1. Client doesn't have the access (READ permission) to the Windows certificate store. 2. Find certificate failed from the Windows certificate store.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29000: Certificate not installed

Cause: Trying to delete a certificate which has not been installed.

Action: Refer to the Oracle Wallet Manager documentation for information about delete option.

NZE-29002: SSL transport detected invalid or obsolete server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29003: SSL transport detected mismatched server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29005: The certificate is invalid.

Cause: The peer certificate encoding is invalid when using SSL 2.0.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-29006: The certificate request message is invalid when using SSL 2.0.

Cause: There is an error processing the SSL 2.0 REQUEST-CERTIFICATE message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29007: Bad Clear Key Length when using SSL 2.0

Cause: The clear key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29008: Bad DH Param key length

Cause: The length of the Diffie-Hellman params exceeds export restrictions.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29009: Bad encrypted key length when using SSL 2.0

Cause: The encrypted key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29010: Export key length does not meet export restrictions.

Cause: The server sent a ServerKeyExchange message with an export key which does not meet export restrictions. For RSA, the export key must be exactly 512 bits.

Action: Obtain a certificate with the appropriate key length.

NZE-29011: Finished message is incorrect.

Cause: The FINISHED message data verification failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29012: Bad key argument length when using SSL 2.0

Cause: The key argument length of an SSL 2.0 Client Master Key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29013: SSL MAC verification failure

Cause: Verification of SSL Record MAC failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29014: Maximum fragment length extension is incorrect.

Cause: The maximum fragment length extension specified is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29015: incorrect message length

Cause: The message length is not correct.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29016: inadequate PKCS1 message padding

Cause: The message was not properly padded before encryption.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29017: The premaster secret length is incorrect.

Cause: The premaster secret sent by the peer has an incorrect length.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29018: The premaster secret contains an incorrect version number.

Cause: The premaster secret must contain the same version number as the ClientHello. The version sent by the client was incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29019: The protocol version is incorrect.

Cause: There is a protocol version mismatch between the two peers.

Action: Specify the correct protocol version in the product's configuration file.

NZE-29020: The handshake record length is too long.

Cause: The handshake record length exceeds the maximum that is allowed by the SSL specification.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29021: Secret key length is incorrect when using SSL 2.0.

Cause: The length of the decrypted ENCRYPTED-KEY is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29022: Operation is being attempted on the wrong side of the client/server connection.

Cause: The SSL network layer has detected that the operation has been attempted on the wrong side of the client/server connection.

Action: Select the protocol side (of this protocol) to be the same as the one selected with a previous protocol.

NZE-29023: The buffers are not empty.

Cause: Trying to free buffers that are not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29024: Certificate validation failure

Cause: The certificate sent by the other side could not be validated. This may occur if the certificate has expired, has been revoked, or is invalid for another reason.

Action: Check the certificate to determine whether it is valid. Obtain a new certificate, alert the sender that the certificate has failed, or resend.

NZE-29025: Error found in certificate check callback.

Cause: The application callback failed during additional certificate validation. Additional checks include CRL validation and extension checking.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29026: Decryption failure

Cause: SSL record decryption failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29027: Error in entropy collection

Cause: The internal entropy collection failed to generate enough seed data.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29028: Server verification failure when using SSL 2.0

Cause: Processing of an SSL 2.0 SERVER-VERIFY message failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29029: connection already secured

Cause: The system tried to secure the TCP/IP connection using SSL/TLS when the connection was already secured.

Action: Ensure that you call the UTL_TCP.SECURE_CONNECTION only once. If you are not using the UTL_TCP package when receiving this error, then enable tracing and attempt the connection again. Contact Oracle Support for help enabling the tracing or for interpretation of the trace file.

NZE-29030: SSL handshake is requested.

Cause: The peer sends this message if it wishes to renegotiate. The application can either proceed with the renegotiation or reject the request.

Action: This is not an error. To find out more details enable tracing and retry the connection. Contact Oracle customer support with the trace output.

NZE-29031: SSL handshake is required.

Cause: Renegotiation cannot proceed before the SSL handshake is completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29032: The given identity is not complete.

Cause: The certificate list does not contain both private key and certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29034: Correct cipher suite or client authentication is needed.

Cause: Before installing a private key, a cipher suite or client authentication suite using the same key exchange algorithm must be installed first. This has not been done.

Action: Install a cipher suite or client authentication suite that uses the same key exchange algorithm as the private key before re-installing the private key.

NZE-29036: This feature is not supported

Cause: Operation is not supported by the current connection parameters.

Action: Check the Oracle documentation to determine the appropriate connection parameters required for this operation.

NZE-29037: No certificate is present

Cause: The other client or server sent a certificate message that contained no certificates.

Action: Check the other side (client or server) to ensure they have appropriate credentials.

NZE-29038: There are no matching certificates.

Cause: The other client or server sent a certificate message that contained a certificate which was not signed by a trusted certificate authority (CA).

Action: Check to ensure that the other client or server sends a certificate which is signed by a CA that is in your trusted list. Or, include the CA certificate for the other client or server's certificate as a trustpoint in your wallet.

NZE-29039: There are no matching cipher suites.

Cause: Neither end of the handshake can agree on a cipher suite.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported.

NZE-29040: There are no supported cipher suites.

Cause: This end of the handshake cannot support any cipher suites. This connection and the peer have some matching cipher suites, however, these cipher suites cannot be negotiated because they cannot be supported by the connection.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported by the connection. Refer to Oracle documentation for supported cipher suites.

NZE-29043: Read is required.

Cause: Renegotiation with the peer has not yet started. There is application data which must be processed before the handshake can proceed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29044: Renegotiation has already been requested.

Cause: Renegotiation has already been requested.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29045: Renegotiation request has been refused.

Cause: A renegotiated handshake has been refused by the peer.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29046: Session is resumable.

Cause: Server is trying to resume a session with different session parameters.

Action: Server should resume the session with the correct session parameters.

NZE-29047: Mismatch in Transport Layer Security extension

Cause: Neither side can agree on a TLS extension.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29048: Unexpected message received.

Cause: An unexpected message has been received.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29049: Unknown record

Cause: The record type is unknown.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29050: Installed client authentication mode is not supported.

Cause: The enabled client authentication mode(s) cannot be used within the selected cipher suite.

Action: Enable a client authentication mode that can be used within the selected cipher suite.

NZE-29051: The given public key type is not supported.

Cause: The public key in the first certificate is not supported.

Action: Check to ensure that the certificate complies with the X.509v3 standard.

NZE-29052: Write buffer is not empty.

Cause: There is an attempt to free a write buffer that is not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29084: The parameter specified is illegal.

Cause: The parameter is not correct. For example, it could be bad input, or an invalid message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29095: Index is not correct.

Cause: The instance identified by the index parameter doesn't exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29096: The given length is incorrect.

Cause: The specified length is too small or is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29100: Cannot create local key ID.

Cause: Creation of local key identifier for the certificate or the private key failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29101: Cannot add private key bag.

Cause: The private key could not be added to the PKCS#12 object. Possible reasons are: (i) A required parameter is NULL (ii) The PKCS#12 construct is not supported (iii) An ASN.1 encoding error occurred in the certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29102: Cannot add certificate bag.

Cause: Creation of certificate bag failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29103: Cannot create PKCS #12 wallet.

Cause: Creation of PKCS#12 wallet failed possibly due to memory allocation failure.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29104: Cannot add certificate request.

Cause: Adding certificate request to the PKCS#12 wallet failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29105: Cannot export PKCS #12 wallet.

Cause: A required parameter is NULL or the PKCS#12 construct is not supported.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29106: cannot import PKCS #12 wallet

Cause: The system could not import the Public Key Cryptography Standards (PKCS) #12 wallet based on the current file and parameter settings. The possible causes include wrong password, wrong auto login file, or wrong contents of the wallet.

Action: Enable tracing and then attempt the connection again. Contact Oracle Support for assistance to enable tracing or interpret the trace output.

NZE-29107: Cannot create PKCS #12 wallet.

Cause: PKCS#12 wallet creation failed. The application may have run out of memory.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29108: Cannot initialize random object.

Cause: The random object could not be initialized or seeded. Either memory allocation has failed or the pseudo random number generator module has not been installed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29109: Cannot create private key object.

Cause: The private key object could not be created. Memory allocation may have failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29110: Invalid PKCS #12 bag type

Cause: The PKCS #12 bag type is invalid. Either one of the required parameters is NULL or the requested OID is not in the list.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29111: Invalid index

Cause: The index passed for getting the bag type is less than 1.

Action: Check to ensure that the index is greater than 1.

NZE-29112: Cannot access attributes from a PKCS #12 certificate bag.

Cause: The certificate cannot be accessed. One of the required parameters is probably NULL, or the index specified by the application does not contain a certbag, or the certificate could be malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29113: Cannot access attributes from a PKCS #12 key bag.

Cause: Retrieval of the private key failed. One of the required parameters is probably NULL or the index specified by the application does not contain a key bag.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29114: Cannot import private key.

Cause: The private key could not be imported. One of the required parameters could be NULL or the encoded private key could be malformed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29115: Cannot export private key.

Cause: The private key could not be exported. Either the application ran out of memory or the key type is not valid.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29116: Cannot get PKCS #12 attributes.

Cause: Retrieval of an attribute failed. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29117: Cannot add PKCS #12 attributes.

Cause: Could not add an attribute. The attribute parameter could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29118: Cannot create PKCS #12 attributes.

Cause: Creation of the attributes failed, possibly due to a memory allocation error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29119: Cannot import certificate.

Cause: The certificate cannot be imported. One of the required parameters could be NULL or the certificate has an invalid X.509 BER or DER encoding.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29120: Cannot export certificate.

Cause: The certificate cannot be exported. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29122: could not add pkcs11 info to the pkcs12 wallet

Cause: Failed while adding pkcs11 information into a pkcs12 wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29123: could not get pkcs11 info from the pkcs12 wallet

Cause: An error was encountered while retrieving pkcs11 information from the wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29124: pkcs11 library name already set

Cause: pkcs11 library information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29125: pkcs11 token label already set

Cause: pkcs11 token label information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29126: pkcs11 token passphrase already set

Cause: The pkcs11 token passphrase can be set only once in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29127: unknown pkcs11 information

Cause: An unknown pkcs11 information type was encountered. The wallet may have been corrupted due to a system error or memory corruption.

Action: Enable tracing and retry the failed operation. Contact Oracle customer support with the trace output.

NZE-29128: pkcs11 library name not set

Cause: The wallet does not have pkcs11 library information.

Action: Ensure that the wallet was created with valid library location or update the wallet with this information.

NZE-29129: pkcs11 token label not set

Cause: The wallet does not have pkcs11 token label information.

Action: Ensure that the wallet was created with valid token label information or update the wallet with this information.

NZE-29130: pkcs11 token passphrase not set

Cause: The wallet does not have pkcs11 token passphrase.

Action: Ensure that the wallet was created with valid token passphrase information or update the wallet with this information.

NZE-29131: pkcs11 certificate label already set in wallet

Cause: The pkcs11 certificate label was already set in the wallet.

Action: Use an empty wallet (created with orapki).

NZE-29135: Seed generation for Random Number Generator failed.

Cause: Generation of seed for random number generator failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29136: The allocated buffer is too small.

Cause: The output buffer is too small.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29137: The global context is incorrect.

Cause: The global context is incorrectly configured or invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29140: Cannot create certificate object.

Cause: Creation of the certificate object failed. The application could have run out of memory or failed to load the certificate.

Action: Ensure that the wallet and certificates in use are valid, enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29141: Cannot import in the der format.

Cause: Cannot import the certificate into the certificate object. The reason could be a malformed certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29150: DES self-test failure

Cause: DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29151: 3DES self-test failure

Cause: 3DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29152: SHA-1 self-test failure

Cause: The SHA-1 power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29153: FIPS self-test failure

Cause: The CRYPTO toolkit power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29154: deterministic RNG self-test failure

Cause: The deterministic Random Number Generator power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29155: continuous key pair consistency check self-test failure

Cause: The public-private key pair check test failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29156: conditional RNG self-test failure

Cause: Continuous Random Number Generator test, which is needed in FIPS mode, has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29157: Unable to build an absolute path to the library.

Cause: Not able to construct an absolute path to the location of the library.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29158: Unable to open library.

Cause: Opening of the library failed.

Action: Check to ensure that the library is present in the location specified, and that it has the appropriate file permissions.

NZE-29159: Unable to read library.

Cause: Not able to read the library on which the DAC check has to be performed. Read call failed.

Action: Check if the library has the appropriate file permissions.

NZE-29160: NZ library being used is different.

Cause: The NZ library being used at runtime is not the same one on which the digest was computed for the software integrity check.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29161: software integrity self-test failure

Cause: The software integrity check test on the NZ shared library has failed.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29162: Non-FIPS cipher suites being used in FIPS mode.

Cause: The cipher suite being used does not contain FIPS-approved algorithms.

Action: Use cipher suites that contain FIPS-approved algorithms.

NZE-29163: Third party PKI vendor is not supported in FIPS mode.

Cause: Third party PKI vendors like Entrust and MCS are not supported in FIPS mode.

Action: Use only Oracle PKI when running in FIPS mode.

NZE-29164: External PKCS #12 wallet is not supported in FIPS mode.

Cause: PKCS #12 wallets created using third party software cannot be used in FIPS mode.

Action: Use only PKCS #12 wallets created by Oracle Wallet Manager when running in FIPS mode.

NZE-29166: Bad key size in FIPS mode.

Cause: User attempted to use a key size that is not allowed in FIPS mode

Action: Ensure that the key size meets FIPS usage requirement. For example, RSA key modulus cannot be less than 1024 bits in FIPS mode.

NZE-29167: Bad key size specified.

Cause: User attempted to use a RSA keysize that is not a standard keysize

Action: Ensure that the keysize is of 512, 1024, 2048, 4096 etc bitizes

NZE-29176: CRL signature verification failed

Cause: A CRL is verified before being used. CRL signature cannot be verified.

Action: Get a new CRL from CA

NZE-29177: certificate serial number is not in CRL

Cause: Cert is not revoked

Action: n/a

NZE-29178: certificate serial number is in CRL

Cause: Cert has been revoked

Action: Reject the certificate

NZE-29179: certificate validation check failed

Cause: Could not complete checking certificate status with a CRL.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29180: Unsupported validation protocol

Cause: The certificate validation protocol is not supported

Action: Make sure a supported certificate validation protocol is specified

NZE-29181: ldap_open failed

Cause: Could not connect to the LDAP server

Action: Ensure that correct LDAP information was provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29182: ldap_bind failed

Cause: Could not log in to the LDAP server

Action: Ensure that correct LDAP credentials were provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29183: ldap_search failed

Cause: Failed to complete search operation in LDAP server

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29184: ldap_result failed

Cause: Failed to retrieve results from LDAP operation

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29185: ldap_first_attribute failed

Cause: Could not get the first attribute from LDAP entry.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29186: ldap_get_values_len failed

Cause: Failed to retrieve attribute values from LDAP entry

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29187: unsupported validation mechanism

Cause: The validation mechanism specified in OID is not supported

Action: Make sure a supported validation mechanism is set in OID

NZE-29188: ldap_count_entries failed

Cause: Failed to get count of entries from a search result chain.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29189: No entry found in OID

Cause: CRL not found in OID

Action: Upload the CRL to OID

NZE-29190: Multiple entries in OID

Cause: For a given issuer name there should be only one CRL in OID

Action: Make sure there is only one CRL for a given issuer name in OID

NZE-29191: OID connection information not set

Cause: To connect to OID the connection information must be available

Action: Set the OID connection information.

NZE-29192: Validation mechanism not set in OID

Cause: The validation mechanism to be used is not set in OID

Action: Set validation mechanism to be used in OID at cn=ValidationMechanism, cn=Validation, cn=PKI, cn=Products, cn=OracleContext

NZE-29193: no CRL found using CRLDP mechanism

Cause: A CRL could not be fetched using CRL Distribution point (CRLDP)

Action: Contact the CA

NZE-29194: no CRL found in cache

Cause: CRL not in cache

Action: n/a

NZE-29195: CRL is expired

Cause: CRL nextUpdate time is in the past

Action: Get a new CRL from the CA

NZE-29222: Distinguished name does not match.

Cause: Distinguished name (DN) on certificate doesn't match user.

Action: Create the global user in the database with the DN that matches with the one in the user certificate on the client side.

NZE-29223: Cannot create certificate chain.

Cause: Unable to create a certificate chain with the existing trust points for the certificate that is to be installed.

Action: Install the trust point that signed the certificate.

NZE-29224: Cannot locate matching certificate request.

Cause: No matching certificate request for the certificate was found.

Action: Install the correct certificate.

NZE-29225: Certificate already installed.

Cause: Attempting to install a certificate into a persona which already has it.

Action: Do not install the certificate.

NZE-29226: No matching private key found.

Cause: Could not locate a matching private key in the persona for the given certificate (public key).

Action: n/a

NZE-29227: Certificate is expired.

Cause: Certificate is no longer valid..

Action: Obtain another certificate or renew this certificate.

NZE-29228: Cannot calculate the number of bytes for output.

Cause: The cryptographic engine is confused about the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29229: the magic number found in the header does not match expected

Cause: The input TDU has either been corrupted or is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29230: the header length is not sufficient for message header

Cause: The input TDU has either been corrupted or it is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29231: the cryptographic engine failed to initialize

Cause: During initialization of the cryptographic engine, some failure occurred. Possible causes include running out of memory and trying to seed the random number generator.

Action: Make sure the executable has been linked with compatible library versions, and that you are not running out of swap space.

NZE-29232: the cryptographic engine key initialization failed

Cause: During initialization of a key for cryptography, some failure occurred. This includes running out of memory and passing illegal arguments.

Action: Make sure the executable has been linked with compatible library versions, and that the correct parameters are being used for the cryptographic functions.

NZE-29233: the key object could not be encoded

Cause: The key object may be corrupted or may be an unsupported type.

Action: Check the key object being passed to the encoding routine.

NZE-29234: a key object was not extracted from encoding

Cause: The encoding may be corrupted or may not be a key object at all.

Action: Check the encoding and parameters passed to decoding routine.

NZE-29235: the key information could not be retrieved

Cause: The key may be corrupted or may be an unsupported type.

Action: Check the parameters being used with the cryptographic functions.

NZE-29236: the random number generator will not accept seed

Cause: The cryptographic engine may have run out of memory.

Action: Make sure the executable has been linked with compatible library versions.

NZE-29237: the cryptographic engine could not finish the algorithm

Cause: The cryptographic engine does not have enough information to correctly finish applying the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29238: the cryptographic engine could not apply the algorithm

Cause: The cryptographic engine does not have enough information to correctly apply the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29239: the cryptographic engine could not initialize the algorithm

Cause: The cryptographic engine does not have enough information to correctly initialize the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29240: the cryptographic engine does not recognize the algorithm

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the cryptographic functions.

NZE-29241: a buffer block needs more space but its length is fixed

Cause: The application has preallocated an output buffer that is too short for the operation and has specified that the buffer should not grow as needed.

Action: Either preallocate a larger buffer or allow the toolkit to grow the output buffer as needed.

NZE-29242: the asymmetric key is too short to be used with the data.

Cause: An asymmetric key must be at least 11 bytes longer than the data it is being used to encrypt.

Action: Use an asymmetric key with more bits or break the data into smaller pieces.

NZE-29243: the toolkit does not recognize the type of key being used

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29245: the toolkit does not recognize the function being used

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29246: the toolkit could not parse the tdu

Cause: The TDU could be corrupted.

Action: Check the parameters being used with the toolkit functions.

NZE-29247: an unopen toolkit object was used before it was opened

Cause: Some toolkit objects must be opened before they can be used.

Action: Check the parameters being used with the toolkit functions.

NZE-29248: an unrecognized WRL was used to open a wallet

Cause: WRL's have a specific set of types and must be formatted correctly.

Action: Check the parameters being used with the toolkit functions.

NZE-29249: an unrecognized state was passed to a cryptographic function

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-43000 to NZE-43084

NZE-43000: pkcs11 library not found

Cause: The PKCS11 library could not be found.

Action: Make sure that the pkcs11 library is at the location specified in the wallet.

NZE-43001: pkcs11 token not found

Cause: The PKCS11 token could not be found.

Action: Make sure that a token with correct label is present in slot.

NZE-43002: pkcs11 passphrase is wrong

Cause: The PKCS11 passphrase is wrong.

Action: Make sure that the token passphrase specified is correct.

NZE-43005: pkcs11: No tokens present

Cause: a token is not present in the slot

Action: Place a pkcs11 token in the slot

NZE-43011: pkcs11: Token login failed

Cause: To login to the pkcs11 token a correct passphrase is needed

Action: Check the token passphrase.

NZE-43014: pkcs11: finding private key on token error

Cause: error occurred while finding private key on token

Action: Make sure the private key corresponding to the certificate in wallet is on the token.
Check trace message

NZE-43015: pkcs11: key pair gen error

Cause: error occurred while generating key pair using HSM

Action: Check trace message

NZE-43017: pkcs11: No certificate found on the smart card/HSM

Cause: No certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate.

NZE-43018: pkcs11: No user certificate found on the smart card/HSM

Cause: No user certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate and private key.

NZE-43019: pkcs11: No certificate found on smart card/HSM label with given cert label

Cause: There were no certificate labels on the smart card/HSM that matched the certificate label specified in the wallet.

Action: Follow smart card/HSM vendor documentation to set certificate label in smart card/HSM.

NZE-43020: pkcs11: Multiple certificates found on smart card/HSM with given cert label

Cause: Certificates with identical labels were found in the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to assign unique certificate labels to certificates.

NZE-43021: pkcs11: Certificate with given cert label is not a user cert

Cause: The certificate with the specified certificate label did not have a matching private key in the smart card/HSM.

Action: Follow smart card/HSM vendor instructions to create credentials (certificate/private key) in smart card/HSM.

NZE-43084: Certificate is using forbidden or unsupported signature algorithm.

Cause: Certificate may be using MD2 or MD5 signature algorithm.

Action: Review wallet content and remove or replace certificates using obsolete algorithms.

O2F-00301 to O2F-00341

O2F-00301: Error attempting to read from the INTYPE file

Cause: An operating system error occurred while attempting to read from the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00302: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2F-00303: No INTYPE file was specified

Cause: The required option INTYPE was not specified.

Action: Set the INTYPE option to the name of the file containing names of types for OTT to translate. The INTYPE option may be specified on the command line or in a CONFIG file.

O2F-00304: Invalid filename for the INTYPE file

Cause: The filename specified for the INTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the INTYPE file correctly.

O2F-00305: Error opening the INTYPE file for reading

Cause: An operating system error occurred while attempting to open the INTYPE file.

Action: Make sure you spelled the filename of the INTYPE file correctly. Try opening the INTYPE file with an editor to make sure you have access to the file.

O2F-00306: Unable to close the INTYPE file

Cause: An operating system error occurred while attempting to close the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00307: Unable to read the INTYPE file

Cause: The first token of the INTYPE file was not read. Either an operating system error occurred while attempting to read from the INTYPE file, or all lines of the INTYPE file are blank lines or comment lines.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file. Make sure the INTYPE file contains one or more type specifications.

O2F-00308: No type specifications were seen in the INTYPE file

Cause: Either there are no type specifications in the INTYPE file, or the first type specification could not be read due to a previously reported error.

Action: Fix any previously reported errors. Make sure there are one or more type specifications in the INTYPE file.

O2F-00309: Name of user-defined type is illegal or missing

Cause: The name of a user-defined type is expected following the keyword TYPE at the beginning of a type specification. No legal type name was seen.

Action: Make sure that the type specification is syntactically correct, and that the type name is spelled correctly.

O2F-00310: Illegal or missing identifier name

Cause: A legal C or C++ identifier was expected following AS, but was not seen.

Action: Use a legal C or C++ identifier, consisting of letters, digits, and underscores not beginning with a digit.

O2F-00311: Illegal or missing file name

Cause: A legal file name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct file name.

O2F-00312: Illegal or missing type version string

Cause: A type version name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct version name.

O2F-00313: Illegal or missing attribute name

Cause: An attribute name was expected in the INTYPE file, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct attribute name.

O2F-00314: AS expected but not seen in the INTYPE file

Cause: Incorrect syntax in the INTYPE file.

Action: Make sure your TYPE file syntax is correct.

O2F-00315: An attribute of a type is listed twice in a type specification

Cause: An attribute of a user-defined type is listed twice in a type specification in the INTYPE file. The second occurrence is ignored.

Action: Remove one of the two occurrences of the attribute.

O2F-00316: An unexpected token was seen at the end of a type specification

Cause: There is a syntax error in the INTYPE file.

Action: Check your documentation to make sure the type specifications in the INTYPE file are syntactically correct. Check your documentation to make sure the type specifications

O2F-00317: Error opening the ERRTYPE file for writing

Cause: An operating system error occurred while attempting to open the ERRTYPE file for writing.

Action: Make sure you spelled the ERRTYPE filename correctly. Try creating or modifying the ERRTYPE file to make sure you have write access to the file.

O2F-00318: Error writing to the OUTTYPE file

Cause: An operating system error occurred when attempting to write to the OUTTYPE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2F-00319: No OUTTYPE file specified

Cause: The required option OUTTYPE was not specified.

Action: Set the OUTTYPE option to the name of the file to which the TYPE file produced by OTT should be written. The OUTTYPE option may be specified on the command line or in a CONFIG file.

O2F-00320: Invalid filename for the OUTTYPE file

Cause: The filename specified for the OUTTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the OUTTYPE file correctly.

O2F-00321: Error opening the OUTTYPE file for writing

Cause: An operating system error occurred while attempting to open the OUTTYPE file.

Action: Make sure you spelled the filename of the OUTTYPE file correctly. Make sure you have operating system permission to open the the file.

O2F-00322: Unable to close the OUTTYPE file

Cause: An operating system error occurred while attempting to close the OUTTYPE file.

Action: Try opening the OUTTYPE file with an editor to make sure you are able to access the file.

O2F-00323: Internal error in OTT facility O2F

Cause: An internal OTT error occurred in the O2F component of OTT.

Action: Contact ORACLE customer support.

O2F-00324: Unable to convert from the database character set to the compiler character set

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable). Use a client character set that can be translated to the compiler character set. The compiler character set itself is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2F-00325: None of the characters in a name were legal identifier characters

Cause: None of the characters in the name of a database entity could be translated to a character that may begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the name in the INTYPE file.

O2F-00326: Some characters in this name were not legal identifier characters

Cause: One or more characters in the name of a database entity could not be translated to a character that may appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Make sure that the name is spelled correctly, and that it is terminated by a blank, the end of a line, or an equals sign ("="). You may use the translated name with added underscores, or you may specify an explicit translation for the name in the INTYPE file.

O2F-00327: CASE option has an illegal value

Cause: The value given for the CASE option in the INTYPE file is not legal.

Action: Change the value given for the CASE option to one of the following legal values: SAME, LOWER, UPPER, or OPPOSITE.

O2F-00328: Illegal INITFUNC name

Cause: The function name given for the INITFUNC option in the INTYPE file is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name can be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2F-00329: Type or option specification expected

Cause: A type or option specification was expected in the INTYPE file, but was not seen.

Action: Check the INTYPE file for syntax errors. Supply a type or option specification. A type specification begins with the word TYPE. An option specification begins with the word CASE, INITFILE, or INITFUNC.

O2F-00330: Name exceeds 265 bytes in length

Cause: A name seen in the INTYPE file exceeds 265 bytes in length.

Action: Choose a shorter name.

O2F-00331: A syntactically illegal name was seen in the INTYPE file

Cause: A syntax error occurred in a name used in the INTYPE file.

Action: If the name is quoted, make sure that the quotes are at the beginning and at the end of the name. If a period (which separates a schema name from a type name) appears, make sure that the schema name and the type name are both present.

O2F-00332: A database link may not appear in the name of a user-defined type

Cause: A database link was seen in the name of a user-defined type. This feature is not yet supported.

Action: Declare the user-defined type in the database to which OTT connects.

O2F-00333: An unexpected token appeared where a keyword was expected in the INTYPE file

Cause: A keyword such as TYPE was expected in the INTYPE file, but an incorrect or misspelled keyword was seen.

Action: Verify that your TYPE specification obeys the syntax described in your documentation. Verify that your keyword is spelled correctly.

O2F-00334: A user-defined type is listed more than once in the INTYPE file

Cause: The same name of a user-defined type appears in more than one type specification. The duplicate specifications of the type name will be ignored.

Action: Put all of the information about the type, including all type name and attribute name translations, in a single TYPE specification, and eliminate the duplicate TYPE specifications.

O2F-00335: Internal error in O2F component of OTT

Cause: A request was made that all types in the database schema are to database.

Action: List the types to be processed in an INTYPE file. Contact ORACLE customer support.

O2F-00336: Error reported by subsystem:\n

Cause: A request was made to generate declarations for all the types in a database schema. An error occurred in a subsystem when accessing the database.

Action: Examine the error message reported by the subsystem to determine its cause. List the types to be processed in an INTYPE file.

O2F-00337: Schema not found, or no types found in schema

Cause: A request was made to generate declarations for all the types in a database schema. Either the schema was not found, no user-declared types were found in the schema, or unable to connect to Oracle.

Action: Ensure that a login/password string was specified for OTT and that the Oracle database can be accessed with it. Ensure that the USER_TYPES table contains at least one row.

O2F-00338: Illegal or missing package name

Cause: A legal Java package name was expected following IN or PACKAGE or IN PACKAGE, but was not seen.

Action: Use a legal Java package name.

O2F-00339: CODE option has an illegal value

Cause: The value given for the CODE option in the INTYPE file is not legal.

Action: Change the value given for the CODE option to one of the following legal values: C, ANSI_C, KR_C, JAVA, NATIVE_JAVA, ORACLE_JAVA.

O2F-00340: Name was null

Cause: A name had a length of 0 characters.

Action: This error should never be reported to the user. Contact ORACLE customer support.

O2F-00341: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

O2I-00101 to O2I-00133

O2I-00101: Invalid value for the USERID parameter

Cause: The value supplied for the USERID parameter is not a legal *username/password[@databasename]* string.

Action: Set the USERID option to the correct *username/password* or *username/password@database name* combination to use when connecting to the database. If you have an OPS\$ account, you may instead omit the USERID option, in which case OTT will attempt to connect to the database using the userid OPS\$*username*. The USERID option may be specified on the command line or in a CONFIG file.

O2I-00102: Unable to connect to Oracle

Cause: OTT could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Either the USERID option value was incorrect, or, if the USERID was not supplied, the userid OPS\$*username* was not accepted.

Action: Check that the username and password are current and correct. Run another program that connects to Oracle to verify that you can connect using that username and password.

O2I-00103: Two file names refer to the same HFILE file in the INTYPE file

Cause: Two different file names have been used in the INTYPE file to refer to the same HFILE file, or different file names have been used to refer to the same HFILE file on the command line and in the INTYPE file.

Action: Consistently refer to each HFILE file using the same file name.

O2I-00110: Internal error in OTT component O2I

Cause: An internal OTT error occurred in the O2I component of OTT.

Action: Contact ORACLE customer support.

O2I-00111: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2I-00112: Unable to write to the HFILE file

Cause: An operating system error occurred when attempting to write to the HFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00113: No HFILE specified

Cause: The HFILE file to which C declarations generated by OTT are written was not specified.

Action: Specify the global HFILE option on the command line or in a CONFIG file. You may choose a different HFILE for a particular type by specifying a different HFILE in the INTYPE

file entry describing the type. If every INTYPE file entry specifies an HFILE, and if none of the types in the HFILE require declarations of types not mentioned there, the global HFILE option may be omitted. An INTYPE file generated by a previous invocation of OTT satisfies these conditions.

O2I-00114: Invalid HFILE file name

Cause: An HFILE file name was specified that is not syntactically correct.

Action: Make sure the HFILE filename is spelled correctly.

O2I-00115: Error opening the HFILE file

Cause: An operating system error occurred while attempting to open the HFILE file for writing.

Action: Make sure the HFILE filename is spelled correctly. Try creating or modifying the HFILE to make sure you have write access to the file.

O2I-00116: Unable to close the HFILE file

Cause: An operating system error occurred while attempting to close the HFILE file.

Action: Try creating or modifying the HFILE file to make sure you are able to access the file.

O2I-00117: Internal error: No message file for component O2U

Cause: The message file for the internal OTT component O2U was not found. OTT may not be correctly installed.

Action: Contact ORACLE customer support.

O2I-00118: This user-defined type was not found in the database

Cause: A user-defined type specified in the INTYPE file was not found in the database.

Action: Make sure the name of the type is spelled correctly. Make sure the type is actually declared in the database.

O2I-00119: Warning reported by subsystem:\n

Cause: A subsystem invoked by OTT reported a warning. This warning immediately follows the "Warning reported by subsystem" message.

Action: Examine the warning reported by the subsystem to determine its cause.

O2I-00120: Error reported by subsystem:\n

Cause: A subsystem invoked by OTT reported an error. This error immediately follows the "Error reported by subsystem" message.

Action: Examine the error message reported by the subsystem to determine its cause.

O2I-00121: No value was specified for the CODE option

Cause: The required CODE option was not specified on the command line or in a configuration file.

Action: Specify the CODE option on the command line or in a configuration file. Currently, the following values of the CODE option are supported: CODE=ANSI_C, CODE=KR_C, CODE=C

O2I-00122: Invalid filename for the INITFILE file

Cause: The filename specified for the INITFILE file is not syntactically correct.

Action: Make sure the filename of the INITFILE file is spelled correctly.

O2I-00123: Unable to close the INITFILE file

Cause: An operating system error occurred while attempting to close the INITFILE file.

Action: Try opening the INITFILE file with an editor to make sure the file can be accessed.

O2I-00124: Error opening the INITFILE file for writing

Cause: An operating system error occurred while attempting to open the INITFILE file for writing.

Action: Make sure the INITFILE filename is spelled correctly. Try creating or modifying the INITFILE file to make sure you have write access to the file.

O2I-00125: Error writing to the INITFILE file

Cause: An operating system error occurred when attempting to write to the INITFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00126: You must specify an INTYPE file with SCHEMA_NAMES=FROM_INTYPE

Cause: The option SCHEMA_NAMES=FROM_INTYPE requests that schema names be written to the OUTTYPE file as given in the INTYPE file. However, an INTYPE file was not specified.

Action: Either supply the name of an INTYPE file, or specify the SCHEMA_NAMES option ALWAYS or IF_NEEDED.

O2I-00127: Illegal INITFUNC name

Cause: The name of the INITFUNC function is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name may be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2I-00128: Unable to write to the Java file

Cause: An operating system error occurred when attempting to write to a Java source file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00129: No Java file specified

Cause: The file to which Java declarations generated by OTT are written was not specified.

Action: This message should never be seen, because Java files are named after the classes declared within them. Contact ORACLE customer support.

O2I-00130: Invalid Java file name

Cause: A Java file name was specified that is not syntactically correct.

Action: Make sure the Java filename is spelled correctly.

O2I-00131: Error opening a Java file

Cause: An operating system error occurred while attempting to open a Java file for writing.

Action: Make sure the filename is spelled correctly. Try creating or modifying the file to make sure you have write access to the file.

O2I-00132: Unable to close a Java file

Cause: An operating system error occurred while attempting to close a Java file.

Action: Try creating or modifying the Java file to make sure you are able to access the file.

O2I-00133: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

O2U-00200 to O2U-00212

O2U-00200: Internal error in OTT facility O2U

Cause: An internal OTT error occurred in the O2U facility of OTT.

Action: Contact ORACLE customer support.

O2U-00201: Illegal arguments to function o2upt()

Cause: Illegal arguments were passed to the function o2upt(). This is an internal error that should not be encountered by an end user.

Action: Contact ORACLE customer support.

O2U-00202: Invalid data passed to function

Cause: Arguments with incorrect values were passed to the function o2upt(). This is an internal error that should not be encountered by the end user.

Action: Contact ORACLE customer support.

O2U-00203: Type to be declared must be an object type or a named collection type

Cause: You have asked OTT to generate code for a type it does not support. When generating Java code, OTT will only generate code for object types. When generating C declarations, OTT will only generate declarations for object types and named collection types.

Action: You are probably asking OTT to declare a built-in type, or, if you are generating Java code, a named collection type. Do not ask OTT to generate a declaration for this type.

O2U-00204: Unable to convert from the database character set to the compiler character set

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable.) Use a client character set that includes the character set of the INTYPE file and can be translated to the compiler character set. The database character set is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2U-00205: None of the characters in a type name were legal identifier characters

Cause: None of the characters in the name of a user-defined type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the type name in the INTYPE file.

O2U-00206: Some characters in a type name were not legal identifier characters

Cause: One or more characters in the name of a user-defined type could not be translated to a character that can appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Specify an explicit translation for the type name in the INTYPE file, or just use the translated type name with added underscores.

O2U-00207: None of the characters in an attribute name were legal identifier characters

Cause: None of the characters in the name of an attribute of a type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore. To find the affected attribute, look in the declaration generated for this type for data member names that are obviously incorrect.

Action: Specify an explicit translation for the attribute name in the INTYPE file.

O2U-00208: One or more characters in an attribute name were not legal identifier characters

Cause: If an attribute name contains one or more characters that can not be translated to a legal C or C++ identifier character, the characters that can not be translated are replaced with underscores. To find the affected attribute or attributes, look in the declaration generated for this type for data member names that have extra underscores not present in the original attribute names.

Action: Specify explicit translations for the affected attribute names in the INTYPE file, or just use the translated attribute names with added underscores.

O2U-00209: Attribute or function name to be translated was not found

Cause: This name, for which a translation was requested, is not the name of an attribute or a function of the current type.

Action: Make sure that the name is spelled correctly, and is the name of an attribute or function defined in the current type.

O2U-00210: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2U-00211: A type without attributes was translated

Cause: OTT translated a type without attributes. The corresponding C-type will be a struct without any components, which is not legal C. The empty type in the database may be the result of an error during type creation. Additionally, incomplete types may be used temporarily in the creation of types that reference one another.

Action: Re-create a full version of the type in the database and then re-run OTT.

O2U-00212: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

OCI-00000 to OCI-00879

OCI-00000: normal, successful completion

Cause: Normal exit.

Action: None

OCI-00001: unique constraint (*string.string*) violated on table *string.string* columns (*string*)

Cause: An UPDATE, INSERT or MERGE statement attempted to update or create a record that duplicated values limited by a unique constraint. A unique constraint can be implemented as an explicit unique constraint, a unique index, or a primary key. Consider the case where a table has a unique constraint on columns FIRSTNAME and LASTNAME. Because of this constraint, it is not possible to insert a row containing values of FIRSTNAME and LASTNAME that are identical to the values of these columns in an existing table row.

Action: Determine what type of unique constraint was violated (explicit unique constraint, unique index, or primary key), and which table columns are affected by this unique constraint. Then choose whether to change the constraint to allow duplicate values; modify the SQL statement to no longer create a duplicate value; or drop the constraint, unique index, or primary key. *Params: 1) constraint_schema: The schema name where the constraint resides. 2) constraint_name: The name of the constraint. 3) table_schema: The schema name for the table affected by this constraint. 4) table_name: The name of the table affected by this constraint. 5) column_names: The column names affected by this constraint.

OCI-00018: maximum number of sessions exceeded

Cause: All session state objects are in use.

Action: Increase the value of the SESSIONS initialization parameter.

OCI-00019: maximum number of session licenses exceeded

Cause: All licenses were in use.

Action: Increase the value of the LICENSE_MAX_SESSIONS initialization parameter.

OCI-00020: exceeded maximum number of processes (*string*) specified in initialization parameter

Cause: The limit specified by number of processes in initialization parameter is reached.

Action: Disconnect existing connections or increase the value of the PROCESSES initialization parameter and restart the instance.

OCI-00021: Cannot switch session because that session is being used by other users.

Cause: The session is currently used by other users.

Action: Do not attempt to switch to a session in use by other users.

OCI-00022: invalid session ID; access denied

Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE_USER privilege.

OCI-00023: session references process private memory; cannot detach session

Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session's database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

OCI-00024: logins from more than one process not allowed in single-process mode

Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

OCI-00025: SGA memory allocation request of *string* failed.

Cause: A process requested allocation of free memory from the System Global Area (SGA), which failed because there was not enough free memory available.

Action: Ensure that there is enough free System Global Area (SGA) memory available by, for example, changing relevant instance parameters and restart the instance. After that, retry the operation. If the problem persists, please contact Oracle Support Services.

OCI-00026: missing or invalid session ID

Cause: Missing or invalid session ID string for the current operation.

Action: Retry with a valid session ID.

OCI-00027: cannot kill current session

Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

OCI-00028: session has been terminated

Cause: A privileged user has terminated your session and you are no longer logged on to the database.

Action: Log in again to continue working.

OCI-00029: session is not a user session

Cause: The session ID specified in the current operation was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

OCI-00030: User session ID does not exist.

Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

OCI-00031: session marked for kill

Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

OCI-00032: invalid session migration password

Cause: The session migration password specified in a session creation call was invalid or too long.

Action: Retry with a valid password using less than 30 characters.

OCI-00034: cannot *string* in current PL/SQL session

Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by 'alter session disable commit in procedure')

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

OCI-00035: LICENSE_MAX_USERS cannot be less than current number of users.

Cause: The LICENSE_MAX_USERS value is less than the current users.

Action: Check the license limit and drop extra users or license more users.

OCI-00036: maximum number of recursive SQL levels (*string*) exceeded

Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

OCI-00037: cannot switch to a session belonging to a different server group

Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

OCI-00038: Cannot create session: server group belongs to another user

Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

OCI-00039: error during periodic action

Cause: An unexpected error occurred while executing a periodically invoked action.

Action: Check the error stack for detailed error information.

OCI-00040: active time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-00041: active time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-00042: Unknown Service name *string*

Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICES\$ or add a new service using the DBMS_SERVICE package.

OCI-00043: remote operation failed

Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

OCI-00044: timed_statistics parameter must be TRUE when statistics_level parameter is not BASIC

Cause: An attempt was made to set timed_statistics parameter to FALSE when statistics_level parameter was not BASIC. The timed_statistics parameter must be set to TRUE to collect meaningful statistics when statistics_level parameter is set to TYPICAL or ALL.

Action: Either set timed_statistics parameter to TRUE or set statistics_level parameter to BASIC.

OCI-00045: Your session has been terminated with no replay.

Cause: A privileged user terminated your session and you are no longer logged on to the database. Your session was not replayed by Application Continuity (AC) or Transparent Application Failover (TAF).

Action: Log in again and resubmit any data changes that are not committed.

OCI-00046: cannot modify sessions parameter

Cause: An attempt was made to alter the sessions parameter in the root container or non-consolidated database.

Action: The sessions parameter behaves like a static parameter in root containers and non-consolidated databases and hence cannot be altered. It can only be altered from a pluggable database.

OCI-00047: cannot set sessions parameter to this value

Cause: An attempt was made to alter the sessions parameter to a value greater than the root container's session value.

Action: The sessions parameter can only be set to a value less than or equal to the root container's session value.

OCI-00049: maximum number of DB_FILES exceeded for the PDB

Cause: The value of the DB_FILES initialization parameter was exceeded for the pluggable database (PDB).

Action: Increase the value of the DB_FILES parameter for the PDB and close and reopen the PDB.

OCI-00050: Operating system error occurred while obtaining an enqueue.

Cause: Operating system resources necessary to allow an Oracle enqueue were unavailable.

Action: Additional information can be found in the alert log and trace file generated for this issue. If the issue is because of lack of operating system user quota, then increase the quota on an operating system level and retry. If the issue persists, contact Oracle Support.

OCI-00051: timeout occurred while waiting for a resource

Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

OCI-00052: maximum number of enqueue resources (*string*) exceeded

Cause: Ran out of enqueue resources.

Action: Increase the value of the ENQUEUE_RESOURCES initialization parameter.

OCI-00053: maximum number of enqueues exceeded

Cause: Ran out of enqueue state objects.

Action: Increase the value of the ENQUEUEES initialization parameter.

OCI-00054: Failed to acquire a lock (Type: "*string*", Name: "*string*", Description: "*string*") because it is currently held by another session. The resource being locked can be identified by *string* ("*string*") and *string* ("*string*")

Cause: The current session is failing to acquire the specified lock on the specified resource because another session holds the lock.

Action: Retry the operation and see if the lock has been released in the meantime. If not, identify which session holds the lock and on which resource using the information provided in the error message text and terminate the transaction of the session before retrying the operation.

OCI-00055: maximum number of DML locks exceeded

Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML_LOCKS initialization parameter and warm start.

OCI-00056: DDL lock on object '*string.string*' is already held in an incompatible mode

Cause: An attempt was made to acquire a Data Definition Language (DDL) lock that was already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

OCI-00057: maximum number of temporary table locks exceeded

Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY_TABLE_LOCKS initialization parameter and warm start.

OCI-00058: DB_BLOCK_SIZE must be *string* to mount this database (not *string*)

Cause: DB_BLOCK_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB_BLOCK_SIZE parameter or mount a database that matches the value.

OCI-00059: maximum number of DB_FILES exceeded

Cause: The value of the DB_FILES initialization parameter was exceeded.

Action: Increase the value of the DB_FILES parameter and warm start.

OCI-00060: deadlock detected while waiting for resource

Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

OCI-00061: another instance has a different DML_LOCKS setting

Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances' INIT.ORA files specify the DML_LOCKS parameter as 0 or all as non-zero.

OCI-00062: DML full-table lock cannot be acquired; DML_LOCKS is 0

Cause: The instance was started with DML_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML_LOCKS not equal to zero, and reexecute the statement.

OCI-00063: maximum number of log files exceeded *string*

Cause: The number of log files specified exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

OCI-00064: object is too large to allocate on this O/S (*string,string,string*)

Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

OCI-00065: initialization of FIXED_DATE failed

Cause: The FIXED_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

OCI-00066: SID '*string*' contains a character that is not allowed or is too long.

Cause: The specified system identifier (SID) contained a character that was not allowed or the SID specified was too long, which cannot occur in an SPFILE setting. Characters that are not allowed include , # " ' = () and whitespace.

Action: Use a SID that does not contain special characters or whitespaces. Check the platform-specific documentation for the maximum length allowed for the SID. *Params: 1) system_identifier: The user-supplied SID value.

OCI-00067: invalid value *string* for parameter *string*; must be at least *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

OCI-00068: invalid value *string* for parameter *string*, must be between *string* and *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

OCI-00069: cannot acquire lock -- table locks disabled for *string*

Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

OCI-00070: The command *string* is invalid.

Cause: An invalid debugger command was specified.

Action: Type HELP to view the list of available commands, and use the correct command.

OCI-00071: Process number must be between 1 and *string*.

Cause: An invalid process number was specified.

Action: Specify a valid process number. Retry the command.

OCI-00072: process "*string*" is not active

Cause: An invalid process was specified.

Action: Specify a valid process and retry the command.

OCI-00073: command *string* takes between *string* and *string* argument(s)

Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

OCI-00074: No process specified for debugging.

Cause: No process was specified for debug.

Action: Specify a valid process and retry.

OCI-00075: process "*string*" not found in this instance

Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

OCI-00076: dump *string* not found

Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

OCI-00077: dump *string* is not valid

Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

OCI-00078: cannot dump variables by name

Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

OCI-00079: variable *string* not found

Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

OCI-00080: invalid global area specified by level *string*

Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area *level* as well as *extra* bytes for every pointer; *extra* must be a multiple of 4.

OCI-00081: address range [*string*, *string*] is not readable

Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

OCI-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstringstring*

Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

OCI-00083: warning: possibly corrupt SGA mapped

Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

OCI-00084: global area must be PGA, SGA, or UGA

Cause: An attempt was made to dump an invalid global area.

Action: Specify either a Program Global Area (PGA), System Global Area (SGA), or User Global Area (UGA).

OCI-00085: current call does not exist

Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

OCI-00086: user call does not exist

Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

OCI-00087: command cannot be executed on remote instance

Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

OCI-00088: command cannot be executed by shared server

Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

OCI-00089: invalid instance number in ORADEBUG command

Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

OCI-00090: failed to allocate memory for cluster database ORADEBUG command

Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

OCI-00091: LARGE_POOL_SIZE must be at least *string*

Cause: The value of LARGE_POOL_SIZE is below the minimum size.

Action: Increase the value of LARGE_POOL_SIZE past the minimum size.

OCI-00092: LARGE_POOL_SIZE must be greater than LARGE_POOL_MIN_ALLOC

Cause: The value of LARGE_POOL_SIZE is less than the value of LARGE_POOL_MIN_ALLOC.

Action: Increase the value of LARGE_POOL_SIZE past the value of LARGE_POOL_MIN_ALLOC.

OCI-00093: Parameter *string* outside valid range *string* to *string*.

Cause: The parameter value was not in a valid range.

Action: Modify the parameter value to be within the valid range.

OCI-00094: *string* requires an integer value

Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

OCI-00096: invalid value *string* for parameter *string*, must be from among *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

OCI-00097: use of Oracle SQL feature not in SQL92 *string* Level

Cause: Usage of Oracle's SQL extensions.

Action: Do not use the feature or use the ALTER SESSION SET FLAGGER command to set the appropriate level of SQL92 compliance.

OCI-00098: creating or mounting the database requires a parameter file

Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

OCI-00099: warning: no parameter file specified for *string* instance

Cause: Even though no parameter file was specified, the instance was started with all default values.

Action: None

OCI-00100: no data found

Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. Note that if the application uses Oracle SQL instead of ANSI SQL, ORA-01403 will be generated instead of ORA-00100.

OCI-00101: invalid specification for system parameter DISPATCHERS

Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

OCI-00102: network protocol *string* cannot be used by dispatchers

Cause: The PROTOCOL type specified was not supported by dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

OCI-00103: invalid network protocol; reserved for use by dispatchers

Cause: The network specified in the SQL*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

OCI-00104: deadlock detected; all public servers blocked waiting for resources

Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX_SHARED_SERVERS as the system will automatically start up new servers to break the deadlock until the number of servers reaches the value specified in MAX_SHARED_SERVERS.

OCI-00105: too many dispatcher configurations

Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

OCI-00106: cannot startup/shutdown database when connected to a dispatcher

Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

OCI-00107: failed to connect to ORACLE listener process

Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

OCI-00108: failed to set up dispatcher to accept connection asynchronously

Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support asynchronous operations.

Action: Contact your ORACLE representative.

OCI-00109: invalid value for attribute *string*: *string*

Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

OCI-00110: invalid value *string* for attribute *string*, must be between *string* and *string*

Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

OCI-00111: invalid attribute *string*

Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

OCI-00112: value of *string* is null

Cause: The attribute was specified with no value.

Action: Specify a non-null value.

OCI-00113: protocol name *string* is too long

Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

OCI-00114: missing value for system parameter SERVICE_NAMES

Cause: No value was specified for the SERVICE_NAMES system parameter, nor for the DB_NAME parameter.

Action: Add an SERVICE_NAMES or DB_NAME definition to the INIT.ORA file. By default, SERVICE_NAMES is the value of DB_NAME unless SERVICE_NAMES is explicitly specified.

OCI-00115: Cannot connect to database. The selected process has reached its connection limit.

Cause: A connection request was refused because the chosen dispatcher or connection broker has reached its connection limit. The listener chooses which process based on the SERVER parameter in the CONNECT_DATA.

Action: Retry the connection call so the listener can forward it to a different dispatcher or connection broker.

OCI-00116: SERVICE_NAMES name is too long

Cause: A service name specified in the SERVICE_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE_NAMES value (<= 255 chars).

OCI-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified

Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

OCI-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified

Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

OCI-00119: invalid specification for system parameter *string*

Cause: The syntax for the specified parameter was incorrect.

Action: Refer to the Oracle Database documentation for the correct syntax.

OCI-00120: invalid 'shared_servers' value for the PDB

Cause: 'shared_servers' cannot be set to a non-zero value in a non-ROOT pluggable database (PDB).

Action: In a multitenant container database (CDB) setup, shared servers can be configured only in ROOT. A non-ROOT PDB can disable shared servers for the PDB by setting 'shared_servers' to 0. No other values are allowed. To reenable within the PDB, use 'alter system reset shared_servers'.

OCI-00122: cannot initialize network configuration

Cause: ORACLE could not initialize SQL*Net version 2.

Action: Check the error stack for detailed information.

OCI-00123: idle public server terminating

Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

OCI-00127: dispatcher *string* does not exist

Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D####" denoting an existing dispatcher process.

OCI-00128: this command requires a dispatcher name

Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [IMMEDIATE] 'dispatcher name'

OCI-00129: listener address validation failed '*string*'

Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

OCI-00130: invalid listener address '*string*'

Cause: The listener address specification was not valid.

Action: Ensure that all the fields in the listener address such as protocol, port, host, key, and so on are correct. Refer to the Oracle Database parameter documentation. *Params: 1) listener_address: The address of the listener.

OCI-00131: network protocol does not support registration '*string*'

Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

OCI-00132: syntax error or unresolved network name '*string*'

Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

OCI-00133: The value of *string* is too long.

Cause: The value specified for the attribute exceeded the maximum characters allowed.

Action: Use shorter names and keywords or remove unnecessary blank spaces.

OCI-00134: invalid DISPATCHERS specification #*string*

Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

OCI-00135: missing attribute *string*

Cause: The indicated mandatory attribute was not specified.

Action: Specify a value for the attribute which cannot be null and retry the operation.

OCI-00136: invalid LISTENER_NETWORKS specification #*string*

Cause: The syntax for the nth LISTENER_NETWORKS specification was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

OCI-00137: invalid LISTENER_NETWORKS specification for NAME '*string*'

Cause: The syntax for the LISTENER_NETWORKS specification with the specified NAME was invalid.

Action: Refer to Oracle Database documentation for the correct syntax for the LISTENER_NETWORKS initialization parameter. *Params: 1) network_name: The name of the network.

OCI-00138: all addresses specified for attribute *string* are invalid

Cause: All of the specified addresses or aliases for the attribute were invalid.

Action: Specify at least one valid address or alias.

OCI-00139: duplicate attribute *string*

Cause: The indicated attribute was specified more than once.

Action: Specify the attribute only once, and retry the operation.

OCI-00140: LISTENER_NETWORKS specification with NAME=*string* not allowed

Cause: An internal network name has been specified.

Action: Specify a different network name.

OCI-00141: Addresses or aliases specified for parameter *string* are invalid.

Cause: The specified addresses or aliases for the parameter were invalid.

Action: If an alias is specified, check that it corresponds to an entry in the tnsnames.ora file or in the naming method being used for resolution. Specify at least one valid address or alias and retry. *Params: 1) parameter_name: The name of the parameter that has an error.

OCI-00142: FORWARD_LISTENER and LOCAL_LISTENER are on the same network.

Cause: FORWARD_LISTENER was used with LOCAL_LISTENER for the same network.

Action: Do not use FORWARD_LISTENER with LOCAL_LISTENER in the same network.

OCI-00143: The registration of a remote port is not supported without the registration of a local port.

Cause: The remote HTTP/HTTPS port could not be registered without the local HTTP/HTTPS port.

Action: Register the local HTTP/HTTPS port first.

OCI-00144: LREG control event

OCI-00145: non-root container listener modification disallowed due to SERVICE_SCOPE configuration for LISTENER_NETWORKS

Cause: Modification of the listener parameter at the non-root container was disallowed because LISTENER_NETWORKS on the root container had SERVICE_SCOPE configured.

Action: Remove the SERVICE_SCOPE configuration in LISTENER_NETWORKS at the root container to use the per-container listener.

OCI-00146: invalid SERVICE_SCOPE value *string* for LISTENER_NETWORKS

Cause: An invalid value was specified for SERVICE_SCOPE.

Action: The SERVICE_SCOPE value can be set to CDB, PDB or ALL. The default value of SERVICE_SCOPE is ALL.

OCI-00147: connection refused; shared servers are disabled

Cause: A connection request was refused because the shared_servers parameter is set to 0.

Action: Set the shared_servers parameter to a non-zero value, or connect using a different SERVER parameter in the CONNECT_DATA.

OCI-00148: no dispatcher available to handle outbound connection

Cause: None of the dispatchers were able to accept a new connection.

Action: Dispatchers cannot accept new connections if they are at their connection limits or are in the process of starting up or shutting down. Start a new dispatcher, if needed.

OCI-00149: no compatible dispatcher found for the PROTOCOL

Cause: The protocol used in the dispatcher configuration did not support the one used in the connection.

Action: Start a new dispatcher with the protocol used in the connection, if needed.

OCI-00150: duplicate transaction ID

Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

OCI-00151: invalid transaction ID

Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

OCI-00152: current session does not match requested session

Cause: The current session is not the same as the session that was passed into a `upixado()` call.

Action: Check your application.

OCI-00153: internal error in XA library

Cause: The XA library could not access thread-specific pointers.

Action: Contact customer support.

OCI-00154: protocol error in transaction monitor

Cause: The transaction monitor returned `TMJOIN` on an `AX_REG` call but the transaction was locally suspended.

Action: Contact the transaction monitor customer support.

OCI-00155: cannot perform work outside of global transaction

Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a `NULL` `XID` on an `AX_REG` call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set `nolocal=f` in the `xa_open` string or start a global transaction prior to attempting the work.

OCI-00160: global transaction length *string* is illegal (maximum allowed *string*)

Cause: An external global transaction ID with a length either too large or 0 was passed in in a distributed transaction.

Action: Report the problem to your external transaction coordinator vendor.

OCI-00161: transaction branch length *string* is illegal (maximum allowed *string*)

Cause: An external transaction branch ID with a length either too large or 0 was passed in.

Action: Report the problem to your external transaction coordinator vendor.

OCI-00162: external dbid length *string* is greater than maximum (*string*)

Cause: An external database name with too large a length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

OCI-00163: internal database name length *string* is greater than maximum (*string*)

Cause: An internal database name with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

OCI-00164: distributed autonomous transaction disallowed within migratable distributed transaction

Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

Action: Roll back or commit the current distributed transaction first.

OCI-00165: migratable distributed autonomous transaction with remote operation is not allowed

Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

Action: n/a

OCI-00166: remote/local nesting level is too deep

Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

OCI-00200: control file could not be created

Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

OCI-00201: control file version *string* incompatible with ORACLE version *string*

Cause: The compatible parameter was set to a lower version than in the control file or the control file was created by incompatible software.

Action: Restart with a correct definition of the compatible parameter or restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

OCI-00202: control file: '*string*'

Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

OCI-00203: using the wrong control files

Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

OCI-00204: error in reading (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

OCI-00205: error in identifying control file, check alert log for more info

Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

OCI-00206: error in writing (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

OCI-00207: control files are not for the same database

Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

OCI-00208: number of control file names exceeds limit of *string*

Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL_FILES parameter in the initialization parameter file, and restart Oracle. Delete unused files.

OCI-00209: control file blocksize mismatch, check alert log for more info

Cause: The block size in the control file header does not match the size specified in the DB_BLOCK_SIZE parameter.

Action: Look at the alert log for more information.

OCI-00210: cannot open the specified control file

Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

OCI-00211: control file does not match previous control files

Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

OCI-00212: block size *string* below minimum required size of *string* bytes

Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

OCI-00213: cannot reuse control file; old file size *string*, *string* required

Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

OCI-00214: control file '*string*' version *string* inconsistent with file '*string*' version *string*

Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistent set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

OCI-00215: must be at least one control file

Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

OCI-00216: control file could not be resized for migration from 8.0.2

Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

OCI-00217: control file could not be resized for new record types

Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

OCI-00218: block size *string* of control file '*string*' does not match DB_BLOCK_SIZE (*string*)

Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB_BLOCK_SIZE. This might be due to an incorrect setting of DB_BLOCK_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB_BLOCK_SIZE to match control file headers block size value.

OCI-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)

Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

OCI-00220: control file not mounted by first instance, check alert log for more info

Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

OCI-00221: error on write to control file

Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

OCI-00222: operation would reuse name of a currently mounted control file

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

OCI-00223: convert file is invalid or incorrect version

Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE_HOME environment variable is properly set.

OCI-00224: control file resize attempted with illegal record type (*string*)

Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD_TYPE parameter.

Action: Use a value for the RECORD_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

OCI-00225: expected size *string* of control file differs from actual size *string*

Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

OCI-00226: operation disallowed while alternate control file open

Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling cfileUseCurrent.

OCI-00227: corrupt block detected in control file: (block *string*, # blocks *string*)

Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the CREATE CONTROLFILE or RECOVER DATABASE USING BACKUP CONTROLFILE command.

OCI-00228: length of alternate control file name exceeds maximum of *string*

Cause: The specified filename, which was supplied as a parameter to cfileSetSnapshotName or cfileUseCopy, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

OCI-00229: operation disallowed: already hold snapshot control file enqueue

Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling `cfileUseCurrent` to release the snapshot control file enqueue.

OCI-00230: operation disallowed: snapshot control file enqueue unavailable

Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

OCI-00231: snapshot control file has not been named

Cause: During an invocation of `cfileMakeAndUseSnapshot` or `cfileUseSnapshot` it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling `cfileSetSnapshotName`.

OCI-00232: snapshot control file is nonexistent, corrupt, or unreadable

Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of `cfileUseSnapshot`.

Action: Call `cfileMakeAndUseSnapshot` again (or for the first time).

OCI-00233: copy control file is corrupt or unreadable

Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of `cfileUseCopy`.

Action: Before retrying `cfileUseCopy`, use the `ALTER DATABASE BACKUP CONTROLFILE` command and specify the same filename that was specified for `cfileUseCopy`.

OCI-00234: error in identifying or opening snapshot or copy control file

Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of `cfileUseSnapshot`, `cfileMakeAndUseSnapshot`, or `cfileUseCopy`.

Action: Re-create the snapshot or copy control file using `cfileMakeAndUseSnapshot` or `ALTER DATABASE BACKUP CONTROLFILE`, respectively.

OCI-00235: control file read without a lock inconsistent due to concurrent update

Cause: Concurrent update activity on a control file caused a process to read inconsistent information from the control file without a lock.

Action: Retry the operation.

OCI-00236: snapshot operation disallowed: mounted control file is a backup

Cause: Attempting to invoke `cfileSetSnapshotName`, `cfileMakeAndUseSnapshot`, or `cfileUseSnapshot` when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

OCI-00237: snapshot operation disallowed: control file newly created

Cause: An attempt to invoke `cfileMakeAndUseSnapshot` with a currently mounted control file that was newly created with `CREATE CONTROLFILE` was made.

Action: Mount a current control file and retry the operation.

OCI-00238: operation would reuse a filename that is part of the database

Cause: The filename supplied as a parameter to the `ALTER DATABASE BACKUP CONTROLFILE` command or to `cfileSetSnapshotName` matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

OCI-00239: timeout waiting for control file enqueue: held by '*string*' for more than *string* seconds

Cause: The specified process waited the maximum allowed time for the control file enqueue.

Action: Restart the blocking instance indicated in the incident trace file or reboot the blocking node.

OCI-00240: control file enqueue held for more than *string* seconds

Cause: The current process did not release the control file enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

OCI-00241: operation disallowed: control file is not yet checked against data dictionary

Cause: Either the control file was recently created by using `CREATE CONTROLFILE`, an incomplete recovery was done, or some previous operations require the control file to be re-checked against the data dictionary.

Action: Shut down and restart the database or the pluggable database so that the check is performed, and then retry the operation.

OCI-00242: maximum allowed filename records used up in control file

Cause: Failed to create a new filename record entry in the control file because the maximum allowed filename records have been allocated and are in use.

Action: Free up controlfile filename section entries by dropping unwanted tablespaces/datafiles/redfiles.

OCI-00243: failed to expand control file filename section by *string* records

Cause: Failed to expand control file filename section. See alert log for more details.

Action: Retry the operation after increasing disk space for controlfile expansion.

OCI-00244: concurrent control file backup operation in progress

Cause: Failed to create a control file backup because concurrent control file backup operation was in progress.

Action: Retry backup creation later.

OCI-00245: control file backup failed; in Oracle RAC, target might not be on shared storage

Cause: Failed to create a control file backup because some process signaled an error during backup creation. This is likely caused by the backup target (i.e., RMAN snapshot controlfile) being on a local file system so it could not be accessed by other instances. It can also be caused by other I/O errors to the backup target. Any process of any instance that starts a read/write control file transaction must have access to the backup control file during backup creation.

Action: Check whether RMAN snapshot controlfile is on shared storage. Also, check alert files of all instances for further information.

OCI-00246: control file backup failed; error accessing backup target

Cause: An attempt to create a control file backup failed because some process signaled an I/O error when accessing the backup target.

Action: Check alert and trace files for further information.

OCI-00250: archiver not started

Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

OCI-00251: LOG_ARCHIVE_DUPLEX_DEST cannot be the same destination as string *string*

Cause: The destination specified by the LOG_ARCHIVE_DUPLEX_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG_ARCHIVE_DUPLEX_DEST, or specify a different destination with the ALTER SYSTEM command.

OCI-00252: log *string* of thread *string* is empty, cannot archive

Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

OCI-00253: The character limit of *string* is exceeded by archive destination *string* *string*.

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Modify the ALTER SYSTEM ARCHIVE LOG START TO command with a string shorter than the specified limit.

OCI-00254: error in archive control string '*string*'

Cause: The specified archive log location was invalid in the archive command or the LOG_ARCHIVE_DEST initialization parameter.

Action: Ensure that the used archive string refers to a valid online device.

OCI-00255: error archiving log *string* of thread *string*, sequence # *string*

Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

OCI-00256: cannot translate ALTER SYSTEM ARCHIVE LOG START TO destination *string string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the message stack for more detailed information. Retry the ALTER SYSTEM command using a different destination.

OCI-00257: Archiver error. Connect AS SYSDBA only until resolved.

Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is that the destination device is out of space to store the redo log file. Another possible cause is that a destination marked as MANDATORY has failed.

Action: Check the alert log and trace files for detailed error information.

OCI-00258: manual archiving in NOARCHIVELOG mode must identify log

Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

OCI-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive

Cause: An attempt was made to archive the current log of an open thread. This was not allowed because the redo log file might be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, then open the database so that instance recovery can recover the thread.

OCI-00260: cannot find online log sequence *string* for thread *string*

Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another sequence number, it might have been dropped, the sequence number might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

OCI-00261: log *string* of thread *string* is being archived or modified

Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

OCI-00262: current log *string* of closed thread *string* cannot switch log

Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread. Also, it was not possible to switch logs because another log was current. All other logs for the thread must be either archived, or cleared, and cannot be reused.

Action: Either archive another log in the same thread first, or clear the log. For more information on why the switch cannot be completed, see attached errors.

OCI-00263: there are no logs that need archiving for thread *string*

Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

OCI-00264: no recovery required

Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

OCI-00265: cannot set ARCHIVELOG mode because instance recovery is required

Cause: The database either crashed or was shutdown with the ABORT option. Media recovery could not be enabled because the online logs may not be sufficient to recover the current data files.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

OCI-00266: name of archived log file needed

Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

OCI-00267: name of archived log file not needed

Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

OCI-00268: specified log file does not exist '*string*'

Cause: The specified redo log file did not exist.

Action: Check the spelling and capitalization of the file name and retry the command.

OCI-00269: specified log file is part of thread *string* and not *string*

Cause: The given redo log file is not part of the given thread.

Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

OCI-00270: error creating archive log *string*

Cause: An error was encountered while creating or opening the destination file for archiving.

Action: Check if the archive destination is valid and ensure that there is sufficient space on the destination device.

OCI-00271: there are no logs that need archiving

Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

Action: No action required.

OCI-00272: error writing archive log *string*

Cause: An I/O error occurred while archiving a redo log file.

Action: Check whether the output device is still available and correct any device errors that may have occurred. Also, ensure that sufficient space for archiving is available on the output device.

OCI-00273: media recovery of direct load data that was not logged

Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

OCI-00274: illegal recovery option *string*

Cause: An illegal option was specified for a recovery command.

Action: Correct the syntax and retry the command.

OCI-00275: media recovery has already been started

Cause: An attempt was made to start a second media recovery operation in the same session.

Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

OCI-00276: CHANGE keyword specified but no change number given

Cause: The CHANGE keyword was specified on the command line, but no change number was given.

Action: Retry the command using a valid change number after the CHANGE keyword.

OCI-00277: illegal option to the UNTIL recovery flag *string*

Cause: Only CANCEL, CHANGE, CONSISTENT and TIME can be used with the UNTIL keyword.

Action: Correct the syntax.

OCI-00278: log file '*string*' no longer needed for this recovery

Cause: The specified archived redo log file was not needed for the current recovery.

Action: No action required. The archived redo log file can be removed from the current location to conserve disk space. However, the archived redo log file may be required for another recovery session in the future.

OCI-00279: change *string* generated at *string* needed for thread *string*

Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

OCI-00280: change *string* for thread *string* is in sequence #*string*

Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

OCI-00281: media recovery may not be performed using dispatcher

Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

OCI-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER

Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

OCI-00283: recovery session canceled due to errors

Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

OCI-00284: recovery session still in progress

Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

OCI-00285: TIME not given as a string constant

Cause: TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

OCI-00286: no members available, or no member contains valid data

Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

OCI-00287: specified change number *string* not found in thread *string*

Cause: The given change number was not listed in any of the online redo logs for the given thread.

Action: Check the statement to ensure that a valid change number is given. You can try using the NEXT option if this error occurs during a request to archive logs. For other requests, retry the request.

OCI-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE

Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

OCI-00289: suggestion : *string*

Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT. This message assumes that LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

OCI-00290: operating system archival error occurred. See error below

Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

OCI-00291: numeric value required for PARALLEL option

Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

OCI-00292: parallel recovery feature not installed

Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY_PARALLELISM parameter in the initialization file.

OCI-00293: control file out of sync with redo log

Cause: The redo log file and control file are out of sync because a non-current control file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

OCI-00294: invalid archivelog format specifier '*string*'

Cause: An invalid format specifier was found in the LOG_ARCHIVE_FORMAT initialization parameter. The only characters permitted following the % symbol are %, a, A, d, D, r, R, s, S, t, and T.

Action: Correct the format specifier and re-start the instance.

OCI-00295: data or temporary file number *string* is invalid; must be between 1 and *string*

Cause: An invalid data or temporary file number was specified.

Action: Specify a valid data or temporary file number and retry the operation.

OCI-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST

Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB_FILES initialization parameter. This error occurs when doing recovery with Recovery Manager, and the instance has been started with a DB_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user's RECOVER command.

Action: Re-start the instance with a higher value for DB_FILES.

OCI-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START

Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

OCI-00298: Missing or invalid attribute value

Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

OCI-00299: must use file-level media recovery on data file *string*

Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

OCI-00300: illegal redo log block size *string* specified - exceeds limit of *string*

Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

OCI-00301: error in adding log file '*string*' - file cannot be created

Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

OCI-00302: limit of *string* logs exceeded

Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

OCI-00303: cannot process Parallel Redo

Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

OCI-00304: requested INSTANCE_NUMBER is busy

Cause: An instance tried to start by using a value of the initialization parameter INSTANCE_NUMBER that is already in use.

Action: Either a) specify another INSTANCE_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

OCI-00305: log *string* of thread *string* inconsistent; belongs to another database

Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

OCI-00306: limit of *string* instances in this database

Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

OCI-00307: requested INSTANCE_NUMBER out of range, maximum is *string*

Cause: The initialization parameter INSTANCE_NUMBER specified a number that was out of range.

Action: Change INSTANCE_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

OCI-00308: cannot open archived log '*string*'

Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

OCI-00309: log belongs to wrong database

Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

OCI-00310: archived log contains sequence *string*; sequence *string* required

Cause: The archived log was out of sequence, probably because it was corrupt or the wrong redo log file name was specified during recovery.

Action: Specify the correct redo log file; then retry the operation.

OCI-00311: cannot read header from archived log

Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

OCI-00312: online log *string* thread *string*: '*string*'

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

OCI-00313: open failed for members of log group *string* of thread *string*

Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

OCI-00314: log *string* of thread *string*, expected sequence# *string* doesn't match *string*

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

OCI-00315: log *string* of thread *string*, wrong thread # *string* in header

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

OCI-00316: log *string* of thread *string*, type *string* in header is not log file

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

OCI-00317: file type *string* in header is not log file

Cause: This is not an archived log file.

Action: Find the correct file and try again.

OCI-00318: log *string* of thread *string*, expected file size *string* doesn't match *string*

Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

OCI-00319: log *string* of thread *string* has incorrect log reset status

Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

OCI-00320: cannot read file header from log *string* of thread *string*

Cause: The file is not available.

Action: Restore the log file.

OCI-00321: log *string* of thread *string*, cannot update log file header

Cause: Cannot write to the log file.

Action: Restore the access to the file.

OCI-00322: log *string* of thread *string* is not current copy

Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

OCI-00323: Current log of thread *string* not useable and all others need archiving

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

OCI-00324: log file '*string*' translated name '*string*' too long, *string* characters exceeds *string* limit

Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

OCI-00325: archived log for thread *string*, wrong thread # *string* in header

Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

OCI-00326: Log begins at change *string*. Earlier change *string* is needed.

Cause: The log supplied for recovery could not be used because it was generated after the log that was needed.

Action: Find the correct archived log. Use the earlier System Change Number (SCN) value from the message to look up the log in the V\$ARCHIVED_LOG dynamic view or other log repository.

OCI-00327: log *string* of thread *string*, physical size *string* less than needed *string*

Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

OCI-00328: Archived log ends at change *string*. Later change *string* is needed.

Cause: The log supplied for recovery could not be used because it was generated before the log that was needed.

Action: Find the correct archived log. Use the later System Change Number (SCN) value from the message to look up the log in the V\$ARCHIVED_LOG dynamic view or other log repository.

OCI-00329: archived log begins at change *string*, need change *string*

Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

OCI-00330: archived log ends at change *string*, need change *string*

Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

OCI-00331: log version *string* incompatible with ORACLE version *string*

Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

OCI-00332: archived log is too small - may be incompletely archived

Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

OCI-00333: redo log read error block *string* count *string*

Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

OCI-00334: archived log: '*string*'

Cause: Reporting filename for details of another error

Action: See associated error messages

OCI-00335: online log *string*: No log with this number, log does not exist

Cause: Reporting filename for details of another error

Action: See associated error messages

OCI-00336: log file size *string* blocks is less than minimum *string* blocks

Cause: The log file size as specified in create database is too small.

Action: Increase the log file size.

OCI-00337: log file '*string*' does not exist and no size specified

Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

Action: Specify a size for the log file.

OCI-00338: log *string* of thread *string* is more recent than control file

Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

OCI-00339: archived log does not contain any redo

Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

Action: Restore the correct log file.

OCI-00340: IO error processing online log *string* of thread *string*

Cause: An IO error occurred on the named online log.

Action: Restore accessibility to file, or restore file from backup.

OCI-00341: log *string* of thread *string*, wrong log # *string* in header

Cause: The internal information in an online log file does not match the control file.

Action: Restore correct file or reset logs.

OCI-00342: archived log does not have expected resetlogs SCN *string*

Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

Action: Supply the correct log file.

OCI-00344: unable to re-create online log '*string*'

Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

OCI-00345: redo log write error block *string* count *string*

Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

OCI-00346: log member marked as STALE and closed

Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

OCI-00347: log *string* of thread *string*, expected block size *string* doesn't match *string*

Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

OCI-00348: single-process redo failure. Must abort instance

Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

OCI-00349: failure obtaining block size for 'string'

Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

OCI-00350: log *string* of instance *string* (thread *string*) needs to be archived

Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

OCI-00351: recover-to time invalid

Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

OCI-00352: all logs for thread *string* need to be archived - cannot enable

Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

OCI-00353: log corruption near block *string* change *string* time *string*

Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

OCI-00354: corrupt redo log block header

Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

OCI-00355: change numbers out of order

Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

OCI-00356: inconsistent lengths in change description

Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

OCI-00357: too many members specified for log file, the maximum is *string*

Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

OCI-00358: Too many file members specified, the maximum is *string*

Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

OCI-00359: logfile group *string* does not exist

Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

OCI-00360: not a logfile member: *string*

Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

OCI-00361: cannot remove last log member *string* for group *string*

Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

OCI-00362: member is required to form a valid logfile in group *string*

Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

OCI-00363: log is not the archived version

Cause: The log given to recovery is a backup of the online version from the time it was the current log. The archived version of the log would not be marked as end of thread. This error can also be caused by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

OCI-00364: cannot write header to new log member

Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

OCI-00365: the specified log is not the correct next log

Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

OCI-00366: log *string* of thread *string*, checksum error in the file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

OCI-00367: checksum error in log file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

OCI-00368: checksum error in redo log block

Cause: The redo block indicated by the accompanying error, is not valid. It has a checksum that does not match the block contents.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database. Restore correct file or reset logs.

OCI-00369: Current log of thread *string* not useable and other log being cleared

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

OCI-00370: potential deadlock during kcbchange operation

Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

OCI-00371: not enough shared pool memory, should be at least *string* bytes

Cause: The SHARED_POOL_SIZE initialization parameter was too small.

Action: Increase the parameter value.

OCI-00372: file *string* cannot be modified at this time

Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

OCI-00373: online log version *string* incompatible with ORACLE version *string*

Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

OCI-00374: parameter `db_block_size` = *string* invalid; must be power of 2 in the range [*string*..*string*]

Cause: invalid value for `db_block_size` parameter

Action: adjust parameter and restart

OCI-00376: file *string* cannot be read at this time

Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

OCI-00377: Frequent backups of file *string* causing write operation to stall

Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

OCI-00378: buffer pools cannot be created as specified

Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

OCI-00379: no free buffers available in buffer pool *string* for block size *stringK*

Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

OCI-00380: cannot specify `db_stringk_cache_size` since *stringK* is the standard block size

Cause: User specified the parameter `db_nk_cache_size` (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using `db_cache_size` (DEFAULT pool) (and `db_recycle_cache_size`, `db_keep_cache_size` if additional buffer pools are required). Do NOT use the corresponding `db_nk_cache_size` parameter for the standard block size.

OCI-00381: cannot use both new and old parameters for buffer cache size specification

Cause: User specified one or more of { `db_cache_size` , `db_recycle_cache_size` , `db_keep_cache_size` , `db_nk_cache_size` (where n is one of 2,4,8,16,32) , `db_cache_advice` } AND one or more of { `db_block_buffers` , `buffer_pool_keep` , `buffer_pool_recycle` }. This is illegal.

Action: Use EITHER the old (pre-Oracle_8.2) parameters OR the new ones. Don't specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

OCI-00382: *string* not a valid block size, valid range [*string*..*string*]

Cause: User specified a value for `db_nk_cache_size` where `n` is one of {2, 4, 8, 16, 32}, but `nk` is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

OCI-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero

Cause: User attempted to reduce `db_cache_size` to zero, or attempted to reduce `db_nK_cache_size` to zero while there were still online tablespaces with blocksize `nK`. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set `db_cache_size` to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

OCI-00384: Insufficient memory to grow cache

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

OCI-00388: dependent redo for buffers is lost

Cause: The instance contained buffers that had non-durable changes and depended on redo in another thread that was lost because of that thread crash. No data are lost because changes to such buffers cannot be committed while they are non-durable.

Action: Restart the instance.

OCI-00390: log *string* of thread *string* is being cleared, cannot become current log

Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

OCI-00391: All threads must switch to new log format at the same time

Cause: An attempt to switch the current log of a single thread is not allowed because the compatibility requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

OCI-00392: log *string* of thread *string* is being cleared, operation not allowed

Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

OCI-00393: log *string* of thread *string* is needed for recovery of offline datafiles

Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptable, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

OCI-00394: online log reused while attempting to archive it

Cause: It has been detected that an online log that was being archived was reused.

Action: No action is required because the log file cannot be archived since it has been overwritten.

OCI-00395: online logs for the clone database must be renamed

Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log_file_name_convert initialization parameter

OCI-00396: error *string* required fallback to single-pass recovery

Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

OCI-00397: instance recovery process terminated with error

Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

OCI-00398: abort thread recovery due to reconfiguration

Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

OCI-00399: corrupt change description in redo log

Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

OCI-00400: invalid release value *string* for parameter *string*

Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

OCI-00401: The value for parameter *string* is not supported in this release.

Cause: The value specified was not supported in this release.

Action: Enter an appropriate value for the parameter, or do not specify a value and use the default value.

OCI-00402: database changes by release *string* cannot be used by release *string*

Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

OCI-00403: *string* (*string*) is not the same as other instances (*string*)

Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

OCI-00404: Convert file not found: '*string*'

Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessible.

OCI-00405: compatibility type "*string*"

Cause: Reporting a type associated with another error.

Action: See accompanying error

OCI-00406: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

OCI-00407: rolling upgrade from release *string.string* to *string.string* is not allowed

Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

OCI-00408: parameter *string* is set to TRUE

Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

OCI-00409: COMPATIBLE needs to be *string* or higher to use AUTO SEGMENT SPACE MANAGEMENT

Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

OCI-00421: failure in creating the required number of sessions for *string* processes

Cause: The required number of sessions for the PROCESSES parameter was greater than the maximum supported value.

Action: Decrease the required number of processes and start the instance.

OCI-00436: ORACLE is not licensed. Contact Oracle Corp. for assistance

Cause: The installed Oracle software was not licensed to run on this CPU. This occurred if the Oracle software was installed incorrectly.

Action: Check if the Oracle software is installed correctly. Then contact Oracle Support Services.

OCI-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance

Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

OCI-00438: *string* Option not installed

Cause: The specified option is not installed.

Action: Purchase and install the option.

OCI-00439: feature not enabled: *string*

Cause: The specified feature was not enabled.

Action: Do not attempt to use this feature.

OCI-00441: Oracle Free Edition SID violation. Expected:*string* vs Actual:*string*

Cause: An attempt was made to start Oracle Database FREE Edition instance with ORACLE_SID other than 'free'.

Action: Oracle Database Free Edition must have ORACLE_SID set to 'free'.

OCI-00442: Oracle Database Free Edition (FREE) single instance violation error

Cause: An attempt was made to start more than one Oracle Database Free Edition (FREE) instance.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) if you want to run more than one instance.

OCI-00443: background process "*string*" did not start

Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

OCI-00444: background process "*string*" failed while starting

Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

OCI-00445: background process "*string*" did not start after *string* seconds

Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

OCI-00446: background process started when not expected

Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

OCI-00447: An irrecoverable error occurred in a background process.

Cause: One of the background processes stopped unexpectedly.

Action: Restart the instance to restart the background processes. If the issue persists, check the applicable log files for a cause. For assistance, contact Oracle Support Services.

OCI-00448: normal completion of background process

Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

OCI-00449: background process '*string*' unexpectedly terminated with error *string*

Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

OCI-00450: background process '*string*' did not start

Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

OCI-00451: foreground process died unexpectedly

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

OCI-00452: foreground process unexpectedly terminated with error *string*

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

OCI-00453: background process '*string*' is dead

Cause: The background process that was being messaged was dead or its incarnation was invalid.

Action: Restart the background process.

OCI-00454: The background process '*string*' is running

Cause: An attempt to spawn a background process that was already running failed.

Action: None

OCI-00455: timeout waiting for background process '*string*' cleanup

Cause: The state of the background process was not cleaned up.

Action: None

OCI-00457: process pool not found

Cause: The specified POOL_NAME was not valid.

Action: Specify a valid POOL_NAME and retry the operation.

OCI-00459: pre-spawned process pool not started

Cause: The pre-spawned process pool was created but not started.

Action: Start the pre-spawned process pool by using the DBMS_PROCESS.START_POOL procedure, and retry the operation.

OCI-00460: process pool invalid configuration value(s)

Cause: Invalid configuration values were specified for the process pool.

Action: Verify the configuration values.

OCI-00469: CKPT process terminated with error

Cause: The checkpoint process died

Action: Warm start instance

OCI-00470: LGWR process terminated with error

Cause: The log writer process died

Action: Warm start instance

OCI-00471: DBWR process terminated with error

Cause: The database writer process died

Action: Warm start instance

OCI-00472: PMON process terminated with error

Cause: The process cleanup process died

Action: Warm start instance

OCI-00473: redo transport process terminated with error

Cause: A redo transport process (ARC*, MRP0, NSS*, or TMON) died.

Action: ARC*, NSS*, and TMON processes will be automatically restarted. If the MRP0 process died, restart recovery.

OCI-00474: SMON process terminated with error

Cause: The system cleanup process died

Action: Warm start instance

OCI-00475: TRWR process terminated with error

Cause: The system tracing process died

Action: Warm start instance

OCI-00476: RECO process terminated with error

Cause: The distributed transaction (two-phase commit) recovery process died.

Action: Warm start instance

OCI-00477: SNP* process terminated with error

Cause: A materialized view refresh process died

Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

OCI-00478: SMON process terminated due to error *string*

Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

OCI-00479: RVWR process terminated with error *string*

Cause: The RVWR process died

Action: Warm start instance

OCI-00480: LCK* process terminated with error

Cause: A system lock process died

Action: Warm start instance

OCI-00481: LMON process terminated with error

Cause: The global enqueue service monitor process died

Action: Warm start instance

OCI-00482: LMD* process terminated with error

Cause: A global enqueue service daemon process died

Action: Warm start instance

OCI-00483: During shutdown a process abnormally terminated

Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

OCI-00484: LMS* process terminated with error

Cause: A global cache service process died

Action: Warm start instance

OCI-00485: DIAG process terminated with error *string*

Cause: A global diagnostic process died

Action: Wait for process to restart

OCI-00486: Oracle ASM background process terminated with error

Cause: The Oracle Automatic Storage Management (ASM) background process in the database instance reported an error and stopped.

Action: Restart the Oracle database instance after ensuring that the Oracle ASM instance is running.

OCI-00487: CTWR process terminated with error

Cause: The change tracking process died

Action: Warm start instance.

OCI-00488: Rebalance coordinator process ended with an error.

Cause: The rebalance coordinator process ended with an error.

Action: Restart the instance. If the issue persists, contact Oracle Support Services.

OCI-00489: ARB* process terminated with error

Cause: An Oracle Automatic Storage Management (Oracle ASM) rebalance worker (ARB*) process terminated with an error.

Action: The Rebalance Worker process will automatically restart, no action is required. If the issue persists, please contact Oracle Support Services.

OCI-00490: Process Spawner (PSP) process exited with an error.

Cause: The process responsible for spawning processes in the Oracle instance failed and exited.

Action: The PSP process is required for normal database execution and should not be terminated by users. Check attention and alert log for more information on the cause of the failure. If the process exits due to internal error, contact Oracle Support.

OCI-00491: RMS0 process terminated with error

Cause: The RAC Management Process died

Action: n/a

OCI-00492: GTX* process terminated with error

Cause: A global transaction background process died.

Action: Warm start instance

OCI-00493: Oracle ASM disk group monitor (GMON) process terminated with an error.

Cause: The Oracle ASM disk group monitor (GMON) process terminated with an error.

Action: Restart the Oracle ASM instance. If the issue persists, please contact Oracle Support Services.

OCI-00494: enqueue *string* held for too long (more than *string* seconds) by 'inst *string*, osid *string*'

Cause: The specified process did not release the enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

OCI-00495: GEN0 process terminated with error

Cause: The generic background processing process died.

Action: Warm start the instance.

OCI-00496: LMHB process terminated with error

Cause: A heartbeat monitor process (LMHB) terminated.

Action: LMHB will automatically restart.

OCI-00497: XDMG process terminated with error

Cause: The Cell automation manager process terminated with error.

Action: PMON will restart XDMG process shortly. If XDMG process does not restart, contact Oracle Support Services.

OCI-00498: XDWK process terminated with error

Cause: The Cell automation worker actions process terminated with error.

Action: PMON will restart XDWK process shortly. If XDWK process does not restart, contact Oracle Support Services.

OCI-00499: XDMG repeatedly failed to initialize terminating the instance.

Cause: The Cell automation manager process repeatedly failed to initialize.

Action: Examine the alert log for the reason prior attempts to start XDMG failed. If it is due to user error or bad configuration, fix it and restart the instance. Otherwise, contact Oracle Support Services.

OCI-00500: Listener registration (LREG) process terminated with an error.

Cause: The listener registration (LREG) process terminated. No information could be exchanged anymore between the instance and the listener, and therefore the instance terminated.

Action: Restart the instance. If the problem persists, check the log files for any issues. If needed, please contact Oracle Support Services.

OCI-00501: cleanup main process (CLMN) terminated with error

Cause: The CLMN process terminated with an error."

Action: Restart the instance where the error occurred.

OCI-00502: process manager (PMAN) terminated with error

Cause: PMAN terminated with an error."

Action: Restart the instance where the error occurred.

OCI-00503: A cleanup process (CL) terminated with an error**

Cause: A cleanup process terminated with an error.

Action: Restart the instance where the error occurred.

OCI-00504: system monitor process (SMON) terminated with error

Cause: SMON terminated with an error.

Action: Restart the instance where the error occurred.

OCI-00505: GEN1 process terminated with error

Cause: The generic background processing process 1 died.

Action: Warm start the instance.

OCI-00506: GEN2 process terminated with error

Cause: The generic background processing process 2 terminated.

Action: Warm start the instance.

OCI-00507: The message bridge (BRDG) background process is terminated.

Cause: The message bridge background process was terminated.

Action: The process monitor (PMON) will restart the message bridge (BRDG) background process. No action needed.

OCI-00508: GENS process terminated with error

Cause: The generic short action background process terminated.

Action: Warm start the instance.

OCI-00509: VOSD process terminated with error

Cause: The Virtual Operating System Daemon background process terminated.

Action: Warm start the instance.

OCI-00511: Cluster flash cache background process terminated with error.

Cause: The cluster flash cache process terminated.

Action: Warm start the instance.

OCI-00512: Attempt to terminate an operating system process with multiple threads.

Cause: A termination request was attempted on an operating system process that had multiple threads. But the process was not marked as one that could be terminated as a group.

Action: Retry the operation. If the issue persists, contact Oracle Support Services.

OCI-00566: Cannot request processor group because Non Uniform Memory Architecture (NUMA) is not enabled.

Cause: A specific processor group was requested while the NUMA feature was disabled. Without enabling NUMA, no specific processor groups can be requested.

Action: Start the process without requesting a NUMA processor group, or enable database NUMA support.

OCI-00567: Process creation in the requested processor group *string* exceeds maximum limit *string*.

Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group, or consult your OS-specific manuals on how to change the maximum limit of the underlying feature (like Linux cgroups) that Oracle leverages for the processor group.

OCI-00568: Maximum number of interrupt handlers exceeded

Cause: User specified too many ^c handlers

Action: Remove some old handlers.

OCI-00569: Failed to acquire global enqueue.

Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED_POOL_SIZE, DML_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER_DATABASE_INSTANCES and PARALLEL_MAX_SERVERS initialization parameters.

OCI-00574: osndnt: \$CANCEL failure (break)**OCI-00575: osndnt: \$QIO failure (send out-of-band break)****OCI-00576: in-band break protocol error****OCI-00577: out-of-band break protocol error****OCI-00578: reset protocol error****OCI-00579: osndnt: server received malformed connection request****OCI-00580: protocol versions do not match****OCI-00581: osndnt: cannot allocate context area****OCI-00582: osndnt: cannot deallocate context area****OCI-00583: osndnt: \$TRNLOG failure****OCI-00584: cannot close connection****OCI-00585: host name has incorrect form****OCI-00586: osndnt: LIB\$ASN_WTH_MBX failure****OCI-00587: invalid value specified for REDO_TRANSPORT_USER initialization parameter**

Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded the allowed maximum platform-specific length.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

OCI-00588: message from host was too short**OCI-00589: message from host had incorrect data length****OCI-00590: message from host had incorrect message type****OCI-00591: incorrect number of bytes written****OCI-00592: osndnt: \$QIO failure (mailbox queue)****OCI-00593: osndnt: \$DASSGN failure (network device)****OCI-00594: osndnt: \$DASSGN failure (mailbox)**

OCI-00595: osndnt: \$QIO failure (receive)

OCI-00596: osndnt: \$QIO failure (send)

OCI-00597: osndnt: \$QIO failure (mailbox requeue)

OCI-00598: osndnt: \$QIO failure (mailbox read)

OCI-00600: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic internal error number for Oracle program exceptions. It indicates that a process has encountered a low-level, unexpected condition. The first argument is the internal message number. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00600 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

OCI-00601: cleanup lock conflict

Cause: The process monitor (PMON) database process ran into a lock conflict while trying to recover the processes.

Action: This is an internal issue. No action required.

OCI-00602: internal programming exception: [PC:string] [ADDR:string]

Cause: An address violation was encountered.

Action: Report the issue as a bug.

OCI-00603: ORACLE server session terminated by irrecoverable error

Cause: An Oracle server session was in an unrecoverable state.

Action: Log in to Oracle again so a new server session will be created automatically. Examine the session trace file for more information.

OCI-00604: Error occurred at recursive SQL level string. Check subsequent errors.

Cause: An error occurred while processing a recursive SQL statement as part of the current operation.

Action: Review the entire error stack to determine the root cause and take corrective actions, if possible; otherwise contact Oracle Support. *Params: 1) recursion_level: The level of the recursion.

OCI-00606: Internal error code

Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

OCI-00607: Internal error occurred while making a change to a data block

Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

OCI-00608: testing error [string] [string] [string] [string] [string]

Cause: Internal error reserved for testing.

Action: call Oracle Support

OCI-00609: An Oracle process was unable to attach to incoming connection.

Cause: An Oracle process could not respond to an incoming connection.

Action: Correct the condition described in the next error on the stack, otherwise contact Oracle Support Services.

OCI-00614: quarantine limit has been reached

Cause: A quarantine limit was reached and the instance or the pluggable database (PDB) was terminated.

Action: Restart the instance or the pluggable database. Review quarantine incidents that were created before the limit was reached.

OCI-00625: internal error code within PDB: (string)(string)(string)(string)(string)(string)(string)(string)(string)(string)

Cause: This is a generic PDB-specific internal error number for Oracle program exceptions. It indicates that a process encountered an unexpected condition within the PDB that led to the closing of the PDB. The first argument in the message is the internal message. This argument and the database version number are critical in identifying the root cause and the potential impact. to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00625 error encountered. An Incident is created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should be gathered to determine the root cause: - changes that led to the error - events or unusual circumstances that led to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Consider the history of the errors that occurred before this internal error.

OCI-00700: soft internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string]

Cause: Internal inconsistency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

OCI-00701: object necessary for warmstarting database cannot be altered

Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

OCI-00702: bootstrap version '*string*' inconsistent with version '*string*'

Cause: The reading version of the bootstrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

OCI-00703: maximum number of row cache instance locks exceeded

Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

OCI-00704: bootstrap process failure

Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

OCI-00705: inconsistent state during start up; shut down the instance, then restart it

Cause: A previous attempt to start an instance was terminated.

Action: Shut down the instance completely, then restart it.

OCI-00706: error changing format of file '*string*'

Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.

Action: Make the file read-write or bring the file online and set the BLKO_FMTCHG event.

OCI-00710: new tablespace name is the same as the old tablespace name

Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.

Action: No action required.

OCI-00711: new tablespace name is invalid

Cause: An attempt to rename a tablespace failed because the new name is invalid.

Action: Choose a valid new name and retry the command.

OCI-00712: cannot rename system tablespace

Cause: An attempt to rename the system tablespace failed.

Action: No action required.

OCI-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported

Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.

Action: No action required.

OCI-00721: changes by release *string* cannot be used by release *string*

Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

OCI-00722: Feature "*string*"

Cause: Reporting name of the feature for details of another error.

Action: See associated error message.

OCI-00723: Initialization parameter COMPATIBLE must be explicitly set

Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the initialization parameter must be explicitly set by the user.

Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

OCI-00724: ALTER DATABASE CONVERT command has been de-supported

Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

OCI-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string*

Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

OCI-00726: *string* subcommand not supported, use ALTER SYSTEM ARCHIVE LOG

Cause: The given User Program Interface (UPI) call is no longer supported.

Action: Use the ALTER SYSTEM ARCHIVE LOG statement for this archive log action.

OCI-00727: feature not supported on redo log in version *string*

Cause: This feature was not supported in this version of redo log.

Action: No action required.

OCI-00740: Data file size of *string* blocks exceeds maximum file size.

Cause: The specified data file size exceeded the maximum permissible size.

Action: Reduce the file size and retry the command. *Params: 1) size: Number of blocks in the data file

OCI-00741: logfile size of (*string*) blocks exceeds maximum logfile size

Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

OCI-00742: Log read detects lost write in thread *string* sequence *string* block *string*

Cause: Either a write issued by Oracle was lost by the underlying operating system or storage system or an Oracle internal error occurred.

Action: The trace file shows the lost write location. Dump the problematic log file to see whether it is a real lost write. Contact Oracle Support Services.

OCI-00750: database has been previously mounted and dismounted

Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

OCI-00751: could not obtain resilvering status for file

Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

OCI-00752: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal database operation on the primary database.

Action: Shutdown the primary database and activate the physical standby database to failover. Call Oracle Support Services. See the Data Guard documentation for details. Unless directed by Oracle Support Services, do not attempt to bypass this error by copying blocks or data files from the primary database to the standby database because that would propagate the lost write from the primary to the standby database.

OCI-00753: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

OCI-00754: recovery detected a data block with invalid SCN

Cause: An error caused a data block mismatch with a log record.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

OCI-00756: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

OCI-00758: recovery detected a block with inconsistent flag values set

Cause: An internal error occurred.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

OCI-00759: session suspension timed out during switchover or failover

Cause: The standby database was going through a role transition and the new primary database was not reopened in the configured timeout duration after switchover.

Action: Open the new primary database and try to connect again.

OCI-00760: Nonexistent data file, "*string*" included in the current container.

Cause: Attempted to use ALTER DATABASE to modify lost write protection of a data file failed because the specified file is not known to the database's control file or the current container is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type. Check the DBA_DATA_FILES view for a list of possible files. *Params: 1) file: The name or number of a data file, specified by the user in the ALTER DATABASE command, that is having its lost write protection state changed.

OCI-00762: could not change lost write protection - out of memory

Cause: Memory allocation failed.

Action: Ensure that enough memory including stack memory is available

OCI-00763: could not add lost write tracking to data file

Cause: An error occurred while trying to add lost write tracking; could not lookup the target data file or there was insufficient space in the shadow tablespace.

Action: This may be an internal error if the target data file exists. Also, check to see if the shadow tablespaces have sufficient space.

OCI-00764: The current transaction started on standby database and attempted to make an update after role transition.

Cause: The session, which started a transaction on the standby database and stayed alive after a role transition, attempted to do an update.

Action: The client should catch the exception and retry the transaction.

OCI-00800: soft external error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: A system misconfiguration or setting resulted in a failure. This failure did not crash the instance, but it could result in unexpected behavior during query execution.

Action: Check the database trace files and correct the system configuration or the settings. If the issue persists, contact Oracle Support Services.

OCI-00816: Error message translation failed.

Cause: An incorrect internal condition prevented error message translation.

Action: Contact Oracle Support Services for further assistance.

OCI-00820: Specified value of sga_max_size is too small, needs to be at least *stringM*

Cause: The specified value of sga_max_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_max_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

OCI-00821: Specified value of sga_target stringM is too small, needs to be at least stringM

Cause: The specified value of sga_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

OCI-00822: MMAN process terminated with error

Cause: The Memory Management process died.

Action: Warm start instance

OCI-00823: Specified value of sga_target greater than sga_max_size

Cause: The specified value of sga_target is greater than sga_max_size.

Action: Increase sga_max_size to match up with sga_target or decrease sga_target to match up with sga_maxsize.

OCI-00824: cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings

Cause: Could not set SGA_TARGET or MEMORY_TARGET due to current parameter settings.

Action: Check the other error messages for additional information.

OCI-00825: cannot set DB_BLOCK_BUFFERS if SGA_TARGET or MEMORY_TARGET is set

Cause: SGA_TARGET or MEMORY_TARGET set with DB_BLOCK_BUFFERS set.

Action: Do not set SGA_TARGET, MEMORY_TARGET or use new cache parameters, and do not use DB_BLOCK_BUFFERS which is an old cache parameter.

OCI-00826: cannot set SGA_TARGET or MEMORY_TARGET for an ASM instance

Cause: SGA_TARGET or MEMORY_TARGET set for an ASM instance.

Action: Do not set SGA_TARGET or MEMORY_TARGET.

OCI-00827: could not shrink sga_target to specified value

Cause: Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.

Action: Do not set sga_target to a value below the current value without first shrinking the individual SGA components.

OCI-00828: specified value of shared_pool_reserved_size inconsistent with internal settings

Cause: Unable to set shared_pool_reserved_size to specified value if SGA_TARGET set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.

Action: If possible, do not set shared_pool_reserved_size without setting shared_pool_size if SGA_TARGET set. Examine the alert log for information about current internal size of shared pool, and valid range of values for shared_pool_reserved_size.

OCI-00830: cannot set statistics_level to BASIC with auto-tune SGA enabled

Cause: The user attempted to set statistics_level to BASIC with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with statistics_level set to BASIC.

Action: Disable auto-tune SGA and try setting the statistics_level to BASIC again.

OCI-00832: no streams pool created and cannot automatically create one

Cause: A database feature which needs STREAMS SGA was being used, however, the streams_pool_size parameter was not defined and the value of db_cache_size was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.

Action: Please set the parameter streams_pool_size or set SGA_TARGET.

OCI-00837: Specified value of MEMORY_TARGET greater than MEMORY_MAX_TARGET

Cause: The specified value of MEMORY_TARGET was greater than MEMORY_MAX_TARGET.

Action: Set MEMORY_TARGET less than or equal to MEMORY_MAX_TARGET.

OCI-00838: Specified value of MEMORY_TARGET is too small, needs to be at least stringM

Cause: The specified value of MEMORY_TARGET was less than the sum of the specified values for SGA_TARGET and PGA_AGGREGATE_TARGET.

Action: Set MEMORY_TARGET to at least the recommended value.

OCI-00839: SGA_TARGET cannot be modified to the specified value

Cause: The specified value of SGA_TARGET was not compatible with current settings of PGA_AGGREGATE_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set SGA_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and PGA_AGGREGATE_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

OCI-00840: PGA_AGGREGATE_TARGET cannot be modified to the specified value

Cause: The specified value of PGA_AGGREGATE_TARGET was not compatible with current settings of SGA_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set PGA_AGGREGATE_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and SGA_TARGET.

OCI-00841: MEMORY_TARGET not supported on this system

Cause: MEMORY_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

OCI-00842: DB_BLOCK_BUFFERS cannot be set with SGA_TARGET or MEMORY_TARGET

Cause: DB_BLOCK_BUFFERS was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Remove the incompatible parameter setting.

OCI-00843: Parameter not taking MEMORY_MAX_TARGET into account

Cause: The parameter was larger than MEMORY_MAX_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_MAX_TARGET.

OCI-00844: Parameter not taking MEMORY_TARGET into account

Cause: The parameter was larger than MEMORY_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_TARGET.

OCI-00845: The Automatic Memory Management (AMM) feature encountered a problem allocating memory.

Cause: AMM is defined in the initialization file using the MEMORY_TARGET parameter. While trying to enable AMM, the database encountered an error. Either the operating system does not support AMM or it is not configured correctly.

Action: Refer to Oracle Database documentation to verify if the operating system supports AMM. If not, remove AMM related parameters from the initialization file. On Linux, check if /dev/shm is mounted and whether it can accommodate the memory requirements defined by MEMORY_TARGET. The database alert log contains additional information about the use of /dev/shm on the Linux platform as well as more actionable steps.

OCI-00846: could not shrink MEMORY_TARGET to specified value

Cause: Attempted to shrink MEMORY_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY_TARGET to a value below the current value without first shrinking the individual memory components.

OCI-00847: MEMORY_TARGET/MEMORY_MAX_TARGET and LOCK_SGA cannot be set together

Cause: MEMORY_TARGET/MEMORY_MAX_TARGET was set to a non-zero value and LOCK_SGA was also set

Action: Do not set MEMORY_TARGET or MEMORY_MAX_TARGET if LOCK_SGA is set to TRUE.

OCI-00848: STATISTICS_LEVEL cannot be set to BASIC with SGA_TARGET or MEMORY_TARGET

Cause: STATISTICS_LEVEL of BASIC was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Fix the incompatible parameter setting. Set STATISTICS_LEVEL to TYPICAL or ALL to use SGA_TARGET or MEMORY_TARGET.

OCI-00849: SGA_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_TARGET to be less than MEMORY_MAX_TARGET.

OCI-00850: PGA_AGGREGATE_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: PGA_AGGREGATE_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set PGA_AGGREGATE_TARGET to be less than MEMORY_MAX_TARGET.

OCI-00851: SGA_MAX_SIZE string cannot be set to more than MEMORY_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_TARGET.

OCI-00852: Rolling migration monitor (RMON) process terminated.

Cause: The ASM rolling migration monitor process terminated.

Action: Warm start the instance.

OCI-00853: SGA_MAX_SIZE string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_MAX_TARGET.

OCI-00854: Oracle ASM IO Server (IOS) instance fence monitor process (FENC) terminated.

Cause: The Oracle Automatic Storage Management (Oracle ASM) IO Server instance FENC process was terminated.

Action: Restart the instance to restart the FENC process. If the issue persists, check the logfiles for more information and contact Oracle Support Services.

OCI-00855: PGA_AGGREGATE_TARGET cannot be set because of insufficient physical memory.

Cause: PGA_AGGREGATE_TARGET value was too high for the current system global area (SGA) size and amount of physical memory available.

Action: Reduce the SGA size or increase the physical memory size.

OCI-00856: PGA_AGGREGATE_TARGET cannot be set higher 50 percent of PGA_AGGREGATE_LIMIT.

Cause: PGA_AGGREGATE_TARGET value was greater than 50 percent the current value of PGA_AGGREGATE_LIMIT.

Action: Increase PGA_AGGREGATE_LIMIT or use a lower PGA_AGGREGATE_TARGET.

OCI-00857: SGA_TARGET increase not a multiple of SGA file size in hugetlbfs (per-granule) setup

Cause: SGA_TARGET increase value was not a multiple of the file size used for creating SGA.

Action: Review alert log for more information and set the proper value for SGA_TARGET increase.

OCI-00858: Processes remain attached to system global area (SGA) after shutdown

Cause: One or more processes remain attached to SGA after shutdown.

Action: Review alert log for more information and take appropriate action.

OCI-00865: cannot perform the current operation on the same session

Cause: The current operation could not be performed on the same session.

Action: None

OCI-00866: invalid or non-existent SQL ID

Cause: The SQL ID specified was invalid or did not exist.

Action: Retry with a valid SQL ID.

OCI-00867: invalid instance ID

Cause: The instance ID specified was invalid.

Action: Retry with a valid instance ID.

OCI-00875: failed to *string* the dedicated connection broker

Cause: The dedicated connection broker could not be enabled or disabled.

Action: Check the process trace file for the reason for the failure. Contact Oracle Support Services for additional help.

OCI-00876: invalid CONNECTION_BROKERS specification #*string*

Cause: The syntax of the nth CONNECTION_BROKERS specification was invalid.

Action: See the additional errors that are reported. Refer to Oracle documentation for the correct syntax.

OCI-00877: TYPE=*string* appears in multiple CONNECTION_BROKERS specifications

Cause: Multiple CONNECTION_BROKER specifications contained the same TYPE.

Action: Specify only one specification for each TYPE.

OCI-00878: Cannot connect to database. The server type is not supported.

Cause: A connection request was refused because the chosen connection broker no longer supports the SERVER type specified in the CONNECT_DATA parameter of the connect string.

Action: Retry the connection call so the listener can forward it to a different connection broker.

OCI-00879: Cannot connect to database. The connection broker is exiting.

Cause: When a database instance uses connection brokers, the listener forwards each connection request to one of those brokers. The current connection attempt failed because the selected broker was exiting.

Action: Retry the connection call so the listener can forward it to a different connection broker.

OCI-00900 to OCI-01499

OCI-00900: invalid SQL statement

Cause: The statement was not recognized as a valid SQL statement. This error can occur if the Procedural Option was not installed and a SQL statement was issued that requires this option (for example, a CREATE PROCEDURE statement). You can determine if the Procedural Option was installed by starting SQL*Plus. If the PL/SQL banner was not displayed, then the option was not installed.

Action: Correct the syntax or install the Procedural Option.

OCI-00901: invalid CREATE command

Cause: The CREATE command was not followed by a valid CREATE option.

Action: Correct the syntax.

OCI-00902: invalid datatype

Cause: The datatype entered in the CREATE or ALTER TABLE statement is not valid.

Action: Correct the syntax.

OCI-00903: invalid table name

Cause: A table or cluster name was invalid or does not exist. This message was also issued if an invalid cluster name or no cluster name was specified in an ALTER CLUSTER or DROP CLUSTER statement.

Action: Check spelling. A valid table name or cluster name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

OCI-00904: *string*: invalid identifier

Cause: The identifier or column name entered was invalid.

Action: Ensure the following: - Enter a valid identifier or column name and verify that there are no typos in the identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. - It must not be a reserved word unless it is enclosed in double quotation marks. - If double quotation marks and mixed case were used for a column name when creating the table, then references to that column must use matching case and quotation marks. *Params: 1) identifier: The identifier or column name that was invalid.

OCI-00905: missing keyword

Cause: A required keyword was missing.

Action: Add the required keyword to correct the syntax.

OCI-00906: missing left parenthesis

Cause: A required left parenthesis has been omitted. Certain commands, such as CREATE TABLE, CREATE CLUSTER, and INSERT, require a list of items enclosed in parentheses.

Parentheses also are required around subqueries in WHERE clauses and in UPDATE table SET column = (SELECT...) statements.

Action: Correct the syntax, inserting a left parenthesis where required, and retry the statement.

OCI-00907: missing right parenthesis

Cause: A left parenthesis was entered without a closing right parenthesis, or there was unrecognized information in the parentheses. All parentheses must be entered in pairs.

Action: Correct the syntax and retry the statement.

OCI-00908: Unexpected token *string* after IS or IS NOT, when expecting a predicate, like NULL or TRUE.

Cause: For the IS or IS NOT logical operator, the keywords NULL, TRUE, or FALSE were not found, nor were other predicates like JSON, NAN, or EMPTY. For example, the following statement generates this message: SELECT * FROM EMP WHERE DEPTNO IS NOT;

Action: Use a predicate after an IS or IS NOT logical operator.

OCI-00909: invalid number of arguments

Cause: A function was called with an incorrect number of arguments.

Action: Correct the syntax of the function call with the required number of arguments.

OCI-00910: specified length too long for its datatype

Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

OCI-00911: *string*: invalid character after *string*

Cause: An invalid character has been encountered in the SQL statement.

Action: Remove the invalid character. If it is part of an identifier, enclose the identifier in double quotation marks. *Params: 1) character_value: The invalid character causing the error. 2) token_value: The token after which the invalid character causing the error occurs.

OCI-00912: input parameter too long

Cause: one of your input strings was too long

Action: shorten the input parameter length

OCI-00913: too many values

Cause: The SQL statement requires two sets of values equal in number. This error occurs when the second set contains more items than the first set. For example, the subquery in a WHERE or HAVING clause may return too many columns, or a VALUES or SELECT clause may return more columns than are listed in the INSERT.

Action: Check the number of items in each set and change the SQL statement to make them equal.

OCI-00914: missing ADD keyword

Cause: The keyword ADD does not precede one of the following: - The keyword LOGFILE in an ALTER DATABASE statement - A column element or table constraint in an ALTER TABLE statement - The keyword DATAFILE in an ALTER TABLESPACE statement

Action: Specify the keyword ADD in the ALTER statement.

OCI-00915: network access of dictionary table not currently allowed

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-00917: missing comma

Cause: A required comma has been omitted from a list of columns or values in an INSERT statement or a list of the form ((C,D),(E,F), ...).

Action: Correct the syntax.

OCI-00918: *string*: column ambiguously specified - appears in *string* and *string*

Cause: A column name used in a join was defined in more than one table and was referenced ambiguously. In a join, any column name that occurs in more than one of the tables must be prefixed by its table name or table alias when referenced.

Action: To avoid ambiguity, prefix references to column names that exist in multiple tables with either the table name or a table alias and a period. For example, if tables EMP and DEPT are being joined and both contain the column DEPTNO, then all references to DEPTNO should be prefixed with the table name, as in EMP.DEPTNO or DEPT.DEPTNO.
*Params: 1) column_name: The name of the column that is specified ambiguously. 2) table_name_1: The first table being joined that contains a reference to the ambiguously defined column name. 3) table_name_2: The second table being joined that contains a reference to the ambiguously defined column name.

OCI-00919: invalid function

Cause: An entry was formatted like a function call, but it was not recognizable as an Oracle function.

Action: Correct the syntax.

OCI-00920: invalid relational operator

Cause: A search condition was entered with an invalid or missing relational operator.

Action: Include a valid relational operator such as =, !=, ^=, >, <, >=, <=, ALL, ANY, [NOT] BETWEEN, EXISTS, [NOT] IN, IS [NOT] NULL, or [NOT] LIKE in the condition.

OCI-00921: unexpected end of SQL command

Cause: The SQL command was not complete. Part of a valid command was entered, but at least one major component was omitted.

Action: Correct the syntax.

OCI-00922: missing or invalid option

Cause: An invalid option was specified in defining a column or storage clause. The valid option in specifying a column was NOT NULL to specify that the column cannot contain any NULL values. Only constraints may follow the datatype. Specifying a maximum length on a DATE or LONG datatype also causes this error.

Action: Correct the syntax. Remove the erroneous option or length specification from the column or storage specification.

OCI-00923: FROM keyword not found where expected

Cause: In a SELECT or REVOKE statement, the keyword FROM was either missing, misplaced, or misspelled. The keyword FROM must follow the last selected item in a SELECT statement or the privileges in a REVOKE statement.

Action: Correct the syntax. Insert the keyword FROM where appropriate. The SELECT list itself also may be in error. If quotation marks were used in an alias, check that double quotation marks enclose the alias. Also, check to see if a reserved word was used as an alias.

OCI-00924: missing BY keyword

Cause: The keyword BY was omitted in a GROUP BY, ORDER BY, or CONNECT BY clause. In a GRANT statement, the keyword IDENTIFIED must also be followed by the keyword BY.

Action: Correct the syntax. Insert the keyword BY where required and then retry the statement.

OCI-00925: missing INTO keyword

Cause: An INSERT statement has been entered without the keyword INTO.

Action: Correct the syntax. Insert the keyword INTO where required and then retry the statement.

OCI-00926: missing VALUES keyword

Cause: An INSERT statement has been entered without the keyword VALUES or SELECT. Either a VALUES clause or a SELECT subquery must follow the INSERT INTO clause.

Action: Correct the syntax. Enter either a VALUES clause or a subquery after the INSERT INTO clause.

OCI-00927: missing equal sign

Cause: An equal sign has been omitted in one of the following places: - In the SET clause of an UPDATE statement - Following "!" in a search condition to signify not equal

Action: Correct the syntax. Insert the equal sign where required and retry the statement.

OCI-00928: SELECT keyword missing

Cause: A CREATE VIEW statement was missing a required SELECT clause.

Action: Include a SELECT clause in the CREATE VIEW statement and retry.

OCI-00929: missing period

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-00930: missing asterisk

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-00931: missing identifier

Cause: An identifier or column name was expected but none was provided.

Action: Enter a valid identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. It must not be a reserved word, unless it is enclosed in double quotation marks.

OCI-00932: expression *string* is of data type *string*, which is incompatible with expected data type *string*

Cause: The input data type for this SQL operation was incompatible with the expected data type.

Action: Modify the expression to have a compatible data type for the SQL operation.

*Params: 1) failed_expression: The expression with the incompatible data type. 2) expression_data_type: The data type of the column or expression. 3) expected_data_type: The data type expected by the SQL operation.

OCI-00933: unexpected keyword at or near *string*

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string. *Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long.

OCI-00934: group function is not allowed here

Cause: One of the group functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used in a WHERE or GROUP BY clause.

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

OCI-00935: group function is nested too deeply

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-00936: missing expression

Cause: A required part of a clause or expression has been omitted. For example, a SELECT statement may have been entered without a list of columns or expressions or with an incomplete expression. This message was also issued in cases where a reserved word was misused, as in SELECT TABLE.

Action: Check the statement syntax and specify the missing component.

OCI-00937: not a single-group group function

Cause: A SELECT list cannot include both a group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, and an individual column expression, unless the individual column expression was included in a GROUP BY clause.

Action: Drop either the group function or the individual column expression from the SELECT list or add a GROUP BY clause that includes all individual column expressions listed.

OCI-00938: not enough arguments for function

Cause: The function was referenced with too few arguments.

Action: Check the function syntax and specify the required number of arguments.

OCI-00939: too many arguments for function

Cause: The function was referenced with too many arguments.

Action: Check the function syntax and specify only the required number of arguments.

OCI-00940: invalid ALTER command

Cause: An invalid ALTER option was specified.

Action: Modify the ALTER command to include a valid option and retry the operation.

OCI-00941: missing cluster name

Cause: The cluster name was either missing or invalid.

Action: Specify a valid cluster name. A valid cluster name must start with a letter, be less than or equal to 30 characters, and contain only alphanumeric characters or the special characters \$, _, and #. It may not be a reserved word. The name must be specified immediately following the keywords CREATE CLUSTER.

OCI-00942: table or viewstring does not exist

Cause: The specified table or view did not exist, or a synonym pointed to a table or view that did not exist. To find existing user tables and views, query the ALL_TABLES and ALL_VIEWS data dictionary views. Certain privileges may be required to access the table. If an application returned this message, then the table that the application tried to access did not exist in the database, or the application did not have access to it.

Action: Check each of the following: - The spelling of the table or view name is correct. - The referenced table or view name does exist. - The synonym points to an existing table or view. If the table or view does exist, ensure that the correct access privileges are granted to the database user requiring access to the table. Otherwise, create the table. Also, if you are attempting to access a table or view in another schema, make sure that the correct schema is referenced and that access to the object is granted. *Params: 1) object_name: The table or view name specified as SCHEMA.OBJECT_NAME, if one is provided. Otherwise, it is blank.

OCI-00943: cluster does not exist

Cause: The current user owns no cluster by the specified name.

Action: Specify a valid cluster name following the keyword CLUSTER, then retry the statement.

OCI-00944: insufficient number of clustered columns

Cause: An attempt was made to create a table with fewer cluster columns than were specified in the CREATE CLUSTER statement. The CLUSTER clause of a CREATE TABLE statement must specify all cluster columns that were defined when the cluster was created.

Action: Specify all cluster columns in the CREATE TABLE statement, then retry it.

OCI-00945: specified clustered column does not exist

Cause: A column specified in the cluster clause of a CREATE TABLE statement was not a column in this table.

Action: Re-execute the statement, using the names of columns defined for the table.

OCI-00946: missing TO keyword

Cause: A GRANT statement was specified without the keyword TO, or an invalid form of the GRANT command was entered.

Action: Check the syntax for the GRANT command, insert the keyword TO where required, and retry the statement.

OCI-00947: not enough values

Cause: This error occurs when a SQL statement requires two sets of values equal in number, but the second set contains fewer items than the first set. This can occur in a WHERE or HAVING clause in which a nested SELECT returns too few columns as in: WHERE (A,B) IN (SELECT C FROM ...) Another common cause of this error is an INSERT statement in which the VALUES or SELECT clause does not contain enough values needed for the INSERT, as in INSERT INTO EMP(EMPNO,ENAME) VALUES('JONES')

Action: Check the number of items in each set and change the SQL statement to make them equal.

OCI-00948: ALTER CLUSTER statement no longer supported

Cause: The ALTER CLUSTER statement has been withdrawn.

Action: To add data to a cluster from an existing table, use the following series of SQL statements: CREATE TABLE newtable SELECT * FROM oldtable CLUSTER clustername; DROP oldtable; RENAME TABLE newtable oldtable;

OCI-00949: illegal reference to remote database

Cause: This was an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-00950: invalid DROP option

Cause: A DROP command was not followed by a valid DROP option, such as CLUSTER, DATABASE LINK, INDEX, ROLLBACK SEGMENT, SEQUENCE, SYNONYM, TABLE, TABLESPACE, or VIEW.

Action: Check the command syntax, specify a valid DROP option, then retry the statement.

OCI-00951: cluster not empty

Cause: A DROP CLUSTER statement specified a cluster that was not empty. A cluster may not be dropped if it contains any tables, unless the optional INCLUDING TABLES clause was specified. Tables may also be removed from a cluster by using the DROP TABLE command.

Action: Either specify the INCLUDING TABLES clause in the DROP CLUSTER statement or remove all tables from the cluster with the DROP TABLE command before issuing the DROP CLUSTER command.

OCI-00952: missing GROUP keyword

Cause: Groups were not implemented.

Action: No user action required.

OCI-00953: missing or invalid index name

Cause: An index name of the form [*identifier* .] *identifier* was expected but not present. If OIDINDEX clause, index name must be *identifier*.

Action: Enter an appropriate index name.

OCI-00954: missing IDENTIFIED keyword

Cause: A GRANT CONNECT statement was issued without the keyword IDENTIFIED.

Action: Check the syntax and insert the keyword IDENTIFIED after the last username. The format is GRANT CONNECT TO user-list IDENTIFIED BY password-list;

OCI-00955: name is already used by an existing object

Cause: An attempt was made to create a database object (such as a table, view, cluster, index, or synonym) that already existed. A user's database objects must have distinct names.

Action: Enter a unique name for the database object or modify or drop the existing object so it can be reused.

OCI-00956: missing or invalid auditing option

Cause: The AUDIT or NOAUDIT statement contained an invalid auditing option.

Action: Use a valid option.

OCI-00957: duplicate column name

Cause: A column name was specified twice in a CREATE or INSERT statement. Column names must be unique within a table, view, or cluster.

Action: In a CREATE statement, change one of the column names to a new, unique column name. In an INSERT statement, remove one of the duplicate names.

OCI-00958: missing CHECK keyword

Cause: The keyword CHECK should follow the keyword WITH in the WITH OPTION clause of the CREATE VIEW statement.

Action: Check the statement syntax and insert the keyword CHECK where required. Then retry the statement.

OCI-00959: tablespace '*string*' does not exist

Cause: A statement specified the name of a tablespace that did not exist.

Action: Enter the name of an existing tablespace. For a list of tablespace names, query the data dictionary.

OCI-00960: ambiguous column naming in select list

Cause: A column name in the order-by list matched more than one select list columns.

Action: Remove duplicate column naming in select list.

OCI-00961: bad datetime or interval value**OCI-00962: too many group-by or order-by expressions**

Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

OCI-00963: unsupported interval type

Cause: An unsupported interval type was encountered.

Action: Use a valid interval type.

OCI-00964: table name not in FROM list

Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

OCI-00965: column aliases not allowed for ''**

Cause: The statement is trying to alias the * expression in the select list which is not legal.

Action: Remove the alias.

OCI-00966: missing TABLE keyword

Cause: A LOCK statement was specified and the keyword TABLE was missing, misspelled, or misplaced. A LOCK statement must begin with LOCK TABLE tablename.

Action: Correct the syntax.

OCI-00967: missing WHERE keyword

Cause: The keyword WHERE in a SELECT statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

OCI-00968: missing INDEX keyword

Cause: The keyword INDEX in a CREATE UNIQUE INDEX or VALIDATE INDEX statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

OCI-00969: missing ON keyword

Cause: The keyword ON in a GRANT, REVOKE, or CREATE INDEX statement was missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword ON where required.

OCI-00970: missing WITH keyword

Cause: The keyword START was specified without the keyword WITH. Both keywords were necessary if a START WITH clause is desired in a tree-structured query.

Action: Change the keyword START to the keywords START WITH. Then retry the statement.

OCI-00971: missing SET keyword

Cause: The keyword SET in an UPDATE statement is missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword SET after the name of the table to be updated.

OCI-00972: The identifier *string...string...* exceeds the maximum length of *string* bytes.

Cause: Either an identifier with more than the maximum bytes was specified, or there was a misuse of single or double quotation characters. Note that some character sets may cause a character to require more than a single byte which can cause the limit of bytes to be exceeded while the number of characters remain within the limit.

Action: Specify no more than the maximum bytes for identifiers. Double check the syntax of your quotations. *Params: 1) first_10_chars: The leading 10 characters of the identifier that is too long. 2) expected_last_10_chars: The expected trailing 10 characters of the identifier which is the maximum length allowed. Cannot be longer than up to here. 3) maximum_bytes: The maximum length of bytes allowed.

OCI-00973: invalid row count estimate

OCI-00974: invalid PCTFREE value (percentage)

Cause: The percentage of free space specified in a CREATE INDEX statement was not between 0 and 100. A PCTFREE value of 0 means the entire block was available. The value 100 was not useful because it means that no data may be inserted. The default was 10.

Action: Specify a PCTFREE value between 0 and 100. Then retry the statement.

OCI-00975: date + date not allowed

Cause: An attempt was made to add two date fields together. Dates may be added only to numeric fields, not to other dates.

Action: Use the Oracle function TO_NUMBER to convert one of the date fields to a numeric field before adding it to the other date field.

OCI-00976: Specified pseudocolumn or operator not allowed here.

Cause: LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE was specified at an illegal location.

Action: Remove LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE.

OCI-00978: nested group function without GROUP BY

Cause: A group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used within another group function, as in MAX(COUNT(*)), without a corresponding GROUP BY clause.

Action: Either add a GROUP BY clause or remove the extra level of nesting.

OCI-00979: string: must appear in the GROUP BY clause or be used in an aggregate function

Cause: The specified expression was not part of either the GROUP BY clause, an aggregate function, or a constant but appeared in a part of the query that is processed after the GROUP BY clause, such as the SELECT clause, the ORDER BY clause, or the HAVING clause.

Action: Add the expression to the GROUP BY clause or add an aggregate function to specify which value of the expression to use for each group. Ensure that any columns in the SELECT list that are not part of an aggregate function are present in the GROUP BY clause.

*Params: 1) expression: The expression that was missing from the GROUP BY clause.

OCI-00980: synonym translation is no longer valid

Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons: 1. The target schema does not exist. 2. The target object does not exist. 3. The synonym specifies an incorrect database link. 4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

OCI-00981: cannot mix table and system auditing options

Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

OCI-00982: missing plus sign

Cause: A left parenthesis appeared in a join condition, but a plus sign (+) did not follow. A left parenthesis in a join condition usually signals an outer-join specification and so a plus sign was expected to follow. To specify an outer join on a column in a join operation, follow the column reference in the join condition with a plus sign (+) enclosed in parentheses.

Action: Correct the SQL syntax and retry the statement.

OCI-00983: AUDIT or NOAUDIT on SYS user actions is not allowed.

Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions, which is not allowed for SYS users.

Action: Retry the statement with a user other than SYS.

OCI-00984: column not allowed here

Cause: A column name was used in an expression where it was not permitted, such as in the VALUES clause of an INSERT statement.

Action: Check the syntax of the statement and use column names only where appropriate.

OCI-00985: invalid program name

Cause: Probably a syntax error.

Action: Correct syntax.

OCI-00986: Missing or invalid join group names.

Cause: There was a syntax error while specifying the join group name.

Action: Correct the syntax and try again.

OCI-00987: missing or invalid username(s)

Cause: No username was specified or one of the specified usernames was invalid. Valid usernames must be specified to define a user. A username must begin with a letter, consist only of alphanumeric characters and the special characters \$, _, and #, and be less than or equal to 30 characters. If it contained other characters, it must be enclosed in double quotation marks. It may not be a reserved word.

Action: Specify a valid username, or list of usernames.

OCI-00988: missing or invalid passwords

Cause: The statement had an invalid or missing password for one or more users.

Action: Ensure that all users in the statement have a valid password that is not null. Do not enclose the password with single quotation marks. Use double quotation marks to enclose the password. Then retry the operation.

OCI-00989: too many passwords for usernames given

Cause: More passwords than usernames were specified in a GRANT statement. Only one password may be entered for each username listed in the GRANT statement.

Action: Enter an equal number of usernames and passwords.

OCI-00990: missing or invalid privilege

Cause: No privileges were specified in a GRANT privilege statement, or one of the specified privileges is invalid.

Action: Enter one or more valid privileges such as SELECT, INSERT, DELETE, UPDATE, ALTER, INDEX, REFERENCES, or ALL. More than one privilege may be granted by entering the privileges as a list separated by commas (,) or by specifying the keyword ALL to grant all privileges.

OCI-00991: only MAC privileges may be granted to procedures

Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

OCI-00992: invalid format for REVOKE command

Cause: An invalid form of the REVOKE command was entered. There are two forms of the REVOKE command. The first form was used to revoke a user's database access privileges. The second form was used to revoke a user's object privileges.

Action: Check the command syntax and retry the statement.

OCI-00993: missing GRANT keyword

Cause: The keyword WITH was specified at the end of a GRANT statement without the keyword GRANT. To grant privileges to a user and the permission to grant those privileges to another user, you must specify the keywords WITH GRANT OPTION at the end of the GRANT statement.

Action: Change the keyword WITH to the keywords WITH GRANT OPTION, then retry the statement.

OCI-00994: missing OPTION keyword

Cause: The keywords WITH GRANT were specified at the end of a GRANT statement without the keyword OPTION.

Action: Change the keywords WITH GRANT to the keywords WITH GRANT OPTION. Then retry the statement.

OCI-00995: missing or invalid synonym identifier

Cause: In a CREATE or DROP SYNONYM statement, the synonym name was either missing or invalid.

Action: Check syntax and spelling. A valid synonym name must be specified immediately following the keyword SYNONYM in both statements. Valid synonym names must begin with a letter, consist of alphanumeric characters and the special characters \$, _, and #, and be less than or equal to 30 characters. They may not be reserved words.

OCI-00996: the concatenate operator is ||, not |

Cause: A single bar (|) was interpreted as an attempt to specify concatenation, but the concatenation operator was a double bar (||).

Action: Enter a double bar (||) for concatenation or remove the single bar (|) if concatenation was not intended.

OCI-00997: illegal use of LONG datatype

Cause: A value of datatype LONG was used in a function or in a DISTINCT, WHERE, CONNECT BY, GROUP BY, or ORDER BY clause. A LONG value can only be used in a SELECT clause.

Action: Remove the LONG value from the function or clause.

OCI-00998: must name this expression with a column alias

Cause: An expression or function was used in a CREATE VIEW statement, but no corresponding column name was specified. When expressions or functions are used in a view, all column names for the view must be explicitly specified in the CREATE VIEW statement.

Action: Enter a column name for each column in the view in parentheses after the view name.

OCI-00999: invalid view name

Cause: In a CREATE VIEW statement, the view name was missing or invalid.

Action: Enter a valid view name following CREATE VIEW. Valid view names must begin with a letter, consist of only alphanumeric characters and the special characters \$, _, and #, be less than or equal to 30 characters, and may not be reserved words. If the view name contains other characters, it must be enclosed in double quotation marks.

OCI-01000: maximum open cursors for session exceeded string

Cause: An application is attempting to open too many cursors within the current session. This could be a result of the application not closing cursors properly or keeping cursors open for longer than needed. This could also be a result of the application genuinely requiring more cursors than currently permitted by the OPEN_CURSORS parameter value. This could also be caused by cursors not being closed properly.

Action: Check the application code to see if currently opened cursors can be closed before opening new ones. If the application does require more cursors to be simultaneously open within a session, then increase the value of the OPEN_CURSORS parameter. If a potential leaked SQL_ID is identified in the error text, then it needs to be reviewed by an application developer.

OCI-01001: cursor number is invalid or does not exist

Cause: Either a host language program call specified an invalid cursor number or the value of the MAXOPENCURSORS option in the precompiler command was too small.

Action: Check the erroneous call statement. Open a cursor when using the V8 Oracle Call Interface (OCI) API, or specify a valid Logon Data Area (LDA) when using the V7 OCI API. When using V8 OCI calls, make sure OCISmtPrepare2 (or OCISmtPrepare) and OCISmtExecute have been called. When using precompilers, all cursors must be opened using the OOPEN call before being referenced in any of the following calls: SQL, DESCRIBE, NAME, DEFINE, BIND, EXEC, FETCH, or CLOSE. If there is no problem with the cursor, it may be necessary to increase the MAXOPENCURSORS option value before precompiling.

OCI-01002: fetch out of sequence

Cause: A fetch was attempted from a cursor that is no longer valid. A PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. Possible causes for this error include the following: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before rerunning the statement. 4) The database server will close cursors at a request boundary when RESET_STATE is active. An attempt to use the cursor after the request has ended can raise this error.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Rerun the statement after rebinding, then attempt to fetch again. 4) Close cursors at the end of a request. Do not fetch from cursors across requests without rerunning the statement.

OCI-01003: no statement parsed

Cause: A host language program call referenced a cursor with no associated parsed SQL statement. A SQL call (for example, OSQL3) must be used to pass a SQL statement to Oracle and to associate the statement with an open cursor. A cursor must already have an associated SQL statement if referenced in any of the following calls: DESCRIBE, NAME, DEFINE, BIND, EXECUTE, and FETCH.

Action: Do the SQL call, for example, OSQL, to pass the required SQL statement before referencing the cursor.

OCI-01004: invalid value for parameter '*string*': *string*

Cause: The value specified for the parameter is invalid due to the reason mentioned in the error message.

Action: Correct the value for the parameter and retry. Refer to the documentation of the parameter for accepted values.

OCI-01005: Login denied due to invalid password.

Cause: A null password was entered.

Action: Null password not allowed. Retry login with a valid password.

OCI-01006: Bind variable does not exist.

Cause: A program issued a call for a unbound variable.

Action: Modify the call to reference a bound variable, or add the bound variable to the SQL statement. Variables must be prefixed by either a colon (:) or ampersand (&) in the SQL statement to be referenced in a BIND call, OBIND, or OBINDN. Error might be caused by a mismatch between a precompiler program and the SQLLIB library.

OCI-01007: Reference to a variable not in SELECT clause.

Cause: A reference was made to a variable not listed in the SELECT clause of the statement.

Action: Modify the SELECT clause to include the reference, or remove the reference from the call.

OCI-01008: value for bind variable placeholder *string* was not provided

Cause: A SQL or PL/SQL statement containing a bind variable placeholder was executed without a value being provided for that placeholder.

Action: To resolve the issue, perform one of the following tasks: - When using named binding, specify a value for each bind variable placeholder. If a placeholder is repeated in the statement, then only one value with that name is needed. - When using positional binding, specify a value for each bind variable position, even if the bind variable placeholder name is repeated in the statement. - When using Native Dynamic SQL in PL/SQL, specify a value for each placeholder in the appropriate clause of the EXECUTE IMMEDIATE statement.

*Params: 1) variable_name: The name of the bind variable without a value or its position.

OCI-01009: missing mandatory parameter

Cause: A host language program call did not pass all required parameters.

Action: Check the syntax for the call and enter all required parameters.

OCI-01011: Cannot use v7 compatibility mode when talking to v6 server

Cause: An attempt was made to use Oracle7 compatibility mode when accessing Oracle version 6.

Action: Use v6 sql language type. You may need to use the 'SET COMPATIBILITY V6' command

OCI-01012: not logged on

Cause: A host language program issued an Oracle call other than OLON or OLOGON, without being logged on to the Oracle. This occurred when a user process attempted to access the database after the instance it was connected to terminated, forcing the process to disconnect.

Action: Log on to Oracle by calling OLON or OLOGON before issuing any Oracle calls. When the instance has restarted, retry the action.

OCI-01013: User requested cancel of current operation.

Cause: The user interrupted an Oracle operation by entering CTRL-C, Control-C, or another canceling operation.

Action: No action needed.

OCI-01014: ORACLE shutdown in progress

Cause: A user tried to log on to Oracle while an instance shutdown was in progress or a service required by an existing process was not available. Oracle logins were disabled and some other services were not available while Oracle was being shut down.

Action: Wait until Oracle is brought back up before attempting to log on. Ignore ORA-1014 errors reported by processes during an Oracle instance shutdown.

OCI-01015: logon called recursively

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-01016: This function can be called only after a fetch

Cause: Cursor in an invalid state.

Action: Make sure that the oci/upi function is called after fetch.

OCI-01017: invalid credential or not authorized; logon denied

Cause: An invalid credential was provided when accessing the Oracle Database or you were not authorized to access this database.

Action: Depending on your authentication method, ensure that the correct credential is provided when logging in to Oracle Database. Retry your credential after checking it. If your credential is correct, you may not be authorized to access the database. You will need to contact your database administrator or identity management administrator to confirm that you are authorized to access the database.

OCI-01018: column does not have a LONG datatype

Cause: An attempt was made to fetch data using the LONG fetch option, but the specified column was not LONG.

Action: Re-execute the fetch without the LONG fetch option or create the table with a LONG column.

OCI-01019: Memory allocation failed for an Oracle Database *string* process.

Cause: One of the following occurred: 1. The operating system did not have enough memory available for the process. 2. The Oracle server process exceeded the limit set by the PGA_AGGREGATE_TARGET parameter.

Action: Take the action that corresponds with the cause: If encountered on the server, try one or more of the following: - Reduce the number of open database connections, perhaps by using client-side connection pooling. Database Resident Connection Pooling (DRCP) may be useful in some scenarios. - Increase the database parameter PGA_AGGREGATE_LIMIT. - If PGA_AGGREGATE_LIMIT cannot be increased further, try to free up memory on the server; for example, by decreasing the database parameter SGA_TARGET. - Increase the system memory available for the database host. If encountered on the client, try to: - Free up memory. - Add memory to the system. *Params: 1) process_type: Either 'client' or 'server', indicating where the memory error occurred.

OCI-01020: context state error

Cause: There was an unexpected context state error.

Action: Retry the command or contact Oracle Support.

OCI-01021: invalid context size specified

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

OCI-01022: database operation not supported in this configuration

Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

OCI-01023: Cursor context not found (Invalid cursor number)

Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

OCI-01024: invalid datatype in OCI call

Cause: An OCI program call specified an invalid datatype. In OCI calls, Oracle datatypes were specified as numbers between 1 and 7.

Action: Check the datatype description and enter the correct number for the datatype.

OCI-01025: UPI parameter out of range

Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

OCI-01026: multiple buffers of size > 4000 in the bind list

Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

OCI-01027: bind variables not allowed for data definition operations

Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

OCI-01028: internal two task error

Cause: Received send long message but don't have the cursor context.

Action: Report as a bug.

OCI-01029: internal two task error

Cause: Received a request to send the long again when there is no long

Action: Report as a bug

OCI-01030: SELECT ... INTO variable does not exist

Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

OCI-01031: insufficient privileges

Cause: A database operation was attempted without the required privilege(s).

Action: Ask your database administrator or security administrator to grant you the required privilege(s).

OCI-01032: no such userid

Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

OCI-01033: ORACLE initialization or shutdown in progress

Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

OCI-01034: The Oracle instance is not available for use. Start the instance.

Cause: An attempt was made to connect to an Oracle database or ASM or ASMIOSEVER instance, but the instance was not available. The instance was either incorrectly specified or was shut down, failed to start, or was aborted.

Action: Verify that you are connecting to the correct Oracle instance and, if so, restart the instance.

OCI-01035: Login denied. Database is in RESTRICTED mode.

Cause: The database is running in RESTRICTED mode. Only users with the RESTRICTED SESSION system privilege are allowed to login.

Action: Obtain the RESTRICTED SESSION system privilege for the user and retry the operation, or request that the database be started without the RESTRICTED SESSION option.

OCI-01036: unrecognized bind variable *string* passed to the bind call

Cause: The bind variable that was passed to the bind call did not have a matching placeholder in the statement.

Action: Ensure that the variable being bound has a placeholder in the statement.

OCI-01037: maximum cursor memory exceeded

Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

OCI-01038: cannot write database file version *string* with Oracle version *string*

Cause: The database file headers had an older format compared to the version of Oracle used to execute the command.

Action: Open the database to advance to the new file format and retry. If the operation is required before the database can be opened, then use the previous Oracle version to complete the operation. *Params: 1) database_file_version_number: The version in database file headers. 2) Oracle_version_number: The Oracle version in use.

OCI-01039: insufficient privileges on underlying objects of the view

Cause: Attempting to explain plan on other people's view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

OCI-01040: invalid character in password; logon denied

Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

OCI-01041: internal error. hostdef extension doesn't exist

Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

OCI-01042: detaching a session with open cursors not allowed

Cause: An attempt was made to detach a session which had open cursors.

Action: Close all the cursors before detaching the session.

OCI-01043: user side memory corruption [string], [string], [string], [string]

Cause: The application code corrupted some of the user memory used by Oracle

Action: Make sure that the application code is not overwriting memory.

OCI-01044: size string of buffer bound to variable exceeds maximum string

Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as: (element_size)*(number of elements)

Action: Reduce buffer size.

OCI-01045: Login denied. User string does not have CREATE SESSION privilege.

Cause: A connect was attempted for a user who does not have the CREATE SESSION privilege.

Action: Grant the user CREATE SESSION privilege, or login with a user that has the CREATE SESSION privilege.

OCI-01046: cannot acquire space to extend context area

Cause: Oracle could not extend the current area any further because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

OCI-01047: The above error occurred in schema=string, package=string, procedure=string

Cause: This message was displayed after a previous message to provide more specific information.

Action: Informational message

OCI-01048: Couldn't find the specified procedure in the given context

Cause: The procedure user specified in deferred RPC doesn't exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

OCI-01049: Bind by name is not supported in streamed RPC

Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: You may need to upgrade one or more of your Oracle servers or relink your user application with new libraries.

OCI-01050: cannot acquire space to open context area

Cause: Oracle could not open a new context area because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

OCI-01051: deferred rpc buffer format invalid

Cause: The deferred rpc data in sys.def\$_call is corrupted.

Action: Contact your customer support representative.

OCI-01052: LOG_ARCHIVE_DUPLEX_DEST is not set.

Cause: A valid destination for parameter LOG_ARCHIVE_DUPLEX_DEST was not set when parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was set to two.

Action: Set a value for parameter LOG_ARCHIVE_DUPLEX_DEST, or set the LOG_ARCHIVE_MIN_SUCCEED_DEST to one.

OCI-01053: user storage address cannot be read

Cause: A bind variable or other user area could not be read by Oracle.

Action: Check that binds are done correctly on valid user buffers, then retry the operation.

OCI-01054: user storage address cannot be written

Cause: A define, FETCH... INTO or SELECT... INTO, variable or other user area could not be written to by Oracle.

Action: Check that INTO variables and indicators are correctly specified. Then retry the operation.

OCI-01055: Object datatypes not supported for bind or define in this mode

Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

OCI-01057: invalid or ambiguous block.field reference in user exit

Cause: The reference to a block.field identifier in a user exit was incorrect or ambiguous, probably because it was misspelled or incomplete.

Action: Check syntax and identifier spelling. Then correct the reference.

OCI-01058: internal New Upi interface error

Cause: Attempt to delete nonexistent hstdef extension.

Action: Report as a bug.

OCI-01059: parse expected before a bind or execute

Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

OCI-01060: array binds or executes not allowed

Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

OCI-01061: cannot start up a V8 server using a V7 client application

Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

OCI-01062: unable to allocate memory for define buffer

Cause: Exceeded the maximum buffer size for current platform

Action: Use piecewise fetch with a smaller buffer size

OCI-01063: fetch row count exceeds MINSWORDMAXVAL

Cause: The total number of rows requested from the server exceeded the maximum specified in MINSWORDMAXVAL.

Action: Fix the number of rows to fetch or prefetch for the fetch interface call.

OCI-01064: invalid value 'string' for parameter INSTANCE_TYPE in Free version

Cause: A value other than RDBMS was specified for the INSTANCE_TYPE parameter in Oracle Database Free version (FREE).

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to bring up any other instance type.

OCI-01065: A value was not provided for placeholder string.

Cause: The SQL statement contained a placeholder but a value was not provided for that placeholder. Placeholders are used in SQL statements so that data values do not need to be hardcoded.

Action: Use the OCISstmtPlaceholderSubstitute() function to set a string value as a substitute for the placeholder when the statement is executed.

OCI-01066: Placeholder substitution failed.

Cause: Either OCISstmtPlaceholderSubstitute() was called after OCISstmtExecute(), or the statement was prepared without specifying the mode OCI_PREP2_OCI_PLACEHOLDER to OCISstmtPrepare2().

Action: 1. Prepare the statement using OCISstmtPrepare2() with mode OCI_PREP2_OCI_PLACEHOLDER before calling OCISstmtPlaceholderSubstitute(). 2. Call OCISstmtPlaceholderSubstitute() before calling OCISstmtExecute().

OCI-01067: invalid placeholder name

Cause: Possible causes are: 1. A placeholder name passed to the function OCISstmtPlaceholderSubstitute() was not used in the statement. 2. A NULL name or length zero was passed to the function OCISstmtPlaceholderSubstitute().

Action: Check that placeholder names used in the function OCISstmtPlaceholderSubstitute() match the names in the statement passed to the function OCISstmtPrepare2().

OCI-01068: invalid substitute string for placeholder *string*

Cause: The substitute string for the specified placeholder was invalid or the mode specified for OCIStmtPlaceholderSubstitute was invalid.

Action: Check the Oracle documentation for the list of valid formats to use with OCIStmtPlaceholderSubstitute, and ensure the substitute string matches the format specified by the mode parameter.

OCI-01069: Attempt to use placeholders in a statement that doesn't support placeholders

Cause: Placeholders are not supported in SELECT, DML and PLSQL statements that already support binds.

Action: Use bind variables instead of placeholders in such statements.

OCI-01070: Using an old version of Oracle for the server

Cause: Using pre 7.0.10.1 version of oracle for server

Action: Upgrade server to post 7.0.10.1 version

OCI-01071: cannot perform operation without starting up ORACLE

Cause: An attempt was made to perform an operation before Oracle was started.

Action: Start Oracle. Then retry the operation.

OCI-01072: cannot stop ORACLE; ORACLE not running

Cause: An attempt was made to stop Oracle, but Oracle was not running.

Action: No action required.

OCI-01073: fatal connection error: unrecognized call type

Cause: An illegal internal operation was attempted.

Action: Contact your customer support representative.

OCI-01074: cannot shut down ORACLE; inside a login session - log off first

Cause: An attempt was made to shut down Oracle inside a logon session.

Action: Log off before shutting down Oracle.

OCI-01075: You are currently logged on.

Cause: Attempted to login while the session was already logged on.

Action: No action required.

OCI-01076: multiple logons per process not yet supported

Cause: Oracle did not support multiple logons per process.

Action: No action required.

OCI-01077: background process initialization failure

Cause: Failure during initialization of ORACLE background processes.

Action: Further diagnostic information should be in the error stack or in the trace file.

OCI-01078: failure in processing system parameters

Cause: Failure during processing of INIT.ORA parameters during system startup.

Action: Further diagnostic information should be in the error stack.

OCI-01079: ORACLE database was not properly created, operation aborted

Cause: There was an error when the database or control file was created.

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the database or a new control file.

OCI-01080: error in shutting down ORACLE

Cause: Failure during system shutdown.

Action: Further diagnostic information should be in the error stack.

OCI-01081: cannot start already-running ORACLE - shut it down first

Cause: An attempt was made to start Oracle while it was already running.

Action: Shut down Oracle first, if you want to restart it.

OCI-01082: 'row_locking = always' requires the transaction processing option

Cause: "row_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

OCI-01083: value of parameter "*string*" is inconsistent with that of other instances

Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

OCI-01084: invalid argument in OCI call

Cause: The failing Oracle Call Interface (OCI) call contained an argument with an invalid value.

Action: Use valid argument values. For more information, see the Oracle documentation for Oracle Call Interfaces and the appropriate programming language supplement.

OCI-01085: preceding errors in deferred rpc to "*string.string.string*"

Cause: Errors were encountered when the named procedure was executed as a deferred remoted procedure call.

Action: Correct the cause of the preceding errors.

OCI-01086: savepoint '*string*' never established in this session or is invalid

Cause: An attempt was made to roll back to a savepoint that was never established in this session, or was invalid.

Action: Try rolling back to the savepoint from the session where it is established.

OCI-01087: cannot start up ORACLE - currently logged on

Cause: An attempt was made to start up Oracle by a user who was currently logged on.

Action: Logoff and then issue the STARTUP command.

OCI-01088: shutdown in progress - operation not permitted until restart

Cause: The SHUTDOWN command was used to shut down a running Oracle instance but the shutdown operation was not complete.

Action: Wait for the instance to be restarted or contact your database administrator.

OCI-01089: immediate shutdown or close in progress - no operations are permitted

Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running Oracle instance, or CLOSE IMMEDIATE was used to shut down a pluggable database, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

OCI-01090: shutdown in progress - connection is not permitted

Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

OCI-01091: failure during startup force

Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

OCI-01092: ORACLE instance terminated. Disconnection forced

Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

OCI-01093: ALTER DATABASE CLOSE only permitted with no sessions connected

Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

OCI-01094: ALTER DATABASE or ALTER PLUGGABLE DATABASE CLOSE in progress. Connections not permitted

Cause: An attempt was made to connect while the database was being closed with the ALTER DATABASE CLOSE statement.

Action: Attempt to connect again when the database is open. Contact the database administrator to find out when the database will be open.

OCI-01095: DML statement processed zero rows

Cause: During a call to OTEX, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEX was halted at this point.

Action: Caller can either do a rollback or ignore the message and execute the rest of the cursors in the cursor array.

OCI-01096: program version (*string*) incompatible with instance (*string*)

Cause: A program was trying to connect to an instance using a different version of binary from which the database was started. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of binary. Check the environment to ensure the correct path and binary is used.

OCI-01097: cannot shutdown while in a transaction - commit or rollback first

Cause: An attempt was made to shut down the database while a transaction was in progress.

Action: Either commit or rollback the current transaction and then attempt to shut down the database.

OCI-01098: program Interface error during Long Insert

Cause: The application program interface could not insert or update a LONG column because of an internal error when a TTCGETV call fails. For example, a network read error or one of the parameters passed to the call is invalid.

Action: Retry the insert or update.

OCI-01099: cannot mount database in SHARED mode if started in single process mode

Cause: An attempt was made to mount a database in parallel mode with the initialization parameter SINGLE_PROCESS set to TRUE.

Action: Either mount the database in EXCLUSIVE mode or set the initialization parameter SINGLE_PROCESS to FALSE before starting the instance in parallel (shared) mode.

OCI-01100: database already mounted

Cause: A database is already mounted in this instance.

Action: No action is required.

OCI-01101: database being created currently mounted by some other instance

Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

OCI-01102: cannot mount database in EXCLUSIVE mode

Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

OCI-01103: control file database name '*string*' does not match parameter file DB_NAME '*string*'

Cause: The database name in the control file did not match the database name specified by the DB_NAME parameter in the parameter file.

Action: If the intent is just to mount a control file so that it can be examined, then just change the value of DB_NAME in the parameter file to match the database name in the control file. If using an SPFILE, then use STARTUP NOMOUNT to allow access to the SPFILE, change the DB_NAME parameter, then use SHUTDOWN IMMEDIATE and STARTUP MOUNT. If the intent is to open a second database using the control file from the first database, then

instead consider using the RMAN DUPLICATE command. If there is no risk of the second database accessing the exact same data files as the first database, then either use the NID (New ID) utility to give the second database a new name and database ID, or change the DB_NAME in the parameter file. Otherwise, locate the correct control file to use for the database. *Params: 1) database_name: Name of the database in the control file. 2) db_name: Value of the DB_NAME parameter in the parameter file.

OCI-01104: number of control files (*string*) does not equal *string*

Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

OCI-01105: mount is incompatible with mounts by other instances

Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

OCI-01106: database must be closed before dismounting

Cause: An attempt was made to dismount a database before it was closed.

Action: Close the database, then retry the operation.

OCI-01107: database must be mounted for media recovery

Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

OCI-01108: file *string* is in backup or media recovery

Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

OCI-01109: database not open

Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

OCI-01110: data file *string*: '*string*'

Cause: Reporting file name for details of another error. The reported name can be of the old file if a data file move operation is in progress.

Action: See associated error message.

OCI-01111: name for data file *string* is unknown - rename to correct file

Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

OCI-01112: media recovery not started

Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

OCI-01113: file *string* needs media recovery

Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

OCI-01114: IO error writing block to file *string* (block # *string*)

Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

OCI-01115: IO error reading block from file *string* (block # *string*)

Cause: Device on which the file resides is probably offline

Action: Restore access to the device

OCI-01116: error in opening database file *string*

Cause: Usually the file is not accessible.

Action: Restore the database file.

OCI-01117: adding file '*string*' with illegal block size: *string*; max limit is *string*; min limit is *string*

Cause: An attempt was made to add a database file with a block size that was greater than the maximum block size allowed or less than the minimum block size allowed or an invalid value (that is, not power of 2) in the allowed range.

Action: Retry the DDL command with a valid block size.

OCI-01118: cannot add any more database files: limit of *string* exceeded

Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

OCI-01119: error in creating database file '*string*'

Cause: Usually due to not having enough space on the device.

Action: Decrease the size of the requested file or allocate a file on another device with more available space. If a file size was not specified in the statement, then specify a file size smaller than the available space on the device.

OCI-01120: cannot remove online database file *string*

Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

OCI-01121: cannot rename database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

OCI-01122: database file *string* failed verification check

Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

OCI-01123: cannot start online backup; media recovery not enabled

Cause: An attempt to start backup of an online tablespace failed because media recovery was not enabled.

Action: Enable media recovery and retry this operation.

OCI-01124: cannot recover data file *string* - file is in use or recovery

Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is currently doing media recovery on the file.

Action: Do not do media recovery.

OCI-01125: Cannot disable media recovery. File *string* has online backup set.

Cause: An attempt to disable media recovery encountered an online backup in progress.

Action: End the offending backup and retry this command.

OCI-01126: database must be mounted in this instance and not open in any instance

Cause: An operation failed because the database was not mounted in exclusive mode.

Action: Shut down Oracle and mount the database in exclusive mode.

OCI-01127: database name '*string*' exceeds size limit of *string* characters

Cause: The specified database name was too long.

Action: Shorten the database name to eight characters or fewer, then retry the operation.

OCI-01128: cannot start online backup - file *string* is offline

Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

OCI-01129: user's default or temporary tablespace does not exist

Cause: The user's default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

OCI-01130: database file version *string* incompatible with ORACLE version *string*

Cause: The named datafile was created under an incompatible version of Oracle, or the file was invalid or non-existent.

Action: Shut down and restart the correct version of Oracle or check the references to the datafile and make sure it exists.

OCI-01131: DB_FILES system parameter value *string* exceeds limit of *string*

Cause: The specified value of the initialization parameter DB_FILES was too large.

Action: Reduce the value of the DB_FILES parameter and retry the operation.

OCI-01132: length of database file name '*string*' exceeds limit of *string* characters

Cause: The specified datafile name was too long.

Action: Shorten the file name and retry the operation.

OCI-01133: length of log file name '*string*' exceeds limit of *string* characters

Cause: The specified redo log file name was too long.

Action: Shorten the file name and retry the operation.

OCI-01134: database mounted exclusive by another instance

Cause: An attempt to access a database failed because it was mounted in exclusive mode by another instance.

Action: Either shut down the other instance or wait for the other instance to either close the database or mount it in parallel mode, before retrying the operation.

OCI-01135: file *string* accessed for DML/query is offline

Cause: Attempted to access a data file that was offline.

Action: Bring the data file back online

OCI-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks

Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller than the size needed

Action: Create the file with a larger size.

OCI-01137: data file *string* is still in the middle of going offline

Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that took it offline.

Action: Wait a bit and try to online the file again.

OCI-01138: database must either be open in this instance or not at all

Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the database in this instance, or close the database in the other instances.

OCI-01139: RESETLOGS option only valid after an incomplete database recovery

Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

OCI-01140: cannot end online backup - all files are offline or readonly

Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

OCI-01141: error renaming data file *string* - new file '*string*' not found

Cause: An attempt to change a data file's name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

OCI-01142: cannot end online backup - none of the files are in backup

Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

OCI-01143: cannot disable media recovery - file *string* needs media recovery

Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

OCI-01144: File size (*string* blocks) exceeds maximum of *string* blocks

Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

OCI-01145: offline immediate disallowed unless media recovery enabled

Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

OCI-01146: cannot start online backup - file *string* is already in backup

Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

OCI-01147: SYSTEM tablespace file *string* is offline

Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA. The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

OCI-01148: cannot refresh file size for datafile *string*

Cause: An operating system or device error occurred when retrieving the file's size. The device on which the file resides may have been offline.

Action: Restore access to the device.

OCI-01149: cannot shutdown - file *string* has online backup set

Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

OCI-01150: cannot prevent writes - file *string* has online backup set

Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

OCI-01151: use media recovery to recover block, restore backup if needed

Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

OCI-01152: file *string* was not restored from a sufficiently old backup

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

OCI-01153: An incompatible media recovery is active.

Cause: There was an attempt to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup. Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs are incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs.

Action: Complete or cancel the other media recovery session or RMAN backup.

OCI-01154: database busy. Open, close, mount, and dismount not allowed now

Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

OCI-01155: the database is being opened, closed, mounted or dismounted

Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

OCI-01156: recovery or flashback in progress may need access to files

Cause: Either media recovery, instance recovery, or flashback was in progress. The recovery or flashback in progress may need the files to which this operation is being applied.

Action: Wait for recovery or flashback to complete.

OCI-01157: cannot identify/lock data file *string* - see DBWR trace file

Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

OCI-01158: database *string* already mounted

Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

OCI-01159: file is not from same database as previous files - wrong database id

Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

OCI-01160: file is not a *string*

Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

OCI-01161: Database name *string* in the file header does not match *string* in the DATABASE clause.

Cause: The database name provided in the DATABASE clause did not match the database name found in the file header.

Action: Ensure consistency of database names. Use the SET DATABASE clause if you are renaming the database.

OCI-01162: block size *string* in file header does not match configured block sizes

Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache block sizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

OCI-01163: SIZE clause indicates *string* (blocks), but should match header *string*

Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size (in bytes).

OCI-01164: MAXLOGFILES may not exceed *string*

Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

OCI-01165: MAXDATAFILES may not exceed *string*

Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

OCI-01166: file number *string* is larger than *string* (*string*)

Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

OCI-01167: two files are the same file/group number or the same file

Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control_files parameter in the init.ora file and see if a file is specified more than once. If all files names appear to be unique, check to make sure that the actual control files themselves are unique. For example, in UNIX check for a symbolic or a hard link to another control file in the list.

OCI-01168: physical block size *string* does not match size *string* of other members

Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

OCI-01169: DATAFILE number 1 not found. Must be present

Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

OCI-01170: file not found '*string*'

Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existence of all files and then resubmit.

OCI-01171: datafile *string* going offline due to error advancing checkpoint

Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

OCI-01172: recovery of thread *string* stuck at block *string* of file *string*

Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

OCI-01173: data dictionary indicates missing data file from a system tablespace

Cause: 1. Recover the database from a more recent control file. 2. Re-create the control file and check to ensure that all of the data files in the system tablespaces are included.

Action: Choose one of the following actions that corresponds with the

OCI-01174: DB_FILES is *string* but needs to be *string* to be compatible

Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB_FILES parameter to be compatible

OCI-01175: data dictionary has more than the *string* files allowed by the instance

Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db_files

OCI-01176: data dictionary has more than the *string* files allowed by the controlfile

Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more data files than that supported by the control file.

Action: Re-create the control file with a larger MAXDATAFILES.

OCI-01177: data file does not match dictionary - probably old incarnation

Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

OCI-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

OCI-01179: file *string* does not exist

Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

OCI-01180: can not create datafile 1

Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

OCI-01181: file *string* created before last known RESETLOGS, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

OCI-01182: cannot create database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

OCI-01183: cannot mount database in SHARED mode

Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

OCI-01184: logfile group *string* already exists

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

OCI-01185: logfile group number *string* is invalid

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

OCI-01186: file *string* failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

OCI-01187: cannot read from file *string* because it failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

OCI-01188: The block size specified *string* does not match header block size *string*

Cause: The block size specified in the BLOCKSIZE clause of the CREATE CONTROLFILE statement does not equate to the block size recorded in the log file header.

Action: Specify the correct block size.

OCI-01189: file is from a different RESETLOGS than previous files

Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

OCI-01190: control file or data file *string* is from before the last RESETLOGS

Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

OCI-01191: file *string* is already offline - cannot do a normal offline

Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

OCI-01192: must have at least one enabled thread

Cause: You must specify at least two logfiles from at least one thread at the create controlfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

OCI-01193: file *string* is not the same file seen at start of recovery

Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

OCI-01194: file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

OCI-01195: online backup of file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

OCI-01196: file *string* is inconsistent due to a failed media recovery session

Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

OCI-01197: thread *string* only contains one log

Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

OCI-01198: must specify size for log file if RESETLOGS

Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

OCI-01199: file *string* is not in online backup mode

Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

OCI-01200: actual file size of *string* is smaller than correct size of *string* blocks

Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

OCI-01201: file *string* header failed to write correctly

Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

OCI-01202: wrong incarnation of this file - wrong creation time

Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

OCI-01203: wrong incarnation of this file - wrong creation SCN

Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

OCI-01204: file number is *string* rather than *string* - wrong file

Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

OCI-01205: not a data file - type number in header is *string*

Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

OCI-01206: file is not part of this database - wrong database id

Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

OCI-01207: file is more recent than the control file

Cause: The control file change sequence number in the data file was greater than the number in the control file. This implies that the wrong control file was used for the file named in the accompanying error. Note: Repeatedly causing this error can make it stop happening without correcting the real problem, as every attempt to open the database will advance the control file change sequence number until it is large enough.

Action: If the control file has just been restored, then ensure the file named in the accompanying error is from a backup taken before the time of the control file backup. Otherwise, use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

OCI-01208: data file is an old version - not accessing current version

Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

OCI-01209: data file is from before the last RESETLOGS

Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

OCI-01210: data file header is media corrupt

Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistency of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

OCI-01211: Oracle7 data file is not from migration to Oracle8

Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration program MUST be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is NOT opened after migration utility is run.

OCI-01212: MAXLOGMEMBERS may not exceed *string*

Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

OCI-01213: MAXINSTANCES may not exceed *string*

Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

OCI-01214: MAXLOGHISTORY may not exceed *string*

Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

OCI-01215: enabled thread *string* is missing after CREATE CONTROLFILE

Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

OCI-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE

Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

OCI-01217: logfile member belongs to a different logfile group

Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

OCI-01218: logfile member is not from the same point-in-time

Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

OCI-01219: Database or pluggable database not open. Queries allowed on fixed tables or views only.

Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database or pluggable database was open.

Action: Rewrite the query to include only fixed objects, or open the database or pluggable database.

OCI-01220: temporary tablespace usage not allowed before database is open

Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Rewrite the query to avoid a large sort, increase the values of the SORT_AREA_SIZE or SORT_AREA_RETAINED_SIZE initialization parameter to enable the sort to be done in-memory.

OCI-01221: data file *string* is not the same file to a background process

Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it received when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

OCI-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string*

Cause: Attempting to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

OCI-01223: RESETLOGS must be specified to set a new database name

Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

OCI-01224: group number in header *string* does not match GROUP *string*

Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

OCI-01225: thread number *string* is greater than MAXINSTANCES *string*

Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

OCI-01226: file header of log member is inconsistent with other members

Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

OCI-01227: log *string* is inconsistent with other logs

Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistency. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

OCI-01228: SET DATABASE option required to install seed database

Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

OCI-01229: data file *string* is inconsistent with logs

Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

OCI-01230: cannot make read only - file *string* is offline

Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

OCI-01231: cannot make read write - file *string* is offline

Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

OCI-01232: cannot start online backup - file *string* is being made read-only

Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

OCI-01233: file *string* is read only - cannot recover using backup control file

Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

OCI-01234: cannot end backup of file *string* - file is in use or recovery

Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

OCI-01235: END BACKUP failed for *string* file(s) and succeeded for *string*

Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

OCI-01236: Error *string* occurred during initialization of file header access

Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

OCI-01237: cannot extend datafile *string*

Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

OCI-01238: cannot shrink datafile *string*

Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

OCI-01239: database must be in ARCHIVELOG mode to use external cache

Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

OCI-01240: too many data files to add in one command

Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

OCI-01241: an external cache has died

Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

OCI-01242: data file suffered media failure: database in NOARCHIVELOG mode

Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

OCI-01243: system tablespace file suffered media failure

Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

OCI-01244: unnamed datafile(s) added to control file by media recovery

Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

OCI-01245: offline file *string* will be lost if RESETLOGS is done

Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

OCI-01246: recovering files through TSPITR of tablespace *string*

Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

OCI-01247: database recovery through TSPITR of tablespace *string*

Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

OCI-01248: file *string* was created in the future of incomplete recovery

Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

OCI-01249: archiving not allowed in a clone database

Cause: There was an attempt to archive an online redo log or enable archiving for a clone database. This was not allowed because the archive log destination of the clone could be the same as that of the primary database, resulting in the destruction of its archived logs.

Action: Do not attempt to archive from a clone. If archiving is needed, then convert the clone to a regular database. To do so, follow the documented steps based on how the clone database was created.

OCI-01250: Error *string* occurred during termination of file header access

Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

OCI-01251: Unknown File Header Version read for file number *string*

Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

OCI-01252: cannot prevent writes - file *string* in recovery manager backup

Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

OCI-01253: cannot start online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

OCI-01254: cannot end online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

OCI-01255: cannot shutdown - file *string* in recovery manager backup

Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

OCI-01256: error in locking database file *string*

Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

OCI-01257: cannot reuse database file *string*, unknown file size

Cause: The size of the raw partition cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

OCI-01258: unable to delete temporary file *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

OCI-01259: unable to delete datafile *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

OCI-01260: warning: END BACKUP succeeded but some files found not to be in backup mode

Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

OCI-01261: Parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

OCI-01262: Stat failed on a file destination directory

Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

OCI-01263: Name given for file destination directory is invalid

Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

OCI-01264: Unable to create *string* file name

Cause: Unable to create an Oracle managed file name.

Action: Check previous error messages for the reason Oracle was unable to create the file name. Take corrective action, if possible, and retry the command.

OCI-01265: Unable to delete *string string*

Cause: An error prevented the file from being deleted.

Action: See the subsequent error messages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

OCI-01266: Unable to create unique file name

Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

OCI-01267: Failure getting date/time

Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

OCI-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE

Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

OCI-01269: Destination parameter string is too long

Cause: The value for DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

OCI-01270: *string* operation is not allowed if STANDBY_PRESERVES_NAMES is true

Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY_PRESERVES_NAMES is true.

Action: Set STANDBY_PRESERVES_NAMES false if the operation must be performed.

OCI-01271: Unable to create new file name for file *string*

Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

OCI-01272: REUSE only allowed when a file name is provided.

Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

OCI-01273: STANDBY_FILE_MANAGEMENT = AUTO needs COMPATIBLE = *string* or higher

Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

OCI-01274: cannot add data file that was originally created as '*string*'

Cause: The recovery failed to add the specified data file either because the recovery tried to create the specified data file but automated standby file management was disabled, or the recovery tried to look for the specified data file but the data file did not exist. In the former case, the recovery added a control file entry as 'UNNAMEDnnnnn'.

Action: Either use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY_FILE_MANAGEMENT to AUTO, or restore the data file to the location specified by the corresponding control file entry, and restart standby recovery.

OCI-01275: Operation *string* is not allowed if standby file management is automatic.

Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY_FILE_MANAGEMENT was set to AUTO.

Action: Set STANDBY_FILE_MANAGEMENT to MANUAL if the operation must be performed.

OCI-01276: Cannot add file *string*. File has an Oracle Managed Files file name.

Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

OCI-01277: file '*string*' already exists

Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename' command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

OCI-01278: error creating file '*string*'

Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename'.

Action: Check the error stack for more detailed information.

OCI-01279: db_files too large

Cause: db_files has been set too high to be supported by the system.

Action: Decrease the number of db_files.

OCI-01280: irrecoverable LogMiner error

Cause: An internal error occurred inside LogMiner.

Action: Check the alert log and trace files for further information.

OCI-01281: invalid SCN range

Cause: The specified SCN range was invalid or the StartSCN was greater than the EndSCN.

Action: Specify a valid SCN range.

OCI-01282: invalid date range

Cause: The specified date range was invalid: - The startTime cannot be after the endTime. - Both startTime and endTime cannot be after the year 2110. - The startTime cannot be before the year 1988.

Action: Specify a valid date range.

OCI-01283: Options specified is invalid

Cause: The specified options parameter is invalid for the procedure.

Action: Specify valid Options parameter.

OCI-01284: file *string* cannot be opened

Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

Action: Ensure that the file and the directory exist and are accessible.

OCI-01285: error reading file *string*

Cause: The file or directory may not exist or is inaccessible.

Action: Specify valid file or directory. Make sure that file and directory are accessible.

OCI-01286: start interval required

Cause: Options were supplied which require a starting time or starting SCN

Action: Specify a starting interval (time or SCN).

OCI-01287: file *string* is from a different database incarnation

Cause: The logfile is produced by a different incarnation of the database.

Action: Add a logfile that is produced by the same incarnation.

OCI-01288: cannot apply this DDL to the Logminer Dictionary

Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME_ZONE" is not supported by Logminer.

Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

OCI-01289: cannot add duplicate logfile *string*

Cause: The logfile specified has already been added to the list of logfiles.

Action: Specify a different logfile.

OCI-01290: cannot remove unlisted logfile *string*

Cause: The user attempted to remove a logfile that is not present in the list.

Action: Specify a valid logfile.

OCI-01291: missing log file *string*

Cause: Not all log files corresponding to the time or SCN range specified had been added to the LogMiner session.

Action: Check the system.logmnr_log\$ table for Logical Standby or Downstream Capture, or v\$logmnr_logs view for adhoc query to determine the missing SCN range, and add the relevant log files.

OCI-01292: LogMiner for upstream capture cannot find log file *string*

Cause: A log file needed by LogMiner could not be found in v\$archived_log.

Action: Check the alert log and trace files to identify the thread and SCN of the missing log. Restore the files if it was deleted or expired from v\$archived_log.

OCI-01293: mounted database required for specified LogMiner options

Cause: Options were specified which required the database to be mounted

Action: Specify different options or mount the database.

OCI-01294: error occurred while processing information in dictionary file *string*, possible corruption

Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

OCI-01295: DB_ID mismatch between dictionary *string* and logfiles

Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

OCI-01296: character set mismatch between dictionary *string* and logfiles

Cause: The character set of the database that produced the dictionary file is different from the character set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

OCI-01297: redo version mismatch between dictionary *string* and logfiles

Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: n/a

OCI-01298: conflicting dictionary option

Cause: More than one dictionary source was specified or DDL_DICT_TRACKING was specified with DICT_FROM_ONLINE_CATALOG.

Action: n/a

OCI-01299: dictionary *string* corresponds to a different database incarnation

Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

OCI-01300: writable database required for specified LogMiner options

Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

OCI-01301: error writing to file during flat file build

Cause: Error writing to file during flat file build

Action: n/a

OCI-01302: dictionary build options missing or incorrect

Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

OCI-01303: subordinate process error: *string*. Check alert and trace logs

Cause: A process subordinate to this Logminer process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

OCI-01304: Subordinate process error. Check alert and trace logs.

Cause: A process subordinate to this LogMiner process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

OCI-01305: incompatible database character set

Cause: The database character set of the mining database was not a superset of the source database character set.

Action: Perform the mining operation on a database having a compatible database character set.

OCI-01306: DBMS_LOGMNR.START_LOGMNR() must be invoked before selecting from V\$LOGMNR_CONTENTS

Cause: A SELECT statement was issued from V\$LOGMNR_CONTENTS without invoking the DBMS_LOGMNR.START_LOGMNR() procedure.

Action: Invoke the DBMS_LOGMNR.START_LOGMNR() procedure before issuing a SELECT statement from the V\$LOGMNR_CONTENTS view.

OCI-01307: no LogMiner session is currently active

Cause: A select was issued from v\$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure. Otherwise, dbms_logmnr.end_logmnr() was called without a prior call to dbms_logmnr.start_logmnr() or dbms_logmnr.add_logfile()

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v\$logmnr_contents view.

OCI-01308: dictionary directory is not set

Cause: The dictionary directory was not valid.

Action: Set the dictionary directory to an appropriate value.

OCI-01309: invalid session

Cause: The specified LogMiner session ID or session handle was invalid.

Action: Use a valid LogMiner session ID or session handle and try again.

OCI-01310: requested return type not supported by the lcr_mine function

Cause: The return type requested by the user is not supported by lcr_mine"

Action: Pick a return type supported by the lcr_mine function"

OCI-01311: Illegal invocation of the mine_value function

Cause: An attempt was made to use mine_value function on a column other than redo_value or undo_value columns of SYS.X\$LOGMNR_CONTENTS or SYS.V\$LOGMNR_CONTENTS fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine_value

OCI-01312: Specified table/column does not exist

Cause: The table/column specified in the lcr_mine call does not exist at the the specified SCN. The table/column definition has to exist at the start SCN specified for lcr_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

OCI-01314: Name of the column to be mined must be a string literal.

Cause: The fully qualified name of the column to be mined by the Oracle LogMiner functions must be a string literal.

Action: For example, if the column to be mined is a.b.c.d, enclose the column name in quotes, as in 'a.b.c.d', to create a fully qualified name.

OCI-01315: A log file has been added or removed during SELECT.

Cause: A redo log file has been added or removed while selecting from the v\$logmnr_logs fixed view.

Action: Retry the SELECT statement.

OCI-01316: Already attached to a Logminer session

Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

OCI-01317: Command or procedure not attached to a LogMiner session.

Cause: A command or procedure was issued which requires an attached LogMiner session.

Action: Attach to a LogMiner session before issuing the command or procedure.

OCI-01318: incompatible national character set

Cause: The national character set of the mining database was not a superset of the source database national character set.

Action: Perform the mining operation on a database having a compatible national character set.

OCI-01319: Invalid Logminer session attribute

Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

OCI-01320: Invalid Logminer dictionary attribute

Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

OCI-01321: No Logminer Dictionary for requested start SCN

Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start_logminer request with a start SCN for which a Logminer Dictionary is available.

OCI-01322: No such table

Cause: An non-existent table was supplied to Logminer include_src_tbl() or exclude_src_table().

Action: Re-issue with valid table name.

OCI-01324: cannot add file *string* due to DB_ID mismatch

Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

OCI-01325: archive log mode must be enabled to build into the logstream

Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

OCI-01326: compatability of 9.0 or greater required to build into the logstream

Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

OCI-01327: failed to exclusively lock system dictionary as required by build

Cause: Other users are performing DDL operations.

Action: n/a

OCI-01328: only one build operation may occur at one time

Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

OCI-01329: unable to truncate required build table

Cause: The table may be missing, or locked by another user.

Action: This error should not occur. If it does occur and there is reason to believe that required tables are missing, then as a last resort the package dbmslmd.sql may be reinstalled. Doing so will delete all existing Logminer Dictionary data.

OCI-01330: problem loading a required build table

OCI-01331: general error while running build**OCI-01332: internal Logminer Dictionary error**

Cause: Unexpected error condition

Action: Check trace and/or alert logs

OCI-01333: failed to establish Logminer Dictionary

Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictionary. Or add_log_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have been added. The following query, run on the system which build() was run, can be helpful in identifying the required files. select DICTIONARY_BEGIN, DICTIONARY_END, name from v\$archived_log; Minimally a set of files beginning with one which has DICTIONARY_BEGIN = 'YES' and all following log files through one marked DICTIONARY_END = 'YES' must be added.

OCI-01334: invalid or missing logminer dictionary processes context

Cause: Unexpected internal error condition

Action: n/a

OCI-01335: unimplemented feature

Cause: An attempt was made to use an unimplemented feature.

Action: Remove the attempted use of the unimplemented feature. Contact Oracle Support Services to raise a request to add this feature.

OCI-01336: specified dictionary file cannot be opened

Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

OCI-01337: log file has a different compatibility version

Cause: The logfile has a different compatibility version than the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

OCI-01338: Other process is attached to LogMiner session

Cause: Can not do this when other process is attached to LogMiner session.

Action: n/a

OCI-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary

Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

OCI-01340: NLS error

Cause: Could not load NLS package.

Action: n/a

OCI-01341: Oracle LogMiner is out-of-memory.

Cause: The Oracle LogMiner session requires more system resources than are currently available.

Action: Allocate more system global area (SGA) for Oracle LogMiner.

OCI-01342: LogMiner can not resume session due to inability of staging checkpointed data

Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max_sga for the given LogMiner session and try again.

OCI-01343: Oracle LogMiner encountered a corruption in the logstream.

Cause: The log file is missing a range of system change number (SCN) values.

Action: Verify the continuity of the SCN range represented by the log files added to Oracle LogMiner.

OCI-01344: LogMiner coordinator already attached

Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

OCI-01345: Must be a LogMiner coordinator process

Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

OCI-01346: Oracle LogMiner processed redo beyond primary reset log SCN string

Cause: Oracle LogMiner detected a new branch with reset log SCN information prior to redo already mined.

Action: If running inside SQL Apply, retrieve standby reset SCN by executing DBMS_LOGSTDBY.MAP_PRIMARY_SCN (primary reset log SCN). And, execute FLASHBACK STANDBY DATABASE [<database_name>] TO BEFORE SCN *standby reset SCN*. Note: If the primary reset log SCN is 0, then intermediary log files are missing. Check the primary database for missing log files. In other scenarios, contact Oracle Support Services.

OCI-01347: Supplemental log data no longer found

Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

OCI-01349: LogMiner tracing event

OCI-01350: must specify a tablespace name

Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of DBMS_LOGMNR_D.SET_TABLESPACE to include the name of a valid tablespace.

OCI-01351: tablespace given for Logminer dictionary does not exist

Cause: The tablespace name given as a parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

OCI-01352: tablespace given for Logminer spill does not exist

Cause: The tablespace name given as the parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

OCI-01353: existing Logminer session

Cause: An attempt was made to execute DBMS_LOGMNR_D.SET_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS_LOGMNR.START_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS_LOGMNR_D.SET_TABLESPACE.

OCI-01354: Supplemental log data must be added to run this command.

Cause: Attempted to perform an operation that requires supplemental log data to run the command.

Action: Execute a command, like ALTER DATABASE ADD SUPPLEMENTAL LOG DATA, and then retry the failed command.

OCI-01355: LogMiner tablespace change is in progress.

Cause: The tables used by LogMiner were in the process of being moved to another tablespace.

Action: Wait until the move is complete and retry.

OCI-01357: LogMiner transaction queue is full

Cause: LogMiner ran out of space in the transaction queue.

Action: Increase the LogMiner transaction queue size and LogMiner system global area (SGA) parameters.

OCI-01358: LogMiner version is less than mined dictionary version

Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

OCI-01360: invalid token *string*

OCI-01361: global name mismatch

Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

OCI-01362: Specified `SQL_REDO_UNDO` parameter is invalid

Cause: The specified input value for the parameter was not a valid number.

Action: Specify a valid number and try again.

OCI-01363: Specified `COLUMN_NAME` parameter is NULL

Cause: NULL was specified for input value of parameter.

Action: Specify a non-NULL value and try again.

OCI-01364: waiting for branch at SCN *string*

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. LogMiner reader is now waiting for logs from the new branch.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files can be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

OCI-01365: waiting for new branch registration

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. The builder process is now waiting for logs from the new branch to be registered before continuing.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files may be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

OCI-01366: failed to find redo logs required for terminal apply

Cause: LogMiner failed to find all the expected log files required to complete the terminal apply, requested using the FINISH APPLY clause. During terminal apply, LogMiner does not wait for logs to be registered. It expects all logs between the starting point and the last log on any redo branch that it will or could mine through, to be present at the mining site.

Action: Examine system.logmnr_log\$ to see which logs are known to LogMiner. Then, locate or restore any missing logs and use the ALTER DATABASE REGISTER LOGICAL LOGFILE statement to register them. Alternatively, do not use the FINISH APPLY clause, but if activating a logical standby, only do this when you are sure that the missing log files can not be located and registered as this can lead to data loss.

OCI-01367: The redo log file *string* is invalid.

Cause: The specified redo log file had an invalid NEXT_CHANGE# column.

Action: Specify only completed or archived redo log names. *Params: 1) name: The redo log file name.

OCI-01368: Redo log file header mismatch for thread *string* sequence *string*.

Cause: Either the thread# or sequence# column specified in the Oracle LogMiner table did not match the thread# and sequence# in the log file header.

Action: Re-register the correct log file in the Oracle LogMiner table. *Params: 1) thread#: The thread number. 2) sequence#: The sequence number.

OCI-01369: persistent memory direct commit file not found for recovery

Cause: The persistent memory (PMEM) direct commit file required for recovery could not be found on an accessible PMEM grid disk or was found to be stale.

Action: Make the PMEM grid disk that contains the required file accessible.

OCI-01370: Specified restart SCN *string* is too old

Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

OCI-01371: Complete LogMiner dictionary not found

Cause: One or more log files containing the LogMiner dictionary was not found.

Action: Add into LogMiner all log files containing the dictionary.

OCI-01372: Insufficient processes for specified LogMiner operation

Cause: The number of processes requested by the caller can not be allocated

Action: Increase number of parallel servers allocated to the instance

OCI-01373: insufficient memory for staging persistent LogMiner session

Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR_MAX_PERSISTENT_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

Action: Increase LOGMNR_MAX_PERSISTENT_SESSIONS and restart instance.

OCI-01374: *_log_parallelism_max* greater than 1 not supported in this release

Cause: LogMiner does not mine redo records generated with *_log_parallelism_max* set to a value greater than 1.

Action: n/a

OCI-01375: Corrupt logfile *string* recovered

Cause: A corrupt logfile has been recovered by RFS

Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

OCI-01377: Invalid log file block size

Cause: An invalid value was specified in the BLOCKSIZE clause.

Action: Use correct syntax.

OCI-01378: The logical block size (*string*) of file *string* is not compatible with the disk sector size (media sector size is *string* and host sector size is *string*)

Cause: One of the following occurred: (1) An attempt was made to create a file. (2) A file was moved to disks with different sector size.

Action: Create file or move file to the proper disk.

OCI-01379: LogMiner testing event

OCI-01380: Instance *string* (thread *string*) has less than two *string* block size log files

Cause: One of the following occurred: (1) An attempt was made to switch to specified block size logs for all threads. (2) An attempt was made to open a thread.

Action: Add log files to the thread that signals error, and try again.

OCI-01381: Dropping log *string* would leave less than two log files with block size *string* for instance *string* (thread *string*)

Cause: The database was migrated to use a specified log block size. Dropping all the logs specified would leave fewer than the required two log files with the specified block size per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

OCI-01382: Thread *string* failed to open log file *string*. The log file's block size (*string*) is larger than the disk sector size (*string*)

Cause: Log file was created on bigger sector disks, and moved to smaller sector disks.

Action: Move the log file back to bigger sector disks.

OCI-01383: Thread *string* failed to open *string* block size log file '*string*' on *string* sector native-mode disks

Cause: Log file was copied from smaller sector disks to larger sector native-mode disks.

Action: Move the log file back to smaller sector disks.

OCI-01384: Cannot add file *string* due to unsupported redo compatibility *string* which is earlier than *string*.

Cause: A log file with compatibility earlier than minimum redo compatibility supported by LogMiner was added.

Action: Specify a log file produced with a redo compatibility setting supported by LogMiner.

OCI-01397: file name too long to shrink without truncation

Cause: An attempt was made to automatically convert the control file created with maximum file name size value of 512 to 256. This could result in truncation of file names leading to loss of uniqueness among file names.

Action: Shorten the file names in the system where the control file was created to conform to the maximum file name length in the current system.

OCI-01400: cannot insert NULL into (*string*)

Cause: An attempt was made to insert NULL into previously listed objects.

Action: These objects cannot accept NULL values. Reservable columns cannot accept NULL values.

OCI-01401: inserted value too large for column

Cause: The value inserted was too large for the given column.

Action: Do not insert a value greater than what the column can hold.

OCI-01402: view WITH CHECK OPTION where-clause violation

Cause: An INSERT or UPDATE statement was attempted on a view created with the CHECK OPTION. This would have resulted in the creation of a row that would not satisfy the view's WHERE clause.

Action: Examine the view's WHERE clause in the dictionary table VIEWS. If the current view does not have the CHECK OPTION, then its FROM clause must reference a second view that is defined using the CHECK OPTION. The second view's WHERE clause must also be satisfied by any INSERT or UPDATE statements. To insert the row, it may be necessary to insert it directly into the underlying table, rather than through the view.

OCI-01403: no data found

Cause: No data was found from the objects.

Action: There was no data from the objects which may be due to end of fetch.

OCI-01404: ALTER COLUMN will make an index too large

Cause: Increasing the length of a column would cause the combined length of the columns specified in a previous CREATE INDEX statement to exceed the maximum index length (255). The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields were calculated as a length of 7, character fields were calculated at their defined width, and numeric fields were length 22.

Action: The only way to alter the column is to drop the affected index. The index cannot be re-created if to do so would exceed the maximum index width.

OCI-01405: The fetched column returned a NULL value.

Cause: A query returned a row containing a NULL value for one of the selected columns, but the program variable associated with the column by the define call (the define variable) did not include an indicator variable. The define variable buffer in the program remained unchanged.

Action: To resolve the issue, perform any one of the following: - Associate an indicator variable with all define variables to record the presence of the NULL value. This technique permits your program to take a specific action if a NULL value is returned. - Use the NVL function to convert the retrieved NULL to another value, such as zero or blank. This is the simplest solution. - Revise the query to eliminate inclusion of columns that / might contain a NULL value.

OCI-01406: fetched column value was truncated

Cause: The fetched column values were truncated.

Action: Use the right data types to avoid truncation.

OCI-01407: cannot update (string) to NULL

Cause: An attempt was made to update a table column "USER"."TABLE"."COLUMN" with a NULL value. For example, if you enter: connect scott/tiger update table a (a1 number not null); insert into a values (null); Oracle returns: ORA-01407 cannot update ("SCOTT"."A"."A1") to NULL which means you cannot update the column "SCOTT"."A"."A1" to NULL.

Action: Retry the operation with a value other than NULL.

OCI-01408: such column list already indexed

Cause: A CREATE INDEX statement specified a column that was already indexed. A single column may be indexed only once. Additional indexes may be created on the column if it was used as a portion of a concatenated index, that was, if the index consists of multiple columns.

Action: Do not attempt to re-index the column, as it is unnecessary. To create a concatenated key, specify one or more additional columns in the CREATE INDEX statement.

OCI-01409: NOSORT option may not be used; rows are not in ascending order

Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split across two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

OCI-01410: The ROWID is invalid.

Cause: Either the ROWID specified had an invalid format, or one or more of the components of the ROWID did not exist.

Action: The following corrective actions may be taken: 1. Refer to DBMS_ROWID package for creation of ROWID that uses the correct format. 2. Verify that the components of the ROWID exist.

OCI-01411: cannot store the length of column in the indicator

Cause: Tried to fetch a column of size more than 64K and couldn't store the length of the column in the given indicator of size 2 bytes.

Action: Use the new bind type with call backs to fetch the long column.

OCI-01412: zero length not allowed for this datatype

Cause: The length for type 97 is 0

Action: Specify the correct length.

OCI-01413: invalid value

Cause: The user buffer bound by the user as packed decimal number contained an invalid value.

Action: Use a valid value and retry.

OCI-01414: invalid array length when trying to bind array

Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Specify a valid length.

OCI-01415: Query contains too many distinct aggregate functions.

Cause: The query contains more than 255 distinct aggregate functions.

Action: Reduce the number of distinct aggregate functions.

OCI-01416: two tables cannot be outer-joined to each other

Cause: Two tables in a join operation specified an outer join with respect to each other. If an outer join was specified on one of the tables in a join condition, it may not be specified on the other table.

Action: Remove the outer join specification (+) from one of the tables, then retry the operation.

OCI-01417: a table may be outer joined to at most one other table

Cause: $a.b (+) = b.b$ and $a.c (+) = c.c$ is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

OCI-01418: specified index does not exist

Cause: An ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement specified the name of an index that did not exist. Only existing indexes can be altered, dropped, or validated. Existing indexes may be listed by querying the data dictionary.

Action: Specify the name of an existing index in the ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement.

OCI-01419: datdts: illegal format code

Cause: An attempt was made to use an incorrect format.

Action: Inspect the format, correct it if necessary, then retry the operation.

OCI-01420: datstd: illegal format code

Cause: An attempt was made to use an invalid format.

Action: Inspect the format, correct it if necessary, then retry the operation.

OCI-01421: datrnd/datrn: illegal precision specifier

Cause: An attempt was made to use an invalid precision specifier.

Action: Inspect the precision specifier, correct it if necessary, then retry the operation.

OCI-01422: exact fetch returned more than the requested number of rows string

Cause: The cause is one of the following: 1. A SELECT statement was executed in the exact fetch mode and returned more rows than requested. 2. In PL/SQL, a SELECT INTO statement returned more than one row. 3. In PL/SQL, a DML RETURNING INTO statement returned more than one row.

Action: Choose the action corresponding to the cause as numbered: 1. Increase the number of rows requested to accommodate the number of rows returned; or omit the exact fetch mode on the fetch call. 2. In PL/SQL, use a FOR loop to process the rows. 3. In PL/SQL, use

BULK COLLECT to return values into a table. *Params: 1) requested_rows: The number of requested rows.

OCI-01423: error encountered while checking for extra rows in exact fetch

Cause: An error was encountered during the execution of an exact fetch. This message will be followed by more descriptive messages.

Action: See the following error and take appropriate action.

OCI-01424: missing or illegal character following the escape character

Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, '%', or '_'.

Action: Remove the escape character or specify the missing character.

OCI-01425: escape character must be character string of length 1

Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

OCI-01426: numeric overflow

Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

OCI-01427: single-row subquery returns more than one row

Cause: The outer query must use one of the keywords ANY, ALL, IN, or NOT IN to specify values to compare because the subquery returned more than one row.

Action: Use ANY, ALL, IN, or NOT IN to specify which values to compare or reword the query so only one row is retrieved.

OCI-01428: Argument *string* is out of range.

Cause: An invalid value for a mathematical function argument was specified. For example: SELECT SQRT(-1) "Square Root" FROM DUAL.

Action: Check the Oracle documentation. Find the valid arguments, correct the request, and retry the operation.

OCI-01429: Index-Organized Table: no data segment to store overflow row-pieces

Cause: No overflow segment defined.

Action: Add overflow segment.

OCI-01430: column being added already exists in table

Cause: An ALTER TABLE ADD statement specified the name of a column that was already in the table. All column names must be unique within a table.

Action: Specify a unique name for the new column, then re-execute the statement.

OCI-01431: internal inconsistency in GRANT command

Cause: An internal error occurred while attempting to execute a GRANT statement.

Action: Contact Oracle Support Services.

OCI-01432: public synonym to be dropped does not exist

Cause: The synonym specified in DROP PUBLIC SYNONYM was not a valid public synonym. It may be a private synonym.

Action: Correct the synonym name or use DROP SYNONYM if the synonym is not public.

OCI-01433: synonym to be created is already defined

Cause: A CREATE SYNONYM statement specified a synonym name that was the same as an existing synonym, table, view, or cluster. Synonyms may not have the same name as any other synonym, table, view, or cluster available to the user creating the synonym.

Action: Specify a unique name for the synonym, then re-execute the statement.

OCI-01434: private synonym to be dropped does not exist

Cause: A DROP SYNONYM statement specified a synonym that did not exist. Existing synonym names may be listed by querying the data dictionary.

Action: Specify the name of an existing synonym in the DROP SYNONYM statement.

OCI-01435: user does not exist

Cause: This message is caused by any reference to a non-existent user. For example, it occurs if a SELECT, GRANT, or REVOKE statement specifies a username that did not exist. Only a GRANT CONNECT statement may specify a new username. All other GRANT and REVOKE statements must specify existing usernames. If specified in a SELECT statement, usernames must already exist.

Action: Specify only existing usernames in the SELECT, GRANT, or REVOKE statement or ask the database administrator to define the new username.

OCI-01436: CONNECT BY loop in user data

Cause: The condition specified in a CONNECT BY clause caused a loop in the query, where the next record to be selected was a descendent of itself. When this happens, there could be no end to the query.

Action: Check the CONNECT BY clause and remove the circular reference.

OCI-01437: cannot have join with CONNECT BY

Cause: A join operation was specified with a CONNECT BY clause. If a CONNECT BY clause was used in a SELECT statement for a tree-structured query, only one table may be referenced in the query.

Action: Remove either the CONNECT BY clause or the join operation from the SQL statement.

OCI-01438: value *string* greater than specified precision *string* for column *string*

Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column. For example, for a column defined to be NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the precision defined for the numeric column. You can also use the MODIFY option with the ALTER TABLE command to redefine the precision.
*Params: 1) value: The numeric value being inserted or updated. 2) precision_scale: The specified precision and scale for the column into which the value is being inserted or

updated. 3) column: The name of the column that the value was being inserted into or updated.

OCI-01439: column to be modified must be empty to change datatype

Cause: An ALTER TABLE MODIFY statement attempted to change the datatype of a column containing data. A column whose datatype was to be altered must contain only NULL values.

Action: To alter the datatype, first set all values in the column to NULL.

OCI-01440: column to be modified must be empty to decrease precision or scale

Cause: An ALTER TABLE MODIFY statement attempted to decrease the scale or precision of a numeric column containing data. In order to decrease either of these values, the column must contain only NULL values. An attempt to increase the scale without also increasing the precision caused this message.

Action: Set all values in the column to NULL before decreasing the numeric precision or scale. If attempting to increase the scale, increase the precision in accordance with the scale or set all values in the column to NULL first.

OCI-01441: cannot decrease column length because some value is too big

Cause: An ALTER TABLE MODIFY statement attempted to decrease the size of a character field containing data. A column whose maximum size was decreased must contain only NULL values.

Action: Set all values in column to NULL before decreasing the maximum size.

OCI-01442: column to be modified to NOT NULL is already NOT NULL

Cause: An ALTER TABLE MODIFY statement attempted to change a column specification unnecessarily, from NOT NULL to NOT NULL.

Action: No action required.

OCI-01443: internal inconsistency; illegal datatype in resultant view column

Cause: An internal error occurred in referencing a view.

Action: Contact Oracle Support Services.

OCI-01444: internal inconsistency; internal datatype maps to invalid external type

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

OCI-01445: cannot select ROWID from, or sample, a join view without a key-preserved table

Cause: A SELECT statement attempted to select ROWIDs from a view derived from a join operation. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

OCI-01446: cannot select ROWID from, or sample, a view with DISTINCT, GROUP BY, etc.

Cause: A SELECT statement attempted to select ROWIDs from a view containing columns derived from functions or expressions. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

OCI-01447: ALTER TABLE does not operate on clustered columns

Cause: An ALTER TABLE MODIFY statement specified a column used to cluster the table. Clustered columns may not be altered.

Action: To alter the column, first re-create the table in non-clustered form. The column's size can be increased at the same time.

OCI-01448: index must be dropped before changing to desired type

Cause: An ALTER TABLE MODIFY statement attempted to change an indexed character column to a LONG column. Columns with the datatype LONG may not be indexed, so the index must be dropped before the modification.

Action: Drop all indexes referencing the column before changing its datatype to LONG.

OCI-01449: Column contains NULL values. Cannot alter column to NOT NULL.

Cause: An ALTER TABLE MODIFY statement attempted to change the column definition to NOT NULL when NULL values were present in the column.

Action: Set all NULL values in the column to values other than NULL before attempting the ALTER TABLE MODIFY statement. You must not have NULL values in a column you want to modify to NOT NULL.

OCI-01450: maximum key length (string) exceeded

Cause: The combined length of all the columns specified in a CREATE INDEX statement exceeded the maximum index length. The maximum index length varies by operating system. The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields have a length of 7, character fields have their defined length, and numeric fields have a length of 22. Numeric length = (precision/2) + 1. If negative, add +1.

Action: Select columns to be indexed so the total index length does not exceed the maximum index length for the operating system. See also your operating system-specific Oracle documentation.

OCI-01451: column to be modified to NULL cannot be modified to NULL

Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

OCI-01452: cannot CREATE UNIQUE INDEX; duplicate keys found

Cause: A CREATE UNIQUE INDEX statement specified one or more columns that currently contained duplicate values. All values in the indexed columns must be unique by row to create a UNIQUE INDEX.

Action: If the entries need not be unique, remove the keyword UNIQUE from the CREATE INDEX statement, then re-execute the statement. If the entries must be unique, as in a primary key, then remove duplicate values before creating the UNIQUE index.

OCI-01453: SET TRANSACTION must be first statement of transaction

Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

OCI-01454: cannot convert column into numeric datatype

Cause: A non-numeric value could not be converted into a number value.

Action: Check the value to make sure it contains only numbers, a sign, a decimal point, and the character "E" or "e", then retry the operation.

OCI-01455: converting column overflows integer datatype

Cause: The converted form of the specified expression was too large for the specified datatype.

Action: Define a larger datatype or correct the data.

OCI-01456: may not perform insert, delete, update operation inside a READ ONLY transaction

Cause: A non-DDL insert, delete, update or select for update operation was attempted.

Action: commit (or rollback) transaction, and re-execute

OCI-01457: converting column overflows decimal datatype

Cause: The converted form of the specified expression was too large for the specified type. The problem also occurred in COBOL programs when using COMP-3 in the picture clause, which was acceptable to the Pro*COBOL Precompiler and to COBOL but results in this error.

Action: Define a larger datatype or correct the data.

OCI-01458: invalid length inside variable character string

Cause: An attempt was made to bind or define a variable character string with a buffer length less than the minimum requirement.

Action: Increase the buffer size or use a different type.

OCI-01459: invalid length for a variable length character string value in bind buffer

Cause: The buffer length was less than the minimum required or greater than its length at bind time.

Action: Ensure that the buffer is large enough to hold the string of the size specified.

OCI-01460: unimplemented or unreasonable conversion requested

Cause: The requested format conversion was not supported.

Action: Remove the requested conversion from the SQL statement. Check the syntax for the TO_CHAR, TO_DATE, and TO_NUMBER functions to see which conversions are supported.

OCI-01461: The value at bind position *string* exceeded the maximum VARCHAR2 length.

Cause: An attempt was made to use a bind value whose length exceeded the maximum VARCHAR2 length allowed for the database.

Action: - If the MAX_STRING_SIZE database parameter is set to STANDARD, consider changing it to EXTENDED. - If it is already set to EXTENDED, consider changing the data type of the column to CLOB. *Params: 1) variable_position: The position of the bind variable with the value that exceeds the maximum VARCHAR2 length.

OCI-01462: cannot insert string literals longer than 4000 characters

Cause: The longest literal supported by Oracle consisted of 4000 characters.

Action: Reduce the number of characters in the literal to 4000 characters or fewer or use the VARCHAR2 or LONG datatype to insert strings exceeding 4000 characters.

OCI-01463: cannot modify column datatype with current constraint(s)

Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vice versa.

Action: Remove the constraint(s) or do not perform the offending operation.

OCI-01464: circular grant (granting to grant ancestor) of table or view

Cause: The user in the TO clause of the GRANT statement had already been GRANTED privileges on this table.

Action: Do not GRANT privileges on a table to the user who originally GRANTED privileges on that table. The statement in error is probably unnecessary.

OCI-01465: invalid hex number

Cause: In an UPDATE statement following a SELECT FOR UPDATE, part of the ROWID contained invalid characters. ROWID must be expressed in the proper and expected format for ROWID and within quotes.

Action: Enter the ROWID just as it was returned in the SELECT FOR UPDATE.

OCI-01466: unable to read data - table definition has changed

Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

OCI-01467: sort key too long

Cause: A DISTINCT, GROUP BY, ORDER BY, or SET operation requires a sort key longer than that supported by Oracle. Either too many columns or too many group functions were specified in the SELECT statement.

Action: Reduce the number of columns or group functions involved in the operation.

OCI-01468: a predicate may reference only one outer-joined table

Cause: A predicate in the WHERE clause had two columns from different tables with "(+)".

Action: Change the WHERE clause so that each predicate has a maximum of one outer-join table.

OCI-01469: PRIOR can only be followed by a column name

Cause: Attempting to specify "PRIOR *something*" where *something* is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

OCI-01470: In-list iteration does not support mixed operators.

Cause: Constants of different types were specified in an in-list.

Action: Use constants of same type for in-lists.

OCI-01471: cannot create a synonym with same name as object

Cause: An attempt was made to create a private synonym with the same name as the object to which it refers. This error typically occurred when a user attempts to create a private synonym with the same name as one of their objects.

Action: Choose a different synonym name or create the synonym under a different username.

OCI-01472: cannot use CONNECT BY on view with DISTINCT, GROUP BY, etc.

Cause: CONNECT BY could not be used on a view where there was not a correspondence between output rows and rows of the underlying table.

Action: Remove the DISTINCT or GROUP BY from the view or move the CONNECT BY clause into the view.

OCI-01473: Subqueries cannot be specified in CONNECT BY clause.

Cause: An attempt was made to specify a subquery in a CONNECT BY clause.

Action: Remove the subquery or move it to the WHERE clause.

OCI-01474: cannot have START WITH or PRIOR without CONNECT BY

Cause: START WITH and PRIOR are meaningful only in connection with CONNECT BY.

Action: Check the syntax for the SQL statement and add a CONNECT BY clause, if necessary.

OCI-01475: must reparse cursor to change bind variable datatype

Cause: After executing a statement, an attempt was made to rebind a bind variable with a datatype different from that of the original bind.

Action: Re-parse the cursor before rebinding with a different datatype.

OCI-01476: divisor is equal to zero

Cause: An expression attempted to divide by zero.

Action: Correct the expression, then retry the operation.

OCI-01477: user data area descriptor is too large

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

OCI-01478: array bind may not include any LONG columns

Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

OCI-01479: last character in the buffer is not Null

Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

OCI-01480: trailing null character is missing from SQLT_STR type bind data

Cause: A bind variable of type SQLT_STR (null-terminated string) did not contain the terminating null character in its buffer.

Action: Add a null character at the end of the string.

OCI-01481: invalid number format model

Cause: The user is attempting to either convert a number to a string via TO_CHAR or a string to a number via TO_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

OCI-01482: unsupported character set

Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

OCI-01483: invalid length for DATE or NUMBER bind variable

Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

OCI-01484: arrays can only be bound to PL/SQL statements

Cause: You tried to bind an array to a non-PL/SQL statement.

Action: Rewrite the offending code being careful to bind arrays only to PL/SQL statements.

OCI-01485: compile bind length different from execute bind length

Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: Ensure that the buffer size is sufficiently large to contain the array plus two bytes for the buffer length.

OCI-01486: size of array element is too large

Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: Find a way to convert or truncate the data value so that its length is acceptable.

OCI-01487: packed decimal number too large for supplied buffer

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

OCI-01488: invalid nibble or byte in the input data

Cause: An impossible request for decimal to an Oracle number conversion was made.

Action: This conversion cannot be performed.

OCI-01489: result of string concatenation is too long

Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

OCI-01490: invalid ANALYZE command

Cause: Incorrect syntax specified

Action: Retry the command

OCI-01491: CASCADE option not valid

Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

OCI-01492: LIST option not valid

Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

OCI-01493: invalid SAMPLE size specified

Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

OCI-01494: invalid SIZE specified

Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

OCI-01495: Chain row table not found.

Cause: The specified chain row table does not exist or the user does not have the proper privileges to access the table.

Action: Specify a chain row table that exists, the user has privileges to access, or both. Retry the statement.

OCI-01496: specified chain row table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

OCI-01497: illegal option for ANALYZE CLUSTER

Cause: The FOR COLUMNS *column-list* clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

OCI-01498: block check failure - see trace file

Cause: An error occurred while checking a block with the ANALYZE command.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAXxxx.TRC. It is found in the directory specified by the initialization parameter USER_DUMP_DEST. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

OCI-01499: table/index cross reference failure - see trace file

Cause: An error occurred when validating an index or a table using the ANALYZE command. One or more entries did not point to the appropriate cross-reference.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAXxxx.TRC. It is found in the directory specified by the USER_DUMP_DEST initialization parameter. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

OCI-01500 to OCI-02098

OCI-01500: failure in getting date/time

Cause: During create database or alter tablespace, there was a failure in getting the date and time.

Action: Contact your customer support representative.

OCI-01501: CREATE DATABASE failed

Cause: An error occurred during create database

Action: See accompanying errors.

OCI-01502: index '*string.string*' or partition of such index is in unusable state

Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

OCI-01503: CREATE CONTROLFILE failed

Cause: An error occurred during CREATE CONTROLFILE

Action: See accompanying errors.

OCI-01504: database name '*string*' does not match initialization parameter DB_NAME '*string*'

Cause: The database name during create or mount did not match the name specified for the DB_NAME initialization parameter.

Action: Correct or omit one of the two names.

OCI-01505: error in adding log files

Cause: During create or alter database, error(s) occurred when adding new log files.

Action: Check error stack for detailed error information.

OCI-01506: missing or illegal database name

Cause: No db_name INIT.ORA parameter was specified.

Action: The database name must be given in the db_name INIT.ORA parameter.

OCI-01507: database not mounted

Cause: A command was attempted that requires the database to be mounted.

Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

OCI-01508: cannot create database; error in file 'string' at line string

Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

OCI-01509: specified name 'string' does not match actual 'string'

Cause: The database name specified in the ALTER DATABASE statement does not match the name of the database that is currently mounted.

Action: Correct the spelling of the database name or DISMOUNT the mounted database.

OCI-01510: error in deleting log files

Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

OCI-01511: error in renaming log/data files

Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

OCI-01512: error renaming log file string - new file string not found

Cause: An attempt to change a log file's name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

OCI-01513: invalid current time returned by operating system

Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

OCI-01514: error in log specification: no such log

Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

OCI-01515: error dropping log group string: no such log

Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

OCI-01516: nonexistent log file, data file, or temporary file "string" in the current container

Cause: An attempt was made to use ALTER DATABASE to rename a log file, data file, or temporary file; or to change attributes of a data file or temporary file (for example, resize, autoextend, online or offline); or to re-create or move a data file. The attempt failed because the specified file is not known to the database's control file or the current container or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V\$ table for a list of possible files.

OCI-01517: log member: 'string'

Cause: Used to print member names

Action: See top level error for information

OCI-01518: CREATE DATABASE must specify more than one log file

Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

OCI-01519: error while processing file 'string' near line string

Cause: The CREATE DATABASE statement encountered a problem while processing the specified file. The specified file is invalid.

Action: Validate the file specified in the message and retry the CREATE DATABASE statement. If the problem persists, contact Oracle Support Services.

OCI-01520: number of data files to add (string) exceeds limit of string

Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

OCI-01521: error in adding data files

Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

OCI-01522: file 'string' to be renamed does not exist

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

OCI-01523: cannot rename data file to 'string' - file already part of database

Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

OCI-01524: cannot create data file as 'string' - file already part of database

Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

OCI-01525: error in renaming data files

Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

OCI-01526: error in opening file 'string'

Cause: CREATE DATABASE was not able to open the specified file.

Action: Make sure your CREATE DATABASE command only contains references to files and file locations for which the OS user and the Oracle Installer group (usually oinstall) has permissions for reading and writing.

OCI-01527: error while reading file

Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

OCI-01528: EOF while processing SQL statement

Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

OCI-01529: error closing file '*string*'

Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry the system installation procedure or contact Oracle Support Services.

OCI-01530: a database already mounted by the instance

Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

OCI-01531: a database already open by the instance

Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

OCI-01532: cannot create database; instance being started elsewhere

Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

OCI-01533: cannot rename file '*string*'; file does not belong to tablespace

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

OCI-01534: rollback segment '*string*' doesn't exist

Cause: During the ALTER or DROP ROLLBACK SEGMENT DDLs, or when modifying the parameters: ROLLBACK_SEGMENTS, _OFFLINE_ROLLBACK_SEGMENTS, and _CORRUPTED_ROLLBACK_SEGMENTS, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

OCI-01535: rollback segment '*string*' already exists or given name has prefix _SYSSMU

Cause: Specified rollback segment already exists or given name starts with _SYSSMU.

Action: Use a different name. Note that _SYSSMU is an illegal prefix to an RBU segment.

OCI-01536: space quota exceeded for tablespace '*string*'

Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

OCI-01537: cannot add file '*string*' - file already part of database

Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

OCI-01538: failed to acquire any rollback segment

Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter `rollback_segments_required`, then startup in shared mode

OCI-01539: tablespace '*string*' is not online

Cause: Failed to either make a tablespace read-only or offline because it was not online. A tablespace must be online before it could become read-only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read-only.

OCI-01540: tablespace '*string*' is not offline

Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

OCI-01541: system tablespace cannot be brought offline; shut down if necessary

Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

OCI-01542: tablespace '*string*' is offline, cannot allocate space in it

Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

OCI-01543: tablespace '*string*' already exists

Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

OCI-01544: cannot drop system rollback segment

Cause: Tried to drop system rollback segment

Action: None

OCI-01545: rollback segment '*string*' specified not available

Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in `_corrupted_rollback_segments` parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the `_corrupted_rollback_segments` parameter.

OCI-01546: tablespace contains active rollback segment '*string*'

Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read-only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read-only

OCI-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below

Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

OCI-01548: active rollback segment '*string*' found, terminate dropping tablespace

Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

OCI-01549: tablespace not empty, use INCLUDING CONTENTS option

Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

OCI-01550: cannot drop system tablespace

Cause: Tried to drop system tablespace

Action: None

OCI-01551: extended rollback segment, pinned blocks released

Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

OCI-01552: cannot use system rollback segment for non-system tablespace '*string*'

Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter `rollback_segments` to acquire private rollback segment. If this is a clone database being used for tablespace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

OCI-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated

Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

OCI-01554: transaction concurrency limit reached reason:*string* params:*string*, *string*

Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters `transactions`, `rollback_segments` or `rollback_segments_required`, then startup again.

OCI-01555: snapshot too old: rollback segment number *string* with name "*string*" too small

Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase `undo_retention` setting. Otherwise, use larger rollback segments

OCI-01556: MINEXTENTS for rollback segment must be greater than 1

Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

OCI-01557: rollback segment extents must be at least *string* blocks

Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

OCI-01558: out of transaction ID's in rollback segment *string*

Cause: All the available transaction id's have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id's.

OCI-01559: MAXEXTENTS for rollback segment must be greater than 1

Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

OCI-01560: LIKE pattern contains partial or illegal character

Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

OCI-01561: failed to remove all objects in the tablespace specified

Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

OCI-01562: failed to extend rollback segment number *string*

Cause: Failure occurred when trying to extend rollback segment

Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintenance. Use the alter rollback segment offline command to take the rollback segment offline.

OCI-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC

Cause: Did not use the keyword PUBLIC to identified public rollback segment

Action: Use the keyword PUBLIC when identifying public rollback segment

OCI-01564: rollback segment is not PUBLIC

Cause: The rollback segment segment identified is not public

Action: Do not use the keyword PUBLIC when identifying private rollback segment

OCI-01565: Error identifying file *string*.

Cause: An error occurred while trying to identify the specified file.

Action: Check that the specified file exists and is accessible.

OCI-01566: file specified more than once in ALTER DATABASE

Cause: The list of files supplied to the command contained at least one duplicate.

Action: Remove the duplicate file specification and retry.

OCI-01567: dropping log *string* would leave less than 2 log files for instance *string* (thread *string*)

Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

OCI-01568: cannot set space quota on PUBLIC

Cause: Trying to set space quota on a tablespace for PUBLIC.

Action: If trying to grant system-wide or tablespace-wide space privileges to all users, use GRANT RESOURCE [ON *tablespace*] TO PUBLIC.

OCI-01569: insufficient space in data file for database creation

Cause: The data file specified while creating the database was too small to hold the system dictionary tables.

Action: Re-create the database by specifying a larger data file, or add more data files.

OCI-01570: MINEXTENTS must be no larger than the *string* extents currently allocated

Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

Action: Specify a smaller MINEXTENTS value.

OCI-01571: redo version *string* incompatible with ORACLE version *string*

Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

OCI-01572: rollback segment '*string*' cannot be brought online, *string* extents exceeded

Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

OCI-01573: shutting down instance, no further change allowed

Cause: Some process tries to make changes while the db is being shutdown

Action: None

OCI-01574: maximum number of concurrent transactions exceeded

Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter 'transactions' , and then restart the system.

OCI-01575: timeout waiting for space management resource

Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

OCI-01576: The instance *string* is not enabled

Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

OCI-01577: cannot add log file '*string*' - file already part of database

Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

OCI-01578: ORACLE data block corrupted (file # *string*, block # *string*)

Cause: The data block indicated was corrupt. This was a physical corruption, also called a media corruption. The cause is unknown but is most likely external to the database. If ORA-26040 is also signaled, the corruption is due to NOLOGGING or UNRECOVERABLE operations.

Action: The general method to repair a media corrupt block is to restore a backup and recover the backup. For databases in ARCHIVELOG mode, use block media recovery or media recovery. In some situations, you can also drop the segment and re-create it. For example, you can drop an index and re-create the index.

OCI-01579: write error occurred during recovery

Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

OCI-01580: error creating control backup file *string*

Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

OCI-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated

Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rolled back by the system, no more extension will be possible until the next extent is freed up by rolling back or committing other transactions.

OCI-01582: unable to open control file for backup

Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

OCI-01583: unable to get block size of control file to be backed up

Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

OCI-01584: unable to get file size of control file to be backed up

Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

OCI-01585: error identifying backup file *string*

Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

OCI-01586: database must be mounted EXCLUSIVE and not open for this operation

Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

OCI-01587: error during control file backup file copy**OCI-01588: must use RESETLOGS option for database open**

Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

OCI-01589: must use RESETLOGS or NORESETLOGS option for database open

Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

OCI-01590: number of segment free list (*string*) exceeds maximum of *string*

Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

OCI-01591: lock held by in-doubt distributed transaction *string*

Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending_trans\$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

OCI-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format

Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

OCI-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)

Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

OCI-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed

Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rolled back by the system; increase the optimal size of the rollback segment.

OCI-01595: error freeing extent (*string*) of rollback segment (*string*)

Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

OCI-01596: cannot specify system in *string* parameter

Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

OCI-01597: cannot alter system rollback segment online or offline

Cause: Tried to online or offline the system rollback segment

Action: None

OCI-01598: rollback segment '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

OCI-01599: failed to acquire rollback segment (*string*), cache space is full

Cause: the amount statically allocated is not enough based on max_rollback_segments parameter.

Action: For now take another rollback segment offline or increase the parameter max_rollback_segments

OCI-01600: at most one "*string*" in clause "*string*" of *string*

Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

OCI-01601: illegal bucket size in clause "*string*" of *string*

Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

OCI-01602: The PDB *string* is in the wrong state for a role change to *string*.

Cause: A role change was requested for a pluggable database (PDB) that was either already in the requested state or, was not a member of a Data Guard configuration.

Action: Request the correct role change or add the PDB into a Data Guard configuration.

OCI-01603: illegal grouping size in clause "*string*" of *string*

Cause: The grouping size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

OCI-01604: illegal number range in clause "*string*" of *string*

Cause: The number range was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

OCI-01605: missing numbers in clause "*string*" of *string*

Cause: The numbers were missing for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

OCI-01606: parameter not identical to that of another mounted instance

Cause: A parameter was different on two instances.

Action: Modify the initialization parameter and restart.

OCI-01607: cannot add logfile to the specified instance

Cause: The limit on the number of instances supported by the control file has been reached.

Action: Use an instance already known to the control file. Alternatively resize the thread, the checkpoint progress or both record sections of the control file.

OCI-01608: cannot bring rollback segment '*string*' online, its status is (*string*)

Cause: Could have been brought online before by DBA or left as a result of process crash.

Action: Check the status of rollback segment in `undo$` or `dba_rollback_segs`

OCI-01609: log *string* is the current log for thread *string* - cannot drop members

Cause: A member of the current log for a thread cannot be dropped.

Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

OCI-01610: recovery using the BACKUP CONTROLFILE option must be done

Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.

Action: Perform recovery using the BACKUP CONTROLFILE option.

OCI-01611: thread number *string* is invalid - must be between 1 and *string*

Cause: A thread number in a command is greater than the number of threads supported by the control file.

Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

OCI-01612: instance *string* (thread *string*) is already enabled

Cause: An attempt was made to enable a thread that is already enabled.

Action: Either use this thread or enable another thread.

OCI-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.

Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

OCI-01614: instance *string* (thread *string*) is busy - cannot enable

Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

OCI-01615: instance *string* (thread *string*) is mounted - cannot disable

Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleanly using the thread.

OCI-01616: instance *string* (thread *string*) is open - cannot disable

Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

OCI-01617: cannot mount: *string* is not a valid thread number

Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

OCI-01618: redo thread *string* is not enabled - cannot mount

Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

OCI-01619: thread *string* is mounted by another instance

Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

OCI-01620: no public threads are available for mounting

Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

OCI-01621: cannot rename member of current log if database is open

Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

OCI-01622: thread number must be specified - default not specific

Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

OCI-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop

Cause: A thread's current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

OCI-01624: log *string* needed for crash recovery of instance *string* (thread *string*)

Cause: A log cannot be dropped or cleared until the thread's checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

OCI-01625: rollback segment '*string*' does not belong to this instance

Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: Take only those rollback segments offline that belong to the current instance. To take the rollback segment offline, connect to the instance containing it.

OCI-01626: rollback segment number '*string*' cannot handle more transactions

Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

OCI-01627: rollback segment number '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

OCI-01628: max # extents (*string*) reached for rollback segment *string*

Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

OCI-01629: max # extents (*string*) reached saving undo for tablespace *string*

Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

OCI-01630: max # extents (*string*) reached in temp segment in tablespace *string*

Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

OCI-01631: max # extents (*string*) reached in table *string.string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

OCI-01632: max # extents (*string*) reached in index *string.string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

OCI-01633: Real Application Clusters Option needed for this operation

Cause: System doesn't have Real Application Clusters configured

Action: Obtain Real Application Clusters option

OCI-01634: rollback segment number '*string*' is about to go offline

Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

OCI-01635: rollback segment #*string* specified not available

Cause: (same as 1545)

Action: (same as 1545)

OCI-01636: rollback segment '*string*' is already online

Cause: The instance is trying to online an already online RS

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

OCI-01637: rollback segment '*string*' is being used by another instance (#*string*)

Cause: The instance is trying to online a RS already in use by another instance

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

OCI-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database

Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the `recovery_compatible` parameter. If this happens when no `recovery_compatible` parameter has been specified then set it to the current software release.

OCI-01639: instance *string* has no thread assigned to it

Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

OCI-01640: cannot make tablespace read-only with changes by in-doubt transactions

Cause: An attempt was made to alter a tablespace read-only while there were changes in the tablespace made by in-doubt distributed transactions. The in-doubt transactions must commit or rollback to ensure that there is no undo for a tablespace before it can be made read-only.

Action: Any in-doubt transactions that made changes to the tablespace must be resolved.

OCI-01641: tablespace '*string*' is not online - cannot add data file

Cause: Attempting to add a datafile to a tablespace that has been set to read-only or offline.

Action: Make the tablespace online and read write then add the datafile.

OCI-01642: begin backup not needed for read-only tablespace '*string*'

Cause: Attempting to begin or end a backup for a tablespace that has been set to read-only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

OCI-01643: system tablespace can not be made read-only

Cause: Attempting to set the system tablespace to read-only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

OCI-01644: tablespace '*string*' is already read-only

Cause: Attempting to make tablespace read-only that is already read-only.

Action: Leave tablespace read-only, or make read write then make read-only again.

OCI-01645: previous attempt to make read write is half complete

Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

OCI-01646: tablespace '*string*' is not read-only - cannot make read write

Cause: Attempting to make a tablespace read write that is not read-only. It may be either online or offline.

Action: Leave tablespace read write.

OCI-01647: tablespace '*string*' is read-only, cannot allocate space in it

Cause: Tried to allocate space in a read-only tablespace

Action: Create the object in another tablespace

OCI-01648: Log *string* is the current log of disabled instance *string* (thread *string*).

Cause: An attempt to enable the thread failed and a log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log cannot be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

OCI-01649: operation not allowed with backup control file

Cause: An attempt was made to run a command on a control file which was a restored backup control file. The command is not allowed on restored backup control files.

Action: Wait until the database is started, and retry the operation.

OCI-01650: unable to extend rollback segment *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01651: unable to extend save undo segment by *string* for tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

OCI-01652: unable to grow *string string* in tablespace *string* by *stringstring* during operation with SQL ID : *string*, temp space used by session : *string* (MB)

Cause: In order to execute the operation, additional space is needed in the tablespace but the system is unable to increase the tablespace size. This can happen if the tablespace size is small. In a temporary tablespace, this can also happen because of concurrent use of the tablespace.

Action: If the failure is in a temporary tablespace, then retry the operation in case any concurrent operations have released space. For failure in permanent and temporary tablespaces, the size of the tablespace can be increased using one of the following methods: - Resize the tablespace using either the ALTER DATABASE RESIZE or ALTER TABLESPACE ADD statement. - Enable AUTOEXTEND for the tablespace. - If AUTOEXTEND is already enabled, then: * If MAXSIZE is set to UNLIMITED, increase the storage media where the tablespace is located. * Increase MAXSIZE. - If it is a BIGFILE tablespace, then use the ALTER TABLESPACE RESIZE statement to increase the tablespace size. *Params: 1) segment_type: The type of the segment that ran into failure. The type may be one of temporary, table, table partition, table subpartition, index, index partition, index subpartition, LOB, LOB partition, or LOB subpartition. 2) object_name: The object name if the failure is in an object that is already created. 3) tablespace_name: The name of the tablespace that was supposed to be extended during the operation. 4) storage_allocated: The number of bytes in KB, MB, or GB in which the allocation was attempted. 5) storage_units: The unit of bytes in KB, MB, or GB in which space was allocated. 6) sql_id: SQL ID of the session for

which error was received. 7) Temp Space Allocated: Temporary space currently used by the session.

OCI-01653: unable to increase tablespace *string* by *stringstring* during insert or update on table *string.string*

Cause: In order to execute the insert or update operation, additional space is needed in the tablespace. However, the system is unable to increase the tablespace.

Action: Depending on the tablespace attributes and storage strategy, take one of the following actions: - Resize the tablespace using either the ALTER DATABASE DATAFILE RESIZE or ALTER TABLESPACE ADD DATAFILE statement. - Enable AUTOEXTEND for the tablespace. - If AUTOEXTEND is already enabled: * And MAXSIZE is set to UNLIMITED, increase the storage media where the tablespace is located. * Increase MAXSIZE. - If it is a BIGFILE tablespace, use the ALTER TABLESPACE RESIZE statement to increase the tablespace. *Params: 1) tablespace_name: The name of the tablespace that is supposed to be extended during the operation. 2) storage_allocated: The number of bytes in KB, MB, or GB for the attempted allocation. 3) storage_units: The unit of bytes in KB, MB, or GB in which storage is allocated. 4) schema_name: The schema name of table. 5) table_name: The table name.

OCI-01654: unable to extend index *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01655: unable to extend cluster *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01656: max # extents (*string*) reached in cluster *string.string*

Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

OCI-01657: invalid SHRINK option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

OCI-01658: unable to create INITIAL extent for *string* by *string* blocks in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

OCI-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

OCI-01660: tablespace '*string*' is already permanent

Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

OCI-01661: tablespace '*string*' is already temporary

Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

OCI-01662: tablespace '*string*' is non-empty and cannot be made temporary

Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

OCI-01663: the contents of tablespace '*string*' is constantly changing

Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

OCI-01664: Transaction which has expanded the Sort Segment has aborted

Cause: Internal Error.

Action: Contact Oracle Support.

OCI-01665: control file is not a standby control file

Cause: An attempt was made to mount, recover, or activate either a standby multitenant container database (CDB) without a standby control file, or a pluggable database (PDB) that was not created as an Oracle Data Guard standby database.

Action: When the error is raised for an action against a CDB, create a standby control file before using the CDB as a standby database. When the error is raised for an action against a PDB, check and correct the PDB context so that it is only used against a PDB created as a standby database.

OCI-01666: control file is for a standby database

Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

OCI-01667: cannot add any more tablespaces: limit of *string* exceeded

Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

OCI-01668: standby database requires DROP option for offline of data file

Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

OCI-01669: standby database control file not consistent

Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

OCI-01670: new datafile *string* needed for standby database recovery

Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

OCI-01671: control file is a backup, cannot make a standby control file

Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

OCI-01672: control file may be missing files or have extra ones

Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

OCI-01673: data file *string* has not been identified

Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

OCI-01674: data file *string* is an old incarnation rather than current file

Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

OCI-01675: max_commit_propagation_delay inconsistent with other instances

Cause: The max_commit_propagation_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max_commit_propagation_delay.

OCI-01676: standby file name conversion of '*string*' exceeds maximum length of *string*

Cause: When the given file name was converted to the name used for the standby database, the converted name was bigger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to convert to a valid file name.

OCI-01677: standby file name conversion parameters differ from other instance

Cause: The DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameters were not the same as in other instances that already had the database mounted.

Action: Change initialization parameters DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to match other instances.

OCI-01678: parameter *string* must be pairs of pattern and replacement strings

Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

OCI-01679: database is being opened

Cause: An attempt was made to activate a standby database when the database was in the middle of being opened.

Action: Wait for database open to finish and retry the ACTIVATE command.

OCI-01680: unable to extend LOB segment by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01681: max # extents (*string*) reached in LOB segment in tablespace *string*

Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

OCI-01682: read-only DB cannot allocate temporary space in tablespace *string*

Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT_AREA_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

OCI-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01684: max # extents (*string*) reached in table *string.string* partition *string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

OCI-01685: max # extents (*string*) reached in index *string.string* partition *string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

OCI-01686: max # files (*string*) reached for the tablespace *string*

Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

OCI-01687: specified logging attribute for tablespace '*string*' is same as the existing

Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

OCI-01688: unable to extend table *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01689: syntax error in clause "*string*" of *string*

Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

OCI-01690: sort area size too small

Cause: sort area size too small to fit two records in memory

Action: increase sort_area_size

OCI-01691: unable to extend lob segment *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

OCI-01692: Unable to extend the LOB segment *string.string* partition *string* by *string* in tablespace *string*.

Cause: Failed to allocate an extent of the required number of blocks for the LOB segment in the specified tablespace.

Action: One of the following actions may resolve the problem: 1. Turn ON autoextension for the data files. 2. Increase MAXSIZE value for autoextensible files. 3. If the segment is in a SMALLFILE tablespace, add one or more data files.

OCI-01693: max # extents (*string*) reached in lob segment *string.string*

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

OCI-01694: maximum number of extents *string* reached in the LOB segment *string.string* partition *string*

Cause: Additional space could not be allocated because the LOB segment has reached the maximum number of extents allowed.

Action: Increase MAXEXTENTS for the LOB segment, or re-create the LOB segment with larger extents.

OCI-01695: error converting rollback segment *string* to version 8.0.2

Cause: Version 8.0.1 database may not have shutdown cleanly

Action: May have to reload the 8.0.1 database and shutdown cleanly

OCI-01696: control file is not a clone control file

Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

OCI-01697: control file is for a clone database

Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

Action: Use the clone option or appropriate commands, or mount with the primary control file.

OCI-01698: a clone database may only have SYSTEM rollback segment online

Cause: Attempting to online a rollback segment in a clone database.

Action: Do not use this command.

OCI-01699: tablespace '*string*' is being imported for point in time recovery

Cause: Attempting to online a tablespace or begin another point in time import while a point in time import was already in progress.

Action: Wait until the import completes.

OCI-01700: duplicate username in list**OCI-01701: a cluster is not appropriate here****OCI-01702: a view is not appropriate here**

Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

Action: An Editioning View may only be created over a base table.

OCI-01703: missing SYNONYM keyword

OCI-01704: string literal too long

Cause: The string literal is longer than 4000 characters.

Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

OCI-01705: an outer join cannot be specified on a correlation column**OCI-01706: data value too large**

Cause: The data value exceeds the maximum allowed length (32K).

Action: Decrease the data value length.

OCI-01707: missing LIST keyword**OCI-01708: ACCESS or SESSION expected****OCI-01709: program does not exist****OCI-01710: missing OF keyword****OCI-01711: duplicate privilege listed****OCI-01712: you cannot grant a privilege which you do not have****OCI-01713: GRANT OPTION does not exist for that privilege****OCI-01714: error in execution of user function****OCI-01715: UNIQUE may not be used with a cluster index**

Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

OCI-01716: NOSORT may not be used with a cluster index

Cause: An attempt was made to create a cluster index using the NOSORT option.

Action: Remove NOSORT from the CREATE INDEX statement.

OCI-01717: seccta: invalid access mode token passed**OCI-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT.**

Cause: An attempt was made to specify the BY ACCESS | SESSION clause in a NOAUDIT statement.

Action: Remove the BY ACCESS | SESSION clause from the NOAUDIT statement.

OCI-01719: outer join operator (+) not allowed in operand of OR or IN

Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+)) or B, try (select where (A(+)) and not B) union all (select where (B)).

OCI-01720: grant option does not exist for *string.string*

Cause: A grant was attempted on a view or a view was being replaced and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view, or revoke existing grants on the view.

OCI-01721: USERENV(COMMITSCN) was invoked more than once in a transaction.

Cause: The USERENV('COMMITSCN') function was used more than once in the transaction, which was not allowed.

Action: Rewrite the transaction to use USERENV('COMMITSCN') only once and resubmit.

OCI-01722: unable to convert string value containing *string* to a number: *string*

Cause: The attempted conversion of a character string for column or expression to a number failed because the character string is not a valid numeric literal. Only numeric fields or character fields containing numeric data can be used in arithmetic functions or expressions. Only numeric fields can be added to or subtracted from dates. If "UNISTR" appears in the error message, the value is not compatible with the national character set and cannot be represented directly.

Action: Use the LIKE expression to identify the problematic value. Ensure that it contains only digits, a sign, a decimal separator, and the character "E" or "e", and retry the operation. *Params: 1) invalid_char: Either this is the first invalid character of the character string that is being converted to a number or UNISTR (character string) if the character is not compatible with the database character set. 2) column_or_expression: The column or expression from where the invalid character comes. *Info: Details about the violating values are provided with the parameter ERROR_MESSAGE_DETAILS=ON. You can enable the parameter using the statement ALTER SESSION SET ERROR_MESSAGE_DETAILS = ON. The error message details are: ORA-01722: unable to convert string value containing invalid_char to a number: column_or_expression ORA-03302: (ORA-01722 details) invalid string value: string_value For example, the following query indicates the string that cannot be converted to a number: SQL> SELECT to_number(ename) FROM emp; SELECT to_number(ename) FROM emp * ERROR at line 1: ORA-01722: unable to convert string value containing 'S' to a number: ENAME ORA-03302: (ORA-01722 details) invalid string value: SMITH If the parameter ERROR_MESSAGE_DETAILS is set to OFF or DISALLOWED, the entire character string is not printed. However, you can check the problematic string using the LIKE expression. For example: SQL> SELECT ename FROM emp WHERE ename LIKE '%S%';

OCI-01723: zero-length columns are not allowed

Cause: Columns with zero length were not allowed.

Action: Correct the use of the column.

OCI-01724: floating point precision is out of range (1 to 126)

Cause: The specified number had an invalid range.

Action: Use a floating point precision that is in the correct precision.

OCI-01725: USERENV('COMMITSCN') is not allowed here.

Cause: The function USERENV('COMMITSCN') is only allowed as a top-level expression in the VALUES clause of an INSERT statement, and on the right-hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function and retry.

OCI-01726: a table is not appropriate here

Cause: A table name was used in a statement in which tables were not permitted.

Action: Enter a valid table statement or use the current statement on the appropriate object.

OCI-01727: numeric precision specifier is out of range (1 to 38)

Cause: The precision specified for a number column in a CREATE or ALTER TABLE or CREATE CLUSTER statement must be a digit between 1 and 38. If no precision was specified, a default precision of 22 digits was used.

Action: Specify numeric precision between 1 and 38 and retry the statement.

OCI-01728: numeric scale specifier is out of range (-84 to 127)

Cause: The scale specified for a numeric field in a CREATE or ALTER TABLE or CREATE CLUSTER statement was not in the valid range. It should be between -84 and 127.

Action: Specify a numeric scale between -84 and 127. If a number is not specified, the default scale of the column is 0 decimal places.

OCI-01729: database link name expected

Cause: A database link name did not follow the at-sign (@) in a reference to a table in a remote database.

Action: Correct the reference and retry the operation. The correct syntax for denoting a table in a remote database follows: username.table_name@ database_name Spaces before and after the at-sign (@) are optional.

OCI-01730: invalid number of column names specified

Cause: The number of column names specified in a CREATE VIEW statement did not correspond to the number of columns listed in the SELECT clause. If column names were specified in a CREATE VIEW statement, exactly one name must be specified for each column or expression in the SELECT clause.

Action: Specify one view column name for each column in the SELECT clause.

OCI-01731: circular view definition encountered

Cause: Through a series of CREATE and DROP VIEW statements, a view was defined that referred to itself. For example, VIEW1 might include a column from VIEW2 that was defined as a column in VIEW1. View definitions may be seen by querying the data dictionary.

Action: Check the view definitions, remove any circular references, and retry the statements.

OCI-01732: data manipulation operation not legal on this view

Cause: An attempt was made to use an UPDATE, INSERT, or DELETE statement on a view that contains expressions or functions or was derived from more than one table. If a join operation was used to create the view or the view contains virtual columns derived from functions or expressions, then the view may only be queried.

Action: UPDATE, INSERT, or DELETE rows in the base tables instead and restrict the operations on the view to queries.

OCI-01733: virtual column not allowed here

Cause: An attempt was made to use an INSERT, UPDATE, or DELETE statement on an expression in a view.

Action: INSERT, UPDATE, or DELETE data in the base tables, instead of the view.

OCI-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX

Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

OCI-01735: invalid ALTER TABLE option

Cause: An invalid option was specified in an ALTER TABLE statement.

Action: Check the statement syntax, specify a valid option, and retry the statement.

OCI-01736: [NOT] SUCCESSFUL expected

Cause: An AUDIT or NOAUDIT statement contained WHENEVER followed by something other than SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the WHENEVER clause and retry the statement.

OCI-01737: valid modes: [ROW] SHARE, [[SHARE] ROW] EXCLUSIVE, SHARE UPDATE

Cause: The lock mode entered was not recognized.

Action: Valid lock modes are SHARE, ROW SHARE, EXCLUSIVE, ROW EXCLUSIVE, SHARE ROW EXCLUSIVE, and SHARE UPDATE.

OCI-01738: missing IN keyword

Cause: In a LOCK TABLE statement, the keyword IN was missing.

Action: Place the keyword IN and lock mode directly after the table name in the LOCK TABLE statement and retry the statement.

OCI-01739: missing MODE keyword

Cause: In a LOCK TABLE statement, the keyword MODE was missing. The keyword MODE must directly follow the specified lock mode.

Action: Check the statement syntax, insert the keyword MODE where required, and retry the statement.

OCI-01740: missing double quote in identifier

Cause: An initial double quote (") was found without a closing quote. If an identifier contains a blank or special characters other than \$, #, or _, it must be enclosed in double quotes.

Action: Add a closing double quote (") to the end of the identifier.

OCI-01741: illegal zero-length identifier

Cause: An attempt was made to use two double quotes ("") as an identifier. An identifier must be at least one character long.

Action: Insert at least one character between the double quotes in the identifier. If a blank identifier is required, specify a blank space between the double quotes (" ").

OCI-01742: comment not terminated properly

Cause: The indicated comment or hint begun with the /* token did not have the terminating */.

Action: Properly terminate the comment or hint with a */.

OCI-01743: only pure functions can be indexed

Cause: The indexed function uses SYSDATE or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use SYSDATE, USER, USERENV(), or anything else dependent on the session state. NLS-dependent functions are OK.

OCI-01744: inappropriate INTO

Cause: The INTO clause may not be used in a subquery.

Action: Check the syntax, place the INTO clause in the top-level query, and retry the statement.

OCI-01745: invalid host/bind variable name

Cause: A colon in a bind variable or INTO specification was followed by an inappropriate name, perhaps a reserved word.

Action: Change the variable name and retry the operation.

OCI-01746: indicator variable not permitted here

Cause: An indicator variable was not permitted in this context.

Action: Remove the indicator variable and retry the operation.

OCI-01747: invalid column specification: *string*

Cause: A column name is specified improperly in the current SQL statement.

Action: Check the syntax of the statement, and ensure that: - Any column names that are reserved words are surrounded by double quotation characters. - All column names are specified correctly. - There are no dangling commas. Then retry the statement. *Params: 1) column_name: The column name that is specified improperly.

OCI-01748: only simple column names allowed here

Cause: This SQL statement did not allow a qualified column name, such as username.table.column or table.column.

Action: Remove the qualifications from the column and retry the operation.

OCI-01749: Cannot GRANT or REVOKE privileges to or from yourself.

Cause: Grantor was not allowed to grant or revoke an object or system privileges to self.

Action: GRANT or REVOKE should be executed by another user who has sufficient privilege to execute the command.

OCI-01750: UPDATE/REFERENCES may only be REVOKEd from the whole table, not by column

Cause: Although it was possible to GRANT update privileges on a column-by-column basis, it was only possible to REVOKE them for an entire table.

Action: Do not identify specific columns. To revoke update privileges for certain columns, use REVOKE for the entire table and GRANT the user privileges for specific columns.

OCI-01751: Invalid dump undo option

Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

OCI-01752: cannot delete from view without exactly one key-preserved table

Cause: The deleted table had - no key-preserved tables, - more than one key-preserved table, or - the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

OCI-01753: column definition incompatible with clustered column definition

Cause: An attempt was made to create a table in a cluster and one of the table's clustered columns is not compatible with the corresponding cluster key column.

Action: Make sure that all table columns specified in the CLUSTER clause of the CREATE TABLE statement are compatible with the corresponding columns of the cluster key, as documented. For example, the data type and the declared collation of a clustered table column must be the same as those of the corresponding cluster key column.

OCI-01754: a table may contain only one column of type LONG

Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

OCI-01755: Must specify an extent number or block number

Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

OCI-01756: quoted string not properly terminated

Cause: A quoted string must be terminated with a single quote mark (').

Action: Insert the closing quote and retry the statement.

OCI-01757: Must specify an object number

Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

OCI-01758: table must be empty to add mandatory (NOT NULL) column

Cause: It was not possible to define a new column as NOT NULL if rows already existed in the table being modified.

Action: Retry the statement without the NOT NULL specification.

OCI-01759: user function is incorrectly defined

Cause: A user function was improperly defined.

Action: Contact Oracle Support Services.

OCI-01760: illegal argument for function

Cause: The argument or arguments specified for the function were not valid in this context.

Action: Check the definition of the function and correct the arguments.

OCI-01761: DML operation does not map to a unique table in the join

Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

OCI-01762: vopdrv: view query block not in FROM

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

OCI-01763: update or delete involves outer joined table

Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table, or the underlying table being updated in a join view is referenced on the right side of an outer join or full outer join in the view.

Action: Change the join specification.

OCI-01764: new update value of join is not guaranteed to be unique

Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

OCI-01765: specifying owner's name of the table is not allowed

Cause: An attempt was made to rename the object with dotted object name.

Action: Do not specify username.tablename in query for table name.

OCI-01766: dictionary table not allowed in this context

Cause: The name of a data dictionary object was used outside the FROM clause of a SELECT statement. The only operation allowed on a data dictionary object was to SELECT from it.

Action: Restrict operations on data dictionary objects to queries.

OCI-01767: UPDATE ... SET expression must be a subquery

Cause: An attempt was made to use a single expression without a subquery to update a list of columns.

Action: Check the syntax for using subqueries to update data and add the necessary subquery.

OCI-01768: number string too long

Cause: A number entered exceeded the limit of 255 characters, including digits, sign, decimal point, and exponent.

Action: Shorten the number string, perhaps by expressing it in scientific notation, for example, 1.85E9 instead of 1,850,000,000.

OCI-01769: duplicate CLUSTER option specifications

Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

OCI-01770: CLUSTER option not allowed in CREATE CLUSTER command

Cause: An attempt was made to use the CLUSTER option within a CREATE CLUSTER statement.

Action: Remove the CLUSTER clause and try again.

OCI-01771: illegal option for a clustered table

Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

OCI-01772: Must specify a value for LEVEL

Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

OCI-01773: may not specify column datatypes in this CREATE TABLE

Cause: Column data types or virtual columns were specified in a SELECT statement used to create and load a table directly.

Action: Remove the column data types and virtual columns. The data types of the SELECT list expressions are automatically used as the column data types.

OCI-01774: Dump undo option specified more than once

Cause: The same option for ALTER DUMP UNDO was specified twice.

Action: Remove the redundant options and reissue the command.

OCI-01775: synonym string resolves to itself due to circular translation

Cause: Translation of a synonym resolved to the same synonym. This is caused by a chain of object definitions including multiple private or public synonyms.

Action: Review the object definitions to determine which synonym resolves back to the original and change one or more of the definitions to break the cycle. *Params: 1) synonym_name: The synonym that is translating to itself.

OCI-01776: cannot modify more than one base table through a join view

Cause: Columns belonging to more than one underlying table were either inserted into or updated.

Action: Phrase the statement as two or more separate statements.

OCI-01777: WITH GRANT OPTION not allowed in this system

Cause: This version of Oracle did not support the WITH GRANT OPTION.

Action: Remove the WITH GRANT option.

OCI-01778: maximum subquery nesting level exceeded

Cause: An attempt was made to use more than 255 levels of nested subqueries.

Action: Merge some of the subqueries into their containing queries, until there are less than 255 levels of nesting.

OCI-01779: cannot modify a column which maps to a non key-preserved table

Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

Action: Modify the underlying base tables directly.

OCI-01780: string literal required

Cause: In a COMMENT statement, the Comment following the keyword IS must be a quoted string literal.

Action: Check that the Comment is a string literal.

OCI-01781: UNRECOVERABLE cannot be specified without AS SELECT

Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

Action: Do not specify UNRECOVERABLE.

OCI-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table

Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

Action: Do not specify UNRECOVERABLE.

OCI-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified

Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

OCI-01784: RECOVERABLE cannot be specified with database media recovery disabled

Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

OCI-01785: ORDER BY item must be the number of a SELECT-list expression

Cause: Either an ORDER BY item for a set expression was not a column number, or the ORDER BY item was not the number of a SELECT list column.

Action: The ORDER BY item must be a number between 1 and the number of columns in the SELECT list. Check the column number and retry the statement.

OCI-01786: FOR UPDATE of this query expression is not allowed

Cause: An attempt was made to use a FOR UPDATE clause on the result of a set expression involving GROUP BY, DISTINCT, UNION, INTERSECT, or MINUS.

Action: Check the syntax, remove the FOR UPDATE clause, and retry the statement.

OCI-01787: only one clause allowed per query block

Cause: An attempt was made to use more than one WHERE, GROUP BY, CONNECT BY, or HAVING clause in the query.

Action: Combine the duplicate clauses into a single clause and retry the statement.

OCI-01788: CONNECT BY clause required in this query block

Cause: A START WITH clause was specified without a CONNECT BY clause.

Action: Check the syntax, specify a CONNECT BY clause, and retry the statement.

OCI-01789: query block has incorrect number of result columns

Cause: All of the queries participating in a set expression do not contain the same number of SELECT list columns.

Action: Check that all the queries in the set expression have the same number of SELECT list columns.

OCI-01790: expression must have same datatype as corresponding expression

Cause: A SELECT list item corresponds to a SELECT list item with a different datatype in another query of the same set expression.

Action: Check that all corresponding SELECT list items have the same datatypes. Use the TO_NUMBER, TO_CHAR, and TO_DATE functions to do explicit data conversions.

OCI-01791: not a SELECTed expression

Cause: There was an incorrect ORDER BY item. The query was a SELECT DISTINCT query with an ORDER BY clause. In this context, all ORDER BY items must be constants, SELECT list expressions, or expressions whose operands were constants or SELECT list expressions.

Action: Remove the inappropriate ORDER BY item from the SELECT list and retry the statement.

OCI-01792: maximum number of columns in a table or view is *string*

Cause: An attempt was made to create a table or view with too many columns, or to add more columns to a table or view which pushes it over the maximum allowable limit. Note that unused columns in the table are counted toward the total column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

OCI-01793: maximum number of index columns is 32

Cause: While creating an index, more than 32 columns were specified.

Action: Remove some columns from the index definition. If all the columns indexed are required, split them into two indexes.

OCI-01794: maximum number of cluster columns is 32

Cause: More than 32 columns were specified in the cluster key.

Action: Remove some of the columns from the cluster key definition. Consider concatenating multiple character strings into a single column.

OCI-01795: maximum number of expressions in a list is *string*

Cause: Number of expressions in the query exceeded the maximum limit. Note that unused column/expressions are also counted towards this limit.

Action: Reduce the number of expressions in the list and resubmit.

OCI-01796: this operator cannot be used with lists

Cause: A relational operator was not allowed in this context. When comparing lists, use only an operator that tests for equivalence, such as =, !=, or IN.

Action: Rephrase the query so that it only compares lists for equivalence. For example, the following clause is invalid: WHERE (A,B) > ((C,D), (E,F)) It may be necessary to compare individual columns separately. For example, to see if A and B are respectively greater than C and D, use WHERE A>B AND C>D instead of WHERE (A,B)>(C,D).

OCI-01797: this operator must be followed by ANY or ALL

Cause: The keyword ANY or ALL was missing.

Action: Check the statement syntax and add ANY or ALL where appropriate.

OCI-01798: missing EXCEPTION keyword

Cause: The EXCEPTION keyword was missing from the ENABLE clause.

Action: Correct the syntax.

OCI-01799: a column may not be outer-joined to a subquery

Cause: *expression(+)* *relop* (*subquery*) is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

OCI-01800: a literal in the date format was too large to process

Cause: A literal specified in a date format was too large. If a literal was entered as a date, it must be less than 220 characters long.

Action: Use only literals less than 220 characters long in the date format.

OCI-01801: date format is too long for internal buffer

Cause: The date format string was too long to process. This occurred only if several long literals are specified as part of a date.

Action: Remove long literals from the date format string.

OCI-01802: Julian date is out of range

Cause: An invalid Julian date was entered. Valid Julian dates ran from 1 to 3,442,447.

Action: Enter a valid Julian date between 1 and 3,442,447.

OCI-01803: failed to get system date and time

Cause: An internal failure in the system clock occurred.

Action: Investigate the system clock and the process that requested the date or time. If necessary, contact Oracle Support.

OCI-01804: failure to initialize timezone information

Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

OCI-01805: possible error in date/time operation

Cause: The timezone files on client and server do not match. Operation can potentially result in incorrect results based on local timezone file.

Action: Please ensure client and server timezone versions are same.

OCI-01810: format code appears twice

Cause: A format code was listed twice in a date specification. Each format code may be specified only once in the function TO_DATE.

Action: Remove the duplicate format code from the date specification, then retry the operation.

OCI-01811: Julian date precludes use of day of year

Cause: Both a Julian date and a day of the year were specified in the TO_DATE function. If a Julian date is specified, the day of the year (DDD) may not be specified, as it is contained in the Julian date.

Action: Remove the day of the year or the Julian date from the specification, then retry the operation.

OCI-01812: year may only be specified once

Cause: More than one year format code was listed in a date specification. Only one of the following year format codes may be specified in a date: YYYY, YYY, YY, Y.

Action: Remove all but one year format from the date specification.

OCI-01813: hour may only be specified once

Cause: More than one hour format code was listed in a date specification. Only one of the following hour format codes may be specified in a date: HH, HH12, HH24.

Action: Remove all but one hour format from the date specification.

OCI-01814: AM/PM conflicts with use of A.M./P.M.

Cause: Both types of meridian indicators, AM and PM, were listed in a date specification. If one of the meridian indicator format masks, such as AM or A.M., is specified in the date, the other may not be specified.

Action: Use one meridian indicator format, with or without periods, consistently.

OCI-01815: BC/AD conflicts with use of B.C./A.D.

Cause: Both types of BC/AD indicators were listed in a date specification. If one of the BC/AD indicator format masks, such as BC or B.C., was specified in the date, the other may not be specified.

Action: Use one BC/AD indicator format, with or without periods, consistently.

OCI-01816: month may only be specified once

Cause: More than one month format code was listed in a date specification. Only one of the following month format codes may be specified in a date: MM, MON, MONTH.

Action: Remove all but one month format from the date specification.

OCI-01817: day of week may only be specified once

Cause: More than one day-of-the-week format code was listed in a date specification. Only one of the following day-of-the-week format codes may be specified in a date: D, DY, DAY.

Action: Remove all but one day-of-the-week format from the date specification.

OCI-01818: 'HH24' precludes use of meridian indicator

Cause: A date specification contained both a 24-hour time format code and a meridian indicator code. If hours are specified using the 24-hour time format (HH24), a meridian indicator, AM or PM, may not be specified.

Action: Remove the meridian indicator format code, AM/PM or A.M./P.M., or the 24-hour time format code, HH24, from the date specification.

OCI-01819: signed year precludes use of BC/AD

Cause: A date specification contained both a signed year and a B.C./A.D. indicator. If the year is specified with a sign, such as SYYYY, then B.C. or A.D. is implicit in the date and must not be entered.

Action: Remove the B.C./A.D. indicator from the date specification.

OCI-01820: format code cannot appear in date input format

Cause: A date specification contained an invalid format code. Only the following may be specified when entering a date: year, month, day, hours, minutes, seconds, Julian day, A.M./P.M. and B.C./A.D.

Action: Remove the invalid format code from the date specification.

OCI-01821: date format not recognized

Cause: A date specification contained an invalid format code.

Action: Check that only valid date format codes are specified.

OCI-01822: era format code is not valid with this calendar

Cause: An era format code, E or EE, was specified with a calendar which did not use era information.

Action: Retry the operation using a date format mask which does not contain era format codes.

OCI-01830: Date format picture ends before converting entire input string.

Cause: A valid date format picture included extra data. The first part of the format picture was converted into a valid date. The remaining data was not required.

Action: Check the specifications of the date format picture and retry.

OCI-01831: year conflicts with Julian date

Cause: The wrong year was specified with a Julian day. If a year was specified with a Julian date, it must be the year in which the Julian date occurred.

Action: Remove the year value from the date specification or enter the correct year for the Julian date.

OCI-01832: day of year conflicts with Julian date

Cause: A Julian date was specified with the day of the year but the day did not correspond to the Julian date. If the day of the year was specified with a Julian date, it must be the same day as the Julian date.

Action: Remove the day of the year value from the date specification or enter the correct day for the Julian date.

OCI-01833: month conflicts with Julian date

Cause: The wrong month was specified with a Julian date. If a month is specified with a Julian date, it must be the month in which the Julian date occurs.

Action: Remove the month value from the date specification or enter the correct month for the Julian date.

OCI-01834: day of month conflicts with Julian date

Cause: A Julian date was specified with the day of the month, but the month day did not correspond to the Julian date. If the day of the month was specified with a Julian date, it must be the same day of the month as the Julian date.

Action: Remove the day of the month value from the date specification or enter the correct day of the month for the Julian date.

OCI-01835: day of week conflicts with Julian date

Cause: A Julian date was specified with the day of the week, but the weekday did not correspond to the Julian date. If the day of the week was specified with a Julian date, it must be the same day of the week as the Julian date.

Action: Remove the day of the week value from the date specification or enter the correct day of the week for the Julian date.

OCI-01836: hour conflicts with seconds in day

Cause: The wrong hour was specified with seconds in the day. If an hour was specified with seconds past midnight (SSSS), it must be the hour in which the seconds value fell.

Action: Remove the hour value from the date specification or specify the correct hour for the seconds past midnight.

OCI-01837: minutes of hour conflicts with seconds in day

Cause: A date specification contained both minutes of the hour and seconds in the day but the values did not correspond. If both minutes in the hour (MI) and seconds past midnight (SSSS) are specified, the minutes value must be the minute in which the seconds value occurred.

Action: Remove the minutes value from the date specification or enter the correct minute value for the specified seconds value.

OCI-01838: seconds of minute conflicts with seconds in day

Cause: A date specification contained both seconds of the minute and seconds in the day but the values did not correspond. If both types of seconds are specified, the seconds of the minute value (SS) must be the second in which the seconds past midnight value (SSSSS) fell.

Action: Remove the seconds of the minute value from the date specification or enter a value that corresponds to the given seconds in the day.

OCI-01839: date not valid for month specified

Cause: The day of the month specified in the date was invalid for the given month. The day of the month (DD) must be between 1 and the number of days in the month.

Action: Enter a valid day of the month for the specified month.

OCI-01840: input value not long enough for date format

Cause: The data to be converted to date format was incomplete; the date format picture was longer than the input data.

Action: Either add more input or shorten the date picture format, then retry the operation.

OCI-01841: (full) year must be between -4713 and +9999, and not be 0

Cause: Illegal year entered

Action: Input year in the specified range

OCI-01842: quarter must be between 1 and 4

Cause: An invalid value was specified for the quarter of the year in a date. The quarter (Q) must be between 1 and 4.

Action: Enter a value for quarter between 1 and 4.

OCI-01843: An invalid month was specified.

Cause: You specified a date with an invalid month.

Action: Enter a valid month value using either the correctly spelled full month name or valid short month code.

OCI-01844: week of year must be between 1 and 52

Cause: An invalid value was specified for the week of the year in a date. Week of the year (WW) must be between 1 and 52.

Action: Enter a week of the year value between 1 and 52.

OCI-01845: week of month must be between 1 and 5

Cause: An invalid value was specified for the week of the month in a date. Week of the month (W) must be between 1 and 5.

Action: Enter a week of the month value between 1 and 5.

OCI-01846: not a valid day of the week

Cause: A date specified an invalid day of the week. Valid days are: - Monday-Sunday, for format code DAY - Mon-Sun, for format code DY - 1-7, for format code D

Action: Enter a valid day of the week value in the correct format.

OCI-01847: day of month must be between 1 and last day of month

Cause: The day of the month listed in a date was invalid for the specified month. The day of the month (DD) must be between 1 and the number of days in that month.

Action: Enter a valid day value for the specified month.

OCI-01848: day of year must be between 1 and 365 (366 for leap year)

Cause: An invalid day of the year was specified in a date. Day of the year (DDD) must be between 1 and 365 for a non-leap year or 1 and 366 for a leap year.

Action: Enter a day of the year value between 1 and 365 (or 366).

OCI-01849: hour must be between 1 and 12

Cause: An invalid hour was specified for a date using the 12-hour time format. If a 12-hour format code (HH or HH12) is used, the specified hour must be between 1 and 12.

Action: Enter an hour value between 1 and 12.

OCI-01850: hour must be between 0 and 23

Cause: An invalid hour was specified for a date using the 24-hour time format. If the 24-hour format code (HH24) was listed, the specified hour must be between 0 and 23.

Action: Enter an hour value between 0 and 23.

OCI-01851: minutes must be between 0 and 59

Cause: An invalid minute value was specified in a date. Minutes must be between 0 and 59.

Action: Enter a minute value between 0 and 59.

OCI-01852: seconds must be between 0 and 59

Cause: An invalid seconds value was specified in a date. Seconds must be between 0 and 59 if the seconds format code (SS) was used.

Action: Enter a seconds value between 0 and 59.

OCI-01853: seconds in day must be between 0 and 86399

Cause: An invalid value for seconds in the day was specified in a date. Seconds must be between 0 and 86399 if the seconds past midnight format code (SSSS) was used.

Action: Specify a seconds value between 0 and 86399.

OCI-01854: julian date must be between 1 and 5373484

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

OCI-01855: AM/A.M. or PM/P.M. required

Cause: A date specification contained a meridian indicator format code but a valid meridian indicator was not specified. If a meridian indicator code, A.M., P.M., AM or PM, was included in a date format, the date must include a valid meridian indicator.

Action: Specify the meridian indicator in the correct format, A.M./AM or P.M./PM.

OCI-01856: BC/B.C. or AD/A.D. required

Cause: A date specification contained a BC/AD format code but a valid BC/AD indicator was not specified. If one of the BC/AD format codes, BC/AD or B.C./A.D., is specified in a date format, the date must include BC/B.C. or AD/A.D.

Action: Specify the BC/AD indicator in the date using the correct format.

OCI-01857: not a valid time zone

Cause: An incorrect time zone code was specified for the NEW_TIME function.

Action: Correct the invalid time zone code, then retry the operation.

OCI-01858: A non-numeric character was found instead of a numeric character.

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to ensure that the elements match the number and type. Retry the operation.

OCI-01859: a non-alphabetic character was found where an alphabetic was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

OCI-01860: week of year must be between 1 and 53

Cause: A week number outside the range 1 to 53 was specified.

Action: Use only a value within the valid range for the week number.

OCI-01861: literal does not match format string

Cause: A literal was specified that did not match the the format string, excluding leading spaces.

Action: Correct the format string to match the literal, or the literal to match the format string.

OCI-01862: the numeric value does not match the length of the format item

Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

OCI-01863: the year is not supported for the current calendar

Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

OCI-01864: the date is out of range for the current calendar

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

OCI-01865: not a valid era

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

OCI-01866: the datetime class is invalid

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

OCI-01867: the interval is invalid

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

OCI-01868: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01869: reserved for future use

Cause: Not an error.

Action: No action required.

OCI-01870: the intervals or datetimes are not mutually comparable

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

OCI-01871: the number of seconds must be less than 60

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

OCI-01872: reserved for future use

Cause: Not an error.

Action: No action required.

OCI-01873: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01874: time zone hour must be between -15 and 15

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -15 and 15.

OCI-01875: time zone minute must be between -59 and 59

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

OCI-01876: year must be at least -4713

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

OCI-01877: string is too long for internal buffer

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

OCI-01878: specified field not found in datetime or interval

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

OCI-01879: the hh25 field must be between 0 and 24

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

OCI-01880: the fractional seconds must be between 0 and 999999999

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

OCI-01881: timezone region ID is invalid

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

OCI-01882: time zone region not found

Cause: The specified time zone region name was not found.

Action: Contact Oracle Support Services.

OCI-01883: overlap was disabled during a region transition

Cause: The region was changing state and the overlap flag was disabled.

Action: Please contact Oracle Customer Support.

OCI-01884: divisor is equal to zero

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

OCI-01885: public synonym collides with Oracle-supplied schema name

Cause: The public synonym was the same as the Oracle-supplied schema name.

Action: Use either a different synonym or a different schema name.

OCI-01886: use CREATE PUBLIC SYNONYM statement to create a public synonym

Cause: An attempt was made to create a public synonym by issuing a CREATE SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Either specify a valid schema for the synonym or use a CREATE PUBLIC SYNONYM statement.

OCI-01887: use ALTER PUBLIC SYNONYM statement to alter a public synonym

Cause: An attempt was made to alter a public synonym by issuing an ALTER SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Use an ALTER PUBLIC SYNONYM statement to alter a public synonym.

OCI-01888: use DROP PUBLIC SYNONYM statement to drop a public synonym

Cause: An attempt was made to drop a public synonym by issuing a DROP SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Use a DROP PUBLIC SYNONYM statement to drop a public synonym.

OCI-01890: NLS error detected

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

OCI-01891: Datetime or Interval internal error.

Cause: An internal error occurred.

Action: Contact Oracle Support.

OCI-01892: A non-numeric character was found instead of a numeric character.

Cause: The input data to be converted is incorrect. The input data did not contain a number where a number was required.

Action: Fix the input data to ensure that the elements match the number and type. Retry the operation.

OCI-01898: too many precision specifiers in date format model

Cause: While trying to truncate or round dates, too many format models (like 'YY' or 'MM') for ROUND or TRUNC were found in the call. Not all date format models can be combined in a call to TRUNC and ROUND.

Action: Check the documentation for which date format models can be combined in the call to ROUND and TRUNC. Correct the date format and retry the operation.

OCI-01899: bad precision specifier

Cause: An invalid precision code was specified in a date.

Action: Enter a valid precision code in the date format. Valid precision types are: century, year, month, day, Julian date, hours, minutes, and seconds.

OCI-01900: LOGFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01901: ROLLBACK keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01902: SEGMENT keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01903: EVENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01904: DATAFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01905: STORAGE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01906: BACKUP keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01907: TABLESPACE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01908: EXISTS keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01909: REUSE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01910: TABLES keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01911: CONTENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01912: ROW keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01913: EXCLUSIVE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01914: invalid auditing option for sequence numbers

Cause: AUDIT or NOAUDIT was specified as an auditing option that is not valid for sequence numbers.

Action: The following options are not allowed for sequence numbers and must be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE.

OCI-01915: invalid auditing option for views

Cause: AUDIT or NOAUDIT was specified on views that had audit options that were not valid for views.

Action: The following options cannot be used for views and must be removed: ALTER, INDEX, REFERENCES, EXECUTE

OCI-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND, END, DROP, ENABLE, REMOVE, SUSPEND, ENCRYPT, or DECRYPT expected

Cause: An expected keyword was not used for the data file or the temporary file clause. Note the ENCRYPT and DECRYPT keywords are only applicable to the data file.

Action: Use the correct syntax.

OCI-01917: user or role '*string*' does not exist

Cause: A user or role by that name did not exist.

Action: Re-specify the name.

OCI-01918: user '*string*' does not exist

Cause: The specified user did not exist in the system.

Action: Verify the user name is correct by querying ALL_USERS view. *Params: 1)
Name: The name of the user.

OCI-01919: Role '*string*' does not exist.

Cause: A role with the specified name did not exist.

Action: Verify that the role name is correct and retry the operation. *Params: 1)
role_name: The name of the role.

OCI-01920: user name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different user name.

OCI-01921: role name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different role name.

OCI-01922: CASCADE must be specified to drop '*string*'

Cause: Cascade is required to remove this user from the system. The user own's object which will need to be dropped.

Action: Specify cascade.

OCI-01923: CASCADE failed

Cause: An object owned by the user could not be dropped because it was locked in another session.

Action: Retry the operation or use the lock monitor to determine who has the objects locked.

OCI-01924: Role "*string*" not granted or does not exist.

Cause: Either the role was not granted to the user, or the role did not exist.

Action: Create the role or grant the role to the user and retry the operation. *Params: 1) role_name: The role name being granted.

OCI-01925: unused error**OCI-01926: A role cannot be granted a privilege with the WITH GRANT OPTION.**

Cause: An attempt was made to grant a privilege WITH GRANT OPTION to a role.

Action: Perform the grant without the WITH GRANT OPTION.

OCI-01927: A privilege cannot be revoked if you did not grant it.

Cause: An attempt was made to revoke an object privilege or a user privilege that you did not originally grant. You can only revoke privileges that you have granted. Alternatively, ensure that you have the GRANT ANY OBJECT PRIVILEGE system privilege to revoke object privileges or user privileges that have been granted to another user.

Action: Ensure that you are revoking the correct privilege from the correct user or role. - Review the granted privileges and grantor in the DBA_TAB_PRIVS view. - Check if the current session has GRANT ANY OBJECT PRIVILEGE by querying the SESSION_PRIVS view.

OCI-01928: GRANT option not granted for all privileges

Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

OCI-01929: no privileges to GRANT

Cause: ALL was specified but the user did not have any privileges with the GRANT option.

Action: Do not grant privileges on that object.

OCI-01930: auditing the object is not supported

Cause: The AUDIT or NOAUDIT commands were specified for an object that could not be audited.

Action: Do not use the AUDIT command on the object.

OCI-01931: cannot grant "*string*" to a role

Cause: An attempt to grant privileges to a role failed. UNLIMITED TABLESPACE, REFERENCES, INDEX, or administrative privileges such as SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, and SYSRAC cannot be granted to a role.

Action: Grant the desired privilege directly to the user. For administrative privilege grants, some additional restrictions apply : * SYSBACKUP, SYSDG, or SYSKM administrative privileges can be granted only when the password file is in Oracle 12c or later format. * SYSASM administrative privilege can be granted only when connected to an Oracle Automatic Storage Management (Oracle ASM) instance. * SYSRAC administrative privilege

cannot be granted to a user because only operating system authentication is supported for SYSRAC privilege.

OCI-01932: Role "*string*" has not been granted with WITH ADMIN OPTION

Cause: A role can be granted to another user or role only if the role has been granted WITH ADMIN OPTION.

Action: Grant the privilege or role to the user WITH ADMIN OPTION and retry the operation.

OCI-01933: cannot create a stored object using privileges from a role

Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

OCI-01934: circular role grant detected

Cause: A circular role grant was detected. A role cannot be granted to itself or in a grant chain where the role is eventually granted back to itself. This is a circular role grant.

Action: Review the role hierarchy to determine where this circular role grant occurred and modify your role hierarchy to prevent this.

OCI-01935: missing or invalid user name

Cause: No user name was specified, or the specified user name was invalid. A user name can contain no more than 128 characters and must begin with a letter, and may only consist of alphanumeric characters and the special characters \$, _, and #. If the user name contains other characters, it must be enclosed in double quotations marks. The user name may not be a reserved word. An existing user name must be specified when using the ALTER USER and DROP USER statements. Existing user names can be found by querying the DBA_USERS view.

Action: Specify a valid user name.

OCI-01936: cannot specify owner when creating or dropping a user or role

Cause: An owner has been specified for user or role. User and role objects do not have an owner.

Action: Do not specify an owner for the user or role.

OCI-01937: missing or invalid role name

Cause: A valid role name was expected.

Action: Specify a valid role name.

OCI-01938: IDENTIFIED BY must be specified for CREATE USER

Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY" for ASM instance.

Action: Specify one of the password clauses.

OCI-01939: invalid option specified for WITH clause in the GRANT statement

Cause: An invalid option was specified in the WITH clause. When granting SYSTEM privileges and ROLES, the WITH clause can only have either ADMIN OPTION or DELEGATE OPTION.

Action: If granting a system privilege, specify ADMIN OPTION in the WITH clause. If granting a role, specify either ADMIN OPTION or DELEGATE OPTION in the WITH clause.

OCI-01940: cannot drop a user who is currently connected

Cause: An attempt was made to drop a user who was logged in.

Action: Ensure the user is logged off and then repeat the command.

OCI-01941: SEQUENCE keyword expected

Cause: keyword missing

Action: supply missing keyword

OCI-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified

Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

OCI-01944: Only one IDENTIFIED clause or one NO AUTHENTICATION clause is allowed.

Cause: Either the IDENTIFIED clause was specified twice, or the NO AUTHENTICATION clause was specified twice, or both the IDENTIFIED clause and NO AUTHENTICATION clause were specified together.

Action: Specify only one IDENTIFIED clause or one NO AUTHENTICATION clause.

OCI-01945: DEFAULT ROLE clause is already specified.

Cause: The DEFAULT ROLE clause was specified more than once.

Action: Update the statement to include only one DEFAULT ROLE clause.

OCI-01946: DEFAULT TABLESPACE already specified

Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

OCI-01947: TEMPORARY TABLESPACE already specified

Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

OCI-01948: length of the identifier name (*string*) exceeds the maximum *string*

Cause: The specified identifier name was longer than the maximum allowed.

Action: Use an identifier that is no longer than the maximum size specified in the error message.

OCI-01949: ROLE keyword expected

Cause: The role keyword is required here.

Action: Specify the role keyword.

OCI-01950: The user *string* has insufficient quota on tablespace *string*.

Cause: The specified user does not have sufficient quota to allocate space in the specified tablespace.

Action: Use the ALTER USER QUOTA statement to allocate the necessary quota on the tablespace for the user and retry. *Params: 1) user_name: The user who owns the object which requires extension. 2) tablespace_name: The tablespace name on which the user has no quota.

OCI-01951: Role "*string*" not granted to "*string*".

Cause: An attempt was made to revoke a role that was not granted to the user.

Action: Query roles granted to the user by issuing the SELECT * FROM DBA_ROLE_PRIVS WHERE GRANTEE = 'USER'; statement. Do not try to revoke a role that is not granted to the user. *Params: 1) role_name: The role name being revoked. 2) user_name: The user name from whom the role is being revoked.

OCI-01952: system privileges not granted to '*string*'

Cause: A system privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

OCI-01953: command no longer valid, see ALTER USER

Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

Action: Use the alter user command instead.

OCI-01954: DEFAULT ROLE clause cannot be specified in CREATE USER statement

Cause: The DEFAULT ROLE was specified in a CREATE USER statement.

Action: Do not specify the DEFAULT ROLE clause in CREATE USER statement. Instead, alter the user's default role after creating the user.

OCI-01955: Role "*string*" not granted to the user.

Cause: The user being altered did not have the specified role granted.

Action: Grant the role to the user and set it as a default role. *Params: 1) role_name: The role name being set as the default role.

OCI-01956: invalid command when parameter OS_ROLES is set

Cause: Granting a role to user or setting a default role of a user was not allowed when the parameter OS_ROLES was set to TRUE.

Action: Grant the role to the user in the operating system.

OCI-01957: Keyword MIN or MAX expected, not found

Cause: The keyword MIN or MAX was expected as an argument.

Action: Enter the keyword MIN or MAX and retry the operation.

OCI-01958: Must supply an integer for the LAYER option

Cause: An item other than an integer was entered for the LAYER option.

Action: Enter an integer for the LAYER option and retry the operation.

OCI-01959: Must supply an integer for the OPCODE option

Cause: An item other than an integer was entered for the OPCODE option. The value in ALTER SYSTEM DUMP ... OPCODE value must be an integer.

Action: Enter an integer for the OPCODE option and retry the operation. For more information on the OPCODE option, see the Oracle9i SQL Reference.

OCI-01960: Invalid dump logfile option

Cause: An invalid option was entered for the ALTER SYSTEM DUMP LOGFILE option command.

Action: For a list of valid options for DUMP LOGFILE, see the Oracle9i SQL Reference.

OCI-01961: Invalid dump option

Cause: An invalid option was entered for the ALTER SYSTEM DUMP statement.

Action: Enter a valid option for ALTER SYSTEM DUMP. Examples of valid options are LOGFILE and UNDO. For more information on the DUMP option, see the Oracle9i SQL Reference.

OCI-01962: Must specify a file number or log sequence number

Cause: An invalid file number or log sequence number was specified.

Action: Enter a valid file number or log sequence number and retry the operation. For more information on valid file and log sequence numbers, see the Oracle9i SQL Reference.

OCI-01963: Must specify a block number

Cause: An invalid block number was specified.

Action: Enter a valid block number and retry the operation. For more information on valid block numbers, see the Oracle9i SQL Reference.

OCI-01964: Must specify a time for the TIME option

Cause: A value was entered for the TIME option that could not be interpreted as a date.

Action: Enter a valid date. For more information on the TIME option, see the Oracle9i SQL Reference.

OCI-01965: Must specify a PERIOD

Cause: A period was missing between the file number and the block number.

Action: Enter a period between the file number and the block number, then retry the operation. For more information on file numbers and block numbers, see the Oracle9i SQL Reference.

OCI-01966: DEFAULT COLLATION already specified

Cause: The default collation clause was specified twice.

Action: Use only one default collation clause.

OCI-01967: invalid option for CREATE CONTROLFILE

Cause: An invalid CREATE CONTROLFILE option is present.

Action: Specify only valid CREATE CONTROLFILE options.

OCI-01968: Only specify RESETLOGS or NORESETLOGS once

Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

OCI-01969: You must specify RESETLOGS or NORESETLOGS

Cause: Missing a RESETLOGS or a NORESETLOGS

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

OCI-01970: You must specify a database name for CREATE CONTROLFILE

Cause: Missing a database name

Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

OCI-01971: Illegal ALTER TRACING option

Cause: An invalid ALTER TRACING option was present.

Action: Specify only valid ALTER TRACING options. Examples of valid options are ENABLE and DISABLE. For more information, see the Oracle9i SQL Reference.

OCI-01972: Must specify a string for ALTER TRACING ENABLE or DISABLE

Cause: Something other than a valid identifier was specified for ALTER TRACING ENABLE or DISABLE.

Action: Specify a valid identifier for ALTER TRACING ENABLE or DISABLE and retry the operation. For more information on valid identifiers, see the Oracle9i SQL Reference.

OCI-01973: Missing change number

Cause: Keyword "CHANGE" found but change number not specified.

Action: Fix command line and resubmit

OCI-01974: Illegal archive option

Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: Check the syntax of the command and retry it.

OCI-01975: Illegal character in change number *string*

Cause: An invalid change number was supplied.

Action: Resubmit the command with a valid change number.

OCI-01976: Missing change number

Cause: A change number was required, but not supplied.

Action: Check the syntax of the command, supply a change number where needed, then retry the command.

OCI-01977: Missing thread number

Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

OCI-01978: Missing sequence number

Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

OCI-01979: missing or invalid password for role "*string*"

Cause: An attempt was made to enable a role without specifying a valid password.

Action: Enable the role with a valid password. *Params: 1) role_name: The name of the role being enabled.

OCI-01980: error during operating system ROLE initialization

Cause: An operating system error occurred while loading operating system ROLES.

Action: Check the operating system error.

OCI-01981: CASCADE CONSTRAINTS must be specified to perform this REVOKE.

Cause: During this REVOKE, some foreign key constraints could not be removed. To perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

OCI-01982: invalid audit option for table specified

Cause: An invalid AUDIT or NOAUDIT option, like REFERENCE or EXECUTE, was specified for a table.

Action: Validate the audit option for the table and retry the operation.

OCI-01983: invalid AUDIT or NOAUDIT operation while specifying ON DEFAULT

Cause: An invalid AUDIT or NOAUDIT operation was requested for the object (like REFERENCES) while specifying the ON DEFAULT clause.

Action: Correct the statement and retry the operation.

OCI-01984: invalid audit option specified for procedure, package, or function

Cause: An invalid AUDIT or NOAUDIT option was specified for the procedure, package, or function while using the DEFAULT clause.

Action: Only EXECUTE is allowed as valid audit option for procedures, packages, and functions.

OCI-01985: cannot create user as LICENSE_MAX_USERS parameter exceeded

Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

OCI-01986: OPTIMIZER_GOAL is obsolete

Cause: An obsolete parameter, OPTIMIZER_GOAL, was referenced.

Action: Use the OPTIMIZER_MODE parameter.

OCI-01987: Operating system user name of the client is too long.

Cause: The operating system user name of the client was too long for the operating system logon method to succeed.

Action: Use a shorter operating system user name.

OCI-01989: role '*string*' not authorized by operating system

Cause: The operating system role did not exist, or had not been granted, or the correct password was not provided.

Action: Attempt the SET ROLE with a valid operating system role and password. *Params: 1) role_name: The role name being enabled with SET ROLE command.

OCI-01990: Error opening password file '*string*'.

Cause: The password file did not exist or was inaccessible.

Action: Check that the file exists and is accessible, and then retry the operation.

*Params: 1) password_file_name: Name of the database password file.

OCI-01991: invalid password file '*string*'

Cause: The specified password file was invalid.

Action: Specify a valid password file name or re-create the password file. *Params: 1) password_filename: The name of the password file.

OCI-01992: There was an operating system error in closing the password file '*string*'.

Cause: The database password file could not be closed because of an underlying operating system error.

Action: Check for the underlying operating system error and retry the action. In most cases, retrying the operation will be sufficient. If the password file has become corrupt or deleted due to the operating system error, you need to recover the password file by re-creating it or retrieving it from backup. *Params: 1) password_file_name: The name of the password file.

OCI-01993: Error writing to password file *string*.

Cause: The password file could not be written to because of an operating system error or because an authentication action failed.

Action: Check for an authentication or operating system error with the password file, correct, and retry.

OCI-01994: Password file is missing or disabled.

Cause: The operation failed either because the initialization parameter file REMOTE_LOGIN_PASSWORDFILE was set to NONE or the password file was missing.

Action: Create the password file using the ORAPWD tool and set the initialization parameter file REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE.

OCI-01995: The database encountered an error in reading the password file '*string*'.

Cause: An operating system error occurred when trying to read the password file. This may be due to the file permissions or that the file was moved or deleted.

Action: Ensure the password file permissions allow for the database to read and write the file and that the file exists in the correct location. You may also need to review your operating system logs for other possible errors that you might need to correct.

*Params: 1) password_file_name: The name of the password file.

OCI-01996: GRANT failed: password file '*string*' is full

Cause: The grant failed when a user could not be added to the password file, because all available slots in it were used already.

Action: Either create a larger password file or free up slots in the password file by revoking the SYSOPER and SYSDBA privileges from some of the remote users. You can determine which remote users are valid and their privileges by issuing the following query in SQL*DBA: SELECT * FROM V\$REMOTE_USERS;

OCI-01998: An administrative privilege cannot be revoked from the SYS user.

Cause: An attempt was made to revoke SYSOPER or SYSDBA administrative privileges from the SYS user which is not allowed.

Action: Review your requirements to determine a different approach.

OCI-01999: The database password file cannot be updated while the REMOTE_LOGIN_PASSWORDFILE parameter is in SHARED mode.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the initialization parameter

REMOTE_LOGIN_PASSWORDFILE is set to SHARED and the password file is in read-only mode: - Attempting to change the password for an administrative privileged user either using ALTER USER DDL statement or SQL*Plus PASSWORD command, or OCIPasswordChange API. - Attempting to grant administrative privileges to a user. - Attempting to revoke administrative privileges from a user. - Attempting to drop an administrative privileged user. If the password file was created in 12.2 format, then the following additional operations are disallowed when the REMOTE_LOGIN_PASSWORDFILE parameter is set to SHARED: - An ALTER USER DDL statement making changes to an administrative privileged user's account status, password profile assignment, identification type, or password expiration timestamp. - An ALTER PROFILE or DROP PROFILE CASCADE DDL statement for a password profile, which is assigned to an administrative privileged user.

Action: Set the REMOTE_LOGIN_PASSWORDFILE parameter to EXCLUSIVE, ensure that the file is writable, and restart the database instance. Then retry the operation.

OCI-02000: missing *string* keyword

Cause: The statement entered requires the missing keyword.

Action: Use the specified keyword.

OCI-02001: user SYS is not permitted to create indexes with freelist groups

Cause: user tried to create an index while running with sys authorization.

Action: Indexes cannot be created with SYS authorization. Either do not create the index or switch to USER authorization.

OCI-02002: error while writing to audit trail

Cause: The auditing facility was unable to write to the audit trail. SQL statements that were being audited may also fail. This error occurred because of one of the following reasons: 1. Designated audit tablespace ran out of disk space. 2. Operating system mount point where the audit files were located did not have enough free space to generate new files. 3. Some other underlying error caused the audit write failure.

Action: Choose the action corresponding to the cause as numbered: 1. Add space to the designated audit tablespace. 2. Purge old audit records from the audit trail. 3. Check the following error to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Support Services.

OCI-02003: invalid USERENV attribute

Cause: An invalid attribute was specified for the USERENV namespace.

Action: Specify a valid attribute name.

OCI-02004: security violation

Cause: This error code was never returned to a user. It was used as a value for column, UNIFIED_AUDIT_TRAIL.RETURN_CODE, to signal that a security violation occurred.

Action: None

OCI-02005: implicit (-1) length not valid for this bind or define data type

Cause: A negative length for the define variable was passed to a define function.

Action: An explicit, non-negative, length parameter must be passed.

OCI-02006: invalid packed decimal format string

Cause: A packed decimal datatype was passed to a bind or define function, and the format string parameter was either not present or invalid.

Action: A valid format string parameter must be passed for a packed decimal variable. Check the programming manual for the definition of a packed decimal format string.

OCI-02007: can't use ALLOCATE or DEALLOCATE options with REBUILD

Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

OCI-02008: non-zero scale specified for nonnumeric column

Cause: A scale factor was specified for a bind or define of a non-numeric variable.

Action: Set the scale factor to zero, then retry the operation.

OCI-02009: the size specified for a file must not be zero

Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

OCI-02010: missing host connect string

Cause: A quoted character string did not follow the keyword USING in the USING clause of a CREATE DATABASE LINK statement.

Action: Specify the host connect string, then retry the operation.

OCI-02011: duplicate database link name

Cause: The database link name specified in a CREATE DATABASE LINK statement already existed.

Action: Either specify a new name or drop the existing link.

OCI-02012: missing USING keyword

Cause: The keyword USING did not follow the CONNECT TO clause in a CREATE DATABASE LINK statement.

Action: Specify the USING clause after the CONNECT TO clause.

OCI-02013: missing CONNECT keyword

Cause: The keyword CONNECT did not follow the database link name in a CREATE DATABASE LINK statement.

Action: Specify the CONNECT clause after the database link name.

OCI-02014: cannot select FOR UPDATE from view with DISTINCT, GROUP BY, etc.

Cause: An attempt was made to select FOR UPDATE from a view which had not been merged because the view used syntax (for example, DISTINCT or GROUP BY) preventing the merge, or because of initialization file parameter settings.

Action: Determine the reason the view will not merge and, if possible, make changes so that it can.

OCI-02015: cannot select FOR UPDATE from remote table

Cause: An attempt was made to select FOR UPDATE on a remote table (directly, or via a view) that had abstract data type columns, and the view or select list contained abstract data type columns or non-column items.

Action: To attempt a select FOR UPDATE, use a view or select list that consists only of base columns from the remote table, none of which may be abstract data type columns.

OCI-02016: cannot use a subquery in a START WITH on a remote database

Cause: An attempt was made to use a subquery in a START WITH clause. Such a subquery is not currently permitted if the table in the FROM clause of the tree query is in a remote database.

Action: It is necessary to connect directly to the remote database before using a subquery in the START WITH clause.

OCI-02017: integer value required

Cause: The specified value must be an integer.

Action: Specify an appropriate integer value, then retry the operation.

OCI-02018: database link of same name has an open connection

Cause: The user was currently connected to a PUBLIC database link with the same name as the database link name specified in a CREATE or DROP DATABASE LINK statement.

Action: Close the cursors that use the PUBLIC database link.

OCI-02019: connection description for remote database not found

Cause: The referenced database link did not exist.

Action: Create the database link before running the SQL statement.

OCI-02020: too many database links in use

Cause: The current session has exceeded the INIT.ORA open_links maximum.

Action: Increase the open_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

OCI-02021: DDL operations are not allowed on a remote database

Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

OCI-02022: remote statement has unoptimized view with remote object

Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

OCI-02023: START WITH or CONNECT BY predicate cannot be evaluated by remote data base

Cause: The statement contained a tree query on a remote database, and the tree query's START WITH or CONNECT BY predicate contained a term that could not be evaluated at the remote database. Such terms included calls to user functions, calls to USERENV, and references to ROWID.

Action: Remove the disallowed term, directly connect, or log on to the remote database.

OCI-02024: database link not found

Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

OCI-02025: all tables in the SQL statement must be at the remote database

Cause: The user's SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: Remote updates can be performed only if all databases in the SQL statement are Oracle Servers. Update the earlier version databases in a separate statement.

OCI-02026: missing LINK keyword

Cause: keyword missing

Action: supply missing keyword

OCI-02027: multi-row UPDATE of LONG column is not supported

Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

OCI-02028: fetching an exact number of rows is not supported by the server

Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

OCI-02029: missing FILE keyword

Cause: keyword missing

Action: supply missing keyword

OCI-02030: can only select from fixed tables/views

Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

OCI-02031: no ROWID for fixed tables or for external-organized tables

Cause: An attempt is being made to access rowid from a fixed table or from an external-organized table.

Action: Do not access ROWID from a fixed table or from an external-organized table.

OCI-02032: clustered tables cannot be used before the cluster index is built

Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

OCI-02033: a cluster index for this cluster already exists

Cause: A cluster index already exists for the cluster.

Action: None

OCI-02034: speed bind not permitted

Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

OCI-02035: illegal bundled operation combination

Cause: User requested that the UPI bundled execution call perform an illegal combination of operations.

Action: See documentation for legal operation combinations.

OCI-02036: too many variables to describe with automatic cursor open

Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

OCI-02037: uninitialized speed bind storage

Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

OCI-02038: define is not allowed for array type

Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: Correct the offending code.

OCI-02039: bind by value is not allowed for array type

Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: Correct the offending code.

OCI-02040: remote database *string* does not support two-phase commit

Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

OCI-02041: client database did not begin a transaction

Cause: internal error

Action: contact support

OCI-02042: too many distributed transactions

Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don't have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

OCI-02043: must end current transaction before executing *string*

Cause: a transaction is in progress and one of the following commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

OCI-02044: transaction manager login denied: transaction in progress

Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

OCI-02045: too many local sessions participating in global transaction

Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

OCI-02046: distributed transaction already begun

Cause: internal error or error in external transaction manager. A server session received a begin_tran RPC before finishing with a previous distributed tran.

Action: Contact Oracle Support Services.

OCI-02047: cannot join the distributed transaction in progress

Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

OCI-02048: attempt to begin distributed transaction without logging on

Cause: client program must issue a distributed transaction login.

Action: contact support.

OCI-02049: timeout: distributed transaction waiting for lock

Cause: "The number of seconds specified in the distributed_lock_timeout initialization parameter were exceeded while waiting for a lock or for a begin transaction hash collision to end."

Action: Treat this timeout as a deadlock. Roll back the transaction and try again.

OCI-02050: transaction *string* rolled back, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

OCI-02051: another session or branch in same transaction failed or finalized

Cause: A session at the same site with the same global transaction ID failed. The failure could also be caused by an application error if an attempt was made to update the database while another tightly coupled transaction branch with the same global transaction ID was finalized or aborted.

Action: No action necessary as the transaction will be automatically recovered. In the case of an application error, make sure there are no more updates to the database once the transaction manager has started two-phase commit for tightly coupled distributed transaction.

OCI-02052: remote transaction failure at *string*

Cause: error in remote transaction at given DBLINK

Action: retry

OCI-02053: transaction *string* committed, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

OCI-02054: transaction *string* in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending_trans\$ for final outcome.

OCI-02055: distributed update operation failed; rollback required

Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

OCI-02056: 2PC: *string*: bad two-phase command number *string* from *string*

Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending_trans\$ table to ensure correct resolution. Contact support.

OCI-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string*

Cause: internal error in two-phase recovery protocol

Action: contact support

OCI-02058: no prepared transaction found with ID *string*

Cause: no transaction with `local_tran_id` or `global_tran_id` found in the `pending_trans$` table in prepared state.

Action: check the `pending_trans$` table.

OCI-02059: ORA-2PC-CRASH-TEST-*string* in commit comment

Cause: This is a special comment used to test the two phase commit.

Action: Don't use this special comment (%s a number 1-10)

OCI-02060: select for update specified a join of distributed tables

Cause: tables in a join with the for update clause must reside at the same DB.

Action: Joined tables in a SELECT statement with the FOR UPDATE clause must reside at the same database. Simplify the SELECT... FOR UPDATE statement so that it joins only tables in the same database.

OCI-02061: lock table specified list of distributed tables

Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

OCI-02062: distributed recovery received DBID *string*, expected *string*

Cause: a database link at a coordinator no longer points to the expected database. Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

OCI-02063: preceding *stringstring* from *stringstring*

Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

OCI-02064: distributed operation not supported

Cause: One of the following unsupported operations was attempted: 1. array execute of a remote update with a subquery that references a dblink, or 2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or 3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

OCI-02065: illegal option for ALTER SYSTEM

Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

OCI-02066: missing or invalid DISPATCHERS text

Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher's specification after ALTER SYSTEM SET DISPATCHERS

OCI-02067: transaction or savepoint rollback required

Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

OCI-02068: following severe error from *stringstring*

Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

OCI-02069: *global_names* parameter must be set to TRUE for this operation

Cause: A remote mapping of the statement is required but cannot be achieved because *global_names* should be set to TRUE for it to be achieved

Action: Issue alter session set *global_names* = true if possible

OCI-02070: database *stringstring* does not support *string* in this context

Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

OCI-02071: error initializing capabilities for remote database *string*

Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL*Connect product.

OCI-02072: distributed database network protocol mismatch

Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

OCI-02073: sequence numbers not supported in remote updates

Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: Perform the operation without specifying a sequence number.

OCI-02074: cannot *string* in a distributed transaction

Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

OCI-02075: another instance changed state of transaction *string*

Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query *DBA_2PC_PENDING* to determine the new state of the transaction.

OCI-02076: sequence not co-located with updated table or long column

Cause: all referenced sequences must be co-located with the table with the long column.

Action: Correct the problem and then reissue the statement.

OCI-02077: selects of long columns must be from co-located tables

Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: Correct the problem, then reissue the statement.

OCI-02078: invalid setting for ALTER SYSTEM FIXED_DATE

Cause: An invalid value was used.

Action: n/a

OCI-02079: cannot join a committing or finalized distributed transaction

Cause: Once a transaction branch was prepared, no new transaction branch was allowed to start, nor was the prepared transaction branch allowed to be joined. Also, once a transaction was marked finalized, no new transaction branch was allowed to start, nor was the prepared transaction branch allowed to be joined. A transaction could have been marked finalized if one of the branches in the transaction was rolled back by PMON because it exceeded the transaction idle time limit.

Action: Check the application code to be sure it is not starting a new branch after doing a prepare (this is an XA protocol violation). If no prepare was done, check that the transaction idle time timeout (TransactionTimeout or SesTM) is large enough to avoid expiring before all work in the transaction is complete.

OCI-02080: database link is in use

Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link *link* command.

Action: commit or rollback, and close all cursors

OCI-02081: database link is not open

Cause: dblink given is not currently open.

Action: Resolve network problems or contact the remote database administrator to determine if the remote database's problem has been fixed. Contact the local database administrator to determine if network problems have been resolved. Wait until the link is open and try the operation again.

OCI-02082: a loopback database link must have a connection qualifier

Cause: An attempt was made to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, for example MYDB.EXAMPLE.COM@INST1 - the '@INST1' is the qualifier

OCI-02083: database name has illegal character 'string'

Cause: supplied database name can contain only A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: Specify a valid database name.

OCI-02084: database name is missing a component

Cause: supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: Specify the full database name.

OCI-02085: database link *string* connects to *string*

Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set `global_names=false`.

OCI-02086: Database name or database link name is too long.

Cause: Database name or database link name limited to 128 characters.

Action: Specify a correct database name or database link name, or use a shorter database name or database link name.

OCI-02087: object locked by another process in same transaction

Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

OCI-02088: distributed database option not installed

Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: Contact Oracle Support Services about obtaining the distributed database option.

OCI-02089: COMMIT is not allowed in a subordinate session

Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

OCI-02090: network error: attempted callback+passthru

Cause: internal error.

Action: Contact Oracle Support Services.

OCI-02091: transaction rolled back

Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

OCI-02092: out of transaction table slots for distributed transaction

Cause: The transaction was assigned to the system rollback segment and was trying to get into the PREPARED state. However, Oracle requires a minimum number of transactions to not be in the PREPARED state in the system rollback segment. This transaction could not transition to the PREPARED state, it has been rolled back.

Action: Add a rollback segment and retry the transaction.

OCI-02093: TRANSACTIONS_PER_ROLLBACK_SEGMENT(*string*) more than maximum possible(*string*)

Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

OCI-02094: replication option not installed

Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

OCI-02095: specified initialization parameter cannot be modified

Cause: The specified initialization parameter is not modifiable

Action: Check the Oracle9i Database Administrator's Guide for information about under what scope the parameter may be modified. For more information about modifying an initialization parameter, see the Oracle9i Database Reference.

OCI-02096: specified initialization parameter is not modifiable with this option

Cause: Although the initialization parameter is modifiable, it could not be modified by using the specified options.

Action: Check Oracle documentation to identify the initialization parameter attributes that are modifiable.

OCI-02097: parameter cannot be modified because specified value is invalid

Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

OCI-02098: error parsing index-table reference (:l)

Cause: An incorrect index-table (:l) syntax was encountered.

Action: This syntax is for oracle internal use only.

OCI-02100 to OCI-04100

OCI-02100: PCC: out of memory (i.e., could not allocate)

Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session and then rerun the program. If the error persists, contact Oracle Support Services for assistance.

OCI-02101: PCC: inconsistent cursor cache (uce/cuc mismatch)

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02102: PCC: inconsistent cursor cache (no cuc entry for this uce)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02103: PCC: inconsistent cursor cache (out-of-range cuc ref)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02104: PCC: inconsistent host cache (no cuc available)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02105: PCC: inconsistent cursor cache (no cuc entry in cache)

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02106: PCC: inconsistent cursor cache (OraCursor nr is bad)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02107: PCC: this pgm too old for run-time library: please re-PCC it

Cause: The program was precompiled by an older version of the Oracle Precompilers, which was incompatible with this release of the Oracle runtime library (SQLLIB).

Action: Precompile the program with a newer version of the Oracle Precompilers.

OCI-02108: PCC: invalid descriptor passed to run-time library

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02109: PCC: inconsistent host cache (out-of-range sit ref)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02110: PCC: inconsistent host cache (invalid sqi type)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02111: PCC: heap consistency error

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

OCI-02112: PCC: SELECT..INTO returns too many rows

Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are three possible solutions: - Use the precompiler option SELECT_ERROR=NO. - Declare a host variable with a larger array dimension. - Declare a cursor or cursor variable for the select statement.

OCI-02140: invalid tablespace name

Cause: An identifier does not follow ALTER TABLESPACE.

Action: Specify a tablespace name following ALTER TABLESPACE.

OCI-02141: invalid OFFLINE option

Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

OCI-02142: missing or invalid ALTER TABLESPACE option

Cause: A valid option was not present.

Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

OCI-02143: invalid STORAGE option

Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

Action: Specify only valid options.

OCI-02144: no option specified for ALTER CLUSTER

Cause: No ALTER CLUSTER options are specified.

Action: Specify one or more of the following options: pctfree, pctused, size, storage.

OCI-02145: missing STORAGE option

Cause: No STORAGE options were specified following STORAGE (

Action: Specify one or more STORAGE option between the parentheses.

OCI-02146: SHARED specified multiple times

Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the SHARED option once.

OCI-02147: conflicting SHARED/EXCLUSIVE options

Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

Action: Specify SHARED or EXCLUSIVE, but not both.

OCI-02148: EXCLUSIVE specified multiple times

Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

OCI-02149: Specified partition does not exist *string*

Cause: Partition not found for the object.

Action: Retry with correct partition name.

OCI-02150: invalid new tablespace name

Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

OCI-02151: invalid tablespace name: *string*

Cause: Oracle cannot create a tablespace whose name starts with '_\$deleted\$'.

Action: Try a different tablespace name.

OCI-02152: Invalid ALTER TABLESPACE ... RENAME option

Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

OCI-02153: invalid VALUES password string

Cause: The IDENTIFIED BY VALUES clause did not contain a valid encoded password string.

Action: Place a valid encoded password string after the IDENTIFIED BY VALUES clause and retry the operation.

OCI-02154: a tablespace with the name 'string' is found

Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

OCI-02155: invalid DEFAULT tablespace identifier

Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

OCI-02156: invalid TEMPORARY tablespace identifier

Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

OCI-02157: no options specified for ALTER USER

Cause: No options were specified.

Action: Specify at least one ALTER USER option.

OCI-02158: invalid CREATE INDEX option

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

OCI-02159: installed DLM does not support releasable locking mode

Cause: The parameter file specified gc_* parameters that allow locks to be release by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

Action: Specify configuration parameters that do not require the additional function.

OCI-02160: index-organized table can not contain columns of type LONG

Cause: A column of type LONG defined for index-organized table.

Action: Do not use columns of type LONG in index-organized tables.

OCI-02161: invalid value for MAXLOGFILES

Cause: A number does not follow MAXLOGFILES.

Action: Specify a number after MAXLOGFILES.

OCI-02162: invalid value for MAXDATAFILES

Cause: A number does not follow MAXDATAFILES.

Action: Specify a number after MAXDATAFILES.

OCI-02163: invalid value for FREELIST GROUPS

Cause: A number does not follow FREELIST GROUPS.

Action: Specify a number after FREELIST GROUPS.

OCI-02164: DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

Action: Specify at most one DATAFILE clause.

OCI-02165: invalid option for CREATE DATABASE

Cause: An invalid CREATE DATABASE option is present.

Action: Specify only valid CREATE DATABASE options.

OCI-02166: ARCHIVELOG and NOARCHIVELOG specified

Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

Action: Specify at most one of these two options.

OCI-02167: LOGFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

Action: Specify at most one LOGFILE clause.

OCI-02168: invalid value for FREELISTS

Cause: A number does not follow FREELISTS

Action: Specify a number after FREELISTS

OCI-02169: FREELISTS storage option not allowed

Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

Action: Remove these options and retry the statement.

OCI-02170: FREELIST GROUPS storage option not allowed

Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow_freelist_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow_freelist_groups INIT.ORA parameter.

OCI-02171: invalid value for MAXLOGHISTORY

Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

OCI-02172: The PUBLIC keyword is not appropriate for a disable thread

Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

OCI-02173: invalid option for DROP TABLESPACE

Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

OCI-02174: Missing required thread number

Cause: Must specify thread number after THREAD keyword

Action: Use correct syntax.

OCI-02175: invalid rollback segment name

Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

OCI-02176: invalid option for CREATE ROLLBACK SEGMENT

Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

OCI-02177: Missing required group number

Cause: Must specify group number after GROUP keyword

Action: Check the syntax of the command, specify a group number after GROUP, and retry it.

OCI-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

OCI-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

OCI-02180: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified for the CREATE TABLESPACE statement.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION, IN SHARD.

OCI-02181: invalid option to ROLLBACK WORK

Cause: A token other than TO follows ROLLBACK [WORK].

Action: Place nothing or TO SAVEPOINT *name* after ROLLBACK [WORK].

OCI-02182: savepoint name expected

Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

Action: Place a savepoint name following TO [SAVEPOINT].

OCI-02183: valid options: ISOLATION_LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

OCI-02184: resource quotas are not allowed in REVOKE

Cause: In a revoke statement, a resource quota was specified.

Action: Specify resource privilege without the quota.

OCI-02185: a token other than WORK follows COMMIT

Cause: A token other than WORK follows COMMIT.

Action: Place either nothing or WORK after COMMIT.

OCI-02186: tablespace resource privilege may not appear with other privileges

Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

Action: Use a separate grant or revoke statement for the resource quota privilege.

OCI-02187: invalid quota specification

Cause: The user attempted to grant a tablespace quota above the upper limit.

Action: Grant a smaller tablespace quota.

OCI-02188: Cannot enable instance publicly

Cause: An attempt was made to publicly enable a thread associated with an instance.

Action: Leave out the PUBLIC keyword.

OCI-02189: ON *tablespace* required

Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON *tablespace* clause.

Action: Specify the tablespace on which the quota is to be applied with the ON *tablespace* clause.

OCI-02190: keyword TABLES expected

Cause: The keyword TABLES is expected following DROP CLUSTER *name* INCLUDING.

Action: Place TABLES after INCLUDING.

OCI-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT *rb*s

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

OCI-02192: PCTINCREASE not allowed for rollback segment storage clauses

Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

OCI-02194: event specification syntax error *string* (minor error *string*) near '*string*'

Cause: There is a syntax error in an event specification.

Action: Fix the error.

OCI-02195: Attempt to create *string* object in a *string* tablespace

Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

OCI-02196: PERMANENT/TEMPORARY option already specified

Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE. For more information about the parameters of CREATE TABLESPACE, see the Oracle9i SQL Reference.

OCI-02197: file list already specified

Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

OCI-02198: ONLINE/OFFLINE option already specified

Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

OCI-02199: missing DATAFILE/TEMPFILE clause

Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

OCI-02200: WITH GRANT OPTION not allowed for PUBLIC

Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

OCI-02201: sequence not allowed here

Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

OCI-02202: No more tables are permitted in this cluster.

Cause: An attempt was made to create a table in a cluster that already contains the maximum number of 32 tables.

Action: Only up to 32 tables may be stored per cluster. You need to drop an existing table in the cluster or create a new cluster for this table.

OCI-02203: INITIAL storage options not allowed

Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

OCI-02204: ALTER, INDEX and EXECUTE not allowed for views

Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

OCI-02205: Only SELECT and ALTER object privileges are valid for sequences.

Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke any object privilege other than SELECT or ALTER on sequences.

OCI-02206: duplicate INITRANS option specification

Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

OCI-02207: invalid INITRANS option value

Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

OCI-02208: duplicate MAXTRANS option specification

Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

OCI-02209: invalid MAXTRANS option value

Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

OCI-02210: no options specified for ALTER TABLE

Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

OCI-02211: invalid value for PCTFREE or PCTUSED

Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

OCI-02212: duplicate PCTFREE option specification

Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

OCI-02213: duplicate PCTUSED option specification

Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

OCI-02214: duplicate BACKUP option specification

Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

OCI-02215: duplicate tablespace name clause

Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

OCI-02216: tablespace name expected

Cause: A tablespace name was not present where required by the syntax for the failing statement.

Action: Specify a tablespace name where required by the syntax.

OCI-02217: duplicate storage option specification

Cause: A storage option (INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

OCI-02218: invalid INITIAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

OCI-02219: invalid NEXT storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

OCI-02220: invalid MINEXTENTS storage option value

Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

OCI-02221: invalid MAXEXTENTS storage option value

Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

OCI-02222: invalid PCTINCREASE storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

OCI-02223: invalid OPTIMAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

OCI-02224: invalid privilege on a table

Cause: An attempt was made to grant an invalid privilege on a table.

Action: Only ALTER, DELETE, INDEX, INSERT, REFERENCES, SELECT, UPDATE, UNDER, ON COMMIT REFRESH, QUERY REWRITE, DEBUG, FLASHBACK, READ, and SIGN object privileges can be granted on a table. Do not grant any other privilege on a table.

OCI-02225: You can only grant or revoke EXECUTE and DEBUG object privileges for this object.

Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function, package, library, assembly, java source, java class, java resource, java shared data, Multilingual Engine (MLE) language, or SQL DOMAIN. You can only grant or revoke the EXECUTE and DEBUG object privilege on these object types.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions package, library, assembly, java source, java class, java resource, java shared data, MLE language or SQL DOMAIN.

OCI-02226: invalid MAXEXTENTS value (max allowed: *string*)

Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

OCI-02227: invalid cluster name

Cause: A cluster name of the form [*identifier .*] *identifier* is expected but not present.

Action: Enter an appropriate cluster name.

OCI-02228: duplicate SIZE specification

Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

OCI-02229: invalid SIZE option value

Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

OCI-02230: invalid ALTER CLUSTER option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

OCI-02231: missing or invalid option to ALTER DATABASE

Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

OCI-02232: invalid MOUNT mode

Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

OCI-02233: invalid CLOSE mode

Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

OCI-02234: changes to this table are already logged

Cause: the log table to be added is a duplicate of another

Action: Don't add this change log to the system; check that the replication product's system tables are consistent

OCI-02235: this table logs changes to another table already

Cause: the table to be altered is already a change log for another table

Action: Don't log changes to the specified base table to this table; check that the replication product's system tables are consistent

OCI-02236: invalid file name

Cause: A character string literal was not used in the file name list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

OCI-02237: invalid file size

Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

OCI-02238: file name lists have different numbers of files

Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing file names does not equal the number of new file names.

Action: Make sure there is a new file name to correspond to each existing file name.

OCI-02239: there are objects which reference this sequence

Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/object

OCI-02240: invalid value for OBJNO or TABNO

Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

OCI-02241: must of form EXTENTS (FILE *n* BLOCK *n* SIZE *n*, ...)

Cause: bad extent storage clause

Action: respecify

OCI-02242: no options specified for ALTER INDEX

Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

OCI-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option

Cause: An option other than INITRANS, MAXTRANS, or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

OCI-02244: invalid ALTER ROLLBACK SEGMENT option

Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

OCI-02245: invalid ROLLBACK SEGMENT name

Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

OCI-02246: missing EVENTS text

Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

OCI-02247: no option specified for ALTER SESSION

Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

OCI-02248: invalid option for ALTER SESSION

Cause: Obvious.

Action: see SQL Language Manual for legal options.

OCI-02249: missing or invalid value for MAXLOGMEMBERS

Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

OCI-02250: missing or invalid constraint name

Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

OCI-02251: subquery not allowed here

Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

OCI-02252: check constraint condition not properly ended

Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

OCI-02253: constraint specification not allowed here

Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

OCI-02254: DEFAULT expression not allowed here

Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

OCI-02255: obsolete 7.1.5

Cause: Was that defaults must not conflict with not null constraints

Action: n/a

OCI-02256: number of referencing columns must match referenced columns

Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

OCI-02257: maximum number of columns exceeded

Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

OCI-02258: duplicate or conflicting NULL and/or NOT NULL specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02259: duplicate UNIQUE/PRIMARY KEY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

OCI-02260: table can have only one primary key

Cause: Self-evident.

Action: Remove the extra primary key.

OCI-02261: The unique or primary key already exists in the table.

Cause: The unique or primary key value that was used already exists in the table.

Action: Remove the extra key or specify an unused value for the key.

OCI-02262: ORA-string occurs while type-checking column default value expression

Cause: New column data type causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don't alter the column data type.

OCI-02263: need to specify the data type for this column

Cause: The required data type for the column is missing.

Action: Specify the required data type.

OCI-02264: name already used by an existing constraint

Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

OCI-02265: cannot derive the data type of the referencing column

Cause: The data type of the referenced column is not defined as yet.

Action: Make sure that the data type of the referenced column is defined before referencing it.

OCI-02266: unique/primary keys in table referenced by enabled foreign keys

Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

OCI-02267: column type incompatible with referenced column type

Cause: The data type or collation of the referencing column was incompatible with the data type or collation of the referenced column.

Action: Select a compatible data type for the referencing column. Also, the collation of a character column in a foreign key must match the collation of the corresponding column in the primary key.

OCI-02268: referenced table does not have a primary key

Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

OCI-02269: key column cannot be of LONG data type

Cause: Self-evident.

Action: Change the data type of the column, or remove the column from the key.

OCI-02270: no matching unique or primary key for this column-list

Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL_CONS_COLUMNS catalog view

OCI-02271: table does not have such constraint

Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

OCI-02272: constrained column cannot be of LONG data type

Cause: Self-evident.

Action: Change the data type of the column, or remove the constraint on the column.

OCI-02273: this unique/primary key is referenced by some foreign keys

Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

OCI-02274: duplicate referential constraint specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

OCI-02275: such a referential constraint already exists in the table

Cause: Self-evident.

Action: Remove the extra constraint.

OCI-02276: default value type incompatible with column type

Cause: The type of the evaluated default expression is incompatible with the data type of the column.

Action: Change the type of the column, or modify the default expression.

OCI-02277: invalid sequence name

Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

OCI-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02280: duplicate or conflicting CYCLE/NOCYCLE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02281: duplicate or conflicting CACHE/NOCACHE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02282: duplicate or conflicting ORDER/NOORDER specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

OCI-02283: cannot alter starting sequence number

Cause: Self-evident.

Action: Don't alter it.

OCI-02284: duplicate INCREMENT BY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

OCI-02285: duplicate START WITH specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

OCI-02286: no options specified for ALTER SEQUENCE

Cause: Self-evident.

Action: The statement is meaningless without any options.

OCI-02287: sequence number not allowed here

Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

OCI-02288: invalid OPEN mode

Cause: A token other than RESETLOGS appears following ALTER DATABASE *name* OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

OCI-02289: sequence does not exist

Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

OCI-02290: check constraint (*string.string*) violated

Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

OCI-02291: integrity constraint (*string.string*) violated - parent key not found

Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

OCI-02292: integrity constraint (*string.string*) violated - child record found

Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

OCI-02293: cannot validate (*string.string*) - check constraint violated

Cause: an alter table operation tried to validate a check constraint to a populated table that had noncomplying values.

Action: Obvious

OCI-02294: cannot enable (*string.string*) - constraint changed during validation

Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

OCI-02295: found more than one enable/disable clause for constraint

Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

OCI-02296: cannot enable (*string.string*) - null values found

Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

OCI-02297: cannot disable constraint (*string.string*) - dependencies exist

Cause: an alter table disable constraint failed because the table has foreign keys that are dependent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

OCI-02298: cannot validate (*string.string*) - parent keys not found

Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

OCI-02299: cannot validate (*string.string*) - duplicate keys found

Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

OCI-02300: invalid value for OIDGENERATORS

Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

OCI-02301: maximum number of OIDGENERATORS is 255

Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

OCI-02302: invalid or missing type name

Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

OCI-02303: Cannot DROP or REPLACE a type with type or table dependents.

Cause: An attempt was made to DROP or REPLACE a type that has type or table dependents.

Action: For DROP TYPE, drop all types and tables depending on the type and then retry the operation, or use the FORCE option. For CREATE TYPE, drop all types and tables depending on the type and then retry the operation, or drop all tables depending on the type and retry with the FORCE option. This query lists the dependent objects: `SELECT owner, name, type FROM all_dependencies WHERE referenced_name = '<type_name>' AND referenced_owner = '<type_owner>';`

OCI-02304: invalid object identifier literal

Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either: - not a string of 32 hexadecimal characters - an object identifier that already identifies an existing object - an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

OCI-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types

Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

OCI-02306: cannot create a type that already has valid dependent(s)

Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

OCI-02307: cannot alter with REPLACE option a type that is not valid

Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

OCI-02308: invalid option *string* for object type column

Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

OCI-02309: atomic NULL violation

Cause: An attempt was made to access the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

OCI-02310: exceeded maximum number of allowed columns in table

Cause: The creation of an object column internally creates a number of columns, including columns for any scalar attribute at any level. The total number of columns created exceeded the maximum column limit for the table.

Action: If this object column needs to be part of the table, drop some other columns so that the limit is not exceeded.

OCI-02311: cannot alter with COMPILE option a valid type with type or table dependents

Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

OCI-02313: Object type contains non-queryable type *string* attribute.

Cause: The specified object type contained a nested attribute whose type could not be queried.

Action: Use an object type with queryable attribute types. *Params: 1) type: The non-queryable type.

OCI-02314: illegal use of type constructor

Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

OCI-02315: incorrect number of arguments for default constructor

Cause: The number of arguments specified for the default constructor doesn't match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

OCI-02320: failure in creating storage table for nested table column *string*

Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation described can be corrected, do so. Otherwise, contact Oracle Support. *Params: 1) column: The given nested table column name.

OCI-02322: failure in accessing storage table of the nested table column

Cause: An error occurred while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support Services.

OCI-02324: more than one column in the SELECT list of THE subquery

Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

OCI-02327: cannot create index on expression with data type *string*

Cause: An attempt was made to create an index on an expression with an unsupported data type: VARRAY, nested table, ADT, LOB, or REF.

Action: Change the column data type or do not create the index on an expression whose data type is one of VARRAY, nested table, ADT, LOB, or REF. *Params: 1) data_type: The unsupported data type.

OCI-02329: Column of data type *string* cannot be unique or a primary key.

Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of data type VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column data type or remove the constraint. Then retry the operation. *Params: 1) data_type: The data type of the column.

OCI-02330: data type specification not allowed

Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

OCI-02331: cannot create constraint on column of data type *string*

Cause: An attempt was made to create a constraint on a column of data type VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column data type, or remove the constraint. *Params: 1) type: The disallowed data type.

OCI-02332: cannot create index on attributes of this column

Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

OCI-02334: cannot infer type for column

Cause: A data type was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a data type for the column.

OCI-02335: invalid data type for cluster column *string*

Cause: An attempt was made to declare a CLUSTER column of data type object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the data type of the column. *Params: 1) column: The column name.

OCI-02336: column attribute cannot be accessed

Cause: An attempt was made to extract an attribute from a packed object type column or a column that is not an Abstract Data Type (ADT).

Action: Correct the column name to use an unpacked ADT column.

OCI-02337: '*string*' is not an object type column.

Cause: An attempt was made to use dot notation on a non Abstract Data Type (ADT) column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation. *Params: 1) column : The column name with dot notation.

OCI-02338: missing or invalid column constraint specification

Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

OCI-02342: replacement type has compilation errors

Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

OCI-02344: Cannot revoke EXECUTE privilege on a type with table dependents.

Cause: An attempt was made to revoke EXECUTE privilege from a type that had table dependents.

Action: Drop all tables that depend on the type, then retry the operation, or use the FORCE option.

OCI-02345: cannot create a view with column based on CURSOR operator

Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

OCI-02347: Direct object privileges cannot be granted on object table columns.

Cause: An attempt was made to grant direct object privileges on the columns of an object table. Privileges cannot be granted to object table columns.

Action: A change to the design may be needed. An option may be to create a view on the object table and create privileges on the view columns.

OCI-02348: cannot create VARRAY column with embedded LOB

Cause: An attempt was made to create a column of VARRAY type which had an embedded large object (LOB) attribute. The LOB could be an attribute of a subtype of the declared type of the VARRAY element.

Action: Remove the offending attribute from the type. If it is a subtype attribute, then declare the VARRAY column as NOT SUBSTITUTABLE.

OCI-02349: invalid user-defined type - type is incomplete

Cause: An attempt was made to use an incomplete type definition as a column or table data type.

Action: Complete the type definition and retry the operation.

OCI-02351: internal error: *string*\n

Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

OCI-02352: error setting an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02353: error fetching an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02354: error in exporting/importing data\n*string*

Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

OCI-02355: error opening file: *string*\n

Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02356: The database is out of space. The load cannot continue

Cause: The load was discontinued due to space exhaustion in the database.

Action: Add space for the specified table.

OCI-02357: header in file *string* may not contain correct information\n

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

OCI-02358: error in exporting or importing data\n

Cause: An error has occurred in a stream export or import operation.

Action: Contact Oracle Support Services.

OCI-02359: database version in file *string* is not valid\n

Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFILE clause.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

OCI-02360: fatal error during data export/import initialization\n

Cause: An unexpected error occurred during initialization for data export/import.

Action: Contact Oracle Support Services.

OCI-02361: error while attempting to allocate *number* bytes of memory\n

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

OCI-02362: error closing file: *string*\n

Cause: An attempt to close the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02363: error reading from file: *string*\n

Cause: An attempt to read from the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02364: error writing to file: *string*\n

Cause: An attempt to write to the specified file for data export or import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02365: error seeking in file: *string*\n

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

OCI-02366: The following index(es) on table *string* were processed:

Cause: The table had some indexes which were loaded if there were no errors.

Action: None

OCI-02367: read ended but had expected more data from file *string*\n

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

OCI-02368: the following file is not valid for this load operation\n

Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFIL clause are from the same unload operation and that the unload was successful.

OCI-02369: internal number in header in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

OCI-02370: internal metadata in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFIL clause are from the same unload operation.

OCI-02371: Loader must be at least version *string.string.string.string.string* for direct path

Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

OCI-02372: data for row: *string* \n

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

OCI-02373: Error parsing insert statement for table *string*.

Cause: self-evident.

Action: Check the error given below this one.

OCI-02374: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

OCI-02375: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

OCI-02376: invalid or redundant resource

Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

Action: define resource first

OCI-02377: invalid profile limit *string*

Cause: A value of 0 or lower was specified for the limit.

Action: Specify a limit greater than 0. For password profile parameters, some additional restrictions apply: * The specified limit of the PASSWORD_ROLLOVER_TIME profile parameter cannot exceed either 60 days, or the current value of the PASSWORD_GRACE_TIME limit of the profile, or the current value of the PASSWORD_LIFE_TIME limit of the profile; whichever value is lowest. * When the PASSWORD_ROLLOVER_TIME profile parameter is non-zero (the password rollover feature is enabled), the specified limit cannot be less than 1 hour, to give the application time to switch over to the new password. * The PASSWORD_LIFE_TIME and PASSWORD_GRACE_TIME limits cannot be less than the PASSWORD_ROLLOVER_TIME limit. * For the INACTIVE_ACCOUNT_TIME profile parameter, the specified limit cannot be less than 15 days. * For the PASSWORD_GRACE_TIME profile parameter, 0 is allowed as a permissible value.

OCI-02378: duplicate resource name *string*

Cause: The same resource was specified twice in a CREATE or ALTER PROFILE statement.

Action: Issue the statement again, carefully checking that each resource is used only once.

OCI-02379: profile *string* already exists

Cause: Try to create a profile which already exist

Action: Create the profile with a name not already used by another profile.

OCI-02380: profile *string* does not exist

Cause: Try to assign a user to a nonexistent profile

Action: Assign the user to an existing profile.

OCI-02381: cannot drop *string* profile

Cause: An attempt was made to drop PUBLIC_DEFAULT or a mandatory profile, which is not allowed due to following restrictions: * PUBLIC_DEFAULT profile can be dropped only when the database is in migration mode. * A mandatory profile can be dropped only if it is not set as a mandatory profile in root container (CDB\$ROOT) of a multitenant container database (CDB) or in a Pluggable Database (PDB).

Action: If you are trying to drop the PUBLIC_DEFAULT profile, try dropping it during migration mode. If you are trying to drop a mandatory profile, check the MANDATORY_USER_PROFILE system parameter setting in the root container (CDB\$ROOT) or in a Pluggable Database (PDB) and retry the operation after resetting the MANDATORY_USER_PROFILE system parameter by executing ALTER SYSTEM RESET DDL statement.

OCI-02382: profile *string* has users assigned, cannot drop without CASCADE

Cause: An attempt was made to drop a profile that had users assigned to it without using the CASCADE option of the DROP PROFILE statement. A profile that had users assigned to it cannot be dropped, unless the CASCADE option was specified. CASCADE reassigns users to the PUBLIC_DEFAULT profile before dropping the profile.

Action: To reassign all users to the PUBLIC_DEFAULT profile, issue the DROP PROFILE statement with the CASCADE option.

OCI-02383: illegal cost factor

Cause: Negative or UNLIMITED cost for this resource

Action: Only positive integer values can be specified for resources in the ALTER RESOURCE COST statement. Issue the statement again, using a positive integer value for each resource specified.

OCI-02384: cannot drop an oracle maintained profile

Cause: An attempt was made to drop an oracle maintained profile. An oracle maintained profile can be dropped only by SYS during migration mode.

Action: Drop the oracle maintained profile during migration mode.

OCI-02385: cannot assign mandatory profile *string* to a user

Cause: An attempt was made to assign a mandatory profile to the user. A mandatory profile defined in the root container (CDB\$ROOT) of a multitenant container database (CDB) was meant only to enforce the minimum password complexity requirement inside the Pluggable Database (PDB), therefore it was not allowed to assign the profile to database or Real Application Security (RAS) users.

Action: Assign a profile other than mandatory profile.

OCI-02386: invalid value for MANDATORY_USER_PROFILE parameter

Cause: An attempt was made to specify a profile for the MANDATORY_USER_PROFILE parameter, which does not exist as a mandatory profile in the root container (CDB\$ROOT) of a multitenant container database (CDB).

Action: Check DBA_PROFILES to see if a profile exists as a mandatory profile and specify a valid value. Only CDB Common profiles created as mandatory profiles using the CREATE MANDATORY PROFILE DDL statement are allowed as valid values for the MANDATORY_USER_PROFILE parameter.

OCI-02387: invalid password parameter for mandatory profile *string*

Cause: Invalid resource name was specified for the mandatory profile.

Action: Assign a valid resource name to the mandatory profile. Only PASSWORD_VERIFY_FUNCTION and PASSWORD_GRACE_TIME password parameters can be specified for a mandatory profile. If the value is specified as DEFAULT or not specified at all, then instead of using the password parameters of the PUBLIC_DEFAULT profile, it is interpreted as NULL and 0 for PASSWORD_VERIFY_FUNCTION and PASSWORD_GRACE_TIME parameters, respectively, for mandatory profile enforcement purposes.

OCI-02390: exceeded COMPOSITE_LIMIT, you are being logged off

Cause: The COMPOSITE_LIMIT for the profile is exceeded. That is, the weighted sum of the connection time, logical reads per session, CPU usage per session, and private SGA space used during the session exceeded the limit set by the COMPOSITE_LIMIT clause set in the user profile.

Action: If this happens often, ask the database administrator to raise the COMPOSITE_LIMIT of the user profile, or determine which resource is used the most and raise the limit on that resource.

OCI-02391: exceeded simultaneous SESSIONS_PER_USER limit

Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSIONS_PER_USER clause of the user profile.

Action: End one or more concurrent sessions or ask the database administrator to increase the SESSIONS_PER_USER limit of the user profile.

OCI-02392: exceeded session limit on CPU usage, you are being logged off

Cause: An attempt was made to exceed the maximum CPU usage allowed by the CPU_PER_SESSION clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_SESSION limit of the user profile.

OCI-02393: exceeded call limit on CPU usage

Cause: An attempt was made to exceed the maximum CPU time for a call, a parse, execute, or fetch, allowed by the CPU_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_CALL limit of the user profile.

OCI-02394: The current session exceeds IO usage limits; this session is being logged off.

Cause: An operation performed by the session exceeded the maximum I/O limit allowed by the LOGICAL_READS_PER_SESSION clause of the user profile.

Action: If this happens often, request the database administrator to increase the LOGICAL_READS_PER_SESSION limit of the user profile.

OCI-02395: exceeded call limit on IO usage

Cause: An attempt was made to exceed the maximum I/O for a call, a parse, execute, or fetch, allowed by the LOGICAL_READS_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the LOGICAL_READS_PER_CALL limit of the user profile.

OCI-02396: exceeded maximum idle time, please connect again

Cause: as stated

Action: The user must reconnect to the database.

OCI-02397: exceeded PRIVATE_SGA limit, you are being logged off

Cause: Only when using TP monitor

Action: expand limit

OCI-02398: exceeded procedure space usage

Cause: Stored procedured used up too much space in SYSTEM Tablespace

Action: Use less stored procedure

OCI-02399: exceeded maximum connect time, you are being logged off

Cause: As stated

Action: The user must reconnect to the database.

OCI-02401: cannot EXPLAIN view owned by another user

Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

OCI-02402: PLAN_TABLE not found

Cause: The table used by EXPLAIN to store plan information does not exist in the current schema.

Action: Create a plan table in the current schema if absent, or use the INTO clause to store the output of EXPLAIN in an existing plan table.

OCI-02403: plan table does not have correct format

Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

OCI-02404: specified plan table not found

Cause: The specified plan table does cannot be found.

Action: Create the specified plan table or use an existing plan table.

OCI-02405: invalid SQL plan object provided

Cause: A NULL, empty, or malformed object of type SQL_PLAN_TABLE_TYPE was provided.

Action: Provide a new, properly formed object to the function.

OCI-02420: missing schema authorization clause

Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Precede the schema authorization identifier with the AUTHORIZATION keyword.

OCI-02421: missing or invalid schema authorization identifier

Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

OCI-02422: missing or invalid schema element

Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

OCI-02423: schema name does not match schema authorization identifier

Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

OCI-02424: potential circular view references or unknown referenced tables

Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

OCI-02425: create table failed

Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

OCI-02426: privilege grant failed

Cause: a grant privilege statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

OCI-02427: create view failed

Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

OCI-02428: could not add foreign key reference

Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have a unique key.

Action: make sure referenced table exists and/or has unique key

OCI-02429: cannot drop index used for enforcement of unique/primary key

Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

OCI-02430: cannot enable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

OCI-02431: cannot disable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

OCI-02432: cannot enable primary key - primary key not defined for table

Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

OCI-02433: cannot disable primary key - primary key not defined for table

Cause: Attempted to disable a primary key that is not defined for the table.

Action: None

OCI-02434: cannot enable unique(*string*) - unique key not defined for table

Cause: attempted to enable a unique key that is not defined for the table.

Action: None

OCI-02435: cannot disable unique(*string*) - unique key not defined for table

Cause: attempted to disable a unique key that is not defined for the table.

Action: None

OCI-02436: date or system variable wrongly specified in CHECK constraint

Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > '10-MAY-96'", which a bug permitted to be created before version 8.

OCI-02437: cannot validate (*string.string*) - primary key violated

Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

OCI-02438: Column check constraint cannot reference other columns

Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constraint.

OCI-02439: Unique index on a deferrable constraint is not allowed

Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

OCI-02440: Create as select with referential constraints not allowed

Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

OCI-02441: Cannot drop nonexistent primary key

Cause: alter table drop primary key - primary key does not exist.

Action: None

OCI-02442: Cannot drop nonexistent unique key

Cause: alter table drop unique (*col list*) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

OCI-02443: Cannot drop constraint - nonexistent constraint

Cause: alter table drop constraint <constraint_name>

Action: make sure you supply correct constraint name.

OCI-02444: Cannot resolve referenced object in referential constraints

Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolved to base table reference

OCI-02445: Exceptions table not found

Cause: the explicitly or implicitly declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

OCI-02446: CREATE TABLE ... AS SELECT failed - check constraint violated

Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

OCI-02447: cannot defer a constraint that is not deferrable

Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

OCI-02448: constraint does not exist

Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistent constraint

OCI-02449: unique/primary keys in table referenced by foreign keys

Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations on the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

OCI-02450: Invalid hash option - missing keyword IS

Cause: Missing IS keyword.

Action: Specify HASH IS option.

OCI-02451: duplicate HASHKEYS specification

Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

OCI-02452: invalid HASHKEYS option value

Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

OCI-02453: duplicate HASH IS specification

Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

OCI-02454: Number of hash keys per block (*string*) exceeds maximum of *string*

Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

OCI-02455: The number of cluster key column must be 1

Cause: When specifying the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

OCI-02456: The HASH IS column specification must be an Oracle Number.

Cause: The column specification must specify an Oracle Number.

Action: Specify the column definition as type NUMBER(precision, 0).

OCI-02457: The HASH IS option must specify a valid column.

Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name in the cluster definition and retry.

OCI-02458: HASHKEYS must be specified for a HASH CLUSTER

Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.

Action: Specify the HASHKEYS option.

OCI-02459: Hashkey value must be a positive integer

Cause: The value of the hash key was not a positive number.

Action: Specify a positive integer.

OCI-02460: Inappropriate index operation on a hash cluster

Cause: An attempt to create a cluster index was issued on a hash cluster.

Action: Do not attempt to create such an index.

OCI-02461: Inappropriate use of the INDEX option

Cause: This option is only valid for non hash clusters.

Action: Do not specify this option.

OCI-02462: Duplicate INDEX option specified

Cause: The INDEX option is specified more than once.

Action: Only specify the INDEX option once.

OCI-02463: Duplicate HASH IS option specified

Cause: The HASH IS option is specified more than once.

Action: Only specify the HASH IS option once.

OCI-02464: Cluster definition can not be both HASH and INDEX

Cause: The cluster can either be a hash or indexed cluster - not both.

Action: Remove either the HASH IS or INDEX options.

OCI-02465: Inappropriate use of the HASH IS option

Cause: This option is only valid for clusters

Action: Do not specify this option

OCI-02466: The SIZE and INITRANS options cannot be altered for a hash cluster.

Cause: Attempted to change the SIZE or INITRANS options after the the hash cluster was created.

Action: Do not specify either of these options.

OCI-02467: Column referenced in HASH IN expression is not found in cluster definition.

Cause: A column in the HASH IS expression was not present in the cluster definition.

Action: Correct the cluster definition by either using column(s) that are present in the cluster key columns(s) or add the column you have chosen for the HASH IS clause as cluster key.

OCI-02468: Constant or system variable wrongly specified in expression

Cause: A constant or system variable was specified in the hash expression.

Action: Recreate the cluster and correct the error in hash expression.

OCI-02469: Hash expression does not return an Oracle Number.

Cause: The chosen expression for the HASH IS clause does not return an Oracle Number.

Action: Choose an expression for the HASH IS clause that returns an Oracle number when creating your cluster.

OCI-02470: TO_DATE, USERENV, or SYSDATE incorrectly used in hash expression.

Cause: An attempt was made to specify SYSDATE, UID, USER, ROWNUM, or LEVEL in hash expression.

Action: Re-create the cluster and correct the error in hash expression.

OCI-02471: An unsupported function is used in the HASH IS expression.

Cause: An attempt was made to use an unsupported user-related function, an unsupported datetime function, or a pseudocolumn. Examples of unsupported constructs in the HASH IS expression are: LEVEL, ROWNUM, UID, USER, SYSDATE, SYSTIMESTAMP. For the full list, please consult Oracle documentation.

Action: Use the correct cluster definition and remove the unsupported functions.

OCI-02472: PL/SQL functions not allowed in hash expressions

Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

OCI-02473: Error while evaluating the cluster's hash expression.

Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

OCI-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)

Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

OCI-02475: maximum cluster chain block count of *string* has been exceeded

Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

OCI-02476: can not create index due to parallel direct load on table

Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

OCI-02477: can not perform parallel direct load on object *string*

Cause: A parallel direct load is not possible because an index is being created on the table.

Action: Retry load after index creation is complete.

OCI-02478: merge into base segment overflowed MAXEXTENTS limit

Cause: Merging the temporary segment into the base segment failed because MAXEXTENTS was smaller than the total in the temporary and base segments.

Action: Increase the value for MAXEXTENTS on the base segment.

OCI-02479: error while translating file name *string* for parallel load

Cause: The specified file name in which to load data is invalid.

Action: Specify a valid database file.

OCI-02482: Syntax error in event specification (*string*)

Cause: Illegal event string

Action: Enter a legal event string

OCI-02483: Syntax error in process specification (*string*)

Cause: Illegal process string

Action: Enter a legal process string

OCI-02484: Invalid `_trace_buffers` parameter specification (*string*)

Cause: Bad process or size in `_trace_buffers` INIT.ORA parameter.

Action: n/a

OCI-02485: Invalid `_trace_options` parameter specification (*string*)

Cause: Bad syntax for `_trace_options` INIT.ORA parameter.

Action: n/a

OCI-02486: Error in writing trace file *string*

Cause: Error occurred in creating/writing the file.

Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

OCI-02487: Error in converting trace data

Cause: Incompatible binary trace data was specified.

Action: Check the format of the input data.

OCI-02488: Error encountered when accessing file [*string*] for trace conversion

Cause: An attempt was made to open or access the trace file during a trace conversion.

Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

OCI-02490: missing required file size in RESIZE clause

Cause: No value was specified for the RESIZE clause.

Action: Use correct syntax.

OCI-02491: missing required keyword ON or OFF in AUTOEXTEND clause

Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

Action: Use correct syntax.

OCI-02492: missing required file block increment size in NEXT clause

Cause: No value was specified for the NEXT clause.

Action: Use correct syntax.

OCI-02493: invalid file increment size in NEXT clause

Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

Action: Use correct syntax.

OCI-02494: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

OCI-02495: cannot resize file *string*, tablespace *string* is read only

Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

OCI-02496: cannot alter or drop an individual chunk tablespace

Cause: An attempt was made to alter or drop an individual chunk tablespace which is part of a tablespace set.

Action: Use alter or drop only on the tablespace set.

OCI-02500: IN SHARD option already specified

Cause: In the CREATE TABLESPACE, the IN SHARD option was specified more than once.

Action: Remove all but one of the IN SHARD options.

OCI-02501: invalid option for CREATE TABLESPACE SET

Cause: An invalid option IN SHARD was specified for the CREATE TABLESPACE SET statement.

Action: Remove the invalid option.

OCI-02502: USING TEMPLATE can only be used in CREATE TABLESPACE SET

Cause: An attempt to specify the TEMPLATE option without the CREATE TABLESPACE SET statement failed.

Action: Specify the USING TEMPLATE option in the CREATE TABLESPACE SET statement.

OCI-02503: USING TEMPLATE option already specified

Cause: In the CREATE TABLESPACE SET, the USING TEMPLATE option was specified more than once.

Action: Remove all but one of the USING TEMPLATE options.

OCI-02504: SHARDSPACE *string* does not exist

Cause: A nonexistent SHARDSPACE was specified in the CREATE TABLESPACE or CREATE TABLESPACE SET statement.

Action: Reissue the CREATE TABLESPACE or CREATE TABLESPACE SET statement with valid SHARDSPACE name.

OCI-02505: IN SHARDSPACE option already specified

Cause: In the CREATE TABLESPACE SET, the IN SHARDSPACE option was specified more than once.

Action: Remove all but one of the IN SHARDSPACE options.

OCI-02506: CREATE TABLESPACE SET statement requires the SHARDSPACE keyword

Cause: The SHARDSPACE option was not specified in the CREATE TABLESPACE SET statement.

Action: Correct the syntax. Insert the missing keyword where required and then retry the statement.

OCI-02507: missing SHARDSPACE keyword

Cause: The SHARDSPACE keyword was omitted in the IN SHARDSPACE option.

Action: Correct the syntax. Insert the keyword SHARDSPACE where required and then retry the statement.

OCI-02508: attempted to create a shard tablespace in a non-shard database

Cause: An attempt was made to create a shard tablespace in a non-shard database.

Action: Deploy the sharding environment before creating a shard tablespace.

OCI-02509: A SHARDSPACE cannot handle several PARTITIONSETS.

Cause: An attempt was made to define multiple PARTITIONSETS in the SHARDSPACE.

Action: Specify the different PARTITIONSETS in different SHARDSPACES.

OCI-02510: A tablespace set cannot be referenced at the table level.

Cause: An attempt was made to reference a tablespace set at the table level.

Action: Remove the reference to the tablespace set at the table level.

OCI-02511: SQL query not allowed; the shard DDL is disabled.

Cause: An attempt was made to run a shard DDL on a nondeployed shard or with the shard DDL option disabled.

Action: Deploy the shards or enable shard DDL before executing the DDL.

OCI-02512: only one PARTITIONSET option may be specified

Cause: The CREATE TABLE statement contained more than one PARTITIONSET option.

Action: Specify PARTITIONSET option at most once in the CREATE SHARDED TABLE statement.

OCI-02513: invalid sharded table PARTITIONSET method

Cause: An invalid PARTITIONSET method was specified in the CREATE TABLE statement. A table may be partitioned by RANGE or LIST.

Action: Modify PARTITIONSET method to RANGE or LIST in the CREATE SHARDED TABLE statement.

OCI-02514: list PARTITIONSET method expects a single partitioning column

Cause: The number of columns in a PARTITIONSET column list exceeded the legal limit of one for list partitioned tables.

Action: Modify PARTITIONSET column list so that it consists of at most one column.

OCI-02515: cannot interval partition set a sharded table

Cause: Interval PARTITIONSET was not supported for a sharded table.

Action: Use a LIST or RANGE PARTITIONSET instead.

OCI-02516: invalid SHARDED type specified

Cause: Only tables can have the SHARDED type.

Action: Remove the SHARDED option.

OCI-02517: PARTITIONSET and CLUSTER clauses are mutually exclusive

Cause: definition of a table with both PARTITIONSET and CLUSTER clauses which is illegal.

Action: Remove the PARTITIONSET or the CLUSTER clause.

OCI-02518: invalid PARTITIONSET clause specified in a non sharded table

Cause: definition of a non sharded table with PARTITIONSET clause is illegal.

Action: remove the PARTITIONSET clause.

OCI-02519: cannot perform cross-shard operation. Chunk "string" is unavailable

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

OCI-02520: Shard data object number exceeds UB4MAXVAL

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

OCI-02521: attempted to enable shard DDL in a non-shard database

Cause: An attempt was made to enable shard DDL in a non-shard database.

Action: Deploy the sharding environment before enabling shard DDL.

OCI-02522: cannot get a new data object number range from the Global Data Services (GDS) catalog

Cause: An attempt was made to get a new range of data object numbers which resulted in a failure.

Action: Check that the shard can connect to the catalog.

OCI-02523: The table being created is not SHARDED.

Cause: PARENT clause was specified on a non-sharded table.

Action: Create a SHARDED table or remove the PARENT clause.

OCI-02524: Invalid parent table specified.

Cause: The parent table specified was not a valid identifier.

Action: Check that the parent table specified is valid.

OCI-02525: child and parent table owner mismatch.

Cause: The child and parent tables did not have the same owner.

Action: Check the owner of the child table.

OCI-02526: child and parent table sharding method mismatch.

Cause: The child and parent tables did not have the same sharding method.

Action: Ensure the sharding method for the two tables is the same.

OCI-02527: child and parent table shard key columns mismatch.

Cause: The child and parent tables did not have the same shard key columns.

Action: Ensure the shard key for the two tables is the same.

OCI-02528: child and table partition set key columns mismatch.

Cause: The child and parent tables did not have the same partition set key columns.

Action: Ensure the partition set key for the two tables is the same.

OCI-02529: invalid parent table.

Cause: The table name specified was not the one of the root table.

Action: Check the root table name specified.

OCI-02530: parent table not specified

Cause: An attempt was made to create a child table without specifying the PARENT clause.

Action: Specify the PARENT clause in the CREATE SHARDED TABLE command.

OCI-02531: shard name not found

Cause: An attempt was made to create a sharded table on a non-sharded database.

Action: Ensure that the sharded database was deployed correctly.

OCI-02532: sharding columns must form a subset key of key columns of a UNIQUE index

Cause: An attempt was made to create a PRIMARY KEY or UNIQUE constraint in a table whose sharding columns do not form a subset of the key columns of the UNIQUE index.

Action: Include all sharding columns in the list of key columns of the UNIQUE index. This is required because UNIQUE constraint cannot be enforced across shards.

OCI-02533: missing PARTITION clause

Cause: The PARTITION clause was expected but was not supplied.

Action: Add a PARTITION clause to the CREATE SHARDED TABLE command.

OCI-02534: invalid PARTITION clause

Cause: The PARTITION clause was supplied with CONSISTENT HASH sharding.

Action: Remove the PARTITION specification.

OCI-02535: missing TABLESPACE SET clause

Cause: The TABLESPACE SET clause was expected but was not supplied.

Action: Add the TABLESPACE SET clause to the CREATE SHARDED TABLE command.

OCI-02536: invalid TABLESPACE SET name: *string*

Cause: The TABLESPACE SET supplied did not exist.

Action: Supply a valid TABLESPACE SET.

OCI-02537: Data file name specified but not supported by tablespace set template

Cause: Data file explicit name was specified as part of the tablespace set template. Only Oracle Managed Files are supported by a tablespace set.

Action: Remove the file name from the data file definition.

OCI-02538: invalid TABLESPACE SET clause

Cause: The TABLESPACE SET clause was not expected.

Action: Remove the keyword SET to specify just TABLESPACE.

OCI-02539: the operation is not supported across shards

Cause: An attempt was made to perform an operation with shard DDL enabled, which is not supported for propagation from catalog to shards.

Action: Disable the shard DDL to perform the operation on the catalog and go to each individual shard to perform the operation locally.

OCI-02540: global indexes are not supported for sharded tables

Cause: An attempt was made to create a global index on a sharded table, which is not supported.

Action: Create a local index instead.

OCI-02541: TABLESPACE SET is required

Cause: The TABLESPACE SET clause was not supplied when creating an index on a system-managed sharded table.

Action: Add the TABLESPACE SET clause to the CREATE INDEX command, or use the same tablespace set as the table by not specifying the TABLESPACE SET clause.

OCI-02542: invalid partitioning method specified with user-defined sharding

Cause: The partitioning method specified was not compatible with user-defined sharding.

Action: Choose a supported partitioning method.

OCI-02543: invalid partitioning method specified with system-managed or composite sharding

Cause: The partitioning method specified was not compatible with system-managed or composite sharding.

Action: Choose a supported partitioning method.

OCI-02544: sharding or partition set column data type is not supported

Cause: Supported data types were not used for the sharding or partition set columns.

Action: Use the supported data types for sharding or partition set columns.

OCI-02545: sharding or partition set column can not be a virtual column

Cause: Virtual column was used in the sharding or partition set key, which is not supported.

Action: Remove the virtual column from the sharding or partition set key.

OCI-02546: The LONG data type is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-02547: Option *string* is not supported for duplicated tables

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-02548: Option *string* is not supported for duplicated tables

Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

OCI-02549: cannot create a *string* table with *string*

Cause: Unsupported scenarios with sharding were attempted. Either an attempt was made to create an index-organized sharded table under system-managed sharding or composite sharding or an attempt was made to create a sharded table or a duplicated table with organization external.

Action: For index organization, either create a heap-organized table and the primary key or create the index-organized table with user-defined sharding. For organization external, do not use an external table in a sharding environment.

OCI-02550: Creating duplicated table not allowed when shard DDL is disabled

Cause: Duplicated tables were created when shard DDL was disabled.

Action: Enable shard DDL.

OCI-02551: Truncate table for duplicated tables is not supported

Cause: Invalid operation was specified on a duplicated table.

Action: Use "delete from *table*" instead.

OCI-02552: invalid shard name

Cause: The shard name specified was not valid.

Action: Choose a valid shard.

OCI-02553: TABLESPACE is required

Cause: The TABLESPACE clause was not supplied when specifying a partition of a user-defined sharded table.

Action: Add the TABLESPACE clause.

OCI-02554: invalid DROP TABLESPACE SET

Cause: The DROP TABLESPACE SET command was not compatible with user-defined sharding.

Action: Choose a supported sharding method.

OCI-02555: Online redefinition is not supported for sharded and duplicated tables.

Cause: An attempt was made to perform online redefinition on a sharded table or a duplicated table for sharding, which is not supported.

Action: Use the ALTER TABLE statement instead.

OCI-02556: Only sharded or duplicated tables are supported across shards.

Cause: An attempt was made to create a non-sharded, non-duplicated table across shards, which is not supported.

Action: Connect to each shard and create the table locally.

OCI-02557: cannot operate on sharded objects when shard DDL is disabled

Cause: An attempt was made to operate on a sharded or a duplicated object across shards when the shard DDL was not enabled.

Action: Enable shard DDL to perform the operation.

OCI-02558: cannot operate on non-sharded objects when shard DDL is enabled

Cause: An attempt was made to ALTER or DROP a non-sharded object when the shard DDL was enabled.

Action: Disable shard DDL to perform the operation.

OCI-02559: The TABLESPACE SET *string* does not belong to the shardspace of the table.

Cause: The TABLESPACE SET supplied existed in a different shardspace from the one to which the table belonged.

Action: Supply a valid TABLESPACE SET in the shardspace of the table.

OCI-02560: cannot modify partitions or subpartitions of *string* in system-managed or composite sharding.

Cause: An attempt was made to modify partitions or subpartitions of sharded tables or indexes in system-managed or composite sharding.

Action: Use the 'gdsctl split chunk' or 'move chunk' commands instead. For truncating partitions of sharded tables, marking local indexes unusable or rebuilding partitions of local indexes, perform the operation on the shard with shard operations enabled.

OCI-02561: maximum number of columns in a duplicated table *string* is *string*

Cause: An attempt was made to create a duplicated table with too many columns. Note that unused columns in the table are counted toward toward the maximum allowable column limit.

Action: Reduce the number of columns in the command and resubmit.

OCI-02562: cannot create a duplicated table in a non-shard schema

Cause: An attempt was made to create a duplicated table in a non-shard schema.

Action: Try creating the duplicated table in a sharded schema.

OCI-02563: XMLType column in a duplicated table cannot be used in non-automatic segment space management tablespace "*string*"

Cause: XMLType column in a duplicated table required an automatic segment space management tablespace.

Action: Specify an automatic segment space management tablespace for the XMLType column in a duplicated table.

OCI-02564: rebuild outline is not supported across shards.

Cause: An attempt was made to rebuild an outline with shard DDL enabled, which is not supported.

Action: Connect to each shard and rebuild the outline locally.

OCI-02565: cannot use individual chunk tablespace

Cause: An individual chunk tablespace which was part of a tablespace set was used.

Action: Use a normal tablespace.

OCI-02566: cannot create duplicated table - insufficient privileges

Cause: An attempt was made to create a duplicated table when the user did not have sufficient privileges.

Action: Ensure that the user has CREATE DATABASE LINK and CREATE MATERIALIZED VIEW privileges before creating a duplicated table.

OCI-02567: cannot create a sharded table with empty columns

Cause: An attempt was made to create a sharded table without any columns.

Action: Use valid columns to create a sharded table.

OCI-02568: cannot create an identity column in a sharded table

Cause: An attempt was made to create a sharded table with an identity column.

Action: Create a sharded table without an identity column.

OCI-02569: cannot drop a system tablespace *string* when sharding environment is deployed

Cause: An attempt was made to drop a system tablespace part of the sharding environment when the sharding environment was deployed.

Action: Do not drop a tablespace created by the system.

OCI-02570: cannot alter user password - insufficient privileges

Cause: An attempt was made to alter the password for a user who created duplicated tables but did not have the privilege to execute the ALTER DATABASE LINK statement.

Action: Ensure that the user, whose password has to be changed, has the ALTER DATABASE LINK privilege and try again.

OCI-02571: cannot modify refresh interval of a non-duplicated table

Cause: An attempt was made to modify the refresh interval of a non-duplicated table.

Action: Only issue the ALTER TABLE MODIFY REFRESH INTERVAL statement on duplicated tables.

OCI-02572: A non all-shard user cannot operate on schema objects that are sharded or duplicated on all shards.

Cause: An attempt was made to operate on a sharded or duplicated schema object by a non all-shard user.

Action: Operate on such objects as an all-shard user.

OCI-02573: cannot enable shard DDL when current_schema has been changed

Cause: Shard DDL is not supported after a session's current schema has been altered.

Action: Reconnect as the correct user to perform shard DDL operations.

OCI-02574: Sharded table cannot be a nested table.

Cause: An attempt was made to create a nested sharded table, which is not supported.

Action: Create a non-nested sharded table.

OCI-02575: Invalid sharding method for a deployed sharded database

Cause: An invalid sharding method was set for a sharded database.

Action: Check the database configuration and correct the settings.

OCI-02576: number of partition set specifications is not equal to the number of shardspaces

Cause: Fewer or more number of partition set specifications were specified than the number of shardspaces in the composite sharding environment.

Action: Specify one partition set specification for each shardspace in the composite sharding environment.

OCI-02577: cannot specify PARTITIONSET in a non-composite sharding environment

Cause: PARTITIONSETS were specified while creating a sharded table in non-composite sharding environment.

Action: Remove the PARTITION SET specifications in the create sharded table statement.

OCI-02578: missing PARTITIONSET specification

Cause: PARTITIONSET specifications were missing.

Action: Specify PARTITIONSETS for the sharded table.

OCI-02579: cannot create a tablespace set with SMALLFILE option

Cause: An attempt was made to create a tablespace set with the SMALLFILE option.

Action: Create a tablespace set with the default BIGFILE option.

OCI-02580: cannot add or drop data files from a tablespace set

Cause: An attempt was made to add or drop a data file from a tablespace set.

Action: Do not add or drop a data file from a tablespace set.

OCI-02581: cannot create foreign key constraints on columns referencing a duplicated table

Cause: An attempt was made to create a foreign key constraint in a sharded table on a column referencing a duplicated table.

Action: Remove the foreign key constraint referencing a column in the duplicated table.

OCI-02582: invalid tablespace set name specified for the partition set

Cause: The tablespace set name specified for the partition set was either invalid or belonged to a different shardspace.

Action: Specify a tablespace set name that belongs to the same shardspace.

OCI-02583: option PARALLEL not supported when creating duplicated table as select from another table

Cause: An attempt was made to create a duplicated table as select from another table in parallel mode.

Action: Create a duplicated table as select without the PARALLEL clause.

OCI-02584: INMEMORY options not supported for duplicated tables

Cause: An attempt was made to create or alter a duplicated table by enabling INMEMORY options.

Action: Verify the specified option.

OCI-02585: create tablespace set failure, one of its tablespaces not created

Cause: One of the tablespaces in the tablespace set was not created.

Action: Verify the creation of the tablespaces.

OCI-02586: cannot change duplicated table refresh rate in a non-catalog database

Cause: An attempt was made to change the dupl_table_refresh_rate in the non-catalog database.

Action: Connect to the catalog database to change the refresh rate of duplicated tables.

OCI-02587: create duplicated table of Object Type is not supported

Cause: An attempt was made to create a duplicated table of object type.

Action: Create a duplicated table without specifying the object type.

OCI-02588: minimum refresh rate for duplicated table is 1 second

Cause: An attempt was made to set the refresh rate for duplicated tables to less than 1 second.

Action: Set the refresh rate for duplicated tables to at least 1 second.

OCI-02589: invalid partition set name

Cause: An invalid partition set name was specified.

Action: Specify a valid partition set name.

OCI-02590: invalid sequence of partition sets

Cause: The sequence used to specify partition sets was invalid.

Action: Specify the partition sets in an increasing order.

OCI-02591: cannot specify a common tablespace set for indexes on a sharded table in composite sharding

Cause: An attempt was made to specify a common tablespace set for indexes on a sharded table in a composite sharding environment which is not supported.

Action: Create an index on sharded tables without the TABLESPACE SET clause or use the PARTITIONSET clause to specify tablespace sets for each partition set.

OCI-02592: cannot drop user until all shard databases are up and all gsm_requests are completed

Cause: An attempt was made to drop a user who owns a duplicated table when the shard database was down or the gsm_requests were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before dropping a user with duplicated table.

OCI-02593: cannot drop *string* until all shard databases are up and all `gsm_requests` are completed

Cause: An attempt was made to drop a duplicated table or one of its columns when the shard database was down or the `gsm_requests` were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before dropping a duplicated table or its column.

OCI-02594: cannot alter shard user password until all shard databases are up and all `gsm_requests` are completed

Cause: An attempt was made to alter shard user password when the shard database was down or the `gsm_requests` were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before altering a shard user password.

OCI-02595: Non-final abstract data type is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

OCI-02596: cannot truncate duplicated table on a shard database

Cause: An attempt was made to truncate a duplicated table on a shard database.

Action: Connect to the catalog database to truncate the duplicated table.

OCI-02597: The read-only option is not supported for sharded tables.

Cause: An invalid option was specified while creating a sharded table.

Action: Verify the specified option.

OCI-02598: tablespace specified in the SQL command does not exist in the shard

Cause: A DROP or ALTER TABLESPACE operation was attempted on a shard where the tablespace does not exist.

Action: Create the tablespace in the shard first.

OCI-02599: cannot drop partitionset column

Cause: An attempt was made to drop a column used as the super-partitioning key for a sharded table.

Action: This action is not allowed.

OCI-02600: credential name is invalid: *string*

Cause: An invalid credential name was specified.

Action: Verify credential name and retry the operation.

OCI-02601: credential already exists: *string*

Cause: Credential name specified already used by an existing object.

Action: Verify credential name and retry the operation.

OCI-02602: credential does not exist: *string*

Cause: The specified credential does not exist.

Action: Verify credential name and retry the operation.

OCI-02603: file name is invalid: *string*

Cause: An invalid file name was specified.

Action: Verify credential name and retry operation.

OCI-02604: file already exists: *string*

Cause: File name specified already used by an existing object.

Action: Verify file name and retry the operation.

OCI-02605: file does not exist: *string*

Cause: The specified file does not exist.

Action: Verify file name and retry the operation.

OCI-02606: destination name is invalid: *string*

Cause: An invalid destination name was specified.

Action: Verify destination name and retry the operation.

OCI-02607: destination not specified

Cause: A destination must be specified in the command.

Action: Provide destination and retry the operation.

OCI-02608: destination does not exist: *string*

Cause: The specified destination does not exist.

Action: Verify destination and retry the operation.

OCI-02609: remote scheduler agent not running

Cause: The specified remote scheduler agent cannot be contacted.

Action: Confirm that the agent is running and retry the operation.

OCI-02610: Remote job failed with error: *string*

Cause: Unable to successfully run specified job.

Action: Check errors returned and retry the operation.

OCI-02611: shardgroup name is invalid: *string*

Cause: An invalid shardgroup name was specified.

Action: Verify the shardgroup name and retry the operation.

OCI-02612: shardgroup does not exist: *string*

Cause: The specified shardgroup did not exist.

Action: Verify the shardgroup name and retry the operation.

OCI-02613: shardspace name is invalid: *string*

Cause: An invalid shardspace name was specified.

Action: Verify the shardspace name and retry the operation.

OCI-02614: shardspace does not exist: *string*

Cause: The specified shardspace did not exist.

Action: Verify the shardspace name and retry the operation.

OCI-02615: Neither a shardgroup nor a shardspace name was specified.

Cause: A shardgroup or shardspace name was not specified.

Action: Update the parameters and retry the operation.

OCI-02616: Both a shardgroup and a shardspace name were specified.

Cause: A shardgroup and a shardspace name were both specified. For this command, either a shardgroup or shardspace name may be specified, but not both.

Action: Update the parameters and retry the operation.

OCI-02617: Neither a credential nor login information was specified

Cause: Either a credential or login information must be specified.

Action: Update the parameters and retry the operation.

OCI-02618: Both a credential and login information was specified

Cause: For this command, either a credential or login information may be specified, not both.

Action: Update the parameters and retry the operation.

OCI-02619: Both a file name and file contents were specified.

Cause: A file name and file contents were both specified.

Action: Update the parameters and retry the operation.

OCI-02620: db_domain value too long: *string*

Cause: The value specified for db_domain exceeded the 128 character limit.

Action: Modify the value specified for db_domain and retry the operation.

OCI-02621: file in use by shard '*string*'

Cause: The specified file was in use by an undeployed shard.

Action: Drop the undeployed shard and retry the operation.

OCI-02622: Shard is not open in write mode.

Cause: The shard was not opened in the correct mode.

Action: Open the shard in write mode and retry the operation.

OCI-02623: Failed to create broker configuration with error *string*.

Cause: A request to create the broker configuration failed.

Action: Check the broker logs for details.

OCI-02624: Failed to enable broker configuration with error *string*.

Cause: A request to enable the broker configuration failed.

Action: Check the broker logs for details.

OCI-02625: Failed to add standby shard *string* to the broker configuration with error *string*.

Cause: A request to add the shard to the broker configuration failed.

Action: Check the broker logs for details.

OCI-02626: Failed to enable standby shard *string* for the broker configuration with error *string*.

Cause: A request to enable the shard for the broker configuration failed.

Action: Check the broker logs for details.

OCI-02627: Shardspace '*string*' does not exist.

Cause: The requested shardspace did not exist.

Action: Check the name and try again.

OCI-02628: invalid shardgroup name '*string*'

Cause: The shardgroup name was invalid.

Action: Use a different name for the shardgroup.

OCI-02629: cannot modify deployed shardgroup *string*

Cause: The shardgroup was already deployed and could no longer be modified.

Action: Do not modify a deployed shardgroup. Delete it and add it again.

OCI-02630: cannot modify primary or standby status of shardgroup *string*

Cause: The shardgroup already contained a shard and could not be converted from a primary shard to a standby shard or from a standby shard to a primary shard.

Action: Do not modify the primary or standby status of this shardgroup.

OCI-02631: The shardspace name '*string*' is invalid.

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

OCI-02632: cannot modify deployed shardspace '*string*'

Cause: The shardspace was already deployed and could no longer be modified.

Action: Do not modify deployed shardspaces.

OCI-02633: The shardspace '*string*' is invalid.

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

OCI-02634: Oracle XML DB is not installed.

Cause: Oracle XML DB was required for remote scheduler agent configuration but was not installed.

Action: Install Oracle XML DB in the catalog database.

OCI-02635: The value of chunks must be greater than one.

Cause: An invalid value of chunks was passed.

Action: Set chunks to a value greater than one.

OCI-02636: Shard is already in shardspace *string*.

Cause: The shard was already in a shardspace.

Action: Remove the shard from the sharding schema before adding it to another shardspace.

OCI-02637: The source and target shards are in different shardgroups.

Cause: The source and target shards for a chunk move operation were in different shardgroups.

Action: Chunks cannot be moved across shardgroups. Specify a source and target shard that are in the same shardgroup.

OCI-02638: The shardgroup *string* is not deployed.

Cause: The containing shardgroup for the source and target shards was not yet deployed.

Action: Chunks cannot be moved until the shardgroup has been deployed. Deploy the shardgroup before moving chunks.

OCI-02639: Source and target shards are the same.

Cause: The source and target shards for a chunk move were the same.

Action: Chunks cannot be moved to the same shard. Specify a different source and target.

OCI-02640: Shardspace already has a primary shardgroup.

Cause: An attempt was made to add a primary shardgroup to a shardspace that already had a primary shardgroup. When Oracle Data Guard replication is used, only one primary shardgroup is allowed in each shardspace.

Action: Do not add another primary shardgroup to this shardspace.

OCI-02641: Shard *string* was not deployed because it does not contain a corresponding shard in all shardgroups.

Cause: The shard did not have a corresponding shard in all shardgroups in an Oracle Data Guard configuration, therefore it was not deployed.

Action: This is only a warning and the deployment will continue without this shard. In order to make use of this shard, either remove shardgroups, or add shards to other shardgroups so that there are the same number of shards in all shardgroups.

OCI-02642: There were no new shards to deploy.

Cause: The 'deploy' command was issued, but there were no new shards to deploy.

Action: This is only a warning. Deploy may continue to recover previous deployment attempts, if any exist, but no new shards will be deployed.

OCI-02643: failed to enable fast-start failover with error *string*

Cause: A request to enable fast-start failover failed.

Action: Check the broker logs for details.

OCI-02644: Shard '*string*' already exists in specified rack '*string*'.

Cause: The specified rack already contained another shard in the same Oracle Data Guard configuration.

Action: Specify a different value for the rack parameter.

OCI-02645: only one primary shard allowed per shardspace

Cause: The specified shardspace already contained a primary shard.

Action: Specify a different shardspace or create a standby shard instead.

OCI-02646: Standby shards not allowed in Oracle GoldenGate configurations.

Cause: The Oracle GoldenGate configurations contained standby shards.

Action: Create a primary shard instead of a standby shard.

OCI-02647: The rack name '*string*' is invalid.

Cause: An invalid rack name was provided.

Action: Check the name and try again.

OCI-02648: Password for SYS account was not specified.

Cause: A SYS password was not specified when creating a new shard using Oracle Database Configuration Assistant (DBCA).

Action: Retry the operation and specify a SYS password.

OCI-02649: cannot change region for a system-managed or composite shard

Cause: An attempt was made to change the region value for a system-managed or composite shard.

Action: Change the region value at the shardgroup level instead.

OCI-02650: remote scheduler agent error: *string*

Cause: An operation failed when performed using the remote scheduler agent.

Action: Correct the error specified in the remote scheduler agent output.

OCI-02651: The specified pool '*string*' is not sharded.

Cause: The specified pool was not sharded.

Action: Specify a sharded pool and retry the operation.

OCI-02652: The maximum number of sharded GDS pools has been reached.

Cause: The maximum number of Global Data Services (GDS) sharded pools had been reached.

Action: No more Global Data Services (GDS) sharded pools can be added without first removing a pool.

OCI-02653: shardgroup already exists: *string*

Cause: The specified shardgroup was already in existence.

Action: Verify the shardgroup name and retry the operation.

OCI-02654: Shards and shardgroups cannot exist in the same database pool.

Cause: The specified database pool already contained either a conflicting shard or shardgroup.

Action: Verify the database pool name and retry the operation.

OCI-02655: not a sharded catalog

Cause: The catalog was not enabled for sharding and a sharding command was executed.

Action: Re-create the catalog with 'create shardcatalog' or verify the command issued.

OCI-02656: shardspace already exists: *string*

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

OCI-02657: too few chunks specified for shardspace

Cause: The number of chunks in the specified shardspace was less than twice the number of shards in one of its shardgroups.

Action: If the shardspace is not deployed, modify the shardspace to increase the number of chunks it contains.

OCI-02658: shardspace already exists: *string*

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

OCI-02659: cannot remove a shard which contains chunks or replication units

Cause: An attempt was made to remove a shard which contained chunks or replication units.

Action: Move any chunks and replication units to another shard and then retry the operation.

OCI-02660: Shard '*string*' was also removed.

Cause: When a shard was removed, all other shards in the same Oracle Data Guard configuration were also removed.

Action: This is an informational message only.

OCI-02661: shardspace and shardgroup parameters are mutually exclusive

Cause: A command was issued that included both the shardspace and and shardgroup parameters.

Action: Remove one of the conflicting parameters from the command.

OCI-02662: Chunk number '*string*' does not exist on the source database.

Cause: An invalid chunk number or source database was provided.

Action: Check the number and try again.

OCI-02663: Remote scheduler agents may be listening on previously specified port.

Cause: The '-agent_port' parameter specified a new agent port value. The already registered scheduler agents must re-register with the catalog database to use this new value.

Action: This is only a warning. Re-register the existing scheduler agents as necessary.

OCI-02664: Specified port may be in use.

Cause: The '-agent_port' parameter specified a new agent port value. The port specified may already have been in use by another process in the system.

Action: This is only a warning. Confirm that there is no port conflict before continuing the operation.

OCI-02665: shardspace not specified

Cause: A command was issued that did not include shardspace".

Action: Specify shardspace.

OCI-02666: Tablespace set required to perform this operation was not found.

Cause: An attempt was made to perform a chunk management operation before creating a tablespace set.

Action: Create a tablespace set before issuing the command.

OCI-02667: Root table required to perform this operation was not found.

Cause: An attempt was made to perform a chunk management operation before creating a sharded table.

Action: Create a sharded table before issuing the command.

OCI-02668: Observer cannot be started for database "string"

Cause: One or more conditions required by Data Guard observer were not met.

Action: Confirm that Data Guard technology is used for replication, the database belongs to disaster recovery group with FSFO enabled, and there is an online primary database in that group.

OCI-02669: data type or length of a partitionset column in a sharded table cannot be changed

Cause: An attempt was made to issue an ALTER TABLE statement to modify the data type or length of a column used to super-partition the specified sharded table.

Action: Do not modify the data type or length of a sharded table super- partitioning column or columns.

OCI-02670: unsupported SQL construct: string

Cause: The query had a construct that was not supported for inter shard query.

Action: Rewrite the query to avoid using an unsupported construct. Consult Oracle documentation for details.

OCI-02671: DML are not allowed on more than one shard

Cause: The DML was applied to more than one shard.

Action: Rewrite the DML to limit operation to a single shard.

OCI-02672: cannot update sharding key

Cause: An attempt was made to update the sharding key value using the UPDATE command.

Action: Drop and re-create the sharding key.

OCI-02673: *string* maps to multiple shards

Cause: The aggregate, group by, semi-join, or anti-join subquery was mapped to multiple shards.

Action: Rewrite the query so that subqueries map to a single shard.

OCI-02674: illegal join predicate on sharding key

Cause: The query had illegal or no join predicate on the sharding key.

Action: Rewrite the query to include join on sharding columns.

OCI-02675: sharded table *string* outer joined with replicated table *string*

Cause: The query had a sharded table outer joined to the replicated table.

Action: Rewrite the query to remove the outer join.

OCI-02676: non-equality join on sharding key

Cause: The query had a non-equality join on the sharding key.

Action: Rewrite the query to remove the non-equality join.

OCI-02677: queries not supported on objects with user-specified sharding

Cause: The query had an object defined by user-specified sharding.

Action: None

OCI-02678: cross shard queries not supported on composite sharding

Cause: The query had an object defined under composite sharding.

Action: None

OCI-02679: queries involving private and sharded tables not supported

Cause: The query referenced a private and a sharded table.

Action: Rewrite the query to refer to either private tables or sharded tables, but not both.

OCI-02680: unsupported construct referred in the query

Cause: The query referenced unsupported constructs which could not be fetched from the shard.

Action: Rewrite the query to avoid using unsupported constructs.

OCI-02681: array DML not supported on a sharded table

Cause: The statement attempts an array DML operation on a sharded table.

Action: Rewrite the array DML statement as separate DML statements.

OCI-02682: shard key missing in INSERT statement

Cause: The INSERT statement was used to insert a row in the sharded table without inserting a value for the shard column.

Action: Insert a value for the shard key column.

OCI-02683: inconsistent shard schema

Cause: The schema definition on the shard and the coordinator did not match.

Action: Verify and fix the schema inconsistency between the shard and the coordinator.

OCI-02684: invalid partition for the chunk *string*

Cause: A valid partition was not found for the chunk number passed to the shard database.

Action: Check the chunks handled by the shard database.

OCI-02685: cannot rename a duplicated table on a shard database

Cause: An attempt was made to rename a duplicated table on a shard database.

Action: Rename the duplicated table in the shard catalog database, if required.

OCI-02686: query returned data from *string* percent of total chunks

Cause: Some of the chunks were not accessible in the system.

Action: Ensure that all shards are online and accessible from the query coordinator.

OCI-02687: target partition key does not map to any partition

Cause: An attempt was made to update or delete a record of a range or list-based sharded table with a partition key that did not belong to any of the partition.

Action: Use the correct partition key that belongs to a defined partition.

OCI-02688: sharded table *string* does not exist

Cause: An attempt was made to add a partition set to a sharded table that did not exist.

Action: Create the sharded table with the partition sets.

OCI-02689: cannot alter duplicated table until GSM_REQUEST to CREATE DUPLICATED TABLE are completed on all shards

Cause: An attempt was made to alter a duplicated table when the GSM_REQUEST to create duplicated table materialized view was pending execution.

Action: Ensure that GSM_REQUEST to create the duplicated table materialized view is completed on all shards before altering the duplicated table.

OCI-02690: cannot add existing value to partition sets

Cause: The value added to the list partition set already existed for the table.

Action: Add new value to the partition set.

OCI-02691: duplicate partition set name

Cause: The name of a partition set of a sharded table being created was not unique.

Action: Rename the partition set to ensure that their names are unique among partitions of the sharded table being created.

OCI-02692: cannot perform cross-shard operation. Some shards are unavailable.

Cause: One or more shards were unavailable during the cross-shard operation.

Action: Rerun the command when the shards become available.

OCI-02693: invalid shard ID

Cause: An invalid shard ID was specified in the query.

Action: Verify the shard ID and retry the operation.

OCI-02700: osnoraenv: error translating ORACLE_SID

Cause: Two-task driver could not find the value of ORACLE_SID in the environment.

Action: Make sure that the ORACLE_SID environment variable has been properly set and exported.

OCI-02701: osnoraenv: error translating oracle image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

OCI-02702: osnoraenv: error translating orapop image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

OCI-02703: osnpipe: pipe creation failed

Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

OCI-02704: osndpop: fork failed

Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-02705: osnpol: polling of communication channel failed

Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

OCI-02706: osnshs: host name too long

Cause: The length of your host-string specified by the TWO_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

OCI-02707: osnacx: cannot allocate context area

Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

OCI-02708: osnrntab: connect to host failed, unknown ORACLE_SID

Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

OCI-02709: osnppop: pipe creation failed

Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

OCI-02710: osnppop: fork failed

Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-02711: osnpvalid: write to validation channel failed

Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

OCI-02712: osnppop: malloc failed

Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

OCI-02713: osnprd: message receive failure

Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

OCI-02714: osnpwr: message send failure

Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

OCI-02715: osnpgetbrkmsg: message from host had incorrect message type

Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

OCI-02716: osnpgetdatmsg: message from host had incorrect message type

Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

OCI-02717: osnpfs: incorrect number of bytes written

Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

OCI-02718: osnprs: reset protocol error

Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

OCI-02719: osnfop: fork failed

Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

OCI-02720: osnfop: shmat failed

Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accommodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

OCI-02721: osnsemit: cannot create semaphore set

Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

OCI-02722: osnpui: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

OCI-02723: osnpui: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

OCI-02724: osnpbr: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

OCI-02725: osnpbr: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

OCI-02726: osnpop: access error on oracle executable

Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

OCI-02727: osnpop: access error on orapop executable

Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE_HOME/bin path.

OCI-02728: osnfop: access error on oracle executable

Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

OCI-02729: osncon: driver not in osntab

Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

OCI-02730: osnrnf: cannot find user logon directory

Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

OCI-02731: osnrnf: malloc of buffer failed

Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

OCI-02732: osnrnf: cannot find a matching database alias

Cause: Database alias specified was not identified in either \$HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

OCI-02733: osnsnf: database string too long

Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

OCI-02734: osnftt: cannot reset shared memory permission

Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

OCI-02735: osnfpm: cannot create shared memory segment

Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

OCI-02736: osnfpm: illegal default shared memory address

Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

OCI-02737: osnpcl: cannot tell orapop to exit

Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

OCI-02738: osnpwrtbrkmsg: incorrect number of bytes written

Cause: The pipe driver apparently sent an incomplete break message.

Action: Contact your customer support representative.

OCI-02739: osncon: host alias is too long

Cause: The alias used for a sqlnet host is longer than 161 characters.

Action: Use a shorter alias.

OCI-02750: osnfsmmap: cannot open shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a shared memory file for two-task communication.

Action: Check the permissions on the directory ?/dbs

OCI-02751: osnfsmmap: cannot map shared memory file

Cause: The Fast driver failed to map a shared memory file for two-task communication.

Action: Contact your customer support representative.

OCI-02752: osnfsmmap: illegal shared memory address

Cause: The Fast driver failed to attach shared memory at the expected location.

Action: Contact your customer support representative.

OCI-02753: osnfsmmap: cannot close shared memory file

Cause: The Fast driver cannot close the shared memory file.

Action: Contact your customer support representative.

OCI-02754: osnfsmmap: cannot change shared memory inheritance

Cause: The Fast driver could not alter the inheritance attributes of the shared memory.

Action: Contact your customer support representative.

OCI-02755: osnfsmcre: cannot create shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a file for shared memory.

Action: Check the permissions on the directory ?/dbs

OCI-02756: osnfsmnam: name translation failure

Cause: The Fast driver encountered an error translating the shared memory file name ?/dbs/ftt_pid.dbf.

Action: Contact your customer support representative.

OCI-02757: osnfop: fork_and_bind failed

Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

Action: Check the desired node number in `sercose[0]` and cluster ID in `sercose[1]`. If these seem valid, contact customer support.

OCI-02758: Allocation of internal array failed

Cause: The package was unable to allocate memory for an array because the system ran out of memory.

Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

OCI-02759: Not enough request descriptors available

Cause: All of the package's request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

OCI-02760: Client close of file failed.

Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

OCI-02761: File number to be canceled is negative.

Cause: The file number contained with the `sfiouv` structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

OCI-02762: file number to be cancelled is greater than the maximum.

Cause: The file number contained with the `sfiouv` structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

OCI-02763: Unable to cancel at least one request

Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

OCI-02764: Invalid package mode

Cause: The mode of the package can only be parallel or duplex.

Action: See `sfa.h` for the correct values.

OCI-02765: Invalid maximum number of servers

Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

OCI-02766: Invalid maximum of request descriptors

Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

OCI-02767: Less than one request descriptor was allocated per server

Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

OCI-02768: Maximum number of files is invalid

Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

OCI-02769: Setting of handler for SIGTERM failed

Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

OCI-02770: Total number of blocks is invalid

Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

OCI-02771: Illegal request time out value

Cause: The number was not a positive number.

Action: Use a positive number.

OCI-02772: Invalid maximum server idle time

Cause: The time given was not a positive number.

Action: Use a positive number.

OCI-02773: Invalid maximum client wait time

Cause: The time given was not a positive number.

Action: Use a positive number.

OCI-02774: Invalid request list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

OCI-02775: Invalid request done signal

Cause: The signal number was not a positive number.

Action: Use a positive number.

OCI-02776: Value for request done signal exceeds maximum

Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: Contact your system administrator.

OCI-02777: Stat failed on log directory

Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

OCI-02778: Name given for the log directory is invalid

Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

OCI-02779: Stat failed on core dump directory

Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

OCI-02780: Name given for the core dump directory is invalid

Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

OCI-02781: Invalid value given for the timing wanted flag

Cause: The value given was not TRUE or FALSE.

Action: Specify TRUE or FALSE for the timing wanted flag.

OCI-02782: Both read and write functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

OCI-02783: Both post and wait functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

OCI-02784: Invalid shared memory ID specified

Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

OCI-02785: Invalid shared memory buffer size

Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

OCI-02786: Size needed for shared region is greater than segment size

Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

OCI-02787: Unable to allocate memory for segment list

Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: Close some processes or contact your system administrator.

OCI-02788: Unable to find kernel process pointer in async process array

Cause: Internal error - Contact ORACLE support.

Action: Contact Oracle Support Services.

OCI-02789: Maximum number of files reached

Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

OCI-02790: File name is too long

Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

OCI-02791: Unable to open file for use with asynchronous I/O

Cause: The package could not open file for some reason.

Action: Check the file name.

OCI-02792: Unable to fstat() a file being used for asynchronous I/O.

Cause: The fstat(2) call on a file being used for asynchronous I/O failed.

Action: Check the file name.

OCI-02793: Close of asynchronous I/O failed.

Cause: The client was unable to close a file being used for asynchronous I/O.

Action: Contact ORACLE support - this should not happen.

OCI-02794: Client unable to get key for shared memory

Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.

Action: Contact ORACLE support - this is an internal error.

OCI-02795: Request list is empty

Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.

Action: Internal error - contact ORACLE support.

OCI-02796: Done request is not in correct state

Cause: A request is not in the right state.

Action: Internal error - contact ORACLE support.

OCI-02797: No requests available

Cause: No free request descriptors are available.

Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

OCI-02798: Invalid number of requests

Cause: The number of operations sent to either `sfard()` or `sfawrite()` is less than zero.

Action: This is a user programming error.

OCI-02799: Unable to arm signal handler

Cause: The arming of a signal handler for the "done" signal failed.

Action: Internal error - contact ORACLE support.

OCI-02800: Requests timed out

Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.

Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with `sfainit()`. If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

OCI-02801: Operations timed out

Cause: Some asynchronous operations timed out in kernel mode.

Action: Internal error - contact ORACLE support.

OCI-02802: No idle servers available in parallel mode

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02803: Retrieval of current time failed

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02804: Allocation of memory failed for log file name

Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

OCI-02805: Unable to set handler for SIGTPA

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02806: Unable to set handler for SIGALRM

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02807: Allocation of memory for I/O vectors failed.

Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

OCI-02808: Allocation of memory of open files array failed.

Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

OCI-02809: Jump buffer not valid

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02810: Unable to make temporary file name for memory mapped file

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-02811: Unable to attach shared memory segment

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-02812: Bad attach address

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OCI-02813: Unable to make temporary file name in order to get key

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02814: Unable to get shared memory

Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

OCI-02815: Unable to attach shared memory

Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

OCI-02816: Unable to kill a process

Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

OCI-02817: Read failed

Cause: A server could not read a requested amount of data.

Action: Check the call to `sford()`. An incorrect file descriptor may have been sent to `sford()`. The number in the "additional information" field is the starting block number of the data segment being read in.

OCI-02818: Less than the number of blocks requested was read in

Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

OCI-02819: Write failed

Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

OCI-02820: Unable to write the requested number of blocks

Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

OCI-02821: could not allocate memory to receive message from LGWR

Cause: A redo transport SYNC process could not allocate memory to receive a message from the log writer process (LGWR).

Action: No action is required.

OCI-02822: Invalid block offset

Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

OCI-02824: Request free list is empty

Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

OCI-02825: Request on free list was not free

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02826: Illegal block size

Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

OCI-02827: Invalid file number

Cause: The file number upon which an operation is to be done is either less than zero or greater than the maximum number of files that can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

OCI-02828: Segment free list is empty

Cause: No segments are available to be allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

OCI-02829: No segment of the proper size is available

Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

OCI-02830: Segment could not be split - no free segments available

Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

OCI-02831: Segment deallocation failed - empty segment list

Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

OCI-02832: Segment deallocation failed - segment not on list

Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

OCI-02833: Server was unable to close file

Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

OCI-02834: Server unable to open file

Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

OCI-02835: Server unable to send signal to client

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02836: Unable to create temporary key file

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02837: Unable to unlink temporary file

Cause: Internal error.

Action: Contact ORACLE support.

OCI-02838: Unable to arm signal handler for the alarm signal

Cause: The arming of a signal handler for the alarm signal failed.

Action: Internal error - contact ORACLE support.

OCI-02839: Sync of blocks to disk failed.

Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

OCI-02840: Open of log file by client failed

Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

OCI-02841: Server died on start up

Cause: A server exited during its initialization process.

Action: Check the servers' logs for more information.

OCI-02842: Client unable to fork a server

Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

OCI-02843: Invalid value for kernel flag

Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

OCI-02844: Invalid value for the leave open flag

Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

OCI-02845: Invalid value for the timing wanted flag

Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

OCI-02846: Unkillable server

Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

OCI-02847: Server did not terminate when posted

Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

OCI-02848: Asynchronous I/O package is not running

Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

OCI-02849: Read failed because of an error

Cause: A server could not read the requested amount of data from disk.

Action: Check the UNIX error number.

OCI-02850: File is closed

Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.

Action: This is a programming error.

OCI-02851: Request list is empty when it should not be

Cause: This is an internal problem.

Action: Contact ORACLE support.

OCI-02852: Invalid critical-section time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

OCI-02853: Invalid server list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

OCI-02854: Invalid number of request buffers

Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than 0.

Action: Use a number that is greater than or equal to 0.

OCI-02855: Number of requests is less than the number of slaves

Cause: The value given for 'db_slave_buffers' in the initialization parameter file was less than the number specified for the number of slaves, 'db_slaves.'

Action: Specify a number that is greater than that given for 'db_slaves.' Alternatively, specify 0. The kernel will supply the appropriate number.

OCI-02875: smpini: Unable to get shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

OCI-02876: smpini: Unable to attach to shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

OCI-02877: smpini: Unable to initialize memory protection

Cause: The adscpinit program has not been executed.

Action: Execute the adscpinit program as shown in your Installation and Users' Guide. If the problem persists, try rebooting your computer.

OCI-02878: sou2o: Variable smpdidini overwritten

Cause: The variable smpdidini was overwritten, probably by client code.

Action: Verify client code, e.g. Pro*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

OCI-02879: sou2o: Could not gain access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

OCI-02880: smpini: Could not register PGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

OCI-02881: sou2o: Could not revoke access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

OCI-02882: sou2o: Could not register SGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

OCI-02899: smscre: Cannot create SGA with Extended Shared Memory feature

Cause: The environment variable EXTSHM was set before starting oracle.

Action: Unset the environment variable EXTSHM and startup oracle.

OCI-03001: unimplemented feature

Cause: This feature was not implemented.

Action: None

OCI-03007: obsolete feature

Cause: User attempted to use a feature which is no longer supported.

Action: None

OCI-03009: Incompatible OCI function call

Cause: An incompatible OCI function call was issued for new functionality.

Action: Do not use V7 OCI calls for this functionality.

OCI-03046: string '*string*' is not syntactically valid following '*string*'

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string. *Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long. 2) previous_keyword_values: a sequence of keyword values that immediately precede the keyword_value in the command. The sequence of previous keyword values may be truncated if it is too long.

OCI-03047: number '*string*' is not syntactically valid following '*string*'

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string. *Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long. 2) previous_keyword_values: a sequence of keyword values that immediately precede the keyword_value in the command. The sequence of previous keyword values may be truncated if it is too long.

OCI-03048: SQL reserved word '*string*' is not syntactically valid following '*string*'

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as

keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string.
 *Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long. 2) previous_keyword_values: a sequence of keyword values that immediately precede the keyword_value in the command. The sequence of previous keyword values may be truncated if it is too long.

OCI-03049: SQL keyword '*string*' is not syntactically valid following '*string*'

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string.
 *Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long. 2) previous_keyword_values: a sequence of keyword values that immediately precede the keyword_value in the command. The sequence of previous keyword values may be truncated if it is too long.

OCI-03050: invalid identifier: *string* is a reserved word

Cause: A reserved word was used when an identifier or column name was expected.

Action: Enter a valid identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. It must not be a reserved word, unless it is enclosed in double quotation marks.

OCI-03051: missing required keyword INNER or OUTER in SYS_OP_KEY_VECTOR_USE operator

Cause: The keyword INNER or OUTER was not specified for the SYS_OP_KEY_VECTOR_USE operator.

Action: Specify the INNER or OUTER keyword for the SYS_OP_KEY_VECTOR_USE operator.

OCI-03052: invalid argument for STANDARD_HASH function

Cause: The second argument provided for STANDARD_HASH was invalid.

Action: Provide a valid second argument for the STANDARD_HASH function, to specify the name of the hash algorithm to be used. Valid algorithms are SHA1, SHA256, SHA384, SHA512 and MD5. The second argument can be omitted, in which case SHA1 will be used.

OCI-03053: unable to parse string '*string*' as a date

Cause: The given string could not be parsed as a date.

Action: Change the string so that it can be parsed as a date.

OCI-03054: invalid identifier: *string* is a number

Cause: A number was used when an identifier or column name was expected.

Action: Enter a valid identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, such as numbers, then it must be enclosed in double quotation marks. It must not be a reserved word, unless it is enclosed in double quotation marks.

OCI-03055: missing keyword: expected **TIMESTAMP, SCN, PERIOD FOR, or SNAPSHOT**

Cause: The AS OF keywords were not followed by one of **TIMESTAMP, SCN, PERIOD FOR, or SNAPSHOT**.

Action: Correct the syntax. After the AS OF keywords, insert **TIMESTAMP, SCN, PERIOD FOR, or SNAPSHOT**.

OCI-03056: invalid expression in **SELECT INTO clause**

Cause: An invalid expression was specified in the **SELECT INTO** clause.

Action: Correct the expression in the **SELECT INTO** clause.

OCI-03057: invalid expression in **RETURNING INTO clause**

Cause: An invalid expression was specified in the **RETURNING INTO** clause.

Action: Correct the expression in the **RETURNING INTO** clause.

OCI-03058: *string*: invalid cursor name in **WHERE CURRENT OF clause**

Cause: The cursor name that was provided in the **WHERE CURRENT OF** clause was invalid.

Action: Provide a valid cursor name in the **WHERE CURRENT OF** clause.

OCI-03059: The expression *string* is invalid.

Cause: The specified expression was invalid. Expected column name, dot-notation syntax, or **TREAT** expression.

Action: Enter a valid expression. It must be a column name, an expression using dot-notation syntax, or a **TREAT** function. Valid column names start with a letter, are 128 characters or less, and use only alphanumeric characters and the special characters \$, _, and #. If the expression uses other characters, those characters must be enclosed in double quotation marks. The name cannot be a reserved word, unless it is enclosed in double quotation marks. *Params: 1) %s: The expression that is invalid.

OCI-03060: Data type *string* is invalid.

Cause: The data type entered in the **CREATE** or **ALTER TABLE** statement was not valid.

Action: Correct the syntax. This may involve doing one of the following: - Fix the misspelled data type. - If the data type is an ADT, then remove any specified

parameters. - If the data type is an Oracle supplied data type, then remove any specified parameters.

OCI-03061: Precision cannot be specified for data type *string*.

Cause: The data type entered in the CREATE or ALTER TABLE statement did not support a precision parameter.

Action: Remove the precision parameter.

OCI-03062: missing comma or right parenthesis
