Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.
Profitability (%)	Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	Displays the proposed, recommended, and original cost calculated at the division level.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.

Column Name	Column Description
Cost	Displays the proposed, recommended, and original cost calculated for the product.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.

Column Name	Column Description
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	On clicking the Edit (✎) icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.
	Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula: Revenue Variation (%) = (Proposed Revenue – Original Revenue)*100/Original Revenue.
Price List Assignment	On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.
	Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.
Product Enrollment	On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.
	Note: You cannot enroll an account for a product if the deal has reached the Finalized status.
Price Item Group Selection	On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.
Cost	Indicates the sum of the proposed costs from all accounts under the customer.
	Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.

Column Name	Column Description
Pricelist	On clicking the View () icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.
Product	On clicking the Edit () icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.
Cost	Indicates the sum of the original costs from all accounts under the customer. Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.

Note: The system also considers the prospect persons and prospect accounts associated with the main customer along with the child and grandchild persons and their accounts in the customer hierarchy.

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen. Note: The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed. The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.
Send Deal for Approval	Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval. Note: On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required. A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed. This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile .

Button Name	Button Description
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p> </div>
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p> </div>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This button is activated when the deal is in the Approved status.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p> </div>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This button is activated only when the deal is in the Finalized status.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p> </div>

Button Name	Button Description
Reject Deal	Used to reject the deal in the system after receiving confirmation of rejection from the customer.
	Note: This button is activated only when the deal is in the Finalized status.
	Tip: You can also reject a deal by clicking the Reject (✖) icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.
Create Deal Version	Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.
	Note: You can add a new deal version to a deal even if the version of any deal version of a deal is in the Finalized status and the status of the deal is Pending for Approval or Approved .
Discard Deal	Used to discard the deal.
	Note: You cannot discard a deal if it has reached the Finalized status.
Print Deal	Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Searching for an Entity

Prerequisites

To search for an entity, you should have:

- Entities (i.e. customers, accounts, and prospect persons) defined in the application

Procedure

To search for an entity:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Pricing Management** and then click **Deal Dashboard**.
The **Deal Dashboard** screen appears.
3. Click the **Create Deal** button in the page title area of the **Deal Dashboard** screen.
The **Deal Information** screen appears.
4. Enter the search criteria in the **Search Entity** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of entities (i.e. customers, accounts, or prospect persons) that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Recommending a Product for a Deal

Prerequisites

To recommend a product for a deal, you should have:

- Products defined in the application

Procedure

To recommend a product for a deal:

1. Ensure that the **Product** section is expanded in the **Deal** zone when you are defining a *deal*.

The **Product** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to indicate the product that you want to recommend for the deal. Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Product Search window appears. On specifying the product, the description of the product appears corresponding to the Product field.	No

Note:

The system automatically derives recommended products for the deal when the questionnaire contains questions where the question applicability is set to **Package and Product Reference**.

The system derives the recommended products from the reference deals. It only considers automatically recommended products of the reference deals and not manually recommended products of the reference deals.

2. Enter the required details in the **Product** section.
3. If you want to recommend more than one product for the deal, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a recommended product from the deal, click the **Delete** (🗑️) icon corresponding to the product.

4. Click **Save**.

The products is recommended for the deal.

Defining a Characteristic for a Deal

Prerequisites

To define a characteristic for a deal, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deal**)

Procedure

To define a characteristic for a deal:

1. Ensure that the **Characteristics** section is expanded in the **Deal** zone when you are defining a deal.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the deal.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Deal .	Note: This field is required while defining a characteristic for the deal.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required while defining a characteristic for the deal.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deal, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the deal, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the deal.

Answering a Questionnaire for a Deal

Procedure

To answer a questionnaire for a deal:

- Ensure that the **Questionnaire** zone is expanded in the **Deal Information** screen.

A list of questions appear in the **Questionnaire** zone if the **Question Display Order** is set to **Sequence Based** in the **Questionnaire Template** associated with the deal type. Whereas, if the **Question Display Order** is set to **Rule Based** in the **Questionnaire Template** associated with the deal type, the questions appear based on the answer provided for the previous question.

- Click the **Previous** (⏪) or **Next** (⏩) icons to navigate through the questions or question sets of a rule based or sequence based questionnaire respectively.
- Answer the questions as per the **Answer Type** set for the questions in the **Questionnaire Template**.
- Click the **Next** button.

A list of reference customers appear based on the answers provided in the questionnaire.

Searching for a Reference

Prerequisites

To search for a reference, you should have:

- Reference customers and reference deals defined in the application
- Pricing and commitments defined for the references

Procedure

To search for a reference:

1. Ensure that the **Select Reference** zone is expanded in the **Deal Information** screen when you are searching a reference for a deal.

Note: The **Select Reference** zone appears when you do not select the check box corresponding to the **Skip Reference** option in the **Deal** zone of the **Deal Information** screen while defining a deal.

2. Enter the search criteria in the **Select Reference** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

3. Click **Search**.

A list of reference customers or reference deals that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Selecting a Reference for a Deal

Prerequisites

To select a reference for a deal, you should have:

- Reference customers and reference deals defined in the application
- Pricing and commitments defined for the references

Procedure

To select a reference for a deal:

1. Search for the reference in the **Select Reference** zone of the **Deal Information** screen.
2. Click the **Broadcast** () icon corresponding to the deal in the **Search Results** section of the **Select Reference** zone whose pricing and commitments you want to use as a reference for defining the deal.

The **Reference Details** zone appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the name of the primary person for whom the customer or deal is defined in the system whose pricing or commitments you want to use as a reference for defining the deal.	Not applicable
Reference Deal	Displays the concatenated string of deal information separated by a comma (,) whose pricing or commitments you want to use as a reference for defining the deal. Note: This field appears when you select a deal as a reference.	Not applicable
Reference Deal Version	Displays the concatenated string of deal version information separated by a comma (,) whose pricing or commitments you want to use as a reference for defining the deal. Note: This field appears when you are copying reference from a deal which is created for a prospect person.	Not applicable
Division	Indicates the division to which the reference customer or deal belongs.	Not applicable
Customer Segment	Indicates the business component using which the reference customer or deal is defined in the system.	Not applicable
Customer Tier	Indicates the customer tier of the customer segment using which the reference customer or deal is defined in the system.	Not applicable
Refer Usage	Used to indicate whether you want to copy commitments from the SQI-based billable charges of the reference customer or deal.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Refer Pricing	Used to indicate whether you want to copy the price list assignments and price assignments of the reference customer or deal.	Yes

- Enter the required details in the **Reference Details** zone.
- Click **Save**.

The reference is selected for the deal.

Defining a Deal Version

Prerequisites

To define a deal version, you should have:

- Deal for which you want to define a deal version defined in the application

Procedure

To define a deal version:

- Search for the deal for which you want to define a deal version in the **Deal Dashboard** screen.
- In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal for which you want to define a deal version.

The **Deal Information** screen appears.

- In the **Deal Information** zone, click the **Create Deal Version** button.

The **Deal Version** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Information	Displays a concatenated string of information about the deal separated by a comma (,) for which you want to define a deal version.	Not applicable
Deal Version Description	Used to specify the description for the deal version	Yes

Field Name	Field Description	Mandatory (Yes or No)
Deal Version Creation Method	<p>Used to indicate the method using which you want to create the deal version. The valid values are:</p> <ul style="list-style-type: none"> • Copy From Current Version With Changes - Used to indicate that you want to copy the customer hierarchy and pricing and commitment details from the current deal version to the new deal version. • Fetch Latest Hierarchy - Used to indicate that you want to derive the latest customer hierarchy from the system. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>In this case, you will have to select the price items, assign the required price lists to the entities, override or edit the required proposed pricing, and add commitments from scratch in the new deal version.</p> <p>Also, the system will include all the prospect persons and accounts associated with the customer in the entity hierarchy of the deal version.</p> </div>	Yes

4. Enter the required details in the **Deal Version** screen.
5. Click **Save**.

The deal version is created and the **Deal Information** screen appears with the details of the deal version updated in the **Deal Information** zone.

Note: Earlier, when any deal version of a deal was in the **Finalized** status and deal was in the **Pending for Approval** or **Approved** status, you were not able to add a new deal version to the deal. Now, in such scenarios, you can add a new deal version to the deal. In addition, after adding a new deal version to the deal, the deal status would be set to the highest deal version status.

Downloading the Pricing and Commitments of a Deal Version

Prerequisites

To download the pricing and commitments of a deal version, you should have:

- The report code using which you want to extract the data in the **Excel** format specified in the **Deal Pricing Download** option type of the **C1–Deal** feature configuration

- Required access to the **C1_DEALDWLDUPLD** application service

Procedure

To download the pricing and commitments of a deal version:

1. Search for the deal version whose pricing and commitments you want to download in the **Deal Dashboard** screen.
2. In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal version whose pricing and commitments you want to download.

The **Deal Information** screen appears.

3. Click the **Download** button in the **Deal Information** zone.

The system extracts the pricing and commitments of the deal version in the Excel format and the web browser screen appears where the downloading process takes place.

4. Navigate to the path where the downloaded content is saved on your local machine.

The pricing and commitments of the deal is downloaded in the Excel format on your local machine.

Note: The **Download** button is enabled for the user groups who have access to the **C1_DEALDWLDUPLD** application service and where the **Access Mode** is set to **Change**.

Uploading the Pricing and Commitments of a Deal Version

Prerequisites

To upload the pricing and commitments of a deal version, you should have:

- The report code using which you want to extract the data in the **Excel** format specified in the **Deal Pricing Download** option type of the **C1–Deal** feature configuration
- Required access to the **C1_DEALDWLDUPLD** application service

Procedure

To upload the pricing and commitments of a deal version:

1. Search for the deal version in the **Deal Dashboard** screen whose pricing and commitments you want to upload in the system.
2. In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal version whose pricing and commitments you want to upload in the system.

The **Deal Information** screen appears.

3. Click the **Upload** button in the **Deal Information** zone.

The **Upload Deal Data File** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to upload the Excel format of the pricing and commitments data file in the system.	Yes
	Note: On clicking the Choose File button corresponding to this field, you can navigate to locate the file on your local machine.	

- Select the required pricing and commitments file.
- Click **Upload**.

The pricing and commitments of the deal version is uploaded in the system and the status of the deal is changed to **Pending Simulation**.

Note: The **Upload** button is enabled for the user groups who have access to the **C1_DEALDWLDUPLD** application service and where the **Access Mode** is set to **Change**.

Price Item Selection

The **Price Item Selection** screen enables you to select the price items which you want to offer in a deal. It contains the following zones:

- [Filters](#) on page 2999
- [Price Item Hierarchy](#) on page 3002
- [Additional Price Items](#) on page 3004

In addition, the **Price Item Selection** screen contains the following buttons:

Button Name	Button Description
Save	On clicking the Save button, the price item selection made in the price item hierarchy is saved.
Save and View Pricing and Commitments	On clicking the Save and View Pricing and Commitments button, the price item selection made in the price item hierarchy is saved and the Pricing and Commitments screen appears.
Back	Used to access the previous screen.

Filters

The **Filters** zone enables you to search for price items in the customer hierarchy using various filter criteria. It contains the following fields:

Field Name	Field Description
Hierarchy Entity	<p>Used to search for price items which are associated with a hierarchy entity in an entity hierarchy relationship.</p> <p>Note:</p> <p>It is a multi-combo box field which enables you to select one or more hierarchy entities from the list.</p> <p>The list includes all those hierarchy entities to which the price items assigned in the customer's hierarchy are associated.</p>
Price Item	<p>Used to search for a particular price item.</p> <p>Note:</p> <p>It is a multi-combo box field which enables you to select one or more price items from the list.</p> <p>If you select a hierarchy entity from the Hierarchy Entity field, the list includes all those price items which are associated the selected hierarchy entity. However, if you do not select a hierarchy entity from the Hierarchy Entity field, the list includes all price items which are assigned in the customer's hierarchy.</p>
Pricing Parameters	<p>Used to search for price items for which the pricing is defined using a particular parameter and parameter value combination.</p> <p>Note:</p> <p>It is a multi-combo box field which enables you to select one or more pricing parameters from the list.</p> <p>If you select a price item from the Price Item field, the list includes all the pricing parameters using which the pricing is defined for the selected price item.</p>

Field Name	Field Description
Assignment Level	<p>Used to search for price items whose price assignment is defined at a particular level. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Used to indicate whether the price item pricing is agreed for the account. • Account Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Used to indicate whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Used to indicate whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Used to indicate whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Used to indicate whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Used to indicate whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Used to indicate whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Used to indicate whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Used to indicate whether the price item pricing is defined in the price list. • Product Pricing - Used to indicate whether the price item pricing defined in the price list is available for the product pricing.
Advanced Filter	<p>Used to search for price items based on the following two options:</p> <ul style="list-style-type: none"> • Selected Price Items – Used to search for price items which are selected for the simulation in the deal. • Price Items with Usage – Used to search for price items for which charges exist for the entity.

In addition, the **Filters** zone contains the following buttons:

Button Name	Button Description
Clear All	Used to clear all the filter criteria.
Apply	Used to filter the data based on the specified criteria.

Price Item Hierarchy

The **Price Item Hierarchy** zone displays the price items and the entity hierarchies to which they are associated. It contains the following columns:

Column Name	Column Description
Hierarchy Entity/Price Item	<p>Displays the price items, root level hierarchy entities, and non-root level hierarchy entities in the price item hierarchy which you can offer in the deal.</p> <p>Note:</p> <p>A check box appears corresponding to the price items and the hierarchy entities which you can select or deselect to include or exclude the price items or the hierarchy entities respectively from the deal.</p> <p>If the deal is created for an existing customer, the system, by default, selects the following price items:</p> <ul style="list-style-type: none"> • Whose pricing is directly assigned to the customer • Whose pricing is inherited by the customer <p>If the deal is created for an account, the system, by default, considers the following price items:</p> <ul style="list-style-type: none"> • Whose pricing is directly assigned to the account • Whose pricing is inherited by the account <p>If required, you can select or deselect the price item by clicking the check box corresponding to the price item in the price item hierarchy.</p> <p>Only the selected price items are considered in the deal for simulation.</p> <p>The hierarchy entities and price items are sorted in the price item hierarchy based on their respective sort sequence. If two or more hierarchy entities and price items have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string. Also, if the sort sequence is not defined for the hierarchy entities and price items, then the system sorts them in the ascending alphabetical order of the information string.</p> <p>Similarly, the system sorts the hierarchy entities and price items in the price item hierarchy when the deal information is extracted in the Excel or PDF format for internal or external use.</p>
Pricing Parameters	<p>Displays the concatenated string of information about the parameters using which the pricing is defined for the price item.</p> <p>Note: All price assignments of the price item are sorted in the alphabetical order of the pricing information in the Pricing Parameter column.</p>

Column Name	Column Description
Assignment Level	<p>Displays the level at which the pricing is defined for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Indicates whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Indicates whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Indicates whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing.

In addition, the header area of the **Price Item Hierarchy** zone contains the following buttons:

Button Name	Button Description
Previous	<p>On clicking the Previous button, the previous page appears in the Price Item Hierarchy zone.</p> <p>Note: The Previous button appears only when the C1-DPIG-ELIG algorithm is attached to the Price Item Group List Filter system event in the deal type used for creating the deal.</p>
Next	<p>On clicking the Next button, the next page appears in the Price Item Hierarchy zone.</p> <p>Note: The Next button appears only when the C1-DPIG-ELIG algorithm is attached to the Price Item Group List Filter system event in the deal type used for creating the deal.</p>
Clear Filter	On clicking the Clear Filter button, the filter criteria for selecting the price item is cleared and the entire price item hierarchy appears in the Price Item Hierarchy column.
Expand All	On clicking the Expand All button, all nodes in the price item hierarchy are expanded at once.
Collapse All	On clicking the Collapse All button, all nodes in the price item hierarchy are collapsed at once.
Select All	On clicking the Select All button, all the price items and the hierarchy entities in the price item hierarchy are selected i.e. the check box corresponding to each price item and hierarchy entity in the price item hierarchy is selected.
De-Select All	On clicking the De-Select All button, all the price items and the hierarchy entities in the price item hierarchy are de-selected i.e. the check box corresponding to each price item and hierarchy entity in the price item hierarchy is unchecked.

Note: The width of the columns in the **Price Item Hierarchy** zone can now be resized and adjusted based on the requirement.

Additional Price Items

The **Additional Price Items** zone lists the additional price items that are associated to the entity for which the deal is created. It contains the following columns:

Column Name	Column Description
Hierarchy Entity/Price Item	<p>Displays the additional price items with their root level and non-root level hierarchy entities which you can offer in the deal.</p> <p>Note:</p> <p>A check box appears corresponding to the price items and the hierarchy entities which you can select or deselect to include or exclude the additional price items respectively from the deal.</p> <p>Only the selected price items are considered in the deal for simulation.</p>

Column Name	Column Description
Pricing Parameters	Displays the concatenated string of information about the parameters using which the pricing is defined for the price item.
	Note: All price assignments of the price item are sorted in the alphabetical order of the pricing information in the Pricing Parameter column.
Assignment Level	Displays the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy.

Note: The width of the columns in the **Additional Price Items** zone can be resized and adjusted based on the requirement.

Pricing and Commitments

The **Pricing and Commitments** screen allows you to view the existing and proposed price items pricing and commitments for the person or account in the customer hierarchy of a deal. It also allows you to do the following:

- View the pass through charge information of an account
- View the product financial summary of a person or an account
- Filter the pricing of a person or an account

The **Pricing and Commitments** screen contains the following sections:

- [Pass Through Charge Information](#) on page 3005
- [Product Financial Summary](#) on page 2959
- [Filters](#) on page 3008
- [Pricing and Commitments](#) on page 3009
-

Product Financial Summary

The **Product Financial Summary** section displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	<p>Displays the revenue generated from the proposed, original, standard, and recommended price item pricing and commitments at the product level.</p> <p>Note:</p> <p>The revenue generated from the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system.</p> <p>The revenue generated from the recommended pricing appears only when there is a recommended pricing defined for the price item.</p>
Cost	<p>Displays the proposed, original, standard, and recommended cost calculated at the product level.</p> <p>Note:</p> <p>The cost calculated from the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system.</p> <p>The cost calculated from the recommended pricing appears only when there is a recommended pricing defined for the price item.</p> <p>The cost includes the total price item cost and the adhoc cost.</p>

Column Name	Column Description
Profit	<p>Displays the profit generated from the proposed, original, standard, and recommended price item pricing and commitments at the product level. It is calculated using the following formula:</p> $\text{Profit} = \text{Revenue} - \text{Cost}$ <p>Note:</p> <p>The profit generated from the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system.</p> <p>The profit generated from the recommended pricing appears only when there is a recommended pricing defined for the price item.</p>
Profitability (%)	<p>Displays the profit percentage calculated for the proposed, original, standard, and recommended price item pricing and commitments at the product level. It is calculated using the following formula:</p> $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$ <p>Note:</p> <p>The profitability calculated for the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system.</p> <p>The profitability calculated for the recommended pricing appears only when there is a recommended pricing defined for the price item.</p>
Revenue Variation (%)	<p>Displays the difference of revenue variation percentage calculated for the proposed, original, standard, and recommended price item pricing and commitments at the product level. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}$ <p>Note:</p> <p>The revenue variation calculated for the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system.</p> <p>The revenue variation calculated for the recommended pricing appears only when there is a recommended pricing defined for the price item.</p> <p>The Green Arrow (▲) or the Red Arrow (▼) corresponding to the revenue variation (%) indicates whether there is an increase or decrease in the revenue variation (%) respectively.</p>

Column Name	Column Description
Profit Variation (%)	<p>Displays the difference of profit variation percentage calculated from the proposed, original, standard, and recommended price item pricing and commitments at the product level. It is calculated using the following formula:</p> $\text{Profit Variation (\%)} = (\text{Proposed Profit} - \text{Original Profit}) * 100 / \text{Original Profit}$ <p>Note:</p> <p>The profit variation calculated for the standard pricing appears only when the Standard Pricing Comparison field is set to Yes in the deal type using which the deal is created in the system. It is calculated using the following formula:</p> $\text{Standard Pricing Profit Variation (\%)} = (\text{Standard Profit} - \text{Original Profit}) * 100 / \text{Original Profit}$ <p>The profit variation calculated for the recommended pricing appears only when there is a recommended pricing defined for the price item.</p> <p>The Green Arrow (▲) or the Red Arrow (▼) corresponding to the profit variation (%) indicates whether there is an increase or decrease in the profit variation (%) respectively.</p>

Note:

The system highlights the cells of the product financial summary in green color if the proposed statistic is within the range of the deal creator or the approver. Whereas, the system highlights the cells of the product financial summary in red color if the proposed statistic is not within the range of the deal creator or the approver.

The **Product Financial Summary** sections appears in the **Deal Information** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** using which the deal is created in the system.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available in the header area of this section.

Pricing and Commitments

The **Pricing and Commitments** section allows you to do the following:

- View the original and proposed commitments of a price item
- View the original and proposed pricing of a price item
- Viewing the original pricing and commitments of a person or an account
- View the pricing and commitments of a person in the division currency
- View the pricing and commitments of an account in the account's invoice currency
- Approve pricing of a price item
- Submit a price item for approval
- Recommend a new pricing for a price item
- View the deal-specific terms and conditions of a price item or a hierarchy entity

- Edit the deal-specific terms and conditions of a price item or a hierarchy entity

The **Pricing and Commitments** section contains the following sub-sections:

- **Symbol Legends** - Used to differentiate between the original, proposed, recommended, and changed pricing and commitments of the price item. It contains the following color codes:

Symbol Name	Symbol Description
 PROJECTED	Indicates the proposed price item pricing and commitments.
 RECOMMENDED	Indicates the recommended price item pricing and commitments.
 ORIGINAL	Indicates the original price item pricing and commitments.
 CHANGED	Indicates the changed price item pricing and commitments.

- **Price Item Hierarchy** - Lists the price items and its pricing and commitments information along with the price item hierarchy associated with the person or account. It contains the following columns:

Column Name	Column Description
Price Item Hierarchy	<p>Displays the price item, non-root level hierarchy entity, and root level hierarchy entity associated with the person or account.</p> <p>Note:</p> <p>The hierarchy entities and price items are sorted in the price item hierarchy based on their respective sort sequence.</p> <p>If two or more hierarchy entities and price items have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string.</p> <p>Also, if the sort sequence is not defined for the hierarchy entities and price items, then the system sorts them in the ascending alphabetical order of the information string.</p>
Parameters	Indicates the parameters using which the pricing for the price item is defined.
Start Date	<p>Displays the date from when the price item pricing is effective.</p> <p>Note:</p> <p>This column appears only when you define a seasonal pricing for the price item.</p> <p>The Expand or Collapse () icon appears in the Start Date column corresponding to the proposed pricing of the price item.</p> <p>On clicking the Expand or Collapse icon, you can view the row for seasonal pricing of the price item.</p>
End Date	<p>Displays the date till when the price item pricing is effective.</p> <p>Note: This column appears only when you define a seasonal pricing for the price item.</p>

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string of information about the proposed, original, recommended, and changed price item pricing separated by a comma (,).</p> <p>Note:</p> <p>It has a link. On clicking the link, the Pricing and Commitments screen appears where you can view the details of the original and proposed price item pricing.</p> <p>The Delete () icon appears in the Pricing Information column corresponding to the proposed, seasonal, and recommended pricing of the price item. On clicking the Delete icon, you can delete the proposed, seasonal, and recommended pricing of the price item.</p> <p>The Delete icon appears corresponding to the proposed pricing only when its price assignment level is different from the price assignment level of the original pricing.</p> <p>The recommended pricing of the price item can only be deleted by the approver who has recommended the new price for the price item.</p> <p>The Expand or Collapse () icon appears in the Pricing Information column corresponding to the proposed pricing of the price item.</p> <p>On clicking the Expand or Collapse icon, you can view the row for original pricing of the price item.</p> <p>You can also edit or override the proposed pricing of the price item through this screen.</p> <p>You can directly change the rate of a price item from this screen when there is only one price component in the pricing and the pricing is negotiable for the price item.</p>
Average Price	<p>Displays the average proposed, original, and recommended cost of the price item as per the proposed, original, and recommended commitments respectively. It is calculated using the following formula:</p> <p>Avg. Price = Proposed Revenue/Proposed Usage</p> <p>Avg. Price = Original Revenue/Original Usage</p> <p>Avg. Price = Recommended Revenue/Recommended Usage</p>
Volume	<p>On clicking the Edit () icon corresponding to a price item, the Pricing and Commitments screen appears where you can view the original and proposed commitments of the price item. Whereas, on clicking the View icon () corresponding to a hierarchy entity, the Pricing and Commitments screen appears where you can view the original and proposed commitments of the price item at the hierarchy entity level.</p> <p>Note: You can directly change the proposed commitment of a price item when there is only one SQI used in the SQI-based billable charges.</p>

Column Name	Column Description
Revenue	Displays the proposed, original, and recommended revenue generated from the proposed, original, and recommended price item pricing and commitments respectively.
Revenue Variation (%)	<p>Displays the variation between the original, proposed, and recommended revenue in percentage generated from the original, proposed, and recommended pricing of the price item. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$
Cost	Displays the proposed, original, and recommended cost of the price item based on the proposed, original, and recommended usage.
Price List Information	Indicates the price list from where the proposed and original pricing of the price item is derived for the person or account in the customer hierarchy.

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the proposed and original pricing of the price item is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Indicates whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Indicates whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Indicates whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing.
Status	Indicates the current approval status of the price item pricing and commitments.
Approver	Indicates the user who has approved the price item pricing and commitments.

Column Name	Column Description
Terms and Conditions	On clicking the Edit (✎) icon, the Mapping Terms and Conditions screen appears where you can view or delete the deal-specific terms and conditions associated with the price item.

Note:

In addition, a check box appears corresponding to the price item which is assigned to the user for approval.

By default, you can view the proposed and recommended pricing details of the price item in the price item hierarchy table. To view or hide the original pricing details of the price item, click the **Original Data** toggle switch available in the **Pricing and Commitments** section.

By default, the price item pricing details are displayed in the deal currency. You can view the price item pricing details in the division currency by clicking the **Currency** toggle switch available in the **Pricing and Commitments** section.

In addition, the **Pricing and Commitments** section contains the following buttons:

Button Name	Button Description
Send Price Items for Approval	<p>On clicking the Send Price Items for Approval button, the status of the price item is changed to Assigned to Price Item Manager.</p> <p>Note: An approver can send a price item for approval when the following conditions are met:</p> <ul style="list-style-type: none"> • The price item is assigned to the approver for approval • The Propose Pricing option is set to Yes in the Deal Approval Profile for the approver • The Submit Price Item for Approval option is set to Yes in the Deal Approval Profile for the approver
Check Limits	<p>On clicking the Check Limits button the system verifies whether the average price of the price item falls within the floor and ceil values defined for the approver in the price item screen.</p> <p>Note:</p> <p>If the average price falls within the floor and ceil values defined for the approver, then the status of the price item is changed to Approved.</p> <p>If the average price does not fall within the floor and ceil values defined for the approver, then the status of the price item is changed to Pending For Approval.</p>

Filtering the Pricing of a Person or an Account

Procedure

To filter the pricing of a person or an account:

1. Search for the deal in the **Search Deal** zone of the **Deal Dashboard** screen.
2. In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal whose persons or accounts pricing you want to filter.
The **Deal Information** screen appears.
3. Ensure that the **Customer Hierarchy** section is expanded in the **Simulation Details** zone.
4. Click the **Edit** (✎) icon in the **Pricing and Commitments** column corresponding to the person or account whose pricing you want to filter.
The **Pricing and Commitments** screen appears.
5. Ensure that the **Filters** section is expanded in the **Pricing and Commitments** screen.
The **Filters** section contains the following fields:

Field Name	Field Description
Search	Used to search for the pricing and commitments of a price item associated with a person or account using a specific search criteria.
Effective Date	Used to search for price items pricing whose effective date is later than the deal start date.

In addition, the **Filters** section contains the following buttons:

Button Name	Button Description
Search	Used to search for price item pricing as per the criteria specified in the Search or Effective Date fields.
Show All Pricing	Used to show all the pricing and commitments of the price items associated with the person or account in the customer hierarchy.
Show Customer or Account Level Pricing	Used to filter customer agreed or account agreed price item pricing for the person or account in the customer hierarchy.
Show Changed Data	Used to display the following for the existing customer, account, or prospect: <ul style="list-style-type: none"> • Agreed pricing of a price item assigned to the customer, account, or prospect in the deal • Seasonal pricing of a price item assigned to the customer, account, or prospect in the deal • Proposed pricing of a price item from the price list with higher priority when the pricing is inherited from two or more price lists assigned to the customer, account, or prospect • Proposed pricing of a price item which is edited in the deal • Price item pricing whose default or reference commitments are edited in the deal • Price item pricing for which commitments are added in the deal from the Pricing and Commitments screen • Price item pricing where there is difference between original and proposed cost • Price item pricing where there is difference between original and proposed average price • Price item pricing where there is difference between original and proposed revenue

6. Enter the required details in the **Filters** section.

7. Click **Search**.

The pricing of the person or the account is filtered in the **Pricing and Commitments** section.

Approving Pricing of a Price Item

Procedure

To approve a price item in a deal:

1. In the **Simulation Details** zone, click the **Edit** (✎) icon in the **Pricing and Commitments** column corresponding to the person or account whose price item pricing you want to approve.
The **Pricing and Commitments** screen appears.
2. In the **Pricing and Commitments** section, ensure that the **Price Item Hierarchy** sub-section is expanded when you are approving the pricing of a price item.
3. Click the check box corresponding to the price item that you want to approve for the deal.

Note:

The check box appears when the price item is assigned to the user for approval.

You can select multiple price items at a time for approving.

The **Check Limits** button is activated.

4. Click the **Check Limits** button.
A message appears confirming the approval status of the price item.
5. Click **OK**
The price item is approved for the deal.

Note:

The price item can be approved by the approver when the average price of the price item falls within the floor and ceil values defined for the approver in the price item screen.

If the average price of the price item falls within the floor and ceil values defined for the approver, then the status of the price item is changed to **Approved**.

If the average price of the price item does not fall within the floor and ceil values defined for the approver, then the status of the price item is changed to **Pending For Approval**.

Submitting a Price Item for an Approval

Procedure

To submit a price item for an approval:

1. In the **Simulation Details** zone, click the **Edit** (✎) icon in the **Pricing and Commitments** column corresponding to the person or account whose price item you want to send for an approval.

The **Pricing and Commitments** screen appears.

- In the **Pricing and Commitments** section, ensure that the **Price Item Hierarchy** sub-section is expanded when you are sending a price item for an approval.
- Click the check box corresponding to the price item which you want to send for an approval.

Note:

The check box appears when the price item is assigned to the user for an approval.
You can select multiple price items at a time to submit for an approval.

The **Send Price Items for Approval** button is activated.

- Click the **Send Price Items for Approval** button.
A message appears confirming the price item is sent for an approval.
- Click **OK**

The price item is sent for an approval and the status of the price item is changed to **Assigned to Price Item Manager**.

Selecting a Price Item or Hierarchy Entity

Procedure

To select a price item or hierarchy entity:

- Do either of the following:

If you want to...	Then...
Select a price item or hierarchy entity from the Deal Information screen	<ol style="list-style-type: none"> Search for the deal in the Search Deal zone of the Deal Dashboard screen. In the Search Results section, click the Broadcast (📡) icon corresponding to the deal for which you want to select the price item or hierarchy entity. The Deal Versions zone appears. In the Deal Versions zone, click the deal version in the Deal Version Information column for which you want to select the price item or hierarchy entity.

If you want to...	Then...
	<p>The Deal Information screen appears.</p> <ol style="list-style-type: none"> 4. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 5. Click the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person of the customer hierarchy.
<p>Select a price item or hierarchy entity from the Pricing and Commitments screen</p>	<ol style="list-style-type: none"> 1. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 2. Click the Edit (✎) icon in the Pricing and Commitments column corresponding to the person or account for which you want to select the price item or hierarchy entity. <p>The Pricing and Commitments screen appears.</p> <ol style="list-style-type: none"> 3. Click the Select Price Item Group button available in the header area of the Pricing and Commitments screen.
<p>Select a price item or hierarchy entity from the Price List Assignment screen</p>	<ol style="list-style-type: none"> 1. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 2. Click the Edit (✎) icon in the Price List Assignment column corresponding to the person or account for whose price list you want to select the price item or hierarchy entity. <p>The Price List Assignment screen appears.</p> <ol style="list-style-type: none"> 3. In the Proposed Price Lists zone, click the link in the Price List Information column corresponding to price list whose price item or hierarchy entity you want to select. <div data-bbox="873 1423 1399 1598" style="border: 1px solid black; padding: 5px;"> <p>Note: You can also search for a price list that you want to assign to the person or account in the Assign Price List zone of the Price List Assignment screen and then select the required price item or hierarchy entity.</p> </div> <ol style="list-style-type: none"> 4. Click the Save and Select Price Item Group button.

The **Select Price Item Group** screen appears. It contains the following sections:

- **Filters** - Used to filter the price assignment in the price item hierarchy which you want to consider while simulating the deal. It contains the following fields:

Field Name	Field Description
Search	Used to search for a particular price item, root level hierarchy entity, or non-root level hierarchy entity in the customer hierarchy.

Field Name	Field Description
Assignment Level	<p>Used to search for price items in the price item hierarchy whose price assignment is defined at a particular level. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Used to indicate whether the price item pricing is agreed for the account. • Account Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Used to indicate whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Used to indicate whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Used to indicate whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Used to indicate whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Used to indicate whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Used to indicate whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Used to indicate whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Used to indicate whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Used to indicate whether the price item pricing is defined in the price list. • Product Pricing - Used to indicate whether the price item pricing defined in the price list is available for the product pricing.

- **Price Item Group** - Displays the price item hierarchy. It contains the following columns:

Column Name	Column Description
Price Item Hierarchy	<p data-bbox="738 266 1468 359">Displays the price items, root level hierarchy entities, and non-root level hierarchy entities in the price item hierarchy which you can select for simulating the deal.</p> <p data-bbox="738 386 1468 877">Note: A check box appears corresponding to the price items and the hierarchy entities which you can select to include the respective price assignments for deal simulation. The hierarchy entities and price items are sorted in the price item hierarchy based on their respective sort sequence. If two or more hierarchy entities and price items have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string. Also, if the sort sequence is not defined for the hierarchy entities and price items, then the system sorts them in the ascending alphabetical order of the information string. Similarly, the system sorts the hierarchy entities and price items in the price item hierarchy when the deal information is extracted in the Excel or PDF format for internal or external use.</p>
Parameter	<p data-bbox="738 932 1468 993">Displays the comma separated parameters using which the pricing of the price item is determined.</p> <p data-bbox="738 1020 1468 1113">Note: All price assignments of a price item are sorted in the alphabetical order of the pricing information in the Parameter column.</p>

Column Name	Column Description
Assignment Level	<p>Displays the level at which the price assignment is defined for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Indicates whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Indicates whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Indicates whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing.

Note: The width of the columns in the **Price Item Group** section of the **Select Price Item Group** screen can now be resized and adjusted based on the requirement.

In addition, the **Price Item Group** section contains the following buttons:

Button Name	Button Description
Expand All	On clicking the Expand All button, all nodes in the price item hierarchy are expanded at once.
Collapse All	On clicking the Collapse All button, all nodes in the price item hierarchy are collapsed at once.
Select All	On clicking the Select All button, all the price items and the hierarchy entities in the price item hierarchy are selected i.e. the check box corresponding to each price item and hierarchy entity in the price item hierarchy is selected.
De-Select All	On clicking the De-Select All button, all the price items and the hierarchy entities in the price item hierarchy are de-selected i.e. the check box corresponding to each price item and hierarchy entity in the price item hierarchy is unchecked.
Save	On clicking the Save button, the price item selection made in the price item hierarchy is saved.
Save & View Pricing & Commitment	On clicking the Save & View Pricing & Commitment button, the price item selection made in the price item hierarchy is saved and the Pricing and Commitments screen appears.
Back	Used to access the previous screen.

2. Ensure that the price item hierarchy is expanded in the **Price Item Group** section.

Note:

The system, by default, selects the price items and hierarchy entities in the **Select Price Item Group** screen when the following conditions are met:

- Deal is created for an existing customer or account
- Default commitments are not defined in the respective deal type

However, if the deal is created for a proposed customer or if the default commitments are defined in the respective deal type, the system does not select the price items and hierarchy entities, by default, in the **Select Price Item Group** screen. You have to manually select the required price items and hierarchy entities in the **Select Price Item Group** screen. Only then, the system considers the pricing and commitments of the selected price items in the deal.

3. Select the check box corresponding to the price item or the hierarchy entity that you want to consider while simulating the deal.

Note: If you select a hierarchy entity, then all its corresponding non-root level hierarchy entities and price items are selected for the deal simulation.

4. Click **Save**.

The price item or hierarchy entity is selected.

Recommending a New Pricing for a Price Item

Procedure

To recommend a new pricing for a price item:

1. Ensure that the price item hierarchy is expanded in the **Pricing and Commitments** section of the **Pricing and Commitments** screen when you are recommending a new pricing for a price item of a person or account in a deal.
2. Click the **Recommend** link in the **Pricing Information** column corresponding to the price item for which you want to recommend a new pricing.

The **Pricing and Commitments** screen appears.

Note: The **Recommend** link appears in the **Pricing Information** column only when the **Propose Pricing** option is set to **Yes** for the user in the **Deal Approval Profile** associated with the **Deal Type** using which the deal is created in the system.

3. Ensure that the **Recommend Pricing** zone is expanded in the **Pricing and Commitments** screen.

The **Recommend Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the recommended price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID.	Not Applicable
	<p>Note:</p> <p>It is a read-only field and cannot be edited.</p> <p>A new price assignment ID is created automatically by the system when you recommend a new pricing for a price item.</p>	
Price Item	Displays the price item whose pricing you want to edit.	Not Applicable
	<p>Note: It is a read-only field and cannot be edited.</p>	
Start Date	Displays the date from when the pricing of the price item is effective for the deal.	Not Applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="743 741 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="743 1234 1192 1350" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="743 1608 1192 1724" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	No
End Date	Displays the date till when the pricing of the price item is effective for the deal.	Not Applicable
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	No
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	No
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	No

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	No
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

- **Parameters** - Used to associate the parameters based on which you want to recommend the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. <div style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p> </div>	No
Parameter Value	Used to specify the value of the parameter.	No

- **Characteristics** - Used to define a list of characteristics for the recommended price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	No

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	No
	Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	
Characteristic Value	Used to specify the value for the characteristic type.	No
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the recommended price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (,).	Not applicable
	Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	No
Description	Used to specify the description of the price component.	No
Show Price Component	Used to indicate whether you want to display the price component in the bill.	No
Rate	Used to specify the rate defined for the price component.	Yes
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	No

Column Name	Column Description	Mandatory (Yes or No)										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="686 405 1183 877"> <thead> <tr> <th data-bbox="686 405 904 453">Column Name</th> <th data-bbox="904 405 1183 453">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="686 453 904 569">Display Sequence</td> <td data-bbox="904 453 1183 569">Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td data-bbox="686 569 904 653">Tiering Criterion</td> <td data-bbox="904 569 1183 653">Used to indicate the tiering criteria.</td> </tr> <tr> <td data-bbox="686 653 904 768">Lower Limit</td> <td data-bbox="904 653 1183 768">Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td data-bbox="686 768 904 877">Upper Limit</td> <td data-bbox="904 768 1183 877">Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	No
Column Name	Column Description											
Display Sequence	Used to specify the sequence of the tiering criteria.											
Tiering Criterion	Used to indicate the tiering criteria.											
Lower Limit	Used to specify the lower limit of the tiering range.											
Upper Limit	Used to specify the upper limit of the tiering range.											

Column Name	Column Description	Mandatory (Yes or No)												
Eligibility Details	<p>On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="688 403 1182 2039"> <thead> <tr> <th data-bbox="688 403 906 453">Column Name</th> <th data-bbox="906 403 1182 453">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="688 453 906 632">Display Sequence</td> <td data-bbox="906 453 1182 632">Used to specify the order in which the eligibility criteria should be executed in the rule.</td> </tr> <tr> <td data-bbox="688 632 906 1146">Parameter</td> <td data-bbox="906 632 1182 1146"> Used to indicate the left hand side parameter which you want to use along with the price item for price determination. <div data-bbox="911 848 1177 1129" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Search  icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> </div> </td> </tr> <tr> <td data-bbox="688 1146 906 1356">Operator</td> <td data-bbox="906 1146 1182 1356">Used to specify the relational operator to define the relation between the left hand side and right hand side parameters.</td> </tr> <tr> <td data-bbox="688 1356 906 1766">Parameter Value Type</td> <td data-bbox="906 1356 1182 1766"> Used to indicate the type of pricing eligibility. Associating Deal-Specific Terms and Conditions with a Price Item

Prerequisites

To associate deal-specific terms and conditions with a price item you should have:

- Terms and conditions defined in the application
- Terms and conditions mapped to the price item

Procedure

To associate deal-specific terms and conditions with a price item:

1. Ensure that the **Pricing and Commitments** zone is expanded when you are associating deal-specific terms and conditions with a price item of **Pricing and Commitments** screen.
2. In the **Pricing and Commitments** zone, click the **Edit** (✎) icon in the **Terms and Conditions** column corresponding to the price item to which you want to associate deal-specific terms and conditions.

The **Terms and Conditions** screen appears. It contains the following field:

Field Name	Field Description
Price Item Information	Indicates the price item to which you want to associate deal-specific terms and conditions.

In addition, the **Terms and Conditions** screen contains the following sections:

- **Terms and Conditions Section** - Lists the terms and conditions that are mapped to the price item. It contains the following buttons:

Button Name	Button Description
Select All	Used to select all the available terms and conditions for the price item from the list.
De-select All	Used to de-select all the terms and conditions from the list.
Refresh Terms and Conditions	Used to de-select the terms and conditions that are selected for the price item from the list.

Note: You can also select or de-select the terms and conditions by clicking the check box corresponding to the respective terms and conditions.

On clicking the **Edit** (✎) icon corresponding to the terms and conditions in the **Terms and Conditions Section** section, you can view and edit the terms and conditions of the price item.

- **Adhoc Terms and Conditions** - Used to add deal-specific adhoc terms and conditions for the price item.
3. Select the required terms and conditions for the price item from the **Terms and Conditions Section** section.
 4. Click **Save**.

The deal-specific terms and conditions are associated with the price item.

Note: You can associate deal-specific terms and conditions with a price item until the deal is in the **Customer Accepted** or **Rejected** status.

Associating Deal-Specific Terms and Conditions with a Hierarchy Entity

Prerequisites

To associate deal-specific terms and conditions with a hierarchy entity you should have:

- Terms and conditions defined in the application
- Terms and conditions mapped to the hierarchy entity

Procedure

To associate deal-specific terms and conditions with a hierarchy entity:

1. Ensure that the **Pricing and Commitments** zone is expanded when you are associating deal-specific terms and conditions with a hierarchy entity in the **Pricing and Commitments** screen.
2. In the **Pricing and Commitments** zone, click the **Edit** (✎) icon in the **Terms and Conditions** column corresponding to the hierarchy entity to which you want to associate deal-specific terms and conditions. The **Terms and Conditions** screen appears. It contains the following field:

Field Name	Field Description
Hierarchy Entity Information	Indicates the hierarchy entity to which you want to associate deal-specific terms and conditions.

In addition, the **Terms and Conditions** screen contains the following sections:

- **Terms and Conditions Section** - Lists the terms and conditions that are mapped to the hierarchy entity. It contains the following buttons:

Button Name	Button Description
Select All	Used to select all the available terms and conditions for the hierarchy entity from the list.
De-select All	Used to de-select all the terms and conditions from the list.
Refresh Terms and Conditions	Used to de-select the terms and conditions that are selected for the hierarchy entity from the list.

Note: You can also select or de-select the terms and conditions by clicking the check box corresponding to the respective terms and conditions.

On clicking the **Edit** (✎) icon corresponding to the terms and conditions in the **Terms and Conditions Section** section, you can view and edit the terms and conditions of the price item.

- **Adhoc Terms and Conditions** - Used to add deal-specific adhoc terms and conditions for the hierarchy entity.
3. Select the required terms and conditions for the hierarchy entity from the **Terms and Conditions Section** section.
 4. Click **Save**.

The deal-specific terms and conditions are associated with the hierarchy entity.

Note: You can associate deal-specific terms and conditions with a hierarchy entity until the deal is in the **Customer Accepted** or **Rejected** status.

Editing the Deal-Specific Terms and Conditions of a Price Item or a Hierarchy Entity

Prerequisites

To edit the deal-specific terms and conditions of a price item or a hierarchy entity, you should have:

- Terms and conditions associated with the price item
- Terms and conditions associated with the hierarchy entity.

Procedure

To edit the deal-specific terms and conditions of a price item or a hierarchy entity:

1. Ensure that the **Pricing and Commitments** section is expanded in the **Pricing and Commitments** screen.
2. In the **Pricing and Commitments** section, click the **Edit** (✎) icon in the **Terms and Conditions** column corresponding to the price item or the hierarchy entity whose deal-specific terms and conditions you want to edit.

The **Terms and Conditions** screen appears.

3. Ensure that the **Terms and Conditions Section** section is expanded in the **Terms and Conditions** screen.
4. Click the **Edit** (✎) icon corresponding to the terms and conditions which you want to edit.

The **Terms and Conditions** window appears. It contains the following fields:

Field Name	Field Description
Terms and Conditions	Indicates the terms and conditions associated with the price item or the hierarchy entity.
Description	Displays the description of the terms and conditions.
Attached File Name	Indicates the terms and conditions document name.
Terms and Conditions Text	Displays the terms and conditions.

5. Click **Edit**.

The **Terms and Conditions Text** field is enabled.

6. Modify the required information from the terms and conditions in the **Terms and Conditions Text** field.
7. Click **Save**.

The changes made to the terms and conditions are saved.

Note: You can edit the terms and conditions of a price item or a hierarchy entity until the deal is in the **Customer Accepted** or **Rejected** status.

Deal Pricing and Commitments

The **Deal Pricing and Commitments** screen allows you to view the original and proposed price item pricing and commitments along with the price item hierarchy and the hierarchy entity. It also allows you to edit the proposed pricing and commitments of the price items. It contains the following sections:

- **Deal Information** - Displays information about the deal version. It contains the following field:

Field Name	Field Description
Deal Version Information	Displays the concatenated string consisting of deal ID, deal version ID and deal description separated by a comma (,).

- **Search Pricing and Commitments** - Used to search pricing and commitments of a price item using various criteria. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate the criteria using which you want to search for the pricing and commitments of a price item. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular account. • All - Used to indicate whether you want to view the pricing and commitments of all the price items in the deal. • Customer - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular person. • Price Item - Used to indicate whether you want to search for the pricing and commitments of a particular price item. • Root Level Hierarchy Entity - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular hierarchy entity. 	Yes
Account ID	<p>Used to search for the pricing and commitments of a price item which belongs to a particular account in the customer hierarchy.</p> <p>Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Prospect Account Search window appears where you can search for the respective account.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the price item pricing and commitments of a particular account.</p>
Price Item	<p>Used to search for the price item pricing and commitments of a particular person, account, or hierarchy entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears where you can search for the respective price item.</p> <p>You can specify a list of price items whose pricing and commitments you want to view when you select the Price Item option from the Search By list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the pricing and commitments of a particular price item.</p>

Field Name	Field Description	Mandatory (Yes or No)
Price Item Approval Status	Used to search for the pricing and commitments of price items which are in a particular approval status. The valid values are: <ul style="list-style-type: none">• Approved• Approved-Existing• Approver-Recommended• Error• Unapproved	No

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search for the pricing and commitments of price items which are defined at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Indicates whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Indicates whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Indicates whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item 	No

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for the pricing and commitments of a price item which belongs to a particular person in the customer hierarchy.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Prospect Account Search window appears where you can search for the respective account.	Note: This field is required for searching the price item pricing and commitments of a particular person.
Root Level Hierarchy Entity	Used to search for the pricing and commitments of price items which belongs to a particular hierarchy entity.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Root Level Hierarchy Entity field. On clicking the Search icon, the Root Level Hierarchy Entity Search window appears where you can search for the respective hierarchy entity.	Note: This field is required for searching the price item pricing and commitments of a particular hierarchy entity.

In addition, the **Search Pricing and Commitments** section contains the following buttons:

Button Name	Button Description
Show All Pricing	Used to display all the price item pricing and commitments available for the specified search criteria.
Show Customer or Account Level Pricing	Used to show only the customer agreed and account agreed price item pricing and commitments available for the specified search criteria.

- **Symbol Legends** - Used to indicate the current status of the price item pricing and commitments. It also differentiates between the proposed and the original price item pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 PROJECTED	Indicates the proposed price item pricing statistics.
 ORIGINAL	Indicates the existing price item pricing statistics.
 APPROVED	Indicates whether the pricing of the price item is approved.
 PENDING FOR APPROVAL	Indicates whether the pricing of the price item is pending for approval.
 Pre-Approved	Indicates whether the original pricing of the price item is approved for the deal.
 APPROVER-RECOMMENDED	Indicates whether a new pricing for the price item is recommended by the approver.

Symbol Name	Symbol Description
 Error	<p>Indicates whether an error occurred while validating the price item pricing during pricing simulation.</p> <p>Note:</p> <p>If the approver clicks the Check Limits button in the Pricing And Commitment Details screen and if the price item floor and ceil value falls within the approvers limit, then the status of the price item is changed to Approved.</p> <p>If the approver clicks the Check Limits button in the Pricing And Commitment Details screen and if the price item floor and ceil value does not fall within the approvers limit, then the status of the price item is changed to Pending For Approval.</p> <p>If the approver clicks the Send Price Items for Approval button in the Pricing And Commitment Details screen, the status of the price item is changed to Assigned to Price Item Manager.</p>
 Assigned to Price Item Manager	Indicates whether the price item pricing is sent to the price item manager for approval.

- **Pricing and Commitments** - Lists the price items as specified in the search criteria whose proposed and original pricing and commitment details you want to view. It contains the following columns:

Column Name	Column Description
Entity Information	<p>Displays the concatenated string of information about the person or account in the customer hierarchy whose price item pricing and commitment details you want to view separated by a comma (,).</p> <p>Note:</p> <p>The hierarchy entity is sorted in the price item hierarchy based on its respective sort sequence.</p> <p>If two or more hierarchy entities have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string.</p> <p>Also, if the sort sequence is not defined for the hierarchy entities, then the system sorts them in the ascending alphabetical order of the information string.</p>

Column Name	Column Description
Price Item	<p data-bbox="703 212 1463 275">Displays the price item whose pricing and commitment details you want to view.</p> <p data-bbox="703 302 1463 333">Note:</p> <p data-bbox="703 348 1463 411">The price item is sorted in the price item hierarchy based on its respective sort sequence.</p> <p data-bbox="703 426 1463 489">If two or more price items have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string.</p> <p data-bbox="703 504 1463 598">Also, if the sort sequence is not defined for the price items, then the system sorts them in the ascending alphabetical order of the information string.</p>
Price Item Hierarchy	Displays the concatenated string consisting of the root level and non-root level hierarchy entity of the price item separated by a comma (,).
Pricing Parameters	Indicates the parameters using which the pricing of the price item is defined.
Revenue Variation (%)	<p data-bbox="703 825 1463 951">Displays the variation between the original, proposed, and recommended revenue in percentage generated from the original, proposed, and recommended pricing of the price item. It is calculated using the following formula:</p> <p data-bbox="703 966 1463 1029">Revenue Variation (%) = (Proposed Revenue – Original Revenue)*100/Original Revenue.</p>
Status	Indicates the current approval status of the price item pricing and commitments.
Approver	Indicates the user who has approved the price item pricing and commitments.
Pricing Information	<p data-bbox="703 1224 1463 1287">Displays the concatenated string of information about the proposed and original price item pricing separated by a comma (,).</p> <p data-bbox="703 1314 1463 1440">Note: It has a link. On clicking the link, the Deal Pricing screen appears where you can view the details of the original and proposed price item pricing. You can also edit or override the proposed pricing of the price item through this screen.</p>
Price List Information	Indicates the price list from where the proposed and original pricing of the price item is derived for the person or account in the customer hierarchy.

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the proposed and original pricing of the price item is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Bundle Pricing - Indicates whether the price item pricing is defined for the bundle which is available for the retail banking. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Market Product Pricing - Indicates whether the price item pricing is defined for the market product which is available for the retail banking. • Offer Pricing - Indicates whether the price item pricing is defined for the offer which is available for the retail banking. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing.
Average Price	<p>Displays the average proposed and original cost of the price item as per the proposed and original commitments. It is calculated using the following formula:</p> $\text{Avg. Price} = \text{Proposed Revenue} / \text{Proposed Usage}$

Column Name	Column Description
Volume and Commitments	On clicking the Edit (✎) icon, the Pricing and Commitments screen appears where you can view the original and proposed commitments of the price item.
Revenue	Displays the proposed and original revenue generated from the proposed and original price item pricing and commitments.
Cost	Displays the proposed and original cost of the price item based on the proposed and original usage.
Terms and Conditions	On clicking the Edit (✎) icon, the Mapping Terms and Conditions screen appears where you can view or delete the deal-specific terms and conditions associated with the price item.

In addition, the **Pricing and Commitments** section contains the following buttons:

Button Name	Button Description
Send Price Items for Approval	<p>On clicking the Send Price Items for Approval button, the status of the price item is changed to Assigned to Price Item Manager.</p> <p>Note: An approver can send a price item for approval when the following conditions are met:</p> <ul style="list-style-type: none"> • The price item is assigned to the approver for approval • The Propose Pricing option is set to Yes in the Deal Approval Profile for the approver • The Submit Price Item for Approval option is set to Yes in the Deal Approval Profile for the approver
Check Limits	<p>On clicking the Check Limits button the system verifies whether the average price of the price item falls within the floor and ceil values defined for the approver in the price item screen.</p> <p>Note:</p> <p>If the average price falls within the floor and ceil values defined for the approver, then the status of the price item is changed to Approved.</p> <p>If the average price does not fall within the floor and ceil values defined for the approver, then the status of the price item is changed to Pending For Approval.</p>

Note: A check box appears corresponding to the price item if the price item is assigned to the approver for approval.

Price List Assignment

The **Price List Assignment** screen enables you to view the existing and proposed price lists of the person or account in a deal. It also enables you to edit or assign proposed price list to the person or account in a deal. It contains the following sections:

- **Deal** - Displays basic information about the deal. It contains the following fields:

Field Name	Field Description
Deal Version Information	Displays the deal version to which the person or account belongs.

Field Name	Field Description
Person ID	<p>Displays the person whose price list assignment details you want to view or edit.</p> <p>Note:</p> <p>This field appears in the following scenarios:</p> <ul style="list-style-type: none"> • If you are viewing the existing price lists of a person. • If you are editing the proposed price list of a person. • If you are assigning a proposed price list to a person. <p>This field appears when you are viewing, editing, or assigning a price list to a person in the customer hierarchy.</p>
Person Information	<p>Displays the concatenated string of information about the person separated by a comma (,).</p> <p>Note: This field appears when you are viewing, editing, or assigning a price list to a person in the customer hierarchy.</p>
Account ID	<p>Displays the account whose price list assignment details you want to view or edit.</p> <p>Note:</p> <p>This field appears in the following scenarios:</p> <ul style="list-style-type: none"> • If you are viewing the existing price lists of an account. • If you are editing the proposed price list of an account. • If you are assigning a proposed price list to an account <p>This field appears when you are viewing, editing, or assigning a price list to an account in the customer hierarchy.</p>
Account Information	<p>Displays the concatenated string of information about the account separated by a comma (,).</p> <p>Note: This field appears when you are viewing, editing, or assigning a price list to an account in the customer hierarchy.</p>

- **Existing Price Lists** - Lists the price lists that are already assigned to the person or account of the customer hierarchy in a deal. It contains the following columns:

Column Name	Column Description
Price List ID	Displays the existing price list of the person or account of the customer hierarchy.
Price List Information	<p>Displays the description of the price list.</p> <p>Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>

Column Name	Column Description
Effective Start Date	Displays the date from when the price list is effective for the deal.
	Note: By default, this date is set to the deal start date and cannot be edited.
Effective End Date	Displays the date till when the price list is effective for the deal.
	Note: The Effective End Date cannot be earlier than the Effective Start Date .
Price List Inheritance	Indicates whether the person or account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the person or account can inherit the price item pricing from the price list hierarchy.
Assignment Status	Indicates the current status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Priority	Indicates the order in which the price list must be considered while determining the price item pricing for the person or account.

Note: The **Existing Price Lists** section appears in the **Price List Assignment** screen when you are viewing the original pricelist assignment of the person or account from the customer hierarchy.

Proposed Price Lists - Lists the price lists that are proposed for the person or account in the customer hierarchy of a deal. It contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list that is proposed for the person or account of the customer hierarchy.
Price List Information	Displays the description of the price list.
	<p>Note:</p> <p>It has a link. On clicking the link, the details of the respective price list appears in the Assign Price List section for editing.</p> <p>You can activate or deactivate a proposed price list by editing its Effective End Date in the Assign Price List section.</p>
Effective Start Date	Displays the date from when the proposed price list is effective for the deal.
	Note: By default, this date is set to the deal start date and cannot be edited.
Effective End Date	Displays the date till when the proposed price list is effective for the deal.
	Note: The Effective End Date cannot be earlier than the Effective Start Date .

Column Name	Column Description
Price List Inheritance	Indicates whether the person or account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the person or account can inherit the price item pricing from the price list hierarchy.
Assignment Status	Indicates the current status of the proposed price list. The valid value is: <ul style="list-style-type: none"> Proposed
Priority	Indicates the order in which the price list must be considered while determining the price item pricing for the person or account.

Note:

The **Proposed Price List** section appears in the **Price List Assignment** screen when you are viewing, editing, or assigning a proposed price list to a person or an account of the customer hierarchy.

You can delete a proposed price list by clicking the **Delete** (🗑️) icon corresponding to the respective proposed price list.

The **Delete** icon appears corresponding to only those price lists which are newly assigned to the customer or account in the deal.

You cannot delete a proposed price list assignment which is created using the original price list assignments.

If you delete a proposed price list, the price item pricing inherited from the price list is also deleted from the **Pricing and Commitments** screen. But, if you have created the customer or account agreed pricing using the price list pricing, then such customer or account agreed pricing is not deleted from the **Pricing and Commitments** screen.

Assign Price List - Enables you to assign a proposed price list to a person or an account of the customer hierarchy in a deal. It contains the following fields:

Field Name	Field Description
Price List ID	Used to indicate a particular price list that you want to assign to the proposed price list of a person or account. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price List ID field. On clicking the Search icon, the Fetch Eligible Price Lists window appears.</p> <p>On indicating the price list, the price list information appears corresponding to the Price List ID field separated by a comma (,).</p>
Effective Start Date	Displays the date from when the price list assignment is effective for the person or account. <p>Note: By default this field is set to the deal start date and cannot be changed.</p>
Effective End Date	Used to specify the date till when the price list assignment is effective for the person or account.
Priority	Used to specify the order in which the assigned price list must be considered while determining the price item pricing for the person or account.

Field Name	Field Description
Price list Inheritance	<p>Indicates whether the person or account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the person or account can inherit the price item pricing from the price list hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Yes - Used to indicate that the person can inherit the price item pricing from the price list hierarchy. • No -Used to indicate that the person cannot inherit the price item pricing from the price list hierarchy.

Note: You cannot assign a proposed price list to a person or account if a deal has reached the **Finalized** status.

In addition, the **Price List Assignment** screen contains the following button:

Button Name	Button Description
Save and Select Price Item Group	On clicking the Save and Select Price Item Group button, the assigned price list is saved as the proposed price list and the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities from the respective price list.

Product Enrollment

The **Product Enrollment** screen enables you to view the existing and proposed products to which the account is enrolled. It also enables you to edit or enroll an account or accounts of a person for a product. It contains the following sections:

- **Deal** - Displays basic information about the deal. It contains the following fields:

Field Name	Field Description
Deal Version Information	Displays the deal version to which the person or account belongs.

Field Name	Field Description
Person ID	Displays the person whose accounts you want to enroll for a product..
	Note: This field appears when you want to enroll all the accounts of the person for a product.
Person Information	Displays the concatenated string of information about the person separated by a comma (,).
	Note: This field appears when you want to enroll all the accounts of the person for a product.
Account ID	Displays the account whose product enrollment details you want to view.
	Note: This field appears in the following scenarios: <ul style="list-style-type: none"> • If you are viewing the existing products enrolled for an account. • If you are editing the existing products enrolled for an account. • If you are enrolling an account for a product.
Account Information	Displays the concatenated string of information about the account separated by a comma (,).
	Note: This field appears when you are viewing, editing, or enrolling an account for a product.

- **Enrolled Products** - Lists the products to which the account is enrolled. It contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.
Product Code	Displays the code of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Description	Displays the description of the enrolled product.
	Note: It has a link. On clicking the link while viewing the existing product to which the account is enrolled, the Product screen appears where you can view the details of the respective product.
Version Description	Displays the version of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.

Column Name	Column Description
Product Type	Displays the type of product which is enrolled for the account.
	<p>Note:</p> <p>Whereas, if you click the link while editing the proposed products to which the account is enrolled, the details of the product and its services appears in the Products and Services section of the Product Enrollment screen where you can edit the respective product.</p> <p>You cannot edit an enrolled product if the deal version has reached the Finalized status.</p>
Product Category	Indicates the category to which the product belongs.
	<p>Note: This column appears only when you are viewing the proposed product enrollment details of an account.</p>
Priority	Displays the priority in which the enrolled product is considered for the account.
	<p>Note: This column appears only when you are viewing the proposed product enrollment details of an account.</p>
Start Date	Displays the date from when the enrolled product is effective for the account.
	<p>Note: By default, this date is set to the deal start date and cannot be edited.</p>
End Date	Displays the date till when the enrolled product is effective for the account.
	<p>Note: The End Date cannot be earlier than the Start Date.</p>

- **Proposed Products** - Lists the products that are proposed for the account for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	<p>Note: By default, this date is set to the deal start date and cannot be edited.</p>

Column Name	Column Description
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note: On clicking the Broadcast () icon corresponding to a proposed enrolled product, the details of the product appears in the Enroll Product and Product and Services sections for editing.
Note: You cannot edit an enrolled product if the deal or deal version has reached the Finalized status.
You can delete the proposed product to which the account is enrolled by clicking the Delete () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Used to specify the enrollment ID once the product is defined for an enrollment.
	Note: Enrollment ID is displayed when the product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.

Field Name	Field Description
End Date	Displays the date till when the product enrollment is effective.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

- **Products and Services** - Used to define products and services for a product. It contains the following fields in a grid:

Field Name	Field Description
Product	Used to indicate the product to which you want to enroll an account or accounts of a person. Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Fetch Eligible Products window appears. On indicating the product, the description of the product appears in the Product field. Also, when you select a product, the Standard Product , Product Services , and the Add-On Product Services that are eligible for the product appears corresponding to the product.
Start Date	Used to specify the date from when the product is effective for the account or accounts of a person. Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product is effective for the account or accounts of a person. Note: The End Date cannot be earlier than the Start Date .
Priority	Used to specify the priority in which you want the product to be considered while calculating the financial summary of the deal.
Inclusion	Used to indicate whether you want to include the services of the product for the account. Note: By default, all the check boxes of the services provided by the product are selected. You can exclude a service by deselecting the check box corresponding to the respective service.
Standard Product	Displays the standard product which is included within the main product.
Start Date	Used to specify the date from when the standard product is effective. Note: By default this field is set to the deal start date and cannot be changed.

Field Name	Field Description
End Date	Used to specify the date till when the standard product is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the standard product is used for enrollment.
Product Services	Displays the service that is a part of the standard product.
Start Date	Used to specify the date from when the service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the service is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the service is used for enrollment.
Add on Services	Displays the add-on service which is a part of the packaged product.
Start Date	Used to specify the date from when the add-on service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the add-on service is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the add-on service is used for enrollment.

Priority	Displays the priority in which the enrolled product is considered for the account.
	<p>Note: This column appears only when you are viewing the proposed product enrollment details of an account.</p>
Start Date	Displays the date from when the enrolled product is effective for the account.
	<p>Note: By default, this date is set to the deal start date and cannot be edited.</p>
End Date	Displays the date till when the enrolled product is effective for the account.
	<p>Note: The End Date cannot be earlier than the Start Date.</p>

- **Proposed Products** - Lists the products that are proposed for the accounts of the person for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.

Column Name	Column Description
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note: On clicking the Broadcast () icon corresponding to a proposed enrolled product, the details of the product appears in the Enroll Product and Product and Services sections for editing.
Note: You cannot edit an enrolled product if the deal or deal version has reached the Finalized status.
You can delete the proposed product to which the account is enrolled by clicking the Delete () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID once the product is defined for an enrollment.
	Note: This field is auto-populated when a product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product enrollment is effective for the accounts of the person.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

- **Products and Services** - Used to define the product and its services for enrollment. It contains the following fields in a grid:

Field Name	Field Description
Product	Used to indicate the product to which you want to enroll the accounts of a person.
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Fetch Eligible Products window appears.</p> <p>On indicating the product, the description of the product appears in the Product field.</p> <p>Also, when you select a product, the Standard Product, Product Services, and the Add-On Product Services that are eligible for the product appears corresponding to the product.</p>
Start Date	Used to specify the date from when the product is effective for the accounts of the person.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product is effective for the accounts of the person.
	Note: The End Date cannot be earlier than the Start Date .
Priority	Used to specify the priority in which you want the product to be considered while calculating the financial summary of the deal.

Field Name	Field Description
Inclusion	Used to indicate whether you want to include the services of the product for the accounts of the person.
	Note: By default, all the check boxes of the services provided by the product are selected. You can exclude a service by deselecting the check box corresponding to the respective service.

- **Enrolled Products** - Lists the products to which the account is enrolled. It contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Description	Displays the description of the enrolled product.
	Note: It has a link. On clicking the link while viewing the existing product to which the account is enrolled, the Product screen appears where you can view the details of the respective product.
Version Description	Displays the version of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Type	Displays the type of product which is enrolled for the account.
	Note: Whereas, if you click the link while editing the proposed products to which the account is enrolled, the details of the product and its services appears in the Products and Services section of the Product Enrollment screen where you can edit the respective product. You cannot edit an enrolled product if the deal version has reached the Finalized status.
Product Category	Indicates the category to which the product belongs.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Priority	Displays the priority in which the enrolled product is considered for the account.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Proposed Products** - Lists the products that are proposed for the account for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note:

On clicking the **Broadcast** () icon corresponding to a proposed enrolled product, the details of the product appears in the **Enroll Product** and **Product and Services** sections for editing.

Note: You cannot edit an enrolled product if the deal or deal version has reached the **Finalized** status.

You can delete the proposed product to which the account is enrolled by clicking the **Delete** () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.

Column Name	Column Description
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID once the product is defined for an enrollment.
	Note: This field is auto-populated when a product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product enrollment is effective for the accounts of the person.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

- **Products and Services** - Used to define the product and its services for enrollment. It contains the following fields in a grid:

Field Name	Field Description
Product	Used to indicate the product to which you want to enroll the account.
	Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Fetch Eligible Products window appears. On indicating the product, the description of the product appears in the Product field. Also, when you select a product, the Standard Product , Product Services , and the Add-On Product Services that are eligible for the product appears corresponding to the product.
Start Date	Used to specify the date from when the product is effective for the account.
	Note: By default this field is set to the deal start date and cannot be changed.

Field Name	Field Description
End Date	Used to specify the date till when the product is effective for the account. Note: The End Date cannot be earlier than the Start Date .
Priority	Used to specify the priority in which you want the product to be considered while calculating the financial summary of the deal.
Inclusion	Used to indicate whether you want to include the services of the product for the account. Note: By default, all the check boxes of the services provided by the product are selected. You can exclude a service by deselecting the check box corresponding to the respective service.
Standard Product	Displays the standard product which is included within the main product.
Start Date	Used to specify the date from when the standard product is effective. Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the standard product is effective. Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the standard product is used for enrollment.
Product Services	Displays the service that is a part of the standard product.
Start Date	Used to specify the date from when the service is effective. Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the service is effective. Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the service is used for enrollment.
Add on Services	Displays the add-on service which is a part of the packaged product.
Start Date	Used to specify the date from when the add-on service is effective. Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the add-on service is effective. Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the add-on service is used for enrollment.

5. Enter the required details in the **Products and Services** section.

6. Click **Save**.

The account is enrolled for a product.

Pricing and Commitments

The **Pricing and Commitments** screen allows you to do the following:

- View the original and proposed pricing of the price item
- Edit the proposed pricing of the price item
- Override the proposed pricing of the price item
- View the original and proposed commitments of the price item
- Edit the proposed commitments of the price item

The **Pricing and Commitments** screen contains the following sections:

- **Pricing** - Used to view the original and proposed pricing of the price item. It also allows you to edit or override the proposed pricing of the price item. It contains the following zones:
 - [Projected Pricing](#) on page 3078
 - [Original Pricing](#) on page 3084
- **Commitments** - Used to view the original and proposed commitments of the price item. It also allows you to edit the proposed commitments of the price item. It contains the following zones:
 - [Proposed Commitments](#) on page 3088
 - [Original Volume](#) on page 3088

Projected Pricing

The **Projected Pricing** zone allows to view, edit, or override the proposed pricing of the price item. It contains the following field:

Field Name	Field Description
Override	Used to indicate whether you want to override the price item pricing.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Price Assignment ID	<p>Displays the price assignment ID.</p> <p>Note: It is a read-only field and cannot be edited. A new Price Assignment ID is generated if you override the proposed pricing of the price item.</p>
Price Item	<p>Displays the price item for which the proposed pricing is defined.</p> <p>Note: It is a read-only field and cannot be edited.</p>
Start Date	<p>Use to specify the date from when the pricing of the price item is effective for the deal.</p> <p>Note: By default the deal start date appears in this field. You can define a seasonal pricing for the price item by overriding the price item pricing with a price assignment start date greater than the deal start date.</p>

Field Name	Field Description
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.
Pricing Eligibility	<p>Used to select the pricing eligibility criteria for the price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.</p> </div>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No

Field Name	Field Description
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.
	<p>Note:</p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.</p>

- **TFM Information** - Displays the transaction information mapped with the price item. It contains the following fields:

Field Name	Field Description
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing.
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Pricing Parameter Information** - Displays the parameters based on which the price item pricing is defined. It contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected.
Parameter Value	Displays the value of the parameter.

- **Characteristics** - Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description
Rate Component	Displays the concatenated string of information about the rate component separated by comma (.). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.
Description	Used to specify the description of the price component.

Column Name	Column Description										
Show Price Component	Used to indicate whether you want to display the price component in the bill.										
Rate	Used to specify the rate defined for the price component.										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can define the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can define the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.
Column Name	Column Description										
Display Sequence	Used to specify the sequence of the tiering criteria.										
Tiering Criterion	Used to indicate the tiering criteria.										
Lower Limit	Used to specify the lower limit of the tiering range.										
Upper Limit	Used to specify the upper limit of the tiering range.										

Column Name	Column Description														
Eligibility Details	<p data-bbox="690 218 1464 317">On clicking the Add  icon, you can define the eligibility criteria of the price component for the price item pricing. Pricing and Commitments screen	Pricing and Commitments on page 3077

Original Pricing

The **Original Pricing** zone allows you to view the details of the existing pricing of the price item. It contains the following sections:

- **Main** - Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Price Assignment ID	Displays the price assignment ID.
Price Item	Displays the price item for which the original pricing is defined.
Start Date	Displays the date from when the pricing of the price item is effective for the deal.
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Indicates that the pricing is used to generate regular bill segment. • Post Processing - Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Indicates that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>
End Date	Displays the date till when the pricing of the price item is effective for the deal.

Field Name	Field Description
Pricing Currency	Indicates the currency in which you want to define the pricing of the price item.
Pricing Eligibility	Indicates whether the pricing eligibility criteria is defined for the price item pricing in the Price Component section.
Print Zero	Indicates whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Rate Schedule	Displays the rate schedule that you want to use while defining price item pricing.
	Note: Rate schedules control how the bills for the price item is calculated.

- **TFM Information** - Displays the transaction information mapped with the price item. It contains the following fields:

Field Name	Field Description
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions
Do Not Aggregate Switch	Indicates whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates aggregation is not required while rating the transactions before billing. • No - Indicates aggregation is required while rating the transactions before billing.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly

- **Pricing Parameter Information** - Displays the parameters based on which the price item pricing is defined. It contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the value of the parameter.

- **Characteristics** - Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Price Component** - Lists the price components of the rate component that is mapped with the price item pricing. It contains the following columns:

Column Name	Column Description										
Rate Component	Displays the concatenated string of information about the rate component separated by comma (,).										
Display Sequence	Displays the sequence of price component whose rate is used for calculating the pricing of the price item.										
Description	Displays the description of the price component.										
Show Price Component	Indicates whether you want to display the price component in the bill.										
Rate	Displays the rate defined for the price component.										
Eligibility and Tier Details	Displays the tiering criteria and eligibility criteria for the price item pricing.										
Tier Details	<p>Displays information about the tiering criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Displays the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Indicates the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Displays the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Displays the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can define the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Displays the sequence of the tiering criteria.	Tiering Criterion	Indicates the tiering criteria.	Lower Limit	Displays the lower limit of the tiering range.	Upper Limit	Displays the upper limit of the tiering range.
Column Name	Column Description										
Display Sequence	Displays the sequence of the tiering criteria.										
Tiering Criterion	Indicates the tiering criteria.										
Lower Limit	Displays the lower limit of the tiering range.										
Upper Limit	Displays the upper limit of the tiering range.										

Column Name	Column Description												
Eligibility Details	<p>Displays information about the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="695 296 1468 1144"> <thead> <tr> <th data-bbox="695 296 1027 348">Column Name</th> <th data-bbox="1027 296 1468 348">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="695 348 1027 464">Display Sequence</td> <td data-bbox="1027 348 1468 464">Displays the order in which the eligibility criteria is executed in the rule.</td> </tr> <tr> <td data-bbox="695 464 1027 579">Parameter</td> <td data-bbox="1027 464 1468 579">Indicates the left hand side parameter which is used along with the price item for price determination.</td> </tr> <tr> <td data-bbox="695 579 1027 716">Operator</td> <td data-bbox="1027 579 1468 716">Indicates the relational operator that is used to define the relation between the left hand side and the right hand side parameters.</td> </tr> <tr> <td data-bbox="695 716 1027 968">Parameter Value Type</td> <td data-bbox="1027 716 1468 968"> Indicates the type of pricing eligibility. Proposed Commitments

The **Proposed Commitments** zone allows to view or edit the proposed commitments of the price item for a person or account based on which the revenue is calculated for the deal. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item.
Pricing Parameters	Indicates the parameter based on which the pricing is defined for the price item.
SQI	Indicates the service quantity identifier that is associated with the price item.
Service Quantity	Used to specify the proposed SQI value using which the rates engine calculates the price item pricing.

Editing a Proposed Price Item Pricing**Prerequisites**

To edit a proposed price item pricing, you should have:

- Values defined for the **Price Assignment Type** in the **PA_TYPE_FLAG** lookup field
- Currencies defined in the application
- Rate schedules, rate versions, and rate components defined in the application

- Values defined for **Transaction Rating Criteria** in the **TXN_RATING_CRITERIA** lookup field
- Values defined for **Pricing Rule Type** in the **PRC_RULE_TYPE_FLG** lookup field
- Aggregation schedules defined in the application
- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Pricing**)
- Transactions mapped to the price item defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application

Procedure

To edit a proposed price item pricing:

1. Ensure that the **Projected Pricing** zone is expanded in the **Pricing and Commitments** screen when you are editing the *proposed* pricing of a price item.

The **Projected Pricing** zone contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Override	Used to indicate whether you want to override the price item pricing.	No
		Note: This field is required only while overriding the price item pricing.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID. Note: It is a read-only field and cannot be edited.	Not Applicable
Price Item	Displays the price item whose pricing you want to edit. Note: It is a read-only field and cannot be edited.	Not Applicable
Start Date	Use to specify the date from when the pricing of the price item is effective for the deal. Note: By default the deal start date appears in this field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="740 737 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="740 1234 1192 1346" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="740 1608 1192 1719" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	Yes
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.	No
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

- **Parameters** - Used to associate the parameters based on which you want to define the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p>	<p>Note: This field is required while associating parameters with the price item pricing.</p>
Parameter Value	Used to specify the value of the parameter.	Yes (Conditional)
		<p>Note: This field is required while associating parameters with the price item pricing.</p>

- **Characteristics** - Used to define a list of characteristics for the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (.). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	Not applicable
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	Yes
Description	Used to specify the description of the price component.	Yes

Column Name	Column Description	Mandatory (Yes or No)										
Show Price Component	Used to indicate whether you want to display the price component in the bill.	Yes (Conditional)										
		Note: This field is required for displaying the price component in the bill.										
Rate	Used to specify the rate defined for the price component.	Yes										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	Yes (Conditional)										
		Note: This field is required for specifying the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	Yes (Conditional)
		Column Name	Column Description									
		Display Sequence	Used to specify the sequence of the tiering criteria.									
		Tiering Criterion	Used to indicate the tiering criteria.									
		Lower Limit	Used to specify the lower limit of the tiering range.									
		Upper Limit	Used to specify the upper limit of the tiering range.									
		Note: This field is required for specifying the tiering criteria of the price component for the price item pricing.										

Column Name	Column Description	Mandatory (Yes or No)		
Eligibility Details	<p>On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p>	Yes (Conditional)		
	<table border="1"> <thead> <tr> <th data-bbox="690 407 906 457">Column Name</th> <th data-bbox="906 407 1182 457">Column Description</th> </tr> </thead> </table>	Column Name	Column Description	<p>Note: This field is required for specifying the eligibility criteria of the price component for the price item pricing.</p>
	Column Name	Column Description

Overriding a Proposed Price Item Pricing

Prerequisites

To override a proposed price item pricing, you should have:

- Values defined for the **Price Assignment Type** in the **PA_TYPE_FLAG** lookup field
- Currencies defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Values defined for **Transaction Rating Criteria** in the **TXN_RATING_CRITERIA** lookup field
- Values defined for **Pricing Rule Type** in the **PRC_RULE_TYPE_FLG** lookup field
- Aggregation schedules defined in the application
- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Pricing**)
- Transactions mapped to the price item defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application

Procedure

To override a proposed price item pricing:

1. Ensure that the **Projected Pricing** zone is expanded in the **Pricing and Commitments** screen when you are overriding the *proposed* pricing of a price item.

The **Projected Pricing** zone contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Override	Used to indicate whether you want to override the price item pricing.	Yes

Note:

A new price assignment ID is created when you override a proposed price item pricing.

While overriding a price item pricing, you can define a seasonal pricing for a price item by changing the pricing effective date to a date greater than the deal start date.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Price Item	Displays the price item whose pricing you want to edit.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Start Date	Use to specify the date from when the pricing of the price item is effective for the deal.	Yes
	Note: By default the deal start date appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="740 737 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="740 1234 1192 1350" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="740 1606 1192 1722" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	Yes
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.	No
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

- **Parameters** - Used to associate the parameters based on which you want to define the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p>	<p>Note: This field is required while associating parameters with the price item pricing.</p>
Parameter Value	Used to specify the value of the parameter.	Yes (Conditional)
		<p>Note: This field is required while associating parameters with the price item pricing.</p>

- **Characteristics** - Used to define a list of characteristics for the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (.). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	Not applicable
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	Yes
Description	Used to specify the description of the price component.	Yes

Column Name	Column Description	Mandatory (Yes or No)										
Show Price Component	Used to indicate whether you want to display the price component in the bill.	Yes (Conditional)										
		Note: This field is required for displaying the price component in the bill.										
Rate	Used to specify the rate defined for the price component.	Yes										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	Yes (Conditional)										
		Note: This field is required for specifying the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	Yes (Conditional)
		Column Name	Column Description									
		Display Sequence	Used to specify the sequence of the tiering criteria.									
		Tiering Criterion	Used to indicate the tiering criteria.									
		Lower Limit	Used to specify the lower limit of the tiering range.									
		Upper Limit	Used to specify the upper limit of the tiering range.									
		Note: This field is required for specifying the tiering criteria of the price component for the price item pricing.										

Column Name	Column Description	Mandatory (Yes or No)		
Eligibility Details	<p>On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p>	Yes (Conditional)		
	<table border="1"> <thead> <tr> <th data-bbox="690 407 906 457">Column Name</th> <th data-bbox="906 407 1182 457">Column Description</th> </tr> </thead> </table>	Column Name	Column Description	<p>Note: This field is required for specifying the eligibility criteria of the price component for the price item pricing.</p>

Editing a Proposed Commitment

Prerequisites

To edit a proposed commitment you should have:

- Proposed commitments defined for a price item

Procedure

To edit a proposed commitment:

1. Ensure that price item hierarchy is expanded in the **Pricing and Commitments** section of the **Pricing and Commitments** screen.
2. In the **Pricing and Commitments** section, click the **Edit** (✎) icon in the **Volume and Commitments** column corresponding to the price item whose proposed commitment you want to edit.

The **Pricing and Commitments** screen appears. It contains the following sections:

- **Proposed Commitments** - Used to view or edit the proposed commitments of the price item for a customer or an account in a deal.
- **Original Volume** - Displays information about the existing commitments of the price item.

The **Proposed Commitments** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Price Item	Displays the price item.	Not applicable
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.	Not applicable
SQI	Indicates the service quantity identifier.	Not applicable
Service Quantity	Used to specify the SQI value using which the rates engine calculates the price item pricing.	Yes

3. Modify the required details in the **Proposed Commitments** section.

Note: You cannot edit a proposed commitment of a price item if the deal or deal version is in the **Finalized** status.

4. Click **Save**.

The changes made to the proposed commitment is saved.

Mapping Terms and Conditions

The **Mapping Terms and Conditions** screen enables you to associate deal-specific terms and conditions with a price item or hierarchy entity of a person or account from the customer hierarchy in a deal. It contains the following sections:

- **Main** - The **Main** section indicates the price item or hierarchy entity with which you want to associate deal-specific terms and conditions. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item of the person or account from the customer hierarchy in a deal with which you want to associate deal-specific terms and conditions. Note: This field appears when you are associating deal-specific terms and conditions with a price item.
Hierarchy Entity	Indicates the hierarchy entity of the person or account from the customer hierarchy in a deal with which you want to associate deal-specific terms and conditions. Note: This field appears when you are associating deal-specific terms and conditions with a hierarchy entity.

- **Deal-Specific Terms and Conditions** - The **Deal-Specific Terms and Conditions** section allows you to associate or disassociate deal-specific terms and conditions from the price item or hierarchy entity of a person or account from the customer hierarchy in a deal. It contains the following columns:

Column Name	Column Description
Terms and Conditions	Used to indicate a deal-specific term and condition which you want to associate with the price item or the hierarchy entity of the person or account.
Default	Used to indicate whether the term and condition is default or not.

Editing Deal-Specific Terms and Conditions

Prerequisites

To edit deal-specific terms and conditions you should have:

- Terms and conditions associated with the deal

Procedure

To edit deal-specific terms and conditions:

1. Search for the deal in the **Deal Dashboard** screen.
2. In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal whose terms and conditions you want to edit.
The **Deal Information** screen appears.
3. Ensure that the customer hierarchy is expanded in the **Simulation Details** zone.
4. Click the **Edit** (✎) icon in the **Pricing and Commitments** column corresponding to the person or account whose terms and conditions you want to edit.
The **Pricing and Commitments** screen appears.
5. Ensure that the **Price Item Hierarchy** sub-section is expanded in the **Pricing and Commitments** section when you are editing the deal-specific terms and conditions.
6. Click the **Edit** (✎) icon in the **Terms and Conditions** column corresponding to the price item, root level hierarchy entity, or non-level hierarchy entity whose

The **Mapping Terms and Conditions** screen appears. It contains the following sections:

- **Main** - The **Main** section displays the hierarchy entity to which the deal-specific terms and conditions are associated. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears when you are editing the deal-specific terms and conditions of a price item.	
Root Level Hierarchy Entity	Indicates the root level hierarchy entity whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears only when you are editing the deal-specific terms and conditions of a root level hierarchy entity.	

Field Name	Field Description	Mandatory (Yes or No)
Non-Root Level Hierarchy Entity	Indicates the non-root level hierarchy entity whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears only when you are editing the deal-specific terms and conditions of a non-root level hierarchy entity.	

- **Deal-Specific Terms and Conditions** - The **Deal-Specific Terms and Conditions** section lists the deal-specific terms and conditions associated with the hierarchy entity. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Terms and Conditions	Indicates the deal-specific terms and conditions associated with the price item, root level hierarchy entity, or non-root level hierarchy entity.	Not applicable
Default	Indicates whether the term and condition is default or not.	Not applicable

7. Edit the required term and condition in the **Deal-Specific Terms and Conditions** section.

Note: You can only disassociate a deal-specific term and condition from the **Deal-Specific Terms and Conditions** section.

8. Click the **Delete** (🗑️) icon corresponding to the term and condition that you want to disassociate from the deal.

Note: You cannot delete a term and condition which is set as default for the hierarchy entity.

9. Click **Save**.

The changes are made to the deal-specific terms and conditions.

Terms and Conditions

The **Terms and Conditions** screen allows you to associate, disassociate, edit, or view the terms and conditions of the deal. It also allows you to add adhoc terms and conditions for the deal. It contains the following field:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal.

In addition, the **Terms and Conditions** screen contains the following sections:

- **Terms and Conditions Section** - Lists the terms and conditions that are mapped to the deal. It contains the following buttons:

Button Name	Button Description
Select All	Used to select all the available terms and conditions for the deal from the list.
De-select All	Used to de-select all the terms and conditions from the list.
Refresh Terms and Conditions	Used to de-select the terms and conditions that are selected for the deal from the list.

Note: You can also select or de-select the terms and conditions by clicking the check box corresponding to the respective terms and conditions.

On clicking the **Edit** (✎) icon corresponding to the terms and conditions in the **Terms and Conditions Section** section, you can view and edit the terms and conditions of the deal.

- **Adhoc Terms and Conditions** - Used to add adhoc terms and conditions for the deal.

Associating the Terms and Conditions with a Deal

Prerequisites

To associate terms and conditions with a deal you should have:

- Terms and conditions defined in the application

Procedure

To associate terms and conditions with a deal:

1. Search for the deal in the **Search Deal** zone of the **Deal Dashboard** screen to which you want to associate the terms and conditions.
2. Click the **Deal Terms and Conditions** link at the top right corner of the **Deal Information** zone.
The **Terms and Conditions** screen appears.
3. Ensure that the **Terms and Conditions** section is expanded in the **Terms and Conditions** screen.
4. Select the required terms and conditions by clicking the check box corresponding to the terms and conditions in the **Terms and Conditions** section.

5. Click **Save**.

The terms and conditions are associated with the deal.

Note: You can associate terms and conditions with a deal until the deal is in the **Customer Accepted** or **Rejected** status.

Deal Log and Comments

The **Deal Log and Comments** screen allows you to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal. It contains the following sections:

- **Log** - The **Log** section contains the following fields:

Field Name	Field Description
Deal ID	Displays the deal ID.
Deal Information	Displays the concatenated string of deal information separated by a comma (,).

In addition, the **Log** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the deal due to which the log is created in the system.
Details	Displays the details of the actions performed on the deal.
User	Indicates the user who has performed the action on the deal.
Log Type	Indicates the type of log using which the action is performed on the deal.
Related Object	Indicates the object or entity which is created when the action is performed on the deal.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the action is performed on the deal.

- **Comments** - The **Comments** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the log entry is created for the deal in the system.
User	Indicates the user who has created the log entry for the deal in the system.
Comments	Displays additional information about the log entry created for the deal.
Reason	Displays the reason why the log entry is created for the deal.

In addition, the **Comments** section contains the following fields:

Field Name	Field Description
Reason	Used to specify the reason why the log entry is created for the deal.
	Note: This list includes only those values which are defined in the Approval Workflow Reason screen where the Reason Category is set to Deal General .
Comment	Used to specify the reason for creating a new log entry for the deal.

Adhoc Revenue and Cost

The **Adhoc Revenue and Cost** screen allows you to add, edit, or view the additional charges applicable for the deal while deal creation. It also allows you to add price item level adhoc charges for the deal. It contains the following fields in a grid:

Field Name	Field Description
Sequence	Used to specify the sequence number of the adhoc revenue or cost for the deal.
Currency	Used to indicate the currency in which you want to specify the adhoc charge for the deal.
	Note: The list includes only those currencies which are defined in the system.

Field Name	Field Description
Amount	Used to specify the amount for the adhoc revenue or cost.
	Note: You can also specify negative value in this field.
Division	Used to indicate the division for which the adhoc charge is applicable.
	Note: You can view only those divisions to which you have access in the Division list.
Price Item	Used to indicate the price item for which you want to add the adhoc charge.
	<p>Note:</p> <p>By default, this field is inactive. This field appears when the Price Item Level option is selected from the Revenue/Cost Type list.</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On indicating the price item, the description of the price item appears corresponding to the Price Item field.</p>
Revenue/Cost Type	Used to indicate the group to which the adhoc charge belong. The valid values are:
	<ul style="list-style-type: none"> • Adhoc Revenue • Courier Cost • Deal Commission • Price Item Level • Travel Cost <p>Note: The list includes only those values which are present in the REVENU_COST_GRP_FLG lookup field.</p>
Amount Type	Used to indicate the type of amount using which you want to add an adhoc charge for the deal. The valid values are:
	<ul style="list-style-type: none"> • Cost • Revenue <p>Note: The list includes only those values which are present in the REV_TYPE_FLG lookup field.</p>

How to add an adhoc revenue or cost for a deal	Adding Adhoc Revenue and Cost for a Deal on page 3118

Adding Adhoc Revenue and Cost for a Deal

Prerequisites

To add an adhoc revenue and cost for a deal, you should have:

- Currencies defined in the application
- Values defined for the **Revenue/Cost Type** and **Revenue Type** in the **REVENU_COST_GRP_FLG** and **REV_TYPE_FLG** lookup fields respectively.

Procedure

To add an adhoc revenue and cost for a deal:

1. Search for the deal or deal version in the **Search Deal** zone of the **Deal Dashboard** screen for which you want to add an adhoc revenue and cost.
2. Click the **Adhoc Revenue and Cost** link at the top right corner of the **Deal Information** zone.

The **Adhoc Revenue And Cost** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number of the adhoc revenue or cost for the deal.	Yes
Currency	Used to indicate the currency in which you want to specify the adhoc charge for the deal. Note: The list includes only those currencies which are defined in the system.	Yes
Amount	Used to specify the amount for the adhoc revenue or cost. Note: You can also specify negative value in this field.	Yes
Division	Used to indicate the division for which the adhoc charge is applicable. Note: You can view only those divisions to which you have access in the Division list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to add the adhoc charge.	Yes (Conditional)
	<p>Note:</p> <p>By default, this field is inactive. This field appears when the Price Item Level option is selected from the Revenue/Cost Type list.</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On indicating the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: This field is required while adding adhoc revenue and cost for price items.</p>
Revenue/Cost Type	Used to indicate the group to which the adhoc charge belongs. The valid values are:	Yes
	<ul style="list-style-type: none"> • Adhoc Revenue • Courier Cost • Deal Commission • Price Item Level • Travel Cost <p>Note: The list includes only those values which are present in the REVENU_COST_GRP_FLG lookup field.</p>	
Amount Type	Used to indicate the type of revenue using which you want to add an adhoc charge for the deal. The valid values are:	Yes
	<ul style="list-style-type: none"> • Cost • Revenue <p>Note: The list includes only those values which are present in the REV_TYPE_FLG lookup field.</p>	

3. Enter the required details in the **Adhoc Revenue And Cost** screen.
4. If you want to associate more than one adhoc revenue and cost for the deal, click the **Add** (+) icon corresponding to the adhoc revenue and cost and then repeat step 3.

Note: However, if you want to remove an adhoc revenue and cost from the deal, click the **Delete** (🗑️) icon corresponding to the adhoc revenue and cost.

5. Click **Save**.

The adhoc revenue and cost is added for the deal.

Note: You cannot add or edit an adhoc revenue and cost if the deal has reached the **Finalized** status.

Terms and Conditions Mapping Details

The **Terms and Conditions Mapping Details** zone displays the mapping details of the terms and conditions. It contains the following sections:

- **Main** - Displays the basic mapping information about the terms and conditions. It contains the following fields:

Field Name	Field Description
Mapping ID	Displays the mapping ID of the terms and conditions.
Mapping Entity Type	Indicates the type of entity using which the terms and conditions are mapped in the system. The valid values are: <ul style="list-style-type: none"> • Price Item • Non-Root Level Hierarchy Entity • Root Level Hierarchy Entity
Mapping Entity	Indicates the entity to which the terms and conditions are mapped.
Price Item	Indicates the price item to which the terms and conditions are mapped. <p>Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Price Item.</p>

Field Name	Field Description
Non-Root Level Hierarchy Entity	Indicates the non-root level hierarchy entity to which the terms and conditions are mapped.
	Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Non-Root Level Hierarchy Entity .
Root Level Hierarchy Entity	Indicates the root level hierarchy entity to which the terms and conditions are mapped.
	Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Root Level Hierarchy Entity .

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the mapping details of the terms and conditions.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the terms and conditions are mapped to the entity. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Terms and Conditions** - Lists the terms and conditions which are mapped to the entity. It contains the following columns:

Column Name	Column Description
Terms and Conditions	Displays the terms and conditions which are mapped to the entity.
	Note: It has a link. On clicking the link, the Terms and Conditions screen appears where you can view the details of the respective terms and conditions.
Start Date	Displays the date from when the terms and conditions are effective for the entity.
	Note: The start date cannot be later than the end date.
End Date	Displays the date till when the terms and conditions are effective for the entity.
	Note: The end date cannot be earlier than the start date.
Default	Indicates whether the mapped term and condition is default or not.

By default, the **Terms and Conditions Mapping Details** zone does not appear in the **Terms and Conditions Mapping** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the terms and conditions mapping information in the **Terms and Conditions Mapping List** zone.

Associating the Terms and Conditions with a Price Item**Prerequisites**

To associate the terms and conditions with a price item, you should have:

- Price item with which you want to associate the terms and conditions defined in the application
- Terms and conditions defined in the application

Procedure

To associate the terms and conditions with a price item:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Pricing Management** and then click **Terms and Conditions Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Terms and Conditions Mapping** sub-menu.

The **Terms and Conditions Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity) with which you want to associate the terms and conditions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity Type	Used to indicate the type of entity using which you want to associate the terms and conditions. The valid values are: <ul style="list-style-type: none"> • Price Item - Used to indicate that you want to associate the terms and conditions with a price item. • Non-Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a non-root level hierarchy entity. • Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a root level hierarchy entity. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity	<p>Used to indicate the entity with which you want to associate the terms and conditions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Mapping Entity field. On clicking the Search icon, the Price Item Terms and Conditions Mapping Search, Non-Root Level Hierarchy Entity Terms and Conditions Mapping Search, or Root Level Hierarchy Entity Terms and Conditions Mapping Search window appears depending upon whether you select the Price Item, Non-Root Level Hierarchy Entity, or Root-Level Hierarchy Entity option from the Mapping Entity Type field respectively.</p> <p>On indicating the mapping entity, the description of the mapping entity appears corresponding to the Mapping Entity field.</p> <p>This field appears when you select the mapping entity type from the Mapping Entity Type field.</p>	Yes

- **Terms and Conditions** - Used to associate the terms and conditions with the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	<p>Used to indicate the terms and conditions that you want to associate with the entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the terms and conditions, the description of the terms and conditions appear corresponding to the Terms and Conditions field.</p> <p>You can search for only those terms and conditions whose Terms and Conditions Usage is set to Deal or Invoice and Deal.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the terms and conditions are associated with the entity.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the terms and conditions are associated with the entity.	No
	Note: The end date cannot be earlier than the start date.	
Default	Used to indicate whether the terms and conditions should be defaulted for the entity.	No
	Note: You must specify atleast one default terms and conditions for an entity.	

- Select the **Price Item** option from the **Mapping Entity Type** field in the **Main** section.

The **Mapping Entity** field appears.

- Search for the price item with which you want to associate the terms and conditions in the **Mapping Entity** field.
- Associate terms and conditions with the price item in the **Terms and Conditions** section.

Note: The valid file extensions for associating terms and conditions are doc, xls, pdf, jpg, txt, avi, bmp, mp3 and rtf.

- If you want to associate more than one terms and conditions with the price item, click the **Add (+)** icon.

Note: However, if you want to disassociate the terms and conditions from the price item, click the **Delete (🗑)** icon corresponding to the respective terms and conditions.

- Click **Save**.

The terms and conditions are associated with the price item.

Associating the Terms and Conditions with a Root Level Hierarchy Entity

Prerequisites

To associate the terms and conditions with a root level hierarchy entity, you should have:

- Hierarchy entity with which you want to associate the terms and conditions defined in the application
- Terms and conditions defined in the application

Procedure

To associate the terms and conditions with a root level hierarchy entity:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Deal Pricing Management** and then click **Terms and Conditions Mapping**.

A sub-menu appears.

3. Click the **Add** option from the **Terms and Conditions Mapping** sub-menu.

The **Terms and Conditions Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity) with which you want to associate the terms and conditions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity Type	<p>Used to indicate the type of entity using which you want to associate the terms and conditions. The valid values are:</p> <ul style="list-style-type: none"> • Price Item - Used to indicate that you want to associate the terms and conditions with a price item. • Non-Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a non-root level hierarchy entity. • Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a root level hierarchy entity. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity	<p>Used to indicate the entity with which you want to associate the terms and conditions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Mapping Entity field. On clicking the Search icon, the Price Item Terms and Conditions Mapping Search, Non-Root Level Hierarchy Entity Terms and Conditions Mapping Search, or Root Level Hierarchy Entity Terms and Conditions Mapping Search window appears depending upon whether you select the Price Item, Non-Root Level Hierarchy Entity, or Root-Level Hierarchy Entity option from the Mapping Entity Type field respectively.</p> <p>On indicating the mapping entity, the description of the mapping entity appears corresponding to the Mapping Entity field.</p> <p>This field appears when you select the mapping entity type from the Mapping Entity Type field.</p>	Yes

- **Terms and Conditions** - Used to associate the terms and conditions with the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	<p>Used to indicate the terms and conditions that you want to associate with the entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the terms and conditions, the description of the terms and conditions appear corresponding to the Terms and Conditions field.</p> <p>You can search for only those terms and conditions whose Terms and Conditions Usage is set to Deal or Invoice and Deal.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the terms and conditions are associated with the entity.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the terms and conditions are associated with the entity.	No
	Note: The end date cannot be earlier than the start date.	
Default	Used to indicate whether the terms and conditions should be defaulted for the entity.	No
	Note: You must specify atleast one default terms and conditions for an entity.	

- Select the **Root Level Hierarchy Entity** option from the **Mapping Entity Type** field in the **Main** section.
The **Mapping Entity** field appears.
- Search for the root level hierarchy entity with which you want to associate the terms and conditions in the **Mapping Entity** field.
- Associate terms and conditions with the root level hierarchy entity in the **Terms and Conditions** section.

Note: The valid file extensions for associating terms and conditions are doc, xls, pdf, jpg, txt, avi, bmp, mp3 and rtf.

- If you want to associate more than one terms and conditions with the root level hierarchy entity, click the **Add (+)** icon.

Note: However, if you want to disassociate the terms and conditions from the root level hierarchy entity, click the **Delete (🗑)** icon corresponding to the respective terms and conditions.

- Click **Save**.

The terms and conditions are associated with the root level hierarchy entity.

Associating the Terms and Conditions with a Non-Root Level Hierarchy Entity

Prerequisites

To associate the terms and conditions with a non-root level hierarchy entity, you should have:

- Hierarchy entity with which you want to associate the terms and conditions defined in the application
- Terms and conditions defined in the application

Procedure

To associate the terms and conditions with a non-root level hierarchy entity:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Deal Pricing Management** and then click **Terms and Conditions Mapping**.

A sub-menu appears.

3. Click the **Add** option from the **Terms and Conditions Mapping** sub-menu.

The **Terms and Conditions Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity) with which you want to associate the terms and conditions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity Type	<p>Used to indicate the type of entity using which you want to associate the terms and conditions. The valid values are:</p> <ul style="list-style-type: none"> • Price Item - Used to indicate that you want to associate the terms and conditions with a price item. • Non-Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a non-root level hierarchy entity. • Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a root level hierarchy entity. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity	<p>Used to indicate the entity with which you want to associate the terms and conditions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Mapping Entity field. On clicking the Search icon, the Price Item Terms and Conditions Mapping Search, Non-Root Level Hierarchy Entity Terms and Conditions Mapping Search, or Root Level Hierarchy Entity Terms and Conditions Mapping Search window appears depending upon whether you select the Price Item, Non-Root Level Hierarchy Entity, or Root-Level Hierarchy Entity option from the Mapping Entity Type field respectively.</p> <p>On indicating the mapping entity, the description of the mapping entity appears corresponding to the Mapping Entity field.</p> <p>This field appears when you select the mapping entity type from the Mapping Entity Type field.</p>	Yes

- **Terms and Conditions** - Used to associate the terms and conditions with the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	<p>Used to indicate the terms and conditions that you want to associate with the entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the terms and conditions, the description of the terms and conditions appear corresponding to the Terms and Conditions field.</p> <p>You can search for only those terms and conditions whose Terms and Conditions Usage is set to Deal or Invoice and Deal.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the terms and conditions are associated with the entity.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the terms and conditions are associated with the entity.	No
	Note: The end date cannot be earlier than the start date.	
Default	Used to indicate whether the terms and conditions should be defaulted for the entity.	No
	Note: You must specify atleast one default terms and conditions for an entity.	

- Select the **Non-Root Level Hierarchy Entity** option from the **Mapping Entity Type** field in the **Main** section. The **Mapping Entity** field appears.
- Search for the non-root level hierarchy entity with which you want to associate the terms and conditions in the **Mapping Entity** field.
- Associate terms and conditions with the non-root level hierarchy entity in the **Terms and Conditions** section.

Note: The valid file extensions for associating terms and conditions are doc, xls, pdf, jpg, txt, avi, bmp, mp3 and rtf.

- If you want to associate more than one terms and conditions with the non-root level hierarchy entity, click the **Add (+)** icon.

Note: However, if you want to disassociate the terms and conditions from the non-root level hierarchy entity, click the **Delete (🗑)** icon corresponding to the respective terms and conditions.

- Click **Save**.

The terms and conditions are associated with the non-root level hierarchy entity.

Deal Approver Dashboard

The **Deal Approver Dashboard** screen allows you to view the To Do tasks assigned to the user that belongs to the access group as defined in the approval hierarchy of the **Deal Approval Profile** screen. It also allows you to search for deals which are assigned to the user for approval. It contains the following zones:

- [Deal Metrics](#) on page 3138
- [Deal To Do](#) on page 3138
- [Search Deal](#) on page 3139

Deal Metrics

The **Deal Metrics** zone enables you to view the following information through a tiles chart for deals which are assigned to the user for approval:

- Number of deals created by the user
- Number of deals in the **Pending for Approval** status
- Number of deals yet to be finalized
- Number of deals yet to be accepted by the customer
- Number of deals accepted by the customer
- Number of deals rejected by the customer

In addition, you can view the above information through a bar and line chart by toggling the **Tiles/Chart** switch available in the **Deal Metrics** zone.

The bar chart indicates the number of deals in different statuses for an existing customer, existing account, and prospect. Whereas, the line chart indicates the deal revenue from an existing customer, existing account, and prospect.

Note: By default, the above information is shown for the period which is specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration. You can change the period if required.

You can filter the information using various criteria (such as, **Period From, Period To, Division, Customer Tier, and Customer Segment**) available in the **Deal Metrics** zone.

Deal To Do

The **Deal To Do** zone lists the deal approval To Do's assigned to the user that belongs to the access group as defined in the approval hierarchy of the **Deal Approval Profile** screen. It also lists the deal information for which the deal approval To Do is generated. It contains the following columns:

Column name	Column Description
To Do	On clicking the To Do icon (📌), the To Do Entry screen appears where you can view the details of the respective To Do assigned to the user.
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,) for which the To Do is created.
	Note: It has a link. On clicking the link, the Deal Information screen appears where you can perform the required action.

Note: By default, the system lists the To Do's for the user that are created in the period which is specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration. You can change the period if required.

You can filter the list using various criteria (such as, **To Do Type**, **Priority**, **Start Date**, and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Search Deal

The **Search Deal** zone allows you to search deals for which the next required action has to be performed by the user as per the deal approval workflow. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deal using the deal, customer, or account details. The valid values are: <ul style="list-style-type: none"> • Deal Details • Customer Details • Account Details 	Yes
	Note: By default, the Deal Details option is selected.	
Division	Used to search deals which are associated with a particular division to which the user belongs.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Deal ID	Used to search for a particular deal.	No
	Note: This field appears when the Deal Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to search deals which are effective from a particular date onwards.	No
	<p>Note:</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p> <p>The start date cannot be later than the end date.</p>	
End Date	Used to search deals which are effective till a particular date.	No
	<p>Note:</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p> <p>The end date cannot be earlier than the start date.</p>	
Status	Used to search deals with a particular status.	No
	<p>Note: This field appears when the Deal Details option is selected from the Search By list.</p>	
Created By	Used to search deals which are created by a particular user.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the User Search window appears.</p> <p>On specifying the creator, the description of the creator appears corresponding to the Created By field.</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p>	
Customer Segment	Used to search deals which are created for customers associated to a particular business component.	No
	<p>Note: This field appears when the Customer Details option is selected from the Search By list.</p>	
Person ID	Used to search deals which are created for a particular customer.	No
	<p>Note: This field appears when the Customer Details option is selected from the Search By list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search deals which are created for persons or accounts with a particular name.	No
	Note: This field appears when the Customer Details or Account Details option is selected from the Search By list.	
Person Identifier Type	Used to search deals which are created for persons using a particular identifier type.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list.	Note: If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type for searching deals created for the persons.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list.	Note: If you enter person identifier type as a search criteria, you have to specify the person identifier.
Account ID	Used to search deal which is created for a particular account.	No
	Note: This field appears when the Account Details option is selected from the Search By list.	
Account Identifier Type	Used to search deals which are created for accounts using a particular identifier type.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type for searching deals created for accounts.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: If you enter account identifier type as a search criteria, you have to select the primary account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Deal Entity	<p>Used to search deals which are created for a particular entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to search deals which are created for the existing accounts in the system. 	Yes (Conditional)
	<p>Note: This value appears when you select the Deal Details or Account Details option from the Search By list.</p>	<p>Note: This field is required while searching for deals created for the respective entities.</p>
	<ul style="list-style-type: none"> • Customer - Used to search deals which are created for the existing customers in the system. 	
	<p>Note: This value appears when you select the Deal Details or Customer Details option from the Search By list.</p> <ul style="list-style-type: none"> • Prospect - Used to search deals which are created for the existing prospects in the system. <p>Note: This value appears when you select the Deal Details or Customer Details option from the Search By list.</p>	
Deal Type	<p>Used to search deals which are created using a particular deal type.</p>	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deal Type Search window appears.</p> <p>On specifying the deal type, the description of the deal type appears corresponding to the Deal Type field.</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p>	<p>Note: This field is required while searching deals using the Deal Details.</p>
Deal Creation From Date	<p>Used to search deals which are created from a particular date onwards.</p> <p>Note: By default, the system displays the date which is specified in the Deal Limits in Months option type of the C1-DEAL feature configuration. You can change the date if required.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Deal Creation To Date	Used to search deals which are created till a particular date.	No
	Note: By default, the system displays the date which is specified in the Deal Limits in Months option type of the C1-DEAL feature configuration. You can change the date if required.	
Deal Identifier	Used to search deals which are created using a particular deal identifier.	No
	Note: This field appears when the Deal Details option is selected from the Search By list.	
Assigned To My Role	Used to search only those deals to which the user has access for approval.	Yes (Conditional)
	Note: On clicking the check box you can search for deals as per the access group defined in the Approval Hierarchy of the Deal Approval Profile to which the user belongs.	

- **Search Results** - On clicking the **Search** button, a list of deals appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
	Note: It has a link. On clicking the link, the Deal Information screen appears where you can view the details of the respective deal.
Person Information	Displays the concatenated string of information about the main person for whom the deal is created in the system.
	Note: It has a link. On clicking the link, the Customer 360° Information or the Prospect Person screen appears where you can view the details of the respective person. The Customer 360° Information screen appears when you select the Account or Customer option from the Deal Entity list in the Search Criteria while searching for a deal. Whereas, the Prospect Person screen appears when you select the Prospect option from the Deal Entity list in the Search Criteria while searching for a deal.

Column Name	Column Description
Deal Entity	Indicates the entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> Account Customer Prospect
Start Date	Displays the date from when the deal is effective for the deal entity.
End Date	Displays the date till when the deal is effective for the deal entity.
Status	Indicates the current status of the deal.
Created By	Displays the user who has created the deal in the system.
View Approval Workflow	On clicking the View Approval Workflow () icon, the Deal Approval Workflow screen appears where you can view the details of the approval workflow of the respective deal.
Print Deal	On clicking the Print () icon, the Deal Extraction screen appears where you can filter the options as per your requirement and extract the deal information in the PDF or Excel format.

Note:

By default, the **Search Results** section lists all the deals which are assigned to the user for the period as specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Searching for a Deal

Prerequisites

To search for a deal, you should have:

- Divisions defined in the application
- Deals or deal versions associated with the division to which the user belongs
- Deal types defined in the application
- Deal entities defined in the application

Procedure

To search for a deal:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Pricing Management** and then click **Deal Approver Dashboard**.
The **Deal Approver Dashboard** screen appears.
3. Enter the search criteria in the **Search Deal** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deals that meet the search criteria appears in the **Search Results** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Search Results** section lists all the deals which are assigned to user and are in the **Pending for Approval** status for the period as specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration.

You must specify at least one search criterion while searching for a deal. One more search criterion is required when you are searching for a deal using the deal entity.

You must specify one more search criterion when you are searching for a deal using the division with the **Deal Details** option selected from the **Search By** list.

Relationship Manager Workbench

Topics:

- [Relationship Manager Workbench](#)
- [Unpaid Invoices Page](#)
- [Inactive Customer Details](#)
- [Revenue Trends](#)

Oracle Revenue Management and Billing provides you one-point-destination for all the relationship/account managers an unified view of all customers under a single relationship manager on a screen named **Relationship Manager Workbench**. This data can then be easily used for analysis, such as:

- Cumulated revenue, average revenue, and unpaid revenue details of the customers
- Cumulated details, active, inactive, and newly added customers under the relationship manager based on number of months that customer has done the transaction from any account
- Number of deals in difference status

In other words, this feature allows you to drill down to see or act on all current and historical revenue management and billing details. This allows you professionally and efficiently to drive the customer engagement effectively and elevate customer relationships.

Relationship Manager Workbench

The **Relationship Manager Workbench** screen is designed for a relationship manager wherein the relationship manager can obtain a holistic view of all its customers. It is designed to provide the following statistics to a relationship manager:

- [Revenue Metrics](#) on page 3157
- [Customer Metrics](#) on page 3158
- [Customer Hierarchy](#) on page 3158
- [Deal Snapshot](#) on page 3161
- [Top 10 Customers by Revenue](#) on page 3163
- [Top 10 Product By Revenue](#) on page 3164
- [Top 10 Price Items by Revenue](#) on page 3163
- [Top 10 Customers Revenue Variations](#) on page 3163

In addition, a relationship manager can also view all the assigned To Dos from the **Relationship Manager Workbench** screen.

The date range specified in the **Period From** and **Period To** fields should not exceed the number of days specified in the **RM Workbench** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

You can view the trend in the **Revenue Trends** zone.

Unpaid Revenue Customer's Details

The **Unpaid Revenue Customer's Details** zone lists the information about the unpaid revenue customers.

It contains the following columns:

Column Name	Column Description
Customer Information	Displays the information about the customer for whom the amount is receivable in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Customer 360° Information screen appears where you can view the details of the customer.
No Label Defined	
Unpaid Amount	Displays the total receivable amount for the customer in corporate currency.
Last TXN Date	Displays the date when the last transaction has done from the account of the customer.
Division	Displays the division to which the customer belongs.
Segment	Displays the segment to which customer belongs.
Contact Number	Displays the contact number of the customer in the system.
City	Displays the city of the customer in the system.
Country	Displays the country of the customer in the system.

Note:

Pagination is used to display limited number of records in the **Unpaid Revenue Customer's Details** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: By default, the above information is shown for the period which is specified in the **RM Workbench** zone. You can change the period if required.

You can filter the information using various criteria (such as, **Period From**, **Period To**, **Division**, **Customer Tier**, and **Customer Segment**) available in the **RM Workbench** zone.

Chapter 45

Hold Request Creation, Modification, Release, and View Through Inbound Web Service

Topics:

- [Prerequisites](#)
- [C1-CreateHoldRequest Business Service](#)
- [C1-GetHoldRequestHistory Business Service](#)
- [C1-ReleaseHoldRequest Business Service](#)
- [C1-UpdateHoldRequest Business Service](#)

Oracle Revenue Management and Billing enables you to create, edit, and release a hold request through a web service. It also enables you to view the details of a hold request through a web service. You can send the hold request creation, modification, release, or view request from the external system through an inbound web service. The following business services are shipped with the product to support different hold request operations:

Business Service	Description
C1-CreateHoldRequest	Used to create a hold request for a single entity (i.e. for a particular person, account, or bill). For more information, see C1-CreateHoldRequest Business Service on page 3175
C1-UpdateHoldRequest	Used to edit an active hold request. For more information, see C1-UpdateHoldRequest Business Service on page 3212
C1-GetHoldRequestHistory	Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see C1-GetHoldRequestHistory Business Service on page 3191
C1-ReleaseHoldRequest	Used to release an active hold request with a single entity (i.e. person, account, or bill). For more information, see C1-ReleaseHoldRequest Business Service on page 3203

You can create one inbound web service which supports all four operations - hold request creation, hold request update, hold request release, and hold request view. Alternatively, you can create four different inbound web services - one for hold request creation, another for hold request update, third for hold request release, and fourth for hold request view.

You can create a SOAP or REST based inbound web service. If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service.

For more information on how to setup this feature, see [Prerequisites](#) on page 3174.

Prerequisites

The following table lists the prerequisites for hold request creation, modification, release, and view through an inbound web service:

If you want to...	Then...
C1-CreateHoldRequest	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CreateHoldRequest business service. • Authorize the ORMB user to access the required application service • Define the required hold request type for the hold request where the Approval Required flag is configured as No. • Define the required hold reason and comments • Define the required values for the HOLD_ENTITY_LVL_FLG lookup field. • Define the required values for the HOLD_PROCESS_FLG lookup field. • Define the required characteristic types where the characteristic entity is set to Hold Request
C1-UpdateHoldRequest	<p>Used to edit an active hold request. Through this service, you can edit the following details of an active hold request:</p> <ul style="list-style-type: none"> • End date, comments, and characteristics of a hold request • End date of a single hold entity in a hold request • End date of multiple hold processes in a hold request <p>It also allows you to delete a characteristic of a hold request. While sending the request for hold request modification, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold entity ID (i.e. person ID, account ID, or bill ID) <p>Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request modification response sent to the external system using the Inbound Web Service History feature.</p>
C1-GetHoldRequestHistory	<p>Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature.</p>
C1-ReleaseHoldRequest	<p>Used to release an active hold request with a single entity (i.e. person, account, or bill). While sending the request for hold request release, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold release reason and comments <p>Once the hold request is released through the service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature.</p>

C1-CreateHoldRequest Business Service

The **Create Hold Request (C1-CreateHoldRequest)** business service enables you to create a hold request for a single entity (i.e. for a particular account, bill, or person). You can call this business service from an external system through an inbound web service. If you want to send the hold request creation request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request creation request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the request for hold request creation, you need to specify the following details:

- Hold request type, hold request start date, and hold request end date or hold days (which is used to calculate hold request end date if not specified)
- Entity (i.e. ACCT, BILL, or PERS) for which you want to create the hold request
- Hold reason and comments
- Entity identifiers when the entity is an account or a person, and the entity ID when the entity is a bill.
- Hold entity and hold process end dates
- Business processes (i.e. ATPY, BILL, FNDG, OVDU, REFD) which you want to hold for the entity
- Characteristics of the hold request

Points to Note:

- You must specify an active hold request type where the approval process is not configured for activation and release.
- If you do not specify the hold request type, the system, by default, considers the hold request type specified in the **Default Hold Request Type for IWS** option type of the **C1-HOLDSRCH** feature configuration.
- This business service does not allow you to create past dated or future dated hold request. Therefore, you must always set the hold request start date to the system date.
- Even if you explicitly specify a value for the defer processing count in the hold request type, it is no longer considered by this business service while creating a hold request.
- The upstream system may provide the hold request type to override the default hold request type, mentioned in the hold request inbound web service.
- If the hold request is in **DRAFT** status, this business service continues to operate in the background until the status of the hold request is set to **ACTIVE**.

On creating a hold request, the status of the hold request is set to **ACTIVE**. Once the hold request is created through the service, the hold request ID is sent in the response along with its status. The system enables you to track the hold request creation response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Creation Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Creation Request in the XML Format](#) on page 3176 and [Hold Request Creation Response in the XML Format](#) on page 3177 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-CreateHoldRequest** business service through an inbound web service, you need to ensure that the hold request creation request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-CreateHoldRequest	Used to indicate that you want to invoke the C1-CreateHoldRequest business service.	Yes
holdRequest	Used to specify the details of the hold request.	Yes
sourceSystem	Used to indicate the external system from which the hold creation request is sent. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request creation request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
externalTransactionId	Used to indicate the transaction in the external system through which the hold request creation request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
holdStartDate	Used to specify the date from when the hold request is effective.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)								
holdEndDate	Used to specify the date till when the hold request is effective.	Yes (Conditional)								
	Note: The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status.	Note: This data is required if the holdDays is not specified.								
holdDays	Used to specify the number of days an entity should be kept on hold in the hold request.	Yes (Conditional)								
	Note: If the holdEndDate is not specified, the system calculates the holdEndDate by adding the holdDays to the holdStartDate . The system considers the holdDays as calendar days which include all the 7 days in a week.	Note: This data is required if holdEndDate is not specified.								
holdRequestType	Used to specify an active hold request type where the approval process is not configured for activation and release.	No								
	Note: If an active hold request type is used where the approval process is configured, the system throws an error with a failure response.									
holdEntity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT - Used when you want to specify the account. • BILL - Used when you want to specify the bill. • PERS - Used when you want to specify the person. 	Yes								
	Note:									
	<table border="1"> <thead> <tr> <th>If...</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>You are creating the hold request for an ACCT entity</td> <td>You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.</td> </tr> <tr> <td>You are creating the hold request for a BILL entity</td> <td>You can only add Funding process in the hold request.</td> </tr> <tr> <td>You are creating the hold request for a PERS entity</td> <td>You can add Bill Generation and Funding process in the hold request.</td> </tr> </tbody> </table>		If...	Then	You are creating the hold request for an ACCT entity	You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request.	You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.	You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.
	If...		Then							
You are creating the hold request for an ACCT entity	You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request.									
You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.									
You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.									
You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It must be in the Active status.										

Tag Name	Tag Description	Mandatory (Yes or No)
holdReason	Used to specify the reason for the hold request.	Yes
	Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.	
holdComments	Used to specify additional information about the hold request.	No
entityIdentifierType	Used to specify the entity type.	Yes (Conditional)
	Note: You cannot specify BILL as a type for the entity identifier.	
entityIdentifierValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	
entityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entity ID when the hold entity is BILL .	
holdEntityEndDate	Used to specify the date till when the entity is effective for hold request.	No
hierarchySwitch	Used to associate the hold entity with the entity hierarchy relationship.	No
holdProcessData	Used to specify process information for the hold request.	Yes
holdProcess	Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. 	Yes
	Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.	
holdProcessEndDate	Used to specify the date till when the entity is effective for hold request.	No
characteristics	Used to specify a characteristic for the hold request.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicType	Used to indicate the characteristic type.	Yes
	Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.	
characteristicValue	Used to specify the value for the characteristic type.	Yes
effectiveDate	Used to specify the date from when the characteristic is effective.	Yes

The following table lists and describes the tags which appear in the hold request creation response in the XML format:

Tag Name	Tag Description
statusCd	Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.
holdStatus	Indicates the current status of the hold request.
messageText	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the statusCd tag is set to Failure .

Hold Request Creation Request in the JSON Format

The following code snippet illustrates how the attribute/value pairs should be structured while receiving the hold request creation request in the JSON format:

```
{
  "Cl-CreateHoldRequest": {
    "holdRequest": {
      "sourceSystem": ""
      "externalTransactionId": ""
      "externalSourceId": ""
      "holdStartDate": ""
      "holdEndDate": ""
      "holdDays": ""
      "holdRequestType": ""
      "holdEntity": ""
      "holdReason": ""
      "holdComments": ""
      "entityIdentifierType": ""
      "entityIdentifierValue": ""
      "entityId": ""
    }
  }
}
```

```

    "holdEntityEndDate": ""
    "hierarchySwitch": ""
    "holdProcessData":
    {
        "holdProcess": ""
        "holdProcessEndDate": ""
    }
    characteristics:
    {
        "characteristicType": ""
        "characteristicValue": ""
        "effectiveDate": ""
    }
    }
}

```

Hold Request Creation Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the [Hold Request Creation Request in the JSON Format](#) on page 3181 and [Hold Request Creation Response in the JSON Format](#) on page 3182 topics in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-CreateHoldRequest** business service through an inbound web service, you need to ensure that the hold request creation request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
C1-CreateHoldRequest	Used to indicate that you want to invoke the C1-CreateHoldRequest business service.	Yes
holdRequest	Used to specify the details of the hold request.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
sourceSystem	Used to indicate the external system from which the hold creation request is sent.	No
	<p>Note:</p> <p>You must specify an external system which is already defined in the system.</p> <p>The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request creation request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History.</p>	
externalTransactionId	Used to indicate the transaction in the external system through which the hold request creation request is sent.	No
	<p>Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.</p>	
externalSourceId	Used to specify the external source system ID.	No
	<p>Note: The external source system ID is used when the Inbound Web Service History feature is enabled.</p>	
holdStartDate	Used to specify the date from when the hold request is effective.	Yes
holdEndDate	Used to specify the date till when the hold request is effective.	Yes (Conditional)
		<p>Note: This data is required if the holdDays is not specified.</p>
holdDays	Used to specify the number of days an entity should be kept on hold in the hold request.	Yes (Conditional)
	<p>Note:</p> <p>If the holdEndDate is not specified, the system calculates the holdEndDate by adding the holdDays to the holdStartDate.</p> <p>The system considers the holdDays as calendar days which include all the 7 days in a week.</p>	<p>Note: This data is required if holdEndDate is not specified.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)								
holdRequestType	Used to specify an active hold request type where the approval process is not configured for activation and release.	No								
	Note: If an active hold request type is used where the approval process is configured, the system throws an error with a failure response.									
holdEntity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT - Used when you want to specify the account. • BILL - Used when you want to specify the bill. • PERS - Used when you want to specify the person. 	Yes								
	Note:									
	<table border="1" data-bbox="492 751 1203 947"> <thead> <tr> <th data-bbox="492 751 818 800">If...</th> <th data-bbox="818 751 1203 800">Then</th> </tr> </thead> <tbody> <tr> <td data-bbox="492 800 818 947">You are creating the hold request for an ACCT entity</td> <td data-bbox="818 800 1203 947">You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.</td> </tr> <tr> <td data-bbox="492 947 818 1031">You are creating the hold request for a BILL entity</td> <td data-bbox="818 947 1203 1031">You can only add Funding process in the hold request.</td> </tr> <tr> <td data-bbox="492 1031 818 1142">You are creating the hold request for a PERS entity</td> <td data-bbox="818 1031 1203 1142">You can add Bill Generation and Funding process in the hold request.</td> </tr> </tbody> </table>		If...	Then	You are creating the hold request for an ACCT entity	You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.	You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.	You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.
	If...		Then							
	You are creating the hold request for an ACCT entity		You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.							
You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.									
You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.									
You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It must be in the Active status.										
holdReason	Used to specify the reason for the hold request.	Yes								
	Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status.									
holdComments	Used to specify additional information about the hold request.	No								
entityIdentifierType	Used to specify the entity type.	Yes (Conditional)								
	Note: You cannot specify BILL as a type for the entity identifier.									
		Note: This data is required while defining or editing a hold request.								

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityIdentifierValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	Note: This data is required while defining or editing a hold request.
entityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entityId when BILL is used as a hold entity.	Note: This data is required while defining or editing a hold request.
holdEntityEndDate	Used to specify the date till when the entity is effective for hold request.	No
hierarchySwitch	Used to associate the hold entity with the entity hierarchy relationship.	No
holdProcessData	Used to specify process information for the hold request.	Yes
holdProcess	Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. 	Yes
	Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.	
holdProcessEndDate	Used to specify the date till when the entity is effective for hold request.	No
characteristics	Used to specify a characteristic for the hold request.	Yes
characteristicType	Used to indicate the characteristic type.	Yes
	Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.	
characteristicValue	Used to specify the value for the characteristic type.	Yes
effectiveDate	Used to specify the date from when the characteristic is effective.	Yes

The following table lists and describes the tags which appear in the hold request creation response in the JSON format:

Attribute Name	Attribute Description
statusCd	Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.
holdStatus	Indicates the current status of the hold request.
messageText	Indicates the error that occurred while creating the hold request. <p>Note: This tag appears when the value in the statusCd tag is set to Failure.</p>

Sample Hold Request Creation Request and Response in the JSON Format

Using the below example, you can create a hold request for an account entity where the overdue process is kept on hold.

Sample Hold Request Creation Request in the JSON Format

```

{
  "CreateHoldRequest" :
  {
    "holdRequest" :
    {
      "sourceSystem": "HOLD_TEST_TEXT",
      "externalTransactionId": "567888876666",
      "externalSourceId": "YERFDDD",
      "holdStartDate": "2022-01-10",
      "holdEndDate": "2022-12-30",
      "holdDays": "20",

```

```

    "holdRequestType": "HOLD_WITHOUT_APPROVAL",
    "holdEntity": "ACCT",
    "holdReason": "3",
    "holdComments": "FIRE_IN_SEAWOODS",
    "entityIdentifierType": "EIN",
    "entityIdentifierValue": "1446IC",
    "entityId": "2334454617",
    "holdEntityEndDate": "2022-12-30",
    "hierarchySwitch": "N",
    "holdProcessData":
    {
      "holdProcess": "OVDU"
      "holdProcessEndDate": "2021-12-30"
    }
  }
}

```

Sample Hold Request Creation Response in the JSON Format

The following information is received as response when the hold request is created successfully.

```

{
  "CreateHoldRequest":
  {
    "holdRequest":
    {
      "statusCd": "SUCCESS",
      "holdRequestId": "790420762398",
      "holdStatus": "Active",
      "sourceSystem": "HOLDTESTEXT",
      "externalTransactionId": "567888876666",
      "externalSourceId": "YERFDDD",
      "holdStartDate": "2022-01-10",
      "holdEndDate": "2022-12-30",
      "holdDays": "20",
      "holdRequestType": "HOLD_WITHOUT_APPROVAL",
      "holdEntity": "ACCT",
      "holdReason": "3",
      "holdComments": "FIRE_IN_SEAWOODS",
      "entityIdentifierType": "EIN",
      "entityIdentifierValue": "1446IC",
      "entityId": "2334454617",
      "holdEntityEndDate": "2022-12-30",
      "hierarchySwitch": "N",
      "holdProcessData":
      {
        "holdProcess": "OVDU"
        "holdProcessEndDate": "2021-12-30"
      }
    }
  }
}

```

The following information is received when the hold request creation responds with a failure.

```

{
  "CreateHoldRequest":
  {
    "holdRequest":
    {
      "statusCd": "FAILURE",
      "messageText": "The system could not fetch the account id"
        "using the Account Identifier Type / Value combination.",
      "holdRequestId": "790420762398",
    }
  }
}

```

```

    "holdStatus": "Active",
    "sourceSystem": "ZZ_PRIME_TEST",
    "externalTransactionId": "323233478998",
    "externalSourceId": "YERFDDD",
    "holdStartDate": "2022-01-10",
    "holdEndDate": "2022-12-30",
    "holdDays": "20",
    "holdRequestType": "HOLD_WITHOUT_APPROVAL",
    "holdEntity": "ACCT",
    "holdReason": "3",
    "holdComments": "FLOODS_IN_CONNECTICUT",
    "entityIdentifierType": "EIN",
    "entityIdentifierValue": "2346IC",
    "entityId": "1237864231",
    "holdEntityEndDate": "2022-12-30",
    "hierarchySwitch": "N",
    "holdProcessData":
    {
      "holdProcess": "OVDU"
      "holdProcessEndDate": "2021-12-30"
    }
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a hold creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-GetHoldRequestHistory Business Service

The **Inquire Hold Request Details (C1-GetHoldRequestHistory)** business service enables you to view the details of an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request view request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request view request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request view request, you need to specify the following details:

- Either the entity identifier type and entity identifier value or the entity ID.

Note: Specify a valid entity ID in the hold request view request which is used in the system.

The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request View Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request View Request in the XML Format](#) on page 3192 and [Hold Request View Response in the XML Format](#) on page 3193 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-GetHoldRequestHistory** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-GetHoldRequestHistory	Used to indicate that you want to invoke the C1-GetHoldRequestHistory business service.	Yes
getHoldReqHistRequest	Used to specify the details of the hold request which you want to view.	Yes
sourceSystem	Used to indicate the external system from which the hold view request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
c1ExternalTransactionId	Used to indicate the transaction in the external system through which the hold request view request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
getHoldReqStartDt	Used when you want to view hold request details which are created from a particular date onwards.	Yes
getHoldReqEndDt	Used when you want to view hold request details which are created till a particular date.	No
getHoldReqEntity	Used when you want to view the hold request details for a particular entity. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
getHoldReqReason	Used when you want to view the hold request details based on a specific reason. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
getHoldReqEntIdentType	Used to specify the entity type.	Yes (Conditional)
	Note: You cannot specify BILL as a type for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntIdentValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entityId when BILL is used as a hold entity.	Note: This data is required while viewing a hold request.
getHoldReqProcess	Used when you want to view the hold request details for a specific process. The valid values are: <ul style="list-style-type: none"> • ATPY • BILL • FNDG • OVDU 	Yes

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
holdReqHistResponse	Displays the response returned by the business service in relation to the hold request.
statusCd	Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
messageText	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the statusCd tag is set to Failure .
holdReqHistList	Displays the details of a hold request.
holdRequestId	Displays the hold request ID.
holdReqStartDt	Displays the date from when the hold request was effective.
holdReqEndDt	Displays the date till when the hold request was effective.
holdStatus	Indicates the current status of the hold request.

Tag Name	Tag Description
holdReqType	Indicates the type using which the hold request was created.
holdReqReason	Indicates the reason which was specified when the hold request was created.
holdReqEntity	Indicates the entity for which the hold request was created.
holdReqProcesses	Indicates the process which was kept on hold in the hold request.

Sample Hold Request View Request and Response in the XML Format

Using the below example, you can view a hold request for the **ACCT** account entity where **ATPY** auto pay process is on hold.

Sample Hold Request View Request in the XML Format

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <clExternalTransactionId>ETI1</clExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
</C1-GetHoldRequestHistory>
```

Sample Hold Request View Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <clExternalTransactionId>ETI1</clExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>SUCCESS</statusCd>
    <messageText></messageText>
    <holdReqHistList>
      <holdReqId>006046575162</holdReqId>
```

```

    <holdReqStartDt>2022-01-01</holdReqStartDt>
    <holdReqEndDt></holdReqEndDt>
    <holdReqStatus>ACTIVE</holdReqStatus>
    <holdReqType>HOLD_WITHOUT_APPROVAL</holdReqType>
    <holdReqReason>TORNADO_IN_TX</holdReqReason>
    <holdReqEntity>003526636627</holdReqEntity>
    <holdReqProcesses>ATPY</holdReqProcesses>
  </holdReqHistList>
</holdReqHistResponse>
</C1-GetHoldRequestHistory>

```

The following information is received from the hold request when the requested search parameters fail to return any search results.

```

<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_TEST</sourceSystem>
    <externalSourceId>ESI55</externalSourceId>
    <c1ExternalTransactionId>ETI33</c1ExternalTransactionId>
    <getHoldReqStartDt>2021-12-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>PERS</getHoldReqEntity>
    <getHoldReqReason>FLOODS_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4323</getHoldReqEntIdentValue>
    <getHoldReqEntityId>004556623427</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>FAILURE</statusCd>
    <messageText>The system could not retrieve hold request ID based on
the search parameters.
    </messageText>
    <holdReqHistList>
      <holdReqId></holdReqId>
      <holdReqStartDt></holdReqStartDt>
      <holdReqEndDt></holdReqEndDt>
      <holdReqStatus></holdReqStatus>
      <holdReqType></holdReqType>
      <holdReqReason></holdReqReason>
      <holdReqEntity></holdReqEntity>
      <holdReqProcesses></holdReqProcesses>
    </holdReqHistList>
  </holdReqHistResponse>
</C1-GetHoldRequestHistory>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-ReleaseHoldRequest Business Service

The **Release Hold Request (C1-ReleaseHoldRequest)** business service enables you to release an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request release request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request release request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request release request, you need to specify the following details:

- Hold request ID

- Hold release reason and comments

Once the hold request is released through this business service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Release Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Release Request in the XML Format](#) on page 3204 and [Hold Request Release Response in the XML Format](#) on page 3205 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ReleaseHoldRequest** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-ReleaseHoldRequest	Used to indicate that you want to invoke the C1-ReleaseHoldRequest business service.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
sourceSystem	<p>Used to indicate the external system from which the hold release request is received.</p> <p>Note: You must specify an external system which is already defined in the system.</p> <p>The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History.</p>	No
externalTransactionId	<p>Used to indicate the transaction in the external system through which the hold request release request is sent.</p> <p>Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.</p>	No
externalSourceId	<p>Used to specify the external source system ID.</p> <p>Note: The external source system ID is used when the Inbound Web Service History feature is enabled.</p>	No
holdRequestId	<p>Used to specify the hold request ID of the hold request for which the hold request release request is sent.</p> <p>Note: You must specify the hold request ID which is already defined in the system.</p>	Yes
holdReleaseReason	<p>Used to specify the reason for releasing the hold request.</p> <p>Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status.</p>	Yes
holdComments	Used to specify additional information about the hold request.	No

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
requestProcessStatus	<p>Indicates whether the hold request view request is successfully processed or not. The valid values are:</p> <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.

Tag Name	Tag Description
holdReleaseReason	Indicates the reason which was specified when the hold request was released.
holdComments	Displays additional information about the hold request.
errormsg	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the requestProcessStatus tag is set to Failure .
holdEndDate	Displays the date till when the hold request was effective.
holdStatus	Indicates the current status of the hold request.

Hold Request Release Request and Response - Tags in JSON Format

Note: We recommend you to refer the [Hold Request Release Request in the JSON Format](#) on page 3207 and [Hold Request Release Response in the JSON Format](#) on page 3208 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ReleaseHoldRequest** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-ReleaseHoldRequest	Used to indicate that you want to invoke the C1-ReleaseHoldRequest business service.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
sourceSystem	Used to indicate the external system from which the hold release request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
externalTransactionId	Used to indicate the transaction in the external system through which the hold request release request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
holdRequestId	Used to specify the hold request ID of the hold request for which the hold request release request is sent. Note: You must specify the hold request ID which is already defined in the system.	Yes
holdReleaseReason	Used to specify the reason for releasing the hold request. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status.	Yes
holdComments	Used to specify additional information about the hold request.	No

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
requestProcessStatus	Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.

Tag Name	Tag Description
holdReleaseReason	Indicates the reason which was specified when the hold request was released.
holdComments	Displays additional information about the hold request.
errormsg	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the requestProcessStatus tag is set to Failure .
holdEndDate	Displays the date till when the hold request was effective.
holdStatus	Indicates the current status of the hold request.

Sample Hold Request Release Request and Response in the XML Format

Using the below example, you can release a hold request with an **Active** status for the **22559977334488** hold request ID.

Sample Hold Request Release Request in the XML Format

```
<C1-ReleaseHoldRequest>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
</C1-ReleaseHoldRequest>
```

Sample Hold Request Release Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>SUCCESS</requestProcessStatus>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
  <holdEndDate>2022-31-01</holdEndDate>
  <holdRequestStatus>RELEASE</holdRequestStatus>
  <errormsg></errormsg>
</C1-ReleaseHoldRequest>
```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>FAILURE</requestProcessStatus>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>790420762397</holdRequestId>
```

```
<holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
<holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
<holdEndDate></holdEndDate>
<holdRequestStatus></holdRequestStatus>
<errmsg>The hold request ID 790420762397 is invalid</errmsg>
</C1-ReleaseHoldRequest>
```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold release request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Hold Request Release Request and Response in the JSON Format

Using the below example, you can release a hold request with an **Active** status for the **44776611339988** hold request ID.

Sample Hold Request View Request in the JSON Format

```
{
  "C1-ReleaseHoldRequest" :
  {
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
  }
}
```

Sample Hold Request Release Response in the JSON Format

```
{
  "C1-ReleaseHoldRequest" :
  {
    "requestProcessStatus": "SUCCESS"
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
    "holdEndDate": "2022-02-28"
    "holdRequestStatus": "RELEASE"
    "errmsg": ""
  }
}
```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
{
  "C1-ReleaseHoldRequest" :
  {
    "requestProcessStatus": "FAILURE"
    "sourceSystem": "SRC_PANAMER_PRIME"
  }
}
```

```

    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "55772211339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
    "holdEndDate": ""
    "holdRequestStatus": ""
    "errorMsg": "The hold request ID 55772211339988 is invalid"
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a hold release request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-UpdateHoldRequest Business Service

The **Update Hold Request (C1-UpdateHoldRequest)** business service enables you to edit an active hold request. You can call this business service from an external system through an inbound web service. If you want to send the hold request update request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request update request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request update request, you need to specify the following details:

- Hold request ID
- Hold entity ID (i.e. person ID, account ID, or bill ID)

Through this service, you can edit the following details of an active hold request:

- End date, comments, and characteristics of a hold request
- End date of a single hold entity in a hold request
- End date of multiple hold processes in a hold request

Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Chapter 46

Hold Direct Debit Instruction

Topics:

- [Prerequisites](#)
- [Algorithms Used in C1-AutoPayRequest](#)
- [Auto Pay Request Status Transition without Approval](#)
- [Auto Pay Request Status Transition with Approval](#)
- [Auto Pay Request Type](#)
- [Auto Pay Request \(Used for Searching\)](#)
- [Auto Pay Request \(Used for Viewing\)](#)

In the financial services and health insurance domains, there might be scenarios wherein the customers would like to review their invoices before the charges are directly debited from their accounts. In such scenarios, there is a need to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer.

Oracle Revenue Management and Billing provides the ability to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. A new field named **Auto Pay Review Required** is added in the **Auto Pay** tab of the **Account** screen. On completing a bill for an account, the system creates the automatic payment records in the **CI_BILL_ACH** table as per the auto pay instructions defined for the account. If the **Auto Pay Review Required** option is selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **N**. However, if the **Auto Pay Review Required** option is not selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **Y**. The **EXTRACT_ELIG_SW** column indicates whether the automatic payment record is eligible for the extraction. If the **EXTRACT_ELIG_SW** column is set to **N**, the **APAYCRET** batch does not consider the automatic payment record in the **CI_BILL_ACH** table for automatic payment creation.

Once the confirmation is received for one or more bills, the system enables you to create an automatic payment request for the bills. While creating an automatic payment request, you need to specify an automatic payment request type using which you want to create the automatic payment request. It is the automatic payment request type which helps the system to determine:

- The business object using which the automatic payment request should be created in the system
- Whether the approval is required for the automatic payment request

Once you specify the automatic payment request type, the system creates the automatic payment request in the **Draft** status. You can then include the bills for which invoice confirmation is received from the customers in the automatic payment request. At least one bill should be included in the automatic payment request. Before submitting an automatic payment request, you need to do the following:

- Edit the Schedule Extract Date (if required) of each bill
- Set the **Eligible for Extraction** field of each bill to **Y**

You can also delete a bill from an automatic payment request when it is in the **Draft** status. Once you edit the required details of the bills in an automatic payment request, you can submit the automatic payment request. If the approval

process is not configured in the respective automatic payment request type, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approval process is configured in the respective automatic payment request type, the system changes the status of the automatic payment request to **Approval In Progress**. A To Do notification is created for the approver using the approval To Do type (specified in the respective automatic payment request type) and assigned to the users with the approval To Do role (specified in the respective automatic payment request type). Once the approver reviews an automatic payment request, the approver can approve, reject, or resubmit the automatic payment request based on the observations. If the approver approves the automatic payment request, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approver rejects an automatic payment request, the status of the automatic payment request is changed to **Rejected**. However, if the approver requests the submitter to resubmit an automatic payment request, the status of the automatic payment request is changed to **Draft**. A To Do notification is created for the submitter using the submitter To Do type (specified in the respective automatic payment request type) and assigned to the users with the submitter To Do role (specified in the respective automatic payment request type). While rejecting or resubmitting an automatic payment request, the approver needs to specify the reason for rejection or resubmission.

To implement the hold direct debit feature, the following new screens are introduced in this release:

- **Auto Pay Request Type** - Enables you to create, edit, delete, and copy an automatic payment request type.
- **Auto Pay Request (Used for Searching)** - Enables you to search for an automatic payment request. It also enables you to create an automatic payment request.
- **Auto Pay Request (Used for Viewing)** - Enables you to edit, delete, submit, approve, reject, and resubmit the automatic payment request. It also enables you to add, edit, and delete bills from the automatic payment request.

In addition, the following changes are made to the system:

- **Auto Pay Review Required** - This field is added in the **Auto Pay** tab of the **Account** screen. It indicates whether you want to hold direct debit (i.e. automatic payment) for the bills of the account until the confirmation is received from the customer.
- **Eligible for Extraction** - This column is added in the **Auto Pay** tab of the **Bill** screen. It indicates whether the automatic payment record for the bill is eligible for extraction.

Prerequisites

To setup the auto pay request feature, you need to do the following:

- Auto pay request type business object defined in the application
- Auto pay request types defined in the system.
- Approval To Do types and To Do roles defined in the application
- Submitter To Do types and To Do roles defined in the application
- Characteristic types defined in the application

Algorithms Used in C1-AutoPayRequest

The following table lists the algorithm which is attached to the **C1-AutoPayRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-APAYRQINF	C1-APAYRQINF	Refer to C1-APAYRQINF on page 3229

The following table lists the algorithms which are used in the lifecycle of the **C1-AutoPayRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1499
Submitted	Enter	C1-APAYSUB	C1-APAYSUB	Refer to C1-APAYSUB on page 3230
Approval In Progress	Enter	C1-APAYAPP	C1-APAYAPP	Refer to C1-APAYAPP on page 3230
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1499
Update Auto Pay Record	Enter	C1-UPDAPAY	C1-UPDAPAY	Refer to C1-UPDAPAY on page 3230
Approved	Enter	C1-APAYAPRVD	C1-APAYAPRVD	Refer to C1-APAYAPRVD on page 3230
Return to Submitter	Enter	C1-APAYRESUB	C1-APAYRESUB	Refer to C1-APAYRESUB on page 3231
Processed	-	-	-	-
Rejected	-	-	-	-

C1-APAYRQINF

The **C1-APAYRQINF** algorithm generates the auto pay request information string and is plugged in at **System Event**:

Information of business object: **C1-AutoPayRequest**.

It concatenates the following fields:

- Auto Pay Request Type Description
- Auto Pay Request Status Description
- Auto Pay Request ID

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-APAYSUB

The **C1-APAYSUB** algorithm will be plugged at the **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **SUBMITTED**.

This algorithm checks the following:

1. Whether the approval is required for the auto pay request based on the configuration in auto pay request type (**IS_APPR_REQ = Y**).
 - a. If the approval is required for the auto pay request, the status of the auto pay request is changed to **Approval In Progress**.
 - b. If the approval is not required for the auto pay request, the status of the auto pay request is changed to **UPDATEAPAY**.
2. At least one auto pay record is selected in the auto pay request.
3. Updated scheduled extraction date cannot be less than system date.
4. **Auto Pay Request** cannot be created for any auto pay record if the same auto pay record is selected in another request which is in the **Approval In Progress** status.

C1-APAYAPP

The **C1-APAYAPP** algorithm creates the following:

1. A To Do using the To Do type specified in the approval profile which is attached to the **Auto Pay Request Type**. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
2. A log entry is added when a To Do is created using the To Do type. It will create To Do Entry when **Auto Pay Request** enters in the **Approval in Progress** status from **Submit** status.

C1-UPDAPAY

The **C1-UPDAPAY** algorithm will be plugged in at **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **UPDATEAPAY**.

1. The **Extract Eligible Switch** and **Auto Pay Creation Date** are updated in the **CI_BILL_ACH** table with the latest values present in **Auto Pay Request Details** table. The auto pay request status is then changed to **PROCESSED**.
2. If the bill which is present in the **Auto Pay Request** is cancelled then the latest details of **Extract Eligible Switch** and **Auto Pay Creation Date** are not updated in the **CI_BILL_ACH** table and the auto pay request status is changed to **PROCESSED**.

C1-APAYAPRVD

The **C1-APAYAPRVD** algorithm is the **Enter** status algorithm. This algorithm is invoked when you approve an **Auto Pay Request**. It confirms whether the approval flag is true and the status of the **Auto Pay request** is **APPROVED** to transit it to the next level.

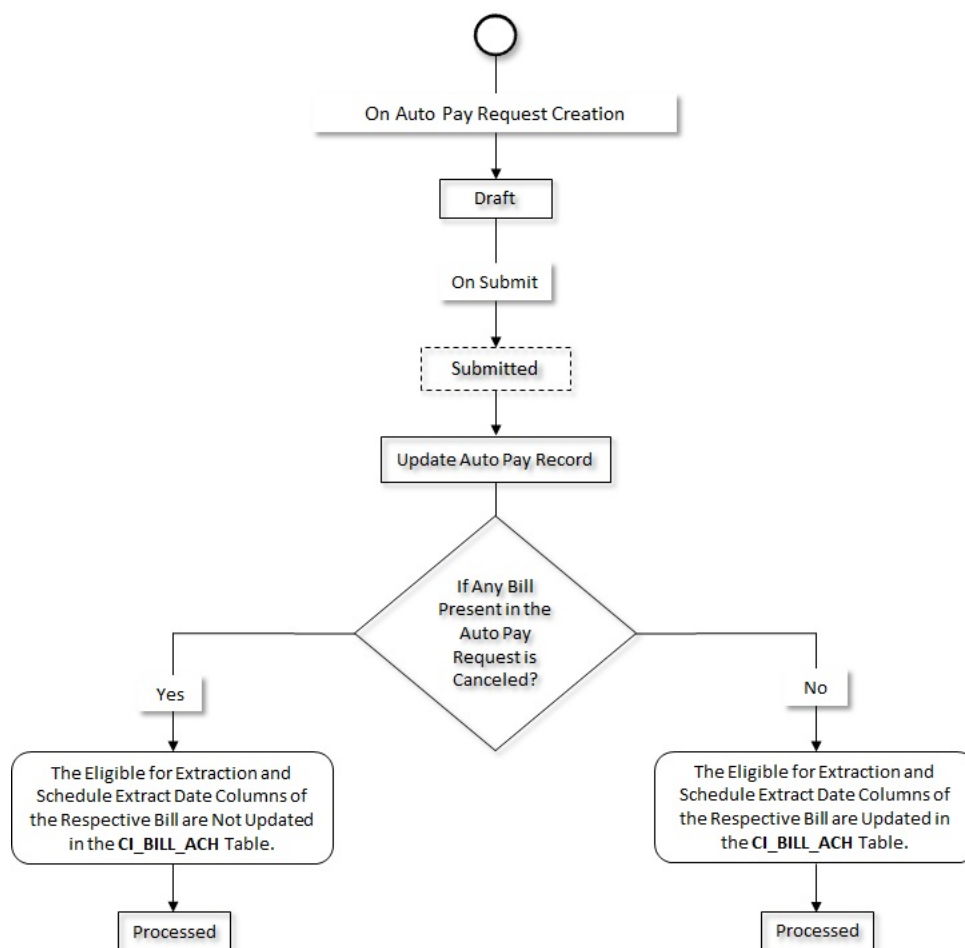

C1-APAYRESUB

The **C1-APAYRESUB** algorithm is invoked on the **Re-Submit** button. It moves the status of the **Auto Pay Request** to **Draft**.

A To Do is generated for the user as submitter whose To Do type and To Do role are fetched from the **Auto Pay Request Type**. This algorithm creates the To Do entry when the **Auto Pay Request** enters into the **Return to Submitter** status from the **Approval In Progress** status.

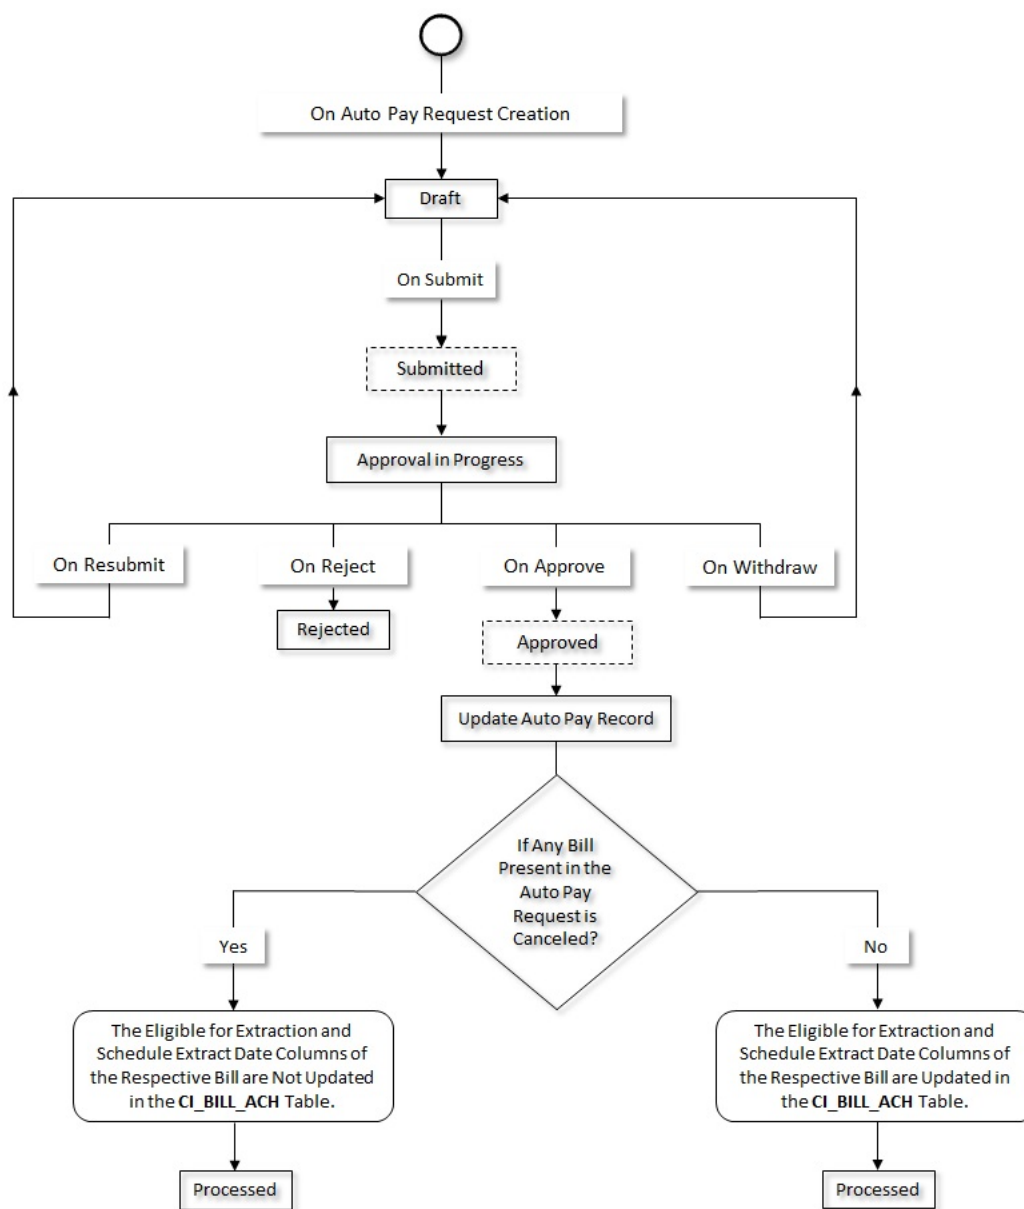

Auto Pay Request Status Transition without Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is not configured in the auto pay request type:

Auto Pay Request Status Transition with Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is configured in the auto pay request type:

Auto Pay Request Type

The **Auto Pay Request Type** screen allows you to define, edit, copy, and delete an auto pay request type. It also allows you to view the details of an auto pay request type. It contains the following zones:

- [Auto Pay Request Type List](#) on page 3232
- [Auto Pay Request Type](#) on page 3233

Auto Pay Request Type List

The **Auto Pay Request Type List** zone lists the auto pay request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Auto Pay Request Type	Displays the auto pay request type.
Description	Displays the description of the auto pay request type.
Edit	On clicking the Edit (✎) icon, the Auto Pay Request Type screen appears where you can edit the details of the auto pay request type.
Duplicate	On clicking the Duplicate (📄) icon, the Auto Pay Request Type screen appears where you can define an auto pay request type using an existing auto pay request type.
Delete	On clicking the Delete (🗑) icon, you can delete the auto pay request type. Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type.

On clicking the **Broadcast** (📡) icon corresponding to an auto pay request type, the **Auto Pay Request Type** zone appears with the details of the respective auto pay request type.

Auto Pay Request Type

The **Auto Pay Request Type** zone displays the details of the auto pay request type. It contains the following sections:

- **Main** - Displays basic information about the auto pay request type. It contains the following fields:

Field Name	Field Description
Auto Pay Request Type	Displays the auto pay request type.
Description	Displays the description of the auto pay request type.
Related Transaction BO	Indicates the business object using which the auto pay transaction is performed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the auto pay request type.
Auto Pay Request Action	Indicates the action which is performed on the auto pay request using the auto pay request type.

Field Name	Field Description
Status	Indicates the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Approval Required	Indicates whether approval is required for the auto pay request which is created using the auto pay request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do Type is created when you submit the auto pay request for an approval. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. This field appears only when the Approval Required option is selected.
Approval To Do Role	Indicates that the users which belong to the specified To Do role can only approve the auto pay request when it is submitted for an approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. This field appears only when the Approval Required option is selected.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do task is created when an auto pay request is resubmitted by an approver. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that the approvers which belong to the specified To Do role can only resubmit the auto pay request. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.

- **Characteristic** - Lists the characteristics defined for the auto pay request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the auto pay request type.

Button Name	Button Description
Delete	Used to delete the auto pay request type. Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type.
Duplicate	Used to create a new auto pay request type using an existing auto pay request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the auto pay request type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Auto Pay Request Type** zone does not appear in the **Auto Pay Request Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to an auto pay request type in the **Auto Pay Request Type List** zone.

Defining an Auto Pay Request Type

Prerequisites

To define an auto pay request type, you should have:

- Auto pay request type business objects defined in the application
- Approval To Do Types and To Do roles defined in the application
- Submitter To Do Types and To Do roles defined in the application

Procedure

To define an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.

A sub-menu appears.

- Click the **Add** option from the **Auto Pay Request Type** sub-menu.

Tip: Alternatively, you can access the **Auto Pay Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Auto Pay Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple auto pay request type business objects defined in the application. If there is only one auto pay request type business object defined in the application, the **Auto Pay Request Type** screen appears.

- Select the required auto pay request type business object from the respective field.
- Click **OK**.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the auto pay request type.
- Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Used to specify the auto pay request type.	Yes
Business Object	Indicates the business object using which the auto pay request type is defined in the system.	Not applicable
Description	Used to specify the description for the auto pay request type.	Yes
Related Transaction BO	Used to indicate the business object using which the auto pay transaction is performed. The valid value is: <ul style="list-style-type: none"> Auto Pay Request 	Yes
Detailed Description	Used to specify additional information about the auto pay request type.	No
Auto Pay Request Action	Indicates the action which is performed on the auto pay request using the auto pay request type. The valid value is: <ul style="list-style-type: none"> Update 	Not applicable
	Note: By default, the Update option is selected and cannot be edited.	
Status	Used to indicate the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of an auto pay request type to Inactive when an auto pay request created using the auto pay request type is in the Draft or Rejected status.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type.	No
Approval To Do Type	<p>Used to specify the To Do entry of the specified To Do Type that is created when you submit the auto pay request for an approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p>
Approval To Do Role	<p>Used to indicate the users which belong to the specified To Do role who can approve the auto pay request when it is submitted for an approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the specified Approval To Do Type.</p> <p>This field appears only when the Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p>
Submitter To Do Type	<p>Used to indicate the To Do entry of the specified To Do Type that is created when an auto pay request is resubmitted by an approver.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. How to define a characteristic for an auto pay request type	Defining a Characteristic for an Auto Pay Request Type on page 3238

Defining a Characteristic for an Auto Pay Request Type

Prerequisites

To define a characteristic for an auto pay request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Pay Request Type**)

Procedure

To define a characteristic for an auto pay request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an auto pay request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) Note: This field is required while defining a characteristic for the auto pay request type.
	Note: The list includes only those characteristic types where the characteristic entity is set to Auto Pay Request Type .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for the respective characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for the auto pay request type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the auto pay request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the auto pay request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Auto Pay Request Type

Prerequisites

To edit an auto pay request type, you should have:

- Auto pay request type that you want to edit defined in the application

Procedure

To edit an auto pay request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Auto Pay Request Type** sub-menu.
The **Auto Pay Request Type** screen appears.
- In the **Auto Pay Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the auto pay request type whose details you want to edit.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the auto pay request type.
- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Displays the auto pay request type.	Not applicable
Business Object	Indicates the business object using which the auto pay request type is defined in the system.	Not applicable
Description	Used to specify the description for the auto pay request type.	Yes
Related Transaction BO	Used to indicate the business object using which the auto pay transaction is performed.	Yes
Detailed Description	Used to specify additional information about the auto pay request type.	No
Auto Pay Request Action	Displays the action which is performed on the auto pay request using the auto pay request type.	Not applicable
Status	Used to indicate the status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Approval Required	Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type.	No
Approval To Do Type	Used to indicate the To Do task which is performed by the approver while approving the auto pay request. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search (🔍) icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate the users with the specified To Do role who can approve the auto pay request.	Yes
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	
Submitter To Do Type	Used to indicate the To Do task created when an auto pay request is submitted by an approver.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p>	
Submitter To Do Role	Used to indicate the users with the specified To Do role who can submit the auto pay request for approval.	Yes
	<p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p>	

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Auto Pay Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the auto pay request type, if required.
7. Click **Save**.

The changes made to the auto pay request type are saved.

Copying an Auto Pay Request Type

Instead of creating an auto pay request type from scratch, you can create a new auto pay request type using an existing auto pay request type. This is possible through copying an auto pay request type. On copying an auto pay request type, the details including the characteristics are copied to the new auto pay request type. You can then edit the details, if required.

Prerequisites

To copy an auto pay request type, you should have:

- Auto pay request type (whose copy you want to create) defined in the application
- Auto pay request business objects defined in the application

Procedure

To copy an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Auto Pay Request Type** sub-menu.

The **Auto Pay Request Type** screen appears.

4. In the **Auto Pay Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the auto pay request type whose copy you want to create.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the auto pay request type.
- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Used to specify the auto pay request type.	Yes
Business Object	Indicates the business object using which the auto pay request type is defined in the system.	Not applicable
Description	Used to specify the description for the auto pay request type.	Yes
Related Transaction BO	Used to indicate the business object using which the auto pay transaction is performed.	Yes
Detailed Description	Used to specify additional information about the auto pay request type.	No
Status	Used to indicate the status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type.	No
Approval To Do Type	<p>Used to indicate the To Do task which is performed by the approver while approving the auto pay request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p>	Yes
Approval To Do Role	<p>Used to indicate the users with the specified To Do role who can approve the auto pay request.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	Yes
Submitter To Do Type	<p>Used to indicate the To Do task created when an auto pay request is submitted by an approver.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate the users with the specified To Do role who can submit the auto pay request for approval.	Yes
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	

Tip: Alternatively, you can copy an auto pay request type by clicking the **Duplicate** button in the **Auto Pay Request Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the auto pay request type, if required.
- Click **Save**.

The new auto pay request type is defined.

Deleting an Auto Pay Request Type

Procedure

To delete an auto pay request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Auto Pay Request Type** sub-menu.
The **Auto Pay Request Type** screen appears.
- In the **Auto Pay Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the auto pay request type that you want to delete.
A message appears confirming whether you want to delete the auto pay request type.

Tip: Alternatively, you can delete an auto pay request type by clicking the **Delete** button in the **Auto Pay Request Type** zone.

- Click **OK**.

The auto pay request type is deleted.

Searching for an Auto Pay Request

Prerequisites

To search for an auto pay request, you should have:

- Auto pay request types defined in the application

Procedure

To search for an auto pay request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Auto Pay Request**.
A sub-menu appears.
3. Click the **Search** option from the **Auto Pay Request** sub-menu.
The **Auto Pay Request** screen appears.
4. Enter the search criteria in the **Search Auto Pay Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of auto pay requests that meet the search criteria appears in the **Search Results** section.

Auto Pay Request - Log

The **Log** tab contains the following zone:

- [Auto Pay Request Log](#) on page 3256

Auto Pay Request Log

The **Auto Pay Request Log** zone lists the complete trail of actions performed on the auto pay request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the auto pay request.
Details	Displays the details about the action performed on the auto pay request.
User	Indicates the user who has performed the action on the auto pay request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the auto pay request. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the auto pay request is rejected.

Note: You can manually add a log entry for the auto pay request by clicking the **Add Log Entry** link in the upper right corner of the **Auto pay Request Log** zone.

Defining a Characteristic for an Auto Pay Request

Prerequisites

To define a characteristic for an auto pay request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Pay Request**)

Procedure

To define a characteristic for an auto pay request:

1. Click **Edit** button, on the **Auto Pay Request** zone in the Main tab of the **Auto Pay Request** screen.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the auto pay request.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the auto pay request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Auto Pay Request . Note: This field is required while defining a characteristic for the auto pay request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the auto pay request. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the auto pay request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the auto pay request, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the auto pay request.

Editing the Auto Pay Request Details

Prerequisites

To edit an auto pay request details, you should have:

- Auto pay requests defined in the application

Procedure

To edit an auto pay request details:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose details you want to edit.

The **Auto Pay Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Auto Pay Request** zone.

The **Edit Auto Pay Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the auto pay request.
- **Characteristics** - Used to define the characteristics for the auto pay request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Information	Displays the concatenated string of information about the auto pay request separated by a comma (,).	Not applicable
Comments	Used to specify additional information about the auto pay request.	No

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the auto pay request, if required.
7. Click **Save**.

The changes made to the auto pay request are saved.

Note: The **Edit** button appears only when the auto pay request is in the **Draft** status.

Submitting an Auto Pay Request

Prerequisites

To submit an auto pay request, you should have:

- At least one bill added to the auto pay request
- Automatic payment amount of each bill not equal to zero

Procedure

To submit an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request which you want to submit.
The **Auto Pay Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click **Submit** button in the **Auto Pay Request** zone.
A message appears confirming whether you want to submit the auto pay request.
5. Click **OK**.
The auto pay request is submitted.

Note:

At least one auto pay record is required for submitting the auto pay request.

The **Submit** button appears only when the auto pay request is in the **Draft** status.

Chapter 47

Garbling Customer Information

Oracle Revenue Management and Billing enables you to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on. On receiving the data erasure request from a customer, the data controller will garble the personal information of the customer by masking the data with random characters and then cease the access to the customer records.

To garble the information of one or more persons, you need to do the following:

1. Define the **Garble Data (C1-GRBL)** characteristic for each person whose data needs to be garbled and set its value to **Y**.
2. Execute the **Garble Person Information (C1-GRBPI)** batch. For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

On executing the **Garble Person Information (C1-GRBPI)** batch, the system identifies the persons where the **Garble Data (C1-GRBL)** characteristic is set to **Y** and the **Garbling Completed (C1-GBCM)** characteristic is either not defined or set to **N**. Note that the system considers the **Garble Data (C1-GRBL)** characteristic value which is effective on the batch business date.

Once the persons are identified, the data in the following fields is masked with random characters across all records in the system:

- ACCOUNT_NBR
- ACCT_NBR
- ADDRESS1
- ADDRESS1_UPR
- ADDRESS2
- ADDRESS3
- ADDRESS4
- BIRTH_DT
- BROKER_NAME
- CITY
- COUNTRY
- COUNTY
- CUSTOMER_NAME
- EMAILID

- ENTITY_NAME
- ENTITY_NAME1
- ENTITY_NAME2
- ENTITY_NAME3
- GEO_CODE
- HOUSE_TYPE
- IN_CITY_LIMIT
- NAME1
- OVRD_MAIL_NAME1
- OVRD_MAIL_NAME2
- OVRD_MAIL_NAME3
- PER_ID_NBR
- PHONE
- POSTAL
- POSTAL_UPR
- STATE

In other words, the personal and account related information of a customer is garbled across the system. In addition, this batch allows you to garble the required characteristics and identifiers of a person and account.

Note: An account may have one or more persons linked to it. The information of an account is garbled when the data erasure request is received for the main customer of the account.

Once the personal and account related information of a customer is garbled, the access group of the person is changed to **C1GB** (which does not have any data access role). This ensures that the data of the person and his or her accounts cannot be accessed from any screens in the system. If an approval transaction contains personal and account related information of a customer, you cannot even view the approval transaction in the system.

Note: The access is forbidden for performing any transaction for the person and account only from the user interface and web services and not through the background process.

You can also garble the data of a person using the **C1-GRBPI** inbound web service. However, you can garble the data of only one person at a time using this inbound web service.

Chapter 48

Deleting Inactive Customer or Closed Account Information

Oracle Revenue Management and Billing enables you to delete all records of a person or account from the system. A new batch named **C1-GDPR** is introduced in this release. It enables you to delete all records of a person or account from the system. You can either delete the records of a particular person or account using its ID or delete the records of a set of persons or accounts at once using its characteristic. A new characteristic type named **C1-GDPRE** is shipped with the product. While executing the batch, the system first checks whether the person or account ID is specified in the batch. If so, the batch deletes the records of the respective person or account from the system. You cannot specify both the person and account ID at the same time while executing the batch.

If the person or account ID is not specified while executing the batch, the system checks whether the **Delete Characteristic Type** parameter is defined in the **C1-GDPR** batch. You can define the **C1-GDPRE** characteristic for the persons or accounts whose records you want to delete from the system. If you set the **Delete Characteristic Type** parameter in the **C1-GDPR** batch to **C1-GDPRE**, the batch considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

The system deletes all records of a particular account only when the following conditions are met:

- Account's closing date is earlier than or equal to system date
- All contracts of the account should either be in the **Closed** or **Canceled** status

The system deletes all records of a particular person only when the following conditions are met:

- The closing date of all its accounts is earlier than or equal to system date
- All contracts of all its accounts should either be in the **Closed** or **Canceled** status

The **C1-GDPR** batch contains the following parameters:

- **Account ID** – Used to indicate the account whose records you want to delete from the system.
- **Person ID** – Used to indicate the person whose records you want to delete from the system.
- **Delete Characteristic Type** – Used to specify the characteristic type. Here, you must specify the **C1-GDPRE** characteristic type. The system then considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

- **Clear CLOB Data** – Used to indicate whether you want to delete the references of the persons or accounts considered for deletion from the CLOB data. The valid values are **Y** and **N**. Note that if you set the value for this parameter to **Y**, the performance of the batch would be impacted when there is voluminous data.
- **Thread Pool Name** – Used to specify the thread pool on which you want to execute the batch.

The **C1-GDPR** batch is a multi-threaded batch. The multi-threading is based on the person or account **ID** and chunks for multi-threading are created based on numerical distribution of person or account **ID**.

Chapter 49

Retail Banking Product Management

Topics:

- [Prerequisites](#)
- [Product Status Transition](#)
- [Market Product Status Transition](#)
- [Offer Status Transition](#)
- [Bundle Status Transition](#)
- [Algorithms Used in C1_PRODUCT](#)

- [C1-OFFRINFO](#)
- [C1-OFFER-VAL](#)
- [C1-BNDLINFO](#)
- [C1-BUNDL-VAL](#)
- [Product \(Used for Searching\)](#)
- [Product \(Used for Adding\)](#)
- [Market Product \(Used for Searching\)](#)

Oracle Revenue Management and Billing facilitates you to maintain and bill a variety of products and services for the retail banking domain. You can define the following types of products in the system:

- Product
- Product Group

As the name indicates, a product group is a group of products. A product group are maintained in the system mainly for the reporting purposes. You can define a product and product group which may belong to different product categories, such as Checking, Loans, Savings, etc. A product or product group must be associated with at least one division. You can associate a product or product group with more than one division.

The system enables you to add one or more product services in a product. A product service may include one or more services which are defined as price items in the system. You can define, edit, delete, and copy a product service using an existing screen named **Product Service**. You can add multiple product services in a product. The system enables you to indicate whether the product service is a mandatory or optional service offered with the product. A product must have at least one mandatory product service.

A product consists of one or more market products. For example, the Loan product can include different market products, such as Personal Loan, Auto Loan, Home Equity Loan, Education Loan, etc. An account can enroll for a market product. While creating a market product for a product, the system inherits the list of divisions and product services from the product. You can associate a market product with only those divisions to which the product belongs. By default, the market product includes the mandatory services of the product. You may or may not include the optional services of the product in the market product. You can define eligibility rules for a market product. The system executes the eligibility rule which is effective while enrolling an account for a market product. If the eligibility rule is met, the system enrolls the account for the market product. However, if the eligibility rule is not met, the system does not enroll the account for the market product. A market product must be associated with at least one price list. You can associate multiple price lists with a market product.

The system enables you to define an offer which can be included in more than one market product. For example, the Car Loan and Two-Wheeler Loan market products may provide same offers, such as No Processing Cost, No Collateral, etc. An account can enroll for an offer. While creating an offer, the system inherits the list of divisions and product services from all market products in which it is included. By default, the offer includes the mandatory services of the product. You may or may not include the optional services of the market product in the offer. You can define eligibility rules for an offer.

- [Market Product \(Used for Adding\)](#)
- [Offer \(Used for Searching\)](#)
- [Offer \(Used for Adding\)](#)
- [Bundle \(Used for Searching\)](#)
- [Bundle \(Used for Adding\)](#)

The system executes the eligibility rule which is effective while enrolling an account for an offer. If the eligibility rule is met, the system enrolls the account for the offer. However, if the eligibility rule is not met, the system does not enroll the account for the offer. An offer must be associated with at least one price list. You can associate multiple price lists with an offer.

The system enables you to define a bundle which can be included in more than one market product. For example, you can define a bundle of services, such as Car Loan, Loan Insurance, etc. in the Car Loan market product. An account can enroll for a bundle. While creating a bundle, the system derives the divisions which are common in all market products in which it is included. It also inherits the list of product services from all market products. By default, the bundle includes the mandatory services of the product. You may or may not include the optional services of the market product in the bundle. Here, you can include additional services which are not included in the product or market product. You can define eligibility rules for a bundle. The system executes the eligibility rule which is effective while enrolling an account for a bundle. If the eligibility rule is met, the system enrolls the account for the bundle. However, if the eligibility rule is not met, the system does not enroll the account for the bundle. A bundle must be associated with at least one price list. You can associate multiple price lists with a bundle.

A product, market product, offer, and bundle goes through a lifecycle in the system. On creating a product, market product, offer, and bundle, their status is set to **Draft**. On submitting a product, market product, offer, and bundle, their status is set to **Active**. A new batch named **C1-PDTRN** is introduced in this release. It transitions the status of a product, market product, offer, and bundle to **Retired** when its end date is earlier than the batch business date.

To implement this new feature, the following new screens are introduced in this release:

- Product
- Product Information
- Market Product
- Market Product Information
- Offer
- Offer Information
- Bundle
- Bundle Information

You can access these screens from the **Retail Banking** menu.

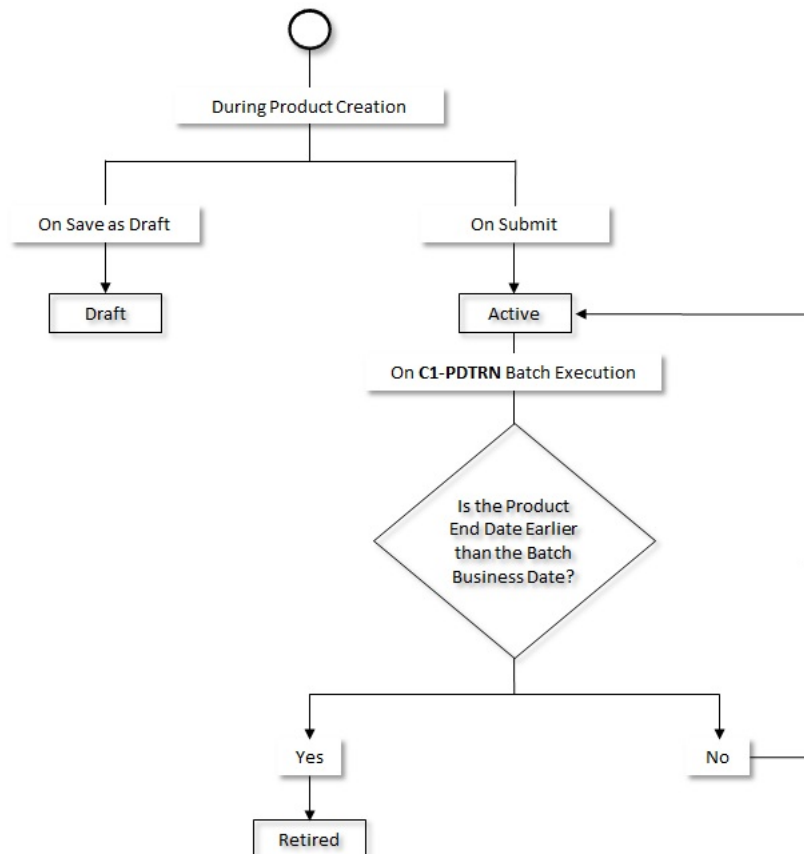

Prerequisites

To setup the retail banking feature, you need to do the following:

- Product Categories and Product Types define in the application.
- Define the Terms and Conditions in the application.
- Product Manager's To Do Roles define in the application.
- Divisions associated with the access group to which the user belongs.
- Characteristics Types defined in the application (where the characteristic entity is set to the product, market product, offer or bundle).
- Parent Groups define in the application.
- Product Services define in the application.
- Parameters and Parameter Value Types (based on which you want to define eligibility criteria of the market product) define in the application.
- Price Lists define in the application.

Product Status Transition

The following figure graphically indicates how the product moves from one status to another when the approval process is configured in the product:

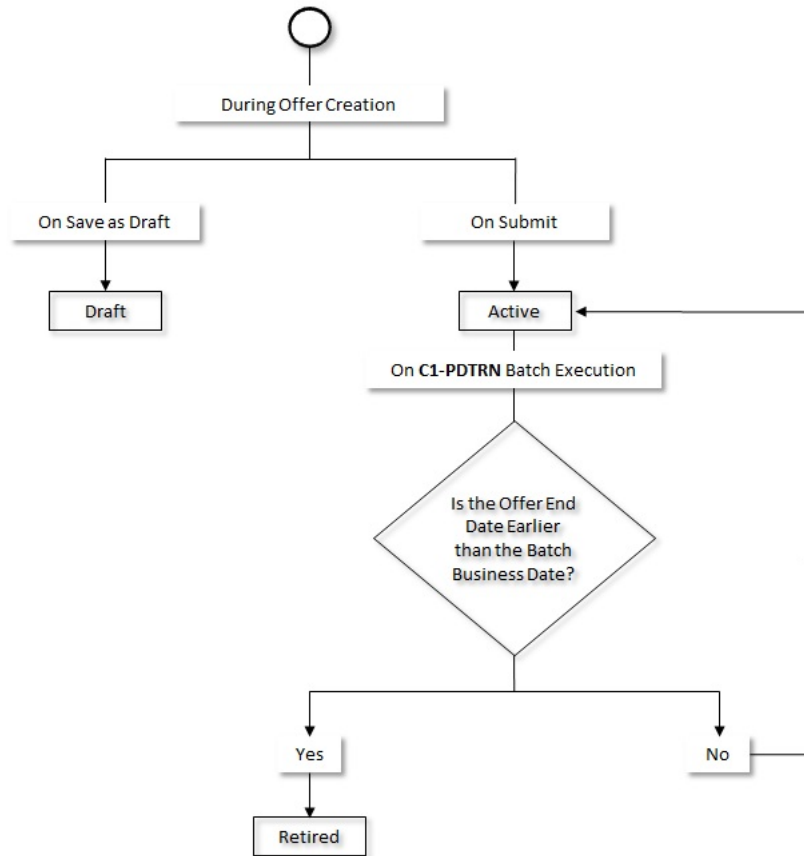

Market Product Status Transition

The following figure graphically indicates how the market product moves from one status to another when the approval process is configured in the market product:

Offer Status Transition

The following figure graphically indicates how the offer moves from one status to another when the approval process is configured in the offer:

Bundle Status Transition

The following figure graphically indicates how the bundle moves from one status to another when the approval process is configured in the bundle:

Algorithms Used in C1_PRODUCT

The following table lists the algorithms which are attached to the **C1_PRODUCT** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-APPTXNBAS	C1-APPTXNBAS	Refer to C1-APPTXNBAS on page 3278
Information	C1-PRDINFO	C1-PRDINFO	Refer to C1-PRDINFO on page 3278
Post-Processing	C1-PRDPSPR	C1-PRDPSPR	Refer to C1-PRDPSPR on page 3279

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PRDCT-VAL	C1-PRDCT-VAL	Refer to C1-PRDCT-VAL on page 3279

The following table lists the algorithms which are used in the lifecycle of the **C1_PRODUCT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Active	Monitor	C1-PRD-TRN	C1-PRD-TRN	C1-PRD-TRN on page 3279
Retired	-	-	-	-

Algorithms Used in C1_MARKET_PRODUCT

The following table lists the algorithms which are attached to the **C1_MARKET_PRODUCT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPINFO	C1-PDINFO	Refer to C1-MPINFO on page 3279
Validation	C1-MP-VAL	C1-MP-VAL	Refer to C1-MP-VAL on page 3279

The following table lists the algorithms which are used in the lifecycle of the **C1_MARKET_PRODUCT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Active	Monitor	F1-AT-RQJ	F1-AT-RQJ	Refer to F1-AT-RQJ on page 3279
Retired	-	-	-	-

Algorithms Used in C1_OFFER

The following table lists the algorithm which is attached to the **C1_OFFER** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-OFFRINFO	C1-PDINFO	Refer to C1-OFFRINFO on page 3280
Validation	C1-OFFER-VAL	C1-OFFER-VAL	Refer to C1-OFFER-VAL on page 3280

The following table lists the algorithms which are used in the lifecycle of the **C1_OFFER** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Active	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 3279
Retired	-	-	-	-

Algorithms Used in C1_BUNDLE

The following table lists the algorithms which are attached to the **C1_BUNDLE** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-BNDLINFO	C1-PDINFO	Refer to C1-BNDLINFO on page 3280
Validation	C1-BUNDL-VAL	C1-BUNDL-VAL	Refer to C1-BUNDL-VAL on page 3280

The following table lists the algorithms which are used in the lifecycle of the **C1_BUNDLE** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Active	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 3279
Retired	-	-	-	-

C1-APPTXNBAS

The **C1-APPTXNBAS** is the standard audit algorithm used by approval workflow responsible for creating approval transactions. This algorithm is to be specified on the business object audit algorithm spot, for the business objects that are part of approval workflow groups.

Parameters: Approval Request Generation (Y/N) - Used to indicate whether the approval workflow request must be created when no changes are made while editing the object. If you set the value to **N**, the approval workflow request is not created when no changes are made while editing the object. However, if you leave this field blank or set the value to **Y**, the approval workflow request is created irrespective of whether any changes are made or not in the object.

C1-PRDINFO

The **C1-PRDINFO** algorithm generates the product information string. It concatenates the provided fields in the parameters, separated by the provided separator in the specified order. The eligible field parameters are listed below:

- PRODUCT_CD
- DESCR
- PROD_TYP_FLG
- PRODUCT_CAT_FLG
- BO_STATUS_CD

- START_DT
- END_DT
- PROD_MNGR
- PROD_MNGR_TD_ROLE
- TC_TYPE_CD

C1-PRDPSPR

Product Post Processing Algorithm.

C1-PRDCT-VAL

The **C1-PRDCT-VAL** algorithm validates the product before saving it to the database.

C1-PRD-TRN

The **C1-PRD-TRN** algorithm is responsible for monitoring the product end date. It transitions the status of a product, market product, offer, and bundle to **Retired** when its end date is earlier than the batch business date.

C1-MPINFO

The **C1-MPINFO** algorithm generates the market product, offer, and bundle information string. It concatenates the provided fields in the parameters, separated by the provided separator in the specified order: The eligible field parameters are listed below:

- ENTITY_CODE
- ENTITY_TYPE
- DESCR
- DESCRLONG
- START_DT
- END_DT
- TC_TYPE_CD
- BO_STATUS_CD
- PRODUCT_CD

C1-MP-VAL

The **C1-MP-VAL** algorithm validates the market product before saving it to the database.

F1-AT-RQJ

The **F1-AT-RQJ** algorithm type transitions the business object current state to the input **Next Status** or to the status related to the input **Next Transition Condition**. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified in the lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

C1-OFFRINFO

The **C1-OFFRINFO** algorithm generates the market product, offer, and bundle information string. It concatenates the provided fields in the parameters, separated by the provided separator in the specified order: The eligible field parameters are listed below:

- ENTITY_CODE
- ENTITY_TYPE
- DESCR
- DESCRLONG
- START_DT
- END_DT
- TC_TYPE_CD
- BO_STATUS_CD PRODUCT_CD

C1-OFFER-VAL

The **C1-OFFER-VAL** algorithm validates the offer before saving it to the database.

C1-BNDLINFO

The **C1-BNDLINFO** algorithm generates the market product, offer, and bundle information string. It concatenates the provided fields in the parameters, separated by the provided separator in the specified order: The eligible field parameters are listed below:

- ENTITY_CODE
- ENTITY_TYPE
- DESCR
- DESCRLONG
- START_DT
- END_DT
- TC_TYPE_CD
- BO_STATUS_CD PRODUCT_CD

C1-BUNDL-VAL

The **C1-BUNDL-VAL** algorithm validates the bundle before saving it to the database.

Product (Used for Searching)

The **Product** screen allows you to search for a product using various search criteria. It also allows you to add, edit, or copy an existing product. It contains the following zone:

- [Search Product](#) on page 3281

Related Topics

For more information on...	See...

How to copy a product	Copying a Product on page 3285

Search Product

The **Search Product** zone allows you to search for a product using various search criteria. It contains the two following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search products which are added by you or search all the products available in the system. The valid values are: <ul style="list-style-type: none"> • My Products • All Products <p>Note: By default, the My Products option is selected.</p>	No
Product Code	Used to search for a particular product.	No
Product Type	Used to search products of a particular type.	No
Product Category	Used to search products which belong to a particular category.	No
Status	Used to search products having a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Retired 	No
Start Date	Used to search products which are effective from a particular date onwards.	No
End Date	Used to search products which are effective till a particular date.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Product Information	Displays the concatenated string of information about the product separated by a comma (,).

Column Name	Column Description
Status	<p>Indicates the current status of the product. The valid values are:</p> <ul style="list-style-type: none"> Active Draft Retired <p>Note:</p> <p>If the product is in the active status, it is indicated by the Active ( Active) icon.</p> <p>If the product is in the draft status, it is indicated by the Draft ( Draft) icon.</p> <p>If the product is in the retired status, it is indicated by the Retired ( Retire) icon.</p>
Product Type	Indicates the type of the product.
Product Category	Indicates the category to which the product belongs.
Start Date	Displays the date from when the product is effective in the system.
End Date	Displays the date till when the product is effective in the system.
Copy	On clicking the Copy () icon, the Product Information screen appears where you can add a new product using an existing product.
Edit	On clicking the Edit () icon, the Product Information screen appears where you can edit the details of the existing product.

<p>Note:</p> <p>Pagination is used to display limited number of records in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.</p> <p>By default, Search Results section lists all the products added by the user.</p>
--

Searching for a Product

Prerequisites

To search a product, you should have:

- Product defined in the application.

Procedure

To search a product:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Retail Banking** and then click the **Product** sub-menu.

A sub-menu appears.

- Click the **Search** option from the **Product** sub-menu.

The **Product** screen appears.

- Enter the search criteria in the **Search Product** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search** button.

A list of product that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing a Product

Procedure

To edit a product:

- Search for the product in the **Product** screen whose details you want to edit.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the product whose details you want to edit.

The **Product Information** screen appears. It contains the following pages:

- [Product Information - Basic Details](#) on page 3287
- [Product Information - Other Details](#) on page 3288
- [Product Information - Services](#) on page 3289

The **Basic Details** page contains the following zone:

- [Basic Details](#)

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Category	Displays the category of the product.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Product Code	Displays the product code.	Not applicable
Product Name	Used to specify the product.	Not applicable
Description	Used to specify the description of the product.	Yes
Product Type	Displays the product type.	Not applicable
Start Date	Displays the date from when the product is effective in the system.	Not applicable
End Date	Used to specify the date till when the product is effective in the system.	No
Terms and Conditions	Used to associate terms and conditions with the product.	No
	Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	
Product Manager	Used to assign the product to the product manager for the approval process.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager field. On clicking the Search icon, the User Search window appears where you can search for the user.	
Product Manager To Do Role	Used to specify the To Do role for the To Do task which is performed by the product manager.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager To Do Role field. On clicking the Search icon, the To Do Role Search window appears where you can search for the To Do role.	

3. Modify the required details in the **Basic Details** page.
4. Associate or disassociate the product from a division in the **Other Details** page, if required.
5. Add, edit, or remove the characteristics from the product in the **Other Details** page, if required.
6. Associate or disassociate the product from the parent group in the **Other Details** page, if required.
7. Add, edit, or remove services from the product in the **Services** page, if required.
8. Click **Submit**.

A window appears confirming the product is submitted in the system.

9. Click the **Close** button in the confirmation window.

The product is modified.

Copying a Product

Instead of creating a product from scratch, you can create a new product using an existing product. This is possible through copying a product. On copying a product, the details including the associated divisions, characteristics, associated parent groups, and the services are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product, you should have:

- Product (whose copy you want to create) defined in the application

Procedure

To copy a product:

1. Search for the product in the **Product** screen whose copy you want to create.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the product whose copy you want to create.

The **Product Information** screen appears. It contains the following pages:

- [Product Information - Basic Details](#) on page 3287
- [Product Information - Other Details](#) on page 3288
- [Product Information - Services](#) on page 3289

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3287

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Category	Used to indicate the category of the product.	Yes
Product Code	Used to specify the product code.	Yes
Product Name	Used to specify the product.	Yes
Description	Used to specify the description for the product.	Yes
Product Type	Used to indicate the type of the product.	Yes
Start Date	Used to specify the date from when the product is effective.	Yes
End Date	Used to specify the date till when the product is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to associate terms and conditions with the product.	No
	Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	
Product Manager	Used to assign the product to the product manager for the approval process.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager field. On clicking the Search icon, the User Search window appears where you can search for the user.	
Product Manager To Do Role	Used to specify the To Do role for the To Do task which is performed by the product manager.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager To Do Role field. On clicking the Search icon, the To Do Role Search window appears where you can search for the To Do role.	

3. Enter the required details in the **Basic Details** page.
4. Associate or disassociate the product from a division in the **Other Details** page, if required.
5. Add, edit, or remove the characteristics from the product in the **Other Details** page, if required.
6. Associate or disassociate the product from the parent group in the **Other Details** page, if required.
7. Add, edit, or remove services from the product in the **Services** page, if required.
8. Click **Submit**.

A window appears confirming the product is submitted in the system.

9. Click the **Close** button in the confirmation window.

The new product is added.

How to add a service for the product	Adding a Service for the Product on page 3293

Adding a Product

Prerequisites

To add a product, you should have:

- Product categories defined in the application.
- Product types defined in the application.

- Terms and conditions defined in the application.
- Product manager's To Do roles defined in the application.

Procedure

To add a product:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Product** sub-menu.
A sub-menu appears.
3. Click the **Add** option from the **Product** sub-menu.

The **Product Information** screen appears. It contains the following pages:

- [Product Information - Basic Details](#) on page 3287
- [Product Information - Other Details](#) on page 3288
- [Product Information - Services](#) on page 3289

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3287

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Category	Used to indicate the category of the product.	Yes
Product Code	Used to specify the product code.	Yes
Product Name	Used to specify the product.	Yes
Description	Used to specify the description for the product.	Yes
Product Type	Used to indicate the type of the product.	Yes
Start Date	Used to specify the date from when the product is effective.	Yes
End Date	Used to specify the date till when the product is effective.	No
Terms and Conditions	Used to associate terms and conditions with the product. Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	No

Field Name	Field Description	Mandatory (Yes or No)
Product Manager	Used to assign the product to the product manager for the approval process.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager field. On clicking the Search icon, the User Search window appears where you can search for the user.	
Product Manager To Do Role	Used to specify the To Do role for the To Do task which is performed by the product manager.	No
	Note: The Search (🔍) icon appears corresponding to the Product Manager To Do Role field. On clicking the Search icon, the To Do Role Search window appears where you can search for the To Do role.	

4. Enter the required details in the **Basic Details** page.
5. Associate the product with divisions in the **Other Details** page, if required.
6. Define characteristics for the product in the **Other Details** page, if required.
7. Associate the product to a parent group in the **Other Details** page, if required.
8. Add a service for the product in the **Services** page, if required.
9. Click **Submit**.

A window appears confirming the product is submitted in the system.

10. Click the **Close** button in the confirmation window.

The product is added.

Tip: Alternatively, you can access the **Product Information** screen by clicking the **Add Product** button in the **Page Title** area of the **Product** screen.

Searching for a Market Product

Prerequisites

To search a market product, you should have:

- Market Product defined in the application.

- Product defined in the application.
- Product Group defined in the application.

Procedure

To search a market product:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Market Product** sub-menu.
A sub-menu appears.
3. Click the **Search** option from the **Market Product** sub-menu.
The **Market Product** screen appears.
4. Enter the search criteria in the **Search Market Product** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search** button.
A list of market product that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing a Market Product

Procedure

To edit a market product:

1. Search for the market product in the **Market Product** screen whose details you want to edit.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the market product whose details you want to edit.

The **Market Product** screen appears. It contains the following pages:

- [Market Product Information - Basic Details](#) on page 3301
- [Market Product Information - Other Details](#) on page 3302
- [Market Product Information - Eligibility](#) on page 3303
- [Market Product Information - Services](#) on page 3305

- [Market Product Information - Price List](#) on page 3306

The **Basic Details** page contains the following zone:

- [Basic Details](#)

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Code	Displays the market product code.	Not applicable
Market Product Name	Displays the market product.	Not applicable
Description	Used to specify the description of the market product.	No
Start Date	Displays the date from when the market product is effective in the system.	Not applicable
End Date	Used to specify the date till when the market product is effective in the system.	No
Terms and Conditions	Used to associate terms and conditions with the market product.	No
	Note: The Search  appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the market product.	

3. Modify the required details in the **Basic Details** page.
4. Associate or disassociate the market product from a division in the **Other Details** page, if required.
5. Add, edit, or remove the characteristics from the market product in the **Other Details** page, if required.
6. Add, edit, or remove the eligibility rule from the market product in the **Eligibility** page, if required.
7. Add, edit, or remove the price list from the market product in the **Price List** page, if required.
8. Click **Submit**.

A window appears confirming the market product is submitted in the system.

9. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to the product.

The market product is modified.

Copying a Market Product

Instead of creating a market product from scratch, you can create a new market product using an existing market product. This is possible through copying a market product. On copying a market product, the details including the associated divisions, characteristics, services, and the price list are copied to the new market product. You can then edit the details, if required.

Prerequisites

To copy a market product, you should have:

- Market Product (whose copy you want to create) defined in the application

Procedure

To copy a market product:

1. Search for the market product in the **Market Product** screen whose copy you want to create.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the market product whose copy you want to create.

The **Market Product** screen appears. It contains the following pages:

- [Market Product Information - Basic Details](#) on page 3301
- [Market Product Information - Other Details](#) on page 3302
- [Market Product Information - Eligibility](#) on page 3303
- [Market Product Information - Services](#) on page 3305
- [Market Product Information - Price List](#) on page 3306

The **Basic Details** page contains the following zone:

- [Basic Details](#)

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Code	Used to specify the market product code.	Yes
Market Product Name	Used to specify the market product.	Yes
Description	Used to specify the description for the market product.	No
Start Date	Used to specify the date from when the market product is effective.	Yes
End Date	Used to specify the date till when the market product is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to associate terms and conditions with the market product.	No
	Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the market product.	

3. Enter the required details in the **Basic Details** page.
4. Associate or disassociate the market product from a division in the **Other Details** page, if required.
5. Add, edit, or remove the characteristics from the market product in the **Other Details** page, if required.
6. Add, edit, or remove the eligibility rule from the market product in the **Eligibility** page, if required
7. Add, edit, or remove the price list from the market product in the **Price List** page, if required
8. Click **Submit**.

A window appears confirming the market product is submitted in the system.

9. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to the product.

The new market product is added.

Adding a Market Product

Prerequisites

To add a market product, you should have:

- Product defined in the application.

Procedure

To add a market product:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Market Product** sub-menu.
A sub-menu appears.
3. Click the **Add** option from the **Market Product** sub-menu.

The **Market Product Information** screen appears. It contains the following pages:

- [Market Product Information - Basic Details](#) on page 3301
- [Market Product Information - Other Details](#) on page 3302
- [Market Product Information - Eligibility](#) on page 3303
- [Market Product Information - Services](#) on page 3305
- [Market Product Information - Price List](#) on page 3306

The **Basic Details** page contains the following zone:

- [Search Product](#)
- [Basic Details](#)

The **Search Product** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for product using product details. The valid value is:	Yes
	Note: The default value is Product Details .	
Product Name	Used to specify the product.	No
Description	Used to specify the description for the product.	No
Product Category	Used to indicate the category of the product.	No
Product Type	Used to indicate the type of the product.	No

On clicking **Search** button, the search results appear based on the specified search criteria. The search results include product code, description, product category, product type, effective start date and effective end date that are associated with the product.

The **Search Results** section contains the following columns:

Column Name	Column Description
Product Code	Used to specify the product code.
Description	Used to specify the description for the product.
Product Category	Used to indicate the category of the product.
Product Type	Used to indicate the type of the product.
Start Date	Used to specify the date from when the product is effective.
End Date	Used to specify the date till when the product is effective.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

4. Select the required product from the search result.

Note: You cannot add more than one product to the market product.

5. On clicking **Select and Proceed** button, the **Basic Details** page of **Market Product Information** screen appears.

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Code	Used to specify the market product code.	Yes
Market Product Name	Used to specify the market product.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the market product.	No
Start Date	Used to specify the date from when the product is effective.	Yes
End Date	Used to specify the date till when the product is effective.	No
Terms and Conditions	Used to associate terms and conditions with the product.	No
	Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	

6. Enter the required details in the **Basic Details** page.
7. Associate the market product with divisions in the **Other Details** page, if required.
8. Define characteristics for the market product in the **Other Details** page, if required.
9. Define and add eligibility rule and parameter for the market product in the **Eligibility** page, if required.
10. Add a service for the market product in the **Services** page, if required.
11. Search and select the price list for the market product in the **Price List** page, if required..
12. Click **Submit**.

A window appears confirming the market product is submitted in the system.

13. Click the **Close** button in the confirmation window.

The market product is added.

Tip: Alternatively, you can access the **Market Product Information** screen by clicking the **Add Market Product** button in the **Page Title** area of the **Market Product** screen.

Searching for an Offer

Prerequisites

To search an offer, you should have:

- Offer defined in the application.

Procedure

To search an offer:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Offer** sub-menu.
A sub-menu appears.
3. Click the **Search** option from the **Offer** sub-menu.
The **Offer** screen appears.
4. Enter the search criteria in the **Search Offer** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search** button.

A list of offer that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing an Offer

Procedure

To edit an offer:

1. Search for an offer in the **Offer** screen whose details you want to edit.

2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to an offer whose details you want to edit.

The **Offer Information** screen appears. It contains the following pages:

- [Offer Information - Basic Details](#) on page 3323
- [Offer Information - Other Details](#) on page 3324
- [Offer Information - Eligibility](#) on page 3324
- [Offer Information - Services](#) on page 3326
- [Offer Information - Price List](#) on page 3327

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3323

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offer Code	Displays the offer code.	Not applicable
Offer Name	Used to specify the offer.	Not applicable
Description	Used to specify the description of the offer.	No
Start Date	Displays the date from when the market product is effective in the system.	Not applicable
End Date	Displays the date till when the market product is effective in the system.	Not applicable
Terms and Conditions	Used to associate terms and conditions with the offer. Note: The Search  appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	No
Market Product Name	Used to specify the market product. Note: The Search  appears corresponding to the Market Product Name field. On clicking the Search icon, the Search Market Product to Offer window appears where you can associate the market product with the offer.	No
Product Category	Displays the product category.	Not applicable
Product Type	Displays the product type.	Not applicable
Product Name	Displays the concatenated string of information about the product separated by a comma (,).	Not applicable

3. Modify the required details in the **Basic Details** page.

4. Associate or disassociate the offer with a market product in the **Basic Details** page.
5. Associate or disassociate the offer from a division in the **Other Details** page, if required.
6. Add, edit, or remove the characteristics from the offer in the **Other Details** page, if required.
7. Add, edit, or remove the eligibility rule from the offer in the **Eligibility** page, if required.
8. Add, edit, or remove the services from the offer in the **Eligibility** page, if required.
9. Add, edit, or remove the price list from the offer in the **Price List** page, if required.
10. Click **Submit**.

A window appears confirming the offer is submitted in the system.

11. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to an offer.

The offer is modified.

Copying an Offer

Instead of creating an offer from scratch, you can create a new offer using an existing offer. This is possible through copying an offer. On copying an offer, the details including the associated divisions, characteristics, services, and the price list are copied to the new offer. You can then edit the details, if required.

Prerequisites

To copy an offer, you should have:

- Offer(whose copy you want to create) defined in the application

Procedure

To copy an offer:

1. Search for an offer in the **Offer** screen whose copy you want to create.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the offer whose copy you want to create.

The **Offer Information** screen appears. It contains the following pages:

- [Offer Information - Basic Details](#) on page 3323
- [Offer Information - Other Details](#) on page 3324

- [Offer Information - Eligibility](#) on page 3324
- [Offer Information - Services](#) on page 3326
- [Offer Information - Price List](#) on page 3327

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3323

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offer Code	Used to specify the offer code.	Yes
Offer Name	Used to specify the offer.	Yes
Description	Used to specify the description for the offer.	No
Start Date	Used to specify the date from when the offer is effective.	Yes
End Date	Used to specify the date till when the offer is effective.	Yes
Terms and Conditions	Used to associate terms and conditions with the offer. Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the offer.	No

The **Basic Details** zone contains the **Add Market Products** section. This section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Name	Used to indicate the search value of the market product name. Note: The Search (🔍) appears corresponding to the Market Product Name field. On clicking the Search icon, the window appears where you can associate the terms and conditions with the product.	No
Product Category	Displays the product category associated with the selected market product.	Not applicable
Product Type	Displays the product type associated with the selected market product.	Not applicable
Product Name	Displays the product associated with the selected market product.	Not applicable

3. Enter the required details in the **Basic Details** page.
4. Associate or disassociate the offer with a market product in the **Basic Details** page.

5. Associate or disassociate the offer from a division in the **Other Details** page, if required.
6. Add, edit, or remove the characteristics from the offer in the **Other Details** page, if required.
7. Add, edit, or remove the eligibility rule from the offer in the **Eligibility** page, if required
8. Add, edit, or remove the services from the offer in the **Eligibility** page, if required
9. Add, edit, or remove the price list from the offer in the **Price List** page, if required
10. Click **Submit**.

A window appears confirming the offer is submitted in the system.

11. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to the product.

The new offer is added.

Adding an Offer

Prerequisites

To add an offer, you should have:

- Market product defined in the application.

Procedure

To add an offer:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Offer** sub-menu.
A sub-menu appears.
3. Click the **Add** option from the **Offer** sub-menu.

The **Offer Information** screen appears. It contains the following pages:

- [Offer Information - Basic Details](#) on page 3323
- [Offer Information - Other Details](#) on page 3324
- [Offer Information - Eligibility](#) on page 3324

- [Offer Information - Services](#) on page 3326
- [Offer Information - Price List](#) on page 3327

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3323

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offer Code	Used to specify the offer code.	Yes
Offer Name	Used to specify the offer.	Yes
Description	Used to specify the description for the offer.	No
Start Date	Used to specify the date from when the offer is effective.	Yes
End Date	Used to specify the date till when the offer is effective.	Yes
Terms and Conditions	Used to associate terms and conditions with the offer.	No
	Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	

The **Basic Details** zone contains the **Add Market Products** section. This section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Name	Used to indicate the search value of the market product name.	Yes
	Note: The Search (🔍) appears corresponding to the Market Product Name field. On clicking the Search icon, the window appears where you can associate the terms and conditions with the product.	
Product Category	Displays the product category associated with the selected product.	Not applicable
Product Type	Displays the product type associated with the selected product.	Not applicable
Product Name	Displays the particular product.	Not applicable

4. Select and add the required market product from the search result.
5. Enter the required details in the **Basic Details** page.
6. Associate the offer with divisions in the **Other Details** page, if required.
7. Define characteristics for the offer in the **Other Details** page, if required.

8. Define and add eligibility rule and parameter for the offer in the **Eligibility** page, if required.
9. Add a service for the offer in the **Services** page, if required.
10. Search and select the price list for the offer in the **Price List** page, if required..
11. Click **Submit**.

A window appears confirming the offer is submitted in the system.

12. Click the **Close** button in the confirmation window.

The offer is added.

Tip: Alternatively, you can access the **Offer Information** screen by clicking the **Add Offer** button in the **Page Title** area of the **Offer** screen.

Defining Eligibility Criteria for the Offer

Prerequisites

To define eligibility criteria for the offer, you should have:

- Parameter defined in the application.

Procedure

To define eligibility criteria for the offer:

1. Ensure that the **Eligibility** zone is expanded in the **Eligibility** page when you are defining eligibility criteria for the offer.

The **Eligibility** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligibility Rule	Used to specify a eligibility rule of the offer.	Yes
Start Date	Used to specify the date from when the eligibility rule is effective for the offer.	Yes
End Date	Used to specify the date till when the eligibility rule is effective for the offer.	No
Parameter	Used to search the parameter which you want to associate with the eligibility rule. Note: The Search (🔍) appears corresponding to the fields. On clicking the Search icon, the Parameter Search window appears where you can search for the required parameter.	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value Type	Used to indicate the parameter value against which you want to compare the parameter. The valid values are: <ul style="list-style-type: none"> • Parameter • Value 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes
	Note: The Search (🔍) appears corresponding to the fields. On clicking the Search icon, the Parameter Search window appears where you can search for the required parameter.	
Is True	Used to indicate what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed. • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed. 	Yes
Is False	Used to indicate what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed. • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed. 	Yes
Is Sufficient	Used to indicate what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed. • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed. 	Yes

The **Eligibility** zone contains the **Eligibility Rules** table which contain following columns:

Column	Column Description
Eligibility Rule	Displays eligibility rule of the offer.
Start Date	Displays the date from when the eligibility rule is effective for the offer.
End Date	Displays the date till when the eligibility rule is effective for the offer.

2. Enter the required details in the **Eligibility** zone.
3. Click **Save as Draft**, to save the offer in the draft.
4. Click **Next**, to go to **Services** page.

The offer is saved as draft in the application.

Searching for a Bundle

Prerequisites

To search a bundle, you should have:

- Bundle defined in the application.
- Market Product defined in the application.
- Product defined in the application.

Procedure

To search a bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Bundle** sub-menu.
A sub-menu appears.
3. Click the **Search** option from the **Bundle** sub-menu.
The **Bundle** screen appears.
4. Enter the search criteria in the **Search Bundle** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search** button.
A list of bundle that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing a Bundle

Procedure

To edit a bundle:

1. Search for the bundle in the **Bundle** screen whose details you want to edit.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the bundle whose details you want to edit.

The **Bundle Information** screen appears. It contains the following pages:

- [Bundle Information - Basic Details](#) on page 3344
- [Bundle Information - Other Details](#) on page 3345
- [Bundle Information - Eligibility](#) on page 3346
- [Bundle Information - Services](#) on page 3348
- [Bundle Information - Price List](#) on page 3348

The **Basic Details** page contains the following zone:

- [Basic Details](#)

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bundle Code	Displays the bundle code.	Not applicable
Bundle Name	Used to specify the bundle.	Yes
Description	Used to specify the description of the bundle.	No
Start Date	Displays the date from when the bundle is effective in the system.	Not applicable
End Date	Used to specify the date till when the bundle is effective in the system.	No
Terms and Conditions	Used to associate terms and conditions with the bundle. Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Market Product Name	Used to specify the market product.	No
	Note: The Search  appears corresponding to the Market Product Name field. On clicking the Search icon, the Search Market Product to Offer window appears where you can associate the market product with the offer.	
Product Category	Displays the product category.	Not applicable
Product Type	Displays the product type.	Not applicable
Product Name	Displays the concatenated string of information about the product separated by a comma (,).	Not applicable

3. Modify the required details in the **Basic Details** page.
4. Associate or disassociate the bundle with a market product in the **Basic Details** page.
5. Associate or disassociate the bundle from a division in the **Other Details** page, if required.
6. Add, edit, or remove the characteristics from the bundle in the **Other Details** page, if required.
7. Add, edit, or remove the eligibility rule from the bundle in the **Eligibility** page, if required.
8. Add, edit, or remove the price list from the bundle in the **Price List** page, if required.
9. Click **Submit**.

A window appears confirming the bundle is submitted in the system.

10. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to the product.

The bundle is modified.

Copying a Bundle

Instead of creating a bundle from scratch, you can create a new bundle using an existing bundle. This is possible through copying a bundle. On copying a bundle, the details including the associated divisions, characteristics, services and the price list are copied to the new bundle. You can then edit the details, if required.

Prerequisites

To copy a bundle, you should have:

- Bundle(whose copy you want to create) defined in the application

Procedure

To copy a bundle:

1. Search for a bundle in the **Bundle** screen whose copy you want to create.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the bundle whose copy you want to create.

The **Bundle Information** screen appears. It contains the following pages:

- [Bundle Information - Basic Details](#) on page 3344
- [Bundle Information - Other Details](#) on page 3345
- [Bundle Information - Eligibility](#) on page 3346
- [Bundle Information - Services](#) on page 3348
- [Bundle Information - Price List](#) on page 3348

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3344

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bundle Code	Used to specify the bundle code.	Yes
Bundle Name	Used to specify the bundle.	Yes
Description	Used to specify the description for the bundle.	No
Start Date	Used to specify the date from when the bundle is effective.	Yes
End Date	Used to specify the date till when the bundle is effective.	No
Terms and Conditions	Used to associate terms and conditions with the bundle. Note: The Search () appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Market Product Name	Used to specify the market product.	Yes
	Note: The Search  appears corresponding to the Market Product Name field. On clicking the Search icon, the Search Market Product to Offer window appears where you can associate the market product with the offer.	
Product Category	Displays the product category.	Not applicable
Product Type	Displays the product type.	Not applicable
Product Name	Displays the concatenated string of information about the product separated by a comma (,).	Not applicable

3. Modify the required details in the **Basic Details** page.
4. Associate or disassociate the bundle with a market product in the **Basic Details** page
5. Associate or disassociate the bundle from a division in the **Other Details** page, if required.
6. Add, edit, or remove the characteristics from the bundle in the **Other Details** page, if required.
7. Add, edit, or remove the eligibility rule from the bundle in the **Eligibility** page, if required.
8. Add, edit, or remove the price list from the bundle in the **Price List** page, if required.
9. Click **Submit**.

A window appears confirming the bundle is submitted in the system.

10. Click the **Close** button in the confirmation window.

Note: You cannot edit fields from the **Services** page when a service is already associated to the product.

The new bundle is added.

Adding a Bundle

Prerequisites

To add a bundle, you should have:

- Market product defined in the application.

Procedure

To add a bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Retail Banking** and then click the **Bundle** sub-menu.
A sub-menu appears.
3. Click the **Add** option from the **Bundle** sub-menu.

The **Bundle Information** screen appears. It contains the following pages:

- [Bundle Information - Basic Details](#) on page 3344
- [Bundle Information - Other Details](#) on page 3345
- [Bundle Information - Eligibility](#) on page 3346
- [Bundle Information - Services](#) on page 3348
- [Bundle Information - Price List](#) on page 3348

The **Basic Details** page contains the following zone:

- [Basic Details](#) on page 3344

The **Basic Details** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bundle Code	Used to specify the bundle code.	Yes
Bundle Name	Used to specify the bundle.	Yes
Description	Used to specify the description for the bundle.	No
Start Date	Used to specify the date from when the bundle is effective.	Yes
End Date	Used to specify the date till when the bundle is effective.	No
Terms and Conditions	Used to associate terms and conditions with the bundle. Note: The Search (🔍) appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search for Product window appears where you can associate the terms and conditions with the product.	No

The **Basic Details** zone contains the **Add Markets Product** section. This section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Market Product Name	Used to indicate the search value of the market product name.	Yes
	Note: The Search  appears corresponding to the Market Product Name field. On clicking the Search icon, the window appears where you can associate the terms and conditions with the product.	
Product Category	Displays the product category associated with the selected market product.	Not applicable
Product Type	Displays the product type associated with the selected market product.	Not applicable
Product Name	Displays the product associated with the selected market product.	Not applicable

4. Select the required market product from the search result.
5. Enter the required details in the **Basic Details** page.
6. Associate the bundle with divisions in the **Other Details** page, if required.
7. Define characteristics for the bundle in the **Other Details** page, if required.
8. Define and add eligibility rule and parameter for the bundle in the **Eligibility** page, if required.
9. Add a service for the bundle in the **Services** page, if required.
10. Search and select the price list for the bundle in the **Price List** page, if required..
11. Click **Submit**.

A window appears confirming the bundle is submitted in the system.

12. Click the **Close** button in the confirmation window.

The bundle is added.

Tip: Alternatively, you can access the **Bundle Information** screen by clicking the **Add Bundle** button in the **Page Title** area of the **Bundle** screen.

Chapter 50

Retail Banking Product Inbound Web Services

Topics:

- [Prerequisites](#)
- [C1_GETELIGIBLEPROD Business Service](#)
- [C1-GetProdDetail Business Service](#)
- [C1PRDCTENRL Business Service](#)

Oracle Revenue Management and Billing provides the ability to do the following through an inbound web service:

- View the details of a retail banking product, market product, offer, and bundle
- Derive the eligible market product, offer, and bundle for a person or an account

The following inbound web services are shipped with the product:

- **C1-GetEligibleProduct** - This is a SOAP based inbound web service. It supports the XML format. It enables you to derive eligible active market products, offers, and bundles for the person or account on the processing date. You can specify the eligibility parameters along with the person or account details when you want to simulate the response. It also enables you to view the details of an active product, market product, offer, and/or bundle which is effective on the processing date. You can extract the data in the following templates:
 - **Summary** - Used when you want to extract the details of the market product, offer, and/or bundle without pricing.
 - **Detail** - Used when you want to extract the details of the market product, offer, and/or bundle with pricing.
- **C1-GetEligibleProductRest** - This is a REST based inbound web service. It supports the JSON and XML formats. It enables you to derive eligible active market products, offers, and bundles for the person or account on the processing date. You can specify the eligibility parameters along with the person or account details when you want to simulate the response. It also enables you to view the details of an active product, market product, offer, and/or bundle which is effective on the processing date. You can extract the data in the following templates:
 - **Summary** - Used when you want to extract the details of the market product, offer, and/or bundle without pricing.
 - **Detail** - Used when you want to extract the details of the market product, offer, and/or bundle with pricing.
- **C1-GetProdDetail** - This is a SOAP based inbound web service. It supports the XML format. It enables you to view the details of an active market product, offer, or bundle which is effective on the processing date. You can extract the data in the following templates:
 - **Summary** - Used when you want to extract the details of the market product, offer, or bundle without pricing.

- **Detail** - Used when you want to extract the details of the market product, offer, or bundle with pricing.
- **C1-GetProdDetailRest** - This is a REST based inbound web service. It supports the JSON and XML formats. It enables you to view the details of an active market product, offer, or bundle which is effective on the processing date. You can extract the data in the following templates:
 - **Summary** - Used when you want to extract the details of the market product, offer, or bundle without pricing.
 - **Detail** - Used when you want to extract the details of the market product, offer, or bundle with pricing.

Prerequisites

The following table lists the prerequisites for eligible derivation of the active market products, offers, or bundles, to view the details of the active market products, offers, or bundles, and to enroll the account to market products, offers, or bundles through an inbound web service:

If you want to...	Then...
Drive eligible market products, offers, or bundles through an inbound web service	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Retail banking product catalog definitions are created in the system. • Price item pricing defined for all the retail banking product catalog definition in the system • Define a REST or SOAP based inbound web service to call the C1_GETELIGIBLEPROD business service. • Active market products, offers, or bundles are required in the system. • Provide the required input parameters, such as, <ul style="list-style-type: none"> • Product Category • Product Code • Product Type • Entity Code • Entity Type • Person account • Process Date
View the details of the active market product, offer, or bundle through an inbound web service	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Retail banking product catalog definitions are created in the system. • Price item pricing defined for all the retail banking product catalog definition in the system • Define a REST or SOAP based inbound web service to call the C1-GetProdDetail business service. • Active market products, offers, or bundles are required in the system. • Provide the required input parameters, such as, <ul style="list-style-type: none"> • Entity Code • Entity Type • Person account

If you want to...	Then...
Enroll the account to market products, offers, or bundles through an inbound web service	You need to do the following: <ul style="list-style-type: none"> • Division, Contract Type, Customer Class, and Customer details setup defined in the application to enroll the account to market products, offers, or bundles. • Definition of market products, offers, or bundles should be created in the system before sending enrollment request.

C1_GETELIGIBLEPROD Business Service

The **C1_GETELIGIBLEPROD** business service enables you to derive the eligible active market products, offers, or bundles for the person or an account on the processing date. It also enables you to view the details of an eligible active market products, offers, or bundles which are effective on the processing date. You can call this business service from an external system through an inbound web service. If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

You can extract the data in the following template:

- **Summary:** Used to derive the details of the eligible active market products, offers, and/or bundles without pricing.
- **Detail:** Used to derive the details of the eligible active market products, offers, and/or bundles with pricing.

To drive for an eligible active market products, offers, or bundles for the person or account, provide the following input parameters:

- Product Category
- Product Code
- Product Type
- Entity Type
- Entity Code
- Person account
- Process Date

Note: Entity is referred to market product, offer or bundle.

Eligible Market Products, Offers, or Bundles Derivation Request and Response - Tags in XML Format

Note: We recommend you to refer the topics [Eligible Market Products, Offers, or Bundles Derivation Request in the XML Format](#) on page 3363 and [Eligible Market Products, Offers, or Bundles Derivation Response in the XML Format](#) on page 3364 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1_GETELIGIBLEPROD** business service through an inbound web service, you need to ensure that the eligible active market products, offers, or bundles derivation request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
productCode	Used to specify the product code to derive the details of the eligible active entities.	Yes(Conditional)
	Note: Entity is referred to market product, offer or bundle.	Note: This field is required if the product category, entity type, or entity code are not entered.
productCategoryFlg	Used to specify the product category flag to derive the details of the eligible active entities.	No
	Note: Entity is referred to market product, offer or bundle.	
division	Used to specify the division to derive the details of the eligible active entities which are associated with a particular division.	Yes(Conditional)
		Note: This field is required with product code, product category, entity type or entity code to derive the entities of the specific division.

Tag Name	Tag Description	Mandatory (Yes or No)
entityType	Used to indicate the entity type to derive the details of the eligible active entities.	Yes(Conditional)
		Note: This field is required if the entity code is entered.
		Note: This field is required if the product code, or product category are not entered.
entityCode	Used to specify the entity code to derive the details of the eligible active entities.	Yes(Conditional)
		Note: This field is required if the product code or product category are not entered.
processDate	Used to specify the date to derive the details of effective market products, offers, or bundles for that date.	Yes(Conditional)
		Note: If the date is not entered then it will display the default date from the system on which the enquiry is made.
accountId	Used to indicate the account for which you want to derive the details of the active entities.	Yes(Conditional)
		Note: If this field is not entered then all active entities will be extract.
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
acctIdtype	Used to indicate the type of account identifier type for which you to derive the details of the eligible active entity.	No
acctIdentifierValue	Used to specify the value for the account identifier type for which you to derive the details of the eligible active entities.	Yes(Conditional)
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
personId	Used to specify the person account for which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional)
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
custIdTypeCd	Used to indicate the customer ID type for which you want to derive the details of eligible active market products, offers, or bundles.	No

Tag Name	Tag Description	Mandatory (Yes or No)
perIdentifireVal	Used to specify the value of person identifier for which you want to derive the details of eligible active market products, offers, or bundles.	No
productLinkedEntity	Used to specify product linked entity(market product code) for which you want to derive the details of eligible active offers or bundles linked with that particular code.	No
linkedEntityCode	Used to specify code of the linked entity(market product code) for which you want to derive the details of eligible active offers or bundles linked with that particular code.	Yes(Conditional) Note: This field is required when you want to derive offer or bundle linked with the particular market product.
linkedEntityType	Used to indicate type of the linked entity(market product code) for which you want to derive the details of eligible active offer or bundle linked with that particular code.	Yes(Conditional) Note: This field is required when you want to derive offer or bundle linked with the particular market product.
eligibleParameter	Used to specify the eligibility parameter based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.
priceParmCode	Used to specify the eligibility parameter code based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.
priceParmVal	Used to specify the eligibility parameter value based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.

The following table lists and describes the tags which appear in the eligible active market products, offers, or bundles derivation response XML format:

Tag Name	Tag Description
entityList	Displays the list of eligible market products, offers, or bundles.
entityCode	Displays the entity code.
entityType	Displays the entity type.
entityName	Displays the entity name.

Tag Name	Tag Description
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
entityCodeDescr	Displays the description of the entity code.
termsAndCondition	Displays the terms and condition of the entity.
termAndConditionDesc	Displays the description of the terms and conditions of the entity.
status	Displays the status of the entity.
productList	Displays the list of the eligible products to which the requested entity belongs.
productCode	Displays the code of the eligible product to which the requested entity belongs.
productDescription	Displays the description of the eligible product to which the requested entity belongs.
productTypFlgDesc	Displays the description of the eligible product type flag to which the requested entity belongs.
productCategoryFlgDesc	Displays the description of the eligible product category flag to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market products, offers, and bundles.
linkedEntityStartDate	Displays the date from when the linked entity is effective.
linkedEntityEndDate	Displays the date till when the linked entity is effective.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityType	Displays the linked entity type for the requested entity code.
	Note: It is applicable in case of offer and bundle.
EntityDivision	Displays the division to which the requested entity belongs.
divisionCode	Displays the division code to which the requested entity belongs.
eligibilityDetails	Indicates the name of group tag.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityRule	Indicates the name of group tag.
sequenceNumber	Indicates the sequence number of eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
operator	Indicates the operator to evaluate the condition.
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd1	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true eligibility condition.
falseFlag	Indicates the false eligibility condition.

Tag Name	Tag Description
insufficientFlag	Indicates the insufficient eligibility condition.
services	Indicates the name of group tag.
serviceName	Displays the service configured to the requested entity code.
mandatoryFlag	Indicates the mandatory or optional type of the services.
pricing	Indicates the name of group tag.
priority	Displays the priority in sequence of the price list of the entities.
priceListId	Displays the Price List ID.
priceListDescription	Displays the description of the price list.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
validityFlag	Indicates the validity of the price item.
sourceEntityType	Displays the source entity type.
sourceEntityCode	Displays the source entity code.
priceListInfo	Displays the information of the price list.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
pricecomptier	Indicates the name of group tag.
priceCompSequenceNo	Displays the sequence number of the price component.
priceItemParmGroupID	Displays the parameter group ID of the price item.
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceItemCode	Displays the price item code.
priceCriteria	Displays the price criteria of the price item.
priceCompId	Displays the price component ID.
tieSeqNum	Indicates the tiering sequence number.
version	Displays the version number.
priceComponentDescription	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
priceComponentDisplay	Displays the price component.

Tag Name	Tag Description
rcMapId	Displays the rate component map ID.
tieredFlag	Indicates the tire flag.
priceCompSequenceNo	Displays the sequence of the price component.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
inquiryTypeFlag	Displays the inquiry type flag. Note: If the inquiry type flag value is SMRY then service will provide details of eligible entities without price component and if the inquiry type flag value is DETL then service will provide details of eligible entities with price component

Sample Eligible Bundle Derivation Request and Response in the XML Format

Using the below example, you can derive the eligible bundles which are processed on **2022-01-11**.

Sample Eligible Bundle Request in the XML Format

```
<C1_GETELIGIBLEPROD>
  <productCode>LOAN_001</productCode>
  <productCategoryFlg></productCategoryFlg>
  <division>IND</division>
  <entityType>BNDL</entityType>
  <entityCode>CHECKBUND_003</entityCode>
  <processDate>2022-01-11</processDate>
  <accountId></accountId>
  <acctIdtype></acctIdtype>
  <acctIdentifierValue></acctIdentifierValue>
  <personId></personId>
  <custIdTypeCd></custIdTypeCd>
  <perIdentifireVal></perIdentifireVal>
  <productLinkedEntity>
    <linkedEntityCode>CHECKMP_001</linkedEntityCode>
    <linkedEntityType>MP</linkedEntityType>
  </productLinkedEntity>
  <eligibleParameter>
    <priceParmCode>ACC_DIVISION</priceParmCode>
    <priceParmVal>IND</priceParmVal>
  </eligibleParameter>
  <eligibleParameter>
    <priceParmCode>PERSON_STATE</priceParmCode>
    <priceParmVal>MH</priceParmVal>
  </eligibleParameter>
</C1_GETELIGIBLEPROD>
```

Sample Eligible Bundle Response in the XML Format

```
<C1_GETELIGIBLEPROD>

Eligible Market Products, Offers, or Bundles Derivation Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the topics [Eligible Market Products, Offers, or Bundles Derivation Request in the JSON Format](#) on page 3451 and [Eligible Market Products, Offers, or Bundles Derivation Response in the JSON Format](#) on page 3452 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes/values are structured in the JSON format.

Before calling the **C1_GETELIGIBLEPROD** business service through an inbound web service, you need to ensure that the eligible active market products, offers, or bundles derivation request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
productCode	Used to specify the product code to derive the details of the eligible active entities.	Yes(Conditional)
	Note: Entity is referred to market product, offer or bundle.	Note: This field is required if the product category, entity type, or entity code are not entered.
productCategoryFlg	Used to specify the product category flag to derive the details of the eligible active entities.	No
	Note: Entity is referred to market product, offer or bundle.	
division	Used to specify the division to derive the details of the eligible active entities which are associated with a particular division.	Yes(Conditional)
		Note: This field is required with product code, product category, entity type or entity code to extract the entities of the specific division.

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityType	Used to indicate the entity type to derive the details of the eligible active entities.	Yes(Conditional)
		Note: This field is required if the entity code is entered.
		Note: This field is required if the product code, or product category are not entered.
entityCode	Used to specify the entity code to derive the details of the eligible active entities.	Yes(Conditional)
		Note: This field is required if the product code or product category are not entered.
processDate	Used to specify the date to derive the details of effective market products, offers, or bundles for that date.	Yes(Conditional)
		Note: If the date is not entered then it will display the default date from the system on which the enquiry is made.
accountId	Used to indicate the account for which you want to derive the details of the eligible active entities.	Yes(Conditional)
		Note: If this field is not entered then all active entity will be extract.
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
acctldtype	Used to indicate the type of account identifier type for which you to derive the details of the eligible active entities.	No
acctIdentifierValue	Used to specify the value for the account identifier type for which you to derive the details of the eligible active entity.	Yes(Conditional)
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
personId	Used to specify the person account for which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional)
		Note: This field is required if you want to derive the details of eligible active entities for specific person or account.
custldTypeCd	Used to indicate the customer ID type for which you want to derive the details of eligible active market products, offers, or bundles.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
perIdentifireVal	Used to specify the value of person identifier for which you want to derive the details of eligible active market products, offers, or bundles.	No
productLinkedEntity	Used to specify product linked entity(market product code) for which you want to derive the details of eligible active offers or bundles linked with that particular code.	No
linkedEntityCode	Used to specify code of the linked entity(market product code) for which you want to derive the details of eligible active offers or bundles linked with that particular code.	Yes(Conditional) Note: This field is required when you want to derive offer or bundle linked with the particular market product.
linkedEntityType	Used to indicate type of the linked entity(market product code) for which you want to derive the details of eligible active offer or bundle linked with that particular code.	Yes(Conditional) Note: This field is required when you want to derive offer or bundle linked with the particular market product.
eligibleParameter	Used to specify the eligibility parameter based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.
priceParmCode	Used to specify the eligibility parameter code based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.
priceParmVal	Used to specify the eligibility parameter value based on which you want to derive the details of eligible active market products, offers, or bundles.	Yes(Conditional) Note: If this field is not entered then system will take the eligibility details from the person or account.

The following table lists and describes the attributes which appear in the eligible active market products, offers, or bundles derivation response JSON format:

Attribute Name	Attribute Description
entityList	Displays the list of eligible market products, offers, or bundles.
entityCode	Displays the entity code.
entityType	Displays the entity type.
entityName	Displays the entity name.

Attribute Name	Attribute Description
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
entityCodeDescr	Displays the description of the entity.
termsAndCondition	Displays the terms and condition of the entity.
termAndConditionDesc	Displays the description of the terms and conditions of the entity.
status	Displays the status of the entity.
productList	Displays the list of the eligible products to which the requested entity belongs.
productCode	Displays the code of the eligible product to which the requested entity belongs.
productDescription	Displays the description of the eligible product to which the requested entity belongs.
productTypFlgDesc	Displays the description of the eligible product type flag to which the requested entity belongs.
productCategoryFlgDesc	Displays the description of the eligible product category flag to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market products, offers, and bundles.
linkedEntityStartDate	Displays the date from when the linked entity is effective.
linkedEntityEndDate	Displays the date till when the linked entity is effective.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityType	Displays the linked entity for the requested entity code.
	Note: It is applicable in case of offer and bundle.
EntityDivision	Displays the division to which the requested entity belongs.
divisionCode	Displays the division code to which the requested entity belongs.
eligibilityDetails	Indicates the name of group tag.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityRule	Indicates the name of group tag.
sequenceNumber	Indicates the sequence number of eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
operator	Indicates the operator to evaluate the condition
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd1	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true condition.
falseFlag	Indicates the false condition.

Attribute Name	Attribute Description
insufficientFlag	Indicates the insufficient condition.
services	Indicates the name of group tag.
serviceName	Displays the service configured at the requested entity code.
mandatoryFlag	Indicates the mandatory or optional type of the services.
pricing	Indicates the name of group tag.
priority	Displays the priority in sequence of the price list of the entities.
priceListId	Displays the Price List ID.
priceListDescription	Displays the description of the price list.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
validityFlag	Indicates the validity of the price item.
sourceEntityType	Displays the source entity type.
sourceEntityCode	Displays the source entity code.
priceListInfo	Displays the information of the price list.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
pricecomptier	Indicates the name of group tag.
priceCompSequenceNo	Displays the sequence number of the price component.
priceItemParmGroupID	Displays the parameter group ID of the price item.
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceItemCode	Displays the price item code.
priceCriteria	Displays the price criteria of the price item.
priceCompId	Displays the price component ID.
tieSeqNum	Indicates the tiering sequence number.
version	Displays the version number.
priceComponentDescription	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
priceComponentDisplay	Displays the price component.

Attribute Name	Attribute Description
rcMapId	Displays the rate component map ID.
tieredFlag	Indicates the tire flag.
priceCompSequenceNo	Displays the sequence of the price component.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
inquiryTypeFlag	Displays the inquiry type flag. Note: If the inquiry type flag value is SMRY then service will provide details of eligible entities without price component and if the inquiry type flag value is DETL then service will provide details of eligible entities with price component

Market Product, Offer, or Bundle View Request - Tags in XML Format

Note: We recommend you to refer the topics [Market Product, Offer, or Bundle View Request in the XML Format](#) on page 3543 and [Market Product, Offer, or Bundle View Response in the XML Format](#) on page 3544 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-GetProdDetail** business service through an inbound web service, you need to ensure that the active market products, offers, or bundles view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
entityCode	Used to specify the entity code to get details of the active entity.	Yes
	Note: Entity is referred to market product, offer or bundle.	
entityType	Used to indicate the entity type to get details of the active entity.	Yes
	Note: Entity is referred to market product, offer or bundle.	
processDate	Used to specify the date to get the effective market product, offer, or bundle for that date.	Yes(Conditional)
		Note: If the date is not entered then it will display the default date from the system on which the enquiry is made.
inquiryTypeFlag	Used to indicate whether you want to view the basic details without price components or the complete details with price components of the entity. The valid values are: <ul style="list-style-type: none"> Detail (DETL) - Used to indicate whether you want to view the complete details with price components of the entity. Summary (SMRY) - Used to indicate whether you want to view the basic details without price components of the product. 	Yes(Conditional)
		Note: The default value is SMRY .

Tag Name	Tag Description	Mandatory (Yes or No)
division	Used to indicate the division to which the entity belongs.	Yes(Conditional)
		Note: This field is required with product code, product category, entity type or entity code to extract the entity of the specific division.

The following table lists and describes the tags which appear in the view active market products, offers, or bundles derivation response XML format:

Tag Name	Tag Description
entityName	Displays the entity name.
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
termsAndCondition	Displays the terms and condition of the entity.
status	Displays the status of the entity.
termsAndCondDescr	Displays the description of the terms and conditions of the entity.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
productlist	Displays the list of the eligible product to which the requested entity belongs.
productCode	Used to display the code of the parent product.
productName	Used to display the parent product.
prodTypFlg	Displays the code of the eligible product to which the requested entity belongs.
productCategoryFlgDes	Displays the description of the eligible product category flag to which the requested entity belongs.
EntityDivision	Used to indicate the division of the requested entity.
divisionCode	Displays the division to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market product, offer, and bundle.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityName	Displays the linked entity for the requested entity code.
linkedEntityType	Displays the linked entity type for the requested entity code.
eligibilityDetails	Indicates the name of group tag.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.

Tag Name	Tag Description
eligibilityRule	This is group tag under the eligibility details.
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true condition.
trueFlagDescr	Displays the description for the true flag condition.
falseFlag	Indicates the false condition.
falseFlagDescr	Displays the description for the false flag condition.
insufficientFlag	Indicates the insufficient condition.
insufficientFlagDescr	Displays the description for the insufficient flag condition.
eligibilityRuleFlg	Indicates the eligibility rule flag condition.
eligibilityDescr	Displays the description of the eligibility criteria for the input entity.
operator	Indicates the operator to evaluate the condition.
priceParmCode	Displays the price parameter code.
sequenceNumber	Displays the sequence number of the eligibility condition.
pricing	Displays the price of the requested entity.
priceListId	Displays the price list ID.
priceListDescription	Displays the description of the Price List.
priority	Displays the priority in sequence of the price list of the entity.
validityFlag	Indicates the validity of the price item.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemCodeDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
priceCompDescr	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
tieredFlag	Indicates the tire flag.
pricecomptier	Indicates the name of group tag.
priceItemParmGroupId	Displays the parameter group ID of the price item.

Tag Name	Tag Description
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceCompPriceItem	Displays the price component of the price item.
priceCriteria	Displays the price criteria of the price item.
priceCompTierId	Displays the price component tier ID.
tieringSeqNum	Indicates the tiering sequence number.
parmString	Indicates the parameter string of the price item.

Market Product, Offer, or Bundle View Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the topics [Market Product, Offer, or Bundle View Request in the JSON Format](#) on page 3637 and [Market Product, Offer, or Bundle View Response in the JSON Format](#) on page 3638 in parallel while understanding the below mentioned tags. This will help you to understand how the attribute/value pairs structured in the JSON format.

Before calling the **C1-GetProdDetail** business service through an inbound web service, you need to ensure that the active market products, offers, or bundles view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityCode	Used to specify the entity code to get the active entity.	Yes
	Note: Entity is referred to market product, offer or bundle.	
entityType	Used to indicate the entity type to get the active entity.	Yes
processDate	Used to specify the date to get the effective market product, offer, or bundle for that date.	Yes(Conditional)
		Note: If the date is not entered then it will display the default date from the system on which the enquiry is made.
inquiryTypeFlag	Used to indicate whether you want to view the basic details without price components or the complete details with price components of the entity. The valid values are: <ul style="list-style-type: none"> Detail (DETL) - Used to indicate whether you want to view the complete details with price components of the entity. Summary (SMRY) - Used to indicate whether you want to view the basic details without price components of the entity. 	Yes(Conditional)
		Note: The default is SMRY.
division	Used to indicate the division to which the entity belongs.	Yes(Conditional)
		Note: This field is required with product code, product category, entity type or entity code to extract the entity of the specific division.

The following table lists and describes the attributes which appear in the view active market products, offers, or bundles derivation response JSON format:

Attribute Name	Attribute Description
entityName	Displays the entity name.

Attribute Name	Attribute Description
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
termsAndCondition	Displays the terms and condition of the entity.
status	Displays the status of the entity.
termsAndCondndescri	Displays the description of the terms and conditions of the entity.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
productlist	Displays the list of the eligible product to which the requested entity belongs.
productCode	Used to display the code of the parent product.
productName	Used to display the parent product.
prodTypFlg	Displays the code of the eligible product to which the requested entity belongs.
productCategoryFlgDes	Displays the description of the eligible product category flag to which the requested entity belongs.
EntityDivision	Used to indicate the division of the requested entity.
divisionCode	Displays the division to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market product, offer, and bundle.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityName	Displays the linked entity for the requested entity code.
linkedEntityType	Displays the linked entity type for the requested entity code.
eligibilityDetails	Indicates the name of group tag.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.
eligibilityRule	This is group tag under the eligibility details.
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true condition.
trueFlagDescr	Displays the description for the true flag condition.
falseFlag	Indicates the false condition.
falseFlagDescr	Displays the description for the false flag condition.
insufficientFlag	Indicates the insufficient condition.

Attribute Name	Attribute Description
insufficientFlagDescr	Displays the description for the insufficient flag condition.
eligibilityRuleFlg	Indicates the eligibility rule flag condition.
eligibilityDescr	Displays the description of the eligibility criteria for the input entity.
operator	Indicates the operator to evaluate the condition.
priceParmCode	Displays the price parameter code.
sequenceNumber	Displays the sequence number of the eligibility condition.
pricing	Displays the price of the requested entity.
priceListId	Displays the price list ID.
priceListDescription	Displays the description of the Price List.
priority	Displays the priority in sequence of the price list of the entity.
validityFlag	Indicates the validity of the price item.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemCodeDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
priceCompDescr	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
tieredFlag	Indicates the tire flag.
pricecomptier	Indicates the name of group tag.
priceItemParmGroupID	Displays the parameter group ID of the price item.
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceCompPriceItem	Displays the price component of the price item.
priceCriteria	Displays the price criteria of the price item.
priceCompTierId	Displays the price component tier ID.
tieringSeqNum	Indicates the tiering sequence number.
parmString	Indicates the parameter string of the price item.

Sample Bundle View Request and Response in the JSON Format

Using the below example, you can view bundles which are processed on the date 2022-01-11.

Sample Bundle View Request in the JSON Format

```
{
  "C1-GetProdDetail":
  {
    "entityCode": "CHECKBUND_003",
    "entityType": "BNDL",
    "processDate": "2022-02-11",
    "inquiryTypeFlag": "DETL",
    "division": "IND",
  }
}
```

Sample Bundle View Response in the JSON Format

```
{
  "C1-GetProdDetail":
  {
    "entityCode": "CHECKBUND_003",
    "entityType": "BNDL",
    "processDate": "2022-02-11",
    "inquiryTypeFlag": "",
    "division": "IND",
  }
  "viewResponse":
  {
    "entityName": "CHECKBUND_003",
    "entityStartDate": "2022-01-11",
    "entityEndDate": "",

The **C1-CUSTACCSA** algorithm is invoked to create new person, account, and contract, if the person, account, and contract is not created while account enrollment with passing parameter values received for this service. This algorithm is attached at Division's algorithm. This algorithm do the following:

- Checks input service parameters which are required person such as person identifier type, person identifier type/value, account identifier, account identifier type/value, or division are not null. If the parameters are null the system send the error message.
- Checks whether the person id or person identifier type values exist in the system. If the values are exist in the system then it retrieve the person details or set the values to create the new person in the system. The values are:
 - Person Type
 - Primary Person Name Type
 - Person Name
 - Primary Person Identifier Type
 - Primary Person Identifier Type Value
 - Division Code
 - Date of Birth
 - Effective Date
 - Address Type
 - Address Line 1
 - Address Line 2
 - Address Line 3
 - Address Line 4
 - Phone
 - City
 - State
 - Zip Code
 - Country
 - Email
 - Characteristic Effective Date
 - Characteristic Type
 - Characteristic Value
- Get the required default values by fetching values configured at person defaulting template code passed as input to the algorithm. For example, Access Group
- Invoke the personDTO.new.entity() or person BO to create new person in the system.
- Create new account for person on successful person creation/retrieval.
- Get the required default values by fetching values configured at account defaulting template code passed as input to the algorithm.
- Sets required values to create new account in the system. The values are:
 - Customer Class - It can be fetched from account default template.
 - Access Group - It can be fetched from account default template.
 - Person ID - It can be used from retrieved or newly created person.

- Account Source - It can be fetched from account default template.
- Bill Route Type - It can be fetched from account default template. For example, Postal
- Account Category - It can be fetched from account default template. For example, Usage
- Relationship Type - It can be fetched from account default template. For example, Main Customer

The input values from service are:

- Setup Date - Account Opening Date
- Invoice Currency - Account Currency Code
- Account Closure Date - Closing date
- Account Closure Date - Closing date

Note: If the account closing date is provided then should not be less than Account Opening Date.

- Account Number Type code - Account Identifier Type
- Account Number - Account Identifier Value
- Division - Division Code
- Invokes the `accountDTO.new.entity()` or account BO to create new person in the system.
- On successful account creation, to retrieve the distinct contract types configured at price items associated with market product. The values for contract creation are:
 - Account ID
 - Division
 - Contract Type
 - Start Date
 - End Date

The soft parameter of the algorithm are:

- Person Defaulting Template - This parameter value is person defaulting template code. The parameter value is used to fetch default values required in the process of new person creation process.
- Account Defaulting Template - This parameter value is account defaulting template code. The parameter value is used to fetch default values required in the process of new account creation process.

This business service enables to edit the enrollment status and close/stop the enrollment by using action flag. The valid values of action flag are:

- Active
- Inactive
- Closed

The validation algorithm is executed before persisting the data using the business object. There are different validation for different action flag (Add, Edit, and Close) and different entities (Market Product, Offer and Bundle). The scenarios are:

If...	Then...
The entity type is Market Product and value of action flag is Add	<ul style="list-style-type: none"> The market product should be in Active status while enrolling to the account. The account enrollment date should be within market product start date and end date. The division code of the respective market product should be defined in which the account is opened.
The entity type is Market Product and value of action flag is Edit	
The entity type is Market Product and value of action flag is Close	<ul style="list-style-type: none"> The system should not accept future date as account close date.
The entity type is Offer and value of action flag is Add/Edit	<ul style="list-style-type: none"> The account can be enrolled to only one active offer at a time. The offer should be active while enrolling to the account. The offer subscription date should be within offer start date and end date. The account can be enrolled to the offer only if the market product in which that particular offer is defined is enrolled to the account. If the enrollment status is either Active or Inactive for “Account ID + Offer Code” combination then the same account ID cannot be enrolled to that offer once again. If there is Active offer subscribed to the account then same account cannot enroll to the other offer. The division code of the respective offer should be defined in which the account is opened.
The entity type is Offer and value of action flag is Close	<ul style="list-style-type: none"> The system should not accept future date as account close date.
The entity type is Bundle and value of action flag is Add/Edit	<ul style="list-style-type: none"> The account can be enrolled to only one active bundle at a time. The bundle should be active while enrolling to the account. The bundle subscription date should be within bundle start date and end date. The account numbers which are enrolled to the bundle should belongs to the same person. The division code of the respective offer should be defined in which the account is opened. If there is Active bundle subscribed to the account then same account cannot enroll to the other bundle.
The entity type is Bundle and value of action flag is Close	<ul style="list-style-type: none"> The system should not accept future date as account close date.

You can call this business service from an external system through an inbound web service. You can send the request in XML or JSON format through inbound web service in Oracle Revenue Management and Billing.

If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

To search for viewing the details active market product, offer, or bundle for the person or account, provide the following input parameters:

- Person Detail
- Account Detail
- Market Product Detail
- Offer Detail
- Bundle Detail

Market Product, Offer, or Bundle Enrollment Request and Response - Tags in XML Format

Note: We recommend you to refer the topics [Market Product, Offer, or Bundle Enrollment Request in the XML Format](#) on page 3721 and [Market Product, Offer, or Bundle Enrollment Response in the XML Format](#) on page 3723 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1PRDCTENRL** business service through an inbound web service, you need to ensure that the market product, offer, or bundle enrollment request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
enrollment	Indicates the name of group tag which encapsulates the single enrollment request.	<p data-bbox="1088 212 1464 264">No</p> <p data-bbox="1088 264 1464 537">Note: The market product should be enrolled to the account in the system before the offer or bundle is enrolled. The enrollment status for market product should be Active during enrollment and will change to Closed when action flag is pass as close.</p> <p data-bbox="1088 558 1464 663">Note: The market product, offer or bundle should be in Active status while enrolling to the account.</p> <p data-bbox="1088 684 1464 894">Note: When the service is called to enroll the account to offer / bundle subscription then offer / bundle subscription will created with the account which is already enrolled to market product.</p> <p data-bbox="1088 915 1464 1062">Note: The enrollment start date of offer or bundle should be between start date and end date of the offer or bundle definition.</p> <p data-bbox="1088 1083 1464 1230">Note: If there is 'Active Offer or Bundle subscription' exists in the system then same account cannot be enrolled to other offer or bundle.</p> <p data-bbox="1088 1251 1464 1314">Note: Only one account can be enroll to one market product.</p> <p data-bbox="1088 1335 1464 1440">Note: The account can be enrolled to another offer if the existing offer enrollment is closed.</p> <p data-bbox="1088 1461 1464 1566">Note: The account can be enrolled to another bundle if the existing bundle enrollment is closed.</p> <p data-bbox="1088 1587 1464 1902">Note: Multiple accounts of the same person can be enrolled to the bundle. If multiple accounts of the person are enrolled to the bundle then bundle enrollment/ subscription date and enrollment characteristics will be same for all accounts which are enrolled/ subscribed to the bundle.</p> <p data-bbox="1088 1923 1464 2091">Note: The service will create new account if the account is not exist in the system while enrolling a market product to the person account.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
enrollmentcharlist	Indicates the name of group tag.	No
characteristicValue	Used to specify the characteristic value.	Yes(Conditional) Note: This field is required if other characteristic value fields are not specified.
characteristicType	Used to indicate the characteristic type for characteristics.	Yes
effectiveDate	Used to specify the effective date for characteristics.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	<p>Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are:</p> <ul style="list-style-type: none"> • Add • Edit • Close <p>Note: In edit market product scenario, the account closing date should not be null and it should be greater than account opening date.</p> <p>Note: In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.</p> <p>Note: In edit offer/bundle scenario, you can only modify the status from Active to Inactive or Inactive to Active.</p> <p>Note: If service invokes Close account enrollment request to market product, then it will only close the enrollment to market product and not to offer or bundle.</p> <p>Note: You should invoke another Close request to close enrollment to offer or bundle.</p> <p>Note: In edit offer/bundle scenario, you can only modify the enrollment status from Active to Inactive or Inactive to Active.</p> <p>Note: If service invokes Close account enrollment request to the market product, then it will only close the enrollment to market product and not to the offer or bundle. The system should invoke another close request to close account enrollment to offer or bundle.</p> <p>Note: To stop or close enrollment the system should pass Action Flag value as Close, the Action Flag value is edit and enrollment is close then the system will throw an error.</p>	Yes
personDetails	Indicates the name of group tag.	No
personId	Used to indicate Person ID.	Yes(Conditional) <p>Note: This field is required if person identifier type and value are not specified.</p>
accountdetailslist	Indicates the name of group tag.	No

Tag Name	Tag Description	Mandatory (Yes or No)
accountcharlist	Indicates the name of group tag.	No
characteristicValue2	Used to specify the characteristic value.	Yes(Conditional) Note: This field is required if other characteristic value fields are not specified.
characteristicType2	Used to specify the characteristic type for characteristics.	Yes
effectiveDate2	Used to specify the effective date for characteristics.	Yes
actionFlag2	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> • Add • Edit • Close Note: In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.	No

Tag Name	Tag Description	Mandatory (Yes or No)
enrollmentStatus	Used to indicate status of enrollment/subscription. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Closed 	Yes(Conditional)
		Note: You can edit enrollment status only if the entity type is either offer or bundle.
		Note: The Market Product is set to Active during the enrollment and remains the same even after the enrollment end date is stamped. The status will change to Closed only when the action flag passes the Close value.
		Note: <ul style="list-style-type: none"> • The account can be enrolled to the offer if the status of the existing offer enrollment is Closed. • The account cannot be enrolled to another offer if Active offer enrollment already exists in the system.
		Note: You cannot enroll to another bundle if one bundle enrollment is already exists for an account in the system. It can be enrolled if the status of existing bundle is Closed .
		Note: The services which are associated with market product, offer, or bundle will be enrolled to the account. You cannot select or exclude the service available in market product, offer, or bundle.
closingDate	Used to indicate the account close date.	Yes(Conditional)
	Note: This will be considered as account enrollment end date.	Note: This field is required if the entity type is market product.
	Note: If the close date is specified, then the close date should be not be less than account opening date.	
accountId	Used to indicate the account ID.	Yes(Conditional) Note: This field is required if the entity type is market product.
currency	Used to indicate the currency code of account.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
setUpDate	Used to specify the date which is used as account enrollment date and new account setup date.	Yes
	Note: This date should not be the future date.	
division	Used to indicate the division to which the account belongs.	Yes
accountNumber	Used to indicate the bank account number.	Yes(Conditional)
		Note: This field is required if the account identifier type is specified.
accountIdentifierType	Used to indicate the account identifier type.	Yes(Conditional)
		Note: This field is required if the Account ID is not specified.
personcharlist	Indicates the name of group tag.	No
characteristicValue3	Used to specify the characteristic value.	Yes(Conditional)
		Note: This field is required if other characteristic value fields are not specified.
characteristicType3	Used to specify the characteristic type for characteristics.	Yes
effectiveDate3	Used to specify the effective date for characteristics.	Yes
actionFlag3		
emailAddress	Used to specify email address of the person.	Yes(Conditional)
		Note: This field is required for new customer.
country	Used to indicate the country where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.
state	Used to indicate the state where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.
city	Used to indicate the city where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.

Tag Name	Tag Description	Mandatory (Yes or No)
address4	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address3	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address2	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address1	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
addressTypeFlg	Used to indicate type of address.	Yes(Conditional)
		Note: This field is required for new customer.
creationDateTime	Used to specify the date and time when the person exists in the system.	Yes(Conditional)
		Note: This field is required for new customer.
birthDate	Used to indicate the date of birth of the person.	Yes(Conditional)
		Note: This field is required for new customer.
division2	Used to indicate the division to which the person account belongs.	No
personIdNumber	Used to indicate the person ID.	Yes(Conditional)
		Note: This field is required if the person identifier type and value is not specified.
personIdentifiers	Used to indicate the person identifier.	Yes(Conditional)
		Note: This field is required either person type or ID.
personNames	Used to specify the person name whose account you want to create.	Yes(Conditional)
		Note: This field is required for new customer.

Tag Name	Tag Description	Mandatory (Yes or No)
nameType	Used to indicate the person name type of the person name.	Yes(Conditional) Note: This field is required for new customer.
personOrBusiness		
startDate	Used to indicate offer/bundle enrollment start date. This date should not be back date. Note: It is applicable only to the offer/bundle .	Yes(Conditional) Note: This field is required if action flag is set to add and entity type is offer or bundle. Note: If the date is not specified then the field is set to the system date.
comments	Used to specify additional comments while enrollment.	No
entityCode	Used to indicate the entity code. Note: Entity is referred to market product, offer or bundle.	Yes
entityType	Used to indicate the type of entity for which enrollment is done.	Yes
enrollmentAction		

The following table lists and describes the tags which appear in the eligible active market products, offers, or bundles derivation response XML format:

Tag Name	Tag Description
error	Indicates the name of group tag.
errorDescription	Displays the error description.
errorMsgText	Displays the error message.
messageNumber	Displays the number of the message.
erroCategory	Displays the category of the error.
enrollResponse	Indicates the name of group tag which encloses the complete response of the service.
messageText	Displays the success message of the enrollment.
productEnrollmentId	Displays the product enrollment ID.

Market Product, Offer, or Bundle Enrollment Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the topics [Market Product, Offer, or Bundle Enrollment Request in the JSON Format](#) on page 3745 and [Market Product, Offer, or Bundle Enrollment Response in the JSON Format](#) on page 3747 in parallel while understanding the below mentioned attributes/values. This will help you to understand how the attributes/values are structured in the JSON format.

Before calling the **C1PRDCTENRL** business service through an inbound web service, you need to ensure that the market product, offer, or bundle enrollment request contains the following attribute:

Attribute Name	Attribute Description	Mandatory (Yes or No)
enrollment	Indicates the name of group attribute which encapsulates the single enrollment request.	<p>No</p> <p>Note: The market product should be enroll to the account in the system before the offer or bundle is enrolled.</p> <p>Note: The market product, offer or bundle should be in active status while enrolling to the account.</p> <p>Note: The enrollment start date of offer or bundle should be between start date and end date of the offer or bundle definition.</p> <p>Note: If there is 'Active Offer or Bundle subscription' exists in the system then same account cannot be enrolled to other offer or bundle.</p> <p>Note: Only one account can be enroll to one market product, offer, or bundle.</p> <p>Note: Multiple accounts of the same person can be enrolled to the bundle. If multiple accounts of the person are enrolled to the bundle then bundle enrollment/ subscription date and enrollment characteristics will be same for all accounts which are enrolled/ subscribed to the bundle.</p> <p>Note: The service will create new account if the account is not exist in the system while enrolling a market product to the person account.</p> <p>Note: The service will create new person if the person is not exist in the system while enrolling a market product to the person account.</p> <p>Note: The service will find contract types which are assigned to price items of the market product and creates the contract for each contract type.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
enrollmentcharlist	Indicates the name of group attribute.	No
characteristicValue	Used to specify the characteristic value.	Yes(Conditional) Note: This field is required if other characteristic value fields are not specified.
characteristicType	Used to indicate the characteristic type for characteristics.	Yes
effectiveDate	Used to specify the effective date for characteristics.	Yes
actionFlag	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> • Add • Edit • Close Note: In edit market product scenario, the account closing date should not be null and it should be greater than account opening date. Note: In edit market product scenario, you can only edit account characteristics. You cannot edit the other details. Note: In edit offer/bundle scenario, you can only modify the status from Active to Inactive or Inactive to Active . Note: If service invokes Close account enrollment request to market product, then it will only close the enrollment to market product and not to offer or bundle. Note: You should invoke another Close request to close enrollment to offer or bundle.	Yes
personDetails	Indicates the name of group attribute.	No
personId	Used to indicate Person ID.	Yes(Conditional) Note: This field is required if person identifier type and value are not specified.
accountdetailslist	Indicates the name of group attribute.	No
accountcharlist	Indicates the name of group attribute.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
characteristicValue2	Used to specify the characteristic value.	Yes(Conditional) Note: This field is required if other characteristic value fields are not specified.
characteristicType2	Used to specify the characteristic type for characteristics.	Yes
effectiveDate2	Used to specify the effective date for characteristics.	Yes
actionFlag2	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> • Add • Edit • Close Note: In edit market product scenario, you can only edit account characteristics. You cannot edit the other details. Note: In edit offer/bundle scenario, you can only modify the status from Active to Inactive or Inactive to Active . Note: If service invokes Close account enrollment request to the market product, then it will only close the enrollment to market product and not to the offer or bundle. Note: You should invoke another Close request to close enrollment to offer or bundle.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
enrollmentStatus	<p>Used to indicate status of enrollment/subscription.</p> <p>The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive • Closed 	Yes(Conditional)
		<p>Note: You can edit enrollment status only if the entity type is either offer or bundle.</p>
		<p>Note: The Market Product is set to Active during the enrollment and remains the same even after the enrollment end date is stamped. The status will change to Closed only when the action flag passes the Close value.</p>
		<p>Note:</p> <ul style="list-style-type: none"> • The account can be enrolled to the offer if the status of the existing offer enrollment is Closed. • The account cannot be enrolled to another offer if Active offer enrollment already exists in the system.
		<p>Note: You cannot enroll to another bundle if one bundle enrollment is already exists for an account in the system. It can be enrolled if the status of existing bundle is Closed.</p>
closingDate	Used to indicate the account close date.	Yes(Conditional)
	<p>Note: This will be considered as account enrollment end date.</p> <p>Note: If the close date is specified, then the close date should be not be less than account opening date.</p>	<p>Note: This field is required if the entity type is market product.</p>
accountId	Used to indicate the account ID.	<p>Yes(Conditional)</p> <p>Note: This field is required if the entity type is market product.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
currency	Used to indicate the currency code of account.	Yes
setUpDate	Used to specify the date which is used as account enrollment date and new account setup date.	Yes
	Note: This date should not be the future date.	
division	Used to indicate the division to which the account belongs.	Yes
accountNumber	Used to indicate the bank account number.	Yes(Conditional)
		Note: This field is required if the account identifier type is specified.
accountIdentifierType	Used to indicate the account identifier type.	Yes(Conditional)
		Note: This field is required if the Account ID is not specified.
personcharlist	Indicates the name of group attribute.	No
characteristicValue3	Used to specify the characteristic value.	Yes(Conditional)
		Note: This field is required if other characteristic value fields are not specified.
characteristicType3	Used to specify the characteristic type for characteristics.	Yes
effectiveDate3	Used to specify the effective date for characteristics.	Yes
actionFlag3		
emailAddress	Used to specify email address of the person.	Yes(Conditional)
		Note: This field is required for new customer.
country	Used to indicate the country where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.
state	Used to indicate the state where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.
city	Used to indicate the city where person belongs to.	Yes(Conditional)
		Note: This field is required for new customer.

Attribute Name	Attribute Description	Mandatory (Yes or No)
address4	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address3	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address2	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
address1	Used to indicate address line.	Yes(Conditional)
		Note: This field is required for new customer.
addressTypeFlg	Used to indicate type of address.	Yes(Conditional)
		Note: This field is required for new customer.
creationDateTime	Used to specify the date and time when the person exists in the system.	Yes(Conditional)
		Note: This field is required for new customer.
birthDate	Used to indicate the date of birth of the person.	Yes(Conditional)
		Note: This field is required for new customer.
division2	Used to indicate the division to which the person account belongs.	No
personIdNumber	Used to indicate the person ID.	Yes(Conditional)
		Note: This field is required if the person identifier type and value is not specified.
personIdentifiers	Used to indicate the person identifier type and person ID.	Yes(Conditional)
		Note: This field is required either person type or ID.
personNames	Used to specify the person name whose account you want to create.	Yes(Conditional)
		Note: This field is required for new customer.

Attribute Name	Attribute Description	Mandatory (Yes or No)
nameType	Used to indicate the person name type of the person name.	Yes(Conditional) Note: This field is required for new customer.
personOrBusiness		
startDate	Used to indicate offer/bundle enrollment start date. This date should not be back date. Note: It is applicable only to the offer/bundle .	Yes(Conditional) Note: This field is required if action flag is set to add and entity type is offer or bundle. Note: If the date is not specified then the field is set to the system date.
comments	Used to specify additional comments while enrollment.	No
entityCode	Used to indicate the entity code. Note: Entity is referred to market product, offer or bundle.	Yes
entityType	Used to indicate the type of entity for which enrollment is done.	Yes
enrollmentAction		

The following table lists and describes the attribute which appear in the eligible active market products, offers, or bundles derivation response JSON format:

Attribute Name	Attribute Description
error	Indicates the name of group attribute.
errorDescription	Displays the error description.
errorMsgText	Displays the error message.
messageNumber	Displays the number of the message.
erroCategory	Displays the category of the error.
enrollResponse	Indicates the name of group attribute which encloses the complete response of the service.
messageText	Displays the success message of the enrollment.
productEnrollmentId	Displays the product enrollment ID.

- [Deal Extraction through Inbound Web Service](#)

Oracle Revenue Management and Billing enables you to manage prospects and deals through the following inbound web services:

- [Prospect Creation, Modification, and View through Inbound Web Service](#) on page 3775
- [Prospect Account Creation, Modification, and View through Inbound Web Service](#) on page 3849
- [Deal Creation, Modification, and View through Inbound Web Service](#) on page 4055
- [Price List Assignments in Deal through Inbound Web Service](#) on page 3881
- [Deal Price Assignments and Commitments through Inbound Web Service](#) on page 3917
- [Deal Extraction through Inbound Web Service](#) on page 4261

Standard Pricing Comparison in Deal through Inbound Web Service

Oracle Revenue Management and Billing enables you to use the pricing from the standard price list of an entity during deal simulation to obtain an optimal pricing for a customer. Until now, if the **Standard Pricing Comparison** field was set to **Yes** in a deal type, the system used to calculate the following using the standard pricing while simulating the respective deals from the user interface:

- Deal level revenue, profit, profitability(%), revenue variation(%), and profit variation(%) using the standard pricing
- Product level revenue, profit, profitability(%), revenue variation(%), and profit variation(%) using the standard pricing
- Division level revenue, profit, profitability(%), revenue variation(%), and profit variation(%) using the standard pricing
- Revenue, profit, profitability(%), revenue variation(%), and profit variation(%) for each entity in the customer hierarchy using the standard pricing
- Revenue, profit, profitability(%), revenue variation(%), and profit variation(%) for each price item and pricing parameters combination using the standard pricing

You can then compare the financial summary of the deal using the original, proposed, standard, and recommended (if any) pricing. Now, the standard pricing comparison feature is also available when you simulate a deal through the **C1-Deal** or **C1-DealREST** inbound web service.

The following tags are newly introduced in the **C1-DealCreationUpdateIWS** business service schema:

Parent Tag	New Tags
<dealSimulationDetails>	<pre><standardDealFinancialSummary> <revenue></revenue> <cost></cost> <profit></profit> <profitabilityPercentage></ profitabilityPercentage> </standardDealFinancialSummary> <standardRevenueVariationPercentage></ standardRevenueVariationPercentage> <standardProfitVariationPercentage></ standardProfitVariationPercentage></pre>
<divisionFinancialSummaryDetails>	<pre><standardDealFinancialSummary> <revenue></revenue> <cost></cost> <profit></profit> <profitabilityPercentage></ profitabilityPercentage> </standardDealFinancialSummary> <standardRevenueVariationPercentage></ standardRevenueVariationPercentage> <standardProfitVariationPercentage></ standardProfitVariationPercentage></pre>
<productFinancialSummaryDetails>	<pre><standardDealFinancialSummary> <revenue></revenue> <cost></cost> <profit></profit> <profitabilityPercentage></ profitabilityPercentage> </standardDealFinancialSummary> <standardRevenueVariationPercentage></ standardRevenueVariationPercentage> <standardProfitVariationPercentage></ standardProfitVariationPercentage></pre>
<hierarchyDetails>	<pre><standardRevenue></standardRevenue> <standardCost></standardCost> <standardProfitabilityAmt></ standardProfitabilityAmt> <standardProfitabilityPercentage></ standardProfitabilityPercentage> <standardProfitVariationPercentage></ standardProfitVariationPercentage> <standardRevenueVariationPercentage></ standardRevenueVariationPercentage></pre>

Prospect Creation, Modification, and View through Inbound Web Service

Oracle Revenue Management and Billing enables you to create and edit a prospect person and its accounts through a web service. It also enables you to view the details of a prospect person and its accounts through a web service. You can send the prospect person creation, modification, or view request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-ProspectPerson** – This is a SOAP based web service. You can use this web service when you want to send the prospect person creation, modification, or view request in the XML format.

- **C1-ProspectPersonREST** – This is a REST based web service. You can use this web service when you want to send the prospect person creation, modification, or view request in the XML or JSON format.

Both these inbound web services call the **C1-ADDPROSPERSON** business service. This business service is used to do the following:

- **Create or edit a prospect person** – While creating a prospect person, you can specify the following details:
 - Name, division, customer segment, customer tier, access group, date of birth, e-mail address, and residential address of the prospect person
 - Characteristics of the prospect person
 - Identifiers of the prospect person
 - Parent and child persons of the prospect person

Note: Other prospect person can be a child of the prospect person. But, only existing person can be a parent of the prospect person.

To add a prospect person through the web service, you must set the action flag to **ADD**. However, to edit a prospect person through the web service, you must set the action flag to **UPD**. While editing a prospect person, you need to specify the prospect person ID to identify the prospect person whose details you want to change. During the update operation, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change. For example, if you want to update the characteristics of a prospect person through the web service, you need to provide all details of the prospect person including the new characteristics. While updating the prospect person, the system deletes the old characteristics and creates the new characteristics for the prospect person.

At a time, you can create or edit only one prospect person through the web service. While adding a prospect person, the status of the prospect person can only be set to **ACTIVE**. If you do not specify the status while adding a prospect person, the system, by default sets the status of the prospect person to **ACTIVE**. While updating a prospect person, you can change the status of the prospect person from **ACTIVE** to **INACTIVE**. On inactivating a prospect person, the system automatically changes the status of all its prospect accounts to **INACTIVE**. However, while activating an inactive prospect person, the system does not automatically activates all its prospect accounts. You need to explicitly send the request for activating the required prospect accounts of the prospect person. Also, note that you cannot update the details of an inactive prospect person unless you activate it. Similarly, you cannot update the details of an inactive prospect account unless you activate the prospect person and the respective prospect account.

- **Create or edit a prospect account of a prospect person** – While creating or updating a prospect person, you can create a prospect account for the prospect person. However, while updating a prospect person, you can create or edit a prospect account of the prospect person. While creating a prospect account, you can specify the following details:
 - Division, setup date, invoice currency, bill cycle, and access group of the prospect account
 - Characteristics of the prospect account
 - Identifiers of the prospect account

Note: The division and access group of the prospect account and prospect person should be same.

While associating the prospect person with the prospect account, the system by default sets the **Main Customer** flag to **true**, the **Financially Responsible** flag to **true**, the **Relationship Type** flag to **Main Customer**, and the **Address Source** flag to **PER**.

While editing a prospect account, you need to specify the prospect account ID to identify the prospect account whose details you want to change. During the update operation, the system replaces the prospect account data instead of editing it.

At a time, you can create or edit multiple prospect accounts of a prospect person through the web service. While adding a prospect account, the status of the prospect account can only be set to **ACTIVE**.

If you do not specify the status while adding a prospect account, the system, by default sets the status of the prospect account to **ACTIVE**. While updating a prospect account, you can change the status of the prospect account from **ACTIVE** to **INACTIVE**.

Note that you cannot update the details of an inactive prospect account unless you activate it. You cannot activate a prospect account when the main customer (i.e. prospect person) of the prospect account is inactive.

- **View the details of a prospect person** – While viewing the details of a prospect person, you need to:
 - Specify the prospect person ID or the primary prospect person identifier type, primary prospect person identifier, and division to determine the prospect person whose details you want to view
 - Set the action flag to **READ**

On processing the request, the system displays all details of the prospect person including the details of all its accounts in the response.

Prospect Add Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the prospect add request in the XML format:

```
<C1-ADDPROSPERSON>
  <actionFlag></actionFlag>

Prospect Add Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Prospect Add Request in the XML Format](#) on page 3777 and [Prospect Add Response in the XML Format](#) on page 3778 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to add a prospect. The valid value is: <ul style="list-style-type: none"> ADD <p>Note: If you do not specify the value in this tag, the system considers it as an ADD action.</p>	Yes
prospectPersonName	Used to specify the name of the prospect person. <p>Note: You should specify a person name which is already present in the system.</p>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
division	Used to indicate the division to which you want to associate the prospect person.	Yes
	Note: You must specify a division which is already defined in the system.	
customerSegment	Used to indicate the business component using which you want to create the prospect person.	No
	Note: You should specify only those values which are present in the CUST_SEG_FLG lookup field.	
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect person.	No
	Note: You should specify only those values which are present in the CUST_TIER_FLG lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect person.	Yes
	Note: You must specify an access group which is associated with the division to which the prospect belongs.	
emailAddress	Used to specify the email address of the prospect person.	No
status	Used to indicate the status in which you want to create the prospect person. <ul style="list-style-type: none"> • ACTIVE • INACTIVE 	Yes
	Note: The status of the prospect person can only be set to ACTIVE while adding a prospect person. If you do not specify the value in this tag, the system, by default sets the status of the prospect person to ACTIVE .	
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No

Tag Name	Tag Description	Mandatory (Yes or No)
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect person.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	Note: If you specify the idType tag, you need to specify the personIdNumber tag.	Note: This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
		Note: This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	Note: If you specify the personIdNumber tag, you need to specify the idType tag.	Note: This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
childPerType	Used to indicate the type of the child person.	Yes (Conditional) Note: This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs. Note: You must specify a division which is already defined in the system. The child person must belong to the division to which the prospect person is associated.	Yes (Conditional) Note: This data is required while specifying the child person of the prospect person.
childPersonIdType	Used to specify the identifier type using which the child person is created in the system. Note: If you specify the childPersonIdNumber tag, you need to specify the childPersonIdType tag.	Yes (Conditional) Note: This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system. Note: If you specify the childPersonIdType tag, you need to specify the childPersonIdNumber tag.	Yes (Conditional) Note: This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional) Note: This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person. Note: You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	No

Tag Name	Tag Description	Mandatory (Yes or No)
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> • EPER - Used to indicate that the parent person is an existing person in the system. • PRSP - Used to indicate that the parent person is a prospect in the system. 	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs. Note: You must specify a division which is already defined in the system. The parent person must belong to the division to which the prospect person is associated.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdNumber tag, you need to specify the parentPersonIdType tag.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdType tag, you need to specify the parentPersonIdNumber tag.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
customerClass	Used to indicate the customer class to which the account is associated. Note: You must specify a customer class which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs. Note: If you do not specify the value in this tag, the system considers the division of the person to whom the account is associated.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE Note: The status of the prospect account can only be set to ACTIVE while adding a prospect account. If you do not specify the value in this tag, the system, by default sets the status of the prospect account to ACTIVE .	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
currency	Used to indicate the currency code of the account.	Yes
	Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)
		Note: This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
	Note: If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.	Note: This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Note: This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No

Tag Name	Tag Description	Mandatory (Yes or No)
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the accountNumber tag, you need to specify the accountIdentifierType tag.</p> <p>You must specify an identifier type which is associated with the division to which the prospect account belongs.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value in this tag, the system considers the value as False.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	<p>Note: If you specify the accountIdentifierType tag, you need to specify the accountNumber tag.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<p>Note: This data is required while adding a characteristic for the prospect person.</p>
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		<p>Note: This data is required while adding a characteristic for the prospect person.</p>
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	<p>Note: You must specify a characteristic type which is associated with the division to which the prospect person belongs.</p>	<p>Note: This data is required while adding a characteristic for the prospect person.</p>

Note: At a time, you can add only one prospect person using the **C1-ADDPROSPERSON** business service. However, you can add multiple accounts for the prospect person using the **C1-ADDPROSPERSON** business service.

Once the prospect is created, all the details of prospect are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
prospectPersonId	Displays the identification value generated for the prospect person.
prospectAccountId	Displays the identification value generated for the prospect account.

Prospect Update Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Prospect Update Request in the XML Format](#) on page 3780 and [Prospect Update Response in the XML Format](#) on page 3781 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect person for whom you want to create the update request.	Yes
actionFlag	Used to indicate that you want to create request to update a prospect person. The valid value is: <ul style="list-style-type: none"> • UPD <p>Note: If you do not specify the value in this tag, the system considers it as an ADD action.</p>	Yes
prospectPersonName	Used to specify the name of the prospect person. <p>Note: You should specify a person name which is already present in the system.</p>	Yes
division	Used to indicate the division to which you want to associate the prospect person. <p>Note: You must specify a division which is already defined in the system.</p>	Yes
customerSegment	Used to indicate the business component using which you want to update the prospect person. <p>Note: You should specify only those values which are present in the CUST_SEG_FLG lookup field.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect person.	No
	Note: You should specify only those values which are present in the CUST_TIER_FLG lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect person.	Yes
	Note: You can specify only those access groups which are associated with the division to which the prospect belongs.	
emailAddress	Used to specify the email address of the prospect person.	No
status	Used to indicate the status in which you want to create the prospect person. <ul style="list-style-type: none"> ACTIVE INACTIVE 	Yes
	Note: The status of the prospect person can only be set to ACTIVE while adding a prospect person. If you do not specify the value in this tag, the system, by default sets the status of the prospect person to ACTIVE .	
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No

Tag Name	Tag Description	Mandatory (Yes or No)
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect person.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	Note: If you specify the idType tag, you need to specify the personIdNumber tag.	Note: This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
		Note: This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	Note: If you specify the personIdNumber tag, you need to specify the idType tag.	Note: This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	Note: You must specify a division which is already defined in the system. The child person must belong to the division to which the prospect person is associated.	Note: This data is required while specifying the child person of the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdNumber tag, you need to specify the childPersonIdType tag.	Note: This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdType tag, you need to specify the childPersonIdNumber tag.	Note: This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	Note: You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> • EPER - Used to indicate that the parent person is an existing person in the system. • PRSP - Used to indicate that the parent person is a prospect in the system. 	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs. Note: You must specify a division which is already defined in the system. The parent person must belong to the division to which the prospect person is associated.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdNumber tag, you need to specify the parentPersonIdType tag.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdType tag, you need to specify the parentPersonIdNumber tag.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
customerClass	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
	Note: You must specify a customer class which is associated with the division to which the prospect account belongs.	Note: This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.	Yes (Conditional)
	Note: If you do not specify the value in this tag, the system considers the division of the person to whom the account is associated.	Note: This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE 	Yes (Conditional)
	Note: The status of the prospect account can only be set to ACTIVE while adding a prospect account. If you do not specify the value in this tag, the system, by default sets the status of the prospect account to ACTIVE .	Note: This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional)
		Note: This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.	Yes
	Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)
		Note: This data is required while adding an account for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
	Note: If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.	Note: This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Note: This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	Note: If you specify the accountNumber tag, you need to specify the accountIdentifierType tag. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Note: This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
	Note: If you do not specify the value in this tag, the system considers the value as False .	Note: This data is required while associating an identifier with the prospect account.

Tag Name	Tag Description	Mandatory (Yes or No)
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	Note: If you specify the accountIdentifierType tag, you need to specify the accountNumber tag.	Note: This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personCharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect person belongs.	Note: This data is required while adding a characteristic for the prospect person.

Note:

At a time, you can edit only one prospect person through the web service.

While updating the prospect person, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change.

Once the prospect person is updated, all the details of prospect person are listed in the above mentioned tags.

Prospect View Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Prospect View Request in the XML Format](#) on page 3782 and [Prospect View Response in the XML Format](#) on page 3783 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect for which you want to create the view request..	Yes (Conditional)
	Note: If you do not specify the value in the prospectPersonId tag, you have to specify the personIdNumber and idType tags.	Note: This data is required for creating view request for a particular prospect.
actionFlag	Used to indicate that you want to create request to view a prospect. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this tag, the system considers it as an ADD action.	
personIdNumber	Used to specify the value of the person identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the idType tag, you need to specify the personIdNumber tag.	Note: This data is required for creating view request for a prospect using its person identifier details.
idType	Used to specify the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the personIdNumber tag, you need to specify the idType tag. The data in this tag is required if you do not specify the value in the prospectPersonId tag. You should specify an identifier type which is associated with the division to which the prospect belongs.	Note: This data is required for creating view request for a prospect using its person identifier details.
division	Used to specify the division of the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the personIdNumber and idType tags, you need to specify the division tag. You must specify a division which is already defined in the system.	Note: This data is required for creating view request for a prospect using its person identifier details.

Once the view request is created for the prospect, all the details of prospect are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
prospectPersonName	Displays the name of the prospect person.
division	Display the division to which the prospect person belongs.
customerSegment	Indicates the business component using which the prospect person is created in the system.
customerTier	Indicates the customer tier of the customer segment to which the prospect person is associated.
accessGroup	Indicates the user groups who can view and edit the details of the prospect person.
emailAddress	Displays the email address of the prospect person.
status	Indicates the current status of the prospect. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE
birthDate	Displays the date of birth of the prospect person.
address1	Displays the first line of the address. It may contain details, such as the house number.
address2	Displays the second line of the address. It may contain details, such as the apartment name.
address3	Displays the third line of the address. It may contain details, such as the street name.
address4	Displays the fourth line of the address. It may contain the landmark details.
city	Displays the city where the prospect person is located.
state	Displays the state where the city is located.
country	Displays the country where the state is located.
postal	Displays the postal code of the address.
prosPerIdentifierList	Displays a list of person identifiers for the prospect.
personIdNumber	Displays the value of the person identifier type.
persIsPrimaryId	Indicates whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False
idType	Displays the identifier type using which the prospect person is created in the system.
prosChildRelationList	Displays the list of child persons associated with the prospect person.
childPersonId	Displays the child person of the prospect person.
personRelationshipType	Indicates how the child person is associated with the prospect person.
childPerType	Indicates the type of the child person.
division	Indicates the division to which the child person belongs.
childPersonIdType	Indicates the identifier type using which the child person is created in the system.
childPersonIdNumber	Displays the value of the identifier type using which the child person is created in the system.

Tag Name	Tag Description
endDate	Displays the date till when the child person is associated with the prospect person.
startDate	Displays the date from when the child person is associated with the prospect person.
prosParentPerRelationList	Displays the list of parent persons associated with the prospect person.
parentPersonId	Displays the parent person of the prospect person.
personRelationshipType	Indicates how the parent person is associated with the prospect person.
parentPerType	Indicates the type of the parent person.
division	Indicates the division to which the parent person belongs.
parentPersonIdType	Indicates the identifier type using which the parent person is created in the system.
parentPersonIdNumber	Displays the value of the identifier type using which the parent person is created in the system.
endDate	Displays the date till when the prospect person is associated with the parent person.
startDate	Displays the date from when the prospect person is associated with the parent person.
prosAccountList	Displays the list of accounts for the prospect person.
personId	Displays the prospect person identification value.
prospectAccountId	Displays the account identification value that is generated for the prospect person.
customerClass	Indicates the customer class to which the account is associated.
accountDivision	Indicate the division to which the account belongs.
status	Indicates the status of the account. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE
setUpDate	Displays the date from when the account is available for the prospect person.
currency	Indicates the currency code of the account.
billCycle	Indicates the time interval in which the bills are created for the account.
accountAccessGroup	Indicates the user group who can view and edit the details of the account.
prosAcctCharacteristicList	Displays the list of characteristics for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays the list of identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> True False
accountNumber	Displays the account to which the identifier is associated.

Tag Name	Tag Description
prosPerCharacteristicList	Displays the list of characteristics defined for the prospect person.
personcharacteristicValue	Displays the value of the characteristic type.
personEffectiveDate	Displays the date from when the characteristic is effective for the prospect person.
personCharType	Indicates the characteristic type.

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a prospect creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Prospect Add Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Prospect Add Request in the JSON Format](#) on page 3812 and [Prospect Add Response in the JSON Format](#) on page 3814 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are nested in the JSON format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to add a prospect. The valid value is: <ul style="list-style-type: none"> ADD <p>Note: If you do not specify the value in this attribute, the system considers it as an ADD action.</p>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
prospectPersonName	Used to specify the name of the prospect person.	Yes
	Note: You should specify a person name which is already present in the system.	
division	Used to indicate the division to which you want to associate the prospect.	Yes
	Note: You must specify a division which is already defined in the system.	
customerSegment	Used to indicate the business component using which you want to create the prospect.	No
	Note: You should specify only those values which are present in the CUST_SEG_FLG lookup field.	
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect.	No
	Note: You should specify only those values which are present in the CUST_TIER_FLG lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect.	Yes
	Note: You must specify an access group which is associated with the division to which the prospect belongs.	
emailAddress	Used to specify the email address of the prospect.	No
status	Used to indicate the status in which you want to create the prospect. <ul style="list-style-type: none"> • ACTIVE • INACTIVE 	Yes
	Note: The status of the prospect person can only be set to ACTIVE while adding a prospect person. If you do not specify the value in this attribute, the system, by default sets the status of the prospect person to ACTIVE .	
birthDate	Used to specify the date of birth of the prospect person.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	Note: If you specify the idType attribute, you need to specify the personIdNumber attribute.	Note: This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
		Note: This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	Note: If you specify the personIdNumber attribute, you need to specify the idType attribute.	Note: This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	Note: You must specify a division which is already defined in the system.	Note: This data is required while specifying the child person of the prospect person.
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdNumber attribute, you need to specify the childPersonIdType attribute.	Note: This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdType attribute, you need to specify the childPersonIdNumber attribute.	Note: This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	Note: You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> EPER - Used to indicate that the parent person is an existing person in the system. PRSP - Used to indicate that the parent person is a prospect in the system. 	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs. Note: You must specify a division which is already defined in the system.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdNumber attribute, you need to specify the parentPersonIdType attribute.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdType attribute, you need to specify the parentPersonIdNumber attribute.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional) Note: This data is required while specifying the parent person relationship of the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
customerClass	Used to indicate the customer class to which the account is associated. Note: You must specify a customer class which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs. Note: If you do not specify the value in this attribute, the system considers the division of the person to whom the account is associated.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE Note: The status of the prospect account can only be set to ACTIVE while adding a prospect account. If you do not specify the value in this attribute, the system, by default sets the status of the prospect account to ACTIVE .	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account. Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account. Note: If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional) Note: This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type. Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account. Note: If you specify the accountNumber attribute, you need to specify the accountIdentifierType attribute. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while associating an identifier with the prospect account.

Attribute Name	Attribute Description	Mandatory (Yes or No)
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the value as False .	Note: This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	Note: If you specify the accountIdentifierType attribute, you need to specify the accountNumber attribute.	Note: This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect person belongs.	Note: This data is required while adding a characteristic for the prospect person.

Note: At a time, you can add only one prospect person using the **C1-ADDPROSPERSON** business service. However, you can add multiple accounts for the prospect person using the **C1-ADDPROSPERSON** business service.

Once the prospect is created, all the details of prospect are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
prospectPersonId	Displays the identification value generated for the prospect person.
prospectAccountId	Displays the identification value generated for the prospect account.

childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	Note: You must specify a division which is already defined in the system. The child person must belong to the division to which the prospect person is associated.	Note: This data is required while specifying the child person of the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdNumber attribute, you need to specify the childPersonIdType attribute.	Note: This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	Note: If you specify the childPersonIdType attribute, you need to specify the childPersonIdNumber attribute.	Note: This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	Note: You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> • EPER - Used to indicate that the parent person is an existing person in the system. • PRSP - Used to indicate that the parent person is a prospect in the system. 	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs. Note: You must specify a division which is already defined in the system. The parent person must belong to the division to which the prospect person is associated.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdNumber attribute, you need to specify the parentPersonIdType attribute.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system. Note: If you specify the parentPersonIdType attribute, you need to specify the parentPersonIdNumber attribute.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional)
		Note: This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional)
		Note: This data is required while adding an account for the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
customerClass	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
	Note: You must specify a customer class which is associated with the division to which the prospect account belongs.	Note: This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the division of the person to whom the account is associated.	Note: This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE 	Yes (Conditional)
	Note: The status of the prospect account can only be set to ACTIVE while adding a prospect account. If you do not specify the value in this attribute, the system, by default sets the status of the prospect account to ACTIVE .	Note: This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.	Yes
	Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional) Note: This data is required while adding an account for the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.	Note: This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Note: This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	Note: If you specify the accountNumber attribute, you need to specify the accountIdentifierType attribute. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Note: This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the value as False .	Note: This data is required while associating an identifier with the prospect account.

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	Note: If you specify the accountIdentifierType attribute, you need to specify the accountNumber attribute.	Note: This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personCharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		Note: This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect person belongs.	Note: This data is required while adding a characteristic for the prospect person.

Note:

At a time, you can edit only one prospect person through the web service.

While updating the prospect person, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change.

Once the prospect is updated, all the details of prospect are listed in the above mentioned attributes.

Prospect View Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Prospect View Request in the JSON Format](#) on page 3818 and [Prospect View Response in the JSON Format](#) on page 3819 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect for which you want to create the view request.	Yes (Conditional)
	Note: If you do not specify the value in the prospectPersonId attribute, you have to specify the personIdNumber and idType attributes.	Note: This data is required for creating view request for a particular prospect.
actionFlag	Used to indicate that you want to create request to view a prospect. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this attribute, the system considers it as an ADD action.	
personIdNumber	Used to specify the value of the person identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the idType attribute, you need to specify the personIdNumber attribute.	Note: This data is required for creating view request for a prospect using its person identifier details.
idType	Used to specify the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the personIdNumber attribute, you need to specify the idType attribute. The data in this attribute is required if you do not specify the value in the prospectPersonId attribute. You should specify an identifier type which is associated with the division to which the prospect belongs.	Note: This data is required for creating view request for a prospect using its person identifier details.
division	Used to specify the division of the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	Note: If you specify the personIdNumber and idType attributes, you need to specify the division attribute. You must specify a division which is already defined in the system.	Note: This data is required for creating view request for a prospect using its person identifier details.

Once the view request is created for the prospect, all the details of prospect are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
prospectPersonName	Displays the name of the prospect person.
division	Display the division to which the prospect person belongs.
customerSegment	Indicates the business component using which the prospect person is created in the system.
customerTier	Indicates the customer tier of the customer segment to which the prospect person is associated.
accessGroup	Indicates the user groups who can view and edit the details of the prospect person.
emailAddress	Displays the email address of the prospect person.
status	Indicates the current status of the prospect. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE
birthDate	Displays the date of birth of the prospect person.
address1	Displays the first line of the address. It may contain details, such as the house number.
address2	Displays the second line of the address. It may contain details, such as the apartment name.
address3	Displays the third line of the address. It may contain details, such as the street name.
address4	Displays the fourth line of the address. It may contain the landmark details.
city	Displays the city where the prospect person is located.
state	Displays the state where the city is located.
country	Displays the country where the state is located.
postal	Displays the postal code of the address.
prosPerIdentifierList	Displays a list of person identifiers for the prospect.
personIdNumber	Displays the value of the person identifier type.
persIsPrimaryId	Indicates whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> True False
idType	Displays the identifier type using which the prospect person is created in the system.
prosChildRelationList	Displays the list of child persons associated with the prospect person.
childPersonId	Displays the child person of the prospect person.
personRelationshipType	Indicates how the child person is associated with the prospect person.
childPerType	Indicates the type of the child person.
division	Indicates the division to which the child person belongs.
childPersonIdType	Indicates the identifier type using which the child person is created in the system.

Attribute Name	Attribute Description
childPersonIdNumber	Displays the value of the identifier type using which the child person is created in the system.
endDate	Displays the date till when the child person is associated with the prospect person.
startDate	Displays the date from when the child person is associated with the prospect person.
prosParentPerRelationList	Displays the list of parent persons associated with the prospect person.
parentPersonId	Displays the parent person of the prospect person.
personRelationshipType	Indicates how the parent person is associated with the prospect person.
parentPerType	Indicates the type of the parent person.
division	Indicates the division to which the parent person belongs.
parentPersonIdType	Indicates the identifier type using which the parent person is created in the system.
parentPersonIdNumber	Displays the value of the identifier type using which the parent person is created in the system.
endDate	Displays the date till when the prospect person is associated with the parent person.
startDate	Displays the date from when the prospect person is associated with the parent person.
prosAccountList	Displays the list of accounts for the prospect person.
personId	Displays the prospect person identification value.
prospectAccountId	Displays the account identification value that is generated for the prospect person.
customerClass	Indicates the customer class to which the account is associated.
accountDivision	Indicate the division to which the account belongs.
status	Indicates the status of the account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE
setUpDate	Displays the date from when the account is available for the prospect person.
currency	Indicates the currency code of the account.
billCycle	Indicates the time interval in which the bills are created for the account.
accountAccessGroup	Indicates the user group who can view and edit the details of the account.
prosAcctCharacteristicList	Displays the list of characteristics for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays the list of identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the account is defined.

Attribute Name	Attribute Description
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False
accountNumber	Displays the account to which the identifier is associated.
prosPerCharacteristicList	Displays the list of characteristics defined for the prospect person.
personcharacteristicValue	Displays the value of the characteristic type.
personEffectiveDate	Displays the date from when the characteristic is effective for the prospect person.
personCharType	Indicates the characteristic type.

    }
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect update request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Prospect Account Creation, Modification, and View through Inbound Web Service

Oracle Revenue Management and Billing enables you to create and edit a prospect account of an existing person or a prospect person through a web service. It also enables you to view the details of a prospect account through a web service. You can send the prospect account creation, modification, or view request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-ProspectAccount** – This is a SOAP based web service. You can use this web service when you want to send the prospect account creation, modification, or view request in the XML format.

- **C1-ProspectAccountREST** – This is a REST based web service. You can use this web service when you want to send the prospect account creation, modification, or view request in the XML or JSON format.

Both these inbound web services call the **C1_PRSACCT_SERVICE** business service. This business service is used to do the following:

- **Create or edit a prospect account** – While creating a prospect account, you can specify the following details:
 - Entity (i.e. existing person or prospect person) for whom you want to create the prospect account
 - Division, setup date, invoice currency, bill cycle, and access group of the prospect account
 - Characteristics of the prospect account
 - Identifiers of the prospect account

Note: The division and access group of the prospect account and the existing or prospect person should be same.

While associating the existing or prospect person with the prospect account, the system by default sets the **Main Customer** flag to **true**, the **Financially Responsible** flag to **true**, the **Relationship Type** flag to **Main Customer**, and the **Address Source** flag to **PER**.

To add a prospect account for an existing or prospect person through the web service, you must set the action flag to **ADD**. However, to edit a prospect account of an existing or prospect person through the web service, you must set the action flag to **UPD**. While editing a prospect account, you need to specify the following details to identify the prospect account whose details you want to change:

- Entity (i.e. existing person or prospect person) whose prospect account you want edit
- Prospect Account ID

During the update operation, the system replaces the prospect account data instead of editing it. At a time, you can create or edit one prospect account of an existing or prospect person through the web service. While adding a prospect account, the status of the prospect account can only be set to **ACTIVE**. If you do not specify the status while adding a prospect account, the system, by default sets the status of the prospect account to **ACTIVE**. While updating a prospect account, you can change the status of the prospect account from **ACTIVE** to **INACTIVE**. You can activate an inactive prospect account of an existing or prospect person whenever required. While activating an inactive prospect account of a prospect person, the system checks whether the status of the prospect person is **ACTIVE**. If so, the system enables you to activate an inactive prospect account of the prospect person.

- **View the details of a prospect account** – While viewing the details of a prospect account, you need to:
 - Specify the prospect account ID to determine the prospect account whose details you want to view
 - Set the action flag to **READ**

On processing the request, the system displays all details of the prospect account including its identifiers and characteristics in the response.

Prospect Account Add Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the prospect account add request in the XML format:

```
<C1_PRSACCT_SERVICE>

Prospect Account Add Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Prospect Account Add Request in the XML Format](#) on page 3850 and [Prospect Account Add Response in the XML Format](#) on page 3851 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1_PRSACT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person for whom you want to add the prospect account.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person for whom you want to add the prospect account. The valid values are: <ul style="list-style-type: none"> • EPER • PRSP 	Yes
actionFlag	Used to indicate that you want to create request to add a prospect account. The valid value is: <ul style="list-style-type: none"> • ADD <p>Note: If you do not specify the value in this tag, by default, the system considers it as an ADD action.</p>	Yes
status	Used to indicate the status of the prospect account. <ul style="list-style-type: none"> • ACTIVE • INACTIVE <p>Note: While adding a prospect account, the status of the prospect account can only be set to ACTIVE. If you do not specify the value in this tag, by default, the system considers it as ACTIVE status.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
customerClass	Used to indicate the customer class to which the prospect account belongs.	Yes
	Note: You must specify a customer class which is associated with the division to which the prospect account belongs.	
accountDivision	Used to indicate the division to which the prospect account belongs.	Yes
	<p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	Used to indicate the currency which you want to use for generating the invoice of the prospect account.	Yes
	Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes (Conditional)
		Note: This data is required while defining the prospect account.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes
	<p>Note:</p> <p>If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.</p> <p>You must specify an access group which is associated with the division to which the prospect account and the person belongs.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional) Note: This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type. Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account. Note: If you specify the accountNumber tag, you need to specify the accountIdentifierType tag. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Yes (Conditional) Note: This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False Note: If you do not specify the value in this tag, the system considers the value as False .	Yes (Conditional) Note: This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account. Note: If you specify the accountIdentifierType tag, you need to specify the accountNumber tag.	Yes (Conditional) Note: This data is required while associating an identifier with the prospect account.

Note:

At a time, you can add only one prospect account for the existing or prospect person through the **C1_PRSACCT_SERVICE** business service.

If the prospect account status is **INACTIVE** in the system, you must set the action flag as **UPD** while adding the prospect account through the inbound web service.

Once the prospect account is created, all the details of prospect account are listed in the above mentioned tags along with the following tag:

Tag Name	Tag Description
prospectAccountId	Displays the prospect account identification number.

Note: We recommend you to refer the topics [Prospect Account Update Request in the XML Format](#) on page 3852 and [Prospect Account Update Response in the XML Format](#) on page 3852 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1_PRSACCT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person whose prospect account you want to update.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person whose prospect account you want to update. The valid values are: <ul style="list-style-type: none"> • EPER • PRSP 	Yes
actionFlag	Used to indicate that you want to create request to update a prospect account. The valid value is: <ul style="list-style-type: none"> • UPD <p>Note: If you do not specify the value in this tag, by default, the system considers it as an ADD action.</p>	Yes
prospectAccountId	Used to specify the prospect account whose details you want to update.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
status	<p>Used to indicate the current status of the prospect account.</p> <ul style="list-style-type: none"> • ACTIVE • INACTIVE <p>Note:</p> <p>You can change the status of the prospect account from ACTIVE to INACTIVE while updating.</p> <p>You can change the status of a prospect account from INACTIVE to ACTIVE only when the status of the existing or prospect person to whom the prospect account belongs is ACTIVE.</p> <p>If you do not specify the value in this tag, the system considers it as an ACTIVE status.</p>	No
customerClass	<p>Used to indicate the customer class to which the prospect account belongs.</p> <p>Note: You must specify a customer class which is associated with the division to which the prospect account belongs.</p>	Yes
accountDivision	<p>Used to indicate the division to which the prospect account belongs.</p> <p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	Yes
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
currency	Used to indicate the currency which you want to use for generating the invoice of the prospect account.	Yes
	Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes
	Note: If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs. You must specify an access group which is associated with the division to which the prospect account and the person belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Note: This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No

Tag Name	Tag Description	Mandatory (Yes or No)
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the accountNumber tag, you need to specify the accountIdentifierType tag.</p> <p>You must specify an identifier type which is associated with the division to which the prospect account belongs.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value in this tag, the system considers the value as False.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.	Yes (Conditional)
	<p>Note: If you specify the accountIdentifierType tag, you need to specify the accountNumber tag.</p>	<p>Note: This data is required while associating an identifier with the prospect account.</p>

Note:

At a time, you can update only one prospect account of the existing or prospect person through the **C1_PRSACCT_SERVICE** business service.

When you create a request to update a prospect account, the system replaces the prospect account data instead of editing it. Therefore, you should provide all details of the prospect account including the data that you want to change.

Once the prospect account is updated, all the details of prospect account are listed in the above mentioned tags.

Prospect Account View Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Prospect Account View Request in the XML Format](#) on page 3853 and [Prospect Account View Response in the XML Format](#) on page 3853 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1_PRSACCT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the prospect account details. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this tag, by default, the system considers it as an ADD action.	
prospectAccountId	Used to specify the prospect account whose details you want to view.	Yes

Once the prospect account view request is created, all the details of prospect account are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
mainEntityId	Displays the person to whom the prospect account belongs.
mainEntityType	Indicates whether the person is an existing person or a prospect person to whom the prospect account belongs. The valid values are: <ul style="list-style-type: none"> • EPER • PRSP
status	Indicates the status of the prospect account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE
customerClass	Indicates the customer class to which the prospect account belongs.
accountDivision	Indicates the division to which the prospect account belongs.
setUpDate	Displays the date from when the prospect account is configured for the person.
currency	Indicates the currency which you want to use for generating the invoice of the prospect account.
billCycle	Indicate the time interval in which you want to generate the bills for the prospect account.
accountAccessGroup	Indicates the user group who can view and edit the details of the prospect account.
prosAcctCharacteristicList	Displays the list of characteristic for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the prospect account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays a list of account identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the prospect account is defined.

Tag Name	Tag Description
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False
accountNumber	Displays the value of the identifier type using which the prospect account is created.

Sample Prospect Account Creation Request and Response in the XML Format

Using the below example, you can create the prospect account for 1723682728 prospect person in 930 division.

Sample Prospect Account Creation Request in the XML Format

```
<C1_PRSACT_SERVICE>
  <mainEntityId>1723682728</mainEntityId>
  <mainEntityType>PRSP</mainEntityType>
  <actionFlag>ADD</actionFlag>
  <status>ACTIVE</status>
  <customerClass>BK</customerClass>
  <accountDivision>930</accountDivision>
  <setUpDate>2019-11-21</setUpDate>
  <currency>USD</currency>
  <billCycle>YEAR</billCycle>
  <accountAccessGroup>***</accountAccessGroup>
  <prosAcctCharacteristicList>
    <characteristicValue>CURRENT</characteristicValue>
    <effectiveDate>2019-11-21</effectiveDate>
    <characteristicType>C1_F_ATY</characteristicType>
  </prosAcctCharacteristicList>
  <prosAcctIdentifierList>
    <accountIdentifierType>ACCT_NM</accountIdentifierType>
    <isPrimaryId>TRUE</isPrimaryId>
    <accountNumber>2429108813</accountNumber>
  </prosAcctIdentifierList>
</C1_PRSACT_SERVICE>
```

Note: If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

Sample Prospect Account Creation Response in the XML Format

```
<C1_PRSACT_SERVICE>
  <mainEntityId>1723682728</mainEntityId>
  <mainEntityType>PRSP</mainEntityType>
  <actionFlag>ADD</actionFlag>
  <prospectAccountId>1368615549</prospectAccountId>
  <status>ACTIVE</status>
  <customerClass>BK</customerClass>
  <accountDivision>930</accountDivision>
  <setUpDate>2019-11-21</setUpDate>
  <currency>USD</currency>
  <billCycle>YEAR</billCycle>
```

```

<accountAccessGroup>***</accountAccessGroup>
<prosAcctCharacteristicList>
  <characteristicValue>CURRENT</characteristicValue>
  <effectiveDate>2019-11-21</effectiveDate>
  <characteristicType>C1_F_ATY</characteristicType>
</prosAcctCharacteristicList>
<prosAcctIdentifierList>
  <accountIdentifierType>ACCT_NM</accountIdentifierType>
  <isPrimaryId>TRUE</isPrimaryId>
  <accountNumber>2429108813</accountNumber>
</prosAcctIdentifierList>
</C1_PRSACCT_SERVICE>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a prospect account creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Prospect Account Add Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Prospect Account Add Request in the JSON Format](#) on page 3865 and [Prospect Account Add Response in the JSON Format](#) on page 3866 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are nested in the JSON format.

Before calling the **C1_PRSACT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person for whom you want to add the prospect account.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person for whom you want to add the prospect account. The valid values are: <ul style="list-style-type: none"> MAIN PRSP 	Yes
actionFlag	Used to indicate that you want to create request to add a prospect account. The valid value is: <ul style="list-style-type: none"> ADD 	Yes
	Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
status	Used to indicate the status of the prospect account. <ul style="list-style-type: none"> • ACTIVE • INACTIVE 	No
	<p>Note:</p> <p>While adding a prospect account, the status of the prospect account can only be set to ACTIVE.</p> <p>If you do not specify the value in this attribute, by default, the system considers it as ACTIVE status.</p>	
customerClass	Used to indicate the customer class to which the prospect account belongs.	Yes
	<p>Note: You must specify a customer class which is associated with the division to which the prospect account belongs.</p>	
accountDivision	Used to indicate the division to which the prospect account belongs.	Yes
	<p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	Used to indicate the currency which you want to use for generating the invoice of the prospect account.	Yes
	<p>Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.</p>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes (Conditional)
		Note: This data is required while defining the prospect account.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes
	Note: If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs. You must specify an access group which is associated with the division to which the prospect account and the person belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Note: This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	Note: If you specify the accountNumber attribute, you need to specify the accountIdentifierType attribute. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Note: This data is required while associating an identifier with the prospect account.

Attribute Name	Attribute Description	Mandatory (Yes or No)
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the value as False .	Note: This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.	Yes (Conditional)
	Note: If you specify the accountIdentifierType attribute, you need to specify the accountNumber attribute.	Note: This data is required while associating an identifier with the prospect account.

Note:

At a time, you can add only one prospect account for the person through the **C1_PRSACCT_SERVICE** business service.

If the prospect account status is **INACTIVE** in the system, you must set the action flag as **UPD** while adding the prospect account through the inbound web service.

Once the prospect account is created, all the details of prospect account are listed in the above mentioned attributes along with the following attribute:

Attribute Name	Attribute Description
prospectAccountId	Displays the prospect account identification number.

Prospect Account Update Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Prospect Account Update Request in the JSON Format](#) on page 3866 and [Prospect Account Update Response in the JSON Format](#) on page 3867 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1_PRSACCT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person whose prospect account you want to update.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
mainEntityType	<p>Used to indicate whether the person is an existing person or a prospect person whose prospect account you want to update. The valid values are:</p> <ul style="list-style-type: none"> • EPER • PRSP 	Yes
actionFlag	<p>Used to indicate that you want to create request to update a prospect account. The valid value is:</p> <ul style="list-style-type: none"> • UPD <p>Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.</p>	Yes
prospectAccountId	Used to specify the prospect account whose details you want to update.	Yes
status	<p>Used to indicate the current status of the prospect account.</p> <ul style="list-style-type: none"> • ACTIVE • INACTIVE <p>Note:</p> <p>You can change the status of the prospect account from ACTIVE to INACTIVE while updating.</p> <p>You can change the status of a prospect account from INACTIVE to ACTIVE only when the status of the existing or prospect person to whom the prospect account belongs is ACTIVE.</p> <p>If you do not specify the value in this attribute, the system considers it as an ACTIVE status.</p>	No
customerClass	<p>Used to indicate the customer class to which the prospect account belongs.</p> <p>Note: You must specify a customer class which is associated with the division to which the prospect account belongs.</p>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountDivision	<p>Used to indicate the division to which the prospect account belongs.</p> <p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	Yes
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	<p>Used to indicate the currency which you want to use for generating the invoice of the prospect account.</p> <p>Note: You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.</p>	Yes
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes
accountAccessGroup	<p>Used to indicate the user group who can view and edit the details of the prospect account.</p> <p>Note:</p> <p>If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.</p> <p>You must specify an access group which is associated with the division to which the prospect account and the person belongs.</p>	Yes
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a characteristic for the prospect account.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type. Note: You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account. Note: If you specify the accountNumber attribute, you need to specify the accountIdentifierType attribute. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Yes (Conditional)
		Note: This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False Note: If you do not specify the value in this attribute, the system considers the value as False .	Yes (Conditional)
		Note: This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account. Note: If you specify the accountIdentifierType attribute, you need to specify the accountNumber attribute.	Yes (Conditional)
		Note: This data is required while associating an identifier with the prospect account.

Note:

At a time, you can update only one prospect account of the existing or prospect person through the **C1_PRSACCT_SERVICE** business service.

When you create a request to update a prospect account, the system replaces the prospect account data instead of editing it. Therefore, you should provide all details of the prospect account including the data that you want to change.

Once the prospect account is updated, all the details of prospect account are listed in the above mentioned attributes.

Prospect Account View Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Prospect Account View Request in the JSON Format](#) on page 3868 and [Prospect Account View Response in the JSON Format](#) on page 3868 in parallel while understanding the below mentioned attributes. This will help you to understand the attribute/value pairs are structured in the JSON format.

Before calling the **C1_PRSACT_SERVICE** business service through an inbound web service, you need to ensure that the prospect account view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the prospect account details. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.	
prospectAccountId	Used to specify the prospect account whose details you want to view.	Yes

Once the prospect account view request is created, all the details of prospect account are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
mainEntityId	Displays the person to whom the prospect account belongs.
mainEntityType	Indicates whether the person is an existing person or a prospect person to whom the prospect account belongs. The valid values are: <ul style="list-style-type: none"> • EPER • PRSP
status	Indicates the status of the prospect account. The valid values are: <ul style="list-style-type: none"> • ACTIVE • INACTIVE
customerClass	Indicates the customer class to which the prospect account belongs.
accountDivision	Indicates the division to which the prospect account belongs.
setUpDate	Displays the date from when the prospect account is configured for the person.
currency	Indicates the currency which you want to use for generating the invoice of the prospect account.

Attribute Name	Attribute Description
billCycle	Indicate the time interval in which you want to generate the bills for the prospect account.
accountAccessGroup	Indicates the user group who can view and edit the details of the prospect account.
prosAcctCharacteristicList	Displays the list of characteristic for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the prospect account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays a list of account identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the prospect account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> • True • False
accountNumber	Displays the value of the identifier type using which the prospect account is created.

Sample Prospect Account Creation Request and Response in the JSON Format

Using the below example, you can create the prospect account for 1723682728 prospect person in 930 division.

Sample Prospect Account Creation Request in the JSON Format

```
{
  "C1_PRSACCT_SERVICE"
  {
    "mainEntityId" : "1723682728",
    "mainEntityType" : "PRSP",
    "actionFlag" : "ADD",
    "status" : "ACTIVE",
    "customerClass" : "BK",
    "accountDivision" : "930",
    "setUpDate" : "2019-11-21",
    "currency" : "USD",
    "billCycle" : "YEAR",
    "accountAccessGroup" : "***",
    "prosAcctCharacteristicList"
    {
      "characteristicValue" : "CURRENT",
      "effectiveDate" : "2019-11-21",
      "characteristicType" : "C1_F_ATY",
    }
    "prosAcctIdentifierList"
    {
      "accountIdentifierType" : "ACCT_NM",
      "isPrimaryId" : "TRUE",
      "accountNumber" : "2429108813",
    }
  }
}
```

```

    }
  }
}

```

Note: If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

Sample Prospect Account Creation Response in the JSON Format

```

{
  "C1_PRSACCT_SERVICE"
  {
    "mainEntityId" : "1723682728",
    "mainEntityType" : "PRSP",
    "actionFlag" : "ADD",
    "prospectAccountId" : "1368615549",
    "status" : "ACTIVE",
    "customerClass" : "BK",
    "accountDivision" : "930",
    "setUpDate" : "2019-11-21",
    "currency" : "USD",
    "billCycle" : "YEAR",
    "accountAccessGroup" : "****",
    "prosAcctCharacteristicList"
    {
      "characteristicValue" : "CURRENT",
      "effectiveDate" : "2019-11-21",
      "characteristicType" : "C1_F_ATY",
    }
    "prosAcctIdentifierList"
    {
      "accountIdentifierType" : "ACCT_NM",
      "isPrimaryId" : "TRUE",
      "accountNumber" : "2429108813",
    }
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect account creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Price List Assignments in Deal through Inbound Web Service

Oracle Revenue Management and Billing enables you to assign a price list to an existing or prospect customer or account in a deal through a web service. It also enables you to edit and delete a price list assignment of a deal and view the details of a price list assignment through a web service. You can send a request from the external system to do the following through an inbound web service:

- Assign a price list to an existing or prospect customer or account in a deal
- Edit a price list assignment of a deal
- Delete a price list assignment of a deal
- View the details of a price list assignment

At a time, you can send a request either for viewing the details of one or more price list assignments or for creating, updating, and/or deleting one or more price list assignments of a deal. We have shipped the following two inbound web services in this release:

- **C1-DealPricelistAssignment** - This is a SOAP based web service. You can use this web service when you want to send the above requests with respect to price list assignment in the XML format.
- **C1-DealPricelistAssignmentREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to price list assignment in the XML or JSON format.

Both these inbound web services call the **C1-DealPricelistAssignmentBS** business service. This business service is used to do the following:

- **Assign a price list to a customer or an account in a deal** – While assigning a price list to a customer or an account in a deal, you can specify the following details:
 - Deal Version ID or Deal ID or Deal Identifier to determine the deal version in which you want to assign the price list to an entity
 - Entity (i.e. person or account) to whom you want to assign the price list
 - Price list that you want to assign
 - Start and end dates of the price list assignment
 - Priority of the price list assignment
 - Whether the customer or account can inherit pricing from the parent price list

To assign a price list to a customer or an account in a deal through the web service, you must set the action flag to **ADD**. On processing the request, the system assigns the price list to the entity in the deal in the **Proposed** status.

- **Edit a price list assignment of a deal** – While editing a price list assignment of a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed price list assignment you want to edit
 - Specify the price list assignment ID
 - Specify the entity (i.e. person or account) whose price list assignment you want to edit
 - Set the action flag to **UPD**

During the update operation, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

- **Delete a price list assignment of a deal** – While deleting a price list assignment of a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed price list assignment you want to delete
 - Specify the price list assignment ID

- Specify the entity (i.e. person or account) whose price list assignment you want to delete
- Set the action flag to **DEL**

On processing the request, the system deletes the proposed price list assignment of the entity from the deal.

- **View the details of a price list assignment** – While viewing the details of a price list assignment, you can specify either of the following:
 - **Price List Assignment ID** – Used when you want to view the details of a particular price list assignment.
 - **Entity Type and Entity ID** – Used when you want to view all price list assignments of a particular entity (i.e. person or account).
 - **Deal Version ID, Deal ID, or Deal Identifier** – Used when you want to view the price list assignments of all customers and accounts in a particular deal.

Note that if you provide the price list assignment ID, entity details, and deal details, the system fetches the details of a price list assignment using the price list assignment ID and ignores the entity and deal details. However, if you provide the entity and deal details, the system fetches the price list assignments of the given entity and ignores the deal details. Similarly, if you only provide the deal details, the system fetches all price list assignments of all entities from the given deal.

To view the details of a price list assignment through the web service, you must set the action flag to **READ**. On processing the request, the system displays the details of the price list assignment in the response.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. For more information about the Deal Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

Deal Price List Assignment Add Request in the XML Format

Deal Price List Assignment Add Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price List Assignment Add Request in the XML Format](#) on page 3882 and [Deal Price List Assignment Add Response in the XML Format](#) on page 3883 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to assign price list to the entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) Note: This data is required if you do not specify the dealID or modelID tags.
dealId	Used to specify the deal for which you want to add the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or modelID tags.
modelId	Used to specify the deal version for which you want to add the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealID tags.
pricelistassignmentlist	Used to assign the price list to the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) to which you want to assign the price list.	Yes
entityType	Used to indicate the type of the entity to which you want to assign the price list. The valid values are: <ul style="list-style-type: none"> PERS ACCT 	Yes
actionFlag	Used to indicate that you want to create request to add the price list assignment. The valid value is: <ul style="list-style-type: none"> ADD Note: If you do not specify the value in this tag, the system considers it as an Add action.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
startDate	<p>Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).</p> <p>Note:</p> <p>The price list assignment start date must be equal to the deal start date.</p> <p>The price list assignment start date cannot be later than the price list assignment end date.</p> <p>If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.</p>	No
endDate	<p>Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).</p> <p>Note:</p> <p>The price list assignment end date cannot be later than the deal end date.</p> <p>The price list assignment end date cannot be earlier than the price list assignment start date.</p>	No
priority	<p>Used to specify the priority in which the price list should be considered to determine the price item pricing.</p> <p>Note:</p> <p>The priority of the price list assignment must be greater than zero.</p> <p>You cannot have same priority for price list assignments having the same effective start date and end date.</p>	Yes
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	<p>Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value in this tag, the system considers it as N.</p>	No

Once the price list assignment is created, all the details of price list assignment are listed in the above mentioned tags along with the following tag:

Tag Name	Tag Description
priceListAssignmentId	Displays the price list assignment ID. Note: A new price list assignment ID is generated by the system when you create a request to add a price list assignment.

Deal Price List Assignment Delete Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price List Assignment Delete Request in the XML Format](#) on page 3883 and [Deal Price List Assignment Delete Response in the XML Format](#) on page 3884 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment delete request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to delete the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) Note: This data is required if you do not specify the dealID or modelID tags.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or modelID tags.
modelId	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealID tags.
pricelistassignmentlist	Used to specify a list of price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal that you want to delete.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to delete.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
entityType	Used to indicate the entity type of the entity for which you want to delete the price list assignment. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT 	Yes
actionFlag	Used to indicate that you want to create a request to delete the price list assignment. The valid value is: <ul style="list-style-type: none"> • DEL <p>Note: If you do not specify the value in this tag, the system considers it as an Add action.</p>	Yes
priceListAssignmentId	Used to specify the price list assignment which you want to delete.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity.	No
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
priority	Used to specify the priority in which the price list is considered to determine the price item pricing.	No
priceListId	Used to specify the price list that you want to delete from the entity (i.e. existing or prospect person or account).	No
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> • Y • N 	No

Once the price list assignment is deleted, all the details of price list assignment are listed in the above mentioned tags.

Deal Price List Assignment Update Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price List Assignment Update Request in the XML Format](#) on page 3884 and [Deal Price List Assignment Update Response in the XML Format](#) on page 3885 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to update the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) Note: This data is required if you do not specify the dealID or modelID tags.
dealId	Used to specify the deal for which you want to update the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or modelID tags.
modelId	Used to specify the deal version for which you want to update the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealID tags.
pricelistassignmentlist	Used to update the price list assignment of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to update.	Yes
entityType	Used to indicate the type of the entity whose price list assignment you want to update. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT 	Yes
actionFlag	Used to indicate that you want to create a request to update the price list assignment. The valid value is: <ul style="list-style-type: none"> • UPD Note: If you do not specify the value in this tag, the system considers it as an Add action.	Yes
priceListAssignmentId	Used to specify the price list assignment which you want to update.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
startDate	<p>Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).</p> <p>Note:</p> <p>The price list assignment start date must be equal to the deal start date.</p> <p>The price list assignment start date cannot be later than the price list assignment end date.</p> <p>If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.</p>	Yes
endDate	<p>Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).</p> <p>Note:</p> <p>The price list assignment end date cannot be later than the deal end date.</p> <p>The price list assignment end date cannot be earlier than the price list assignment start date.</p>	Yes
priority	<p>Used to specify the priority in which the price list is considered to determine the price item pricing.</p> <p>Note:</p> <p>The priority of the price list assignment must be greater than zero.</p> <p>You cannot have same priority for price list assignments having the same effective start date and end date.</p>	Yes
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	<p>Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value in this tag, the system considers it as N.</p>	Yes

Note: When you create a request to update a price list assignment, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

Once the deal price list assignment is updated, all the details of deal price list assignment are listed in the above mentioned tags.

Deal Price List Assignment View Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price List Assignment View Request in the XML Format](#) on page 3885 and [Deal Price List Assignment View Response in the XML Format](#) on page 3886 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to view the price list assignments of all the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • READ 	Yes (Conditional)
	Note: If you do not specify the value in this tag, the system considers the value provided in the actionFlag tag of the pricelistassignmentlist tag.	Note: This data is required if the actionFlag tag is not specified in the pricelistassignmentlist tag.
dealIdentifier	Used to view the price list of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		Note: This data is required if you do not specify the dealID or modelID tags.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		Note: This data is required if you do not specify the dealIdentifier or modelID tags.
modelID	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		Note: This data is required if you do not specify the dealIdentifier or dealID tags.

Tag Name	Tag Description	Mandatory (Yes or No)
entityId	Used to specify the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal whose price list assignment you want to view.	No
entityType	Used to indicate the type of the entity whose price list assignment you want to view. The valid values are: <ul style="list-style-type: none"> PERS ACCT 	Yes (Conditional)
	Note: If you specify the entityId tag, you need to specify the entityType tag.	Note: This data is required for viewing the price list assignments of a particular entity in the entity hierarchy of a deal.
priceListAssignmentId	Used to specify the price list assignment whose details you want to view.	Yes

Once the price list assignment view request is created, all the details of price list assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
pricelistassignmentlist	Lists the price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityId	Displays the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> PERS ACCT
actionFlag	Indicates the action performed for viewing the price list assignment of the entity (i.e. existing or prospect person or account). The valid value is: <ul style="list-style-type: none"> READ
priceListAssignmentId	Displays the price list assignment ID.
startDate	Displays date from when the price list assignment is effective for the entity.
endDate	Displays the date till when the price list assignment is effective for the entity.
priority	Displays the priority in which the price list is considered to determine the price item pricing.
priceListId	Displays the price list that is assigned to the entity (i.e. existing or prospect person or account).
priceListAssignStatusFlag	Indicates the current status of the price list assignment. The valid values are: <ul style="list-style-type: none"> Active Proposed Inactive Rejected

Tag Name	Tag Description
priceListInheritanceSw	Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> • Y • N

Sample Deal Price List Assignment Add Request and Response in the XML Format

Using the below example, you can create the price list assignment for 1600395396 entity in 3336086427 deal.

Sample Price List Assignment Creation Request in the XML Format

```
<C1-DealPricelistAssignmentBS>
  <dealId>3336086427</dealId>
  <pricelistassignmentlist>
    <entityId>1600395396</entityId>
    <entityType>PERS</entityType>
    <actionFlag>ADD</actionFlag>
    <startDate>2024-01-01</startDate>
    <endDate>2025-01-01</endDate>
    <priority>9</priority>
    <priceListId>0106513196</priceListId>
    <priceListInheritanceSw>N</priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType>ZZ-DLCHR</characteristicType>
    <characteristicValue>7266725883</characteristicValue>
    <effectiveDate>2021-06-01</effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

Note: If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

Sample Price List Assignment Creation Response in the XML Format

```
<C1-DealPricelistAssignmentBS>
  <dealId>3336086427</dealId>
  <modelId>8729119397</modelId>
  <pricelistassignmentlist>
    <entityId>1600395396</entityId>
    <entityType>PERS</entityType>
    <actionFlag>ADD</actionFlag>
    <priceListAssignmentId>0710416227</priceListAssignmentId>
    <startDate>2024-01-01</startDate>
    <endDate>2025-01-01</endDate>
    <priority>9</priority>
    <priceListId>0106513196</priceListId>
    <priceListInheritanceSw>N</priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType>ZZ-DLCHR</characteristicType>
```

```

    <characteristicValue>7266725883</characteristicValue>
    <effectiveDate>2021-06-01</effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a deal price list assignment add request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Deal Price List Assignment Add Response in the JSON Format

The following code snippet illustrates how the attribute/value pairs should be structured while sending the deal price list assignment creation response in the JSON format:

```
{
  "C1-DealPricelistAssignmentBS"
  {
    "dealIdentifier" : "",
    "dealId" : "",
    "modelId" : "",
    "priceListAssignmentId" : "",
    "pricelistassignmentlist"
    {
      "entityId" : "",
      "entityType" : "",
      "actionFlag" : "",
      "priceListAssignmentId" : "",
      "startDate: : "",
    }
  }
}
```

```

        "endDate" : "",
        "priority" : "",
        "priceListId" : "",
        "priceListAssignStatusFlag" : "",
        "priceListInheritanceSw" : "",
    {
    "characteristicsList"
        "characteristicType" : "",
        "characteristicValue" : "",
        "effectiveDate" : "",
    }
    }
}

```

Deal Price List Assignment Add Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price List Assignment Add Request in the JSON Format](#) on page 3899 and [Deal Price List Assignment Add Response in the JSON Format](#) on page 3899 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to assign price list to the entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) Note: This data is required if you do not specify the dealID or modelID attributes.
dealId	Used to specify the deal for which you want to add the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or modelID attributes.
modelId	Used to specify the deal version for which you want to add the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealID attributes.
pricelistassignmentlist	Used to assign the price list to the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) to which you want to assign the price list.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityType	Used to indicate the type of the entity to which you want to assign the price list. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT 	Yes
actionFlag	Used to indicate that you want to create request to add the price list assignment. The valid value is: <ul style="list-style-type: none"> • ADD <p>Note: If you do not specify the value in this attribute, the system considers it as an Add action.</p>	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account). <p>Note:</p> <p>The price list assignment start date must be equal to the deal start date.</p> <p>The price list assignment start date cannot be later than the price list assignment end date.</p> <p>If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.</p>	No
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account). <p>Note:</p> <p>The price list assignment end date cannot be later than the deal end date.</p> <p>The price list assignment end date cannot be earlier than the price list assignment start date.</p>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
priority	Used to specify the priority in which the price list should be considered to determine the price item pricing.	Yes
	<p>Note:</p> <p>The priority of the price list assignment must be greater than zero.</p> <p>You cannot have same priority for price list assignments having the same effective start date and end date.</p>	
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value in this attribute, the system considers it as N.</p>	

Once the price list assignment is created, all the details of price list assignment are listed in the above mentioned attributes along with the following attribute:

Attribute Name	Attribute Description
priceListAssignmentId	Displays the price list assignment ID.
	<p>Note: A new price list assignment ID is generated by the system when you create a request to add a price list assignment.</p>

Deal Price List Assignment Update Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price List Assignment Update Request in the JSON Format](#) on page 3901 and [Deal Price List Assignment Update Response in the JSON Format](#) on page 3902 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to update the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) Note: This data is required if you do not specify the dealID or modelID attributes.
dealId	Used to specify the deal for which you want to update the price list assignment.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or modelID attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
modelId	Used to specify the deal version for which you want to update the price list assignment.	Yes (Conditional)
		Note: This data is required if you do not specify the dealIdentifier or dealID attributes.
pricelistassignmentlist	Used to update the price list assignment of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to update.	Yes
entityType	Used to indicate the type of the entity whose price list assignment you want to update. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT 	Yes
actionFlag	Used to indicate that you want to create a request to update the price list assignment. The valid value is: <ul style="list-style-type: none"> • UPD 	Yes
	Note: If you do not specify the value in this attribute, the system considers it as an Add action.	
priceListAssignmentId	Used to specify the price list assignment which you want to update.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	Yes
	Note: The price list assignment start date must be equal to the deal start date. The price list assignment start date cannot be later than the price list assignment end date. If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account). Note: The price list assignment end date cannot be later than the deal end date. The price list assignment end date cannot be earlier than the price list assignment start date.	Yes
priority	Used to specify the priority in which the price list is considered to determine the price item pricing. Note: The priority of the price list assignment must be greater than zero. You cannot have same priority for price list assignments having the same effective start date and end date.	Yes
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> • Y • N Note: If you do not specify the value in this attribute, the system considers it as N.	Yes

Note: When you create a request to update a price list assignment, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

Once the deal price list assignment is updated, all the details of deal price list assignment are listed in the above mentioned attributes.

Deal Price List Assignment View Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price List Assignment View Request in the JSON Format](#) on page 3903 and [Deal Price List Assignment View Response in the JSON Format](#) on page 3903 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to view the price list assignments of all the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • READ 	Yes (Conditional)
	Note: If you do not specify the value in this attribute, the system considers the value provided in the actionFlag attribute of the pricelistassignmentlist attribute.	Note: This data is required if the actionFlag attribute is not specified in the pricelistassignmentlist attribute.
dealIdentifier	Used to view the price list of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		Note: This data is required if you do not specify the dealID or modelID attributes.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		Note: This data is required if you do not specify the dealIdentifier or modelID attributes.
modelID	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		Note: This data is required if you do not specify the dealIdentifier or dealID attributes.
entityId	Used to specify the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal whose price list assignment you want to view.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityType	Used to indicate the type of the entity whose price list assignment you want to view. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT 	Yes (Conditional)
	Note: If you specify the entityId attribute, you need to specify the entityType attribute.	Note: This data is required for viewing the price list assignments of a particular entity in the entity hierarchy of a deal.
priceListAssignmentId	Used to specify the price list assignment whose details you want to view.	Yes

Once the price list assignment view request is created, all the details of price list assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
pricelistassignmentlist	Lists the price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityId	Displays the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • PERS • ACCT
actionFlag	Indicates the action performed for viewing the price list assignment of the entity (i.e. existing or prospect person or account). The valid value is: <ul style="list-style-type: none"> • READ
priceListAssignmentId	Displays the price list assignment ID.
startDate	Displays date from when the price list assignment is effective for the entity.
endDate	Displays the date till when the price list assignment is effective for the entity.
priority	Displays the priority in which the price list is considered to determine the price item pricing.
priceListId	Displays the price list that is assigned to the entity (i.e. existing or prospect person or account).
priceListAssignStatusFlag	Indicates the current status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Proposed • Inactive • Rejected

Attribute Name	Attribute Description
priceListInheritanceSw	Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> • Y • N

Sample Deal Price List Assignment Add Request and Response in the JSON Format

Using the below example, you can create the price list assignment for 1600395396 entity in 3336086427 deal.

Sample Deal Price List Assignment Creation Request in the JSON Format

```
{
  "C1-DealPricelistAssignmentBS"
  {
    "dealIdentifier" : "3336086427",
    "pricelistassignmentlist"
    {
      "entityId" : "1600395396",
      "entityType" : "PERS",
      "actionFlag" : "ADD",
      "startDate" : "2024-01-01",
      "endDate" : "2025-01-01",
      "priority" : "9",
      "priceListId" : "0106513196",
      "priceListInheritanceSw" : "N",
      {
        "characteristicsList"
        "characteristicType" : "ZZ-DLCHR",
        "characteristicValue" : "7266725883",
        "effectiveDate" : "2021-06-01",
      }
    }
  }
}
```

Note: If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

Sample Deal Price List Assignment Creation Response in the JSON Format

```
{
  "C1-DealPricelistAssignmentBS"
  {
    "dealIdentifier" : "3336086427",
    {
      "entityId" : "1600395396",
      "entityType" : "PERS",
      "actionFlag" : "ADD",
      "priceListAssignmentId" : "0710416227",
      "startDate" : "2024-01-01",
    }
  }
}
```

```

        "endDate" : "2025-01-01",
        "priority" : "9",
        "priceListId" : "0106513196",
        "priceListInheritanceSw" : "N",
    {
    "characteristicsList"
        "characteristicType" : "ZZ-DLCHR",
        "characteristicValue" : "7266725883",
        "effectiveDate" : "2021-06-01",
    }
    }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price list assignment add request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

    "dealIdentifier" : "7781868561",
    "pricelistassignmentlist"
    {
      "entityId" : "0073281975",
      "entityType" : "PERS",
    }
  }
}

```

```

    "actionFlag" : "DEL",
    "priceListAssignmentId" : "1164917538",
    "startDate" : "2024-01-01",
    "endDate" : "2025-01-01",
    "priority" : "7",
    "priceListId" : "0014720899",
    "priceListInheritanceSw" : "Y",
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price list assignment delete request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Deal Price List Assignment Update Request and Response in the JSON Format

Using the below example, you can update the price list assignment for 0073281975 entity in 7781868561 deal.

Sample Deal Price List Assignment Update Request in the JSON Format

```

{
  "C1-DealPricelistAssignmentBS"
  {
    "dealIdentifier" : "7781868561",
    "pricelistassignmentlist"
    {
      "entityId" : "0073281975",
      "entityType" : "PERS",
      "actionFlag" : "UPD",
      "priceListAssignmentId" : "9884925490",
      "startDate" : "2024-01-01",
      "endDate" : "2025-01-01",
      "priority" : "6",
      "priceListId" : "0014720899",
      "priceListInheritanceSw" : "Y",
      {
        "characteristicsList"
        {
          "characteristicType" : "ZZ-DLCHR",
          "characteristicValue" : "7266725883",
          "effectiveDate" : "2021-06-01",
        }
      }
    }
  }
}

```

Note: If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

Sample Deal Price List Assignment Update Response in the JSON Format

```

{
  "C1-DealPricelistAssignmentBS"

```

```

{
  "dealIdentifier" : "7781868561",
  "pricelistassignmentlist"
  {
    "entityId" : "0073281975",
    "entityType" : "PERS",
    "actionFlag" : "UPD",
    "priceListAssignmentId" : "9884925490",
    "startDate" : "2024-01-01",
    "endDate" : "2025-01-01",
    "priority" : "6",
    "priceListId" : "0014720899",
    "priceListInheritanceSw" : "Y",
    {
      "characteristicsList"

Deal Price Assignments and Commitments through Inbound Web Service

Oracle Revenue Management and Billing enables you to override, edit, recommend, and delete a price item pricing of an entity in a deal through a web service. It also enables you to add or update the commitments of a price item and pricing parameters combination in a deal through a web service. In addition, it enables you to view the pricing and commitment details of a deal through a web service.

You can send a request from the external system to do the following through an inbound web service:

- Override a price item pricing of an existing or prospect customer or account in a deal
- Edit or delete a price item pricing of a deal
- Recommend a price item pricing for an existing or prospect customer or account in a deal
- Add or edit commitments of a price item and pricing parameters combination
- View the price item pricing and commitments details of a deal

At a time, you can send a request either for viewing the pricing and/or commitments details of all or particular entity in a deal, or for creating, updating, recommending, and/or deleting one or more pricing of a deal and/or for adding or editing commitments of one or more price item and pricing parameters combinations in a deal. We have shipped the following two inbound web services in this release:

- **C1-DealPriceAsgnCommitments** - This is a SOAP based web service. You can use this web service when you want to send the above requests with respect to pricing and commitments in the XML format.

- **C1-DealPriceAsgnCommitmentsREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to pricing and commitments in the XML or JSON format.

Both these inbound web services call the **C1-DealPriceAsgnCommitmentBS** business service. This business service is used to do the following:

- **Override a price item pricing of an existing or prospect customer or account in a deal** - While overriding a price item pricing of a customer or an account in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to override the pricing of an entity
 - Specify the entity (i.e. person or account) whose pricing you want override and thereby create an agreed pricing
 - Specify the price assignment ID
 - Specify the pricing details including pricing parameters, characteristics, and flat and tiered price components
 - Specify the tiering criteria and eligibility for the required price components
 - Set the action flag to **OVRD**

On processing the request, the system creates an agreed pricing for the entity in the deal in the **Proposed** status.

- **Edit a price item pricing of a deal** - While editing a price item pricing of an entity in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed pricing you want to edit
 - Specify the entity (i.e. person or account) whose pricing you want edit
 - Specify the price assignment ID
 - Set the action flag to **UPD**

During the update operation, the system replaces the pricing data instead of editing it. Therefore, you should provide all details of the pricing including the data that you want to change.

- **Delete a price item pricing of a deal** - While deleting a price item pricing of an entity in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed pricing you want to delete
 - Specify the entity (i.e. person or account) whose pricing you want to delete
 - Specify the price assignment ID
 - Set the action flag to **DEL**

On processing the request, the system deletes the proposed pricing of the entity from the deal.

- **Recommend a price item pricing for an existing or prospect customer or account in a deal** - While recommending a price item pricing for an entity in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to recommend pricing for an entity
 - Specify the entity (i.e. person or account) for whom you want to recommend a pricing
 - Specify the price assignment ID
 - Set the action flag to **RECM**

During the update operation, the system replaces the pricing data instead of editing it. Therefore, you should provide all details of the pricing including the data that you want to change.

- **Add commitments for a price item pricing** - While adding commitments for a pricing in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to add commitments for the price item and pricing parameters combination

- Specify the entity (i.e. person or account) for whom you want to add commitments
- Specify the price item and pricing parameters combination for which you want to add commitments
- Specify the commitments for the SQIs
- Set the action flag to **ADD**

On processing the request, the system adds commitments for the price item and pricing parameters combination in the deal in the **Proposed** status.

- **Edit commitments of a price item pricing** - While editing commitments of a price item and pricing parameters combination in a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed commitments you want to edit
 - Specify the entity (i.e. person or account) whose commitments you want to edit
 - Specify the price item and pricing parameters combination whose commitments you want to edit
 - Set the action flag to **UPD**

During the update operation, the system replaces the commitment data instead of editing it. Therefore, you should provide all commitment details including the data that you want to change.

- **View the price item pricing and/or commitments details** - While viewing the pricing and/or commitment details of a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose pricing and commitment details you want to view
 - Set the action flag to **READ**

On processing the request, the system then displays the pricing and commitment details of all customers and accounts in the deal version. You can also view the pricing and commitment details of a particular entity in the deal version. In addition, you can opt to view either pricing or commitment details or both pricing and commitment details of a deal version. If you want to view the pricing details of a deal version, you must set the inquiry mode to **PRIC**. If you want to view the commitment details of a deal version, you must set the inquiry mode to **COMT**. And, if you want to view both the pricing and commitment details of a deal version, you must set the inquiry mode to **BOTH**. Note that the system displays all active, proposed, and recommended price item pricing of the entities and all active and proposed commitments of the price item and parameters combination in the response.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. The system allows you to override, edit, delete, or recommend pricing and/or add or edit commitments for multiple entities of a deal in the same request. For more information about the Deal Pricing Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

Deal Price Assignment Override Request in the XML Format

Deal Price Assignment Override Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment Override Request in the XML Format](#) on page 3919 and [Deal Price Assignment Override Response in the XML Format](#) on page 3921 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment override request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to override.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.	Note: This data is required if you do not specify the dealId and modelId tags.
dealId	Used to specify the deal whose price assignments you want to override.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required if you do not specify the dealIdentifier and modelId tags.
modelId	Used to specify the deal version whose price assignments you want to override.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.	Note: This data is required if you do not specify the dealIdentifier and dealId tags.

Tag Name	Tag Description	Mandatory (Yes or No)
inquiryModeFlag	Used to indicate whether you want to override the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> • PRIC 	Yes
pricingcmtmndtcls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to override. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityType tag, you need to specify the entityId tag. The entityId should belong to the modelId.</p> </div>	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to override. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityId tag, you need to specify the entityType tag.</p> </div>	Yes
pricingdtcls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to override. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The priceAsgnId should belong to the entityId.</p> </div>	Yes
actionFlag	Used to indicate that you want to create request to override the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> • OVRD 	Yes
priceItemCode	Used to specify the price item whose price assignment you want to override for the entity (i.e. existing or prospect person or account) of the deal.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> PRPD 	Yes
	Note: You can override a price assignment of a price item only when it is in the PRPD status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> FALSE TRUE 	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> POST PPIN PPPR RGLR 	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> Y N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.

Tag Name	Tag Description	Mandatory (Yes or No)
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional) Note: This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item. Note: If you specify the priceParmVal tag, you need to specify the priceParmCode tag.	Yes (Conditional) Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment. Note: If you specify the priceParmCode tag, you need to specify the priceParmVal tag.	Yes (Conditional) Note: This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No

Tag Name	Tag Description	Mandatory (Yes or No)
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY 	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate. Note: You should specify a value in this tag only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	No

Tag Name	Tag Description	Mandatory (Yes or No)
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component. Note: You can specify the eligibility criteria for the price component only when the value in the isEligible tag is set to TRUE .	No
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> PARAMETER - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). VALUE - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
operator	Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are: <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE 	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is overridden, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal whose price assignments you have overridden.
	Note: The value in this tag appears when you specify the dealIdentifier or the modelId tag while creating the override request.
modelId	Displays the deal version whose price assignments you have overridden.
	Note: The value in this tag appears when you specify the dealIdentifier or the dealId tag while creating the override request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment override request.

You can override only the inherited price assignments and not the agreed price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

Deal Price Assignment Update Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment Update Request in the XML Format](#) on page 3922 and [Deal Price Assignment Update Response in the XML Format](#) on page 3923 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to update.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.	Note: This data is required if you do not specify the dealId and modelId tags.
dealId	Used to specify the deal whose price assignments you want to update.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required if you do not specify the dealIdentifier and modelId tags.
modelId	Used to specify the deal version whose price assignments you want to update.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.	Note: This data is required if you do not specify the dealIdentifier and dealId tags.
inquiryModeFlag	Used to indicate whether you want to update the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> • PRIC 	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to update.	Yes
	Note: If you specify the entityType tag, you need to specify the entityId tag. The entityId should belong to the modelId .	

Tag Name	Tag Description	Mandatory (Yes or No)
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to update. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS 	Yes
	Note: If you specify the entityId tag, you need to specify the entityType tag.	
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to update.	Yes
	Note: The priceAsgnId should belong to the entityId .	
actionFlag	Used to indicate that you want to create request to update the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> • UPD 	Yes
priceItemCode	Used to specify the price item whose price assignment you want to update for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> • PRPD 	Yes
	Note: You can update a price assignment of a price item only when it is in the PRPD status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> FALSE TRUE 	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> POST PPIN PPPR RGLR 	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> Y N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No

Tag Name	Tag Description	Mandatory (Yes or No)
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	Note: If you specify the priceParmVal tag, you need to specify the priceParmCode tag.	Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	Note: If you specify the priceParmCode tag, you need to specify the priceParmVal tag.	Note: This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY 	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No

Tag Name	Tag Description	Mandatory (Yes or No)
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate. Note: You should specify a value in this tag only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	No
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	Note: You can specify the eligibility criteria for the price component only when the value in the isEligible tag is set to TRUE .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> PARAMETER - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). VALUE - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> COND - Used to indicate that the condition with the consecutive sequence number is executed. RLFS - Used to indicate that the action specified in the Rule False Action field is executed. RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
sequenceNumber	<p>Used to specify the order in which the pricing eligibility criteria is executed in the rule.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE 	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is updated, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal whose price assignments you have updated.
	Note: The value in this tag appears when you specify the dealIdentifier or the modelId tag while creating the update request.
modelId	Displays the identification value of the deal version whose price assignments you have updated.
	Note: The value in this tag appears when you specify the dealIdentifier or the dealId tag while creating the update request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.

Tag Name	Tag Description
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment update request.

You can update only the agreed price assignments and not the inherited price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

When you create a request to update a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Recommend Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment Recommend Request in the XML Format](#) on page 3925 and [Deal Price Assignment Recommend Response in the XML Format](#) on page 3926 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment recommend request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to recommend.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.	Note: This data is required if you do not specify the dealId and modelId tags.

Tag Name	Tag Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose price assignments you want to recommend.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId tags.</p>
modelId	Used to specify the deal version whose price assignments you want to recommend.	Yes (Conditional)
	<p>Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId tags.</p>
inquiryModeFlag	Used to indicate whether you want to recommend the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> • PRIC 	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend.	Yes
	<p>Note:</p> <p>If you specify the entityType tag, you need to specify the entityId tag.</p> <p>The entityId should belong to the modelId.</p>	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS 	Yes
	<p>Note: If you specify the entityId tag, you need to specify the entityType tag.</p>	
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to recommend.	Yes
	Note: The priceAsgnId should belong to the entityId .	
actionFlag	Used to indicate that you want to create request to recommend the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> • RECM 	Yes
priceItemCode	Used to specify the price item whose price assignment you want to recommend for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> • RECM 	Yes
	Note: You can recommend a price assignment of a price item only when it is in the RECM status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE 	No

Tag Name	Tag Description	Mandatory (Yes or No)
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR 	Yes
printfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	Note: If you specify the priceParmVal tag, you need to specify the priceParmCode tag.	Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	Note: If you specify the priceParmCode tag, you need to specify the priceParmVal tag.	Note: This data is required while specifying the price assignment parameters for the price item.

Tag Name	Tag Description	Mandatory (Yes or No)
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY 	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No
	Note: You should specify a value in this tag only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)
		Note: This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional)
		Note: This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	Note: You can specify the eligibility criteria for the price component only when the value in the isEligible tag is set to TRUE .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		Note: This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> PARAMETER - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). VALUE - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> COND - Used to indicate that the condition with the consecutive sequence number is executed. RLFS - Used to indicate that the action specified in the Rule False Action field is executed. RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
isFalseFlag	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> COND - Used to indicate that the condition with the consecutive sequence number is executed. RLFS - Used to indicate that the action specified in the Rule False Action field is executed. RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
isTrueFlag	Used to indicate what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
operator	Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are: <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is recommended, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal for which you have recommended the price assignments.
	Note: The value in this tag appears when you specify the dealIdentifier or the modelId tag while creating the recommend request.
modelId	Displays the identification value of the deal version for which you have recommended the price assignments.
	Note: The value in this tag appears when you specify the dealIdentifier or the dealId tag while creating the recommend request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment recommend request.

You can recommend only the agreed price assignments and not the inherited price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Recommended** status.

When you create a request to recommend a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Delete Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment Delete Request in the XML Format](#) on page 3927 and [Deal Price Assignment Delete Response in the XML Format](#) on page 3928 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment delete request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignment you want to delete.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.	Note: This data is required if you do not specify the dealId and modelId tags.
dealId	Used to specify the deal whose price assignment you want to delete.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required if you do not specify the dealIdentifier and modelId tags.
modelId	Used to specify the deal version whose price assignment you want to delete.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.	Note: This data is required if you do not specify the dealIdentifier and dealId tags.

Tag Name	Tag Description	Mandatory (Yes or No)
inquiryModeFlag	Used to indicate whether you want to delete the price assignment or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> • PRIC 	Yes
pricingcmtmndtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignment you want to delete. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityType tag, you need to specify the entityId tag. The entityId should belong to the modelId.</p> </div>	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignment you want to delete. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityId tag, you need to specify the entityType tag.</p> </div>	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to delete. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The priceAsgnId should belong to the entityId.</p> </div>	Yes
actionFlag	Used to indicate that you want to create request to delete the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> • DEL 	Yes

Once the deal price assignment is deleted, all the details of deal price assignment are listed in the above mentioned tags along with the following tag:

Tag Name	Tag Description
isEligible	Indicates the eligibility criteria of the deleted price assignment. The valid values are: <ul style="list-style-type: none"> FALSE TRUE

Note:

Only **RM** (Relationship Manager) can delete the price assignment which is in the **Proposed** status. Whereas, only the **PM** (Product Manager) can delete the price assignment which is in the **Recommended** status.

You cannot delete a price list price assignment.

You cannot delete the same price assignment twice.

Deal Price Assignment and Commitments View Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment and Commitments View Request in the XML Format](#) on page 3928 and [Deal Price Assignment and Commitments View Response in the XML Format](#) on page 3929 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment and commitments view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments and commitments you want to view. Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealIdentifier tag.	Yes (Conditional) Note: This data is required if you do not specify the dealId and modelId tags.

Tag Name	Tag Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose price assignments and commitments you want to view.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId tags.</p>
modelId	Used to specify the deal version whose price assignments and commitments you want to view.	Yes (Conditional)
	<p>Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId tags.</p>
actionflag	Used to indicate that you want to create request to view the price assignment and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
inquiryModeFlag	Used to indicate that you want to view the price assignments and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • BOTH 	Yes

Once the deal price assignment and commitments view request is created, all the details of the deal price assignment and commitments are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
pricingcmtmntdtls	Displays the price assignment and commitment details of the entity in the customer hierarchy of the deal.
entityId	Displays the entity whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierValue	Displays the value of the identifier type using which the entity is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity is created in the system.
entityDivision	Indicates the division to which the entity belongs.

Tag Name	Tag Description
pricingdtls	Displays the price assignment details of the entity in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceStatusFlag	Indicates the current status of the price assignment.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity.
endDate	Displays the date till when the price assignment of the price item is effective for the entity.
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR
printfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N
priceasgnchar	Displays a list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.

Tag Name	Tag Description
priceasgnparm	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
priceParmCode	Indicates the pricing parameter which is associated with the price item.
priceParmVal	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N
doNotAggSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompTier	Displays the tiering criteria of the price component.
toVal	Displays the upper limit of the pricing range.
fromVal	Displays the lower limit of the pricing range.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
tieSeqNum	Indicates the tiering sequence number.
priceparm	Displays the list of parameters based on which the price items total usage is considered for determining the rate. <p>Note: The value in this tag appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>

Tag Name	Tag Description
priceParmCode	Indicates the parameter which is associated with the tiering criteria.
parameterVal	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component.
	Note: The value in this tag appears only when the isEligible tag is set to TRUE and the eligibility criteria is defined for the price component.
rhsPriceParmCd	Displays the parameter against which you want to compare the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you want to compare the parameter (on the left hand side).
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
rhsPriceParmTypeFlg	Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> • PARAMETER - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Indicates that the parameter (on the left hand side) is compared against a parameter value.
isInsufficientFlag	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isFalseFlag	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isTrueFlag	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.

Tag Name	Tag Description
operator	Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are: <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
priceComponentDisplay	Indicates whether the price component is displayed in the bill or not. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	Displays the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD
commitmentDetails	Displays the price item commitment details for the entity (i.e. existing or prospect person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.

Tag Name	Tag Description
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.

Deal Commitments Add Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Commitments Add Request in the XML Format](#) on page 3930 and [Deal Commitments Add Response in the XML Format](#) on page 3931 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to add.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.	Note: This data is required if you do not specify the dealId and modelId tags.
dealId	Used to specify the deal for which you want to add commitments.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required if you do not specify the dealIdentifier and modelId tags.
modelId	Used to specify the deal version for which you want to add commitments.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.	Note: This data is required if you do not specify the dealIdentifier and dealId tags.

Tag Name	Tag Description	Mandatory (Yes or No)
inquiryModeFlag	Used to indicate whether you want to add price assignments or commitments of the price item for the deal. The valid value is: <ul style="list-style-type: none"> • COMT 	Yes
pricingcmtmntdttl	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityType tag, you need to specify the entityId tag. The entityId should belong to the modelId.</p> </div>	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: If you specify the entityId tag, you need to specify the entityType tag.</p> </div>	Yes
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to add for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
sqiValue	Used to specify the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.	Yes
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is: <ul style="list-style-type: none"> PRPD 	Yes
actionFlag	Used to specify that you want to create request to add commitments for the deal. The valid value is: <ul style="list-style-type: none"> ADD 	Yes

Once the deal commitments are added, all the details of deal commitments are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal for which you have added the commitments. Note: The value in this tag appears when you specify the dealIdentifier or the modelId tag while creating the add request.
modelId	Displays the identification value of the deal for which you have added the commitments. Note: The value in this tag appears when you specify the dealIdentifier or the dealId tag while creating the add request.

Note:

Only **RM** (Relationship Manager) can create the deal commitments add request.

You can add commitments for a price item only when the price item and the parameter combination is valid.

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a deal price assignment and commitments view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Deal Price Assignment Override Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price Assignment Override Request in the JSON Format](#) on page 3985 and [Deal Price Assignment Override Response in the JSON Format](#) on page 3987 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment override request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to override. Note: If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes.	Yes (Conditional) Note: This data is required if you do not specify the dealId and modelId attributes.
dealId	Used to specify the deal whose price assignments you want to override. Note: If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes. If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier and modelId attributes.
modelId	Used to specify the deal version whose price assignments you want to override. Note: If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier and dealId attributes.
inquiryModeFlag	Used to indicate whether you want to override the price assignments or the commitments of the price item. The valid value is: • PRIC	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to override. Note: If you specify the entityType attribute, you need to specify the entityId attribute. The entityId should belong to the modelId .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to override. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS Note: If you specify the entityId attribute, you need to specify the entityType attribute.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to override. Note: The priceAsgnId should belong to the entityId .	Yes
actionFlag	Used to indicate that you want to create request to override the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> • OVRD 	Yes
priceItemCode	Used to specify the price item whose price assignment you want to override for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> • PRPD Note: You can override a price assignment of a price item only when it is in the PRPD status.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE 	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR 	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.

Attribute Name	Attribute Description	Mandatory (Yes or No)
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	Note: If you specify the priceParmVal attribute, you need to specify the priceParmCode attribute.	Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	Note: If you specify the priceParmCode attribute, you need to specify the priceParmVal attribute.	Note: This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY 	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional)
		Note: This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No
	Note: You should specify a value in this attribute only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component. Note: You can specify the eligibility criteria for the price component only when the value in the isEligible attribute is set to TRUE .	No
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> • PARAMETER - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.

Attribute Name	Attribute Description	Mandatory (Yes or No)
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
operator	Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are: <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN 	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional) Note: This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE 	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is overridden, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal whose price assignments you have overridden.
	Note: The value in this attribute appears when you specify the dealIdentifier or the modelId attribute while creating the override request.
modelId	Displays the deal version whose price assignments you have overridden.
	Note: The value in this attribute appears when you specify the dealIdentifier or the dealId attribute while creating the override request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment override request.

You can override only the inherited price assignments and not the agreed price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

	Note: You can update a price assignment of a price item only when it is in the PRPD status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> FALSE TRUE 	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> POST PPIN PPPR RGLR 	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> Y N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	Note: If you specify the priceParmVal attribute, you need to specify the priceParmCode attribute.	Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	Note: If you specify the priceParmCode attribute, you need to specify the priceParmVal attribute.	Note: This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY 	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) Note: This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate. Note: You should specify a value in this attribute only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	No
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) Note: This data is required while specifying the parameters for the tiering criteria of the price component.

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	Note: You can specify the eligibility criteria for the price component only when the value in the isEligible attribute is set to TRUE .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
	Note: This data is required while specifying the pricing eligibility criteria of the price component.	
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
	Note: This data is required while specifying the pricing eligibility criteria of the price component.	
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
	Note: This data is required while specifying the pricing eligibility criteria of the price component.	
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • PARAMETER - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	Note: This data is required while specifying the pricing eligibility criteria of the price component.
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	Note: This data is required while specifying the pricing eligibility criteria of the price component.

Attribute Name	Attribute Description	Mandatory (Yes or No)
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Used to indicate that the condition with the consecutive sequence number is executed. • RLFS - Used to indicate that the action specified in the Rule False Action field is executed. • RLTR - Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>
sequenceNumber	<p>Used to specify the order in which the pricing eligibility criteria is executed in the rule.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the pricing eligibility criteria of the price component.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE 	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is updated, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal whose price assignments you have updated.
	Note: The value in this attribute appears when you specify the dealIdentifier or the modelId attribute while creating the update request.
modelId	Displays the identification value of the deal version whose price assignments you have updated.
	Note: The value in this attribute appears when you specify the dealIdentifier or the dealId attribute while creating the update request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.

Attribute Name	Attribute Description
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment update request.

You can update only the agreed price assignments and not the inherited price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

When you create a request to update a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Recommend Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price Assignment Recommend Request in the JSON Format](#) on page 3991 and [Deal Price Assignment Recommend Response in the JSON Format](#) on page 3993 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment recommend request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to recommend. Note: If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes.	Yes (Conditional) Note: This data is required if you do not specify the dealId and modelId attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose price assignments you want to recommend.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId attributes.</p>
modelId	Used to specify the deal version whose price assignments you want to recommend.	Yes (Conditional)
	<p>Note: If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId attributes.</p>
inquiryModeFlag	<p>Used to indicate whether you want to recommend the price assignments or the commitments of the price item. The valid value is:</p> <ul style="list-style-type: none"> • PRIC 	Yes
pricingcmtmntdcls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend.	Yes
	<p>Note:</p> <p>If you specify the entityType attribute, you need to specify the entityId attribute.</p> <p>The entityId should belong to the modelId.</p>	
entityType	<p>Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend. The valid values are:</p> <ul style="list-style-type: none"> • ACCT • PERS 	Yes
	<p>Note: If you specify the entityId attribute, you need to specify the entityType attribute.</p>	
pricingdcls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to recommend.	Yes
	Note: The priceAsgnId should belong to the entityId .	
actionFlag	Used to indicate that you want to create request to recommend the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> RECM 	Yes
priceItemCode	Used to specify the price item whose price assignment you want to recommend for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> RECM 	Yes
	Note: You can recommend a price assignment of a price item only when it is in the RECM status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> FALSE TRUE 	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR 	Yes
printfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is associated with the division to which the price item belongs.	Note: This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	Note: If you specify the priceParmVal attribute, you need to specify the priceParmCode attribute.	Note: This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	Note: If you specify the priceParmCode attribute, you need to specify the priceParmVal attribute.	Note: This data is required while specifying the price assignment parameters for the price item.

Attribute Name	Attribute Description	Mandatory (Yes or No)
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX 	Yes

valueAmt	<p>Used to specify the rate for the price component.</p>	<p>Yes</p>
priceComponentDisplay	<p>Used to indicate whether the price component is displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • TRUE • FALSE 	<p>Yes</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes

Once the deal price assignment is recommended, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal for which you have recommended the price assignments.
	Note: The value in this attribute appears when you specify the dealIdentifier or the modelId attribute while creating the recommend request.
modelId	Displays the identification value of the deal version for which you have recommended the price assignments.
	Note: The value in this attribute appears when you specify the dealIdentifier or the dealId attribute while creating the recommend request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment recommend request.

You can recommend only the agreed price assignments and not the inherited price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Recommended** status.

When you create a request to recommend a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment and Commitments View Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price Assignment and Commitments View Request in the JSON Format](#) on page 3995 and [Deal Price Assignment and Commitments View Response in the JSON Format](#) on page 3996 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment and commitments view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments and commitments you want to view. Note: If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes. If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealIdentifier attribute.	Yes (Conditional) Note: This data is required if you do not specify the dealId and modelId attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose price assignments and commitments you want to view.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId attributes.</p>
modelId	Used to specify the deal version whose price assignments and commitments you want to view.	Yes (Conditional)
	<p>Note: If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId attributes.</p>
actionflag	Used to indicate that you want to create request to view the price assignment and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • READ 	Yes
inquiryModeFlag	Used to indicate that you want to view the price assignments and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> • BOTH 	Yes

Once the deal price assignment and commitments view request is created, all the details of the deal price assignment and commitments are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
pricingcmtmntdtls	Displays the price assignment and commitment details of the entity in the customer hierarchy of the deal.
entityId	Displays the entity whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierValue	Indicates the value of the identifier type using which the entity is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity is created in the system.
entityDivision	Indicates the division to which the entity belongs.

Attribute Name	Attribute Description
pricingdtls	Displays the price assignment details of the entity in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceStatusFlag	Indicates the current status of the price assignment.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity.
endDate	Displays the date till when the price assignment of the price item is effective for the entity.
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR
printfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N
priceasgnchar	Displays a list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.

Attribute Name	Attribute Description
priceasgnparm	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
priceParmCode	Indicates the pricing parameter which is associated with the price item.
priceParmVal	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N
doNotAggSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompTier	Displays the tiering criteria of the price component.
toVal	Displays the upper limit of the pricing range.
fromVal	Displays the lower limit of the pricing range.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
tieSeqNum	Indicates the tiering sequence number.
priceparm	<p>Displays the list of parameters based on which the price items total usage is considered for determining the rate.</p> <p>Note: The value in this attribute appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>

Attribute Name	Attribute Description
priceParmCode	Indicates the parameter which is associated with the tiering criteria.
parameterVal	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component.
	Note: The value in this attribute appears only when the isEligible attribute is set to TRUE and the eligibility criteria is defined for the price component.
rhsPriceParmCd	Displays the parameter against which you want to compare the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you want to compare the parameter (on the left hand side).
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
rhsPriceParmTypeFlg	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:</p> <ul style="list-style-type: none"> • PARAMETER - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Indicates that the parameter (on the left hand side) is compared against a parameter value.
isInsufficientFlag	<p>Indicates what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isFalseFlag	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isTrueFlag	<p>Indicates what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.

Attribute Name	Attribute Description
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
priceComponentDisplay	<p>Indicates whether the price component is displayed in the bill or not. The valid values are:</p> <ul style="list-style-type: none"> • TRUE • FALSE
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	<p>Displays the tiering type used for the price component. The valid values are:</p> <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD
commitmentDetails	Displays the price item commitment details for the entity (i.e. existing or prospect person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item..
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.

Attribute Name	Attribute Description
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.

Deal Commitments Add Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Commitments Add Request in the JSON Format](#) on page 3998 and [Deal Commitments Add Response in the JSON Format](#) on page 3998 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to add.	Yes (Conditional)
	Note: If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes.	Note: This data is required if you do not specify the dealId and modelId attributes.
dealId	Used to specify the deal for which you want to add commitments.	Yes (Conditional)
	Note: If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes. If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.	Note: This data is required if you do not specify the dealIdentifier and modelId attributes.
modelId	Used to specify the deal version for which you want to add commitments.	Yes (Conditional)
	Note: If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.	Note: This data is required if you do not specify the dealIdentifier and dealId attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
inquiryModeFlag	Used to indicate whether you want to add price assignments or commitments of the price item for the deal. The valid value is: <ul style="list-style-type: none"> • COMT 	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. <p>Note: If you specify the entityType attribute, you need to specify the entityId attribute. The entityId should belong to the modelId.</p>	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS <p>Note: If you specify the entityId attribute, you need to specify the entityType attribute.</p>	Yes
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to add for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
sqiValue	Used to specify the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.	Yes
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is: <ul style="list-style-type: none"> PRPD 	Yes
actionFlag	Used to specify that you want to create request to add commitments for the deal. The valid value is: <ul style="list-style-type: none"> ADD 	Yes

Once the deal commitments are added, all the details of deal commitments are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal for which you have added the commitments. Note: The value in this attribute appears when you specify the dealIdentifier or the modelId attribute while creating the add request.
modelId	Displays the identification value of the deal for which you have added the commitments. Note: The value in this attribute appears when you specify the dealIdentifier or the dealId attribute while creating the add request.

Note:

Only **RM** (Relationship Manager) can create the deal commitments add request.

You can add commitments for a price item only when the price item and the parameter combination is valid.

Deal Commitments Update Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Commitments Update Request in the JSON Format](#) on page 3999 and [Deal Commitments Update Response in the JSON Format](#) on page 4000 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to update.	Yes (Conditional)
	Note: If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes.	Note: This data is required if you do not specify the dealId and modelId attributes.
dealId	Used to specify the deal whose commitments you want to update.	Yes (Conditional)
	Note: If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes. If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.	Note: This data is required if you do not specify the dealIdentifier and modelId attributes.
modelId	Used to specify the deal version whose commitments you want to update.	Yes (Conditional)
	Note: If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.	Note: This data is required if you do not specify the dealIdentifier and dealId attributes.
inquiryModeFlag	Used to indicate whether you want to update the price assignments or the commitments of the price item for the deal. The valid value is: <ul style="list-style-type: none"> • COMT 	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to update.	Yes
	Note: If you specify the entityType attribute, you need to specify the entityId attribute. The entityId should belong to the modelId .	

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to update. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS 	Yes
	Note: If you specify the entityId attribute, you need to specify the entityType attribute.	
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to update for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes
sqiValue	Used to specify the SQI value for the price item and parameter combination that you want to update for calculating the price item pricing.	Yes
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is: <ul style="list-style-type: none"> • PRPD 	Yes
actionFlag	Used to specify that you want to create request to update commitments for the deal. The valid value is: <ul style="list-style-type: none"> • UPD 	Yes

Once the deal commitments are updated, all the details of deal commitments are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal for which you have added the commitments.
	Note: The value in this attribute appears when you specify the dealIdentifier or the modelId attribute while creating the update request.
modelId	Displays the identification value of the deal for which you have added the commitments.
	Note: The value in this attribute appears when you specify the dealIdentifier or the dealId attribute while creating the update request.

Note:

Only **RM** (Relationship Manager) can create the deal commitments update request.

You can update commitments for a price item only when the price item and the parameter combination is valid.

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price assignment delete request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

        {
```

- **C1-DealREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to deal in the XML or JSON format.

Both these inbound web services call the **C1-DealCreationUpdateIWS** business service. This business service is used to do the following:

- **Create a deal with or without using a reference and/or a deal template** - While creating a deal, you can specify the following details:
 - Entity (i.e. existing or prospect customer or account) for which you want to create the deal
 - Details of the customer, main customer (in case of account), or prospect, such as customer segment, customer tier, division, etc.
 - Basic details of the deal, such as simulation type, review frequency, deal and deal version description, price selection date, usage period, etc.
 - Template details in case you want to create the deal using a deal template
 - Characteristics and terms and conditions for the deal
 - Recommended products for the deal
 - Whether you want to refer another entity or deal for pricing and commitments

To add a deal through the web service, you must set the action flag to **ADD**. On processing the request, the system creates the deal and its deal version in the **PSML** or **DHRC** status.

- **Edit the details of a deal version** - While editing a deal version of a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to edit
 - Set the action flag to **UPD**

During the update operation, the system replaces the deal version data instead of editing it. Therefore, you should provide all details of the deal version including the data that you want to change.

- **View the details of a deal version** - While viewing the details of a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose details you want to view
 - Set the action flag to **READ**

On processing the request, the system displays the details of the deal and its deal version.

- **Add a new deal version to a deal** – While adding a deal version to a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal in which you want to add the version
 - Specify the description for the deal version
 - Specify the method using which you want to create the deal version
 - Set the action flag to **ADD** and the operation flag to **CRDV**

On processing the request, the system creates the deal version in the **PSML** or **DHRC** status.

- **Simulate a deal version** - While simulating a deal version of a deal, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to simulate
 - Set the action flag to **UPD** and the operation flag to **SMLD**

On processing the request, the status of the deal version is changed to **SMLD** or **DSML**. If the deal version is in the **SMLD** status, the system displays the deal level financial summary, division level financial summary (if any), and product level financial summary (if any) along with the hierarchy level simulation details.

- **Send a deal version for approval** - While sending a deal version for approval, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to send for approval
- Set the action flag to **UPD** and the operation flag to **SNDP**

On processing the request, the system sends the deal version to the deal approval hierarchy. If the product and/or division level approval is required for the deal, the system sends the deal version to the product and/or division approval hierarchy before it goes to the deal approval hierarchy.

- **Approve a deal version** - While approving a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to approve
 - Set the action flag to **UPD** and the operation flag to **APPR**

On processing the request, the system either approves the deal version or sends the deal to the next level in the approval hierarchy. Only the approver at the respective level in the product, division, or deal approval hierarchy can approve the deal version of the deal.

- **Return the deal version to the submitter** - While requesting the submitter to resubmit the deal version for approval, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to return to the submitter
 - Set the action flag to **UPD** and the operation flag to **RETN**

On processing the request, the deal is resubmitted to the submitter to incorporate the changes requested by the approver.

- **Finalize a deal version** - While finalizing a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to finalize
 - Set the action flag to **UPD** and the operation flag to **FNAL**

On processing the request, the deal is finalized and its status is changed to **FNAL**.

- **Accept a deal version** - While accepting a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to review
 - Set the action flag to **UPD** and the operation flag to **ACPT**
 - Specify the start date from when the deal version will be effective and end date (if it is a contracted deal) till when the deal version will be effective

On processing the request, the status of the deal is changed to **ACPT**.

- **Reject a deal version** - While rejecting a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to review
 - Set the action flag to **UPD** and the operation flag to **REJC**
 - Reason why you want to reject the deal version

On processing the request, the status of the deal is changed to **REJC**.

- **Discard a deal version** - While discarding a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal that you want to discard
 - Set the action flag to **UPD** and the operation flag to **DSCR**

On processing the request, the status of the deal is changed to **DSCR**.

- **View the price items assigned to the customer or account for which the deal is created** - While viewing the price items assigned to the existing entity for which the deal is created, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal whose details you want to view
- Set the action flag to **READ** and the operation flag to **PSEL**

On processing the request, the system lists all price items which are currently assigned to the entity using the respective pricing parameters. It also indicates whether any price item and pricing parameters combination is available in the deal version at the moment for defining the proposed pricing and commitments.

- **Select the price items for which you want to inherit, override, or edit pricing and add commitments in the deal version** – While selecting the price items in a deal version, you need to:
 - Specify the deal version ID or deal ID or deal identifier to determine the deal version which you want to edit
 - Set the action flag to **UPD** and the operation flag to **PSEL**
 - Set the **Include** flag of the price item and pricing parameters combination to **true**

On processing the request, the system enables you to define proposed pricing and commitments for the selected price item and pricing parameters combination.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. For more information about the Deal Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

Deal Creation Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Creation Request in the XML Format](#) on page 4058 and [Deal Creation Response in the XML Format](#) on page 4059 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal creation request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create a deal for an entity (i.e. existing person, account, or prospect person) in the system. The valid value is: <ul style="list-style-type: none"> ADD <p>Note: If you do not specify the value in this tag, by default, the system considers it as an ADD action.</p>	Yes
dealDetails	Used to specify basic information about the deal.	Yes
dealEntityDetails	Used to specify basic information about the entity (i.e. existing person, account, or prospect person) for which you want to create a deal.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
personIdentifierType	Used to indicate the identifier type using which the person is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the personIdentifier tag, you need to specify the personIdentifierType tag.</p> <p>If you specify the personIdentifier tag and do not specify the personIdentifierType tag, the system will throw an error message indicating that the person identifier type field is missing.</p> <p>If you specify the personIdentifierType tag, you need not specify the personId tag.</p>	<p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType tag is set to EPER.</p>
personIdentifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the personIdentifierType tag, you need to specify the personIdentifier tag.</p> <p>If you specify the personIdentifierType tag and do not specify the personIdentifier tag, the system will throw an error message indicating that the person identifier field is missing.</p> <p>If you specify the personIdentifier tag, you need not specify the personId tag.</p>	<p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType tag is set to EPER.</p>
personId	Used to specify the existing person for whom you want to create a deal in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the personId tag, you need not specify the personIdentifierType and the personIdentifier tags.</p> <p>If the personId tag is not valid, the system will throw an error message indicating that the person ID is invalid.</p> <p>Based on the specified value in the personId tag, the system fetches the values of the person's division, accessGrp, customerSegment, and customerTier tags.</p>	<p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType tag is set to EPER.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
accountIdentifierType	Used to indicate the identifier type using which the account is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the accountIdentifier tag, you need to specify the accountIdentifierType tag.</p> <p>If you specify the accountIdentifier tag and do not specify the accountIdentifierType tag, the system will throw an error message indicating that the account identifier type field is missing.</p> <p>If you specify the accountIdentifierType tag, you need not specify the accountId tag.</p>	<p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType tag is set to EACC.</p>
accountIdentifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the accountIdentifierType tag, you need to specify the accountIdentifier tag.</p> <p>If you specify the accountIdentifierType tag and do not specify the accountIdentifier tag, the system will throw an error message indicating that the account identifier field is missing.</p> <p>If you specify the accountIdentifier tag, you need not specify the accountId tag.</p>	<p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType tag is set to EACC.</p>
accountId	Used to specify the existing account for which you want to create a deal in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the accountId tag, you need not specify the accountIdentifierType and the accountIdentifier tags.</p> <p>If the accountId tag is not valid, the system will throw an error message indicating that the account ID is invalid.</p> <p>Based on the specified value in the accountId tag, the system fetches the account's main person ID and further fetches the values of the division, accessGrp, customerSegment, and customerTier tags.</p>	<p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType tag is set to EACC.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
prsPerIdentifierType	<p>Used to indicate the identifier type using which the prospect person is created in the system.</p> <p>Note:</p> <p>If you specify the prsPerIdentifier tag, you need to specify the prsPerIdentifierType tag.</p> <p>If you specify the prsPerIdentifier tag and do not specify the prsPerIdentifierType tag, the system will throw an error message indicating that the prospect person identifier type field is missing.</p> <p>If you specify the prsPerIdentifierType tag, you need not specify the prospectPersonId tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType tag is set to PRSP.</p>
prsPerIdentifier	<p>Used to specify the value for the prospect person identifier type.</p> <p>Note:</p> <p>If you specify the prsPerIdentifierType tag, you need to specify the prsPerIdentifier tag.</p> <p>If you specify the prsPerIdentifierType tag and do not specify the prsPerIdentifier tag, the system will throw an error message indicating that the prospect person identifier field is missing.</p> <p>If you specify the prsPerIdentifier tag, you need not specify the prospectPersonId tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType tag is set to PRSP.</p>
prospectPersonId	<p>Used to specify the prospect person for whom you want to create a deal in the system.</p> <p>Note:</p> <p>If you specify the prospectPersonId tag, you need not specify the prsPerIdentifierType and the prsPerIdentifier tags.</p> <p>If the prospectPersonId tag is not valid, the system will throw an error message indicating that the prospect person ID is invalid.</p> <p>Based on the specified value in the prospectPersonId tag, the system fetches the values of prospect person's division, accessGrp, customerSegment, and customerTier tags.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType tag is set to PRSP.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
division	Used to indicate the division to which the entity (i.e. existing person, account, or prospect person) belongs.	Yes (Conditional)
	<p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>If you do not specify the division tag while specifying the identifier type and identifier of the entity (i.e. existing customer, account, or prospect customer), the system throws an error message indicating that the division is mandatory when identifier type and identifier is provided.</p>	<p>Note: This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the entity's identifier type and identifier.</p>
dealIdentifier	Used to specify the primary identifier using which you want to create the deal in the system.	Yes
	<p>Note:</p> <p>You should ensure that every deal has a unique deal identifier.</p> <p>An error message appears when you save a deal with a deal identifier which is already used while creating a deal.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
dealEntityType	<p>Used to indicate the type of entity for which you want to create a deal. The valid values are:</p> <ul style="list-style-type: none"> • EPER - Used to indicate that you want to create deal for an existing person. <div data-bbox="634 369 1089 978" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as EPER, you must specify either the personId tag or the personIdentifierType, personIdentifier, and division tags.</p> <p>If you do not specify the personId tag, the system will validate the combination of the values provided in the personIdentifierType, personIdentifier, and division tags. If the combination is valid, the system will derive the person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p> </div> <ul style="list-style-type: none"> • EACC - Used to indicate that you want to create deal for an existing account. <div data-bbox="634 1077 1089 1686" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as EACC, you must specify either the accountId tag or the accountIdentifierType, accountIdentifier, and division tags.</p> <p>If you do not specify the accountId tag, the system will validate the combination of the values provided in the accountIdentifierType, accountIdentifier, and division tags. If the combination is valid, the system will derive the account's main person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p> </div> <ul style="list-style-type: none"> • PRSP - Used to indicate that you want to create deal for a prospect person. <div data-bbox="634 1780 1089 2100" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as PRSP, you must specify either the prospectPersonId tag or the prsPerIdentifierType, prsPerIdentifier, and division tags.</p> <p>If you do not specify the prospectPersonId tag, the system will validate the combination of the values</p> </div>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
contractedDealFlag	Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false 	Yes
currency	Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.	Yes
	Note: You can specify only those currencies which are already defined in the system.	
dealTypeCode	Used to specify the deal type using which you want to create the deal in the system.	Yes
	Note: If you specify a value in the dealTypeCode tag, the customer segment, customer tier, and division of the specified deal type is validated against the customerSegment , customerTier , and division tags specified in the deal creation request using the GETDEALTYPE business service. If the deal type is validated successfully, the system will continue the deal creation process. Whereas, if the deal type is invalid, the system will throw an error message indicating that the deal type is invalid.	
startDate	Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).	Yes
	Note: This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment.	
endDate	Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).	No

Tag Name	Tag Description	Mandatory (Yes or No)
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL 	Yes
reviewFrequency	Used to specify the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> • 6 - Used to indicate that you want to monitor the deal usage biannually. • 12 - Used to indicate that you want to monitor the deal usage annually. • 24 - Used to indicate that you want to monitor the deal usage in every two years. 	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • 1 - Used to indicate that you want to simulate the deal every month • 3 - Used to indicate that you want to simulate the deal quarterly • 6 - Used to indicate that you want to simulate the deal biannually • 12 - Used to indicate that you want to simulate the deal annually 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
skipReferenceFlag	<p>Used to specify whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you do not specify a value in the skipReferenceFlag tag, by default, the system considers it as false.</p> <p>If you specify the value in the skipReferenceFlag tag as false, you need to specify the reference deal details. The system will then copy the reference deal details using the C1-ReferePriceVolumeAdd business service.</p>	No
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to aggregate the deal data every month • 3 - Used to indicate that you want to aggregate the deal data quarterly • 6 - Used to indicate that you want to aggregate the deal data biannually • 12 - Used to indicate that you want to aggregate the deal data annually 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while creating a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you do not specify a value in the includeHierarchyFlag tag, by default, the system considers it as false.</p> <p>You can specify the value in the includeHierarchyFlag tag as true only when the dealEntityType tag is set to EPER and the simulationTypeFlag tag is set to CUST.</p> <p>You cannot specify the value in the includeHierarchyFlag as false when the value in the dealEntityType tag is set to PRSP and the simulationTypeFlag tag is set to CUST. In such case, the system will throw an error message indicating that you must set the include hierarchy flag to true when deal entity type is PRSP and simulation type is CUST.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the deal details to create a deal for an existing or prospect person.</p>
templateFlag	<p>Use to indicate whether you want the deal to be used as a template while searching references for other deals. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>Users who belong to the user group which has the Change access mode provided for the C1-DEALTEMPLATE application service can create the deal templates in the system.</p> <p>If you specify the value in the templateFlag tag as true and you do not belong to the user group which has the Change access mode provided for the C1-DEALTEMPLATE application service, the system will throw an error message indicating that you do not have security rights to create a deal template.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
templateReferenceDetails	Used to specify the template deal details which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	No
	<p>Note: Template deal information such as, Deal type, Price Selection Date, End Date, Simulation Type, Currency, Include Hierarchy, Contracted deal, Review Frequency, Deal Frequency, Skip Reference, Usage Period, Deal Description and Deal Version Description are copied when you use a template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>	
templateDealId	Used to specify the template deal which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<p>Note:</p> <p>If you specify the templateDealId tag, you need not specify the templateDealIdentifier and templateModelId tags.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal ID in the system. In such case, you need to specify the templateModelId tag of the template deal instead of the templateDealId tag.</p> <p>If the value specified in the templateDealId tag is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Tag Name	Tag Description	Mandatory (Yes or No)
templateDealIdentifier	<p>Used to specify the primary identifier using which the template deal is created in the system.</p> <p>Note: If you specify the templateDealIdentifier tag, you need not specify the templateDealId and templateModelId tags.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal identifier in the system. In such case, you need to specify the templateModelId tag of the template deal instead of the templateDealIdentifier tag.</p> <p>If the value specified in the templateDealIdentifier tag is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
templateModelId	<p>Used to specify the deal version which you want to use as a template for creating a deal for the entity (i.e. existing person, account, or prospect person).</p> <p>Note: If you specify the templateModelId tag, you need not specify the templateDealId and templateDealIdentifier tags.</p> <p>If the value specified in the templateModelId tag is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Tag Name	Tag Description	Mandatory (Yes or No)
copyBasicDetailsFlag	<p>Used to indicate whether you want to copy the basic details from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p>Note:</p> <p>If you specify the values in the copyPricingFlag and copyUsageFlag tags as false, you need to specify the value in the copyBasicDetailsFlag as true.</p> <p>Details such as, Deal Information, Deal Products, Deal Terms and Conditions and Deal Characteristics are copied from the template deal when you specify the copyBasicDetailsFlag as true.</p> <p>The Deal Information copied from the template deal gets overridden by the Deal Information specified by the user while creating a deal through the inbound web service.</p>	
copyPricingFlag	<p>Used to indicate whether you want to copy the price list assignments and price assignments from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p>Note: If you specify the values in the copyBasicDetailsFlag and copyUsageFlag tags as false, you need to specify the value in the copyPricingFlag as true.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
copyUsageFlag	Used to indicate whether you want to copy commitments from the SQI-based billable charges from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	Note: If you specify the values in the copyBasicDetailsFlag and copyPricingFlag tags as false , you need to specify the value in the copyUsageFlag as true .	Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).
dealCharacteristics	Used to specify a list of characteristics for the deal.	No
	Note: If you create a deal using a template deal as a reference, the characteristics specified in the dealCharacteristics tag will be added with the template deal characteristics.	
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	Note: You can specify only those characteristic types where the characteristic entity is set to Deal . If the Characteristic Type of the template deal matches with the value specified in the characteristicType tag, the system will override the template deal Characteristic Type .	Note: This data is required while specifying a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		Note: This data is required while specifying a characteristic for the deal.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required while specifying a characteristic for the deal.

Tag Name	Tag Description	Mandatory (Yes or No)
dealTermsAndConditionsDetails	Used to specify a list of terms and conditions which you want to associate with the deal. Note: If you create a deal using a template deal as a reference, the deal terms and conditions specified in the dealTermsAndConditionsDetails tag will be added with the template deal terms and conditions.	No
termsAndConditionsList	Used to specify the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions. Note: If the value specified in the description tag is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	Yes (Conditional) Note: This data is required while associating terms and conditions with a deal.
termsAndCondition	Used to specify the term and condition which you want to associate with the deal. Note: If the value specified in the termsAndCondition tag is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	Yes (Conditional) Note: This data is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify additional information about the term and condition.	No
adhocTermsAndCondition	Used to specify the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to recommend a list of products for the deal. Note: If you create a deal using a template deal as a reference, the deal products specified in the productDetailsList tag will be added with the template deal recommended products.	No
productCode	Used to specify the product which you want to recommend for the deal.	Yes (Conditional) Note: This data is required while recommending a product for the deal.

Tag Name	Tag Description	Mandatory (Yes or No)
referenceDetails	Used to specify the details of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional) Note: This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).

Tag Name	Tag Description	Mandatory (Yes or No)
referenceTypeFlg	<p>Used to indicate the type of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • RPER - Used to indicate that you want to use the deal of a person as a reference to create the deal for the existing person or the prospect person. <div data-bbox="634 499 1089 915" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the skipReferenceFlag tag as false and the dealEntityType tag as EPER or PRSP, you need to ensure that the referenceTypeFlg tag is set to either RPER or RDEL.</p> <p>If you specify the referenceTypeFlg tag as RPER, you must specify the values in either the referPersonId tag or refPersonIdentifierType, refPersonIdentifier, and division tags.</p> </div> <ul style="list-style-type: none"> • RACC - Used to indicate that you want to use the deal of an account as a reference to create the deal for the existing account. <div data-bbox="634 1045 1089 1461" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the skipReferenceFlag tag as false and the dealEntityType tag as EACC, you need to ensure that the referenceTypeFlg tag is set to either RACC or RDEL.</p> <p>If you specify the referenceTypeFlg tag as RACC, you must specify the values in either the referAccountId tag or refAccountIdentifierType, refAccountIdentifier, and division tags.</p> </div> <ul style="list-style-type: none"> • RDEL - Used to indicate that you want to use an existing deal as a reference to create the deal for the existing person, account or prospect person. <div data-bbox="634 1623 1089 1801" style="border: 1px solid black; padding: 5px;"> <p>Note: If you specify the referenceTypeFlg tag as RDEL, you must specify the values in either the referenceDealId, referDealIdentifier, or referenceModelId tag.</p> </div> <div data-bbox="573 1822 1089 1997" style="border: 1px solid black; padding: 5px;"> <p>Note: If you do not specify the value of the referenceTypeFlg tag and the skipReferenceFlag is set as false, the system will throw an error message indicating that the Reference Type Flag field is missing.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1097 264 1466 436" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).</p> </div>

Tag Name	Tag Description	Mandatory (Yes or No)
refPersonIdentifierType	Used to specify the identifier type of the person using which the reference deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refPersonIdentifier tag, you need to specify the refPersonIdentifierType tag.</p> <p>If you specify the refPersonIdentifier tag and do not specify the refPersonIdentifierType tag, the system will throw an error message indicating that the person identifier type in the reference section is missing.</p> <p>If you specify the refPersonIdentifierType tag, you need not specify the referPersonId tag.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refPersonIdentifierType tag, you need to specify the refPersonIdentifier tag.</p> <p>If you specify the refPersonIdentifierType tag and do not specify the refPersonIdentifier tag, the system will throw an error message indicating that the person identifier in the reference section is missing.</p> <p>If you specify the refPersonIdentifier tag, you need not specify the referPersonId tag.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
referPersonId	Used to specify the person for whom the reference deal is created.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referPersonId tag, you need not specify the refPersonIdentifierType and the refPersonIdentifier tags.</p> <p>If the referPersonId tag is not valid, the system will throw an error message indicating that the referred person is invalid.</p> <p>Based on the specified value in the referPersonId tag, the system fetches the reference deal details for the deal creation process.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
refAccountIdentifierType	<p>Used to specify the identifier type of the account using which the reference deal is created in the system.</p> <p>Note: If you specify the refAccountIdentifier tag, you need to specify the refAccountIdentifierType tag.</p> <p>If you specify the refAccountIdentifier tag and do not specify the refAccountIdentifierType tag, the system will throw an error message indicating that the account identifier type in the reference section is missing.</p> <p>If you specify the refAccountIdentifierType tag, you need not specify the referAccountId tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>
refAccountIdentifier	<p>Used to specify the value of the reference account identifier type.</p> <p>Note: If you specify the refAccountIdentifierType tag, you need to specify the refAccountIdentifier tag.</p> <p>If you specify the refAccountIdentifierType tag and do not specify the refAccountIdentifier tag, the system will throw an error message indicating that the account identifier in the reference section is missing.</p> <p>If you specify the refAccountIdentifier tag, you need not specify the referAccountId tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
referAccountId	<p>Used to specify the account for which the reference deal is created.</p> <p>Note: If you specify the referAccountId tag, you need not specify the refAccountIdentifierType and the refAccountIdentifier tags.</p> <p>If the referAccountId tag is not valid, the system will throw an error message indicating that the referred account is invalid.</p> <p>Based on the specified value in the referAccountId tag, the system fetches the reference deal details for the deal creation process.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>
referDealIdentifier	<p>Used to specify the primary identifier using which the reference deal is created in the system.</p> <p>Note: If you specify the referDealIdentifier tag, you need not specify the referenceDealId and referenceModelId tags.</p> <p>You need to ensure that the Simulation Type of the reference deal matches with the value specified in the simulationTypeFlag tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>Also, you cannot use a deal whose status is Draft, Discarded, Hierarchy Creation, Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the referenceModelId tag of the reference deal instead of the referDealIdentifier tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
referenceDealId	Used to specify the existing deal which you want to use as a reference.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referenceDealId tag, you need not specify the referDealIdentifier and referenceModelId tags.</p> <p>You need to ensure that the Simulation Type of the reference deal matches with the value specified in the simulationTypeFlag tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>Also, you cannot use a deal whose status is Draft, Discarded, Hierarchy Creation, Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the referenceModelId tag of the reference deal instead of the referenceDealId tag.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
referenceModelId	Used to specify the deal version which you want to use as a reference.	Yes (Conditional)
	<p>Note:</p> <p>You need to specify the referenceModelId if the reference deal has multiple deal versions.</p> <p>If you specify the referenceModelId tag, you need not specify the referDealIdentifier and referenceDealId tags.</p> <p>You need to ensure that the Simulation Type of the reference deal version matches with the value specified in the simulationTypeFlag tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p> <p>Also, you cannot use a deal version whose status is Draft, Discarded, Hierarchy Creation Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal version is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referUsageSw	<p>Used to indicate whether you want to copy commitments from the SQI-based billable charges of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>If you do not specify a value in the referUsageSw tag, by default, the system considers it as false.</p> <p>You should specify values in either referUsageSw or referPriceSw tag or both.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
referPriceSw	Used to indicate whether you want to copy the price list assignments and price assignments of the reference deal. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>If you do not specify a value in the referPriceSw tag, by default, the system considers it as false.</p> <p>You should specify values in either referUsageSw or referPriceSw tag or both.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
includeChildHierarchy	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts of the reference deal while creating the deal for an existing or prospect person. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>By default, the system considers all child and grandchild persons and their accounts in the customer hierarchy while specifying a reference deal for an existing person irrespective of the values provided in the includeChildHierarchy tag.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person.</p>
division	Used to specify the division to which the reference person belongs.	Yes (Conditional)
		<p>Note: This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the reference deal identifier type and identifier.</p>

Once the deal is created, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealResponse	Displays whether the deal creation request is successfully processed or not.
message	Displays the message generated for the deal response.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
dealId	Displays the identification value of the deal.

Tag Name	Tag Description
modelId	Displays the identification value of the deal version.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) for which the deal is created.
createdDate	Displays the date when the deal is created in the system.
status	Displays the current status of the deal.
dealVersionStatus	Displays the current status of the deal version.

Deal Update Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Update Request in the XML Format](#) on page 4061 and [Deal Update Response in the XML Format](#) on page 4063 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to update a deal. The valid value is: <ul style="list-style-type: none"> UPD <p>Note: If you do not specify the value in the actionFlag tag, by default, the system considers it as an ADD action. The RM (i.e. Relationship Manager) can update a deal only when it is in the DRAF, PSML, PFAP, SMLD, DSML, or RFAP status.</p>	Yes
dealOperation	Used to specify the operation that you want to perform while updating the deal.	No

Tag Name	Tag Description	Mandatory (Yes or No)
operationFlag	<p>Used to specify the operation that you want to perform on the deal while creating the update request. The valid values are:</p> <ul style="list-style-type: none"> • APPR • ACPT • REJC • FNAL • SMLD • SNDP • RETN • PSEL • CRDV • DSCR <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You cannot specify the operationFlag tag as DSCR if the status of the deal version is FORC, PROR, REJC, FNAL, or ACPT.</p> </div>	Yes (Conditional)
	<p>Note:</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as SMLD, then, the deal version gets simulate.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as SNDP, then, the deal version is send for the approval.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as APPR, then, the deal version is approved or sent to next level in the approval hierarchy.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as RETN, then, the submitter is requested to resubmit the deal version for the approval.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as FNAL, then, the deal version gets finalized.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as ACPT, then, the deal version is accepted.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as REJC, then, the deal version is rejected.</p> <p>If you specify the value of actionFlag tag as UPD and operationFlag tag as DSCR, then, the deal version is discarded.</p> <p>To select the price item for which you want to inherit, override, or edit pricing and commitments in the deal version you need to set the value of actionFlag tag as UPD and</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal identifier using which you want to update the deal in the system.	Yes (Conditional)
	Note: You cannot update the value specified in the dealIdentifier tag if the status of the deal is PSML .	Note: This data is required if the do not specify value of dealId tag.
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional)
		Note: This data is required if the do not specify value of dealIdentifier tag.
modelId	Used to specify the deal version for which you want to create the update request.	Yes (Conditional)
		Note: This data is required if the value of operation flag is APPR and multiple deal version exists in the system.
dealAcceptEffStartDate	Used to specify the date from when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		Note: This data is required if the value of operationFlag is set to ACPT .
dealAcceptEffEndDate	Used to specify the date till when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		Note: This data is required if the value of operationFlag is set to ACPT .
comments	Used to specify the information about accepting or rejecting the deal.	Yes (Conditional)
		Note: This data is required if the value of operationFlag is set to REJC .
rejectReasonCode	Used to specify the reason why you want to reject the deal in the system.	Yes (Conditional)
		Note: This data is required if the value of operation flag is set to REJC .
dealVersionDescription	Used to specify the deal version description.	No

Tag Name	Tag Description	Mandatory (Yes or No)
dealVersionCreationFlag	<p>Used to indicate the method using which you want to create a new deal version. The valid values are:</p> <ul style="list-style-type: none"> • CVOC - Used to indicate that you want to copy the customer hierarchy without the pricing and commitment details from the current deal version to the new deal version. • CVWC - Used to indicate that you want to copy the customer hierarchy and pricing and commitment details from the current deal version to the new deal version. • FLHR - Used to indicate that you want to derive the latest customer hierarchy from the system. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>In this case, you will have to select the price items, assign the required price lists to the entities, override or edit the required proposed pricing, and add commitments from scratch in the new deal version.</p> <p>Also, the system will include all the prospect persons and accounts associated with the customer in the customer hierarchy of the deal version.</p> </div>	No
priceItemGroupSelection	Used to specify the details of price item group selection.	No
priceItemSelectionList	Used to specify a list of price item selection.	No
priceItemCode	Used to specify the price item code which is associated with the deal that you want to update.	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>
priceItemInfo	Used to specify the information of the price item that you want to update.	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>
parameterInfo	Used to specify the information of the parameters which are associated with the price item.	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>

Tag Name	Tag Description	Mandatory (Yes or No)
assignmentLevel	Used to indicate the level at which the price item pricing is defined in the person hierarchy.	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
hierarchyDetails	Used to specify the details of the person hierarchy.	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
includeFlag	Used to indicate the flag value of the price item pricing. The valid value are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
	Note: You have to set the includeFlag of the price item and pricing as true .	
dealDetails	Used to specify the details for a deal.	No
dealEntityDetails	Used to specify the details of the entity for which you want to update the deal.	No
personIdentifierType	Used to indicate the identifier type of the existing person based on which you want to update the deal.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifier tag.
personIdentifier	Used to specify the existing person identifier.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifierType tag.
personId	Used to specify the existing person whose deal you want to update.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifier tag.
accountIdentifierType	Used to indicate the identifier type of the existing person account based on which you want to update the deal.	Yes (Conditional)
		Note: This data is required if you specify the accountIdentifier tag.
accountIdentifier	Used to specify the existing person account identifier.	Yes (Conditional)
		Note: This data is required if you specify the accountIdentifierType tag.

Tag Name	Tag Description	Mandatory (Yes or No)
accountId	Used to specify the existing person account whose deal you want to update.	Yes (Conditional) Note: This data is required if you do not specify the accountIdentifier tag.
prsPerIdentifierType	Used to indicate the identifier type of the prospect person based on which you want to update the deal.	Yes (Conditional) Note: This data is required if you specify the prsPerIdentifier tag.
prsPerIdentifier	Used to specify the prospect person identifier.	Yes (Conditional) Note: This data is required if you specify the prsPerIdentifierType tag.
prospectPersonId	Used to specify the prospect person whose deal you want to update.	Yes (Conditional) Note: This data is required if you do not specify the prsPerIdentifier tag.
division	Used to indicate the division to which the person belongs.	Yes (Conditional) Note: This data is required if you specify the personIdentifier and personIdentifierType tags.
dealIdentifier	Used to specify the deal identifier for which you want to update the deal.	Yes (Conditional) Note: This data is required if you do not specify the dealId or dealversionId tag.
dealInformation	Used to specify the information about the deal which you want to update for the entity.	Yes
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealversionId tag.
modelId	Used to specify the model for which you want to create the update request.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
dealEntityType	<p>Used to indicate the entity type of the entity (i.e. existing person, account, or prospect person) whose deal details you want to update. The valid values are:</p> <ul style="list-style-type: none"> • EPER - Used to indicate that you want to update deal of an existing person. <div data-bbox="639 436 1089 1041" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as EPER, you must specify either the personId tag or the personIdentifierType, personIdentifier, and division tags.</p> <p>If you do not specify the personId tag, the system will validate the combination of the values provided in the personIdentifierType, personIdentifier, and division tags. If the combination is valid, the system will derive the person ID and continue the deal update process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p> </div> <ul style="list-style-type: none"> • EACC - Used to indicate that you want to update deal of an existing account. <div data-bbox="639 1140 1089 1745" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as EACC, you must specify either the accountId tag or the accountIdentifierType, accountIdentifier, and division tags.</p> <p>If you do not specify the accountId tag, the system will validate the combination of the values provided in the accountIdentifierType, accountIdentifier, and division tags. If the combination is valid, the system will derive the account's main person ID and continue the deal update process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p> </div> <ul style="list-style-type: none"> • PRSP - Used to indicate that you want to update deal of a prospect person. <div data-bbox="639 1843 1089 2091" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType tag as PRSP, you must specify either the prospectPersonId tag or the prsPerIdentifierType, prsPerIdentifier, and division tags.</p> <p>If you do not specify the</p> </div>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
customerSegment	Used to specify the business component to which the entity (i.e. the existing person or account, prospect person) belongs.	No
	Note: You cannot update the value specified in the customerSegment tag if the status of the deal is DRAF or PSML .	
customerTier	Used to specify the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.	No
	Note: You cannot update the value specified in the customerTier tag if the status of the deal is DRAF or PSML .	
division	Used to specify the division to which the entity (i.e. existing person, account, or prospect person) belongs.	No
	Note: You must specify a division which is already defined in the system. You cannot update the value specified in the division tag if the status of the deal is DRAF or PSML .	
accessGrp	Used to indicate the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).	No
	Note: The value specified in the accessGrp tag should be associated with the division to which the entity belongs. You cannot update the value specified in the accessGrp tag if the status of the deal is DRAF or PSML .	
dealEntityId	Used to specify the entity (i.e. existing person, account, or prospect person) whose deal details you want to update.	No

Tag Name	Tag Description	Mandatory (Yes or No)
contractedDealFlag	Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: You cannot update the value specified in the contractedDealFlag tag if the status of the deal is PSML .	
currency	Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.	No
	Note: You can specify only those currencies which are already defined in the system. You cannot update the value specified in the currency tag if the status of the deal is PSML .	
dealTypeCode	Used to specify the deal type using which you want to create request to update the deal in the system.	No
	Note: You cannot update the value specified in the dealTypeCode tag if the status of the deal is PSML .	
startDate	Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).	No
	Note: This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment. You cannot update the value specified in the startDate tag if the status of the deal is PSML .	
endDate	Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).	No
	Note: You cannot update the value specified in the endDate tag if the status of the deal is PSML .	

Tag Name	Tag Description	Mandatory (Yes or No)
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL 	Yes
	Note: You cannot update the value specified in the simulationTypeFlag tag if the status of the deal is PSML .	
reviewFrequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
skipReferenceFlag	Used to indicate whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: By default, the value is set to false .	
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • biannually • monthly • quarterly • yearly 	Yes
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while updating the deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>If the entity is prospect person, then you have specify the value of includeHierarchyFlag to true.</p> <p>If you specify the value of includeHierarchyFlag tag as true and dealEntityType is set as ACCT or DEAL, then, the system will throw an error.</p> <p>If you specify the value of includeHierarchyFlag tag as false and dealEntityType as PRSP, then, the system will throw an error.</p> </div>	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
status	<p>Used to indicate the current status of the deal. The valid values are:</p> <ul style="list-style-type: none"> • DRAFT • PSML • PFAP • SMLD • DSML • RFAP <p>Note:</p> <p>If you specify the value of the deal status as DRFT, then, you cannot update the details of dealEntityType, customerSegment, customerTier, accessGrp, division, and templatedeal else the system will throw an error.</p> <p>If you specify the value of the deal status as PSML, then, you cannot update the details of startDate, createdDate, contractedDealFlag, dealIdentifier, templateDealId, dealTypeCode, dealEntityCode, status, customerTier, customerSegment, accessGrp, division, currency, SimulationTypeFlag, priceSelectionDate, dealFrequency, usagePeriod, templateFlag, skipReferenceFlag or includeHierarchyFlag else the system will throw an error.</p> <p>If you specify the value of the deal status as PFAP, SMLD, DSML or RFAP then, you cannot update the details of dealInformation and dealCharacteristics.</p> <p>If the deal status is set as DRFT, PSML, PFAP, SMLD, DSML or RFAP then, the termsAndCondition can be updated only one who creates the deal, else the system will throw an error.</p> <p>If the deal is approved, then, you cannot update the dealInformation, dealCharacteristics, termsAndCondition, and dealProduct else the system will throw an error.</p>	
dealVersionStatus	Used to indicate the current status of the deal version (model).	No

Tag Name	Tag Description	Mandatory (Yes or No)
templateFlag	Use to indicate whether you want the deal to be used as a template while updating the other deals. <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	Note: The system will check whether the user has access to update the template deal.	
templateReferenceDetails	Used to specify the details of the template reference of the deal.	No
templateDealId	Used to specify the particular deal whose details you want to use as a template for other deals.	Yes (Conditional)
	Note: If you do not specify the templateDealIdentifier or templateModelId tags, you need to specify the templateDealId tag. If you specify the values of templateDealId , templateDealIdentifier , and templateModelId tags and the value for copyUsageFlag , copyBasicDetailsFlag , and copyPricingFlag tags is set as false , then, the system will throw an error. The value of copyUsageFlag , copyBasicDetailsFlag , or copyPricingFlag tag should be set to true . If you specify templateDealIdentifier or templateDealId tag and there are multiple deal versions then the system will throw an error. If the value of templateDealIdentifier or templateDealId tag is not found in the system then it will throw an error.	
templateDealIdentifier	Used to specify the deal identifier whose details you want to use as a template for other deals.	Yes (Conditional)
	Note: If you do not specify the templateDealId or templateModelId tag, you need to specify the templateDealIdentifier tag.	
templateModelId	Used to specify the template deal version whose details you want to use as a template for other deals.	Yes (Conditional)
	Note: If you do not specify the templateDealId or templateDealIdentifier tag, you need to specify the templateModelId tag.	

Tag Name	Tag Description	Mandatory (Yes or No)
copyBasicDetailsFlag	Used to indicate whether you want to use basic details of the deal to update a deal. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	Note: If you specify the templateDealId or templateDealIdentifier or templateModelId tags, you need to set the value of the copyBasicDetailsFlag tag.	Note: This data is required while specifying the template deal.
	Used to indicate whether you want to use pricing details of the deal to update a deal. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
Note: If you specify the value for templateDealId or templateDealIdentifier or templateModelId tags, you need to set the value of the copyPricingFlag tag.		Note: This data is required while specifying the template deal.

Tag Name	Tag Description	Mandatory (Yes or No)
copyUsageFlag	<p>Used to indicate whether you want to use usage details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
		<p>Note: This data is required while specifying the template deal.</p>
	<p>Note:</p> <p>If you specify the value for templateDealId or templateDealIdentifier or templateModelId tags, you need to set the value of the copyUsageFlag tag.</p> <p>If the templateDealId, templateDealIdentifier, and templateModelId is entered with copyUsageFlag value as true, then system will copy the dealinformation, dealproducts, dealTermsAndConditionsDetails, and dealCharacteristics from the deal.</p> <p>If you specify the value for dealinformation tag, then, it overrides the value of the template dealinformation.</p> <p>If you specify the value for dealCharacteristics, dealTermsAndConditionsDetails, and dealproducts, then, it will add the value along with template dealCharacteristics, dealTermsAndConditionsDetails, and dealproducts.</p>	
dealCharacteristics	Used to specify a list of characteristics of the deal.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
		<p>Note: This data is required while defining a characteristic for the deal.</p>
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<p>Note: This data is required while defining a characteristic for the deal.</p>
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<p>Note: This data is required while defining a characteristic for the deal.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
dealTermsAndConditionsDetails	Used to specify the details of the terms and conditions of the deal.	No
termsAndConditionsList	Used to specify a list of the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions of the deal.	No
termsAndCondition	Used to indicate the terms and conditions which you want to associate with the deal. Note: If you do not specify the value in the termsAndCondition tag, then, the system will throw an error.	Yes (Conditional) Note: This field is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify the description of terms and conditions for the deal.	Yes (Conditional) Note: This field is required while associating terms and conditions with a deal.
adhocTermsAndCondition	Used to indicate the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to specify a list of product details of the deal.	No
productCode	Used to specify the product code.	No
referenceDetails	Used to specify the details of the deal that you want to use as reference to update the deal.	No
referenceTypeFlg	Used to indicate the reference type of the deal that you want to use as reference to update the deal for the entity. The valid value is: <ul style="list-style-type: none"> • RPER • RACC • RDEL Note: If you specify the value in the skipReferenceFlag as false , then, you need to specify the value in the referenceTypeFlg tag.	Yes (Conditional) Note: This data is required while specifying the reference deal.
refPersonIdentifierType	Used to specify the reference person identifier type based on which you want to update the deal for the entity. Note: If you specify the value in the referenceTypeFlg tag as RPER , then, you need to specify the refPersonIdentifierType tag.	Yes (Conditional) Note: This data is required while specifying the reference deal of the person.

Tag Name	Tag Description	Mandatory (Yes or No)
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RPER , then, you need to specify the refPersonIdentifier tag.	Note: This data is required while specifying the reference deal of the person.
referPersonId	Used to specify the reference person using which you want to update the deal.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RPER , then, you need to specify the referPersonId tag.	Note: This data is required while specifying the reference deal of the person.
refAccountIdentifierType	Used to specify the reference account identifier type based on which you want to update the deal for the entity.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RACC , then, you need to specify the refAccountIdentifierType tag.	Note: This data is required while specifying the reference deal of the person account.
refAccountIdentifier	Used to specify the value of the reference account identifier type.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RACC , then, you need to specify the refAccountIdentifier tag.	Note: This data is required while specifying the reference deal of the person account.
referAccountId	Used to specify the reference account using which you want to update the deal.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RACC , then, you need to specify the referAccountId tag.	Note: This data is required while specifying the reference deal of the person account.
referDealIdentifier	Used to specify the value of the reference deal identifier type.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg tag as RDEL , then, you need to specify the referDealIdentifier tag.	Note: This data is required while specifying the reference deal.

Tag Name	Tag Description	Mandatory (Yes or No)
referenceDealId	Used to specify the reference deal using which you want to update the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the value in the referenceTypeFlg tag as RDEL, then, you need to specify the referenceDealId tag.</p> <p>If you do not specify the value in the referenceDealId, referDealIdentifier, and referenceModelId tags, then, the system will throw an error.</p> <p>If you specify the values in the referenceDealId, referDealIdentifier, and referenceModelId tags, then, the system will check whether the values are valid or not.</p>	<p>Note: This data is required while specifying the reference deal.</p>
referenceModelId	Used to specify the reference deal version using which you want to update the deal.	Yes (Conditional)
	<p>Note: If you specify the value in the referenceTypeFlg tag as RDEL, then, you need to specify the referenceModelId tag.</p>	<p>Note: This data is required while specifying the reference deal.</p>
referUsageSw	Used to indicate whether you want to use reference usage details to update the deal.	Yes (Conditional)
	<ul style="list-style-type: none"> • true • false <p>Note:</p> <p>By default, the value is set to false.</p> <p>You need to specify the value of either referUsageSw or referPriceSw as true.</p>	<p>Note: This data is required while specifying the reference deal.</p>
referPriceSw	Used to indicate whether you want to use reference pricing details to update the deal.	Yes (Conditional)
	<ul style="list-style-type: none"> • true • false <p>Note:</p> <p>By default, the value is set to false.</p> <p>You need to specify the value of either referUsageSw or referPriceSw as true.</p>	<p>Note: This data is required while specifying the reference deal.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
includeChildHierarchy	Used to indicate whether you want to add child hierarchy in the deal of the person. <ul style="list-style-type: none"> true false 	Yes (Conditional)
	Note: By default, the value is set to false .	
division		

Once the deal is updated, all the details of deal are listed in the above mentioned tags along with the following:

Tag Name	Tag Description
dealResponse	Indicates whether the deal update request is successfully processed or not.
message	Displays the message of successful deal update.
dealId	Displays the deal ID.
modelId	Displays the model ID.
createdDate	Displays the date when the deal is created.
acceptanceDate	Displays the date when the deal is accepted.
finalizedDate	Displays the date when the deal is finalized.
effectiveStartDate	Displays the date from when the deal is effective.
effectiveEndDate	Displays the date till when the deal is effective.
reviewedDate	Displays the date when the deal is reviewed.
dealSimulationDetails	Displays the simulation details of the deal.
dealfinancialsummarylist	Displays a list of the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> APPR EROR INIT UNAP
originalDealFinancialSummary	Displays the summary of the original financial summary at the deal level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the original cost calculated at the deal level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue

Tag Name	Tag Description
proposedDealFinancialSummary	Displays the summary of the proposed financial at the deal level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the proposed cost calculated at the deal level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage at the recommend deal level from the price item pricing and price assignments.
divisionFinancialSummaryDetails	Displays the summary details of the financial at the division level.
division	Displays the division associated with the deal.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDivisionFinancialSummary	Displays the summary of the original financial at the division level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the original cost calculated at the division level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost

Tag Name	Tag Description
profitabilityPercentage	Displays the original profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
proposedDivisionFinancialSummary	Displays the summary of the proposed financial at the division level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the proposed cost calculated at the proposed level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the recommended cost calculated at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the recommended profit and proposed profit in percentage. at the division level from the price item pricing and price assignments.
productFinancialSummaryDetails	Displays the summary details of the financial at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Displays the product.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays the summary of the original financial at the product level.

Tag Name	Tag Description
revenue	Displays the original revenue generated from the price item pricing and price assignments at the product level.
cost	Displays the original cost calculated at the product level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the original profit created in percentage at the product level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
proposedProductDivisionFinancialSummary	Displays the summary of the financial at the proposed product division level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the proposed product division level.
cost	Displays the cost calculated at the proposed product division level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the proposed product division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the profit created in percentage at the proposed product division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the financial at the recommend deal level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the recommend deal level.
cost	Displays the cost calculated at the recommend deal level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the recommend deal division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the profit created in percentage at the recommend deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage. at the recommend deal level from the price item pricing and price assignments.
hierarchySimulationDetails	Displays the details of the hierarchy simulation.
entityType	Displays the entity type.
entityId	Displays the entity Id of the child.

Tag Name	Tag Description
parentEntityId	Displays the entity Id of the parent.
status	Indicates the status of the deal.
revenueVariation	Displays the average revenue generated from a person or account.
proposedRevenue	Displays the revenue generated from the proposed price item pricing and commitments.
proposedCost	Displays the overall cost of the proposed price item based on the usage.
originalRevenue	Displays the revenue generated through the original price item pricing and commitments.
originalCost	Displays the overall cost of the original price item based on the usage.

Deal View Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal View Request in the XML Format](#) on page 4067 and [Deal View Response in the XML Format](#) on page 4068 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the deal details of an entity (i.e. existing person, account, or prospect person). The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this tag, by default, the system considers it as an ADD action.	
dealOperation	Used to specify the operation that you want to perform while viewing the deal details.	No
	Note: You need to specify the dealOperation tag only when you want to view the price items using which the deal is simulated.	
operationFlag	Used to indicate that you want to create request to view the price items offered in the deal. The valid value is: <ul style="list-style-type: none"> • PSEL 	Yes (Conditional)
		Note: This data is required for viewing the price items offered in the deal.
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId or the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealIdentifier tag.	Note: This data is required for viewing the price items offered in the deal.
dealId	Used to specify the deal whose price items you want to view.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier or the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required for viewing the price items offered in the deal.
modelId	Used to specify the deal version whose price items you want to view.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier or the dealId tags.	Note: This data is required for viewing the price items offered in the deal.

Tag Name	Tag Description	Mandatory (Yes or No)
dealDetails	Used to specify the details of the deal.	No
	Note: You need to specify the dealDetails tag only when you want to view the deal details other than the price items offered in the deal (i.e. when you do not specify the dealOperation tag).	
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)
	Note: If you specify the dealIdentifier tag, you need not specify the dealId or the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealIdentifier tag.	Note: This data is required for viewing the deal details except the price items offered in the deal.
dealId	Used to specify the deal whose details you want to view.	Yes (Conditional)
	Note: If you specify the dealId tag, you need not specify the dealIdentifier or the modelId tags. If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.	Note: This data is required for viewing the deal details except the price items offered in the deal.
modelId	Used to specify the deal version whose details you want to view.	Yes (Conditional)
	Note: If you specify the modelId tag, you need not specify the dealIdentifier or the dealId tags.	Note: This data is required for viewing the deal details except the price items offered in the deal.

Once the deal view request is created, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealResponse	Indicates whether the deal view request is successfully processed or not.
message	Displays the message generated for the deal response.
dealAcceptEffStartDate	Displays the date when the deal is accepted in the system.
	Note: The data in this tag appears only when the deal is accepted in the system.

Tag Name	Tag Description
dealAcceptEffEndDate	Displays the date till when you can finalize the deal in the system.
	Note: The data in this tag appears only when the deal is accepted in the system and awaiting finalization.
comments	Displays information about deal acceptance or rejection.
rejectReasonCode	Displays the reason why the deal is rejected in the system.
dealVersionDescription	Displays description of the deal version created for the deal.
dealVersionCreationFlag	Indicates the information using which the deal version is created. The valid values are: <ul style="list-style-type: none"> • CVOC - Indicates that the deal version is created without copying the changes done in the current deal. • CVWC - Indicates that the deal version is created by copying the changes done in the current deal. • FLHR - Indicates that the deal version is created by using the latest hierarchy of the entity from the system for which the current deal is created.
priceItemGroupSelection	Displays the list of price items offered in the deal.
	Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).
priceItemSelectionList	Displays information about the price item offered in the deal.
	Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).
priceItemCode	Displays the price item.
	Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).
priceItemInfo	Displays the concatenated string of information about the price item.
	Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).
parameterInfo	Displays the parameters using which the pricing is defined for the price item.
	Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).

Tag Name	Tag Description
assignmentLevel	<p>Indicates the level at which the price item pricing is defined in the entity (i.e. exiting person, account, or prospect person) hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates price item pricing is agreed for the account. • Account Price List - Indicates price item pricing is defined in the price list which is assigned to the account. • Account Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Customer Agreed - Indicates price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List - Indicates price item pricing is defined in the price list which is assigned to the main customer. • Default Price List - Indicates price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates price item pricing defined in the price list is available in the global price list. • Customer Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Parent Customer Agreed - Indicates price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List - Indicates price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Product Default Price List - Indicates product defined in the price list is available in the default price list. <p>Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).</p>
hierarchyDetails	<p>Displays the root level and/or non-root level hierarchy entities to which the price item belongs.</p> <p>Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).</p>
includeFlag	<p>Indicates whether the price item is included in the deal for simulation. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag tag is set to PSEL).</p>

Tag Name	Tag Description
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EPER .
personIdentifier	Displays the value of the person identifier type. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EPER .
personId	Displays the existing person for whom the deal is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EPER .
accountIdentifierType	Indicates the identifier type using which the account is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EACC .
accountIdentifier	Displays the value of the account identifier type. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EACC .
accountId	Displays the existing account for which the deal is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is EACC .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is PRSP .
prsPerIdentifier	Displays the value of the prospect person identifier type. Note: The value in this tag appears only when the value specified in the dealEntityType tag is PRSP .
prospectPersonId	Displays the prospect person for whom the deal is created in the system. Note: The value in this tag appears only when the value specified in the dealEntityType tag is PRSP .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (.).
modelId	Displays the identification value of the deal version.

Tag Name	Tag Description
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • EPER - Indicates that the deal is created for an existing person. • EACC - Indicates that the deal is created for an existing account. • PRSP - Indicates that the deal is created for a prospect person.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
currency	Indicates the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> • 6 - Used to indicate that you want to monitor the deal usage biannually. • 12 - Used to indicate that you want to monitor the deal usage annually. • 24 - Used to indicate that you want to monitor the deal usage in every two years.
dealDescription	Displays the description for the deal.
dealVersionDescription	Displays the description for the deal version.

Tag Name	Tag Description
dealFrequency	<p>Indicates the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to simulate the deal every month • 3 - Used to indicate that you want to simulate the deal quarterly • 6 - Used to indicate that you want to simulate the deal biannually • 12 - Used to indicate that you want to simulate the deal annually
skipReferenceFlag	<p>Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are:</p> <ul style="list-style-type: none"> • true • false
priceSelectionDate	<p>Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.</p>
usagePeriod	<p>Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to aggregate the deal data every month • 3 - Used to indicate that you want to aggregate the deal data quarterly • 6 - Used to indicate that you want to aggregate the deal data biannually • 12 - Used to indicate that you want to aggregate the deal data annually
includeHierarchyFlag	<p>Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy are included in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false
templateFlag	<p>Indicates whether the deal is used as a template while searching references for other deals. The valid values are:</p> <ul style="list-style-type: none"> • true • false
templateReferenceDetails	<p>Displays the details of the template deal which is used as a reference for creating the deal.</p>
templateDealId	<p>Displays the particular template deal which is used for creating the deal.</p>
templateDealIdentifier	<p>Displays the primary identifier using which the template deal is created in the system.</p>
templateModelId	<p>Displays the particular template deal version which is used for creating the deal.</p>
copyBasicDetailsFlag	<p>Indicates whether the basic details from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false

Tag Name	Tag Description
copyPricingFlag	Indicates whether the price list assignments and price assignments from the template deal are copied to create the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
copyUsageFlag	Indicates whether the commitments from the SQI-based billable charges from the template deal are copied to create the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
dealCharacteristics	Displays the list of characteristics of the deal.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions that are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
description	Displays the description of the terms and conditions.
termsAndCondition	Indicates the term and condition which is associated with the deal.
termsAndConditionText	Displays additional information about the term and condition.
adhocTermsAndCondition	Displays the adhoc terms and conditions associated with the deal.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created in the system.
referenceTypeFlg	Indicates the type of the reference deal using which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • RPER - Indicates that the deal is created by using the deal of an existing person as a reference. • RACC - Indicates that the deal is created by using the deal of an existing account as a reference. • RDEL - Indicates that the deal is created by using an existing deal as a reference.
refPersonIdentifierType	Displays the identifier type of the person using which the reference deal is created in the system. <p>Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RPER.</p>
refPersonIdentifier	Displays the value of the reference person identifier type. <p>Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RPER.</p>

Tag Name	Tag Description
referPersonId	Displays the person for whom the reference deal is created.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RPER .
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RACC .
refAccountIdentifier	Displays the value of the reference account identifier type.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RACC .
referAccountId	Display the account for which the reference deal is created.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RACC .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RDEL .
referenceDealId	Displays the existing deal which is used as a reference to create the deal.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RDEL .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	Note: The value in this tag appears only when the value specified in the referenceTypeFlg tag is RDEL .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> • true • false
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> • true • false
includeChildHierarchy	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal. The valid values are: <ul style="list-style-type: none"> • true • false

Tag Name	Tag Description
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealfinancialsummarylist	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.

Tag Name	Tag Description
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the division level in percentage (%).
productFinancialSummaryDetail	Displays information about the financial summary at the product level.

Tag Name	Tag Description
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the product level in percentage (%).

Tag Name	Tag Description
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
status	Indicates the approval status of the price assignments for the respective entity (i.e. person or account).
revenueVariation	Displays the difference in the original and the proposed revenues at the entity level in percentage (%).
proposedRevenue	Displays the revenue generated at the entity level from the proposed price list assignments and price assignments.
proposedCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.
originalRevenue	Displays the revenue generated at the entity level from the original price list assignments and price assignments.
originalCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.

Deal Discard through Inbound Web Service

Oracle Revenue Management and Billing enables you to discard a deal and its versions through a web service. You can send a request to discard only one deal at a time. The **C1-DealCreationUpdateIWS** business service is enhanced to provide the ability to discard a deal. While discarding a deal, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal that you want to discard
- Set the action flag to **UPD** and the operation flag to **DSCR**

On processing the request, the deal is discarded. The status of the deal and its deal versions is changed to **DSCR**. The system does not allow you to discard a deal which is in the **Fully Orchestrated**, **Rejected**, **Finalized**, **Customer Accepted**, or **Partially Orchestrated** status. In addition, only the relationship manager of a deal can discard a deal through a web service.

Sample Deal Creation Request and Response in the XML Format

Using the below example, you can create the deal for 0074771343 person.

Sample Deal Creation Request in the XML Format

```
<C1-DealCreationUpdateIWS>
  <actionFlag>ADD</actionFlag>
```

```

<dealDetails>
  <dealEntityDetails>
    <personId>0074771343</personId>
  </dealEntityDetails>
  <dealIdentifier>EXISTINGPER1</dealIdentifier>

Deal Creation Request and Response - Attribute Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Creation Request in the JSON Format](#) on page 4157 and [Deal Creation Response in the JSON Format](#) on page 4159 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal creation request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create a deal for an entity (i.e. existing person, account, or prospect person) in the system. The valid value is: <ul style="list-style-type: none"> ADD <p>Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.</p>	Yes
dealDetails	Used to specify basic information about the deal.	Yes
dealEntityDetails	Used to specify basic information about the entity (i.e. existing person, account, or prospect person) for which you want to create a deal.	Yes
personIdentifierType	Used to indicate the identifier type using which the person is created in the system. <p>Note:</p> <p>If you specify the personIdentifier attribute, you need to specify the personIdentifierType attribute.</p> <p>If you specify the personIdentifier attribute and do not specify the personIdentifierType attribute, the system will throw an error message indicating that the person identifier type field is missing.</p> <p>If you specify the personIdentifierType attribute, you need not specify the personId attribute.</p>	Yes (Conditional) <p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType attribute is set to EPER.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
personIdentifier	<p>Used to specify the value for the person identifier type.</p> <p>Note:</p> <p>If you specify the personIdentifierType attribute, you need to specify the personIdentifier attribute.</p> <p>If you specify the personIdentifierType attribute and do not specify the personIdentifier attribute, the system will throw an error message indicating that the person identifier field is missing.</p> <p>If you specify the personIdentifier attribute, you need not specify the personId attribute.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType attribute is set to EPER.</p>
personId	<p>Used to specify the existing person for whom you want to create a deal in the system.</p> <p>Note:</p> <p>If you specify the personId attribute, you need not specify the personIdentifierType and the personIdentifier attributes.</p> <p>If the personId attribute is not valid, the system will throw an error message indicating that the person ID is invalid.</p> <p>Based on the specified value in the personId attribute, the system fetches the values of the person's division, accessGrp, customerSegment, and customerTier attributes.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an existing person i.e. when the value of the dealEntityType attribute is set to EPER.</p>
accountIdentifierType	<p>Used to indicate the identifier type using which the account is created in the system.</p> <p>Note:</p> <p>If you specify the accountIdentifier attribute, you need to specify the accountIdentifierType attribute.</p> <p>If you specify the accountIdentifier attribute and do not specify the accountIdentifierType attribute, the system will throw an error message indicating that the account identifier type field is missing.</p> <p>If you specify the accountIdentifierType attribute, you need not specify the accountId attribute.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType attribute is set to EACC.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountIdentifier	<p>Used to specify the value for the account identifier type.</p> <p>Note:</p> <p>If you specify the accountIdentifierType attribute, you need to specify the accountIdentifier attribute.</p> <p>If you specify the accountIdentifierType attribute and do not specify the accountIdentifier attribute, the system will throw an error message indicating that the account identifier field is missing.</p> <p>If you specify the accountIdentifier attribute, you need not specify the accountId attribute.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType attribute is set to EACC.</p>
accountId	<p>Used to specify the existing account for which you want to create a deal in the system.</p> <p>Note:</p> <p>If you specify the accountId attribute, you need not specify the accountIdentifierType and the accountIdentifier attributes.</p> <p>If the accountId attribute is not valid, the system will throw an error message indicating that the account ID is invalid.</p> <p>Based on the specified value in the accountId attribute, the system fetches the account's main person ID and further fetches the values of the division, accessGrp, customerSegment, and customerTier attributes.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an existing account i.e. when the value of the dealEntityType attribute is set to EACC.</p>
prsPerIdentifierType	<p>Used to indicate the identifier type using which the prospect person is created in the system.</p> <p>Note:</p> <p>If you specify the prsPerIdentifier attribute, you need to specify the prsPerIdentifierType attribute.</p> <p>If you specify the prsPerIdentifier attribute and do not specify the prsPerIdentifierType attribute, the system will throw an error message indicating that the prospect person identifier type field is missing.</p> <p>If you specify the prsPerIdentifierType attribute, you need not specify the prospectPersonId attribute.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType attribute is set to PRSP.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
prsPerIdentifier	<p>Used to specify the value for the prospect person identifier type.</p> <p>Note:</p> <p>If you specify the prsPerIdentifierType attribute, you need to specify the prsPerIdentifier attribute.</p> <p>If you specify the prsPerIdentifierType attribute and do not specify the prsPerIdentifier attribute, the system will throw an error message indicating that the prospect person identifier field is missing.</p> <p>If you specify the prsPerIdentifier attribute, you need not specify the prospectPersonId attribute.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType attribute is set to PRSP.</p>
prospectPersonId	<p>Used to specify the prospect person for whom you want to create a deal in the system.</p> <p>Note:</p> <p>If you specify the prospectPersonId attribute, you need not specify the prsPerIdentifierType and the prsPerIdentifier attributes.</p> <p>If the prospectPersonId attribute is not valid, the system will throw an error message indicating that the prospect person ID is invalid.</p> <p>Based on the specified value in the prospectPersonId attribute, the system fetches the values of prospect person's division, accessGrp, customerSegment, and customerTier attributes.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for a prospect person i.e. when the value of the dealEntityType attribute is set to PRSP.</p>
division	<p>Used to indicate the division to which the entity (i.e. existing person, account, or prospect person) belongs.</p> <p>Note:</p> <p>You must specify a division which is already defined in the system.</p> <p>If you do not specify the division attribute while specifying the identifier type and identifier of the entity (i.e. existing customer, account, or prospect customer), the system throws an error message indicating that the division is mandatory when identifier type and identifier is provided.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the entity's identifier type and identifier.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the primary identifier using which you want to create the deal in the system.	Yes
	Note: You should ensure that every deal has a unique deal identifier. An error message appears when you save a deal with a deal identifier which is already used while creating a deal.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealEntityType	<p>Used to indicate the type of entity for which you want to create a deal. The valid values are:</p> <ul style="list-style-type: none"> • EPER - Used to indicate that you want to create deal for an existing person. <div data-bbox="634 369 1089 978" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType attribute as EPER, you must specify either the personId attribute or the personIdentifierType, personIdentifier, and division attributes.</p> <p>If you do not specify the personId attribute, the system will validate the combination of the values provided in the personIdentifierType, personIdentifier, and division attributes. If the combination is valid, the system will derive the person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p> </div> <ul style="list-style-type: none"> • EACC - Used to indicate that you want to create deal for an existing account. <div data-bbox="634 1077 1089 1745" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType attribute as EACC, you must specify either the accountId attribute or the accountIdentifierType, accountIdentifier, and division attributes.</p> <p>If you do not specify the accountId attribute, the system will validate the combination of the values provided in the accountIdentifierType, accountIdentifier, and division attributes. If the combination is valid, the system will derive the account's main person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p> </div> <ul style="list-style-type: none"> • PRSP - Used to indicate that you want to create deal for a prospect person. <div data-bbox="634 1843 1089 2100" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the dealEntityType attribute as PRSP, you must specify either the prospectPersonId attribute or the prsPerIdentifierType, prsPerIdentifier, and division attributes.</p> <p>If you do not specify</p> </div>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
contractedDealFlag	<p>Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
currency	<p>Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.</p>	Yes
	<p>Note: You can specify only those currencies which are already defined in the system.</p>	
dealTypeCode	<p>Used to specify the deal type using which you want to create the deal in the system.</p>	Yes
	<p>Note:</p> <p>If you specify a value in the dealTypeCode attribute, the customer segment, customer tier, and division of the specified deal type is validated against the customerSegment, customerTier, and division attributes specified in the deal creation request using the GETDEALTYPE business service.</p> <p>If the deal type is validated successfully, the system will continue the deal creation process. Whereas, if the deal type is invalid, the system will throw an error message indicating that the deal type is invalid.</p>	
startDate	<p>Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).</p>	Yes
	<p>Note: This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment.</p>	
endDate	<p>Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).</p>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL 	Yes
reviewFrequency	Used to specify the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> • 6 - Used to indicate that you want to monitor the deal usage biannually • 12 - Used to indicate that you want to monitor the deal usage annually • 24 - Used to indicate that you want to monitor the deal usage in every two years 	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • 1 - Used to indicate that you want to simulate the deal every month • 3 - Used to indicate that you want to simulate the deal quarterly • 6 - Used to indicate that you want to simulate the deal biannually • 12 - Used to indicate that you want to simulate the deal annually 	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
skipReferenceFlag	<p>Used to specify whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you do not specify a value in the skipReferenceFlag attribute, by default, the system considers it as false.</p> <p>If you specify the value in the skipReferenceFlag attribute as false, you need to specify the reference deal details. The system will then copy the reference deal details using the C1-ReferePriceVolumeAdd business service.</p>	No
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to aggregate the deal data every month • 3 - Used to indicate that you want to aggregate the deal data quarterly • 6 - Used to indicate that you want to aggregate the deal data biannually • 12 - Used to indicate that you want to aggregate the deal data annually 	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while creating a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you do not specify a value in the includeHierarchyFlag attribute, by default, the system considers it as false.</p> <p>You can specify the value in the includeHierarchyFlag attribute as true only when the dealEntityType attribute is set to EPER and the simulationTypeFlag attribute is set to CUST.</p> <p>You cannot specify the value in the includeHierarchyFlag as false when the value in the dealEntityType attribute is set to PRSP and the simulationTypeFlag attribute is set to CUST. In such case, the system will throw an error message indicating that you must set the include hierarchy flag to true when deal entity type is PRSP and simulation type is CUST.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the deal details to create a deal for an existing or prospect person.</p>
templateFlag	<p>Use to indicate whether you want the deal to be used as a template while searching references for other deals. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>Users who belong to the user group which has the Change access mode provided for the C1-DEALTEMPLATE application service can create the deal templates in the system.</p> <p>If you specify the value in the templateFlag attribute as true and you do not belong to the user group which has the Change access mode provided for the C1-DEALTEMPLATE application service, the system will throw an error message indicating that you do not have security rights to create a deal template.</p>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
templateReferenceDetails	<p>Used to specify the template deal details which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).</p> <p>Note: Template deal information such as, Deal type, Price Selection Date, End Date, Simulation Type, Currency, Include Hierarchy, Contracted deal, Review Frequency, Deal Frequency, Skip Reference, Usage Period, Deal Description and Deal Version Description are copied when you use a template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>	No
templateDealId	<p>Used to specify the template deal which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).</p> <p>Note: If you specify the templateDealId attribute, you need not specify the templateDealIdentifier and templateModelId attributes. If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal ID in the system. In such case, you need to specify the templateModelId attribute of the template deal instead of the templateDealId attribute. If the value specified in the templateDealId attribute is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
templateDealIdentifier	Used to specify the primary identifier using which the template deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the templateDealIdentifier attribute, you need not specify the templateDealId and templateModelId attributes.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal identifier in the system. In such case, you need to specify the templateModelId attribute of the template deal instead of the templateDealIdentifier attribute.</p> <p>If the value specified in the templateDealIdentifier attribute is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
templateModelId	Used to specify the deal version which you want to use as a template for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<p>Note:</p> <p>If you specify the templateModelId attribute, you need not specify the templateDealId and templateDealIdentifier attributes.</p> <p>If the value specified in the templateModelId attribute is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
copyBasicDetailsFlag	<p>Used to indicate whether you want to copy the basic details from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p>Note:</p> <p>If you specify the values in the copyPricingFlag and copyUsageFlag attributes as false, you need to specify the value in the copyBasicDetailsFlag as true.</p> <p>Details such as, Deal Information, Deal Products, Deal Terms and Conditions and Deal Characteristics are copied from the template deal when you specify the copyBasicDetailsFlag as true.</p> <p>The Deal Information copied from the template deal gets overridden by the Deal Information specified by the user while creating a deal through the inbound web service.</p>	
copyPricingFlag	<p>Used to indicate whether you want to copy the price list assignments and price assignments from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p>Note: If you specify the values in the copyBasicDetailsFlag and copyUsageFlag attributes as false, you need to specify the value in the copyPricingFlag as true.</p>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
copyUsageFlag	<p>Used to indicate whether you want to copy commitments from the SQI-based billable charges from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note: If you specify the values in the copyBasicDetailsFlag and copyPricingFlag attributes as false, you need to specify the value in the copyUsageFlag as true.</p>	<p>Note: This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
dealCharacteristics	<p>Used to specify a list of characteristics for the deal.</p>	No
	<p>Note: If you create a deal using a template deal as a reference, the characteristics specified in the dealCharacteristics attribute will be added with the template deal characteristics.</p>	
characteristicType	<p>Used to indicate the characteristic type.</p>	Yes (Conditional)
	<p>Note: You can specify only those characteristic types where the characteristic entity is set to Deal. If the Characteristic Type of the template deal matches with the value specified in the characteristicType attribute, the system will override the template deal Characteristic Type.</p>	<p>Note: This data is required while specifying a characteristic for the deal.</p>
effectiveDate	<p>Used to specify the date from when the characteristic is effective for the deal.</p>	Yes (Conditional)
characteristicValue	<p>Used to specify the value for the characteristic type.</p>	Yes (Conditional)
		<p>Note: This data is required while specifying a characteristic for the deal.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealTermsAndConditionsDetails	Used to specify a list of terms and conditions which you want to associate with the deal. Note: If you create a deal using a template deal as a reference, the deal terms and conditions specified in the dealTermsAndConditionsDetails attribute will be added with the template deal terms and conditions.	No
termsAndConditionsList	Used to specify the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions. Note: If the value specified in the description attribute is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	Yes (Conditional) Note: This data is required while associating terms and conditions with a deal.
termsAndCondition	Used to specify the terms and conditions which you want to associate with the deal. Note: If the value specified in the termsAndCondition attribute is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	Yes (Conditional) Note: This data is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify additional information about the terms and conditions.	No
adhocTermsAndCondition	Used to specify the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to recommend a list of products for the deal. Note: If you create a deal using a template deal as a reference, the deal products specified in the productDetailsList attribute will be added with the template deal recommended products.	No
productCode	Used to specify the product which you want to recommend for the deal.	Yes (Conditional) Note: This data is required while recommending a product for the deal.

Attribute Name	Attribute Description	Mandatory (Yes or No)
referenceDetails	Used to specify the details of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional) Note: This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).

Attribute Name	Attribute Description	Mandatory (Yes or No)
referenceTypeFlg	<p>Used to indicate the type of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> RPER - Used to indicate that you want to use the deal of a person as a reference to create the deal for the existing person or the prospect person. <div data-bbox="634 499 1089 947" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the skipReferenceFlag attribute as false and the dealEntityType attribute as EPER or PRSP, you need to ensure that the referenceTypeFlg attribute is set to either RPER or RDEL.</p> <p>If you specify the referenceTypeFlg attribute as RPER, you must specify the values in either the referPersonId attribute or refPersonIdentifierType, refPersonIdentifier, and division attributes.</p> </div> <ul style="list-style-type: none"> RACC - Used to indicate that you want to use the deal of an account as a reference to create the deal for the existing account. <div data-bbox="634 1077 1089 1524" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>If you specify the skipReferenceFlag attribute as false and the dealEntityType attribute as EACC, you need to ensure that the referenceTypeFlg attribute is set to either RACC or RDEL.</p> <p>If you specify the referenceTypeFlg attribute as RACC, you must specify the values in either the referAccountId attribute or refAccountIdentifierType, refAccountIdentifier, and division attributes.</p> </div> <ul style="list-style-type: none"> RDEL - Used to indicate that you want to use an existing deal as a reference to create the deal for the existing person, account or prospect person. <div data-bbox="634 1686 1089 1864" style="border: 1px solid black; padding: 5px;"> <p>Note: If you specify the referenceTypeFlg attribute as RDEL, you must specify the values in either the referenceDealId, referDealIdentifier, or referenceModelId attribute.</p> </div> <div data-bbox="574 1885 1089 2060" style="border: 1px solid black; padding: 5px;"> <p>Note: If you do not specify the value of the referenceTypeFlg attribute and the skipReferenceFlag is set as false, the system will throw an error message indicating that the Reference Type Flag field is missing.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1101 264 1472 436" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).</p> </div>

Attribute Name	Attribute Description	Mandatory (Yes or No)
refPersonIdentifierType	Used to specify the identifier type of the person using which the reference deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refPersonIdentifier attribute, you need to specify the refPersonIdentifierType attribute.</p> <p>If you specify the refPersonIdentifier attribute and do not specify the refPersonIdentifierType attribute, the system will throw an error message indicating that the person identifier type in the reference section is missing.</p> <p>If you specify the refPersonIdentifierType attribute, you need not specify the referPersonId attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refPersonIdentifierType attribute, you need to specify the refPersonIdentifier attribute.</p> <p>If you specify the refPersonIdentifierType attribute and do not specify the refPersonIdentifier attribute, the system will throw an error message indicating that the person identifier in the reference section is missing.</p> <p>If you specify the refPersonIdentifier attribute, you need not specify the referPersonId attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referPersonId	Used to specify the person for whom the reference deal is created.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referPersonId attribute, you need not specify the refPersonIdentifierType and the refPersonIdentifier attributes.</p> <p>If the referPersonId attribute is not valid, the system will throw an error message indicating that the referred person is invalid.</p> <p>Based on the specified value in the referPersonId attribute, the system fetches the reference deal details for the deal creation process.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refAccountIdentifierType	Used to specify the identifier type of the account using which the reference deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refAccountIdentifier attribute, you need to specify the refAccountIdentifierType attribute.</p> <p>If you specify the refAccountIdentifier attribute and do not specify the refAccountIdentifierType attribute, the system will throw an error message indicating that the account identifier type in the reference section is missing.</p> <p>If you specify the refAccountIdentifierType attribute, you need not specify the referAccountId attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
refAccountIdentifier	Used to specify the value of the reference account identifier type.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the refAccountIdentifierType attribute, you need to specify the refAccountIdentifier attribute.</p> <p>If you specify the refAccountIdentifierType attribute and do not specify the refAccountIdentifier attribute, the system will throw an error message indicating that the account identifier in the reference section is missing.</p> <p>If you specify the refAccountIdentifier attribute, you need not specify the referAccountId attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>
referAccountId	Used to specify the account for which the reference deal is created.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referAccountId attribute, you need not specify the refAccountIdentifierType and the refAccountIdentifier attributes.</p> <p>If the referAccountId attribute is not valid, the system will throw an error message indicating that the referred account is invalid.</p> <p>Based on the specified value in the referAccountId attribute, the system fetches the reference deal details for the deal creation process.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing account.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referDealIdentifier	Used to specify the primary identifier using which the reference deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referDealIdentifier attribute, you need not specify the referenceDealId and referenceModelId attributes.</p> <p>You need to ensure that the Simulation Type of the reference deal matches with the value specified in the simulationTypeFlag attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>Also, you cannot use a deal whose status is Draft, Discarded, Hierarchy Creation, Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the referenceModelId attribute of the reference deal instead of the referDealIdentifier attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referenceDealId	Used to specify the deal which you want to use as a reference.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the referenceDealId attribute, you need not specify the referDealIdentifier and referenceModelId attributes.</p> <p>You need to ensure that the Simulation Type of the reference deal matches with the value specified in the simulationTypeFlag attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>Also, you cannot use a deal whose status is Draft, Discarded, Hierarchy Creation Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the referenceModelId attribute of the reference deal instead of the referenceDealId attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referenceModelId	<p>Used to specify the deal version which you want to use as a reference.</p> <p>Note: You need to specify the referenceModelId if the reference deal has multiple deal versions.</p> <p>If you specify the referenceModelId attribute, you need not specify the referDealIdentifier and referenceDealId attributes.</p> <p>You need to ensure that the Simulation Type of the reference deal version matches with the value specified in the simulationTypeFlag attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p> <p>Also, you cannot use a deal version whose status is Draft, Discarded, Hierarchy Creation Deferred, and Inactive as a reference for creating a deal. If the status of the reference deal version is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referUsageSw	<p>Used to indicate whether you want to copy commitments from the SQI-based billable charges of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify a value in the referUsageSw attribute, by default, the system considers it as false.</p> <p>You should specify values in either referUsageSw or referPriceSw attribute or both.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referPriceSw	Used to indicate whether you want to copy the price list assignments and price assignments of the reference deal. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>If you do not specify a value in the referPriceSw attribute, by default, the system considers it as false.</p> <p>You should specify values in either referUsageSw or referPriceSw attribute or both.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
includeChildHierarchy	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts of the reference deal while creating the deal for an existing or prospect person. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>By default, the system considers all child and grandchild persons and their accounts in the customer hierarchy while specifying a reference deal for an existing person irrespective of the values provided in the includeChildHierarchy attribute.</p>	<p>Note: This data is required while specifying the reference deal to create a deal for an existing person.</p>
division	Used to specify the division to which the reference person belongs.	Yes (Conditional)
		<p>Note: This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the reference deal identifier type and identifier.</p>

Once the deal is created, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealResponse	Displays whether the deal creation request is successfully processed or not.
message	Displays the message generated for the deal response.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (.).

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal.
modelId	Displays the identification value of the deal version.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicate the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) for which the deal is created.
createdDate	Displays the date when the deal is created in the system.
status	Displays the current status of the deal.
dealVersionStatus	Displays the current status of the deal version.

Deal Update Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Update Request in the JSON Format](#) on page 4160 and [Deal Update Response in the JSON Format](#) on page 4163 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to update a deal. The valid value is: <ul style="list-style-type: none"> UPD <p>Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.</p>	Yes
dealOperation	Used to specify the details of the deal operation.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
operationFlag	<p>Used to indicate that you want to create request that which operation you want to perform on a deal. The valid values are:</p> <ul style="list-style-type: none"> • APPR • ACPT • REJC • FNAL • SMLD • SNDP • RETN • PSEL • CRDV • DSCR <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You cannot specify the operationFlag attribute as DSCR if the status of the deal version is FORC, PROR, REJC, FNAL, or ACPT.</p> </div>	Yes (Conditional)
	<p>Note:</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as SMLD, then, the deal version gets simulate.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as SNDP, then, the deal version is send for the approval.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as APPR, then, the deal version is approved or send to next level in the approval hierarchy.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as RETN, then, the submitter is requested to resubmit the deal version for the approval.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as FNAL, then, the deal version gets finalized.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as ACPT, then, the deal version is accepted.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as REJC, then, the deal version is rejected.</p> <p>If you specify the value of actionFlag attribute as UPD and operationFlag attribute as DSCR, then, the deal version is discarded.</p> <p>To select the price item for which you want to inherit, override, or edit pricing and commitments in the deal version you need to set the value of actionFlag attribute as UPD and operationFlag</p>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal identifier using which you want to update the deal in the system.	Yes (Conditional) Note: This data is required if the do not specify value of dealId attribute.
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional) Note: This data is required if the do not specify value of dealIdentifiertag .
modelId	Used to specify the deal version for which you want to create the update request.	Yes (Conditional) Note: This data is required if the value of operation flag is APPR and multiple deal version exists in the system.
dealAcceptEffStartDate	Used to specify the date from when the deal is effective for the existing or prospect person or account.	Yes (Conditional) Note: This data is required if the value of operationFlag is set to ACPT .
dealAcceptEffEndDate	Used to specify the date till when the deal is effective for the existing or prospect person or account.	Yes (Conditional) Note: This data is required if the value of operationFlag is set to ACPT .
comments	Used to specify the information about accepting or rejecting the deal.	Yes (Conditional) Note: This data is required if the value of operationFlag is set to REJC .
rejectReasonCode	Used to specify the deal rejectReasonCode which you want to reject.	Yes (Conditional) Note: This data is required if the value of operation flag is set to REJC .
dealVersionDescription	Used to specify the deal version description.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealVersionCreationFlag	<p>Used to indicate the method using which you want to create a new deal version. The valid values are:</p> <ul style="list-style-type: none"> • CVOC - Used to indicate that you want to copy the customer hierarchy without the pricing and commitment details from the current deal version to the new deal version. • CVWC - Used to indicate that you want to copy the customer hierarchy and pricing and commitment details from the current deal version to the new deal version. • FLHR - Used to indicate that you want to derive the latest customer hierarchy from the system. <div data-bbox="602 688 1084 1073" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>In this case, you will have to select the price items, assign the required price lists to the entities, override or edit the required proposed pricing, and add commitments from scratch in the new deal version.</p> <p>Also, the system will include all the prospect persons and accounts associated with the customer in the customer hierarchy of the deal version.</p> </div>	No
priceItemGroupSelection	Used to specify the details of price item group selection.	No
priceItemSelectionList	Used to specify a list of price item selection.	No
priceItemCode	Used to specify the price item code which is associated with the deal that you want to update.	<p>Yes (Conditional)</p> <div data-bbox="1097 1283 1468 1398" style="border: 1px solid black; padding: 2px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>
priceItemInfo	Used to specify the information of the price item that you want to update.	<p>Yes (Conditional)</p> <div data-bbox="1097 1476 1468 1591" style="border: 1px solid black; padding: 2px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>
parameterInfo	Used to specify the information of the parameters which are associated with the price item.	<p>Yes (Conditional)</p> <div data-bbox="1097 1669 1468 1785" style="border: 1px solid black; padding: 2px;"> <p>Note: This data is required while updating the price item associated with the deal.</p> </div>

Attribute Name	Attribute Description	Mandatory (Yes or No)
assignmentLevel	Used to indicate the level at which the price item pricing is defined in the person hierarchy.	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
hierarchyDetails	Used to specify the details of the person hierarchy.	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
includeFlag	Used to indicate the flag value of the price item pricing. The valid value are: <ul style="list-style-type: none"> true false 	Yes (Conditional)
		Note: This data is required while updating the price item associated with the deal.
	Note: You have to set the includeFlag of the price item and pricing as true .	
dealDetails	Used to specify the details for a deal.	No
dealEntityDetails	Used to specify the details of the entity for which you want to update the deal.	No
personIdentifierType	Used to indicate the identifier type of the existing person based on which you want to update the deal.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifier attribute.
personIdentifier	Used to specify the existing person identifier.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifierType attribute.
personId	Used to specify the existing person whose deal you want to update.	Yes (Conditional)
		Note: This data is required if you specify the personIdentifier attribute.
accountIdentifierType	Used to indicate the identifier type of the existing person account based on which you want to update the deal.	Yes (Conditional)
		Note: This data is required if you specify the accountIdentifier attribute.

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountIdentifier	Used to specify the existing person account identifier.	Yes (Conditional) Note: This data is required if you specify the accountIdentifierType attribute.
accountId	Used to specify the existing person account whose deal you want to update.	Yes (Conditional) Note: This data is required if you do not specify the accountIdentifier attribute.
prsPerIdentifierType	Used to indicate the identifier type of the prospect person based on which you want to update the deal.	Yes (Conditional) Note: This data is required if you specify the prsPerIdentifier attribute.
prsPerIdentifier	Used to specify the prospect person identifier.	Yes (Conditional) Note: This data is required if you specify the prsPerIdentifierType attribute.
prospectPersonId	Used to specify the prospect person whose deal you want to update.	Yes (Conditional) Note: This data is required if you do not specify the prsPerIdentifier attribute.
division	Used to indicate the division to which the person belongs.	Yes (Conditional) Note: This data is required if you specify the personIdentifier and personIdentifierType attributes.
dealIdentifier	Used to specify the deal identifier for which you want to update the deal.	Yes (Conditional) Note: This data is required if you do not specify the dealId or dealversionId attribute.
dealInformation	Used to specify the information about the deal which you want to update for the entity.	Yes
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional) Note: This data is required if you do not specify the dealIdentifier or dealversionId attribute.
modelId	Used to specify the model for which you want to create the update request.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealEntityType	<p>Used to indicate the deal entity type for which you want to update the deal.</p> <ul style="list-style-type: none"> • EPER • EACC • PRSP <p>Note:</p> <p>If you specify the value of this attribute as EPER, then, you must specify the values for the personId, personIdentifierType, personIdentifier, and division attributes.</p> <p>If you specify the value of this attribute as EPER, then, the system will fetch the details of accessGrp, division, customerSegment, and customerTier from the existing person.</p> <p>If you specify the value of this attribute as EACC, then, you must specify the values for the accountId, accountIdentifierType, accountIdentifier, and division attributes.</p> <p>If you specify the value of this attribute as EACC, then, the system will fetch the details of main personId from existing person's account and division, accessGrp, customerSegment, and customerTier from the existing person.</p> <p>If you specify the value of this attribute as PRSP, then, you must specify the values for the prospectPersonId, prsPerIdentifierType, prsPerIdentifier, and division attributes.</p> <p>If you specify the value of this attribute as PRSP, then, the system will fetch the details of the accessGrp, division, customerSegment and customerTier from the prospect person.</p>	Yes
customerSegment	<p>Used to indicate the business component to which the entity (i.e. the existing person or account, prospect person) belongs. The valid values are:</p> <ul style="list-style-type: none"> • COMM • CORP • SME 	No
customerTier	<p>Used to indicate the customer tier to which the entity (i.e. the existing person or account, prospect person) belongs.</p>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
division	Used to indicate the division to which the entity (i.e. the existing person or account, prospect person) is associated.	Yes
	Note: You must specify a division which is already defined in the system.	
accessGrp	Used to indicate the user groups who can view and edit the details of the entity.	Yes
	Note: You must specify an accessGrp which is associated with the division to which the entity belongs.	
dealEntityId	Used to specify the deal entity Id whose details you want to update.	
contractedDealFlag	Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for an existing person, account or prospect person. <ul style="list-style-type: none"> • true • false 	Yes
currency	Used to specify the currency in which you want to calculate the deal or division specific financial summary and profitability of the deal.	Yes
dealTypeCode	Used to indicate the deal type using which you want to create request to update the deal in the system.	Yes
startDate	Used to specify the date from when the deal is effective for the entity (i.e. the person, account, or prospect person).	Yes
endDate	Used to specify the date till when the deal is effective for the entity (i.e. the person, account, or prospect person).	No
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL 	Yes
reviewFrequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
dealDescription	Used to specify the description for the deal.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	<p>Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal.</p> <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
skipReferenceFlag	<p>Used to indicate whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	No
	<p>Note: By default, the value is set to false.</p>	
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • biannually • monthly • quarterly • yearly 	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while updating the deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If the entity is prospect person, then you have specify the value of includeHierarchyFlag to true.</p> <p>If you specify the value of includeHierarchyFlag attribute as true and dealEntityType is set as ACCT or DEAL, then, the system will throw an error.</p> <p>If you specify the value of includeHierarchyFlag attribute as false and dealEntityType as PRSP, then, the system will throw an error.</p>	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
status	<p>Used to indicate the current status of the deal. The valid values are:</p> <ul style="list-style-type: none"> • DRAFT • PSML • PFAP • SMLD • DSML • RFAP <p>Note:</p> <p>You can update the deal only if the value of deal status is set as DRFT, PSML, PFAP, SMLD, DSML or RFAP.</p> <p>If you specify the value of the deal status as DRFT, then, you cannot update the details of dealEntityType, customerSegment, customerTier, accessGrp, division, and templatedeal else the system will throw an error.</p> <p>If you specify the value of the deal status as PSML, then, you cannot update the details of startDate, createdDate , contractedDealFlag, dealIdentifier, templateDealId, dealTypeCode, dealEntityCode, status, customerTier, customerSegment, accessGrp, division, currency, SimulationTypeFlag, priceSelectionDate, dealFrequency, usagePeriod, templateFlag, skipReferenceFlag or includeHierarchyFlag else the system will throw an error.</p> <p>If you specify the value of the deal status as PFAP, SMLD, DSML or RFAP then, you cannot update the details of dealInformation and dealCharacteristics.</p> <p>If the deal status is set as DRFT, PSML, PFAP, SMLD, DSML or RFAP then, the termsAndCondition can be updated only one who creates the deal, else the system will throw an error.</p> <p>If the deal is approved, then, you cannot update the dealInformation, dealCharacteristics, termsAndCondition, and dealProduct else the system will throw an error.</p>	
dealVersionStatus	Used to indicate the current status of the deal version(model).	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
templateFlag	Use to indicate whether you want the deal to be used as a template while updating the other deals. <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	Note: The system will check whether the user has access to update the template deal.	
templateReferenceDetails	Used to specify the details of the template reference of the deal.	No
templateDealId	Used to specify the particular deal whose details you want to use as a template for other deals.	Yes (Conditional) Note: This data is required while specifying the template deal.
	Note: If you do not specify the templateDealIdentifier or templateModelId attributes, you need to specify the templateDealId attribute. If you specify the values of templateDealId , templateDealIdentifier , and templateModelId attributes and the value for copyUsageFlag , copyBasicDetailsFlag , and copyPricingFlag attributes is set as false , then, the system will throw an error. The value of copyUsageFlag , copyBasicDetailsFlag , or copyPricingFlag attribute should be set to true . If you specify templateDealIdentifier or templateDealId attribute and there are multiple deal versions then the system will throw an error. If the value of templateDealIdentifier or templateDealId attribute is not found in the system then it will throw an error.	
templateDealIdentifier	Used to specify the deal identifier whose details you want to use as a template for other deals.	Yes (Conditional) Note: This data is required while specifying the template deal.
	Note: If you do not specify the templateDealId or templateModelId attribute, you need to specify the templateDealIdentifier attribute.	
templateModelId	Used to specify the template deal version whose details you want to use as a template for other deals.	Yes (Conditional) Note: This data is required while specifying the template deal.
	Note: If you do not specify the templateDealId or templateDealIdentifier attribute, you need to specify the templateModelId attribute.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
copyBasicDetailsFlag	<p>Used to indicate whether you want to use basic details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note: If you specify the templateDealId or templateDealIdentifier or templateModelId attributes, you need to set the value of the copyBasicDetailsFlag attribute.</p>	<p>Note: This data is required while specifying the template deal.</p>
copyPricingFlag	<p>Used to indicate whether you want to use pricing details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note: If you specify the value for templateDealId or templateDealIdentifier or templateModelId attributes, you need to set the value of the copyPricingFlag attribute.</p>	<p>Note: This data is required while specifying the template deal.</p>
copyUsageFlag	<p>Used to indicate whether you want to use usage details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	<p>Note:</p> <p>If you specify the value for templateDealId or templateDealIdentifier or templateModelId attributes, you need to set the value of the copyUsageFlag attribute.</p> <p>If the templateDealId, templateDealIdentifier, and templateModelId is entered with copyUsageFlag value as true, then system will copy the dealinformation, dealproducts, dealTermsAndConditionsDetails, and dealCharacteristics from the deal.</p> <p>If you specify the value for dealinformation attribute, then, it overrides the value of the template dealinformation .</p> <p>If you specify the value for dealCharacteristics, dealTermsAndConditionsDetails, and dealproducts, then, it will add the value along with template dealCharacteristics, dealTermsAndConditionsDetails, and dealproducts.</p>	<p>Note: This data is required while specifying the template deal.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealCharacteristics	Used to specify a list of characteristics of the deal.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional) Note: This data is required while defining a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional) Note: This data is required while defining a characteristic for the deal.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required while defining a characteristic for the deal.
dealTermsAndConditionsDetails	Used to specify the details of the terms and conditions of the deal.	No
termsAndConditionsList	Used to specify a list of the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions of the deal.	No
termsAndCondition	Used to indicate the terms and conditions which you want to associate with the deal. Note: If you do not specify the value in the termsAndCondition attribute, then, the system will throw an error.	Yes (Conditional) Note: This field is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify the description of terms and conditions for the deal.	Yes (Conditional) Note: This field is required while associating terms and conditions with a deal.
adhocTermsAndCondition	Used to indicate the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to specify a list of product details of the deal.	No
productCode	Used to specify the product code.	No
referenceDetails	Used to specify the details of the deal that you want to use as reference to update the deal.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
referenceTypeFlg	<p>Used to indicate the reference type of the deal that you want to use as reference to update the deal for the entity. The valid value is:</p> <ul style="list-style-type: none"> • RPER • RACC • RDEL 	Yes (Conditional)
	<p>Note: If you specify the value in the skipReferenceFlag as false, then, you need to specify the value in the referenceTypeFlg attribute.</p>	<p>Note: This data is required while specifying the reference deal.</p>
	refPersonIdentifierType	<p>Used to specify the reference person identifier type based on which you want to update the deal for the entity.</p>
<p>Note: If you specify the value in the referenceTypeFlg attribute as RPER, then, you need to specify the refPersonIdentifierType attribute.</p>		<p>Note: This data is required while specifying the reference deal of the person.</p>
refPersonIdentifier		<p>Used to specify the value of the reference person identifier type.</p>
	<p>Note: If you specify the value in the referenceTypeFlg attribute as RPER, then, you need to specify the refPersonIdentifier attribute.</p>	<p>Note: This data is required while specifying the reference deal of the person.</p>
	referPersonId	<p>Used to specify the reference person using which you want to update the deal.</p>
<p>Note: If you specify the value in the referenceTypeFlg attribute as RPER, then, you need to specify the referPersonId attribute.</p>		<p>Note: This data is required while specifying the reference deal of the person.</p>
refAccountIdentifierType		<p>Used to specify the reference account identifier type based on which you want to update the deal for the entity.</p>
	<p>Note: If you specify the value in the referenceTypeFlg attribute as RACC, then, you need to specify the refAccountIdentifierType attribute.</p>	<p>Note: This data is required while specifying the reference deal of the person account.</p>
	refAccountIdentifier	<p>Used to specify the value of the reference account identifier type.</p>
<p>Note: If you specify the value in the referenceTypeFlg attribute as RACC, then, you need to specify the refAccountIdentifier attribute.</p>		<p>Note: This data is required while specifying the reference deal of the person account.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
referAccountId	Used to specify the reference account using which you want to update the deal.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg attribute as RACC , then, you need to specify the referAccountId attribute.	Note: This data is required while specifying the reference deal of the person account.
referDealIdentifier	Used to specify the value of the reference deal identifier type.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg attribute as RDEL , then, you need to specify the referDealIdentifier attribute.	Note: This data is required while specifying the reference deal.
referenceDealId	Used to specify the reference deal using which you want to update the deal.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg attribute as RDEL , then, you need to specify the referenceDealId attribute. If you do not specify the value in the referenceDealId , referDealIdentifier , and referenceModelId attributes, then, the system will throw an error. If you specify the values in the referenceDealId , referDealIdentifier , and referenceModelId attributes, then, the system will check whether the values are valid or not.	Note: This data is required while specifying the reference deal.
referenceModelId	Used to specify the reference deal version using which you want to update the deal.	Yes (Conditional)
	Note: If you specify the value in the referenceTypeFlg attribute as RDEL , then, you need to specify the referenceModelId attribute.	Note: This data is required while specifying the reference deal.
referUsageSw	Used to indicate whether you want to use reference usage details to update the deal. <ul style="list-style-type: none"> • true • false 	Yes (Conditional)
	Note: By default, the value is set to false . You need to specify the value of either referUsageSw or referPriceSw as true .	Note: This data is required while specifying the reference deal.

Attribute Name	Attribute Description	Mandatory (Yes or No)
referPriceSw	Used to indicate whether you want to use reference pricing details to update the deal. <ul style="list-style-type: none"> true false 	Yes (Conditional)
	<p>Note:</p> <p>By default, the value is set to false.</p> <p>You need to specify the value of either referUsageSw or referPriceSw as true.</p>	<p>Note: This data is required while specifying the reference deal.</p>
includeChildHierarchy	Used to indicate whether you want to add child hierarchy in the deal of the person. <ul style="list-style-type: none"> true false 	Yes (Conditional)
	<p>Note: By default, the value is set to false.</p>	
division		

Once the deal is updated, all the details of deal are listed in the above mentioned attributes along with the following:

Attribute Name	Attribute Description
dealResponse	Indicates whether the deal update request is successfully processed or not.
message	Displays the message of successful deal update.
dealId	Displays the deal ID.
modelId	Displays the model ID.
createdDate	Displays the date when the deal is created.
acceptanceDate	Displays the date when the deal is accepted.
finalizedDate	Displays the date when the deal is finalized.
effectiveStartDate	Displays the date from when the deal is effective.
effectiveEndDate	Displays the date till when the deal is effective.
reviewedDate	Displays the date when the deal is reviewed.
dealSimulationDetails	Displays the simulation details of the deal.
dealFinancialSummaryId	Displays a list of the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> APPR EROR INIT UNAP
originalDealFinancialSummaryId	Displays the summary of the original financial summary at the deal level.

Attribute Name	Attribute Description
revenue	Displays the original revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the original cost calculated at the deal level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
proposedDealFinancialSummary	Displays the summary of the proposed financial at the deal level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the proposed cost calculated at the deal level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage at the recommend deal level from the price item pricing and price assignments.
divisionFinancialSummary	Displays the summary details of the financial at the division level.
division	Displays the division associated with the deal.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP

Attribute Name	Attribute Description
originalDivisionFinancialSummary	Displays the summary of the original financial at the division level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the original cost calculated at the division level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the original profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
proposedDivisionFinancialSummary	Displays the summary of the proposed financial at the division level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the proposed cost calculated at the proposed level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the recommended cost calculated at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the recommended profit and proposed profit in percentage at the division level from the price item pricing and price assignments.
productFinancialSummaryDetails	Displays the summary details of the financial at the product level.

Attribute Name	Attribute Description
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Displays the product.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays the summary of the original financial at the product level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the product level.
cost	Displays the original cost calculated at the product level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the original profit created in percentage at the product level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = (Revenue – Cost)*100/ Revenue
proposedProductDivisionFinancialSummary	Displays the summary of the financial at the proposed product division level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the proposed product division level.
cost	Displays the cost calculated at the proposed product division level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the proposed product division level. It is calculated using the following formula: Profit = Revenue – Cost
profitabilityPercentage	Displays the profit created in percentage at the proposed product division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage= (Revenue – Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the financial at the recommend deal level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the recommend deal level.
cost	Displays the cost calculated at the recommend deal level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the recommend deal division level. It is calculated using the following formula: Profit = Revenue – Cost

Attribute Name	Attribute Description
profitabilityPercentage	Displays the profit created in percentage at the recommend deal level from the price item pricing and price assignments. It is calculated using the following formula: $\text{Profitability Percentage} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage. at the recommend deal level from the price item pricing and price assignments.
hierarchySimulationDetails	Displays the details of the hierarchy simulation.
entityType	Displays the entity type.
entityId	Displays the entity Id of the child.
parentEntityId	Displays the entity Id of the parent.
status	Indicates the status of the deal.
revenueVariation	Displays the average revenue generated from a person or account.
proposedRevenue	Displays the revenue generated from the proposed price item pricing and commitments.
proposedCost	Displays the overall cost of the proposed price item based on the usage.
originalRevenue	Displays the revenue generated through the original price item pricing and commitments.
originalCost	Displays the overall cost of the original price item based on the usage.

Deal View Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal View Request in the JSON Format](#) on page 4167 and [Deal View Request in the JSON Format](#) on page 4168 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the deal details of an entity (i.e. existing person, account, or prospect person). The valid value is: <ul style="list-style-type: none"> • READ 	Yes
	Note: If you do not specify the value in this attribute, by default, the system considers it as an ADD action.	
dealOperation	Used to specify the operation that you want to perform while viewing the deal details.	No
	Note: You need to specify the dealOperation attribute only when you want to view the price items using which the deal is simulated.	
operationFlag	Used to indicate that you want to create request to view the price items offered in the deal. The valid value is: <ul style="list-style-type: none"> • PSEL 	Yes (Conditional)
	Note: This data is required for viewing the price items offered in the deal.	
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)
	Note: If you specify the dealIdentifier attribute, you need not specify the dealId or the modelId tags. If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealIdentifier attribute.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose price items you want to view.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId attribute, you need not specify the dealIdentifier or the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.</p>	<p>Note: This data is required for viewing the price items offered in the deal.</p>
modelId	Used to specify the deal version whose price items you want to view.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the modelId attribute, you need not specify the dealIdentifier or the dealId tags.</p>	<p>Note: This data is required for viewing the price items offered in the deal.</p>
dealDetails	Used to specify the details of the deal.	No
	<p>Note: You need to specify the dealDetails attribute only when you want to view the deal details other than the price items offered in the deal (i.e. when you do not specify the dealOperation attribute).</p>	
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealIdentifier attribute, you need not specify the dealId or the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealIdentifier attribute.</p>	<p>Note: This data is required for viewing the deal details except the price items offered in the deal.</p>
dealId	Used to specify the deal whose details you want to view.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId attribute, you need not specify the dealIdentifier or the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.</p>	<p>Note: This data is required for viewing the deal details except the price items offered in the deal.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
modelId	Used to specify the deal version whose details you want to view.	Yes (Conditional)
	Note: If you specify the modelId attribute, you need not specify the dealIdentifier or the dealId tags.	Note: This data is required for viewing the deal details except the price items offered in the deal.

Once the deal view request is created, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealResponse	Indicates whether the deal view request is successfully processed or not.
message	Displays the message generated for the deal response.
dealAcceptEffStartDate	Displays the date when the deal is accepted in the system.
	Note: The data in this attribute appears only when the deal is accepted in the system.
dealAcceptEffEndDate	Displays the date till when you can finalize the deal in the system.
	Note: The data in this attribute appears only when the deal is accepted in the system and awaiting finalization.
comments	Displays information about deal acceptance or rejection.
rejectReasonCode	Displays the reason why the deal is rejected in the system.
dealVersionDescription	Displays description of the deal version created for the deal.
dealVersionCreationFlag	Indicates the information using which the deal version is created. The valid values are: <ul style="list-style-type: none"> • CVOC - Indicates that the deal version is created without copying the changes done in the current deal. • CVWC - Indicates that the deal version is created by copying the changes done in the current deal. • FLHR - Indicates that the deal version is created by using the latest hierarchy of the entity from the system for which the current deal is created.
priceItemGroupSelection	Displays the list of price items offered in the deal.
	Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).
priceItemSelectionList	Displays information about the price item offered in the deal.
	Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).

Attribute Name	Attribute Description
priceItemCode	<p data-bbox="573 210 829 239">Displays the price item.</p> <p data-bbox="573 268 1463 327">Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).</p>
priceItemInfo	<p data-bbox="573 369 1308 399">Displays the concatenated string of information about the price item.</p> <p data-bbox="573 428 1463 487">Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).</p>
parameterInfo	<p data-bbox="573 529 1398 558">Displays the parameters using which the pricing is defined for the price item.</p> <p data-bbox="573 588 1463 646">Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).</p>
assignmentLevel	<p data-bbox="573 688 1463 747">Indicates the level at which the price item pricing is defined in the entity (i.e. exiting person, account, or prospect person) hierarchy. The valid values are:</p> <ul data-bbox="602 764 1463 1766" style="list-style-type: none"> • Account Agreed - Indicates price item pricing is agreed for the account. • Account Price List - Indicates price item pricing is defined in the price list which is assigned to the account. • Account Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Customer Agreed - Indicates price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List - Indicates price item pricing is defined in the price list which is assigned to the main customer. • Default Price List - Indicates price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates price item pricing defined in the price list is available in the global price list. • Customer Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Parent Customer Agreed - Indicates price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List - Indicates price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Product Default Price List - Indicates product defined in the price list is available in the default price list. <p data-bbox="573 1795 1463 1854">Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).</p>

Attribute Name	Attribute Description
hierarchyDetails	Displays the root level and/or non-root level hierarchy entities to which the price item belongs.
	Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).
includeFlag	Indicates whether the price item is included in the deal for simulation. The valid values are: <ul style="list-style-type: none"> • true • false
	Note: The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the operationFlag attribute is set to PSEL).
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EPER .
personIdentifier	Displays the value of the person identifier type.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EPER .
personId	Displays the existing person for whom the deal is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EPER .
accountIdentifierType	Indicates the identifier type using which the account is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EACC .
accountIdentifier	Displays the value of the account identifier type.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EACC .
accountId	Displays the existing account for which the deal is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is EACC .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is PRSP .

Attribute Name	Attribute Description
prsPerIdentifier	Displays the value of the prospect person identifier type.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is PRSP .
prospectPersonId	Displays the prospect person for whom the deal is created in the system.
	Note: The value in this attribute appears only when the value specified in the dealEntityType attribute is PRSP .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (.).
modelId	Displays the identification value of the deal version.
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • EPER - Indicates that the deal is created for an existing person. • EACC - Indicates that the deal is created for an existing account. • PRSP - Indicates that the deal is created for a prospect person.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
currency	Indicates the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).

Attribute Name	Attribute Description
simulationTypeFlag	<p>Indicates the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> • CUST • ACCT • DEAL
reviewFrequency	<p>Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are:</p> <ul style="list-style-type: none"> • 6 - Used to indicate that you want to monitor the deal usage biannually. • 12 - Used to indicate that you want to monitor the deal usage annually. • 24 - Used to indicate that you want to monitor the deal usage in every two years.
dealDescription	Displays the description for the deal.
dealVersionDescription	Displays the description for the deal version.
dealFrequency	<p>Indicates the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to simulate the deal every month • 3 - Used to indicate that you want to simulate the deal quarterly • 6 - Used to indicate that you want to simulate the deal biannually • 12 - Used to indicate that you want to simulate the deal annually
skipReferenceFlag	<p>Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are:</p> <ul style="list-style-type: none"> • true • false
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	<p>Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Used to indicate that you want to aggregate the deal data every month • 3 - Used to indicate that you want to aggregate the deal data quarterly • 6 - Used to indicate that you want to aggregate the deal data biannually • 12 - Used to indicate that you want to aggregate the deal data annually
includeHierarchyFlag	<p>Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy are included in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false

Attribute Name	Attribute Description
templateFlag	Indicates whether the deal is used as a template while searching references for other deals. The valid values are: <ul style="list-style-type: none"> • true • false
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	Indicates whether the basic details from the template deal are copied to create the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
copyPricingFlag	Indicates whether the price list assignments and price assignments from the template deal are copied to create the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
copyUsageFlag	Indicates whether the commitments from the SQI-based billable charges from the template deal are copied to create the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
dealCharacteristics	Displays the list of characteristics of the deal.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions that are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
description	Displays the description of the terms and conditions.
termsAndCondition	Indicates the term and condition which is associated with the deal.
termsAndConditionText	Displays additional information about the term and condition.
adhocTermsAndCondition	Displays the adhoc terms and conditions associated with the deal.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created in the system.

Attribute Name	Attribute Description
referenceTypeFlg	<p>Indicates the type of the reference deal using which the deal is created in the system. The valid values are:</p> <ul style="list-style-type: none"> • RPER - Indicates that the deal is created by using the deal of an existing person as a reference. • RACC - Indicates that the deal is created by using the deal of an existing account as a reference. • RDEL - Indicates that the deal is created by using an existing deal as a reference.
refPersonIdentifierType	<p>Displays the identifier type of the person using which the reference deal is created in the system.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RPER.</p>
refPersonIdentifier	<p>Displays the value of the reference person identifier type.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RPER.</p>
referPersonId	<p>Displays the person for whom the reference deal is created.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RPER.</p>
refAccountIdentifierType	<p>Displays the identifier type of the account using which the reference deal is created in the system.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RACC.</p>
refAccountIdentifier	<p>Displays the value of the reference account identifier type.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RACC.</p>
referAccountId	<p>Display the account for which the reference deal is created.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RACC.</p>
referDealIdentifier	<p>Displays the primary identifier using which the reference deal is created in the system.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RDEL.</p>
referenceDealId	<p>Displays the existing deal which is used as a reference to create the deal.</p> <p>Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RDEL.</p>

Attribute Name	Attribute Description
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	Note: The value in this attribute appears only when the value specified in the referenceTypeFlg attribute is RDEL .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> • true • false
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> • true • false
includeChildHierarchy	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal. The valid values are: <ul style="list-style-type: none"> • true • false
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealfinancialsummarylist	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.

Attribute Name	Attribute Description
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the cost calculated at the deal level from the recommended price list assignments and price assignments.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetail	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.

Attribute Name	Attribute Description
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the division level in percentage (%).
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.

Attribute Name	Attribute Description
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the product level in percentage (%).
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
status	Indicates the approval status of the price assignments for the respective entity (i.e. person or account).
revenueVariation	Displays the difference in the original and the proposed revenues at the entity level in percentage (%).
proposedRevenue	Displays the revenue generated at the entity level from the proposed price list assignments and price assignments.
proposedCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.
originalRevenue	Displays the revenue generated at the entity level from the original price list assignments and price assignments.
originalCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

  }
}
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal version creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Deal Simulation Request and Response in the JSON Format

Using the below example, you can simulate the deal 1359491858.

Sample Deal Simulation Request in the JSON Format

```
{
  "C1-DealCreationUpdateIWS":
  {
    "actionFlag" : "UPD",
    "dealOperation"
    {
      "operationFlag" : "SMLD",
      "dealId" : "1359491858",
      "modelId" : "8154562108",
    }
  }
}
```

Sample Deal Simulation Response in the JSON Format

```
{
  "C1-DealCreationUpdateIWS":
  {
    "actionFlag" : "UPD",
    "dealResponse"
    {
      "message" : "Deal Simulated Successfully",
    }
    "dealOperation"
    {
      "operationFlag" : "SMLD",
      "dealId" : "1359491858",

}
}
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal finalize request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Deal Acceptance Request and Response in the JSON Format

Using the below example, you can accept the deal 4524551669 whose deal identifier is DEALPRS2022PER23.

Sample Deal Acceptance Request in the JSON Format

```
{
  "C1-DealCreationUpdateIWS": {
    "actionFlag" : "UPD",
    "dealOperation" : {
      "operationFlag" : "ACPT",
      "dealIdentifier" : "DEALPRS2022PER23",
      "dealAcceptEffStartDate" : "2022-03-09",
      "comments" : "deal accepted",
    }
  }
}
```

Sample Deal Acceptance Response in the JSON Format

```
{
  "C1-DealCreationUpdateIWS": {
    "actionFlag" : "UPD",
    "dealResponse" : {
      "message" : "Deal Accepted Successfully.",
    }
    "dealOperation" : {
      "operationFlag" : "ACPT",
      "dealIdentifier" : "DEALPRS2022PER23",

Deal Extraction through Inbound Web Service

Oracle Revenue Management and Billing enables you to extract the details of a deal through a web service. At a time, you can extract the details of only one deal version of a deal. You can send the extract request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-DealExtract** - This is an SOAP based web service. You can use this web service when you want to send the extract request in the XML format.
- **C1-DealExtractREST** - This is a REST based web service. You can use this web service when you want to send the extract request in the XML or JSON format.

Both these inbound web services call the **C1-DealExtractionWebService** business service. This business service is used to extract the details of a deal version. While extracting the details of a deal version, you need to specify the deal ID, deal version ID, or the deal identifier to determine the deal version whose details you want to view. If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions.

On processing the request, the system displays the following:

- Entity for which the deal is created
- Basic details of the deal including its terms and conditions, characteristics, and products
- Template using which the deal is created
- Details of the reference (if any) used in the deal
- Logs of the deal and deal version
- Adhoc cost and revenue details of the deal version
- Pricing and commitment details of each entity in the customer hierarchy
- Deal-specific terms and conditions defined for the price items and hierarchy entities
- Characteristics of different entities in the customer hierarchy
- Characteristics of different price items and hierarchy entities included in the deal

If the deal version is simulated, the system also displays the following information:

- Original, proposed, and recommended deal level financial summary
- Original, proposed, and recommended product level financial summary (if any)
- Original, proposed, and recommended division level financial summary (if any)
- Simulation details of each entity in the customer hierarchy

Deal Extraction Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the deal extract request in the XML format:

```
<C1-DealExtractionWebService>
  <dealDetails>
    <dealIdentifier></dealIdentifier>
    <dealId></dealId>
    <modelId></modelId>
  </C1-DealExtractionWebService>
```

Deal Extraction Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Extraction Request in the XML Format](#) on page 4261 and [Deal Extraction Response in the XML Format](#) on page 4262 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealExtractionWebService** business service through an inbound web service, you need to ensure that the deal extraction request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the primary identifier of the deal using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealIdentifier tag, you need not specify the dealId and the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId tag instead of the dealIdentifier tag.</p>	<p>Note: This data is required if you do not specify the dealId and modelId tags.</p>
dealId	Used to specify the deal ID using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId tag, you need not specify the dealIdentifier and the modelId tags.</p> <p>If the deal has multiple versions, then, you should specify the modelId tag instead of the dealId tag.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId tags.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
modelId	Used to specify the deal version using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the modelId tag, you need not specify the dealIdentifier and the dealId tags.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId tags.</p>

Once the deal is extracted, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealDetails	Displays basic information about the deal.
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EPER .
personIdentifier	Displays the value of person identifier type.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EPER .
personId	Displays the existing person for whom the deal created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EPER .
accountIdentifierType	Indicates the identifier type using which the account is created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EACC .
accountIdentifier	Displays the value of the account identifier type.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EACC .
accountId	Displays the existing account for which the deal is created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is EACC .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is PRSP .

Tag Name	Tag Description
prsPerIdentifier	Displays the value of the prospect person identifier type.
	Note: The value in this tag appears only when the value of the dealEntityType tag is PRSP .
prospectPersonId	Displays the prospect person for whom the deal is created in the system.
	Note: The value in this tag appears only when the value of the dealEntityType tag is PRSP .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (.).
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • EPER - Indicates that the deal is created for an existing person. • EACC - Indicates that the deal is created for an existing account. • PRSP - Indicates that the deal is created for a prospect person.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the deal belongs.
accessGrp	Indicate the user group who can view and edit the details of the deal.
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) whose deal details you are viewing.
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
currency	Indicates the currency in which the deal level, division level, or product level financial summary and profitability of the deal is calculated.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. the existing person, account or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. the existing person, account, or prospect person).

Tag Name	Tag Description
simulationTypeFlag	Indicates the simulation type using which the cost, revenue, and profitability of the deal is analyzed. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> • 6 - Indicates that you want to monitor the deal usage biannually. • 12 - Indicates that you want to monitor the deal usage annually. • 24 - Indicates that you want to monitor the deal usage in every two years.
dealDescription	Displays the description of the deal.
dealVersionDescription	Displays the description of the deal version.
dealFrequency	Indicates the duration in which the financial summary and profitability of the deal is calculated through simulation. The valid values are: <ul style="list-style-type: none"> • 1 - Indicates that you want to simulate the deal every month. • 3 - Indicates that you want to simulate the deal quarterly. • 6 - Indicates that you want to simulate the deal biannually. • 12 - Indicates that you want to simulate the deal annually.
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> • true • false
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	Indicates the period for which deal data is aggregated to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • 1 - Indicates that you want to aggregate the deal data every month. • 3 - Indicates that you want to aggregate the deal data quarterly. • 6 - Indicates that you want to aggregate the deal data biannually. • 12 - Indicates that you want to aggregate the deal data annually.
includeHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy is included in the deal or not. The valid values are: <ul style="list-style-type: none"> • true • false
status	Indicates the current status of the deal.
dealVersionStatus	Indicates the current status of the deal version.

Tag Name	Tag Description
templateFlag	Indicates whether the deal is used as a template while searching references for creating other deals. The valid values are: <ul style="list-style-type: none"> true false
createdDate	Displays the date when the deal is created in the system.
acceptanceDate	Displays the date when the deal is accepted in the system after the customer review and acceptance. Note: The data in this tag appears only when the deal has reached the Accepted status. If the deal status is Rejected , then the acceptanceDate tag specifies the date when the deal is rejected in the system.
finalizedDate	Displays the date when the deal is finalized in the system.
effectiveStartDate	Displays the date from when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
effectiveEndDate	Displays the date till when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
reviewedDate	Displays the date when the deal usage as per the commitments made by the customer is reviewed in the system.
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	Indicates whether the basic details are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> true false
copyPricingFlag	Indicates whether the price list assignments and price assignments are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> true false
copyUsageFlag	Indicates whether the commitments from the SQL-based billable charges are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> true false
dealCharacteristics	Displays the list of characteristics of the deal.
effectiveDate	Displays the date from when the characteristic is effective for the deal.

Tag Name	Tag Description
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions which are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
termsAndCondition	Displays the term and condition which is associated with the deal.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information about the term and condition.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system.
referenceTypeFlg	Indicates the type of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system. The valid values are: <ul style="list-style-type: none"> • RPER - Indicates that the deal is created by using the deal of an existing person as a reference. • RACC - Indicates that the deal is created by using the deal of an existing account as a reference. • RDEL - Indicates that the deal is created by using an existing deal as a reference.
refPersonIdentifierType	Displays the identifier type of the person using which the reference deal is created in the system. Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RPER .
refPersonIdentifier	Displays the value of the reference person identifier type. Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RPER .
referPersonId	Displays the person for whom the reference deal is created. Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RPER .
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system. Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RACC .
refAccountIdentifier	Displays the value of the reference account identifier type. Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RACC .

Tag Name	Tag Description
referAccountId	Display the account for which the reference deal is created.
	Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RACC .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system.
	Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RDEL .
referenceDealId	Displays the existing deal which is used as a reference to create the deal.
	Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RDEL .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	Note: The value in this tag appears only when the value of the referenceTypeFlg tag is RDEL .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false
includeChildHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal for the entity (i.e. existing person, account, or prospect person).. The valid values are: <ul style="list-style-type: none"> • true • false
division	Indicates the division to which the reference person belongs.
dealComments	Displays information about the actions performed on the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal.
user	Displays the user who has performed the action on the deal.
dealComments	Displays the details about the action performed on the deal.
reasonCode	Displays the reason why the action is performed on the deal.
modelcomments	Displays information about the actions performed on the deal version of the deal.

Tag Name	Tag Description
sequenceNo	Displays the sequence number in which the action is performed on the deal version of the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal version of the deal.
user	Displays the user who has performed the action on the deal version of the deal.
modelComments	Displays the details about the action performed on the deal version of the deal.
adhocRevenueCostDetails	Displays information about the adhoc revenue and cost of the deal.
sequence	Displays the sequence number of the adhoc revenue or cost of the deal.
revenueCostGroupFlag	Indicates the group to which the adhoc charge belongs. The valid values are: <ul style="list-style-type: none"> • ADRE - Indicates the charges incurred as the adhoc revenue for the deal. • CUCO - Indicates the charges of the courier services for the deal. • DCOM - Indicates the charges that incurred during deal commissioning. • PRIL - Indicates the price item specific charges for the deal. • TRCO - Indicates the travel cost.
division	Indicates the division for which the adhoc charge is applicable.
currency	Indicates the currency in which the adhoc charge is specified for the deal.
amount	Displays the amount for the adhoc revenue or cost.
	Note: You can even view the negative value in this tag.
priceItem	Indicates the particular price item for which the adhoc charge is added.
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealFinancialSummaryDetails	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.

Tag Name	Tag Description
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetail	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.

Tag Name	Tag Description
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.

Tag Name	Tag Description
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
hierarchyDetails	Displays the details of the hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
entityIdentifierType	Displays the identifier type using which the entity is created in the system.
entityIdentifierValue	Displays the value of the entity identifier type.
entityDivision	Indicates the division to which the entity belongs.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
parentEntityIdentifierType	Displays the identifier type using which the parent entity is created in the system.
parentEntityIdentifierValue	Displays the value of the parent entity identifier type.
parentEntityDivision	Indicates the division to which the parent entity belongs.
status	Indicates the current approval status of the price list assignments and price assignments for the respective entity (i.e. person or account) in the customer hierarchy.
revenueVariation	Displays the average revenue generated from the price assignment and commitments of the price items at the entity (i.e. person or account) level in the customer hierarchy.
proposedRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
proposedCost	Displays the cost calculated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
originalRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.

Tag Name	Tag Description
originalCost	Displays the cost calculated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
dealPricingAndCommitment	Displays information about the price assignment and commitments of the entities (i.e. person or account) in the customer hierarchy of the deal.
pricingAndCommitmentsDetails	Displays the price assignment and commitment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
entityId	Displays the entity (i.e. person or account) whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Indicates the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
pricingDetails	Displays the price assignment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity (i.e. person or account) whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
cost	Displays the cost calculated at the price item level from the proposed price assignment and commitments of the price item.
revenue	Displays the revenue generated from the proposed price assignment and commitments of the price item.
averagePrice	Displays the average price of the price item as per the proposed price assignment and commitments of the price item.
variation	Displays the variation between the original and proposed revenue in percentage (%) generated from the price assignment and commitments of the price item.
pricingStatus	Indicates the current approval status of the price assignment of the price item.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity (i.e. person or account).

Tag Name	Tag Description
endDate	Displays the date till when the price assignment of the price item is effective for the entity (i.e. person or account).
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR
printIfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N
priceAssignCharacteristics	Displays the list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
parameterDetails	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
parameterCode	Indicates the pricing parameter which is associated with the price item.
parameterValue	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX

Tag Name	Tag Description
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N
aggregateSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
displaySw	Indicates whether the price component is displayed in the bill or not. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	Displays the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompTier	Displays the tiering criteria of the price component.
tierSeqNum	Indicates the tiering sequence number.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
lowerLimit	Displays the lower limit of the pricing range.
upperLimit	Displays the upper limit of the pricing range.

Tag Name	Tag Description
priceCompParameterDetails	<p>Displays the list of parameters based on which the price items total usage is considered for determining the rate.</p> <p>Note: The value in this tag appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
parameterCode	Indicates the parameter which is associated with the tiering criteria.
parameterValue	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	<p>Displays the pricing eligibility criteria defined for the price component.</p> <p>Note: The value in this tag appears only when the isEligible tag is set to TRUE and the eligibility criteria is defined for the price component.</p>
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN
rhsPriceParmTypeFlg	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.</p> <ul style="list-style-type: none"> • PARAMETER - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Indicates that the parameter (on the left hand side) is compared against a parameter value.
rhsPriceParmCd	Displays the parameter against which you have compared the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you have compared the parameter (on the left hand side).

Tag Name	Tag Description
isTrueFlag	<p>Indicates what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isFalseFlag	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
commitmentDetails	Displays the price items commitment details for the entity (i.e. person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that is used for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.
termsAndConditionsDetails	Displays the list of terms and conditions associated with the deal at the price item level.

Tag Name	Tag Description
priceItemCode	Displays the price item to which the terms and conditions are associated.
priceItemDescription	Displays the description of the price item.
priceItemGroupCode	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceItemGroupCodeDescription	Displays the description of the root level and/or non-root level hierarchy entity to which the price item belongs.
parameterDetails	Displays the list of the parameters using which the price item pricing is defined in the system.
parameterCode	Indicates the parameter which is associated with the price item.
parameterValue	Displays the value of the parameter which is associated with the price item.
termsAndConditionsList	Displays information about the terms and conditions associated with the price item.
termsAndCondition	Indicates the term and condition which is associated with the price item.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information of the term and condition.
entitycharacteristics	Displays the list of the characteristics defined for the entities (i.e. person or account) in the deal.
entityId	Displays the identification value of the entity (i.e. person or account) for which the characteristic is defined.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Displays the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
entityCharacteristicsList	Displays information about the characteristic defined for the entity (i.e. person or account).
effectiveDate	Displays the date from when the characteristic is effective for the entity (i.e. person or account).
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.

Deal Extraction Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Extraction Request in the JSON Format](#) on page 4292 and [Deal Extraction Response in the JSON Format](#) on page 4292 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealExtractionWebService** business service through an inbound web service, you need to ensure that the deal extract request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the primary identifier of the deal using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealIdentifier attribute, you need not specify the dealId and the modelId attributes.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealIdentifier attribute.</p>	<p>Note: This data is required if you do not specify the dealId and modelId attributes.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealId	Used to specify the deal ID using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the dealId attribute, you need not specify the dealIdentifier and the modelId attributes.</p> <p>If the deal has multiple versions, then, you should specify the modelId attribute instead of the dealId attribute.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and modelId attributes.</p>
modelId	Used to specify the deal version using which you want to extract the details of the deal.	Yes (Conditional)
	<p>Note:</p> <p>If you specify the modelId attribute, you need not specify the dealIdentifier and the dealId attributes.</p>	<p>Note: This data is required if you do not specify the dealIdentifier and dealId attributes.</p>

Once the deal is extracted, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealDetails	Displays basic information about the deal.
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	<p>Note: The value in this attribute appears only when the value of the dealEntityType attribute is EPER.</p>
personIdentifier	Displays the value of person identifier type.
	<p>Note: The value in this attribute appears only when the value of the dealEntityType attribute is EPER.</p>
personId	Displays the existing person for whom the deal created in the system.
	<p>Note: The value in this attribute appears only when the value of the dealEntityType attribute is EPER.</p>
accountIdentifierType	Indicates the identifier type using which the account is created in the system.
	<p>Note: The value in this attribute appears only when the value of the dealEntityType attribute is EACC.</p>

Attribute Name	Attribute Description
accountIdentifier	Displays the value of the account identifier type.
	Note: The value in this attribute appears only when the value of the dealEntityType attribute is EACC .
accountId	Displays the existing account for which the deal is created in the system.
	Note: The value in this attribute appears only when the value of the dealEntityType attribute is EACC .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system.
	Note: The value in this attribute appears only when the value of the dealEntityType attribute is PRSP .
prsPerIdentifier	Displays the value of the prospect person identifier type.
	Note: The value in this attribute appears only when the value of the dealEntityType attribute is PRSP .
prospectPersonId	Displays the prospect person for whom the deal is created in the system.
	Note: The value in this attribute appears only when the value of the dealEntityType attribute is PRSP .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (.).
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • EPER - Indicates that the deal is created for an existing person. • EACC - Indicates that the deal is created for an existing account. • PRSP - Indicates that the deal is created for a prospect person.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the deal belongs.
accessGrp	Indicate the user group who can view and edit the details of the deal.
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) whose deal details you are viewing.

Attribute Name	Attribute Description
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
currency	Indicates the currency in which the deal level, division level, or product level financial summary and profitability of the deal is calculated.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. the existing person, account or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. the existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which the cost, revenue, and profitability of the deal is analyzed. The valid values are: <ul style="list-style-type: none"> • CUST • ACCT • DEAL
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> • 6 - Indicates that you want to monitor the deal usage biannually. • 12 - Indicates that you want to monitor the deal usage annually. • 24 - Indicates that you want to monitor the deal usage in every two years.
dealDescription	Displays the description of the deal.
dealVersionDescription	Displays the description of the deal version.
dealFrequency	Indicates the duration in which the financial summary and profitability of the deal is calculated through simulation. The valid values are: <ul style="list-style-type: none"> • 1 - Indicates that you want to simulate the deal every month. • 3 - Indicates that you want to simulate the deal quarterly. • 6 - Indicates that you want to simulate the deal biannually. • 12 - Indicates that you want to simulate the deal annually.
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> • true • false
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.

Attribute Name	Attribute Description
usagePeriod	<p>Indicates the period for which deal data is aggregated to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • 1 - Indicates that you want to aggregate the deal data every month. • 3 - Indicates that you want to aggregate the deal data quarterly. • 6 - Indicates that you want to aggregate the deal data biannually. • 12 - Indicates that you want to aggregate the deal data annually.
includeHierarchyFlag	<p>Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy is included in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> • true • false
status	Indicates the current status of the deal.
dealVersionStatus	Indicates the current status of the deal version.
templateFlag	<p>Indicates whether the deal is used as a template while searching references for creating other deals. The valid values are:</p> <ul style="list-style-type: none"> • true • false
createdDate	Displays the date when the deal is created in the system.
acceptanceDate	Displays the date when the deal is accepted in the system after the customer review and acceptance.
	<p>Note: The data in this attribute appears only when the deal has reached the Accepted status. If the deal status is Rejected, then the acceptanceDate attribute specifies the date when the deal is rejected in the system.</p>
finalizedDate	Displays the date when the deal is finalized in the system.
effectiveStartDate	Displays the date from when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
effectiveEndDate	Displays the date till when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
reviewedDate	Displays the date when the deal usage as per the commitments made by the customer is reviewed in the system.
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.

Attribute Name	Attribute Description
copyBasicDetailsFlag	Indicates whether the basic details are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
copyPricingFlag	Indicates whether the price list assignments and price assignments are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
copyUsageFlag	Indicates whether the commitments from the SQI-based billable charges are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> • true • false
dealCharacteristics	Displays the list of characteristics of the deal.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions which are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
termsAndCondition	Displays the term and condition which is associated with the deal.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information about the term and condition.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system.
referenceTypeFlg	Indicates the type of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system. The valid values are: <ul style="list-style-type: none"> • RPER - Indicates that the deal is created by using the deal of an existing person as a reference. • RACC - Indicates that the deal is created by using the deal of an existing account as a reference. • RDEL - Indicates that the deal is created by using an existing deal as a reference.

Attribute Name	Attribute Description
refPersonIdentifierType	Displays the identifier type of the person using which the reference deal is created in the system.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RPER .
refPersonIdentifier	Displays the value of the reference person identifier type.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RPER .
referPersonId	Displays the person for whom the reference deal is created.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RPER .
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RACC .
refAccountIdentifier	Displays the value of the reference account identifier type.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RACC .
referAccountId	Display the account for which the reference deal is created.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RACC .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RDEL .
referenceDealId	Displays the existing deal which is used as a reference to create the deal.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RDEL .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	Note: The value in this attribute appears only when the value of the referenceTypeFlg attribute is RDEL .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false

Attribute Name	Attribute Description
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> • true • false
includeChildHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal for the entity (i.e. existing person, account, or prospect person).. The valid values are: <ul style="list-style-type: none"> • true • false
division	Indicates the division to which the reference person belongs.
dealComments	Displays information about the actions performed on the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal.
user	Displays the user who has performed the action on the deal.
dealComments	Displays the details about the action performed on the deal.
reasonCode	Displays the reason why the action is performed on the deal.
modelcomments	Displays information about the actions performed on the deal version of the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal version of the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal version of the deal.
user	Displays the user who has performed the action on the deal version of the deal.
modelComments	Displays the details about the action performed on the deal version of the deal.
adhocRevenueCostDetails	Displays information about the adhoc revenue and cost of the deal.
sequence	Displays the sequence number of the adhoc revenue or cost of the deal.
revenueCostGroupFlag	Indicates the group to which the adhoc charge belongs. The valid values are: <ul style="list-style-type: none"> • ADRE - Indicates the charges incurred as the adhoc revenue for the deal. • CUCO - Indicates the charges of the courier services for the deal. • DCOM - Indicates the charges that incurred during deal commissioning. • PRIL - Indicates the price item specific charges for the deal. • TRCO - Indicates the travel cost.
division	Indicates the division for which the adhoc charge is applicable.
currency	Indicates the currency in which the adhoc charge is specified for the deal.
amount	Displays the amount for the adhoc revenue or cost. Note: You can even view the negative value in this attribute.

Attribute Name	Attribute Description
priceItem	Indicates the particular price item for which the adhoc charge is added.
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealFinancialSummaryDetails	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.

Attribute Name	Attribute Description
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
productFinancialSummaryDetail	Displays information about the financial summary at the product level.

Attribute Name	Attribute Description
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> • APPR • EROR • INIT • UNAP
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
hierarchyDetails	Displays the details of the hierarchy.

Attribute Name	Attribute Description
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
entityIdentifierType	Displays the identifier type using which the entity is created in the system.
entityIdentifierValue	Displays the value of the entity identifier type.
entityDivision	Indicates the division to which the entity belongs.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
parentEntityIdentifierType	Displays the identifier type using which the parent entity is created in the system.
parentEntityIdentifierValue	Displays the value of the parent entity identifier type.
parentEntityDivision	Indicates the division to which the parent entity belongs.
status	Indicates the current approval status of the price list assignments and price assignments for the respective entity (i.e. person or account) in the customer hierarchy.
revenueVariation	Displays the average revenue generated from the price assignment and commitments of the price items at the entity (i.e. person or account) level in the customer hierarchy.
proposedRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
proposedCost	Displays the cost calculated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
originalRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
originalCost	Displays the cost calculated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
dealPricingAndCommitment	Displays information about the price assignment and commitments of the entities (i.e. person or account) in the customer hierarchy of the deal.
pricingAndCommitmentsDetails	Displays the price assignment and commitment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
entityId	Displays the entity (i.e. person or account) whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Indicates the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.

Attribute Name	Attribute Description
pricingDetails	Displays the price assignment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity (i.e. person or account) whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
cost	Displays the cost calculated at the price item level from the proposed price assignment and commitments of the price item.
revenue	Displays the revenue generated from the proposed price assignment and commitments of the price item.
averagePrice	Displays the average price of the price item as per the proposed price assignment and commitments of the price item.
variation	Displays the variation between the original and proposed revenue in percentage (%) generated from the price assignment and commitments of the price item.
pricingStatus	Indicates the current approval status of the price assignment of the price item.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity (i.e. person or account).
endDate	Displays the date till when the price assignment of the price item is effective for the entity (i.e. person or account).
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> • FALSE • TRUE
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> • ACPI • CUPI • PCPI
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • POST • PPIN • PPPR • RGLR

Attribute Name	Attribute Description
printIfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> • Y • N
priceAssignCharacteristics	Displays the list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
parameterDetails	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
parameterCode	Indicates the pricing parameter which is associated with the price item.
parameterValue	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • DNRT • AGTR • RITA • RITX
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Y • N
aggregateSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Y • N
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • DAILY • WEEKLY • MONTHLY • QUARTERLY • YEARLY
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.

Attribute Name	Attribute Description
valueAmt	Displays the rate of the price component.
displaySw	Indicates whether the price component is displayed in the bill or not. The valid values are: <ul style="list-style-type: none"> • TRUE • FALSE
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	Displays the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompTier	Displays the tiering criteria of the price component.
tierSeqNum	Indicates the tiering sequence number.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
lowerLimit	Displays the lower limit of the pricing range.
upperLimit	Displays the upper limit of the pricing range.
priceCompParameterDetails	Displays the list of parameters based on which the price items total usage is considered for determining the rate. <p>Note: The value in this attribute appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
parameterCode	Indicates the parameter which is associated with the tiering criteria.
parameterValue	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component. <p>Note: The value in this attribute appears only when the isEligible attribute is set to TRUE and the eligibility criteria is defined for the price component.</p>
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.

Attribute Name	Attribute Description
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • BETWEEN • IN • LIKE • NOT IN
rhsPriceParmTypeFlg	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.</p> <ul style="list-style-type: none"> • PARAMETER - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • VALUE - Indicates that the parameter (on the left hand side) is compared against a parameter value.
rhsPriceParmCd	<p>Displays the parameter against which you have compared the parameter (on the left hand side).</p>
rhsPriceParmVal	<p>Displays the parameter value against which you have compared the parameter (on the left hand side).</p>
isTrueFlag	<p>Indicates what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
isFalseFlag	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.

Attribute Name	Attribute Description
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • COND - Indicates that the condition with the consecutive sequence number is executed. • RLFS - Indicates that the action specified in the Rule False Action field is executed. • RLTR - Indicates that the action specified in the Rule True Action field is executed.
commitmentDetails	Displays the price items commitment details for the entity (i.e. person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that is used for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.
termsAndConditionsDetails	Displays the list of terms and conditions associated with the deal at the price item level.
priceItemCode	Displays the price item to which the terms and conditions are associated.
priceItemDescription	Displays the description of the price item.
priceItemGroupCode	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceItemGroupCodeDescription	Displays the description of the root level and/or non-root level hierarchy entity to which the price item belongs.
parameterDetails	Displays the list of the parameters using which the price item pricing is defined in the system.
parameterCode	Indicates the parameter which is associated with the price item.
parameterValue	Displays the value of the parameter which is associated with the price item.
termsAndConditionsList	Displays information about the terms and conditions associated with the price item.
termsAndCondition	Indicates the term and condition which is associated with the price item.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information of the term and condition.

Attribute Name	Attribute Description
entitycharacteristics	Displays the list of the characteristics defined for the entities (i.e. person or account) in the deal.
entityId	Displays the identification value of the entity (i.e. person or account) for which the characteristic is defined.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • ACCT • PERS
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Displays the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
entityCharacteristicsList	Displays information about the characteristic defined for the entity (i.e. person or account).
effectiveDate	Displays the date from when the characteristic is effective for the entity (i.e. person or account).
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.

Chapter 52

Chatbot

Oracle Revenue Management and Billing provides digital assistance to end-users using Oracle Digital Assistant (ODA). You can use the digital assistant, also known as detective Chatbot, to have conversational experiences with ORMB through text, chat, and voice interfaces.

We have introduced a Menu Based Chatbot in this release. As the name suggests, this Chatbot facilitates the user to choose from several options, presented in the form of menus and sub menus. At present, we have the following menu options in the Chatbot:

- **Customer Info** – It enables you to view the details of a customer. On clicking the **Customer Info** menu option, a sub menu appears with the following options:
 - **Customer ID** – Used when you want to view the details of a particular customer. The system then displays the details of the customer in the **Customer 360° Information** screen.
 - **Customer Name** – Used when you want to view the list of customers with a particular name. You can use the wildcard character (%) while specifying the customer name. If there is only one customer whose name matches the specified value, the system displays the details of the customer in the **Customer 360° Information** screen. However, if there are multiple customers whose name matches the specified value, the system displays the list of customers that meet the criteria in the **Customer 360° View** screen.
- **Account Info** - It enables you to view the details of an account. On clicking the **Account Info** menu option, a sub menu appears with the following options:
 - **Account ID** - Used when you want to view the details of a particular account. The system then displays the details of the account in the **Customer 360° Information** screen.
 - **Customer Name** - Used when you want to view the list of accounts where a particular customer is the main customer.

You can use the wildcard character (%) while specifying the customer name. If there is only one account of the customer, the system displays the details of the account in the **Account** screen.

However, if there are multiple accounts of the customer, the system displays the list of accounts that meet the criteria in the **Account Search** window.

- **Account Statement** – Used when you want to view the mini statement (last five transactions) of an account. The system displays the financial transaction details in the **Chatbot** window.
- **Bill Info** – It enables you to view the details of a bill and initiate the bill creation or cancellation process. On clicking the **Bill Info** menu option, a sub menu appears with the following options:
 - **Create Bill** – Used when you want to create a bill for an account. On entering the account ID, the **Bill** screen appears where you can generate a bill for the account.
 - **Latest Bill Details** – Used when you want to view the details of a bill. On clicking the **Latest Bill Details** menu option, a sub menu appears with the following options:
 - **Account ID** – Used when you want to view the latest bill details of a particular account.
 - **Alternate Bill ID** – Used when you want to view the details of a particular bill.
 - **Bill ID** – Used when you want to view the details of a particular bill.
 - **Cancel Bill** – Used when you want to cancel a bill of an account. On entering the bill ID, the **Bill** screen appears where you can cancel the bill of the account.
- **Pricing Info** – It enables you to view the effective or agreed pricing of a customer or an account. It also enables you to view the details of a price list. On clicking the **Pricing Info** menu option, a sub menu appears with the following options:
 - **Customer ID** – Used when you want to view the price assignments of a customer. On entering the customer ID, a sub menu appears with the following options:
 - **Effective Pricing** – Used when you want to view all effective price assignments of the customer.
 - **Agreed Pricing** – Used when you want to view all agreed price assignments of the customer.

The system displays the effective or agreed price assignments of the customer in the **Pricing (Person)** screen.
 - **Account ID** – Used when you want to view the price assignments of an account. On entering the account ID, a sub menu appears with the following options:
 - **Effective Pricing** – Used when you want to view all effective price assignments of the account.
 - **Agreed Pricing** – Used when you want to view all agreed price assignments of the account.

The system displays the effective or agreed price assignments of the account in the **Pricing (Account)** screen.
- **Price List** - Used when you want to view the details of a price list. On entering the price list description, the system displays the details of the price list in the **Price List** screen.

- **Others** - It enables you to view the details of a batch job or DBMS scheduler job. On clicking the **Others** menu option, a sub menu appears with the following options:
 - **Batch Job Status** – Used when you want to view the status of last five batch jobs of a particular batch control. The system displays the batch job details in the **Chatbot** window.
 - **DBMS Job Status** – Used when you want to view the status of a particular DBMS scheduler job. The system displays the scheduler job details in the **Chatbot** window.

To implement and use the **Chatbot** feature, you need to additionally procure the license for Oracle Digital Assistant (ODA). To integrate ODA with ORMB, you need to make some configurations in ODA and ORMB. For more information about configuration, refer the *Oracle Revenue Management and Billing Chatbot Configuration Guide*. And, for more information about how to use the **Chatbot** feature, refer to the *Oracle Revenue Management and Billing Chatbot User Guide*.

Chapter

53

Billing Anomaly Detection with Artificial Intelligence (AI) and Machine Learning (ML)

Topics:

- [Lifecycle of a ML Job](#)
- [Prerequisites](#)
- [Seasonality in Billing Anomaly Detection](#)
- [ML Jobs](#)
- [Diagnostic Central](#)

Until now, the system enabled you to detect anomalies in the bills before bill completion using the **Bill Tolerance** feature. Now, in addition, Oracle Revenue Management and Billing enables you to use artificial intelligence and machine learning to detect anomalies in the bills and bill segments before the bill completion. The different steps involved in the machine learning process are:

- Data Preparation
- Model Generation
- Data Prediction

These three steps are referred as ML jobs in the system. An ML Job goes through various statuses in its lifecycle. We have shipped the following three batches to execute the above three steps:

- **C1-MLDPR** – This batch is used to extract the historical bills and their bill segments which are later used to create a machine learning training model. It transforms the historical bills and their bill segments into materialized views.

You can specify the extraction date range to fetch the bills and bill segments which are created within that date range. We recommend you to extract the historical data of at least last three years. This batch provides an option to extract the data incrementally. If you want to extract the data incrementally, then you need to set the **Incremental Data** parameter to **Y** and specify the extraction from date and cutoff days. This option should be used when you want to extract historical data from a particular date till the cutoff date (i.e. system date – cutoff days).

Ideally, you should use this option when you want to use a static from date and a dynamic end date each time the batch is executed. However, if you do not want to extract the data incrementally, then you need to set the **Incremental Data** parameter to **N** and specify the extraction date range (i.e. from and to dates). You can extract the historical bills and their bill segments either separately or together. However, if you have voluminous data, we recommend you to extract the historical bills in the first batch run and then extract the historical bill segments in the next batch run.

This batch also enables you to filter the dataset based on the bill cycle and division. It is a single-threaded batch. Ideally, you must execute this batch every three months to refresh the dataset of the machine learning training model.

- **C1-MLMCR** – This batch is used to create a machine learning training model using the historical data extracted through the **C1-MLDPR** batch.

A machine learning training model is a process in which a machine learning (ML) algorithm is fed with sufficient training data to learn and analyze using the dataset. It enables you to process large volumes of data to detect anomalies and test correlations while searching for patterns across the dataset. At present, you can build a model using the following approach:

- **BULTIN** – Used when you want to build a model far ahead in time before the anomaly detection.

Once a machine learning training model is created, it is stored in the database as a database object. This batch is a single-threaded batch. Ideally, you must execute this batch every three months to create a new machine learning training model with the latest dataset.

- **C1-MLPRE** – This batch is used to detect anomalies in the current bills and their bills segments based on the patterns observed in the machine learning training model. At a time, you can either detect anomalies in the bills or their bill segments in a single batch run. You must execute this batch after generating bill segments and bills through the billing batches.

While using AI ML for anomaly detection, you should not enable the **Freeze and Complete** option for the bill cycle. This is because you will then have the option to make the required corrections based on anomaly detection before freezing and completing the bills and their bill segments. A To Do notification is created to summarize anomaly detection for a given batch code, batch number and batch rerun number.

While executing the **C1-MLPRE** batch, you need to specify the bill segment generation or bill completion batch control and its batch run number whose bills or bill segments you want to consider for anomaly detection. You can either specify the batch run number or set the incremental run flag to **true** during the **C1-MLPRE** batch execution. This batch is a multi-threaded batch.

At present, the following data mismatch is considered as anomalies by the machine learning process:

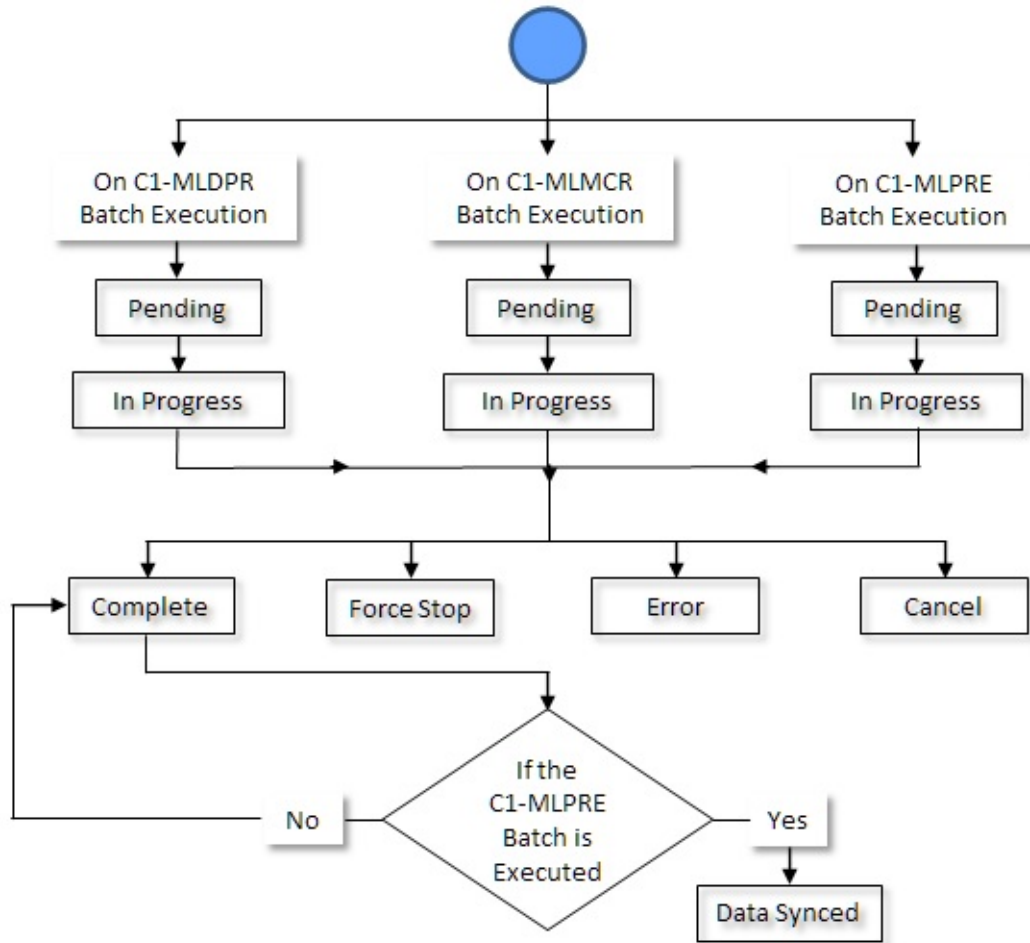

- Data mismatch in the bill segments (i.e. SQI or amount mismatch)
- Data mismatch in the bills (i.e. an additional price item is charged in the current bill, a price item (which is billed earlier) is not charged in the current bill, and bill amount mismatch)

To implement this AI ML feature, the following two screens are introduced in this release:

- **ML Jobs** – Enables you to track the status of different ML jobs.
- **Diagnostics Central** – Enables you to view and close the detected anomalies in the bills and bill segments. After reviewing the anomaly, you can either take any one of the following action:
 - Fix the anomaly in the bill or bill segment and then close the anomaly. In this case, while closing the anomaly, you must set the **Anomaly** field to **Yes** to indicate that it is an anomaly.
 - Ignore the anomaly in the bill or bill segment and then close the anomaly. In this case, while closing the anomaly, you must set the **Anomaly** field to **No** to indicate that it is not an anomaly.

Lifecycle of a ML Job

The following figure graphically indicates how a ML Job moves from one status to another in its lifecycle:

Prerequisites

To setup the billing anomaly detection with artificial intelligence (AI) and machine learning (ML) feature, you need to do the following:

- Create an algorithm using the **C1-ANMLYCHCK** algorithm type and attach it to the **Pre Bill Completion** algorithm spot of the customer class.
- Set the values for following option types in the **C1-PREBSEG** feature configuration:
 - **ML Invocation Logic Enabled**

Related Topics

For more information on...	See...
How to setup the C1-PREBSEG feature configuration	Setting the C1-PREBSEG Feature Configuration on page 4340

Seasonality in Billing Anomaly Detection

Oracle Revenue Management and Billing enables you to build a data model considering seasonality and accordingly predict the billing anomalies. Seasonality is a characteristic of a time series in which the data experiences regular and predictable changes that recur every calendar year. Any predictable fluctuation or pattern that recurs or repeats over a one-year period is said to be seasonal.

We offer this feature based on the assumption that an account's behavior would be similar for a given month across the years. To enable the seasonality feature in billing anomaly detection, you need to set the **Seasonal Prediction Flag** option type of the **C1-BRMLINOPS** feature configuration. It is used to indicate whether seasonality should be considered while extracting the data for model building. The valid values are **Y** and **N**. If you set this option type to **Y**, the system considers the following fields of the respective entities during model building:

Entity	Fields
Bill	INVOICE_ACCT, BILL_ID, BILL_CYC_CD, BILL_AMT, PRICEITEM_VECTOR, CURRENCY_CD, START_DT_MON
Bill Segment	INVOICE_ACCT, BILL_CYC_CD, BSEG_AMT, BSEG_ID, PRICEITEM_CD, PRICE_ASGN_ID, CURRENCY_CD, START_DT_MONTH

If you do not specify the value for this option type, by default, it is set to **N**. If you change the value of this option type, you need to run the **C1-MLDPR** and **C1-MLMCR** batches once again to rebuild the machine learning training model.

ML Jobs

The **ML Jobs** screen allows you to search and track the status of different ML jobs. It contains the following zone:

- [Search ML Job](#) on page 4332

Search ML Job

The **Search ML Job** zone allows you to search for various ML jobs using various search criteria. It contains the following section:

- **Search Criteria** - The Search Criteria section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search ML jobs which are executed from a particular date onwards.	Yes
Created Until	Used to search ML jobs which are executed till a particular date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
ML Job Type	Used to search ML jobs which are classified based on the job type. The valid values are: <ul style="list-style-type: none"> Data Model Creation Data Prediction Data Preparation 	No
ML Entity Type	Used to search ML jobs which are created for the specific entity type. The valid values are: <ul style="list-style-type: none"> All Bill Bill Segment 	No
ML Job Status	Used to search ML jobs in a particular status. The valid values are: <ul style="list-style-type: none"> Canceled Completed Data Synchronized Error Force Stopped In Progress Pending 	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
ML Job Type	Indicates the type using which the ML job is created.
ML Entity Type	Indicates the type of entity using which the ML job is created.
Batch Job Details	Displays the batch job details such as batch description, batch number, and batch rerun number.
Parent Batch Job Details	Displays the parent batch job details such as batch description, batch number, and batch rerun number.
	Note: The data in this column appears only in case of data prediction batches.
ML Job Status	Indicates the status of the ML job.
Creation Date Time	Displays the date and time when the ML job is created.
Job Start Date Time	Displays the date and time when the ML job is started.
Job End Date Time	Displays the date and time when the ML job is ended.

Related Topics

For more information on...	See...
How to search for an ML job	Searching for an ML Job on page 4334

Searching for an ML Job

Procedure

To search for an ML job:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **ML Jobs**.
The **ML Jobs** screen appears.
3. Enter the search criteria in the **Search ML Jobs** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of ML jobs that meet the search criteria appears in the **Search Results** section.

Search ML Jobs zone	Search ML Job on page 4332

Diagnostic Central

The **Diagnostic Central** screen allows you to search for anomalies in the bills and bill segments. It contains the following zones:

- [Search Anomaly](#) on page 4334
- [Bill Segment Anomalies](#) on page 4338

Search Anomaly

The **Search Anomaly** zone allows you to search for anomalies using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account or bill level anomaly, or bill segment anomaly. The valid values are: <ul style="list-style-type: none"> Account/Bill Level Anomaly Bill Segment Level Anomaly 	Yes
	Note: By default, the Account/Bill Level Anomaly option is selected.	
Division	Used to search anomalies which includes bills or bill segments of accounts which belong to a particular division.	No
Anomaly Status	Used to search anomalies with a particular status. The valid values are: <ul style="list-style-type: none"> Canceled Closed Ignored Open 	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for anomalies.	Yes (Conditional)
		Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search the anomalies with a particular identifier.	Yes (Conditional)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Account ID	User to search anomalies for a particular account. The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. On specifying the value for a predefined account, the description of the account appears corresponding to the Account ID field.	No
Trail Bill	Used to search anomalies based on whether the bill is a trial bill. The valid values are: <ul style="list-style-type: none"> Yes No 	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Created From	Used to search anomalies which include accounts or bills, or bill segments which are created from a particular date onwards.	Yes
Bill Created Until	Used to search anomalies which include accounts or bills, or bill segments which are created till a particular date.	Yes
Bill Cycle	Used to search anomalies with a particular bill cycle.	No
Bill ID	Used to search anomalies for a particular bill. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears. On specifying the value for a predefined bill, the description of the account appears corresponding to the Account ID field.	No
Anomaly Category	Used to search anomalies with a particular category. The valid values are: <ul style="list-style-type: none"> • Bill Level Anomaly • Bill Segment Level Anomaly 	No
Anomaly Reason	Used to search anomalies with a particular reason. Note: The list appears when the anomaly category is selected.	No

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for an account (associated with the policies) using the policy type and/or source system.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays the account level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Column Name	Column Description
Bill Information	Displays the bill level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the bill was generated.
Anomaly Status	Indicates the status of the anomaly. The valid values are: <ul style="list-style-type: none"> • Canceled • Closed • Ignored • Open
Anomaly Reason	Displays the reason that caused the anomaly.
To Do Information	Displays the To Do that got generated when an anomaly was detected. Note: It has a link. On clicking the link, the To Do Entry screen appears where you can view the details of the respective To Do.

In addition, this section contains the following button:

Button Name	Button Description
Close	Used to close a bill level or bill segment level anomaly.

A check box appears corresponding to each account. On selecting the check box, you can close the selected anomaly. You can also select multiple anomalies at the same time. In addition, you can select the check box corresponding to the column header. This allows you to close all the anomalies listed in the respective page.

<p>Note:</p> <p>Pagination is used to display limited number of records in the Search Results section. You can use the navigation links, such as Previous and Next to navigate between pages.</p> <p>On clicking the Broadcast () icon corresponding to the account information column the Bill Segment Anomaly zone appears with the anomalies detected at bill segment level.</p> <p>You can filter the list using the various search criterias available in the Filter area. By default, the Filter area is hidden. You can view the Filter area by clicking the Filters () icon in the upper right corner of this zone.</p>

Bill Segment Anomalies

The **Bill Segment Anomalies** zone displays the bill segment level anomaly details. It contains the following columns:

Column Name	Column Description
Account Information	<p>Displays the account level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Bill Segment ID	Displays the bill segment ID for which the anomaly is detected.
Bill ID	Displays the bill ID of the bill segment.
Bill Date	Displays the date on which the bill was generated.
Anomaly Status	<p>Indicates the status of the anomaly. The valid values are:</p> <ul style="list-style-type: none"> • Cancel • Closed • Ignore • Open

By default, the **Bill Segment Anomalies** zone does not appear in the **Diagnostic Central** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the account information column in the **Search Anomaly** zone.

Closing an Anomaly

Procedure

To close an anomaly:

1. Search for the bill level or bill segment level anomaly in the **Diagnostic Central** screen.
2. In the **Search Results** section, select an anomaly and then click the **Close** button.

The **Close Anomaly** window appears. It contains the following fields:

Field Name	Field Description
Anomaly	Used to indicate whether the selected entry is an anomaly. The valid values are: <ul style="list-style-type: none"> • No • Yes
Comments	Used to specify additional details for closing the anomaly.

3. Select the appropriate option from the Anomaly field and enter the comments in the respective field.
4. Click **Save**.
5. The status of the anomaly is changed to **Closed**.

Note: If you close an anomaly the system does not automatically complete the respective To Do entry. You have to manually complete the To Do entry. On the other hand, if a To Do is completed before an anomaly is closed, the system changes the anomaly status to **Closed**.

Setting the C1-PREBSEG Feature Configuration

The **C1-PREBSEG** feature configuration enables you to validate the bill segment before generating the bill.

Prerequisites

To set the **C1-PREBSEG** feature configuration, you should have:

- ML invocation logic defined in the application

Procedure

To set the **C1-PREBSEG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PREBSEG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
ML Invocation Logic Enabled	Used to specify whether the ML invocation logic is enabled when the bill segment is generated.	Yes
	Note: If you want to enable the ML invocation logic, specify True else False in the Value field.	

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Chapter 54

Automatic Refund

Oracle Revenue Management and Billing enables you to create automatic refunds when a credit bill or a credit adjustment is created or when there is an overpayment. A new algorithm spot named **Immediate Refund Creation** is introduced in the **Division** screen. A new algorithm type named **C1-IMREFCRET** is introduced in this release. You can create an algorithm using the **C1-IMREFCRET** algorithm type and attach it to the **Immediate Refund Creation** algorithm spot of the required divisions.

To implement the automatic refund feature, the following fields are newly introduced in the respective screen:

The following table lists the newly introduced fields in the respective screen for the **Automatic Refund** feature:

Screen	Tab	Field Name	Field Description
Account	Main	Immediate Refund	Used to indicate whether you want to process immediate refund for the account.
	Auto Pay	Auto Pay Usage	Used to indicate whether the automatic payment option is available for automatic credit or debit, or for both automatic credit and debit.
Person	Main	Immediate Refund	Used to indicate whether you want to process immediate refund for the person's accounts.
Customer Class	Controls	Immediate Refund	Used to indicate whether you want to process immediate refund for the accounts which belong to the customer class.
Division	Main	Direct Credit Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the direct credit mode.

Screen	Tab	Field Name	Field Description
		Immediate Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division. This field is enabled when the Direct Credit Refund or A/P Request Fund option is selected.
		A/P Request Fund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the A/P request mode.
Adjustment Type	Main	Refund Option	Used to indicate whether you want to use the adjustment type for creating direct credit refund adjustments or A/P request refund adjustments.
Auto Pay Instruction	Auto Pay	Auto Pay Usage	Used to indicate whether the automatic payment instruction is available for automatic credit or debit, or for both automatic credit and debit.
Auto Pay Route Type	-	Refund Auto Pay Date Calculation Algorithm	Used to calculate the extract date for an automatic refund clearing record in the CI_APAY_CLR_STG table.

Note: While creating a person through a customer registration object, you can also set the immediate refund option for the person. Similarly, while creating an account through a customer registration object, you can also set the immediate refund and auto pay usage options for the account.

Now, when a credit bill is completed, when a credit adjustment is frozen, and when an overpayment is frozen, the system checks whether an algorithm is attached to the **Immediate Refund Creation** algorithm spot of the respective account's division. If an algorithm created using the **C1-IMREFCRET** algorithm type is attached to the **Immediate Refund Creation** algorithm spot of the division, the system checks whether the **Immediate Refund on Credit Bill**, **Immediate Refund on Dispute/Credit Adjustments**, or **Immediate Refund on Overpayment** parameter in the algorithm is set to **Y** depending on whether it is a credit bill, credit adjustment, or overpayment.

If the respective parameter is set to **Y**, the system checks whether the **Immediate Refund** option is selected at either of the following levels –

Account, Person, Customer Class, or Division. If so, the system checks whether the **Direct Credit Refund** option of the division is set to **Y** and the automatic payment option for automatic credit or for automatic credit and debit exists for the account. If so, the system creates a refund request using the direct credit refund request type which is specified in the **C1-IMREFCRET** algorithm. However, if the **Direct Credit Refund** option of the division is set to **N** and the **A/P Request Fund** option of the division is set to **Y**, the system creates a refund request using the A/P request refund request type which is specified in the **C1-IMREFCRET** algorithm. In addition, if the **Direct Credit Refund** option of the division is set to **Y**, the **A/P Request Fund** option of the division is set to **Y**, and the automatic payment option for automatic credit or for automatic credit and debit does not exist for the account, the system creates a refund request using the A/P request refund request type which is specified in the **C1-IMREFCRET** algorithm.

If the **Direct Credit Refund** option of the division is set to **Y**, the **A/P Request Fund** option of the division is set to **N**, and the automatic payment option for automatic credit or for automatic credit and debit does not exist for the account, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm. Also, if the **Direct Credit Refund** option of the division is set to **N** and the **A/P Request Fund** option of the division is set to **N**, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm.

In addition, if the **Immediate Refund** option is not selected at any of the following levels – Account, Person, Customer Class, or Division, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm. Note that these transfer adjustments are created on the excess credit contract of the account. If the excess credit contract is not available for the account, the system creates an excess credit contract for the account using the overpayment contract type which is specified in the **C1-IMREFCRET** algorithm.

The refund requests are created in the **Processed** status. While creating a direct access refund request type, you need to ensure that you specify an adjustment type where the refund option is set to **Direct Credit**. However, while creating an A/P request refund request type, you need to ensure that you specify an adjustment type where the refund option is set to **A/P Payment**. The system will then accordingly create the direct credit or A/P request refund adjustments when the refund request is processed. If the **Adjustment Freeze Switch** parameter in the **C1-IMREFCRET** algorithm is set to **Y**, the transfer and refund adjustments are created in the **Frozen** status.

When a credit bill is canceled for which either the refund adjustments or payments are created, the system does the following:

- Creates the transfer adjustments on the excess credit contract of the account

Note: The system considers the transfer adjustment type and overpayment contract type specified in the **C1-TRNADJEX** algorithm which is attached to the account's customer class.

The **APAYCRET** batch is enhanced to support the new automatic refund process. Now, if the automatic payment amount stamped against a bill is in credit and the auto pay usage flag is set to **Credit** or **Credit and Debit**, the batch creates a refund request against the bill. Here, in addition, if the refund option is set to **Direct Credit** in the respective refund adjustment type, the batch creates

a clearing record for the automatic refund in the **CI_ADJ_CLR_STG** table. However, if the refund option is set to **A/P Request** in the respective refund adjustment type, the batch creates an A/P request entry for the automatic refund in the **CI_ADJ_APREQ** table.

Chapter

55

Reporting

Topics:

- [Report Creation Using Apache FOP Framework](#)
- [FOP Reports](#)

Oracle Revenue Management and Billing provides best-in-class enterprise reporting feature which enables its customers to uncover new sights for taking faster and more informed business decisions. The reporting feature is a unique platform which easily integrates with the existing infrastructure and provides reusable design, data elements, and easy access to the application programming interface.

Oracle Revenue Management and Billing Reporting feature provides its customers the following benefits:

- Allows to generate and deliver customized reports to users in various departments and customers on time.
- Allows the implementers to efficiently create and update document templates.
- Supports output in the CSV, JSON, PDF, XML, and XLS formats using custom Formatting Objects Processor (FOP) templates.

Report Creation Using Apache FOP Framework

Oracle Revenue management and Billing allows you to create reports in the CSV, JSON, PDF, XML, and XLS formats using the Apache FOP (Formatting Objects Processor) framework. Apache FOP is an output arrangement which is driven by the XSL formatting object. It is a Java application that reads the XSL formatting object tree conforming to the XSL 1.1 Recommendation (05 December 2006) and then converts it into a document in the required output format. It allows you to preview the output directly on the screen.

To understand more about the framework, refer to the official Apache FOP site at <https://xmlgraphics.apache.org/fop/> or you can also refer GitHub at <https://github.com/apache/fop>.

Prerequisites

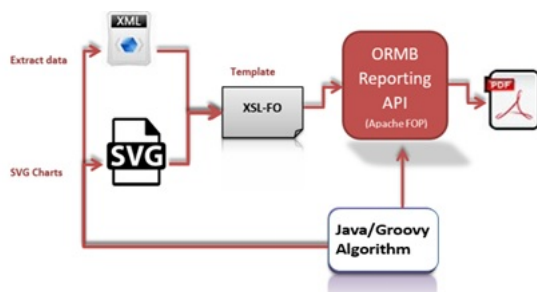

To use the Apache FOP reporting feature in ORMB, you should have:

- **C1-REPORTVW** feature configuration set in the application

PDF Generation Using Apache FOP

For generating a PDF from an XML file you need an XSLT stylesheet which converts the XML file to an XSL-FO file. The created XSL-FO file is also an XML file which contains all the formatted objects. The ORMB FOP reporting framework reads the XSL-FO file and formats it to a PDF document.

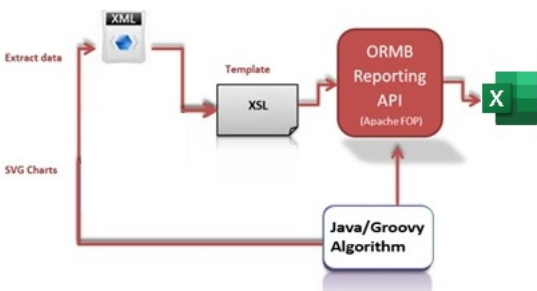

The process overview of PDF generation from an XML file is shown in the below image:

Excel (XLS) Generation Using XSL Transformation

For generating an Excel (XLS) from an XML file you need an XSLT stylesheet which converts the XML file to an XSL file. The created XSL file is also an XML file which contains all the formatted objects. The ORMB reporting framework reads the XSL file and formats it to an Excel (XLS) document.

The process overview of Excel (XLS) generation from an XML file is shown in the below image:

Sample XML Format for FOP Reporting

Using the below example, you can create an XML which contains name and a list of friends with contact numbers:

Sample XML Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<root>
<name>Ryan</name>
<friend>
  <name>David</name>
  <phNo>+1.603.555.0100</phNo>
</friend>
<friend>
  <name>John</name>
  <phNo>+1.603.555.0101</phNo>
</friend>
</root>
```

Note: This is how an XML should be generated with encoded UTF-8 format.

Sample XSL Format for FOP Reporting

Using the below example, you can create an XSL format which renders the table that contains details of friends given in the above sample XML format:

Sample XSL Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<xsl:stylesheet version="1.1"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:fo="http://www.w3.org/1999/XSL/Format"
  exclude-result-prefixes="fo">
<xsl:template match="root">
<fo:root xmlns:fo="http://www.w3.org/1999/XSL/Format">
  <fo:layout-master-set>
    <fo:simple-page-master master-name="my-page">
      <fo:region-body margin="1in"/>
    </fo:simple-page-master>
  </fo:layout-master-set>
  <fo:page-sequence master-reference="my-page">
    <fo:flow flow-name="xsl-region-body">
      <fo:block>Hello, <xsl:value-of select="name" />!</fo:block>
      <fo:block>
        <fo:table>
          <fo:table-body>
            <fo:table-row>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>No.</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Name</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Phone Number</fo:block>
              </fo:table-cell>
            </fo:table-row>
          </fo:table-body>
        </fo:table>
        <xsl:for-each select="./friend">
          <fo:table-row>
            <fo:table-cell border="solid 1px black" text-align="center">
              <fo:block>
                <xsl:value-of select="position()" />
              </fo:block>
            </fo:table-cell>
            <fo:table-cell border="solid 1px black" text-align="center">
```

```

<fo:block>
  <xsl:value-of select="name" />
</fo:block>
</fo:table-cell>
<fo:table-cell border="solid 1px black" text-align="center">
  <fo:block>
    <xsl:value-of select="phNo" />
  </fo:block>
</fo:table-cell>
</fo:table-row>
</xsl:for-each>
</fo:table-body>
</fo:table>
</fo:block>
</fo:flow>
</fo:page-sequence>
</fo:root>
</xsl:template>
</xsl:stylesheet>

```

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

Create XSL Template for an FOP Report

The XSL template is required to create an FOP report in the PDF or Excel (XLS) format. The XSL template converts the XML file into XSL-FO file. This XSL-FO is further read by the ORMB FOP reporting framework and formats the XSL-FO file into a PDF/Excel (XLS) file.

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

XSL Templates shipped with ORMB

The following XSL templates for the corresponding FOP reports are shipped with ORMB:

XSL Template	FOP Report
FOPAGEBPDF	AgingReport.xml
FOPAGEOPDF	
FOPAGEHCBPDF	AgingReportHC.xml
FOPAGEHCOPDF	
FOPAGEHCBXLS	AgingReportHCExcel.xml
FOPAGEHCOXLS	
RPT_LETTER	AutoPay_Letter.xml

Create an Algorithm for an FOP Report

Before creating any new custom FOP report an algorithm is created which contains the following content:

- Query for the report
- XML formation code
- Input parameter validation
- Call to report generation algorithm

The algorithm is then associated with the FOP report while defining the FOP report in the application. When the FOP report is generated, the algorithm which is attached to the FOP report does the following:

- Extract data from the system in an XML file
- Present the extracted data in CSV, JSON, PDF, XML, or XLS format using the XSL file associated with the FOP report

The following algorithms for the corresponding FOP reports are shipped with ORMB:

FOP Report	Report Generation Algorithm
FOPADJBXLS	C1_FOPADJUST
FOPADJOXLS	
FOPAGEBPDF	C1_FOPAGING
FOPAGEOPDF	
FOPAGEHCBPDF	C1_FOPAGEHC
FOPAGEHCOPDF	
FOPAGEHCBXLS	C1_FOPAGEHC
FOPAGEHCOXLS

Creating a Message for an FOP Report

Prerequisite

To create a message for an FOP report you should have:

- Error message added in the MessageRepository.java file. For example:

```
public static ServerMessage searchByIsNull()
{
    MessageRepository repo = MessageRepository.getInstance();
    MessageParameters messageParms = new MessageParameters();
    return repo.getMessage(SEARCH_BY_IS_NULL, messageParms);
}
```

- Error code added in the ReportingMessage.java file. For example:

```
public static final int SEARCH_BY_IS_NULL = 2039;
```

Procedure

To create a message for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Message**.
A sub-menu appears
3. Click the **Add** option from the **Message** sub-menu.

The Select Business Object screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Message Business Object	Used to indicate that you want to create a message for a business object.	Yes

4. Select **Message** from the **Message Business Object** list.
5. Click **OK**.

The **Message** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Message Category	Used to indicate the category for which you want to create a message. The valid value is: <ul style="list-style-type: none"> • Reports 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Message Number	Used to specify the error code which you have added in the ReportingMessage.java file.	Yes
Message Text	Used to specify the error message.	Yes
Detailed Description	Used to specify additional information about the message.	No

6. Click **Save**.

The message is created.

Calling the ORMB FOP Reporting API

Procedure

To call the ORMB FOP reporting API:

1. You should use the ORMB provided business component to call the below reporting API which generates the FOP reports:
com.splwg.ccb.domain.reportsubmission.FOPReportGenerationComponent_Impl
2. Call the reporting API method in the below format:

```
public String generateReport(String xslTemplateName, String xmlContent, String outputFileName)
```

The parameters for the reporting API method is defined as below:

Parameter Name	Parameter Description
xslTemplateName	Used to pass the XSL-FO/XSL file name. It is given in the below format: <code><name of report>.xsl</code>
xmlContent	Used to pass the XML content generated by the algorithm.
outputFileName	Used to pass the PDF/Excel (XLS) file name that you want to generated. It is given in the below format: <code><name_of_report>.pdf/xls</code>

Setting Master Configuration for Email Notification

Procedure

Email notification is configured for FOP reports which are generated in the batch mode. To set master configuration for email notification:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Master Configuration**.
The **Master Configuration** screen appears.
3. Search for **Reporting Email Sender Configuration** in the **Master Configuration List** zone.
4. Click the **Add** (+) icon in the **Action** column corresponding to **Reporting Email Sender Configuration**.

The **Master Configuration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Master Configuration	Displays the master configuration	Not Applicable
SMTP Host Name	Used to specify the SMTP application to send and receive emails.	Yes
SMTP Port	Used to specify the communication endpoint to transfer email data over SMTP through a network, from one server to another. The valid value is: <ul style="list-style-type: none"> 25 	Yes
Username	Used to specify the username of the user.	Yes
Password	Used to specify the password for the user.	Yes
Secure Sockets Layer	Used to indicate whether you want to transfer the email data securely across a network.	No
Test	Used to configure the sender's and receiver's email ID.	Yes
From Email Address	Used to specify the user's email ID. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;">Note: This field appears only when you select the check box corresponding to the Test field.</div>	Yes
To Recipient Email ID	Used to specify the receiver's email ID. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;">Note: This field appears only when you select the check box corresponding to the Test field.</div>	Yes

5. Enter the required details in the **Master Configuration** screen.
6. Click **Save**.

The master configuration for email notification is set.

Creating a Custom Algorithm for FOP Reports

Prerequisite

To create a custom algorithm for FOP reports you should have:

- The **ReportDataExtractAlgorithmSpot** algorithm spot defined in the application

Procedure

To create a custom algorithm for FOP reports:

1. Log into **Eclipse**.
2. In the navigation pane, right click on the **C1** folder.

A list appears.

- From the list, select **New** and then click **Others**.

The **Select a Wizard** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Wizard	Used to filter the Algorithm Implementation wizard.	No

Note: You can also navigate to the **Algorithm Implementation** wizard in the **Oracle Utilities** section through the navigation window provided below the **Wizard** field.

- Select **Algorithm Implementation** from the navigation window.
- Click **Next**.

The **New Algorithm Implementation** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source Folder	Displays the source from where the algorithm spot is called. The valid value is: <code>C1/Java</code>	Not Applicable
Package	Used to specify the directory in the source folder where you want the algorithm to appear. The valid value is: <code>com.splwg.ccb.domain.reports</code>	Yes
Name	Used to specify the algorithm that you want to create.	Yes
Soft Parameters	Used to specify parameters for the algorithm.	No
Algorithm Spot Interface	Used to specify the algorithm spot used to create custom data extract in the PDF or XLS format. The valid value is: <code>com.splwg.ccb.domain.reports</code> Note: You can also extract data in the XML, CSV, or JSON formats by calling the <code>CommonUtil_Impl</code> API while generating the respective report.	Yes

- Click **Finish**.

The custom algorithm for FOP report is created.

Configuring the Custom Algorithm from the User Interface

Prerequisites

To configure the custom algorithm from the user interface you should:

- Define custom algorithm JAVA code

- Generate artifacts, do Web Build and start the WebLogic server to bring the ORMB application up and running

Procedure

To configure the custom algorithm from the user interface you should:

- Create an algorithm type and associate it with the custom algorithm java code
 - Create an algorithm and associate it with the algorithm type
1. To create an algorithm type, click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Algorithm Type**.

A sub-menu appears

3. Click the **Add** option from the **Algorithm Type** sub-menu.

The **Algorithm Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Type	Used to specify the algorithm type that you want to create in the system.	Yes
Description	Used to specify the description for the algorithm type.	Yes
Detailed Description	Used to specify additional information about the algorithm type	No
Algorithm Entity	Used to indicate the algorithm entity for which you want to create the algorithm type. The valid value is: <ul style="list-style-type: none"> • Report-Data Extract Algorithm 	Yes
Program Type	Used to indicate the program code using which the custom algorithm is created. The valid value is: <ul style="list-style-type: none"> • JAVA 	Yes
Program Name	Used to specify the custom algorithm java code. The valid value is: com.splwg.ccb.domain.reportsubmission.ReportDataExtractAlgor	Yes

In addition, the **Algorithm Type** screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the parameter is considered for the algorithm type.	No
Parameter	Used to specify the parameter using which you want to create the algorithm type.	No
Required	Used to indicate whether the parameter is required or not.	No
Owner	Indicates the user who associated the parameter with the algorithm type.	No

4. Enter the required details in the **Algorithm Type** screen.
5. Click **Save**.
The algorithm type is saved.
6. To create an algorithm, click the **Admin** link in the **Application** toolbar.
A list appears.
7. From the **Admin** menu, select **A** and then click **Algorithm**.
A sub-menu appears
8. Click the **Add** option from the **Algorithm** sub-menu.
The **Algorithm** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Code	Used to specify the algorithm that you want to create in the system	Yes
Description	Used to specify the description for the algorithm.	Yes
Algorithm Type	Used to specify the algorithm type to which you want to associate the algorithm.	Yes
Algorithm Type Description	Displays the description of the algorithm type.	Not Applicable
Parameter	Displays the parameter of the algorithm.	Not Applicable
Effective Date	Displays the date from when the algorithm type is effective for the algorithm.	Not Applicable

9. Enter the required details in the **Algorithm** screen.
10. Click **Save**.
The custom algorithm is configured in the user interface.

Report Creation

The **Report Creation** screen allows you to define reports for extracting data of a person and/or its accounts using the Apache FOP framework. It also enables you to view, edit, or delete an existing report. It contains the following zone:

[Report Search](#) on page 4361

Report Search

The **Report Search** zone allows you to search for an existing FOP report using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to search for a particular FOP report.	No
Description	Used to search FOP reports with a particular description.	No

Note: You must specify at least one search criterion while searching for an FOP report.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Report	Displays the FOP report.
Description	Displays the description of the FOP report.
Output Format	Indicates the format in which the FOP report is extracted from the system. Note: At present, you can extract an FOP report in PDF, CSV, and XML formats.
Report Type	Indicates the type of information which is extracted using the FOP report. The valid values are: <ul style="list-style-type: none"> • Bill • Custom • Letter
View	On clicking the View button you can view the details of the FOP report.
Edit	On clicking the Edit (✎) icon, the Report Creation screen appears where you can edit the details of the FOP report.
Delete	On clicking the Delete (🗑) icon, you can delete the FOP report.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an FOP Report

Procedure

To search for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.
The **Report Creation** screen appears.
3. Enter the search criteria in the **Report Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of FOP reports that meet the search criteria appears in the **Search Results** section.

Defining an FOP Report

Prerequisites

To define an FOP report you should have:

- FOP reporting framework configured in the system
- **C1_FOPONBL** algorithm defined in the system to create FOP reports for bill templates
- Parameters defined for the **C1_FOPONBL** algorithm
- **C1_FOPONBL** algorithm attached to the **Online Bill Display** system event
- **C1_FOPLTRALG** algorithm defined in the system to create FOP reports for letter templates
- Parameters defined for the **C1_FOPLTRALG** algorithm
- **C1_FOPLTRALG** algorithm attached to the **Online Letter Image** system event
- Algorithms defined in the application for creating custom FOP reports

Procedure

To define an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.
The **Report Creation** screen appears.
3. Click the **Add** button available at the upper right corner of the **Report Creation** screen.
The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	No
Description	Used to specify the description for the FOP report	No

Field Name	Field Description	Mandatory (Yes or No)
Output Format	<p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • CSV • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p>	Yes
Script	<p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p>	No
Report Type	<p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter <p>Note: This field is disabled when you select the Web option from the Output Format list.</p>	Yes
Report Template	<p>Used to indicate the template using which the FOP report is uploaded in the system.</p> <p>Note: This field appears only when you select the Bill or Letter option from the Report Type list.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
XSL Template	Used to indicate the XSL template file using which you want to create the FOP report.	Yes
	<p>Note:</p> <p>The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the Web option from the Output Format list.</p>	
Report Generation Algorithm	Used to indicate the algorithm defined for creating a custom FOP report.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the Custom option from the Report Type list.</p>	
Reporting Mode	<p>Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are:</p> <ul style="list-style-type: none"> • Batch • Online 	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	<p>Note: This field is enabled only when you select the Batch option from the Reporting Mode list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field.	

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

4. Enter the required details in the **Report Creation** screen.
5. Click **Save**.

The FOP report is defined.

Editing an FOP Report

Prerequisites

To edit an FOP report you should have:

- FOP report (whose details you want to edit) defined in the application
- Algorithms defined in the application for creating custom FOP reports

Procedure

To edit an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the FOP report whose details you want to edit.

The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	Not Applicable
Description	Used to specify the description for the FOP report	No
Output Format	<p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • CSV • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p>	Yes
Script	<p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Report Type	<p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter 	Yes
	<p>Note: This field is disabled when you select the Web option from the Output Format list.</p>	
Report Template	<p>Used to indicate the template using which the FOP report is uploaded in the system.</p>	Yes
	<p>Note: This field appears only when you select the Bill or Letter option from the Report Type list.</p>	
XSL Template	<p>Used to indicate the XSL template file using which you want to create the FOP report.</p>	Yes
	<p>Note:</p> <p>The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the Web option from the Output Format list.</p>	
Report Generation Algorithm	<p>Used to indicate the algorithm defined for creating a custom FOP report.</p>	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the Custom option from the Report Type list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Reporting Mode	Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are: <ul style="list-style-type: none"> • Batch • Online 	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field.	

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

3. Modify the required details in the **Report Creation** screen.
4. Click **Save**.

The changes made to the FOP report are saved.

Deleting an FOP Report

Procedure

To delete an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the FOP report that you want to delete.

A message appears confirming whether you want to delete the FOP report from the system.

3. Click **OK**.
4. The FOP report is deleted.

Viewing the FOP Report Details

Prerequisites

To view the FOP report details you should have:

- FOP report (whose details you want to view) defined in the system

Procedure

To view the FOP report details:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **View** button in the **View** column corresponding to the FOP report whose details you want to view.

The **Report Details** screen appears.

3. View the details of the FOP report in the **Report Details** screen.

Report Audit

The **Report Audit** screen allows you to track the records of the generated FOP reports in the system. It also allows you to do the following:

- Download the FOP reports which are generated successfully in the system
- View the error message of the FOP report which did not generate successfully

The **Report Audit** screen contains the following zone:

[Report Generation List](#) on page 4371

Report Generation List

The **Report Generation List** zone allows you to view a list of FOP reports which are generated in the system. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the generated FOP report.
Report ID	Displays the unique identification number which is created automatically by the system for a particular FOP report during report generation process.
Report	Displays the FOP report which is generated in the system.
Created By	Displays the user who has generated the FOP report in the system.
Creation Date Time	Displays the date and time when the FOP report is generated in the system.
Generation Successful	Indicates whether the FOP report generation is successful or not. The valid values are: <ul style="list-style-type: none"> • No • Yes

Column Name	Column Description
Message Text	<p>Displays information about the FOP report generation.</p> <p>Note:</p> <p>If the FOP report generation is successful, then, this column displays the following message:</p> <p>Report Generation Success</p> <p>However, if the FOP report generation is not successful, then, this column displays the reason why the FOP reports is not generated successfully in the system.</p>
Download Report	<p>On clicking the Download link, you can download the FOP report.</p> <p>Note: The Download link does not appear for FOP reports which are not generated successfully in the system.</p>

Downloading an FOP Report

Prerequisites

To download an FOP report you should have:

- FOP reports generated successfully in the system

Procedure

To download an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Audit**.
The **Report Audit** screen appears.
3. Ensure that the **Report Generation List** zone is expanded in the **Report Audit** screen.
4. Click the **Filters** (🔍) icon available at the upper right corner of the **Report Generation List** zone.
The **Report** field appears below the report list.
5. Specify the FOP report which you want to download in the **Report** field.
6. Click **Search**.
The specified FOP report is filtered in the **Report Generation List** zone.
7. Click the **Download** link in the **Download** column corresponding to the FOP report that you want to download.
The FOP report is downloaded.

Report Generation

The **Report Generation** screen allows you to extract the details of an FOP report.

Generating an FOP Report

Prerequisites

To generate an FOP report you should have:

- FOP reports created in the system

Procedure

To generate an FOP report:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Reports** and then click **Report Generation**.

The **Report Generation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to indicate the FOP report that you want to generate.	Yes
Description	Displays the description of the FOP report	Not Applicable

In addition, the **Report Generation** screen contains the following columns:

Column Name	Column Description
Display Sequence	Displays the sequence in which the parameter is defined for the FOP report.
Report Parameter	Displays the parameter which is defined for the FOP report.
Report Parameter Value	Used to specify the value of the parameter for generating the FOP report.

3. Select the required FOP report from the **Report** list.
4. Specify the values of the parameters defined for the FOP report in the **Report Parameter Value** column.
5. Click **Generate**.

The FOP report is generated.

FOP Reports

Oracle Revenue Management and Billing enables you to extract data using the following FOP reports:

- [Adjustment Detail Report](#) on page 4374

- [Entity Hold Detail Report](#) on page 4374
- [Invoice Aging Report](#) on page 4374
- [Payment Detail Report](#) on page 4375
- [Payment Summary Report](#) on page 4375
- [Transaction Rejection Detail Report](#) on page 4375
- [Transaction Rejection Summary Report](#) on page 4376
- [To Do Report](#) on page 4376
- [User Access Report](#) on page 4376
- [Quick Response Code Generation](#) on page 4376

For more information about these FOP reports, refer to *Oracle Revenue Management and Billing FOP Reports Guide*

Adjustment Detail Report

The **Adjustment Detail** report enables you to view the adjustments which are created for persons or accounts, or which are created against bills. While generating the adjustment detail report, you can specify the following parameters – Start Date, End Date, Division, Entity Type, and Entity ID. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2022 and entity type as Account, the system will extract all adjustments which are created for the accounts from 01-01-2022 till the current date.

You can generate the adjustment detail report from the user interface or through a batch process in the Excel format. We have shipped the following adjustment detail reports in this release:

- **FOPADJBXLS** - Used when you want to generate the adjustment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPADJOXLS** - Used when you want to generate the adjustment detail report from the user interface in the Excel format.

Entity Hold Detail Report

The **Entity Hold Detail** report enables you to view the entities, such as persons, accounts, or bills for which the business processes, such as bill generation, automatic payment, funding, overdue, or refund, are on hold for a given period. While generating the entity hold detail report, you can specify the following parameters – Start Date, End Date, Division, Hold Entity, Entity ID, Hold Process, and Hold Status. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2021 and hold entity as Bill, the system will extract all hold requests which are created for the bills from 01-01-2021 till the current date.

You can generate the entity hold detail report from the user interface or through a batch process in the Excel format. We have shipped the following entity hold detail reports in this release:

- **FOPHLDBXLS** - Used when you want to generate the entity hold detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPHLDOXLS** - Used when you want to generate the entity hold detail report from the user interface in the Excel format.

Invoice Aging Report

The **Invoice Aging** report enables you to view the invoices which are due for payment in different age buckets. At a time, it enables you to view the invoice aging data of all customers which belong to a particular division. While generating the invoice aging report, you can specify the following parameters – Start Date, End Date, and Division. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date. While generating the invoice aging report, the system does the currency conversion when the accounts' invoice currency is different from the customer's division currency.

You can generate the invoice aging report from the user interface or through a batch process in the PDF format. We have shipped the following invoice aging reports in this release:

- **FOPAGEBPDF** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the PDF format.
- **FOPAGEOPDF** - Used when you want to generate the invoice aging report from the user interface in the PDF format.

Payment Detail Report

The **Payment Detail** report enables you to view the payment details of an account. At a time, it enables you to view the payments made for the accounts of all customers which belong to a particular division. While generating the payment detail report for the financial services domain, you can specify the following parameters – Division, Start Date, and End Date. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in the PDF format. We have shipped the following payment detail reports for the financial services domain in this release:

- **FOPPAYDTBPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPAYDTPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.

Payment Summary Report

The **Payment Summary** report enables you to view the total payment made via a tender type. At a time, it enables you to view the total payments made via a tender type for each customer which belongs to a particular division. While generating the payment summary report for the financial services domain, you can specify the following parameters – Division, Start Date, and End Date. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in the PDF format. We have shipped the following payment summary reports for the financial services domain in this release:

- **FOPPAYSMBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPAYSMPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.

Transaction Rejection Detail Report

The **Transaction Rejection Detail** report enables you to view the details of the transactions which are in the **Error** or **Ignored** status. At a time, it enables you to view the error and ignored transactions of all accounts which belong to a particular division. While generating the transaction rejection detail report, you can specify the following parameters – Start Date, End Date, Division, and Transaction Header. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date.

You can generate the transaction rejection detail report from the user interface or through a batch process in the Excel format. We have shipped the following transaction rejection detail reports in this release:

- **FOPTRDTBXLS** - Used when you want to generate the transaction rejection detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPTRDTOXLS** - Used when you want to generate the transaction rejection detail report from the user interface in the Excel format.

Transaction Rejection Summary Report

The **Transaction Rejection Summary** report enables you to view the number of transactions mapped to a particular account and price item combination which are in the **Error** or **Ignored** status. At a time, it enables you to view the error and ignored transaction summary of all accounts which belong to a particular division. While generating the transaction rejection summary report, you can specify the following parameters – Start Date, End Date, Division, and Transaction Header. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date.

You can generate the transaction rejection summary report from the user interface or through a batch process in the Excel format. We have shipped the following transaction rejection summary reports in this release:

- **FOPTRSMBXLS** - Used when you want to generate the transaction rejection summary report through the **C1-RPTGN** batch in the Excel format.
- **FOPTRSMOxls** - Used when you want to generate the transaction rejection summary report from the user interface in the Excel format.

To Do Report

The **To Do** report enables you to view the notifications (i.e. To Dos) assigned to a user and its current status. While generating the To Do report, you can specify the following parameters – Start Date, End Date, To Do Type, To Do Type Description, Assigned User, Created By, Status, Operator, and To Do Age. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 06-01-2022 and To Do type as C1-ACCL, the system will extract all To Dos which are created using the C1-ACCL To Do type from 06-01-2022 till the current date. While filtering the data using the To Do age, you need to specify the operator along with the To Do age. The system supports the following operators: Greater Than (>), Less Than (<), Less Than Equal To (<=), Greater Than Equal To (>=), and Equal To (=). For example, if you specify the start date as 06-01-2022, To Do age as 50, and operator as >, the system will extract all To Dos which are open in the system since more than 50 days.

You can generate the To Do report from the user interface or through a batch process in the PDF format. We have shipped the following To Do reports in this release:

- **FOPTODOBPDF** - Used when you want to generate the To Do report through the **C1-RPTGN** batch in the PDF format.
- **FOPTODOOPDF** - Used when you want to generate the To Do report from the user interface in the PDF format.

User Access Report

The **User Access** report enables you to view the permissions granted to different users for accessing the data. While generating the user access report, you can specify the following parameters – User Group, User Group Description, To Do Role, and To Do Role Description.

You can generate the user access report from the user interface in the PDF format. We have shipped the following user access report in this release:

- **FOPUSROPDF** - Used when you want to generate the user access report from the user interface in the PDF format.

Quick Response Code Generation

A Quick Response (QR) code is a type of matrix barcode (or two-dimensional barcode). A barcode is a machine-readable optical label that can contain information about the item to which it is attached. Oracle Revenue Management and Billing provides a QR code generator using which you can generate a QR code. At the moment, the QR code is only supported for the FOP reports which are generated in the PDF format. You can define dataset for the QR string using which you want to generate the QR code. You can insert a QR code on any page in the Portable Document Format (PDF) file.

To insert a QR code in an FOP report, you need to add QR related code snippets in the respective XSL file. Only then, the system will insert the QR code when you generate the FOP report in the PDF format.

Chapter 56

Invoice Extract in UBL Format

Topics:

- [Prerequisites](#)
- [C1-InvoiceChargeExtract Business Service](#)
- [C1-UBLBILEX Algorithm](#)
- [C1-UBLINVOICEEXTRACT Extract Template](#)
- [UBL Format](#)
- [Field Mapping for UBL Format](#)
- [Sample Invoice Extract in the UBL Format](#)

Oracle Revenue Management and Billing provides the capability to extract the invoices in the Universal Business Language (UBL) format. UBL is a structured XML format which contains all the information but in a defined and fixed structure. The invoice extract in UBL format simplifies the process of sending and receiving invoices internationally through an electronic standard to different e-invoicing systems, thereby reducing the data entry cost and manual data entry errors.

A new algorithm type named **C1-UBLBILEX** is introduced in this release. If you want to extract the invoice in the UBL 2.1 format, you need to attach the **C1-UBLBILEX** algorithm to the **Bill Extract Method** algorithm spot of the required bill route type. In this algorithm, you need to specify the extract template using which you want to extract the invoice data in the UBL format. An out-of-box invoice extract template named **C1-UBLINVOICEEXTRACT** is shipped with the product. You can specify either the out-of-box invoice extract template or a custom invoice extract template in the algorithm parameter. This algorithm will accordingly extract the invoice data using the **C1-InvoiceChargeExtract** business service and present it as per the field mapping defined in the invoice extract template.

On executing the **POSTROUT** batch, the system will invoke the **C1-UBLBILEX** algorithm and extract the invoice data in the UBL format.

Prerequisites

To extract invoice in the UBL format, you need to do the following:

- Define the **C1_STM** feature configuration.
- Define the **C1-InvoiceChargeExtract** business service in the system.
- Define the **C1-UBLINVOICEEXTRACT** extract template in the system and associate it with the **C1-InvoiceChargeExtract** business service.
- Map the required UBL fields with the corresponding fields in the system.
- Define the **C1-UBLBILEX** algorithm using the **C1-UBLBILEX** algorithm type.
- Define the following parameters for **C1-UBLBILEX** algorithm:
 - Extract Folder
 - Dat Folder
 - External System Input String
 - Extract Template Code
- Attach the **C1-UBLBILEX** algorithm with the bill route types using the **POSTROUT** batch control.

C1-InvoiceChargeExtract Business Service

The **C1-InvoiceChargeExtract** business service is used to fetch invoice and invoice line details from the system. Information such as the payer details, invoice details, sender details, receiver details, bill segment details, bill adjustments details, and tax details are extracted using the **C1-InvoiceChargeExtract** business service. These details are further used by the **C1-UBLINVOICEEXTRACT** extract template to extract data in the UBL format.

The above mentioned data is extracted using the below given format:

```
<schema>
  <billId></billId>
  <billDate></billDate>
  <amtDueBeforeTax></amtDueBeforeTax>
  <netAmtDue></netAmtDue>
  <totalInvTaxes></totalInvTaxes>
  <billCurrency></billCurrency>
  <sender>
    <personId></personId>
    <name></name>
    <legalName></legalName>
    <emailAddress></emailAddress>

C1-UBLINVOICEEXTRACT extract template	C1-UBLINVOICEEXTRACT Extract Template on page 4380

C1-UBLBILEX Algorithm

The **C1-UBLBILEX** algorithm is invoked when the **POSTROUT** batch is executed within the ORMB system. It selects the bills attached to the associated bill route types for extraction in the UBL format.

The **C1-UBLBILEX** algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Extract Folder	Used to indicate the location where the invoice extract file is saved in the XML format.	Yes
Dat Folder	Used to save the path of the invoice extract file for the external system.	Yes
External System Input String	Used to indicate the location of the path from where the external system will fetch the extracted file in the XML format.	Yes
Extract Template Code	Used to indicate the template using which the invoice is extracted in the UBL format.	Yes

Note: Apart from the above mentioned parameters, few additional contextual parameters such as **accountId**, **acctNbr**, **personId**, and **personIdNbr** are added to the parameter list and passed to the extract utility by the algorithm internally. The user should not specify these parameters while defining the **C1-UBLBILEX** algorithm.

C1-UBLINVOICEEXTRACT Extract Template

The **C1-UBLINVOICEEXTRACT** extract template is used to extract invoice details in the Universal Business Language (UBL) 2.1 XML format. It uses the **C1-InvoiceChargeExtract** business service to fetch the person details, bill segments, adjustments, and tax details with respect to the bills attached to the respective bill route types associated with the **C1-UBLBILEX** algorithm.

The **C1-UBLINVOICEEXTRACT** extract template has the following three types of field mappings:

- Fields Starting with **IN** - Indicates the initial fields which are used as an input to fetch details corresponding to the **C1-InvoiceChargeExtract** business service.
- Fields Starting with **OUT_INV** - Indicates the extracted fields which contains the invoice information.
- Fields Starting with **OUT_INV_LIN** - Indicates the extracted fields which contains the invoice line information.

The **C1-UBLINVOICEEXTRACT** extract template is mapped in the system as shown in the below table:

Extract Template Field Name	Source Xpath	Target Xpath	Parameters/ Default Values
IN_ACCOUNT_ID	-	ubl:Invoice/accountId	PARAM(accountId)

OUT_INV_VERSIONID	-	ubl:Invoice/cbc:UBLVersionID	2.1

Note:

You should always create a new template or copy the existing template for additional field mapping.

You can use predefined functions/scripts to manipulate and enrich extract fields.

Cloud Service Features

Topics:

- [User Status Synchronization](#)

This section lists various features which are offered specifically for Oracle Revenue Management and Billing Cloud Service and Oracle Revenue Management and Billing Cloud Service Premium Edition.

User Status Synchronization

The **User Status Synchronization** feature is offered for Oracle Revenue Management and Billing Cloud Service and Oracle Revenue Management and Billing Cloud Service Premium Edition. There may be scenarios wherein the users are enabled or disabled in either Oracle Revenue Management and Billing (ORMB) or Oracle Identity Cloud Service (IDCS). Ideally, the user status should be in sync in both ORMB and IDCS. The system enables you to synchronize the user status from ORMB to IDCS and vice-versa. To synchronize the user status from ORMB to IDCS, you need to configure the **ORMB to IDCS User Sync** master configuration in ORMB. Here, in the master configuration, you need to specify the following:

- **IDCS User Sync Reqd** – Used to indicate whether you want to synchronize the user status from ORMB to IDCS.
- **IDCS URL** – Used to specify the authentication URL using which you access the ORMB Cloud Service environment. This field appears and is required when the **IDCS User Sync Reqd** option is selected.
- **Client ID** – Used to specify the public identifier for the ORMB Cloud Service environment. This field appears and is required when the **IDCS User Sync Reqd** option is selected.
- **Client Secret** – Used to specify a secret known only to the ORMB application and to the authorization server. This field appears and is required when the **IDCS User Sync Reqd** option is selected.
- **Application ID** – Used to specify the ORMB application that you want to access on Oracle Cloud Infrastructure (OCI). This field appears and is required when the **IDCS User Sync Reqd** option is selected.

After you setup the **ORMB to IDCS User Sync** master configuration, the system automatically updates IDCS immediately whenever you enable or disable the user in ORMB. To synchronize the user status from IDCS to ORMB, you need to execute a newly introduced batch named **C1-SYNUSB** in ORMB. This batch is used to update the user status to **Enable** or **Disable** in ORMB depending on whether the user is enabled or disabled in IDCS. It is a single-threaded batch. It contains the following parameter:

Parameter Name	Mandatory (Yes or No)	Description
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

Appendix

A

Most Commonly Used Tasks

Topics:

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 4392
- [Adding a Column to the Zone](#) on page 4392
- [Rearranging Columns in the Zone](#) on page 4392

Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration** () icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

Note: The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 4392

Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 4392

Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete** () icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

Note: Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

Appendix

B

Administration

Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

UI Maps

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

Procedure

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.
The changes are saved.

Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The `<approvalTransactionId/>` tag is used in the schema to retrieve the approval transaction ID of the respective business object. The `<action/>` tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace `<Approval Workflow Group Code>` with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in Oracle Revenue Management and Billing.

Setting the C1_ACCTINFO Feature Configuration

Prerequisites

To set the **C1_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

Procedure

To set the **C1_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_ACCTINFO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the Account screen.	Yes
	Note: By default, the C1_F_ATY characteristic type is specified. If you want to use account types other than the ones defined in the C1_F_ATY characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the Account screen.	Yes
	Note: By default, the C1_F_IGA characteristic type is specified. If you want to use any other characteristic type other than C1_F_IGA , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_AXENTITY Feature Configuration

The **C1_AXENTITY** feature configuration enables you to configure various settings related to the **Approval Workflow** feature.

Prerequisites

To set the **C1_AXENTITY** feature configuration, you should have:

- An algorithm defined using the **C1-APPTXN** algorithm type in the application
- To Do types defined in the application
- Fields defined in the application
- XSL files that you want to use for the Input and Display UI maps

Procedure

To set the **C1_AXENTITY** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_AXENTITY** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which you want to highlight the new record or new additions made to the existing record. This helps in comparing the existing and new data while reviewing an approval transaction.	Yes
	Note: You must specify a hexadecimal value for this option type.	

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare Value Changed Color	<p>Used to indicate the color in which you want to highlight the modifications made to the existing data. This helps in comparing the existing and new data while reviewing an approval transaction.</p> <p>Note: You must specify a hexadecimal value for this option type.</p>	Yes
Approval Transaction Entity Access Algorithms	<p>Used to specify the algorithm which controls access to the maintenance objects based on the access group and division.</p> <p>Note: By default, the value is set to C1-APPTXN. If you create new maintenance objects and want to control the access of these new maintenance objects based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you will have to define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.</p>	Yes
Approval Transaction Field Masking	<p>Used to specify the business object for masking the approval transaction field in the approval workflow group schema.</p> <p>Note: If you do not specify the business object, masking is disabled for the respective field.</p>	Yes
Approval Transaction Resolve To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when an approver at any level in the hierarchy rejects an approval transaction.</p> <p>Note: You must specify a To Do type which is already defined in the system.</p>	Yes
Approval Transaction screen timeout	<p>Used to indicate the time (in minutes) in which the screen timeout message should appear in the Comparison: New versus Existing screen when the system takes longer time to display an approval transaction.</p>	Yes
Disable Approval Transaction Fields in Input UI Maps	<p>Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.</p> <p>Note: You must specify a field which is already defined in the application.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Display Existing Panel on Left Side (Y/N)	<p>Used to indicate whether you want to view the existing or new data in the left panel while reviewing an approval transaction. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the existing data to appear in the left panel of the Comparison: New versus Existing screen. • N - Used when you want the new data to appear in the left panel of the Comparison: New versus Existing screen. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Display Information String	<p>Used to indicate whether the approval transaction information string should appear in the Comparison: New versus Existing screen when you are reviewing an approval transaction of a construct. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Display only Differences of fields on UI	<p>Used to indicate whether you want to view only those fields of a record where the data is added or updated or all fields of a record while reviewing an approval transaction. The valid values are:</p> <ul style="list-style-type: none"> • Yes - Used when you want to view only those fields of a record where the data is added or updated in the Comparison: New versus Existing screen. • No - Used when you want to view all fields of a record in the Comparison: New versus Existing screen. 	Yes
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_DIVFUNCT Feature Configuration

Procedure

To set the **C1_DIVFUNCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_DIVFUNCT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the Person , Account and Contract screens. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-Deal Feature Configuration

The **C1-Deal** feature configuration enables you to configure various settings related to the **Deal Pricing Management** feature.

Prerequisites

To set the **C1-Deal** feature configuration, you should have:

- Required FOP based reports defined in the application

Procedure

To set the **C1-Deal** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-Deal** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Limit for Online Hierarchy Creation	<p>Used to determine whether the customer hierarchy for a deal should be created in the online or deferred mode. If the number of accounts in the customer hierarchy does not exceed the account limit, the system creates the corresponding prospect persons and accounts for the deal immediately and then changes the status of the deal to Pending Simulation. However, if the number of accounts in the customer hierarchy exceeds the account limit, the status of the deal is changed to Hierarchy Creation Deferred.</p> <p>Note: This option type is considered when a deal is created for an existing customer or prospect with the simulation type set to Customer. You must specify a value greater than or equal to zero. On executing the C1_HRC batch, the system checks whether there are any deals in the Hierarchy Creation Deferred status. If so, the system creates the corresponding prospect persons and accounts for the deal and then changes the status of the deal to Pending Simulation. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes
Footnote Character for Terms & Conditions in Deal Extract	Used to specify a special character which you want to use while inserting terms and conditions of a price item or hierarchy entity as footnotes in the deal extract report. For example, *, \$, &, #, etc.	Yes
Deal Comparison Report	<p>Used to specify the FOP based report using which you want to extract the deal comparison report in the Excel format.</p> <p>Note: You can set the value of this option type to DCMR or to any custom FOP based report which is designed to show the deal comparison report in the Excel format.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Company Logo File Name for Deal Extract	<p>Used to specify the company logo file that you want to embed while extracting the deal information in the PDF format for the customer review and acceptance.</p> <p>Note:</p> <p>You must upload the specified company logo file in the required FOP based report using which you want to extract the deal information in the PDF format. It is then stored at the following location:</p> <pre>/scratch/rmbbuild/spl/INSTALL_DIR/splapp/reporting/xsl/</pre> <p>Here, you must specify a file name along with the extension.</p>	Yes
Price Item Status Characteristic Type	<p>Used to indicate the characteristic type where the status of a price item is stored. This characteristic type is defined for a price item. The system uses this characteristic type while deriving active price items in the price item hierarchy of an existing customer or account in a deal. Here, you must specify a characteristic type where the characteristic entity is set to Price Item.</p> <p>Note: The C1-DLPIS characteristic type is shipped with the product.</p>	Yes
Default Period in Deal Dashboard and Deal Approver Dashboard	<p>Used to specify the duration in months. The system calculates the default period considering the specified duration and system date, and accordingly shows the details for the default period in:</p> <ul style="list-style-type: none"> • Deal Metrics, Deal Statistics, Deal To Dos, and Search Deal zones of the Deal Dashboard screen • Deal Metrics, Deal To Dos and Search Deal zones of the Deal Approver Dashboard screen <p>For example, if the system date is 07-11-2021 and the value for this option type is set to 12, then the system displays the following information in the respective zone of the Deal Dashboard screen on 07-11-2021:</p> <ul style="list-style-type: none"> • Deal Metrics - Indicates number of deals which are created, pending for approval, ready for finalization, pending for client acceptance, won, and rejected between Aug 2020 to July 2021. • Deal Statistics - Graphically represents the number of deals of an existing customer, existing account, and prospect in a particular status. • Deal To Dos - Lists the To Dos which are created between Aug 2020 to July 2021. • Search Deals - Lists deals where start date fall between Aug 2020 to July 2021. 	Yes

Option Type	Description	Mandatory (Yes or No)
Deal Profitability Report	Used to specify the FOP based report using which you want to extract the deal profitability report in the Excel format.	Yes
	Note: You can set the value of this option type to DLPRTXL or to any custom FOP based report which is designed to show the deal profitability report in the Excel format.	
Deal External Report in Excel	Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the customer review and acceptance.	Yes
	Note: You can set the value of this option type to DEEEXCEL or to any custom FOP based report which is designed to show the deal information to the customer in the Excel format.	
Deal External Report in PDF	Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the customer review and acceptance.	Yes
	Note: You can set the value of this option type to DEEPDF or to any custom FOP based report which is designed to show the deal information to the customer in the PDF format.	
Deal Internal Report in Excel	Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the internal review.	Yes
	Note: You can set the value of this option type to DEIEXCEL or to any custom FOP based report which is designed to show the deal information to the internal user in the Excel format.	
Deal Internal Report in PDF	Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the internal review.	Yes
	Note: You can set the value of this option type to DEIPDF or to any custom FOP based report which is designed to show the deal information to the internal user in the PDF format.	

Option Type	Description	Mandatory (Yes or No)
Validate Average Price Against Proposed Price List Pricing	<p>Used to indicate whether the average price of a price item in a deal should be validated against the proposed price list pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y - Indicates that the average price of a price item in a deal should be validated against the proposed price list pricing. • N - Indicates that the average price of a price item in a deal should be validated against the eligible price list pricing. <p>Note: This option type is considered when the Price Item Approval Required field is set to Yes in the respective deal type.</p>	Yes
Deal Pricing and Commitments - Pagination Limit	<p>Used to specify the maximum number of records that can be displayed on filtering the data in each page of the Deal Pricing and Commitments screen.</p> <p>Note: You must specify a numeric value greater than zero.</p>	Yes
Deal Questionnaire - Pagination Limit	<p>Used to specify the number of questions that should appear in the Questionnaire page of the Deal Information screen.</p> <p>Note: You must specify a numeric value greater than zero.</p>	Yes
Refer Volume Aggregation	<p>Used to indicate whether you want to derive the following for an account in a deal from the charge and volume aggregation tables:</p> <ul style="list-style-type: none"> • Recurring and non-recurring pass through charges • Commitments from recurring and non-recurring SQI based billable charges <p>The valid values are:</p> <ul style="list-style-type: none"> • Y - Indicates that you want to extract the charges and commitments of an account from the C1_CHARGE_AGGR and C1_VOLUME_AGGR tables, respectively, while viewing the pricing and commitment details of the account. <p>Note: If you want to refer the data from the C1_CHARGE_AGGR and C1_VOLUME_AGGR tables, you need to execute the PREAGGR and CSTPREAG batches before creating a deal for an existing customer or account. For more information about these batches, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <ul style="list-style-type: none"> • N - Indicates that you want to derive the charges and commitments of an account for the deal frequency, at the runtime, while viewing the pricing and commitment details of the account. 	Yes

Option Type	Description	Mandatory (Yes or No)
Thread Count for Price Item Hierarchy	Used to specify the number of threads you want to spawn in parallel. It is used while deriving the price item hierarchy for an existing customer or account in a deal.	Yes
	Note: You must specify a numeric value greater than zero.	
Valid Period for Seasonal Pricing in Months	Used to specify the maximum duration in months for which you can offer a seasonal pricing for a price item in a deal. The system then validates the end date of a seasonal pricing using the specified duration. For example, if the value for this option type is set to 6 and the seasonal pricing start date is 02-01-2021, then the system checks whether the end date of the seasonal pricing is not beyond 07-31-2021.	Yes
Volume and Commitment Limit Online Simulation	Used to determine whether the cost, revenue, and profitability for a deal version should be calculated in the online or deferred mode. If the proposed commitments do not exceed the specified limit, the system calculates the cost, revenue, and profitability for the deal version immediately and then changes the status of the deal and its version to Simulated . However, if the proposed commitments exceed the specified limit, the status of the deal is changed to Simulation Deferred .	Yes
	<p>Note:</p> <p>You must specify a value greater than or equal to zero.</p> <p>On executing the C1_SMLD batch, the system checks whether there are any deals in the Simulation Deferred status. If so, the system calculates the cost, revenue, and profitability for the deal version and then changes the status of the deal and its version to Simulated. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	
Deal Dashboard Default View	<p>Used to indicate whether the system should list the information of deals, which are created by the logged in user or which are created by a set of users who belong to the logged in user's access group, by default, in the Deal Dashboard screen. The valid values are:</p> <ul style="list-style-type: none"> • U - Used when you want to view the information of deals, which are created by the logged in user, by default, in the Deal Dashboard screen. • UG - Used when you want to view the information of deals, which are created by a set of users who belong to the logged in user's access group, by default, in the Deal Dashboard screen. <p>Note: If you do not set this option type, the system, by default, shows the data of the logged in user in the Deal Dashboard screen.</p>	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-EHRCONFIG Feature Configuration

The **C1-EHRCONFIG** feature configuration enables the system to determine the maximum number of levels that can be included in an entity hierarchy relationship. Accordingly, the system enables you to create hierarchy entities for upto one level less than the level specified in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. For example, if you set the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

Procedure

To set the **C1-EHRCONFIG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-EHRCONFIG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Maximum Hierarchy Level	Used to indicate the maximum number of levels that you want to include in an entity hierarchy relationship. Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels. The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. By default, the value is set to 10. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in this option type.	Yes

- Enter the value for the required option type in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXCHRATE Feature Configuration

Procedure

To set the **C1_EXCHRATE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_EXCHRATE** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> • Y • N By default, the value of this option type is set to N .	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXP_OVRD Feature Configuration

Procedure

To set the **C1_EXP_OVRD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_EXP_OVRD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FINTRANOP Feature Configuration

The **C1_FINTRANOP** feature configuration enables the system to determine various options which should be considered while creating billable charges, determining a price item pricing, generating bill segments, and while creating an actual bill using a trial bill.

Prerequisites

To set the **C1_FINTRANOP** feature configuration, you should have:

- Values defined for the **BIRC_OPT_TYP_FLG** lookup field

Procedure

To set the **C1_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_FINTRANOP** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Financial History Details Switch	<p>Used to indicate whether detailed or summarized information should be displayed for an account in the Account Financial History screen. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to list all financial transactions of a bill, payment, or adjustment for an account in the Account Financial History screen. • N - Used when you want to summarize all financial transactions of a particular type on an entity (i.e. bill, payment, or adjustment) and display the total amount in the Account Financial History screen. <p>Note: If you do not specify the value for this option type, by default, it is set to Y.</p>	No
Allow Advance Billing of Future Dated Charges	<p>Used to indicate whether you want to use advance billing for future dated billable charges. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If the Allow Advance Billing of Future Dated Charges option type is set to Y, the system considers those billable charges where the bill after date is on or before the cut-off date, irrespective whether the date of those billable charges is past or future dated.</p> <p>The Allow Advance Billing of Future Dated Charges option type should be defined only in case of non-recurring billable charges.</p> <p>By default, the value for this option type is set to N.</p>	No
Allow Caching Of Rule Based Autopay List	<p>Used to indicate whether you want to cache the rule based auto pay instructions of an account when the C1-APRULEEVL algorithm is invoked. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

Option Type	Description	Mandatory (Yes or No)
Allow non-significant zero amount FT GL entry	Used to indicate whether you want to allow non-significant zero amount FT GL entries in the system. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes (Conditional) Note: This data is required when you want to allow non-significant zero amount FT GL entries in the system.
	Note: The FT GL amount is considered significant only when the statistical and total amount are non-zero.	
Avoid internal match event creation for zero dollar Bill	Used to indicate whether you want to consider a zero balance bill for offsetting against another bills in an offset request. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes (Conditional) Note: This data is required when you want to consider a zero balance bill for offsetting against another bills in an offset request.
	Note: If you set this option type to Y , the system does not match the credit and debit line items internally of a zero balance bill on the bill completion. If you set this option type to N , the system matches the credit and debit line items internally of a zero balance bill on the bill completion.	
Avoid Pricing Crawling if Rate Schedule present at Contract	Used to indicate that the system should not determine the price item pricing using the price assignment search algorithm (which is attached on the account's division) when the effective rate schedule is present on the contract. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value for this option type, by default, it is set to N .	

Option Type	Description	Mandatory (Yes or No)
Bill Segment Regeneration on Freeze	<p>Used to indicate whether you want to regenerate the bill segments before freezing them. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to N.</p> <p>If the Freeze and Complete option is selected for the respective window period in the bill cycle and the Bill Segment Regeneration on Freeze option type is set to Y, then the bill segments are regenerated and the status of the bill segments is set to Frozen. However, if the Freeze and Complete option is not selected for the respective window period in the bill cycle, then the bill segments are always regenerated irrespective of whether the Bill Segment Regeneration on Freeze option type is set to Y or N.</p>	No
Billable Charges Date - Non Recurring	<p>Used to indicate whether you want to consider the non-recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S - Used when you want to consider the non-recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the non-recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to S.</p> <p>The system always considers the recurring billable charges whose start date is earlier than the cut-off date and end date is later than the cut-off date irrespective of whether the Billable Charges Date option type is set to S or E.</p>	No

Option Type	Description	Mandatory (Yes or No)
Billable Charges Date - Recurring	<p>Used to indicate whether you want to consider the recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S - Used when you want to consider the recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note: If you do not specify the value for this option type, by default, it is set to S.</p>	No
Catch Up Flag For Recurring Charges	<p>Used to indicate whether you want to consider the recurring billable charges for catch up. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date. • N - Used when you do not want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date. 	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to catch up with the recurring billable charges before the bill generation process.</p>
Defer Bill Segment Freeze	<p>Used to indicate whether you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the system to freeze the bill segment after the bill routing and bill due date calculation is completed. • N - Used when you do not want the system to freeze the bill segment after the bill routing and bill due date calculation is completed. <p>Note: This flag is only considered for freezing the bill once the bill's status is set to Complete.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed.</p>
Hide Debt Class Details On Account Main Page	<p>Used to indicate whether you want to hide the debt class details in the Main tab of the Account screen. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the system to hide the debt class details in the Main tab of the Account screen. • N - Used when you want the system to populate the debt class details in the Main tab of the Account screen. 	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to hide the debt class details in the Main tab of the Account screen.</p>

Option Type	Description	Mandatory (Yes or No)
Rate Component Step Optimization	<p>Used to indicate whether you want to determine the rate for all tiering ranges of a step tiered rate component or for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to determine the rate for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. It helps to improve the performance of the billing batches. If you set this option type to Y, always ensure that you define the price components with the tiering ranges in the ascending order. • N - Used when you want to determine the rate for all tiering ranges of a step tiered rate component. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Refund/Write-Off Flush Counter	<p>Used to specify the value for flush counter when the refund or write-off details are defined.</p> <p>Note: You must specify a numeric value greater than zero. If the total number of refund or write-off records are equal to the flush counter, the system then performs a flush and clear at session level.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining the refund or write-off details in the system.</p>
Skip Priceitem Contract Type Validation	<p>Used to indicate whether you want to skip the price item's and billable charge's contract's contract type validation. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is not associated. • N - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is associated. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Trial Bill Characteristics Conversion	<p>Used to indicate whether you want to copy the trial bill's characteristics when an actual bill is created using a trial bill. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1_FM Feature Configuration

Procedure

To set the **C1_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_FM** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNIP for this option type.	
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNCU for this option type.	

Option Type	Description	Mandatory (Yes or No)
Disaggregation - Price Assignment	<p>Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: You can use this feature when an algorithm which is created using the TXNDISAGGPRA algorithm type is attached to the Post-Processing system event of the C1_PRASGN_BO business object.</p>	No
Allow Duplicate Summary ID	<p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the Service Quantity Calculation (C1-TXNSQ) batch. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you set this option type to false, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to false.</p>	No

Option Type	Description	Mandatory (Yes or No)
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 5 • 6 • 7 <p>Note:</p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2⁴) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p>	No
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, Validate Transaction and Derive Price Item . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No

Option Type	Description	Mandatory (Yes or No)
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns Rule Is True irrespective of whether the rule true action is set to Next Dependent, Next Rule by Priority, or Success and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the Ignore Transaction, Aggregate Transaction, and Aggregation Schedule fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Use Materialized Views	<p>Used to indicate whether the price item pricing information must be cached in the CI_PRC_AGRD, CI_PRC_PL, and CI_PRC_INH_PL tables. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
Maximum Price Item Parameters Cache Size	<p>Used to indicate the maximum number of price items whose parameter information can be cached in the memory.</p>	Yes
Maximum Price Item Parameter Groups Cache Size	<p>Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.</p>	Yes
SQ Recalculation Required	<p>Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the C1-TXNCU batch. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No

Option Type	Description	Mandatory (Yes or No)
Transaction Detail Account Validation	<p>Used to indicate whether the account must be validated during the transaction validation process. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	<p>Used to specify the description for the batch which is used for adding a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. For example, Populate CI_TXN_DTL_PRITM_SUMMARY Table. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when the Use C1-TXNPS During Transaction Aggregation option type is set to true.</p>
Find Price Item Pricing Batch Description	<p>Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, Price Item Pricing Verification. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes
Update Transaction Status Batch Description	<p>Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, Update Status. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes
Service Quantity Calculation Batch Description	<p>Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, Service Quantity Calculation. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes
Transaction Completion Batch Description	<p>Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, Mark Completion. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, Clean Up . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Use C1-TXNPS During Transaction Aggregation	<p>Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you set this option type to true, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> 1. Flush All Caches (F1-FLUSH) 2. Refresh Pricing (C1-TXNRP) 3. Header Validation (C1-TXNHV) 4. Validate Transaction and Derive Price Item (C1-TXNIP) 5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS) 6. Price Item Pricing Verification (C1-TXNVP) 7. Update Status (C1-TXNEX) 8. Service Quantity Calculation (C1-TXNSQ) 9. Mark Completion (C1-TXNCM) 10. Clean Up (C1-TXNCU) with the Request Type parameter set to EROR 	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-INCT Feature Configuration

The **C1-INCT** feature configuration enables you to configure various settings related to the **Construct Based Billing and Settlement** feature.

Prerequisites

To set the **C1-INCT** feature configuration, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Contract Type**)

Procedure

To set the **C1-INCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-INCT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Settlement Currency Validation Required	Used to indicate whether you want to enable or disable the linked accounts’ and settlement account’s currency validation. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to validate whether the linked accounts’ currency matches the settlement account’s currency. • N - Used when you do not want to validate whether the linked accounts’ currency matches the settlement account’s currency. 	No
	Note: If you do not specify the value for this option type, by default, it is set to N .	
Target Contract Characteristic Type	Used to indicate the characteristic type which stores the contract type using which the contract should be created for the new invoice account when the construct is activated. This characteristic type must be defined on the usage accounts’ contract’s contract type.	Yes
	Note: You must specify a characteristic type where the characteristic entity is set to Contract Type .	

7. Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MASPRI Feature Configuration

Procedure

To set the **C1_MASPRI** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_MASPRI** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Thread Count	Used to specify the number of threads you want to spawn in parallel. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MLTCURACC Feature Configuration

The **C1_MLTCURACC** feature configuration enables you to configure various settings related to the **Multi-Currency Accounts** feature.

Prerequisites

To set the **C1_MLTCURACC** feature configuration, you should have:

- Adjustment types and adjustment cancel reasons defined in the application

Procedure

To set the **C1_MLTCURACC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1_MLTCURACC** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)												
Allow Multi-Currency Accounts	<p>Used to indicate whether you want to enable the Multi-Currency Accounts feature. The valid values are:</p> <ul style="list-style-type: none"> • Y - If the Allow Multi-Currency Accounts option type is set to Y, the following fields are enabled in the respective screen: <table border="1" data-bbox="654 407 1166 804"> <thead> <tr> <th>Screen Name</th> <th>Field Name</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Invoice Currency</td> </tr> <tr> <td>Billable Charge</td> <td>Currency Code (for Bill Line)</td> </tr> <tr> <td>Adjustment</td> <td>Currency</td> </tr> <tr> <td>Payment Event Add</td> <td>Payment Currency</td> </tr> <tr> <td>Rate Component</td> <td>Allow Currency Conversion</td> </tr> </tbody> </table> <ul style="list-style-type: none"> • N - If the Allow Multi-Currency Accounts option type is set to N, the Invoice Currency field is disabled in the Account screen. By default, the base currency of the account's division appears in the Invoice Currency field. If the base currency is not defined for the account's division, the currency code specified in the Installation Options - Framework screen appears in the Invoice Currency field. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	Screen Name	Field Name	Account	Invoice Currency	Billable Charge	Currency Code (for Bill Line)	Adjustment	Currency	Payment Event Add	Payment Currency	Rate Component	Allow Currency Conversion	No
Screen Name	Field Name													
Account	Invoice Currency													
Billable Charge	Currency Code (for Bill Line)													
Adjustment	Currency													
Payment Event Add	Payment Currency													
Rate Component	Allow Currency Conversion													
Transfer Adjustment Type	<p>Used to specify the adjustment type using which you want to create a transfer adjustment when an amount is converted from one currency to another.</p> <p>Note: You must specify an adjustment type which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the Allow Multi-Currency Accounts option type is set to Y .												
Reason Code for Cancelling Original Adjustment	<p>Used to specify the reason code that you want to use while cancelling the original currency conversion adjustment.</p> <p>Note: You must specify an adjustment cancel reason which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the Allow Multi-Currency Accounts option type is set to Y .												

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-ODBFC Feature Configuration

Procedure

To set the **C1-ODBFC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-ODBFC** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Average Record Size	Used to specify the average size of a usage record in bytes. By default, the value is set to 500. You can change the value, if required.	Yes
Billable Charge Chunk Size	Used to specify the number of billable charges you want to create in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes
File Size Limit	Used to specify the size of a usage data file in bytes. By default, the value is set to 100000. You can change the value, if required.	Yes
Online Bill Creation Limit	Used to determine whether adhoc bills must be generated for a usage data file online or through the background process. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, adhoc bills are generated for the usage data file through a batch process. By default, the value is set to 500. You can change the value, if required.	Yes
Staging XML Size	Used to specify the number of usage records you want to parse and map in each XML file. By default, the value is set to 500. You can change the value, if required.	Yes
Thread Count	Used to specify the number of threads you want to spawn in parallel.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Option Type	Description	Mandatory (Yes or No)
Transaction Limit	Used to determine whether billable charges for a usage data file must be created online or through the background process. If the total number of valid or approved records in a usage data file exceeds the transaction limit, billable charges are created for the valid or approved records through a batch process.	No
Validation Chunk Size	Used to specify the number of usage records you want to validate or revalidate in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes

- Enter the value for the option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

Procedure

To set the **C1-OFFSETREQ** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-OFFSETREQ** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Allow Offsetting Across Persons	Used to indicate whether you want to offset bills across main customer’s hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons. • N - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer. 	Yes
Show Warning When Offsetting Across Person Hierarchy	Used to indicate whether the system should display a warning message when a bill added for offsetting is in different person hierarchy than the base bill person hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want the system to display a warning message when a bill is added for offset • N 	Yes (Conditional)
	Note: If you do not specify the value for this option type, by default, it is set to N .	Note: This data is required when the Allow Offsetting Across Person option type is set to Y .

7. Enter the value for the required option type in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYPORTAL Feature Configuration

Procedure

To set the **C1-PAYPORTAL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PAYPORTAL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the Edit Payment Amount screen. Note: The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.	Yes
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the Edit Payment Amount screen. Note: The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.	Yes

Option Type	Description	Mandatory (Yes or No)
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the Edit Payment Amount screen.	Yes
	Note: The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the Edit Payment Amount screen.	No
	Note: At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PER_REL Feature Configuration

You can define person to person relationship type sequence in the **C1_PER_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

Procedure

To set the **C1_PER_REL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_PER_REL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type. Note: If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PLSM Feature Configuration

The **C1-PLSM** feature configuration enables you to extract the details and summary of a price list simulation in the Excel format. Two FOP based reports are shipped with the product — **PLSM_DETEXL** and **PLSM_SMRYEXL**. You can use these FOP based reports or create the custom FOP based reports to extract the data in the Excel format.

Prerequisites

To set the **C1-PLSM** feature configuration, you should have:

- Required FOP based reports defined in the application

Procedure

To set the **C1-PLSM** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-PLSM** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Detail Report Code Excel	Used to specify the FOP based report using which you want to extract the detailed report of a price list simulation in the Excel format.	Yes
	Note: You can set the value of this option type to PLSM_DETEXL or to any custom FOP based report which is designed to show the detailed report of a price list simulation in the Excel format.	
Summary Report Code Excel	Used to specify the FOP based report using which you want to extract the summarized report of a price list simulation in the Excel format.	Yes
	Note: You can set the value of this option type to PLSM_SMRYEXL or to any custom FOP based report which is designed to show the summarized report of a price list simulation in the Excel format.	

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PPARM_FLG Feature Configuration

The **C1_PPARM_FLG** feature configuration enables the system to determine whether the multi parameter based pricing or variance parameter based pricing feature is enabled. For more information on how to define pricing for a price item or price item bundle based on multiple parameters, see [Multi Parameter Based Pricing](#) on page 275. For more information on how to define pricing for a price item or price item bundle based on variance parameter, see [Variance Parameter Based Pricing](#) on page 275.

Procedure

To set the **C1_PPARM_FLG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_PPARM_FLG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to enable the multi parameter or variance parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> True - Used when you want to enable the multi parameter based pricing feature. False - Used when you want to enable the variance parameter based pricing feature. 	Yes

- Enter the value for the required option type in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PR_REC Feature Configuration

Procedure

To set the **C1_PR_REC** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_PR_REC** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Effective Pricing Record Set Limit	Used to specify the number of records that can be displayed in the Search Results section of the Effective Price Assignment zone. The value must be an integer and not in decimals. The maximum number of records that can be displayed are 5000. Note: If you enter the value as 0 or if you do not specify the value for the Effective Pricing RecordSet Limit option type, no records will be displayed in the Search Results section.	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRICING Feature Configuration

The **C1_PRICING** feature configuration enables the system to determine the following:

- The contract type that should be associated with a price item or price item bundle which is available for pricing.
- The priority that should be defaulted while assigning a price list to a person or an account from the user interface or through a business service.
- Whether the logs should be maintained when the **C1-GetAllAssignedPriceLists**, **C1-AssignPriceList**, **C1-GetEffectivePricing**, **C1-GetAccountRate**, **C1_PRICEASSIGN_SERVICE**, **C1-PriceAccount**, and **C1-GetPricing** business services are invoked.

Prerequisites

To set the **C1_PRICING** feature configuration, you should have:

- Contract types defined in the application

Procedure

To set the **C1_PRICING** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_PRICING** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Default Contract Type	Used to indicate the contract type that you want to associate with a price item or price item bundle which is available for pricing.	Yes
	Note: You must specify a contract type which is already defined in the system. You must ensure that the specified contract type is defined for all divisions in the system.	
Default Price List Priority	Used to indicate the default priority that should appear in the Price List Assignment screen when you assign a price list to a person or an account. You can then edit the priority, if required. It is also used when both the priority and priority indicator are not passed to the C1-AssignPriceList business service.	No
	Note: The value for this option type must be a positive integer.	
Enable Service Logging	Used to indicate whether you want to maintain logs when the C1-GetAllAssignedPriceLists , C1-AssignPriceList , C1-GetEffectivePricing , C1-GetAccountRate , C1_PRICEASSIGN_SERVICE , C1-PriceAccount , and C1-GetPricing business services are invoked. The valid values are: <ul style="list-style-type: none"> • True • False 	No

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRASNORDR Feature Configuration

The **C1_PRASNORDR** feature configuration enables the system to determine the manner in which price assignments should be searched for a global customer. For more information on how effective price item pricing is derived, see [Price Assignment Search Mechanism](#) on page 279.

Prerequisites

To set the **C1_PRASNORDR** feature configuration, you should have:

- An algorithm defined using the **C1_PRASN_PP** algorithm type in the application

Procedure

To set the **C1_PRASNORDR** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PRASNORDR** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Price Assignment Algorithm	Used to specify the algorithm using which the price assignment should be searched for a global customer.	Yes
	Note: You must specify an algorithm which is already defined in the system.	

- Enter the value for the required option type in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-TXNDMYID Feature Configuration

For manually added transactions, the system can generate header details including the header ID automatically if you set the option types in the **C1-TXNDMYID** feature configuration.

Procedure

To set the **C1-TXNDMYID** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-TXNDMYID** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Dummy File Name	Used to specify the dummy file name.	Yes
Dummy Header ID	Used to specify the dummy header ID.	Yes
Dummy Transaction Source	Used to specify the dummy transaction source.	Yes
Dummy Header Date	Used to specify the dummy header date.	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYFLUPLD Feature Configuration

Procedure

To set the **C1-PAYFLUPLD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1-PAYFLUPLD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Field Mapping for Match Type	<p>Used to specify a field mapping which is created using the Configuration for Match Type - Handling Overpayment preference category.</p> <p>Note: The system then considers this field mapping during the step-three PUPL batch execution whenever there are multiple payment records of the payee account in the CSV file. By default, the value is set to MT_CNF. You can change the value, if required. This option type is only applicable for the health insurance domain.</p>	Yes
Payment Portal Thread Count	<p>Used to specify the number of threads you want to spawn in parallel. This value is used when a batch job is automatically created for the Create Payments from Payment Staging Records (PUPL) batch.</p> <p>Note: By default, the value is set to 1. You can change the value, if required.</p>	No
Thread Pool Name	<p>Used to specify the thread pool on which you want to execute the batch. This value is used when a batch job is automatically created for the following batches:</p> <ul style="list-style-type: none"> Upload Payment Records in Pre-Staging Area (C1-PYUP1) Move Payment Records to Staging Area (C1-PYUP2) Create Payments from Payment Staging Records (PUPL) <p>Note: By default, the value is set to DEFAULT. You can change the value, if required.</p>	No

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-CFS Feature Configuration

The **C1-CFS** feature configuration enables you to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). If the file object storage service of OCI is used, you need to specify the buckets or containers within the Object Storage namespace from where you need to read files for the On Demand Billing and Payment Upload features. Before specifying the buckets to read files from the external location for the On Demand Billing and Payment Upload features, you need to define a file storage extendable lookup value using the **File Storage Configuration (F1-FileStorage)** extendable lookup where the file adapter is set to **Oracle Cloud Object Storage**. For more information on how to define a file storage extendable lookup value, refer to the **Oracle Utilities Application Framework Administrative Processes # Configuration Tools # Miscellaneous Topics # Referencing URIs # External File Storage** in *Oracle Revenue Management and Billing Online Help*.

Procedure

To set the **C1-CFS** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.
2. Click the **Admin** link in the **Application** toolbar.
A list appears.
3. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
4. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
5. In the **Feature Configuration Search** zone, enter **C1-CFS** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
File Object Storage Usage	<p>Used to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>By default, the value is set to N.</p> <p>You must ensure that the value of this option type is set to N in the On Premise and Cloud Service environments.</p> <p>If the value of this option type is set to Y, you need to accordingly specify the directory paths while executing the DWLDBILC, C1-PUPSG, C1-APACK, and C1-RECUP batches. For more information, refer to the <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes
ODB Extendable Lookup and Bucket	<p>Used to specify the following information in the <File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the On Demand Billing feature. • The bucket or container from where you want to upload the file using the On Demand Billing feature. <p>Note: This option type is required only when the File Object Storage Usage option type is set to Y and you want to use the On Demand Billing feature.</p>	Yes (Conditional)

Option Type	Description	Mandatory (Yes or No)
Payment Upld Extendable Lookup and Bucket	<p>Used to specify the following information in the <File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the Payment Upload feature. The bucket or container from where you want to upload the file using the Payment Upload feature. <p>Note: This option type is required only when the File Object Storage Usage option type is set to Y and you want to use the Payment Upload feature.</p>	Yes (Conditional)

8. Set the **File Object Storage Usage** option type to **N**.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-FLUPLD Feature Configuration

You need to set the **C1-FLUPLD** feature configuration only when you want to decrypt the encrypted files on the SFTP server while uploading and transforming the files through the **C1-FTRAN** batch. The **C1-FRDALG** algorithm is used to decrypt the file using the keystore. Earlier, the following properties were derived from the `FW_spl.properties.keystore.truststore.include` file to encrypt or decrypt the files using the keystore:

- `com.oracle.ouaf.system.keystore.file`
- `com.oracle.ouaf.system.keystore.passwordFileName`
- `com.oracle.ouaf.system.keystore.type`
- `com.oracle.ouaf.system.keystore.padding`
- `com.oracle.ouaf.system.keystore.mode`
- `com.oracle.ouaf.system.keystore.alias`
- `ouaf.system.fileupload.pgp.pvt.key.filepath`

Now, the **C1-FLUPLD** feature configuration enables you to specify the required details to encrypt or decrypt the files using the keystore.

Procedure

To set the **C1-FLUPLD** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.

2. Click the **Admin** link in the **Application** toolbar.

A list appears.

3. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1-FLUPLD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
File Decryption Key Alias	Used to specify the alias (i.e. key defined in the keystore) using which you want to encrypt or decrypt the files.	Yes
	Note: By default, the value is set to ouaf.system . You can change the value as per the requirement.	

Option Type	Description	Mandatory (Yes or No)
Key Store File Path	<p>Used to specify the directory or bucket from where you want to fetch the keystore file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the keystore file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/.ouaf_keystore.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore file on OCI. • The bucket or container from where you want the system to fetch the keystore file. <p>Note: By default, the value is set to @SHARED_DIR/ks/.ouaf_keystore. You must change the value as per the requirement. The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p>	Yes
Key Store Mode	<p>Used to specify the mode using which you want to encrypt or decrypt the files.</p> <p>Note: By default, the value is set to CBC (i.e. Cipher-block Chaining).</p>	Yes
Key Store Padding	<p>Used to specify the padding using which you want to encrypt or decrypt the files.</p> <p>Note: By default, the value is set to PKCS5Padding.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Key Store Password File Path	<p>Used to specify the directory or bucket from where you want to fetch the keystore password file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the keystore password file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/.ouaf_storepass.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore password file on OCI. • The bucket or container from where you want the system to fetch the keystore password file. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/ks.ouaf_storepass. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p>	Yes
Key Store Type	<p>Used to indicate the type of keystore file.</p> <p>Note: By default, the value is set to JCEKS.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Private Key File Path	<p>Used to specify the directory or bucket from where you want to fetch the private key file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the private key file from the shared directory on the server. <p>For example, you can set the value to <code>@SHARED_DIR/.ouaf_storepass</code>.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the <code>file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket></code> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the private key file on OCI. • The bucket or container from where you want the system to fetch the private key file. <p>Note:</p> <p>By default, the value is set to <code>@SHARED_DIR/ks.ouaf_storepass</code>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p>	Yes

8. Enter the values for the required option types in the **Feature Configuration** screen.
9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-REPORTVW Feature Configuration

You need to set the **C1-REPORTVW** feature configuration only when you are using the Apache FOP Reporting framework in ORMB. It enables you to define the following properties which were earlier derived from the `spl.properties` file:

- `ouaf.runtime.billView.directoryPath`
- `ouaf.runtime.reportView.directoryPath`
- `ouaf.application.reportingDir`

Procedure

To set the **C1-REPORTVW** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.
2. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1-REPORTVW** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Report Download HTTP URL	<p>Used to specify the HTTP servlet using which you want to download and view the FOP reports that are generated in the online mode. You must specify the URL in the following format:</p> <pre>https://ipaddress:port/ouaf/reportView</pre> <p>Note: You must override the default value as per the requirement.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Report Generation (FOP) File Path	<p>Used to specify the directory or bucket where you want to store the FOP reports which are generated either from the user interface or through a batch process.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to store the FOP reports in the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/output.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the FOP reports on OCI. • The bucket or container where you want the system to store the FOP reports which are generated in the different formats. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/splapp/reporting/output. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Report Generation XSL Template File Path	<p>Used to specify the directory or bucket from where the respective XSL file should be fetched while generating the FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the XSL file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/xsl.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the XSL file for an FOP report. • The bucket or container from where you want the system to fetch the XSL file while generating the FOP report. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/splapp/reporting/xsl. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> <p>Before generating an FOP report, you need to ensure that the XSL files are copied from the @INSTALL_DIR/splapp/reporting/xsl directory to the specified shared directory.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Report Generation XML Data File Path	<p>Used to specify the directory or bucket where you want to extract the data from the system in the XML format for an FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to store the XML file in the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/extractxml.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the XML file on OCI. • The bucket or container where you want the system to store the XML file for an FOP report. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/splapp/reporting/extractxml. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p>	Yes

8. Enter the values for the required option types in the **Feature Configuration** screen.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
