# C1-GetProdDetail Business Service

The **C1-GetProdDetail** business service enables you to view the details of an active market product, offer, or bundle for the person or account which is effective on the processing date. You can call this business service from an external system through an inbound web service. You can send the request in XML or JSON format through inbound web service in Oracle Revenue Management and Billing.

If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

You can extract the data in the following template:

- **Summary:** Used to extract the details of the market product, offer, and/or bundle without pricing.
- **Detail:** Used to extract the details of the market product, offer, and/or bundle with pricing.

To search for viewing the details active market product, offer, or bundle for the person or account, provide the following input parameters:

- Entity Code
- Entity Type
- Person account

**Note:** Entity is referred to market product, offer or bundle.

## Market Product, Offer, or Bundle View Request - Tags in XML Format

**Note:** We recommend you to refer the topics [Market Product, Offer, or Bundle View Request in the XML Format](#) on page 3487 and [Market Product, Offer, or Bundle View Response in the XML Format](#) on page 3488 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-GetProdDetail** business service through an inbound web service, you need to ensure that the active market products, offers, or bundles view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
entityCode	Used to specify the entity code to get details of the active entity.	Yes
	<b>Note:</b> Entity is referred to market product, offer or bundle.	
entityType	Used to indicate the entity type to get details of the active entity.	Yes
	<b>Note:</b> Entity is referred to market product, offer or bundle.	<b>Note:</b> This field is required if the entity code is entered.
processDate	Used to specify the date to get the effective market product, offer, or bundle for that date.	Yes(Conditional)
		<b>Note:</b> If the date is not entered then it will display the default date from the system on which the enquiry is made.
inquiryTypeFlag	Used to indicate whether you want to view the basic details without price components or the complete details with price components of the entity. The valid values are: <ul style="list-style-type: none"><li>Detail (DETL) - Used to indicate whether you want to view the complete details with price components of the entity.</li><li>Summary (SMRY) - Used to indicate whether you want to view the basic details without price components of the product.</li></ul>	Yes(Conditional)
		<b>Note:</b> The default value is <b>SMRY</b> .
division	Used to indicate the division to which the entity belongs.	Yes(Conditional)
		<b>Note:</b> This field is required with product code, product category, entity type or entity code to extract the entity of the specific division.

The following table lists and describes the tags which appear in the view active market products, offers, or bundles derivation response XML format:

Tag Name	Tag Description
entityName	Displays the entity name.
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
termsAndCondition	Displays the terms and condition of the entity.
status	Displays the status of the entity.
termsAndCondndDescr	Displays the description of the terms and conditions of the entity.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
productlist	Displays the list of the eligible product to which the requested entity belongs.
productCode	Used to display the code of the parent product.
productName	Used to display the parent product.
prodTypFlg	Displays the code of the eligible product to which the requested entity belongs.
productCategoryFlgDescr	Displays the description of the eligible product category flag to which the requested entity belongs.
EntityDivision	Used to indicate the division of the requested entity.
divisionCode	Displays the division to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market product, offer, and bundle.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityName	Displays the linked entity for the requested entity code.
linkedEntityType	Displays the linked entity type for the requested entity code.
eligibilityDetails	Indicates the name of group tag.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.
eligibilityRule	This is group tag under the eligibility details.
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true condition.
trueFlagDescr	Displays the description for the true flag condition.
falseFlag	Indicates the false condition.
falseFlagDescr	Displays the description for the false flag condition.

Tag Name	Tag Description
insufficientFlag	Indicates the insufficient condition.
insufficientFlagDescr	Displays the description for the insufficient flag condition.
eligibilityRuleFlg	Indicates the eligibility rule flag condition.
eligibilityDescr	Displays the description of the eligibility criteria for the input entity.
operator	Indicates the operator to evaluate the condition.
priceParmCode	Displays the price parameter code.
sequenceNumber	Displays the sequence number of the eligibility condition.
pricing	Displays the price of the requested entity.
priceListId	Displays the price list ID.
priceListDescription	Displays the description of the Price List.
priority	Displays the priority in sequence of the price list of the entity.
validityFlag	Indicates the validity of the price item.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemCodeDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
priceCompDescr	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
tieredFlag	Indicates the tire flag.
pricecomptier	Indicates the name of group tag.
priceItemParmGroupId	Displays the parameter group ID of the price item.
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceCompPriceItem	Displays the price component of the price item.
priceCriteria	Displays the price criteria of the price item.
priceCompTierId	Displays the price component tier ID.
tieringSeqNum	Indicates the tiering sequence number.
parmString	Indicates the parameter string of the price item.

**Market Product, Offer, or Bundle View Request and Response - Attribute/Value Pairs in JSON Format**

**Note:** We recommend you to refer the topics [Market Product, Offer, or Bundle View Request in the JSON Format](#) on page 3582 and [Market Product, Offer, or Bundle View Response in the JSON Format](#) on page 3582 in parallel while understanding the below mentioned tags. This will help you to understand how the attribute/value pairs structured in the JSON format.

Before calling the **C1-GetProdDetail** business service through an inbound web service, you need to ensure that the active market products, offers, or bundles view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityCode	Used to specify the entity code to get the active entity.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> Entity is referred to market product, offer or bundle.	
entityType	Used to indicate the entity type to get the active entity.	Yes
processDate	Used to specify the date to get the effective market product, offer, or bundle for that date.	Yes(Conditional)
		<b>Note:</b> If the date is not entered then it will display the default date from the system on which the enquiry is made.
inquiryTypeFlag	Used to indicate whether you want to view the basic details without price components or the complete details with price components of the entity. The valid values are: <ul style="list-style-type: none"> <li>Detail (DETL) - Used to indicate whether you want to view the complete details with price components of the entity.</li> <li>Summary (SMRY) - Used to indicate whether you want to view the basic details without price components of the entity.</li> </ul>	Yes(Conditional)
		<b>Note:</b> The default is SMRY.
division	Used to indicate the division to which the entity belongs.	Yes(Conditional)
		<b>Note:</b> This field is required with product code, product category, entity type or entity code to extract the entity of the specific division.

The following table lists and describes the attributes which appear in the view active market products, offers, or bundles derivation response JSON format:

Attribute Name	Attribute Description
entityName	Displays the entity name.
entityStartDate	Displays the date from when the entity is effective.
entityEndDate	Displays the date till when the entity is effective.
termsAndCondition	Displays the terms and condition of the entity.
status	Displays the status of the entity.
termsAndCondndDescr	Displays the description of the terms and conditions of the entity.
messageCategory	Indicates the category of the message.
messageNumber	Indicates the number of the message.
messageText	Displays the message.
longDescription	Displays the long description.
productlist	Displays the list of the eligible product to which the requested entity belongs.

Attribute Name	Attribute Description
productCode	Used to display the code of the parent product.
productName	Used to display the parent product.
prodTypFlg	Displays the code of the eligible product to which the requested entity belongs.
productCategoryFlgDesc	Displays the description of the eligible product category flag to which the requested entity belongs.
EntityDivision	Used to indicate the division of the requested entity.
divisionCode	Displays the division to which the requested entity belongs.
productLinkedEntity	Displays the list of eligible market product, offer, and bundle.
linkedEntityCode	Displays the linked entity code for the requested entity code.
linkedEntityName	Displays the linked entity for the requested entity code.
linkedEntityType	Displays the linked entity type for the requested entity code.
eligibilityDetails	Indicates the name of group tag.
eligibilityDescription	Displays the description of the eligibility to which the requested entity belongs.
eligibilityStartDate	Displays the date from when the eligibility of the entity is effective.
eligibilityEndDate	Displays the date till when the eligibility of the entity is effective.
eligibilityRule	This is group tag under the eligibility details.
rhsPriceParmCd	Indicates the right side parameter code of the eligibility condition.
rhsPriceParmVal	Indicates the right side parameter value of the eligibility condition.
lhsPriceParmCd	Indicates the left side parameter code of the eligibility condition.
rhsPriceParmTypeFlg	Indicates the value of the right side flag.
trueFlag	Indicates the true condition.
trueFlagDescr	Displays the description for the true flag condition.
falseFlag	Indicates the false condition.
falseFlagDescr	Displays the description for the false flag condition.
insufficientFlag	Indicates the insufficient condition.
insufficientFlagDescr	Displays the description for the insufficient flag condition.
eligibilityRuleFlg	Indicates the eligibility rule flag condition.
eligibilityDescr	Displays the description of the eligibility criteria for the input entity.
operator	Indicates the operator to evaluate the condition.
priceParmCode	Displays the price parameter code.
sequenceNumber	Displays the sequence number of the eligibility condition.
pricing	Displays the price of the requested entity.
priceListId	Displays the price list ID.
priceListDescription	Displays the description of the Price List.
priority	Displays the priority in sequence of the price list of the entity.

Attribute Name	Attribute Description
validityFlag	Indicates the validity of the price item.
noOfDays	Displays the validity of price list in number of days.
priceItemCode	Displays the price item code.
priceitemCodeDescr	Displays the description of the price item.
priceAsgnId	Displays the price assignment ID.
priceListStartDate	Displays the date from when the price list of the entity is effective.
priceListEndDate	Displays the date till when the price list of the entity is effective.
priceComponent	Indicates the name of group tag.
priceCompId	Displays the price component ID.
priceCompDescr	Displays the description of the price component.
valueAmt	Displays the value amount of the price component.
tieredFlag	Indicates the tire flag.
pricecomptier	Indicates the name of group tag.
priceItemParmGroupId	Displays the parameter group ID of the price item.
toVal	Indicates the tiering to value of the price item.
fromVal	Indicates the tiering from value of the price item.
timeOfUse	Indicates the tiering time of use.
priceCompPriceItem	Displays the price component of the price item.
priceCriteria	Displays the price criteria of the price item.
priceCompTierId	Displays the price component tier ID.
tieringSeqNum	Indicates the tiering sequence number.
parmString	Indicates the parameter string of the price item.

## Sample Bundle View Summary Request and Response in the JSON Format

Using the below example, you can view summary of bundles which are processed on the date 2022-01-11.

### Sample Bundle View Summary Request in the JSON Format

```
{
  -"C1-GetProdDetail": '
  {
    -"entityCode": -"CHECKBUND_003",
    -"entityType": -"BNDL",
    -"processDate": -"2022-02-11",
    -"inquiryTypeFlag": -"SMRY",
    -"division": -"IND",
  -}
}
```

### Sample Bundle View Summary Response in the JSON Format

```
{
  -"C1-GetProdDetail": '
  {
    -"entityCode": -"CHECKBUND_003",

# C1PRDCTENRNL Business Service

The **C1PRDCTENRNL** business service enables you to enroll the account to market product, offer, or bundle for the person.

The **C1-CUSTACCSA** algorithm is invoked to create new person, account, and contract, if the person, account, and contract is not created while account enrollment with passing parameter values received for this service. This algorithm is attached at Division's algorithm. This algorithm do the following:

- Checks input service parameters which are required person such as person identifier type, person identifier type/value, account identifier, account identifier type/value, or division are not null. If the parameters are null the system send the error message.
- Checks whether the person id or person identifier type values exist in the system. If the values are exist in the system then it retrieve the person details or set the values to create the new person in the system. The values are:
  - Person Type
  - Primary Person Name Type
  - Person Name
  - Primary Person Identifier Type
  - Primary Person Identifier Type Value
  - Division Code
  - Date of Birth
  - Effective Date
  - Address Type
  - Address Line 1
  - Address Line 2
  - Address Line 3

- Address Line 4
- Phone
- City
- State
- Zip Code
- Country
- Email
- Characteristic Effective Date
- Characteristic Type
- Characteristic Value
- Get the required default values by fetching values configured at person defaulting template code passed as input to the algorithm. For example, Access Group
- Invoke the `personDTO.new.entity()` or person BO to create new person in the system.
- Create new account for person on successful person creation/retrieval.
- Get the required default values by fetching values configured at account defaulting template code passed as input to the algorithm.
- Sets required values to create new account in the system. The values are:
  - Customer Class - It can be fetched from account default template.
  - Access Group - It can be fetched from account default template.
  - Person ID - It can be used from retrieved or newly created person.
  - Account Source - It can be fetched from account default template.
  - Bill Route Type - It can be fetched from account default template. For example, Postal
  - Account Category - It can be fetched from account default template. For example, Usage
  - Relationship Type - It can be fetched from account default template. For example, Main Customer

The input values from service are:

- Setup Date - Account Opening Date
- Invoice Currency - Account Currency Code
- Account Closure Date - Closing date
- Account Closure Date - Closing date

<p><b>Note:</b> If the account closing date is provided then should not be less than Account Opening Date.</p>
--

- Account Number Type code - Account Identifier Type
- Account Number - Account Identifier Value
- Division - Division Code
- Invokes the `accountDTO.new.entity()` or account BO to create new person in the system.
- On successful account creation, to retrieve the distinct contract types configured at price items associated with market product. The values for contract creation are:
  - Account ID
  - Division
  - Contract Type
  - Start Date
  - End Date

The soft parameter of the algorithm are:

- Person Defaulting Template - This parameter value is person defaulting template code. The parameter value is used to fetch default values required in the process of new person creation process.
- Account Defaulting Template - This parameter value is account defaulting template code. The parameter value is used to fetch default values required in the process of new account creation process.

This business service enables to edit the enrollment status and close/stop the enrollment by using action flag. The valid values of action flag are:

- Active
- Inactive
- Closed

The validation algorithm is executed before persisting the data using the business object. There are different validation for different action flag (Add, Edit, and Close) and different entities (Market Product, Offer and Bundle). The scenarios are:

If...	Then...
The entity type is Market Product and value of action flag is <b>Add</b>	<ul style="list-style-type: none"> <li>• The market product should be in <b>Active</b> status while enrolling to the account. The account enrollment date should be within market product start date and end date.</li> <li>• The division code of the respective market product should be defined in which the account is opened.</li> </ul>
The entity type is Market Product and value of action flag is <b>Edit</b>	
The entity type is Market Product and value of action flag is <b>Close</b>	<ul style="list-style-type: none"> <li>• The system should not accept future date as account close date.</li> </ul>
The entity type is Offer and value of action flag is <b>Add/Edit</b>	<ul style="list-style-type: none"> <li>• The account can be enrolled to only one active offer at a time.</li> <li>• The offer should be active while enrolling to the account.</li> <li>• The offer subscription date should be within offer start date and end date.</li> <li>• The account can be enrolled to the offer only if the market product in which that particular offer is defined is enrolled to the account.</li> <li>• If the enrollment status is either <b>Active</b> or <b>Inactive</b> for "Account ID + Offer Code" combination then the same account ID cannot be enrolled to that offer once again.</li> <li>• If there is Active offer subscribed to the account then same account cannot enroll to the other offer.</li> <li>• The division code of the respective offer should be defined in which the account is opened.</li> </ul>
The entity type is Offer and value of action flag is <b>Close</b>	<ul style="list-style-type: none"> <li>• The system should not accept future date as account close date.</li> </ul>
The entity type is Bundle and value of action flag is <b>Add/Edit</b>	<ul style="list-style-type: none"> <li>• The account can be enrolled to only one active bundle at a time.</li> <li>• The bundle should be active while enrolling to the account.</li> <li>• The bundle subscription date should be within bundle start date and end date.</li> <li>• The account numbers which are enrolled to the bundle should belongs to the same person.</li> <li>• The division code of the respective offer should be defined in which the account is opened.</li> <li>• If there is Active bundle subscribed to the account then same account cannot enroll to the other bundle.</li> </ul>
The entity type is Bundle and value of action flag is <b>Close</b>	<ul style="list-style-type: none"> <li>• The system should not accept future date as account close date.</li> </ul>

You can call this business service from an external system through an inbound web service. You can send the request in XML or JSON format through inbound web service in Oracle Revenue Management and Billing.

If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

To search for viewing the details active market product, offer, or bundle for the person or account, provide the following input parameters:

- Person Detail
- Account Detail
- Market Product Detail
- Offer Detail
- Bundle Detail

## Market Product, Offer, or Bundle Enrollment Request and Response - Tags in XML Format

**Note:** We recommend you to refer the topics [Market Product, Offer, or Bundle Enrollment Request in the XML Format](#) on page 3666 and [Market Product, Offer, or Bundle Enrollment Response in the XML Format](#) on page 3668 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1PRDCTENRL** business service through an inbound web service, you need to ensure that the market product, offer, or bundle enrollment request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
enrollment	Indicates the name of group tag which encapsulates the single enrollment request.	No
		<b>Note:</b> The market product should be enrolled to the account in the system before the offer or bundle is enrolled. The enrollment status for market product should be <b>Active</b> during enrollment and will change to <b>Closed</b> when action flag is pass as close.
		<b>Note:</b> The market product, offer or bundle should be in <b>Active</b> status while enrolling to the account.
		<b>Note:</b> When the service is called to enroll the account to offer / bundle subscription then offer / bundle subscription will created with the account which is already enrolled to market product.
		<b>Note:</b> The enrollment start date of offer or bundle should be between start date and end date of the offer or bundle definition.
		<b>Note:</b> If there is 'Active Offer or Bundle subscription' exists in the system then same account cannot be enrolled to other offer or bundle.
		<b>Note:</b> Only one account can be enroll to one market product.
		<b>Note:</b> The account can be enrolled to another offer if the existing offer enrollment is closed.

Tag Name	Tag Description	Mandatory (Yes or No)
		<b>Note:</b> The account can be enrolled to another bundle if the existing bundle enrollment is closed.
		<b>Note:</b> Multiple accounts of the same person can be enrolled to the bundle. If multiple accounts of the person are enrolled to the bundle then bundle enrollment/ subscription date and enrollment characteristics will be same for all accounts which are enrolled/ subscribed to the bundle.
		<b>Note:</b> The service will create new account if the account is not exist in the system while enrolling a market product to the person account.
		<b>Note:</b> The service will create new person if the person is not exist in the system while enrolling a market product to the person account.
		<b>Note:</b> The service will find contract types which are assigned to price items of the market product and creates the contract for each contract type.
enrollmentcharlist	Indicates the name of group tag.	No
characteristicValue	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType	Used to indicate the characteristic type for characteristics.	Yes
effectiveDate	Used to specify the effective date for characteristics.	Yes
actionFlag	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> <li>Add</li> <li>Edit</li> <li>Close</li> </ul>	Yes
	<b>Note:</b> In edit market product scenario, the account closing date should not be null and it should be greater than account opening date.	

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.	
	<b>Note:</b> In edit offer/bundle scenario, you can only modify the status from <b>Active</b> to <b>Inactive</b> or <b>Inactive</b> to <b>Active</b> .	
	<b>Note:</b> If service invokes <b>Close</b> account enrollment request to market product, then it will only close the enrollment to market product and not to offer or bundle.	
	<b>Note:</b> You should invoke another <b>Close</b> request to close enrollment to offer or bundle.	
	<b>Note:</b> In edit offer/bundle scenario, you can only modify the enrollment status from <b>Active</b> to <b>Inactive</b> or <b>Inactive</b> to <b>Active</b> .	
	<b>Note:</b> If service invokes <b>Close</b> account enrollment request to the market product, then it will only close the enrollment to market product and not to the offer or bundle. The system should invoke another close request to close account enrollment to offer or bundle.	
	<b>Note:</b> To stop or close enrollment the system should pass Action Flag value as <b>Close</b> , the Action Flag value is edit and enrollment is close then the system will throw an error.	
personDetails	Indicates the name of group tag.	No
personId	Used to indicate Person ID.	Yes(Conditional)
		<b>Note:</b> This field is required if person identifier type and value are not specified.
accountdetailslist	Indicates the name of group tag.	No
accountcharlist	Indicates the name of group tag.	No
characteristicValue2	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType2	Used to specify the characteristic type for characteristics.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
effectiveDate2	Used to specify the effective date for characteristics.	Yes
actionFlag2	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> <li>Add</li> <li>Edit</li> <li>Close</li> </ul>	No
	<b>Note:</b> In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.	
enrollmentStatus	Used to indicate status of enrollment/subscription.  The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> <li>Closed</li> </ul>	Yes(Conditional)
		<b>Note:</b> You can edit enrollment status only if the entity type is either offer or bundle.
		<b>Note:</b> The Market Product is set to <b>Active</b> during the enrollment and remains the same even after the enrollment end date is stamped. The status will change to <b>Closed</b> only when the action flag passes the <b>Close</b> value.
		<b>Note:</b> <ul style="list-style-type: none"> <li>The account can be enrolled to the offer if the status of the existing offer enrollment is <b>Closed</b>.</li> <li>The account cannot be enrolled to another offer if <b>Active</b> offer enrollment already exists in the system.</li> </ul>
		<b>Note:</b> You cannot enroll to another bundle if one bundle enrollment is already exists for an account in the system. It can be enrolled if the status of existing bundle is <b>Closed</b> .
		<b>Note:</b> The services which are associated with market product, offer, or bundle will be enrolled to the account. You cannot select or exclude the service available in market product, offer, or bundle.
closingDate	Used to indicate the account close date.	Yes(Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> This will be considered as account enrollment end date.	<b>Note:</b> This field is required if the entity type is market product.
	<b>Note:</b> If the close date is specified, then the close date should be not be less than account opening date.	
accountId	Used to indicate the account ID.	Yes(Conditional)
		<b>Note:</b> This field is required if the entity type is market product.
currency	Used to indicate the currency code of account.	Yes
setUpDate	Used to specify the date which is used as account enrollment date and new account setup date.	Yes
	<b>Note:</b> This date should not be the future date.	
division	Used to indicate the division to which the account belongs.	Yes
accountNumber	Used to indicate the bank account number.	Yes(Conditional)
		<b>Note:</b> This field is required if the account identifier type is specified.
accountIdentifierType	Used to indicate the account identifier type.	Yes(Conditional)
		<b>Note:</b> This field is required if the Account ID is not specified.
personcharlist	Indicates the name of group tag.	No
characteristicValue3	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType3	Used to specify the characteristic type for characteristics.	Yes
effectiveDate3	Used to specify the effective date for characteristics.	Yes
actionFlag3		
emailAddress	Used to specify email address of the person.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
country	Used to indicate the country where person belongs to.	Yes(Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		<b>Note:</b> This field is required for new customer.
state	Used to indicate the state where person belongs to.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
city	Used to indicate the city where person belongs to.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address4	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address3	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address2	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address1	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
addressTypeFlg	Used to indicate type of address.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
creationDateTime	Used to specify the date and time when the person exists in the system.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
birthDate	Used to indicate the date of birth of the person.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
division2	Used to indicate the division to which the person account belongs.	No
personIdNumber	Used to indicate the person ID.	Yes(Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		<b>Note:</b> This field is required if the person identifier type and value is not specified.
personIdentifiers	Used to indicate the person identifier.	Yes(Conditional)
		<b>Note:</b> This field is required either person type or ID.
personNames	Used to specify the person name whose account you want to create.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
nameType	Used to indicate the person name type of the person name.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
personOrBusiness		
startDate	Used to indicate offer/bundle enrollment start date. This date should not be back date.	Yes(Conditional)
	<b>Note:</b> It is applicable only to the offer/bundle .	<b>Note:</b> This field is required if action flag is set to add and entity type is offer or bundle.
		<b>Note:</b> If the date is not specified then the field is set to the system date.
comments	Used to specify additional comments while enrollment.	No
entityCode	Used to indicate the entity code.	Yes
	<b>Note:</b> Entity is referred to market product, offer or bundle.	
entityType	Used to indicate the type of entity for which enrollment is done.	Yes
enrollmentAction		

The following table lists and describes the tags which appear in the eligible active market products, offers, or bundles derivation response XML format:

Tag Name	Tag Description
error	Indicates the name of group tag.
errorDescription	Displays the error description.
errorMsgText	Displays the error message.
messageNumber	Displays the number of the message.

Tag Name	Tag Description
erroCategory	Displays the category of the error.
enrollResponse	Indicates the name of group tag which encloses the complete response of the service.
messageText	Displays the success message of the enrollment.
productEnrollmentId	Displays the product enrollment ID.

## Market Product, Offer, or Bundle Enrollment Request and Response - Attribute/Value Pairs in JSON Format

**Note:** We recommend you to refer the topics [Market Product, Offer, or Bundle Enrollment Request in the JSON Format](#) on page 3690 and [Market Product, Offer, or Bundle Enrollment Response in the JSON Format](#) on page 3692 in parallel while understanding the below mentioned attributes/values. This will help you to understand how the attributes/values are structured in the JSON format.

Before calling the **C1PRDCTENRL** business service through an inbound web service, you need to ensure that the market product, offer, or bundle enrollment request contains the following attribute:

Attribute Name	Attribute Description	Mandatory (Yes or No)
enrollment	Indicates the name of group attribute which encapsulates the single enrollment request.	No
		<b>Note:</b> The market product should be enroll to the account in the system before the offer or bundle is enrolled.
		<b>Note:</b> The market product, offer or bundle should be in active status while enrolling to the account.

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> The enrollment start date of offer or bundle should be between start date and end date of the offer or bundle definition.
		<b>Note:</b> If there is 'Active Offer or Bundle subscription' exists in the system then same account cannot be enrolled to other offer or bundle.
		<b>Note:</b> Only one account can be enroll to one market product, offer, or bundle.
		<b>Note:</b> Multiple accounts of the same person can be enrolled to the bundle. If multiple accounts of the person are enrolled to the bundle then bundle enrollment/subscription date and enrollment characteristics will be same for all accounts which are enrolled/subscribed to the bundle.
		<b>Note:</b> The service will create new account if the account is not exist in the system while enrolling a market product to the person account.
		<b>Note:</b> The service will create new person if the person is not exist in the system while enrolling a market product to the person account.
		<b>Note:</b> The service will find contract types which are assigned to price items of the market product and creates the contract for each contract type.
enrollmentcharlist	Indicates the name of group attribute.	No
characteristicValue	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType	Used to indicate the characteristic type for characteristics.	Yes
effectiveDate	Used to specify the effective date for characteristics.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are: <ul style="list-style-type: none"> <li>Add</li> <li>Edit</li> <li>Close</li> </ul>	Yes
	<b>Note:</b> In edit market product scenario, the account closing date should not be null and it should be greater than account opening date.	
	<b>Note:</b> In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.	
	<b>Note:</b> In edit offer/bundle scenario, you can only modify the status from <b>Active</b> to <b>Inactive</b> or <b>Inactive</b> to <b>Active</b> .	
	<b>Note:</b> If service invokes <b>Close</b> account enrollment request to market product, then it will only close the enrollment to market product and not to offer or bundle.	
	<b>Note:</b> You should invoke another <b>Close</b> request to close enrollment to offer or bundle.	
personDetails	Indicates the name of group attribute.	No
personId	Used to indicate Person ID.	Yes(Conditional)
		<b>Note:</b> This field is required if person identifier type and value are not specified.
accountdetailslist	Indicates the name of group attribute.	No
accountcharlist	Indicates the name of group attribute.	No
characteristicValue2	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType2	Used to specify the characteristic type for characteristics.	Yes
effectiveDate2	Used to specify the effective date for characteristics.	Yes
actionFlag2	Used to indicate for which action service is called. This service is called to add, edit, or close the enrollment. The valid values are:	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Add</li><li>Edit</li><li>Close</li></ul>	
	<b>Note:</b> In edit market product scenario, you can only edit account characteristics. You cannot edit the other details.	
	<b>Note:</b> In edit offer/bundle scenario, you can only modify the status from <b>Active</b> to <b>Inactive</b> or <b>Inactive</b> to <b>Active</b> .	
	<b>Note:</b> If service invokes <b>Close</b> account enrollment request to the market product, then it will only close the enrollment to market product and not to the offer or bundle.	
enrollmentStatus		
	<b>Note:</b> You should invoke another <b>Close</b> request to close enrollment to offer or bundle.	
	Used to indicate status of enrollment/subscription.	Yes(Conditional)
	The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Inactive</li><li>Closed</li></ul>	<b>Note:</b> You can edit enrollment status only if the entity type is either offer or bundle.
		<b>Note:</b> The Market Product is set to <b>Active</b> during the enrollment and remains the same even after the enrollment end date is stamped. The status will change to <b>Closed</b> only when the action flag passes the <b>Close</b> value.
		<b>Note:</b> <ul style="list-style-type: none"><li>The account can be enrolled to the offer if the status of the existing offer enrollment is <b>Closed</b>.</li><li>The account cannot be enrolled to another offer if <b>Active</b> offer enrollment already exists in the system.</li></ul>
		<b>Note:</b> You cannot enroll to another bundle if one bundle enrollment is already exists for an account in the system. It can be enrolled if the status of existing bundle is <b>Closed</b> .

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> The services which are associated with market product, offer, or bundle will be enrolled to the account. You cannot select or exclude the service available in market product, offer, or bundle.
closingDate	Used to indicate the account close date.	Yes(Conditional)
	<b>Note:</b> This will be considered as account enrollment end date.	<b>Note:</b> This field is required if the entity type is market product.
	<b>Note:</b> If the close date is specified, then the close date should be not be less than account opening date.	
accountId	Used to indicate the account ID.	Yes(Conditional)
		<b>Note:</b> This field is required if the entity type is market product.
currency	Used to indicate the currency code of account.	Yes
setUpDate	Used to specify the date which is used as account enrollment date and new account setup date.	Yes
	<b>Note:</b> This date should not be the future date.	
division	Used to indicate the division to which the account belongs.	Yes
accountNumber	Used to indicate the bank account number.	Yes(Conditional)
		<b>Note:</b> This field is required if the account identifier type is specified.
accountIdentifierType	Used to indicate the account identifier type.	Yes(Conditional)
		<b>Note:</b> This field is required if the Account ID is not specified.
personcharlist	Indicates the name of group attribute.	No
characteristicValue3	Used to specify the characteristic value.	Yes(Conditional)
		<b>Note:</b> This field is required if other characteristic value fields are not specified.
characteristicType3	Used to specify the characteristic type for characteristics.	Yes
effectiveDate3	Used to specify the effective date for characteristics.	Yes
actionFlag3		

Attribute Name	Attribute Description	Mandatory (Yes or No)
emailAddress	Used to specify email address of the person.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
country	Used to indicate the country where person belongs to.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
state	Used to indicate the state where person belongs to.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
city	Used to indicate the city where person belongs to.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address4	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address3	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address2	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
address1	Used to indicate address line.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
addressTypeFlg	Used to indicate type of address.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
creationDateTime	Used to specify the date and time when the person exists in the system.	Yes(Conditional)
		<b>Note:</b> This field is required for new customer.
birthDate	Used to indicate the date of birth of the person.	Yes(Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This field is required for new customer.
division2	Used to indicate the division to which the person account belongs.	No
personIdNumber	Used to indicate the person ID.	Yes(Conditional) <b>Note:</b> This field is required if the person identifier type and value is not specified.
personIdentifiers	Used to indicate the person identifier type and person ID.	Yes(Conditional) <b>Note:</b> This field is required either person type or ID.
personNames	Used to specify the person name whose account you want to create.	Yes(Conditional) <b>Note:</b> This field is required for new customer.
nameType	Used to indicate the person name type of the person name.	Yes(Conditional) <b>Note:</b> This field is required for new customer.
personOrBusiness		
startDate	Used to indicate offer/bundle enrollment start date. This date should not be back date. <b>Note:</b> It is applicable only to the offer/bundle .	Yes(Conditional) <b>Note:</b> This field is required if action flag is set to add and entity type is offer or bundle. <b>Note:</b> If the date is not specified then the field is set to the system date.
comments	Used to specify additional comments while enrollment.	No
entityCode	Used to indicate the entity code. <b>Note:</b> Entity is referred to market product, offer or bundle.	Yes
entityType	Used to indicate the type of entity for which enrollment is done.	Yes
enrollmentAction		

The following table lists and describes the attribute which appear in the eligible active market products, offers, or bundles derivation response JSON format:

Attribute Name	Attribute Description
error	Indicates the name of group attribute.
errorDescription	Displays the error description.
errorMsgText	Displays the error message.
messageNumber	Displays the number of the message.
erroCategory	Displays the category of the error.
enrollResponse	Indicates the name of group attribute which encloses the complete response of the service.
messageText	Displays the success message of the enrollment.
productEnrollmentId	Displays the product enrollment ID.

# Prospect Creation, Modification, and View through Inbound Web Service

Oracle Revenue Management and Billing enables you to create and edit a prospect person and its accounts through a web service. It also enables you to view the details of a prospect person and its accounts through a web service. You can send the prospect person creation, modification, or view request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-ProspectPerson** - This is a SOAP based web service. You can use this web service when you want to send the prospect person creation, modification, or view request in the XML format.
- **C1-ProspectPersonREST** - This is a REST based web service. You can use this web service when you want to send the prospect person creation, modification, or view request in the XML or JSON format.

Both these inbound web services call the **C1-ADDPROSPERSON** business service. This business service is used to do the following:

- **Create or edit a prospect person** - While creating a prospect person, you can specify the following details:
  - Name, division, customer segment, customer tier, access group, date of birth, e-mail address, and residential address of the prospect person
  - Characteristics of the prospect person
  - Identifiers of the prospect person
  - Parent and child persons of the prospect person

**Note:** Other prospect person can be a child of the prospect person. But, only existing person can be a parent of the prospect person.

To add a prospect person through the web service, you must set the action flag to **ADD**. However, to edit a prospect person through the web service, you must set the action flag to **UPD**. While editing a prospect person, you need to specify the prospect person ID to identify the prospect person whose details you want to change. During the update operation, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change. For example, if you want to update the characteristics of a prospect person through the web service, you need to provide all details of the prospect person including the new characteristics. While updating the prospect person, the system deletes the old characteristics and creates the new characteristics for the prospect person.

At a time, you can create or edit only one prospect person through the web service. While adding a prospect person, the status of the prospect person can only be set to **ACTIVE**. If you do not specify the status while adding a prospect person, the system, by default sets the status of the prospect person to **ACTIVE**. While updating a prospect person, you can change the status of the prospect person from **ACTIVE** to **INACTIVE**. On inactivating a prospect person, the system automatically changes the status of all its prospect accounts to **INACTIVE**. However, while activating an inactive prospect person, the system does not automatically activates all its prospect accounts. You need to explicitly send the request for activating the required prospect accounts of the prospect person. Also, note that you cannot update the details of an inactive prospect person unless you activate it. Similarly, you cannot update the details of an inactive prospect account unless you activate the prospect person and the respective prospect account.

- **Create or edit a prospect account of a prospect person** - While creating or updating a prospect person, you can create a prospect account for the prospect person. However, while updating a prospect person, you can create or edit a prospect account of the prospect person. While creating a prospect account, you can specify the following details:
  - Division, setup date, invoice currency, bill cycle, and access group of the prospect account
  - Characteristics of the prospect account
  - Identifiers of the prospect account

**Note:** The division and access group of the prospect account and prospect person should be same.

While associating the prospect person with the prospect account, the system by default sets the **Main Customer** flag to **true**, the **Financially Responsible** flag to **true**, the **Relationship Type** flag to **Main Customer**, and the **Address Source** flag to **PER**.

While editing a prospect account, you need to specify the prospect account ID to identify the prospect account whose details you want to change. During the update operation, the system replaces the prospect account data instead of editing it.

At a time, you can create or edit multiple prospect accounts of a prospect person through the web service. While adding a prospect account, the status of the prospect account can only be set to **ACTIVE**.

If you do not specify the status while adding a prospect account, the system, by default sets the status of the prospect account to **ACTIVE**. While updating a prospect account, you can change the status of the prospect account from **ACTIVE** to **INACTIVE**.

Note that you cannot update the details of an inactive prospect account unless you activate it. You cannot activate a prospect account when the main customer (i.e. prospect person) of the prospect account is inactive.

- **View the details of a prospect person** - While viewing the details of a prospect person, you need to:
  - Specify the prospect person ID or the primary prospect person identifier type, primary prospect person identifier, and division to determine the prospect person whose details you want to view
  - Set the action flag to **READ**

On processing the request, the system displays all details of the prospect person including the details of all its accounts in the response.

## Prospect Add Request in the XML Format

---

The following code snippet illustrates how the tags should be nested while receiving the prospect add request in the XML format:

```
<C1-ADDPROSPERSON>

## Prospect Add Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Prospect Add Request in the XML Format](#) on page 3721 and [Prospect Add Response in the XML Format](#) on page 3722 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to add a prospect. The valid value is:	Yes
	<ul style="list-style-type: none"> <li>ADD</li> </ul>	
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>ADD</b> action.	
prospectPersonName	Used to specify the name of the prospect person.	Yes
	<b>Note:</b> You should specify a person name which is already present in the system.	
division	Used to indicate the division to which you want to associate the prospect person.	Yes
	<b>Note:</b> You must specify a division which is already defined in the system.	
customerSegment	Used to indicate the business component using which you want to create the prospect person.	No
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_SEG_FLG</b> lookup field.	
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect person.	No
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_TIER_FLG</b> lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect person.	Yes
	<b>Note:</b> You must specify an access group which is associated with the division to which the prospect belongs.	
emailAddress	Used to specify the email address of the prospect person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
status	Used to indicate the status in which you want to create the prospect person. <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	Yes
	<b>Note:</b> The status of the prospect person can only be set to <b>ACTIVE</b> while adding a prospect person.  If you do not specify the value in this tag, the system, by default sets the status of the prospect person to <b>ACTIVE</b> .	
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect person.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>idType</b> tag, you need to specify the <b>personIdNumber</b> tag.	<b>Note:</b> This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>True</li> <li>False</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>personIdNumber</b> tag, you need to specify the <b>idType</b> tag.	<b>Note:</b> This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system. The child person must belong to the division to which the prospect person is associated.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdNumber</b> tag, you need to specify the <b>childPersonIdType</b> tag.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdType</b> tag, you need to specify the <b>childPersonIdNumber</b> tag.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	<b>Note:</b> You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that the parent person is an existing person in the system.</li> <li><b>PRSP</b> - Used to indicate that the parent person is a prospect in the system.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system.  The parent person must belong to the division to which the prospect person is associated.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>parentPersonIdNumber</b> tag, you need to specify the <b>parentPersonIdType</b> tag.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>parentPersonIdType</b> tag, you need to specify the <b>parentPersonIdNumber</b> tag.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
customerClass	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this tag, the system considers the division of the person to whom the account is associated.	<b>Note:</b> This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	Yes (Conditional)
	<b>Note:</b> The status of the prospect account can only be set to <b>ACTIVE</b> while adding a prospect account. If you do not specify the value in this tag, the system, by default sets the status of the prospect account to <b>ACTIVE</b> .	<b>Note:</b> This data is required while adding an account for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.	<b>Note:</b> This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>accountNumber</b> tag, you need to specify the <b>accountIdentifierType</b> tag.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>• True</li><li>• False</li></ul>	Yes (Conditional)
		<b>Note:</b> This data is required while associating an identifier with the prospect account.
	<b>Note:</b> If you do not specify the value in this tag, the system considers the value as <b>False</b> .	
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> tag, you need to specify the <b>accountNumber</b> tag.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect person belongs.	<b>Note:</b> This data is required while adding a characteristic for the prospect person.

**Note:** At a time, you can add only one prospect person using the **C1-ADDPROSPERSON** business service. However, you can add multiple accounts for the prospect person using the **C1-ADDPROSPERSON** business service.

Once the prospect is created, all the details of prospect are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
prospectPersonId	Displays the identification value generated for the prospect person.

Tag Name	Tag Description
prospectAccountId	Displays the identification value generated for the prospect account.

Prospect Update Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Prospect Update Request in the XML Format](#) on page 3724 and [Prospect Update Response in the XML Format](#) on page 3725 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect person for whom you want to create the update request.	Yes
actionFlag	Used to indicate that you want to create request to update a prospect person. The valid value is: <ul style="list-style-type: none"><li>UPD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>ADD</b> action.	
prospectPersonName	Used to specify the name of the prospect person.	Yes
	<b>Note:</b> You should specify a person name which is already present in the system.	
division	Used to indicate the division to which you want to associate the prospect person.	Yes
	<b>Note:</b> You must specify a division which is already defined in the system.	
customerSegment	Used to indicate the business component using which you want to update the prospect person.	No
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_SEG_FLG</b> lookup field.	
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_TIER_FLG</b> lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect person.  <b>Note:</b> You can specify only those access groups which are associated with the division to which the prospect belongs.	Yes
emailAddress	Used to specify the email address of the prospect person.	No
status	Used to indicate the status in which you want to create the prospect person. <ul style="list-style-type: none"><li>• ACTIVE</li><li>• INACTIVE</li></ul> <b>Note:</b> The status of the prospect person can only be set to <b>ACTIVE</b> while adding a prospect person. If you do not specify the value in this tag, the system, by default sets the status of the prospect person to <b>ACTIVE</b> .	Yes
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>idType</b> tag, you need to specify the <b>personIdNumber</b> tag.	<b>Note:</b> This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdNumber</b> tag, you need to specify the <b>idType</b> tag.	<b>Note:</b> This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	<b>Note:</b>	<b>Note:</b> This data is required while specifying the child person of the prospect person.
	You must specify a division which is already defined in the system.	
	The child person must belong to the division to which the prospect person is associated.	
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>childPersonIdNumber</b> tag, you need to specify the <b>childPersonIdType</b> tag.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdType</b> tag, you need to specify the <b>childPersonIdNumber</b> tag.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	<b>Note:</b> You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that the parent person is an existing person in the system.</li> <li><b>PRSP</b> - Used to indicate that the parent person is a prospect in the system.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify a division which is already defined in the system.  The parent person must belong to the division to which the prospect person is associated.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system.  <b>Note:</b> If you specify the <b>parentPersonIdNumber</b> tag, you need to specify the <b>parentPersonIdType</b> tag.	Yes (Conditional)  <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system.  <b>Note:</b> If you specify the <b>parentPersonIdType</b> tag, you need to specify the <b>parentPersonIdNumber</b> tag.	Yes (Conditional)  <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional)  <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional)  <b>Note:</b> This data is required while adding an account for the prospect person.
customerClass	Used to indicate the customer class to which the account is associated.  <b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	Yes (Conditional)  <b>Note:</b> This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.  <b>Note:</b> If you do not specify the value in this tag, the system considers the division of the person to whom the account is associated.	Yes (Conditional)  <b>Note:</b> This data is required while adding an account for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
status	Used to indicate the status of the account. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	<b>Note:</b> This data is required while adding an account for the prospect person.
	<b>Note:</b> The status of the prospect account can only be set to <b>ACTIVE</b> while adding a prospect account. If you do not specify the value in this tag, the system, by default sets the status of the prospect account to <b>ACTIVE</b> .	
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.	<b>Note:</b> This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountNumber</b> tag, you need to specify the <b>accountIdentifierType</b> tag. You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while associating an identifier with the prospect account.
	<b>Note:</b> If you do not specify the value in this tag, the system considers the value as <b>False</b> .	
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> tag, you need to specify the <b>accountNumber</b> tag.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.

Tag Name	Tag Description	Mandatory (Yes or No)
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect person belongs.	<b>Note:</b> This data is required while adding a characteristic for the prospect person.

**Note:**

At a time, you can edit only one prospect person through the web service.

While updating the prospect person, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change.

Once the prospect person is updated, all the details of prospect person are listed in the above mentioned tags.

**Prospect View Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Prospect View Request in the XML Format](#) on page 3727 and [Prospect View Response in the XML Format](#) on page 3727 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect for which you want to create the view request..	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in the <b>prospectPersonId</b> tag, you have to specify the <b>personIdNumber</b> and <b>idType</b> tags.	<b>Note:</b> This data is required for creating view request for a particular prospect.
actionFlag	Used to indicate that you want to create request to view a prospect. The valid value is: <ul style="list-style-type: none"><li>• READ</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>ADD</b> action.	
personIdNumber	Used to specify the value of the person identifier type using which you want to create the view request for a prospect.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>idType</b> tag, you need to specify the <b>personIdNumber</b> tag.	<b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.
idType	Used to specify the identifier type using which you want to create the view request for a prospect.  <b>Note:</b> If you specify the <b>personIdNumber</b> tag, you need to specify the <b>idType</b> tag.  The data in this tag is required if you do not specify the value in the <b>prospectPersonId</b> tag.  You should specify an identifier type which is associated with the division to which the prospect belongs.	Yes (Conditional)  <b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.
division	Used to specify the division of the identifier type using which you want to create the view request for a prospect.  <b>Note:</b> If you specify the <b>personIdNumber</b> and <b>idType</b> tags, you need to specify the <b>division</b> tag.  You must specify a division which is already defined in the system.	Yes (Conditional)  <b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.

Once the view request is created for the prospect, all the details of prospect are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
prospectPersonName	Displays the name of the prospect person.
division	Display the division to which the prospect person belongs.
customerSegment	Indicates the business component using which the prospect person is created in the system.
customerTier	Indicates the customer tier of the customer segment to which the prospect person is associated.
accessGroup	Indicates the user groups who can view and edit the details of the prospect person.
emailAddress	Displays the email address of the prospect person.
status	Indicates the current status of the prospect. The valid values are: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>
birthDate	Displays the date of birth of the prospect person.
address1	Displays the first line of the address. It may contain details, such as the house number.

Tag Name	Tag Description
address2	Displays the second line of the address. It may contain details, such as the apartment name.
address3	Displays the third line of the address. It may contain details, such as the street name.
address4	Displays the fourth line of the address. It may contain the landmark details.
city	Displays the city where the prospect person is located.
state	Displays the state where the city is located.
country	Displays the country where the state is located.
postal	Displays the postal code of the address.
prosPerIdentifierList	Displays a list of person identifiers for the prospect.
personIdNumber	Displays the value of the person identifier type.
persIsPrimaryId	Indicates whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>
idType	Displays the identifier type using which the prospect person is created in the system.
prosChildRelationList	Displays the list of child persons associated with the prospect person.
childPersonId	Displays the child person of the prospect person.
personRelationshipType	Indicates how the child person is associated with the prospect person.
childPerType	Indicates the type of the child person.
division	Indicates the division to which the child person belongs.
childPersonIdType	Indicates the identifier type using which the child person is created in the system.
childPersonIdNumber	Displays the value of the identifier type using which the child person is created in the system.
endDate	Displays the date till when the child person is associated with the prospect person.
startDate	Displays the date from when the child person is associated with the prospect person.
prosParentPerRelationList	Displays the list of parent persons associated with the prospect person.
parentPersonId	Displays the parent person of the prospect person.
personRelationshipType	Indicates how the parent person is associated with the prospect person.
parentPerType	Indicates the type of the parent person.
division	Indicates the division to which the parent person belongs.
parentPersonIdType	Indicates the identifier type using which the parent person is created in the system.
parentPersonIdNumber	Displays the value of the identifier type using which the parent person is created in the system.
endDate	Displays the date till when the prospect person is associated with the parent person.
startDate	Displays the date from when the prospect person is associated with the parent person.
prosAccountList	Displays the list of accounts for the prospect person.

Tag Name	Tag Description
personId	Displays the prospect person identification value.
prospectAccountId	Displays the account identification value that is generated for the prospect person.
customerClass	Indicates the customer class to which the account is associated.
accountDivision	Indicate the division to which the account belongs.
status	Indicates the status of the account. The valid values are: <ul style="list-style-type: none"><li>ACTIVE</li><li>INACTIVE</li></ul>
setUpDate	Displays the date from when the account is available for the prospect person.
currency	Indicates the currency code of the account.
billCycle	Indicates the time interval in which the bills are created for the account.
accountAccessGroup	Indicates the user group who can view and edit the details of the account.
prosAcctCharacteristicList	Displays the list of characteristics for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays the list of identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>True</li><li>False</li></ul>
accountNumber	Displays the account to which the identifier is associated.
prosPerCharacteristicList	Displays the list of characteristics defined for the prospect person.
personcharacteristicValue	Displays the value of the characteristic type.
personEffectiveDate	Displays the date from when the characteristic is effective for the prospect person.
personCharType	Indicates the characteristic type.

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a prospect creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

**Prospect Add Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Prospect Add Request in the JSON Format](#) on page 3756 and [Prospect Add Response in the JSON Format](#) on page 3757 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are nested in the JSON format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to add a prospect. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>ADD</b> action.	
prospectPersonName	Used to specify the name of the prospect person.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify a person name which is already present in the system.	
division	Used to indicate the division to which you want to associate the prospect.  <b>Note:</b> You must specify a division which is already defined in the system.	Yes
customerSegment	Used to indicate the business component using which you want to create the prospect.  <b>Note:</b> You should specify only those values which are present in the <b>CUST_SEG_FLG</b> lookup field.	No
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect.  <b>Note:</b> You should specify only those values which are present in the <b>CUST_TIER_FLG</b> lookup field.	No
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect.  <b>Note:</b> You must specify an access group which is associated with the division to which the prospect belongs.	Yes
emailAddress	Used to specify the email address of the prospect.	No
status	Used to indicate the status in which you want to create the prospect. <ul style="list-style-type: none"><li>ACTIVE</li><li>INACTIVE</li></ul> <b>Note:</b> The status of the prospect person can only be set to <b>ACTIVE</b> while adding a prospect person. If you do not specify the value in this attribute, the system, by default sets the status of the prospect person to <b>ACTIVE</b> .	Yes
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>idType</b> attribute, you need to specify the <b>personIdNumber</b> attribute.	<b>Note:</b> This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdNumber</b> attribute, you need to specify the <b>idType</b> attribute.	<b>Note:</b> This data is required while specifying the prospect person identifier.
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdNumber</b> attribute, you need to specify the <b>childPersonIdType</b> attribute.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdType</b> attribute, you need to specify the <b>childPersonIdNumber</b> attribute.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	<b>Note:</b> You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that the parent person is an existing person in the system.</li> <li><b>PRSP</b> - Used to indicate that the parent person is a prospect in the system.</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs. <b>Note:</b> You must specify a division which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system. <b>Note:</b> If you specify the <b>parentPersonIdNumber</b> attribute, you need to specify the <b>parentPersonIdType</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system. <b>Note:</b> If you specify the <b>parentPersonIdType</b> attribute, you need to specify the <b>parentPersonIdNumber</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional) <b>Note:</b> This data is required while adding an account for the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
customerClass	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the division of the person to whom the account is associated.	<b>Note:</b> This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	Yes (Conditional)
	<b>Note:</b> The status of the prospect account can only be set to <b>ACTIVE</b> while adding a prospect account. If you do not specify the value in this attribute, the system, by default sets the status of the prospect account to <b>ACTIVE</b> .	<b>Note:</b> This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type. <b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account. <b>Note:</b> If you specify the <b>accountNumber</b> attribute, you need to specify the <b>accountIdentifierType</b> attribute. You must specify an identifier type which is associated with the division to which the prospect account belongs.	Yes (Conditional) <b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>• True</li><li>• False</li></ul> <b>Note:</b> If you do not specify the value in this attribute, the system considers the value as <b>False</b> .	Yes (Conditional) <b>Note:</b> This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional) <b>Note:</b> This data is required while associating an identifier with the prospect account.

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> attribute, you need to specify the <b>accountNumber</b> attribute.	
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type. <b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect person belongs.	Yes (Conditional) <b>Note:</b> This data is required while adding a characteristic for the prospect person.

**Note:** At a time, you can add only one prospect person using the **C1-ADDPROSPERSON** business service. However, you can add multiple accounts for the prospect person using the **C1-ADDPROSPERSON** business service.

Once the prospect is created, all the details of prospect are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
prospectPersonId	Displays the identification value generated for the prospect person.
prospectAccountId	Displays the identification value generated for the prospect account.

**Prospect Update Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Prospect Update Request in the JSON Format](#) on page 3759 and [Prospect Update Response in the JSON Format](#) on page 3761 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are nested in the JSON format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect person for whom you want to create the update request.	Yes
actionFlag	Used to indicate that you want to create request to update a prospect person. The valid value is: <ul style="list-style-type: none"> <li>• UPD</li> </ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>ADD</b> action.	
prospectPersonName	Used to specify the name of the prospect person.	Yes
	<b>Note:</b> You should specify a person name which is already present in the system.	
division	Used to indicate the division to which you want to associate the prospect person.	Yes
	<b>Note:</b> You must specify a division which is already defined in the system.	
customerSegment	Used to indicate the business component using which you want to update the prospect person.	No
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_SEG_FLG</b> lookup field.	
customerTier	Used to indicate the customer tier of the customer segment to which you want to associate the prospect person.	No
	<b>Note:</b> You should specify only those values which are present in the <b>CUST_TIER_FLG</b> lookup field.	
accessGroup	Used to indicate the user groups who can view and edit the details of the prospect person.	Yes
	<b>Note:</b> You can specify only those access groups which are associated with the division to which the prospect belongs.	
emailAddress	Used to specify the email address of the prospect person.	No
status	Used to indicate the status in which you want to create the prospect person. <ul style="list-style-type: none"> <li>• ACTIVE</li> <li>• INACTIVE</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> The status of the prospect person can only be set to <b>ACTIVE</b> while adding a prospect person. If you do not specify the value in this attribute, the system, by default sets the status of the prospect person to <b>ACTIVE</b> .	
birthDate	Used to specify the date of birth of the prospect person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	No
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city where the prospect is located.	No
state	Used to specify the state where the city is located.	No
country	Used to specify the country where the state is located.	No
postal	Used to specify the postal code of the address.	No
prosPerIdentifierList	Used to specify a list of person identifiers for the prospect person.	No
personIdNumber	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>idType</b> attribute, you need to specify the <b>personIdNumber</b> attribute.	<b>Note:</b> This data is required while specifying the prospect person identifier.
persIsPrimaryId	Used to indicate whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the prospect person identifier.
idType	Used to specify the identifier type using which you want to add the prospect person in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdNumber</b> attribute, you need to specify the <b>idType</b> attribute.	<b>Note:</b> This data is required while specifying the prospect person identifier.

Attribute Name	Attribute Description	Mandatory (Yes or No)
prosChildRelationList	Used to specify a list of child persons associated with the prospect person.	No
childPersonId	Used to specify the child person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
personRelationshipType	Used to indicate how the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPerType	Used to indicate the type of the child person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.
division	Used to indicate the division to which the child person belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system.  The child person must belong to the division to which the prospect person is associated.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdType	Used to specify the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdNumber</b> attribute, you need to specify the <b>childPersonIdType</b> attribute.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
childPersonIdNumber	Used to specify the value of the identifier type using which the child person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>childPersonIdType</b> attribute, you need to specify the <b>childPersonIdNumber</b> attribute.	<b>Note:</b> This data is required while specifying the child person of the prospect person.
endDate	Used to specify the date till when the child person is associated with the prospect person.	No
startDate	Used to specify the date from when the child person is associated with the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the child person of the prospect person.

Attribute Name	Attribute Description	Mandatory (Yes or No)
prosParentPerRelationList	Used to specify a list of parent persons associated with the prospect person.	No
	<b>Note:</b> You can now add a prospect person or account to an existing person in the system. In other words, the system allows you to add a prospect person or account in an existing person's hierarchy. Also, you can create deals for such prospect person's or account's, if required.	
parentPersonId	Used to specify the parent person of the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
personRelationshipType	Used to indicate how the prospect person is associated with the specified person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPerType	Used to indicate the type of the parent person. The valid values are: <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that the parent person is an existing person in the system.</li> <li><b>PRSP</b> - Used to indicate that the parent person is a prospect in the system.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
division	Used to indicate the division to which the parent person belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system.  The parent person must belong to the division to which the prospect person is associated.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdType	Used to specify the identifier type using which the parent person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>parentPersonIdNumber</b> attribute, you need to specify the <b>parentPersonIdType</b> attribute.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
parentPersonIdNumber	Used to specify the value of the identifier type using which the parent person is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>parentPersonIdType</b> attribute, you need to specify the <b>parentPersonIdNumber</b> attribute.	<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
endDate	Used to specify the date till when the prospect person is associated with the parent person.	No
startDate	Used to specify the date from when the prospect person is associated with the parent person.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parent person relationship of the prospect person.
prosAccountList	Used to specify a list of accounts for the prospect person.	No
personId	Used to specify the person to which the account belongs.	Yes (Conditional)
		<b>Note:</b> This data is required while adding an account for the prospect person.
customerClass	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while adding an account for the prospect person.
accountDivision	Used to indicate the division to which the account belongs.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the division of the person to whom the account is associated.	<b>Note:</b> This data is required while adding an account for the prospect person.
status	Used to indicate the status of the account. The valid values are: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	Yes (Conditional)
	<b>Note:</b> The status of the prospect account can only be set to <b>ACTIVE</b> while adding a prospect account. If you do not specify the value in this attribute, the system, by default sets the status of the prospect account to <b>ACTIVE</b> .	<b>Note:</b> This data is required while adding an account for the prospect person.
setUpDate	Used to specify the date from when the account is available for the prospect person.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while adding an account for the prospect person.
currency	Used to indicate the currency code of the account.  <b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	Yes
billCycle	Used to indicate the time interval in which you want to create the bills for the account.	Yes (Conditional)  <b>Note:</b> This data is required while adding an account for the prospect person.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the account.  <b>Note:</b> If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.	Yes (Conditional)  <b>Note:</b> This data is required while adding an account for the prospect person.
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)  <b>Note:</b> This data is required while adding a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)  <b>Note:</b> This data is required while adding a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.  <b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	Yes (Conditional)  <b>Note:</b> This data is required while adding a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>accountNumber</b> attribute, you need to specify the <b>accountIdentifierType</b> attribute.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while associating an identifier with the prospect account.
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the value as <b>False</b> .	
accountNumber	Used to specify the prospect account to which you want to associate the identifier.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> attribute, you need to specify the <b>accountNumber</b> attribute.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
prosPerCharacteristicList	Used to specify a list of characteristics for the prospect person.	No
personcharacteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.
personEffectiveDate	Used to specify the date from when the characteristic is effective for the prospect person.	Yes (Conditional)
		<b>Note:</b> This data is required while adding a characteristic for the prospect person.
personCharType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect person belongs.	<b>Note:</b> This data is required while adding a characteristic for the prospect person.

**Note:**

At a time, you can edit only one prospect person through the web service.

While updating the prospect person, the system replaces the prospect person data instead of editing it. Therefore, you should provide all the details of prospect person including the data that you want to change.

Once the prospect is updated, all the details of prospect are listed in the above mentioned attributes.

Sample prospect update request and response in the JSON format	<a href="#">Sample Prospect Update Request and Response in the JSON Format</a> on page 3785

**Prospect View Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Prospect View Request in the JSON Format](#) on page 3762 and [Prospect View Response in the JSON Format](#) on page 3763 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-ADDPROSPERSON** business service through an inbound web service, you need to ensure that the prospect view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
prospectPersonId	Used to specify the prospect for which you want to create the view request.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in the <b>prospectPersonId</b> attribute, you have to specify the <b>personIdNumber</b> and <b>idType</b> attributes.	<b>Note:</b> This data is required for creating view request for a particular prospect.
actionFlag	Used to indicate that you want to create request to view a prospect. The valid value is: <ul style="list-style-type: none"><li>• READ</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>ADD</b> action.	
personIdNumber	Used to specify the value of the person identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>idType</b> attribute, you need to specify the <b>personIdNumber</b> attribute.	<b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.
idType	Used to specify the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>personIdNumber</b> attribute, you need to specify the <b>idType</b> attribute.  The data in this attribute is required if you do not specify the value in the <b>prospectPersonId</b> attribute.  You should specify an identifier type which is associated with the division to which the prospect belongs.	<b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.
division	Used to specify the division of the identifier type using which you want to create the view request for a prospect.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdNumber</b> and <b>idType</b> attributes, you need to specify the <b>division</b> attribute.  You must specify a division which is already defined in the system.	<b>Note:</b> This data is required for creating view request for a prospect using its person identifier details.

Once the view request is created for the prospect, all the details of prospect are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
prospectPersonName	Displays the name of the prospect person.
division	Display the division to which the prospect person belongs.
customerSegment	Indicates the business component using which the prospect person is created in the system.
customerTier	Indicates the customer tier of the customer segment to which the prospect person is associated.
accessGroup	Indicates the user groups who can view and edit the details of the prospect person.
emailAddress	Displays the email address of the prospect person.
status	Indicates the current status of the prospect. The valid values are: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>
birthDate	Displays the date of birth of the prospect person.
address1	Displays the first line of the address. It may contain details, such as the house number.
address2	Displays the second line of the address. It may contain details, such as the apartment name.
address3	Displays the third line of the address. It may contain details, such as the street name.
address4	Displays the fourth line of the address. It may contain the landmark details.

Attribute Name	Attribute Description
city	Displays the city where the prospect person is located.
state	Displays the state where the city is located.
country	Displays the country where the state is located.
postal	Displays the postal code of the address.
prosPerIdentifierList	Displays a list of person identifiers for the prospect.
personIdNumber	Displays the value of the person identifier type.
persIsPrimaryId	Indicates whether the prospect person identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>
idType	Displays the identifier type using which the prospect person is created in the system.
prosChildRelationList	Displays the list of child persons associated with the prospect person.
childPersonId	Displays the child person of the prospect person.
personRelationshipType	Indicates how the child person is associated with the prospect person.
childPerType	Indicates the type of the child person.
division	Indicates the division to which the child person belongs.
childPersonIdType	Indicates the identifier type using which the child person is created in the system.
childPersonIdNumber	Displays the value of the identifier type using which the child person is created in the system.
endDate	Displays the date till when the child person is associated with the prospect person.
startDate	Displays the date from when the child person is associated with the prospect person.
prosParentPerRelationList	Displays the list of parent persons associated with the prospect person.
parentPersonId	Displays the parent person of the prospect person.
personRelationshipType	Indicates how the parent person is associated with the prospect person.
parentPerType	Indicates the type of the parent person.
division	Indicates the division to which the parent person belongs.
parentPersonIdType	Indicates the identifier type using which the parent person is created in the system.
parentPersonIdNumber	Displays the value of the identifier type using which the parent person is created in the system.
endDate	Displays the date till when the prospect person is associated with the parent person.
startDate	Displays the date from when the prospect person is associated with the parent person.
prosAccountList	Displays the list of accounts for the prospect person.
personId	Displays the prospect person identification value.
prospectAccountId	Displays the account identification value that is generated for the prospect person.
customerClass	Indicates the customer class to which the account is associated.
accountDivision	Indicate the division to which the account belongs.

Attribute Name	Attribute Description
status	Indicates the status of the account. The valid values are: <ul style="list-style-type: none"><li>ACTIVE</li><li>INACTIVE</li></ul>
setUpDate	Displays the date from when the account is available for the prospect person.
currency	Indicates the currency code of the account.
billCycle	Indicates the time interval in which the bills are created for the account.
accountAccessGroup	Indicates the user group who can view and edit the details of the account.
prosAcctCharacteristicList	Displays the list of characteristics for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays the list of identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>True</li><li>False</li></ul>
accountNumber	Displays the account to which the identifier is associated.
prosPerCharacteristicList	Displays the list of characteristics defined for the prospect person.
personcharacteristicValue	Displays the value of the characteristic type.
personEffectiveDate	Displays the date from when the characteristic is effective for the prospect person.
personCharType	Indicates the characteristic type.

    - "accountNumber" - : "PROS",
  - }
  - }
  - "prosPerCharacteristicList"
  {
    - "personcharacteristicValue" - : "ORG",
    - "personEffectiveDate" - : "2025-01-01",
    - "personCharType" - : "ORGORFI",
  - }
  - }
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect update request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

# Prospect Account Creation, Modification, and View through Inbound Web Service

Oracle Revenue Management and Billing enables you to create and edit a prospect account of an existing person or a prospect person through a web service. It also enables you to view the details of a prospect account through a web service. You can send the prospect account creation, modification, or view request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-ProspectAccount** - This is a SOAP based web service. You can use this web service when you want to send the prospect account creation, modification, or view request in the XML format.
- **C1-ProspectAccountREST** - This is a REST based web service. You can use this web service when you want to send the prospect account creation, modification, or view request in the XML or JSON format.

Both these inbound web services call the **C1\_PRSACCT\_SERVICE** business service. This business service is used to do the following:

- **Create or edit a prospect account** - While creating a prospect account, you can specify the following details:
  - Entity (i.e. existing person or prospect person) for whom you want to create the prospect account
  - Division, setup date, invoice currency, bill cycle, and access group of the prospect account
  - Characteristics of the prospect account
  - Identifiers of the prospect account

**Note:** The division and access group of the prospect account and the existing or prospect person should be same.

While associating the existing or prospect person with the prospect account, the system by default sets the **Main Customer** flag to **true**, the **Financially Responsible** flag to **true**, the **Relationship Type** flag to **Main Customer**, and the **Address Source** flag to **PER**.

To add a prospect account for an existing or prospect person through the web service, you must set the action flag to **ADD**. However, to edit a prospect account of an existing or prospect person through the web service, you must set the action flag to **UPD**. While editing a prospect account, you need to specify the following details to identify the prospect account whose details you want to change:

- Entity (i.e. existing person or prospect person) whose prospect account you want edit
- Prospect Account ID

During the update operation, the system replaces the prospect account data instead of editing it. At a time, you can create or edit one prospect account of an existing or prospect person through the web service. While adding a prospect account, the status of the prospect account can only be set to **ACTIVE**. If you do not specify the status

while adding a prospect account, the system, by default sets the status of the prospect account to **ACTIVE**. While updating a prospect account, you can change the status of the prospect account from **ACTIVE** to **INACTIVE**. You can activate an inactive prospect account of an existing or prospect person whenever required. While activating an inactive prospect account of a prospect person, the system checks whether the status of the prospect person is **ACTIVE**. If so, the system enables you to activate an inactive prospect account of the prospect person.

- **View the details of a prospect account** - While viewing the details of a prospect account, you need to:
  - Specify the prospect account ID to determine the prospect account whose details you want to view
  - Set the action flag to **READ**

On processing the request, the system displays all details of the prospect account including its identifiers and characteristics in the response.

## Prospect Account Add Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the prospect account add request in the XML format:

```
<C1_PRSACCT_SERVICE>
  <mainEntityId></mainEntityId>
  <mainEntityType></mainEntityType>
  <actionFlag></actionFlag>
  <status></status>
  <customerClass></customerClass>
  <accountDivision></accountDivision>
  <setUpDate></setUpDate>
  <currency></currency>
  <billCycle></billCycle>

## Prospect Account Add Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Prospect Account Add Request in the XML Format](#) on page 3794 and [Prospect Account Add Response in the XML Format](#) on page 3794 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person for whom you want to add the prospect account.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person for whom you want to add the prospect account. The valid values are: <ul style="list-style-type: none"><li>EPER</li><li>PRSP</li></ul>	Yes
actionFlag	Used to indicate that you want to create request to add a prospect account. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, by default, the system considers it as an <b>ADD</b> action.	
status	Used to indicate the status of the prospect account. <ul style="list-style-type: none"><li>ACTIVE</li><li>INACTIVE</li></ul>	No
	<b>Note:</b> While adding a prospect account, the status of the prospect account can only be set to <b>ACTIVE</b> . If you do not specify the value in this tag, by default, the system considers it as <b>ACTIVE</b> status.	
customerClass	Used to indicate the customer class to which the prospect account belongs.	Yes
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	
accountDivision	Used to indicate the division to which the prospect account belongs.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	<p>Used to indicate the currency which you want to use for generating the invoice of the prospect account.</p> <p><b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.</p>	Yes
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining the prospect account.</p>
accountAccessGroup	<p>Used to indicate the user group who can view and edit the details of the prospect account.</p> <p><b>Note:</b></p> <p>If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.</p> <p>You must specify an access group which is associated with the division to which the prospect account and the person belongs.</p>	Yes
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a characteristic for the prospect account.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountNumber</b> tag, you need to specify the <b>accountIdentifierType</b> tag.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>• True</li><li>• False</li></ul>	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in this tag, the system considers the value as <b>False</b> .	<b>Note:</b> This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> tag, you need to specify the <b>accountNumber</b> tag.	<b>Note:</b> This data is required while associating an identifier with the prospect account.

**Note:**

At a time, you can add only one prospect account for the existing or prospect person through the **C1\_PRSACCT\_SERVICE** business service.

If the prospect account status is **INACTIVE** in the system, you must set the action flag as **UPD** while adding the prospect account through the inbound web service.

Once the prospect account is created, all the details of prospect account are listed in the above mentioned tags along with the following tag:

Tag Name	Tag Description
prospectAccountId	Displays the prospect account identification number.

## Prospect Account Update Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Prospect Account Update Request in the XML Format](#) on page 3795 and [Prospect Account Update Response in the XML Format](#) on page 3796 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person whose prospect account you want to update.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person whose prospect account you want to update. The valid values are: <ul style="list-style-type: none"><li>EPER</li><li>PRSP</li></ul>	Yes
actionFlag	Used to indicate that you want to create request to update a prospect account. The valid value is: <ul style="list-style-type: none"><li>UPD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, by default, the system considers it as an <b>ADD</b> action.	
prospectAccountId	Used to specify the prospect account whose details you want to update.	Yes
status	Used to indicate the current status of the prospect account. <ul style="list-style-type: none"><li>ACTIVE</li><li>INACTIVE</li></ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You can change the status of the prospect account from <b>ACTIVE</b> to <b>INACTIVE</b> while updating.</p> <p>You can change the status of a prospect account from <b>INACTIVE</b> to <b>ACTIVE</b> only when the status of the existing or prospect person to whom the prospect account belongs is <b>ACTIVE</b>.</p> <p>If you do not specify the value in this tag, the system considers it as an <b>ACTIVE</b> status.</p>	
customerClass	<p>Used to indicate the customer class to which the prospect account belongs.</p> <p><b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.</p>	Yes
accountDivision	<p>Used to indicate the division to which the prospect account belongs.</p> <p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p> <p>You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).</p> <p>If you do not specify the division, by default, the system considers the division to which the person belongs.</p>	Yes
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	<p>Used to indicate the currency which you want to use for generating the invoice of the prospect account.</p> <p><b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.</p>	Yes
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify the value in this tag, the system considers the access group of the person to whom the account belongs.  You must specify an access group which is associated with the division to which the prospect account and the person belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)  <b>Note:</b> This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)  <b>Note:</b> This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountNumber</b> tag, you need to specify the <b>accountIdentifierType</b> tag.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while associating an identifier with the prospect account.
	<b>Note:</b> If you do not specify the value in this tag, the system considers the value as <b>False</b> .	

Tag Name	Tag Description	Mandatory (Yes or No)
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> tag, you need to specify the <b>accountNumber</b> tag.	<b>Note:</b> This data is required while associating an identifier with the prospect account.

**Note:**

At a time, you can update only one prospect account of the existing or prospect person through the **C1\_PRSACCT\_SERVICE** business service.

When you create a request to update a prospect account, the system replaces the prospect account data instead of editing it. Therefore, you should provide all details of the prospect account including the data that you want to change.

Once the prospect account is updated, all the details of prospect account are listed in the above mentioned tags.

**Prospect Account View Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Prospect Account View Request in the XML Format](#) on page 3796 and [Prospect Account View Response in the XML Format](#) on page 3797 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the prospect account details. The valid value is:	Yes
	<ul style="list-style-type: none"><li>• READ</li></ul>	
	<b>Note:</b> If you do not specify the value in this tag, by default, the system considers it as an <b>ADD</b> action.	
prospectAccountId	Used to specify the prospect account whose details you want to view.	Yes

Once the prospect account view request is created, all the details of prospect account are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
mainEntityId	Displays the person to whom the prospect account belongs.
mainEntityType	Indicates whether the person is an existing person or a prospect person to whom the prospect account belongs. The valid values are: <ul style="list-style-type: none"><li>• EPER</li><li>• PRSP</li></ul>
status	Indicates the status of the prospect account. The valid values are: <ul style="list-style-type: none"><li>• ACTIVE</li><li>• INACTIVE</li></ul>
customerClass	Indicates the customer class to which the prospect account belongs.
accountDivision	Indicates the division to which the prospect account belongs.
setUpDate	Displays the date from when the prospect account is configured for the person.
currency	Indicates the currency which you want to use for generating the invoice of the prospect account.
billCycle	Indicate the time interval in which you want to generate the bills for the prospect account.
accountAccessGroup	Indicates the user group who can view and edit the details of the prospect account.
prosAcctCharacteristicList	Displays the list of characteristic for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the prospect account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays a list of account identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the prospect account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"><li>• True</li><li>• False</li></ul>
accountNumber	Displays the value of the identifier type using which the prospect account is created.

**Sample Prospect Account Creation Request and Response in the XML Format**

Using the below example, you can create the prospect account for 1723682728 prospect person in 930 division.

**Sample Prospect Account Creation Request in the XML Format**

```

<C1_PRSACCT_SERVICE>
  <mainEntityId>1723682728</mainEntityId>
  <mainEntityType>PRSP</mainEntityType>
  <actionFlag>ADD</actionFlag>
  <status>ACTIVE</status>
  <customerClass>BK</customerClass>
  <accountDivision>930</accountDivision>
  <setUpDate>2019-11-21</setUpDate>
  <currency>USD</currency>
  <billCycle>YEAR</billCycle>
  <accountAccessGroup>***</accountAccessGroup>
  <prosAcctCharacteristicList>
    <characteristicValue>CURRENT</characteristicValue>
    <effectiveDate>2019-11-21</effectiveDate>
    <characteristicType>C1_F_ATY</characteristicType>
  </prosAcctCharacteristicList>
  <prosAcctIdentifierList>
    <accountIdentifierType>ACCT_NM</accountIdentifierType>
    <isPrimaryId>TRUE</isPrimaryId>
    <accountNumber>2429108813</accountNumber>
  </prosAcctIdentifierList>
</C1_PRSACCT_SERVICE>

```

**Note:** If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

**Sample Prospect Account Creation Response in the XML Format**

```

<C1_PRSACCT_SERVICE>
  <mainEntityId>1723682728</mainEntityId>
  <mainEntityType>PRSP</mainEntityType>
  <actionFlag>ADD</actionFlag>
  <prospectAccountId>1368615549</prospectAccountId>
  <status>ACTIVE</status>
  <customerClass>BK</customerClass>
  <accountDivision>930</accountDivision>
  <setUpDate>2019-11-21</setUpDate>
  <currency>USD</currency>
  <billCycle>YEAR</billCycle>
  <accountAccessGroup>***</accountAccessGroup>
  <prosAcctCharacteristicList>
    <characteristicValue>CURRENT</characteristicValue>
    <effectiveDate>2019-11-21</effectiveDate>
    <characteristicType>C1_F_ATY</characteristicType>
  </prosAcctCharacteristicList>
  <prosAcctIdentifierList>
    <accountIdentifierType>ACCT_NM</accountIdentifierType>
    <isPrimaryId>TRUE</isPrimaryId>
    <accountNumber>2429108813</accountNumber>
  </prosAcctIdentifierList>
</C1_PRSACCT_SERVICE>

```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a prospect account creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

## Prospect Account Add Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Prospect Account Add Request in the JSON Format](#) on page 3809 and [Prospect Account Add Response in the JSON Format](#) on page 3810 in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are nested in the JSON format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person for whom you want to add the prospect account.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person for whom you want to add the prospect account. The valid values are: <ul style="list-style-type: none"><li>MAIN</li><li>PRSP</li></ul>	Yes
actionFlag	Used to indicate that you want to create request to add a prospect account. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
status	Used to indicate the status of the prospect account.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>	
	<b>Note:</b> While adding a prospect account, the status of the prospect account can only be set to <b>ACTIVE</b> .  If you do not specify the value in this attribute, by default, the system considers it as <b>ACTIVE</b> status.	
customerClass	Used to indicate the customer class to which the prospect account belongs.	Yes
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	
accountDivision	Used to indicate the division to which the prospect account belongs.	Yes
	<b>Note:</b> You must specify a division which is already defined in the system.  You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).  If you do not specify the division, by default, the system considers the division to which the person belongs.	
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	Used to indicate the currency which you want to use for generating the invoice of the prospect account.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining the prospect account.
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.  You must specify an access group which is associated with the division to which the prospect account and the person belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountNumber</b> attribute, you need to specify the <b>accountIdentifierType</b> attribute.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>	<b>Note:</b> This data is required while associating an identifier with the prospect account.
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the value as <b>False</b> .	

Attribute Name	Attribute Description	Mandatory (Yes or No)
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>accountIdentifierType</b> attribute, you need to specify the <b>accountNumber</b> attribute.	<b>Note:</b> This data is required while associating an identifier with the prospect account.

**Note:**

At a time, you can add only one prospect account for the person through the **C1\_PRSACCT\_SERVICE** business service.

If the prospect account status is **INACTIVE** in the system, you must set the action flag as **UPD** while adding the prospect account through the inbound web service.

Once the prospect account is created, all the details of prospect account are listed in the above mentioned attributes along with the following attribute:

Attribute Name	Attribute Description
prospectAccountId	Displays the prospect account identification number.

## Prospect Account Update Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Prospect Account Update Request in the JSON Format](#) on page 3810 and [Prospect Account Update Response in the JSON Format](#) on page 3811 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
mainEntityId	Used to specify the person whose prospect account you want to update.	Yes
mainEntityType	Used to indicate whether the person is an existing person or a prospect person whose prospect account you want to update. The valid values are: <ul style="list-style-type: none"><li>EPER</li><li>PRSP</li></ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to update a prospect account. The valid value is: <ul style="list-style-type: none"> <li>• UPD</li> </ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
prospectAccountId	Used to specify the prospect account whose details you want to update.	Yes
status	Used to indicate the current status of the prospect account. <ul style="list-style-type: none"> <li>• ACTIVE</li> <li>• INACTIVE</li> </ul>	No
	<b>Note:</b> You can change the status of the prospect account from <b>ACTIVE</b> to <b>INACTIVE</b> while updating.  You can change the status of a prospect account from <b>INACTIVE</b> to <b>ACTIVE</b> only when the status of the existing or prospect person to whom the prospect account belongs is <b>ACTIVE</b> .  If you do not specify the value in this attribute, the system considers it as an <b>ACTIVE</b> status.	
customerClass	Used to indicate the customer class to which the prospect account belongs.	Yes
	<b>Note:</b> You must specify a customer class which is associated with the division to which the prospect account belongs.	
accountDivision	Used to indicate the division to which the prospect account belongs.	Yes
	<b>Note:</b> You must specify a division which is already defined in the system.  You must specify a division to which the prospect account and the person belongs (i.e. the division of the prospect account and the person for whom the account is added should be the same).  If you do not specify the division, by default, the system considers the division to which the person belongs.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
setUpDate	Used to specify the date from when the prospect account is configured for the person.	Yes
currency	Used to indicate the currency which you want to use for generating the invoice of the prospect account.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system and which is associated with the division to which the prospect account belongs.	
billCycle	Used to indicate the time interval in which you want to generate the bills for the prospect account.	Yes
accountAccessGroup	Used to indicate the user group who can view and edit the details of the prospect account.	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the access group of the person to whom the account belongs.  You must specify an access group which is associated with the division to which the prospect account and the person belongs.	
prosAcctCharacteristicList	Used to specify a list of characteristics for the prospect account.	No
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the prospect account.
effectiveDate	Used to specify the date from when the characteristic is effective for the prospect account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the prospect account.
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while defining a characteristic for the prospect account.
prosAcctIdentifierList	Used to specify a list of identifiers for the prospect account.	No
accountIdentifierType	Used to indicate the identifier type based on which you want to define the prospect account.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>accountNumber</b> attribute, you need to specify the <b>accountIdentifierType</b> attribute.  You must specify an identifier type which is associated with the division to which the prospect account belongs.	<b>Note:</b> This data is required while associating an identifier with the prospect account.
isPrimaryId	Used to indicate whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul> <b>Note:</b> If you do not specify the value in this attribute, the system considers the value as <b>False</b> .	Yes (Conditional)  <b>Note:</b> This data is required while associating an identifier with the prospect account.
accountNumber	Used to specify the value of the identifier type using which you want to add the prospect account.  <b>Note:</b> If you specify the <b>accountIdentifierType</b> attribute, you need to specify the <b>accountNumber</b> attribute.	Yes (Conditional)  <b>Note:</b> This data is required while associating an identifier with the prospect account.

**Note:**

At a time, you can update only one prospect account of the existing or prospect person through the **C1\_PRSACCT\_SERVICE** business service.

When you create a request to update a prospect account, the system replaces the prospect account data instead of editing it. Therefore, you should provide all details of the prospect account including the data that you want to change.

Once the prospect account is updated, all the details of prospect account are listed in the above mentioned attributes.

## Prospect Account View Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Prospect Account View Request in the JSON Format](#) on page 3812 and [Prospect Account View Response in the JSON Format](#) on page 3812 in parallel while understanding the below mentioned attributes. This will help you to understand the attribute/value pairs are structured in the JSON format.

Before calling the **C1\_PRSACCT\_SERVICE** business service through an inbound web service, you need to ensure that the prospect account view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the prospect account details. The valid value is:	Yes
	<ul style="list-style-type: none"> <li>• READ</li> </ul>	
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
prospectAccountId	Used to specify the prospect account whose details you want to view.	Yes

Once the prospect account view request is created, all the details of prospect account are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
mainEntityId	Displays the person to whom the prospect account belongs.
mainEntityType	Indicates whether the person is an existing person or a prospect person to whom the prospect account belongs. The valid values are: <ul style="list-style-type: none"> <li>• EPER</li> <li>• PRSP</li> </ul>
status	Indicates the status of the prospect account. The valid values are: <ul style="list-style-type: none"> <li>• ACTIVE</li> <li>• INACTIVE</li> </ul>
customerClass	Indicates the customer class to which the prospect account belongs.
accountDivision	Indicates the division to which the prospect account belongs.
setUpDate	Displays the date from when the prospect account is configured for the person.
currency	Indicates the currency which you want to use for generating the invoice of the prospect account.
billCycle	Indicate the time interval in which you want to generate the bills for the prospect account.
accountAccessGroup	Indicates the user group who can view and edit the details of the prospect account.
prosAcctCharacteristicList	Displays the list of characteristic for the prospect account.
characteristicValue	Displays the value of the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the prospect account.
characteristicType	Indicates the characteristic type.
prosAcctIdentifierList	Displays a list of account identifiers for the prospect account.
accountIdentifierType	Indicates the identifier type based on which the prospect account is defined.
isPrimaryId	Indicates whether the prospect account identifier is primary or not. The valid values are: <ul style="list-style-type: none"> <li>• True</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"><li>False</li></ul>
accountNumber	Displays the value of the identifier type using which the prospect account is created.

# Sample Prospect Account Creation Request and Response in the JSON Format

Using the below example, you can create the prospect account for 1723682728 prospect person in 930 division.

**Sample Prospect Account Creation Request in the JSON Format**

```
{
  -"C1_PRSACCT_SERVICE"
  {
    -"mainEntityId" -:"1723682728",
    -"mainEntityType" -:"PRSP",
    -"actionFlag" -:"ADD",
    -"status" -:"ACTIVE",
    -"customerClass" -:"BK",
    -"accountDivision" -:"930",
    -"setUpDate" -:"2019-11-21",
    -"currency" -:"USD",
    -"billCycle" -:"YEAR",
    -"accountAccessGroup" -:"***",
    -"prosAcctCharacteristicList"
    {
      -"characteristicValue" -:"CURRENT",
      -"effectiveDate" -:"2019-11-21",
      -"characteristicType" -:"C1_F_ATY",
    }
    -"prosAcctIdentifierList"
    {
      -"accountIdentifierType" -:"ACCT_NM",
      -"isPrimaryId" -:"TRUE",
      -"accountNumber" -:"2429108813",
    }
  }
}
```

**Note:** If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

**Sample Prospect Account Creation Response in the JSON Format**

```
{
  -"C1_PRSACCT_SERVICE"
  {
    -"mainEntityId" -:"1723682728",
    -"mainEntityType" -:"PRSP",
    -"actionFlag" -:"ADD",
```

```
-"prospectAccountId" -:"1368615549",
-"status" -:"ACTIVE",
-"customerClass" -:"BK",
-"accountDivision" -:"930",
-"setUpDate" -:"2019-11-21",
-"currency" -:"USD",
-"billCycle" -:"YEAR",
-"accountAccessGroup" -:"***",
-"prosAcctCharacteristicList"
{
  -"characteristicValue" -:"CURRENT",
  -"effectiveDate" -:"2019-11-21",
  -"characteristicType" -:"C1_F_ATY",
-}
-"prosAcctIdentifierList"
{
  -"accountIdentifierType" -:"ACCT_NM",
  -"isPrimaryId" -:"TRUE",
  -"accountNumber" -:"2429108813",
-}
-}
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a prospect account creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

## Price List Assignments in Deal through Inbound Web Service

---

Oracle Revenue Management and Billing enables you to assign a price list to an existing or prospect customer or account in a deal through a web service. It also enables you to edit and delete a price list assignment of a deal and view the details of a price list assignment through a web service. You can send a request from the external system to do the following through an inbound web service:

- Assign a price list to an existing or prospect customer or account in a deal
- Edit a price list assignment of a deal
- Delete a price list assignment of a deal
- View the details of a price list assignment

At a time, you can send a request either for viewing the details of one or more price list assignments or for creating, updating, and/or deleting one or more price list assignments of a deal. We have shipped the following two inbound web services in this release:

- **C1-DealPricelistAssignment** - This is a SOAP based web service. You can use this web service when you want to send the above requests with respect to price list assignment in the XML format.
- **C1-DealPricelistAssignmentREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to price list assignment in the XML or JSON format.

Both these inbound web services call the **C1-DealPricelistAssignmentBS** business service. This business service is used to do the following:

- **Assign a price list to a customer or an account in a deal** - While assigning a price list to a customer or an account in a deal, you can specify the following details:
  - Deal Version ID or Deal ID or Deal Identifier to determine the deal version in which you want to assign the price list to an entity
  - Entity (i.e. person or account) to whom you want to assign the price list
  - Price list that you want to assign
  - Start and end dates of the price list assignment
  - Priority of the price list assignment
  - Whether the customer or account can inherit pricing from the parent price list

To assign a price list to a customer or an account in a deal through the web service, you must set the action flag to **ADD**. On processing the request, the system assigns the price list to the entity in the deal in the **Proposed** status.

- **Edit a price list assignment of a deal** - While editing a price list assignment of a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed price list assignment you want to edit
  - Specify the price list assignment ID
  - Specify the entity (i.e. person or account) whose price list assignment you want to edit
  - Set the action flag to **UPD**

During the update operation, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

- **Delete a price list assignment of a deal** - While deleting a price list assignment of a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed price list assignment you want to delete
  - Specify the price list assignment ID
  - Specify the entity (i.e. person or account) whose price list assignment you want to delete
  - Set the action flag to **DEL**

On processing the request, the system deletes the proposed price list assignment of the entity from the deal.

- **View the details of a price list assignment** - While viewing the details of a price list assignment, you can specify either of the following:
  - **Price List Assignment ID** - Used when you want to view the details of a particular price list assignment.
  - **Entity Type and Entity ID** - Used when you want to view all price list assignments of a particular entity (i.e. person or account).
  - **Deal Version ID, Deal ID, or Deal Identifier** - Used when you want to view the price list assignments of all customers and accounts in a particular deal.

Note that if you provide the price list assignment ID, entity details, and deal details, the system fetches the details of a price list assignment using the price list assignment ID and ignores the entity and deal details. However, if you provide the entity and deal details, the system fetches the price list assignments of the given entity and ignores the deal details. Similarly, if you only provide the deal details, the system fetches all price list assignments of all entities from the given deal.

To view the details of a price list assignment through the web service, you must set the action flag to **READ**. On processing the request, the system displays the details of the price list assignment in the response.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. For more information about the Deal Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

## Deal Price List Assignment Add Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the deal price list assignment creation request in the XML format:

```
<C1-DealPricelistAssignmentBS>
  <dealIdentifier></dealIdentifier>
  <dealId></dealId>
  <modelId></modelId>
  <pricelistassignmentlist>
    <entityId></entityId>
    <entityType></entityType>
    <actionFlag></actionFlag>
    <startDate></startDate>
    <endDate></endDate>
    <priority></priority>
    <priceListId></priceListId>
    <priceListInheritanceSw></priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType></characteristicType>
    <characteristicValue></characteristicValue>
    <effectiveDate></effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

## Deal Price List Assignment Add Response in the XML Format

The following code snippet illustrates how the tags should be nested while sending the deal price list assignment creation response in the XML format:

```
<C1-DealPricelistAssignmentBS>
  <dealIdentifier></dealIdentifier>
  <dealId></dealId>
  <modelId></modelId>
  <priceListAssignmentId></priceListAssignmentId>
  <pricelistassignmentlist>
    <entityId></entityId>
    <entityType></entityType>
    <actionFlag></actionFlag>
    <priceListAssignmentId></priceListAssignmentId>
    <startDate></startDate>
    <endDate></endDate>
    <priority></priority>
    <priceListId></priceListId>
    <priceListAssignStatusFlag></priceListAssignStatusFlag>
    <priceListInheritanceSw></priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType></characteristicType>
    <characteristicValue></characteristicValue>
    <effectiveDate></effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

Deal Price List Assignment Add Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Deal Price List Assignment Add Request in the XML Format](#) on page 3826 and [Deal Price List Assignment Add Response in the XML Format](#) on page 3827 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to assign price list to the entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> tags.
dealId	Used to specify the deal for which you want to add the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> tags.
modelId	Used to specify the deal version for which you want to add the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> tags.
pricelistassignmentlist	Used to assign the price list to the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) to which you want to assign the price list.	Yes
entityType	Used to indicate the type of the entity to which you want to assign the price list. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>	
actionFlag	Used to indicate that you want to create request to add the price list assignment. The valid value is:	Yes
	<ul style="list-style-type: none"> <li>ADD</li> </ul>	
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>Add</b> action.	
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
	<b>Note:</b> The price list assignment start date must be equal to the deal start date. The price list assignment start date cannot be later than the price list assignment end date.	
	If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.	
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
	<b>Note:</b> The price list assignment end date cannot be later than the deal end date.	
	The price list assignment end date cannot be earlier than the price list assignment start date.	
priority	Used to specify the priority in which the price list should be considered to determine the price item pricing.	Yes
	<b>Note:</b> The priority of the price list assignment must be greater than zero.	
	You cannot have same priority for price list assignments having the same effective start date and end date.	
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	No
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as N.	

Once the price list assignment is created, all the details of price list assignment are listed in the above mentioned tags along with the following tag:

Tag Name	Tag Description
priceListAssignmentId	Displays the price list assignment ID.
	<b>Note:</b> A new price list assignment ID is generated by the system when you create a request to add a price list assignment.

**Deal Price List Assignment Delete Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Price List Assignment Delete Request in the XML Format](#) on page 3827 and [Deal Price List Assignment Delete Response in the XML Format](#) on page 3828 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment delete request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to delete the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> tags.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> tags.

Tag Name	Tag Description	Mandatory (Yes or No)
modelId	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> tags.
pricelistassignmentlist	Used to specify a list of price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal that you want to delete.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to delete.	Yes
entityType	Used to indicate the entity type of the entity for which you want to delete the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>	Yes
actionFlag	Used to indicate that you want to create a request to delete the price list assignment. The valid value is: <ul style="list-style-type: none"> <li>DEL</li> </ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>Add</b> action.	
priceListAssignmentId	Used to specify the price list assignment which you want to delete.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity.	No
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
priority	Used to specify the priority in which the price list is considered to determine the price item pricing.	No
priceListId	Used to specify the price list that you want to delete from the entity (i.e. existing or prospect person or account).	No
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No

Once the price list assignment is deleted, all the details of price list assignment are listed in the above mentioned tags.

## Deal Price List Assignment Update Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Deal Price List Assignment Update Request in the XML Format](#) on page 3828 and [Deal Price List Assignment Update Response in the XML Format](#) on page 3829 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to update the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> tags.
dealId	Used to specify the deal for which you want to update the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> tags.
modelId	Used to specify the deal version for which you want to update the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> tags.
pricelistassignmentlist	Used to update the price list assignment of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to update.	Yes
entityType	Used to indicate the type of the entity whose price list assignment you want to update. The valid values are: <ul style="list-style-type: none"><li>PERS</li><li>ACCT</li></ul>	Yes
actionFlag	Used to indicate that you want to create a request to update the price list assignment. The valid value is:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>UPD</li> </ul>	
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as an <b>Add</b> action.	
priceListAssignmentId	Used to specify the price list assignment which you want to update.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	Yes
	<b>Note:</b> The price list assignment start date must be equal to the deal start date. The price list assignment start date cannot be later than the price list assignment end date. If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.	
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	Yes
	<b>Note:</b> The price list assignment end date cannot be later than the deal end date. The price list assignment end date cannot be earlier than the price list assignment start date.	
priority	Used to specify the priority in which the price list is considered to determine the price item pricing.	Yes
	<b>Note:</b> The priority of the price list assignment must be greater than zero. You cannot have same priority for price list assignments having the same effective start date and end date.	
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	
	<b>Note:</b> If you do not specify the value in this tag, the system considers it as N.	

**Note:** When you create a request to update a price list assignment, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

Once the deal price list assignment is updated, all the details of deal price list assignment are listed in the above mentioned tags.

**Deal Price List Assignment View Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Price List Assignment View Request in the XML Format](#) on page 3830 and [Deal Price List Assignment View Response in the XML Format](#) on page 3830 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to view the price list assignments of all the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal. The valid value is: <ul style="list-style-type: none"><li>READ</li></ul>	Yes (Conditional)
	<b>Note:</b> This data is required if the <b>actionFlag</b> tag is not specified in the <b>pricelistassignmentlist</b> tag.	
	<b>Note:</b> If you do not specify the value in this tag, the system considers the value provided in the <b>actionFlag</b> tag of the <b>pricelistassignmentlist</b> tag.	
dealIdentifier	Used to view the price list of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
	<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> tags.	

Tag Name	Tag Description	Mandatory (Yes or No)
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> tags.
modelID	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> tags.
entityId	Used to specify the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal whose price list assignment you want to view.	No
entityType	Used to indicate the type of the entity whose price list assignment you want to view. The valid values are: <ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>	Yes (Conditional)
	<b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	
priceListAssignmentId	Used to specify the price list assignment whose details you want to view.	Yes

Once the price list assignment view request is created, all the details of price list assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
pricelistassignmentlist	Lists the price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityId	Displays the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>
actionFlag	Indicates the action performed for viewing the price list assignment of the entity (i.e. existing or prospect person or account). The valid value is: <ul style="list-style-type: none"> <li>READ</li> </ul>
priceListAssignmentId	Displays the price list assignment ID.
startDate	Displays date from when the price list assignment is effective for the entity.
endDate	Displays the date till when the price list assignment is effective for the entity.

Tag Name	Tag Description
priority	Displays the priority in which the price list is considered to determine the price item pricing.
priceListId	Displays the price list that is assigned to the entity (i.e. existing or prospect person or account).
priceListAssignStatusFlag	Indicates the current status of the price list assignment. The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Proposed</li><li>Inactive</li><li>Rejected</li></ul>
priceListInheritanceSw	Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>

**Sample Deal Price List Assignment Add Request and Response in the XML Format**

Using the below example, you can create the price list assignment for 1600395396 entity in 3336086427 deal.

**Sample Price List Assignment Creation Request in the XML Format**

```
<C1-DealPricelistAssignmentBS>
  <dealId>3336086427</dealId>
  <pricelistassignmentlist>
    <entityId>1600395396</entityId>
    <entityType>PERS</entityType>
    <actionFlag>ADD</actionFlag>
    <startDate>2024-01-01</startDate>
    <endDate>2025-01-01</endDate>
    <priority>9</priority>
    <priceListId>0106513196</priceListId>
    <priceListInheritanceSw>N</priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType>ZZ-DLCHR</characteristicType>
    <characteristicValue>7266725883</characteristicValue>
    <effectiveDate>2021-06-01</effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

**Note:** If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

Sample Price List Assignment Creation Response in the XML Format

```
<C1-DealPricelistAssignmentBS>
  <dealId>3336086427</dealId>
  <modelId>8729119397</modelId>
  <pricelistassignmentlist>
    <entityId>1600395396</entityId>
    <entityType>PERS</entityType>
    <actionFlag>ADD</actionFlag>
    <priceListAssignmentId>0710416227</priceListAssignmentId>
    <startDate>2024-01-01</startDate>
    <endDate>2025-01-01</endDate>
    <priority>9</priority>
    <priceListId>0106513196</priceListId>
    <priceListInheritanceSw>N</priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType>ZZ-DLCHR</characteristicType>
    <characteristicValue>7266725883</characteristicValue>
    <effectiveDate>2021-06-01</effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a deal price list assignment add request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

</C1-DealPricelistAssignmentBS>
```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a deal price list assignment delete request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Deal Price List Assignment Update Request and Response in the XML Format

Using the below example, you can update the price list assignment for 0073281975 entity in 7781868561 deal.

Sample Deal Price List Assignment Update Request in the XML Format

```
<C1-DealPricelistAssignmentBS>
  <dealId>7781868561</dealId>
  <pricelistassignmentlist>
    <entityId>0073281975</entityId>
    <entityType>PERS</entityType>
    <actionFlag>UPD</actionFlag>
    <priceListAssignmentId>9884925490</priceListAssignmentId>
    <startDate>2024-01-01</startDate>
    <endDate>2025-01-01</endDate>
    <priority>6</priority>
    <priceListId>0014720899</priceListId>
    <priceListInheritanceSw>Y</priceListInheritanceSw>
  </pricelistassignmentlist>
  <characteristicsList>
    <characteristicType>ZZ-DLCHR</characteristicType>
    <characteristicValue>7266725883</characteristicValue>
    <effectiveDate>2021-06-01</effectiveDate>
  </characteristicsList>
</C1-DealPricelistAssignmentBS>
```

**Note:** If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

**Sample Deal Price List Assignment Update Response in the XML Format**

```
<C1-DealPricelistAssignmentBS>
  <dealId>7781868561</dealId>
  <modelId>1782818851</modelId>

## Deal Price List Assignment Add Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Deal Price List Assignment Add Request in the JSON Format](#) on page 3843 and [Deal Price List Assignment Add Response in the JSON Format](#) on page 3844 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to assign price list to the entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> attributes.
dealId	Used to specify the deal for which you want to add the price list assignment.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> attributes.
modelId	Used to specify the deal version for which you want to add the price list assignment.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> attributes.
pricelistassignmentlist	Used to assign the price list to the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) to which you want to assign the price list.	Yes
entityType	Used to indicate the type of the entity to which you want to assign the price list. The valid values are: <ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to add the price list assignment. The valid value is: <ul style="list-style-type: none"><li>• ADD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>Add</b> action.	
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
	<b>Note:</b> The price list assignment start date must be equal to the deal start date. The price list assignment start date cannot be later than the price list assignment end date. If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.	
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
	<b>Note:</b> The price list assignment end date cannot be later than the deal end date. The price list assignment end date cannot be earlier than the price list assignment start date.	
priority	Used to specify the priority in which the price list should be considered to determine the price item pricing.	Yes
	<b>Note:</b> The priority of the price list assignment must be greater than zero. You cannot have same priority for price list assignments having the same effective start date and end date.	
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as N.	

Once the price list assignment is created, all the details of price list assignment are listed in the above mentioned attributes along with the following attribute:

Attribute Name	Attribute Description
priceListAssignmentId	Displays the price list assignment ID.
	<b>Note:</b> A new price list assignment ID is generated by the system when you create a request to add a price list assignment.

**Deal Price List Assignment Delete Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Deal Price List Assignment Delete Request in the JSON Format](#) on page 3845 and [Deal Price List Assignment Delete Response in the JSON Format](#) on page 3845 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment delete request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to delete the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> attributes.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
modelId	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to delete.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> attributes.
pricelistassignmentlist	Used to specify a list of price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of a deal that you want to delete.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to delete.	Yes
entityType	Used to indicate the entity type of the entity for which you want to delete the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>PERS</li> <li>ACCT</li> </ul>	Yes
actionFlag	Used to indicate that you want to create a request to delete the price list assignment. The valid value is: <ul style="list-style-type: none"> <li>DEL</li> </ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>Add</b> action.	
priceListAssignmentId	Used to specify the price list assignment which you want to delete.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity.	No
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	No
priority	Used to specify the priority in which the price list is considered to determine the price item pricing.	No
priceListId	Used to specify the price list that you want to delete from the entity (i.e. existing or prospect person or account).	No
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No

Once the price list assignment is deleted, all the details of price list assignment are listed in the above mentioned attributes.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to update the price list assignment of an entity (i.e. existing or prospect person or account) in the entity hierarchy of a deal which is created using a particular deal identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> attributes.
dealId	Used to specify the deal for which you want to update the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> attributes.
modelId	Used to specify the deal version for which you want to update the price list assignment.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> attributes.
pricelistassignmentlist	Used to update the price list assignment of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price list assignment you want to update.	Yes
entityType	Used to indicate the type of the entity whose price list assignment you want to update. The valid values are: <ul style="list-style-type: none"><li>PERS</li><li>ACCT</li></ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create a request to update the price list assignment. The valid value is: <ul style="list-style-type: none"><li>• UPD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as an <b>Add</b> action.	
priceListAssignmentId	Used to specify the price list assignment which you want to update.	Yes
startDate	Used to specify the date from when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	Yes
	<b>Note:</b> The price list assignment start date must be equal to the deal start date. The price list assignment start date cannot be later than the price list assignment end date. If you do not specify the value in this tag, the system considers the deal start date as the price list assignment start date.	
endDate	Used to specify the date till when the price list assignment is effective for the entity (i.e. existing or prospect person or account).	Yes
	<b>Note:</b> The price list assignment end date cannot be later than the deal end date. The price list assignment end date cannot be earlier than the price list assignment start date.	
priority	Used to specify the priority in which the price list is considered to determine the price item pricing.	Yes
	<b>Note:</b> The priority of the price list assignment must be greater than zero. You cannot have same priority for price list assignments having the same effective start date and end date.	
priceListId	Used to specify the price list that you want to assign to the entity (i.e. existing or prospect person or account).	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceListInheritanceSw	Used to indicate whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, the system considers it as N.	

**Note:** When you create a request to update a price list assignment, the system replaces the price list assignment data instead of editing it. Therefore, you should provide all details of the price list assignment including the data that you want to change.

Once the deal price list assignment is updated, all the details of deal price list assignment are listed in the above mentioned attributes.

**Deal Price List Assignment View Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Deal Price List Assignment View Request in the JSON Format](#) on page 3847 and [Deal Price List Assignment View Response in the JSON Format](#) on page 3848 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealPricelistAssignmentBS** business service through an inbound web service, you need to ensure that the deal price list assignment view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to view the price list assignments of all the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal. The valid value is: <ul style="list-style-type: none"><li>READ</li></ul>	Yes (Conditional)
	<b>Note:</b> This data is required if the <b>actionFlag</b> attribute is not specified in the <b>pricelistassignmentlist</b> attribute.	
	<b>Note:</b> If you do not specify the value in this attribute, the system considers the value provided in the <b>actionFlag</b> attribute of the <b>pricelistassignmentlist</b> attribute.	
dealIdentifier	Used to view the price list of the entities (i.e. existing or prospect person or account) in the	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	entity hierarchy of a deal which is created using a particular deal identifier.	<b>Note:</b> This data is required if you do not specify the <b>dealID</b> or <b>modelID</b> attributes.
dealId	Used to specify the deal whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>modelID</b> attributes.
modelID	Used to specify the deal version whose entities (i.e. existing or prospect person or account) price list assignment you want to view.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealID</b> attributes.
entityId	Used to specify the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal whose price list assignment you want to view.	No
entityType	Used to indicate the type of the entity whose price list assignment you want to view. The valid values are: <ul style="list-style-type: none"><li>PERS</li><li>ACCT</li></ul> <b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required for viewing the price list assignments of a particular entity in the entity hierarchy of a deal.
priceListAssignmentId	Used to specify the price list assignment whose details you want to view.	Yes

Once the price list assignment view request is created, all the details of price list assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
pricelistassignmentlist	Lists the price list assignments of the entities (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityId	Displays the entity (i.e. existing or prospect person or account) in the entity hierarchy of the deal.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"><li>PERS</li><li>ACCT</li></ul>
actionFlag	Indicates the action performed for viewing the price list assignment of the entity (i.e. existing or prospect person or account). The valid value is: <ul style="list-style-type: none"><li>READ</li></ul>
priceListAssignmentId	Displays the price list assignment ID.

Attribute Name	Attribute Description
startDate	Displays date from when the price list assignment is effective for the entity.
endDate	Displays the date till when the price list assignment is effective for the entity.
priority	Displays the priority in which the price list is considered to determine the price item pricing.
priceListId	Displays the price list that is assigned to the entity (i.e. existing or prospect person or account).
priceListAssignStatusFlag	Indicates the current status of the price list assignment. The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Proposed</li><li>Inactive</li><li>Rejected</li></ul>
priceListInheritanceSw	Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the entity (i.e. existing or prospect person or account). The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>

# Sample Deal Price List Assignment Add Request and Response in the JSON Format

Using the below example, you can create the price list assignment for 1600395396 entity in 3336086427 deal.

**Sample Deal Price List Assignment Creation Request in the JSON Format**

```
{
  -"C1-DealPricelistAssignmentBS"
  {
    -"dealIdentifier" -:"3336086427",
    -"pricelistassignmentlist"
    {
      -"entityId" -:"1600395396",
      -"entityType" -:"PERS",
      -"actionFlag" -:"ADD",
      -"startDate" -:"2024-01-01",
      -"endDate" -:"2025-01-01",
      -"priority" -:"9",
      -"priceListId" -:"0106513196",
      -"priceListInheritanceSw" -:"N",
      {
        -"characteristicsList"
        -"characteristicType" -:"ZZ-DLCHR",
        -"characteristicValue" -:"7266725883",
```

```
        -"effectiveDate" -:"2021-06-01",
      -}
    -}
  }
```

**Note:** If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

**Sample Deal Price List Assignment Creation Response in the JSON Format**

```
{
  -"C1-DealPricelistAssignmentBS"
  {
    -"dealIdentifier" -:"3336086427",
    {
      -"entityId" -:"1600395396",
      -"entityType" -:"PERS",
      -"actionFlag" -:"ADD",
      -"priceListAssignmentId" -:"0710416227",
      -"startDate" -:"2024-01-01",
      -"endDate" -:"2025-01-01",
      -"priority" -:"9",
      -"priceListId" -:"0106513196",
      -"priceListInheritanceSw" -:"N",
    }
    -"characteristicsList"
    {
      -"characteristicType" -:"ZZ-DLCHR",
      -"characteristicValue" -:"7266725883",
      -"effectiveDate" -:"2021-06-01",
    }
  }
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price list assignment add request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

**Sample Deal Price List Assignment Delete Request and Response in the JSON Format**

Using the below example, you can delete the price list assignment of 0073281975 entity in 7781868561 deal.

**Sample Deal Price List Assignment Delete Request in the JSON Format**

```
{
  -"C1-DealPricelistAssignmentBS"
  {
```

```
-"dealIdentifier" -:"7781868561",
-"pricelistassignmentlist"
{
  -"entityId" -:"0073281975",
  -"entityType" -:"PERS",
  -"actionFlag" -:"DEL",
  -"priceListAssignmentId" -:"1164917538",
  -"startDate: -:"2024-01-01",
  -"endDate" -:"2025-01-01",
  -"priority" -:"7",
  -"priceListId" -:"0014720899",
  -"priceListInheritanceSw" -:"Y",
-}
-}
}
```

**Sample Deal Price List Assignment Delete Response in the JSON Format**

```
{
  -"C1-DealPricelistAssignmentBS"
  {
    -"dealIdentifier" -:"7781868561",
    -"pricelistassignmentlist"
    {
      -"entityId" -:"0073281975",
      -"entityType" -:"PERS",
      -"actionFlag" -:"DEL",
      -"priceListAssignmentId" -:"1164917538",
      -"startDate: -:"2024-01-01",
      -"endDate" -:"2025-01-01",
      -"priority" -:"7",
      -"priceListId" -:"0014720899",
      -"priceListInheritanceSw" -:"Y",
    -}
  -}
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price list assignment delete request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

## Sample Deal Price List Assignment View Request and Response in the JSON Format

Using the below example, you can view the price list assignment of 0710416227 price list assignment ID in 3336086427 deal.

### Sample Deal Price List Assignment View Request in the JSON Format

```
{
  -"C1-DealPricelistAssignmentBS"
  {
    -"dealIdentifier" -:"3336086427",
    -"actionFlag" -:"READ",
    -"entityId" -:"1278130724",
    -"entityType" -:"Entity_NM",
    -"priceListAssignmentId" -:"0710416227",
  -}
}
```

### Sample Deal Price List Assignment View Response in the JSON Format

```
{
  -"C1-DealPricelistAssignmentBS"
  {
    -"dealIdentifier" -:"3336086427",
    -"actionFlag" -:"READ",
    -"entityId" -:"1278130724",
    -"entityType" -:"Entity_NM",
    -"priceListAssignmentId" -:"0710416227",
    -"pricelistassignmentlist"
    {
      -"entityId" -:"1600395396",
      -"entityType" -:"PERS",
      -"actionFlag" -:"READ",
      -"priceListAssignmentId" -:"0710416227",
      -"startDate: -:"2024-01-01",
      -"endDate" -:"2025-01-01",
      -"priority" -:"9",
      -"priceListId" -:"0106513196",
      -"priceListAssignStatusFlag" -:"PRPD",
      -"priceListInheritanceSw" -:"Y",
    {
      -"characteristicsList"
        -"characteristicType" -:"ZZ-DLCHR",
        -"characteristicValue" -:"7266725883",
        -"effectiveDate" -:"2021-06-01",
      -}
    }
  -}
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal price list assignment view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. # Deal Price Assignments and Commitments through Inbound Web Service

Oracle Revenue Management and Billing enables you to override, edit, recommend, and delete a price item pricing of an entity in a deal through a web service. It also enables you to add or update the commitments of a price item and pricing parameters combination in a deal through a web service. In addition, it enables you to view the pricing and commitment details of a deal through a web service.

You can send a request from the external system to do the following through an inbound web service:

- Override a price item pricing of an existing or prospect customer or account in a deal
- Edit or delete a price item pricing of a deal
- Recommend a price item pricing for an existing or prospect customer or account in a deal
- Add or edit commitments of a price item and pricing parameters combination
- View the price item pricing and commitments details of a deal

At a time, you can send a request either for viewing the pricing and/or commitments details of all or particular entity in a deal, or for creating, updating, recommending, and/or deleting one or more pricing of a deal and/or for adding or editing commitments of one or more price item and pricing parameters combinations in a deal. We have shipped the following two inbound web services in this release:

- **C1-DealPriceAsgnCommitments** - This is a SOAP based web service. You can use this web service when you want to send the above requests with respect to pricing and commitments in the XML format.
- **C1-DealPriceAsgnCommitmentsREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to pricing and commitments in the XML or JSON format.

Both these inbound web services call the **C1-DealPriceAsgnCommitmentBS** business service. This business service is used to do the following:

- **Override a price item pricing of an existing or prospect customer or account in a deal** - While overriding a price item pricing of a customer or an account in a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to override the pricing of an entity
  - Specify the entity (i.e. person or account) whose pricing you want override and thereby create an agreed pricing
  - Specify the price assignment ID
  - Specify the pricing details including pricing parameters, characteristics, and flat and tiered price components
  - Specify the tiering criteria and eligibility for the required price components
  - Set the action flag to **OVRD**

On processing the request, the system creates an agreed pricing for the entity in the deal in the **Proposed** status.

- **Edit a price item pricing of a deal** - While editing a price item pricing of an entity in a deal, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed pricing you want to edit
- Specify the entity (i.e. person or account) whose pricing you want edit
- Specify the price assignment ID
- Set the action flag to **UPD**

During the update operation, the system replaces the pricing data instead of editing it. Therefore, you should provide all details of the pricing including the data that you want to change.

- **Delete a price item pricing of a deal** - While deleting a price item pricing of an entity in a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed pricing you want to delete
  - Specify the entity (i.e. person or account) whose pricing you want to delete
  - Specify the price assignment ID
  - Set the action flag to **DEL**

On processing the request, the system deletes the proposed pricing of the entity from the deal.

- **Recommend a price item pricing for an existing or prospect customer or account in a deal** - While recommending a price item pricing for an entity in a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to recommend pricing for an entity
  - Specify the entity (i.e. person or account) for whom you want to recommend a pricing
  - Specify the price assignment ID
  - Set the action flag to **RECM**

During the update operation, the system replaces the pricing data instead of editing it. Therefore, you should provide all details of the pricing including the data that you want to change.

- **Add commitments for a price item pricing** - While adding commitments for a pricing in a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version in which you want to add commitments for the price item and pricing parameters combination
  - Specify the entity (i.e. person or account) for whom you want to add commitments
  - Specify the price item and pricing parameters combination for which you want to add commitments
  - Specify the commitments for the SQIs
  - Set the action flag to **ADD**

On processing the request, the system adds commitments for the price item and pricing parameters combination in the deal in the **Proposed** status.

- **Edit commitments of a price item pricing** - While editing commitments of a price item and pricing parameters combination in a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose proposed commitments you want to edit
  - Specify the entity (i.e. person or account) whose commitments you want to edit
  - Specify the price item and pricing parameters combination whose commitments you want to edit
  - Set the action flag to **UPD**

During the update operation, the system replaces the commitment data instead of editing it. Therefore, you should provide all commitment details including the data that you want to change.

- **View the price item pricing and/or commitments details** - While viewing the pricing and/or commitment details of a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose pricing and commitment details you want to view
  - Set the action flag to **READ**

On processing the request, the system then displays the pricing and commitment details of all customers and accounts in the deal version. You can also view the pricing and commitment details of a particular entity in the deal version. In addition, you can opt to view either pricing or commitment details or both pricing and commitment details of a deal version. If you want to view the pricing details of a deal version, you must set the inquiry mode to **PRIC**. If you want to view the commitment details of a deal version, you must set the inquiry mode to **COMT**. And, if you want to view both the pricing and commitment details of a deal version, you must set the inquiry mode to **BOTH**. Note that the system displays all active, proposed, and recommended price item pricing of the entities and all active and proposed commitments of the price item and parameters combination in the response.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. The system allows you to override, edit, delete, or recommend pricing and/or add or edit commitments for multiple entities of a deal in the same request. For more information about the Deal Pricing Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

## Deal Price Assignment Override Request in the XML Format

The following code snippet illustrates how the tags should be nested while sending the deal price assignment override request in the XML format.

**Deal Price Assignment Override Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Price Assignment Override Request in the XML Format](#) on page 3864 and [Deal Price Assignment Override Response in the XML Format](#) on page 3865 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment override request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to override.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal whose price assignments you want to override.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version whose price assignments you want to override.  <b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
inquiryModeFlag	Used to indicate whether you want to override the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to override.  <b>Note:</b> If you specify the <b>entityType</b> tag, you need to specify the <b>entityId</b> tag.  The <b>entityId</b> should belong to the <b>modelId</b> .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to override. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul> <b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to override.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to override the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>OVRD</li> </ul>	Yes
priceItemCode	Used to specify the price item whose price assignment you want to override for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>PRPD</li> </ul> <b>Note:</b> You can override a price assignment of a price item only when it is in the <b>PRPD</b> status.	Yes
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmVal</b> tag, you need to specify the <b>priceParmCode</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmCode</b> tag, you need to specify the <b>priceParmVal</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	<p>Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>	Yes
ignoreSw	<p>Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>N</li> </ul>	
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify a value in this tag only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	<b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> tag is set to <b>TRUE</b> .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• IN</li><li>• LIKE</li><li>• NOT IN</li></ul>	
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"><li>• TRUE</li><li>• FALSE</li></ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"><li>• FLAT</li><li>• STEP</li><li>• THRESHOLD</li></ul>	Yes

Once the deal price assignment is overridden, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal whose price assignments you have overridden.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> tag while creating the override request.
modelId	Displays the deal version whose price assignments you have overridden.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> tag while creating the override request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.

Tag Name	Tag Description
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"><li>• ACPI</li><li>• CUPI</li><li>• PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

Note:  
Only **RM** (Relationship Manager) can create the deal price assignment override request.  
You can override only the inherited price assignments and not the agreed price assignments.  
On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

Deal Price Assignment Update Request and Response - Tags in the XML Format

Note: We recommend you to refer the topics [Deal Price Assignment Update Request in the XML Format](#) on page 3867 and [Deal Price Assignment Update Response in the XML Format](#) on page 3868 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to update.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal whose price assignments you want to update.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version whose price assignments you want to update.  <b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
inquiryModeFlag	Used to indicate whether you want to update the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to update.  <b>Note:</b> If you specify the <b>entityType</b> tag, you need to specify the <b>entityId</b> tag.  The <b>entityId</b> should belong to the <b>modelId</b> .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to update. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul> <b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to update.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to update the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>• UPD</li> </ul>	Yes
priceItemCode	Used to specify the price item whose price assignment you want to update for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>• PRPD</li> </ul> <b>Note:</b> You can update a price assignment of a price item only when it is in the <b>PRPD</b> status.	Yes
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• FALSE</li> <li>• TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• POST</li> <li>• PPIN</li> <li>• PPPR</li> <li>• RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmVal</b> tag, you need to specify the <b>priceParmCode</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmCode</b> tag, you need to specify the <b>priceParmVal</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	<p>Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>	Yes
ignoreSw	<p>Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>N</li> </ul>	
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No

priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify a value in this tag only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component. <b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> tag is set to <b>TRUE</b> .	No
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"><li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li></ul>	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>IN</li> <li>LIKE</li> <li>NOT IN</li> </ul>	
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>TRUE</li> <li>FALSE</li> </ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> <li>FLAT</li> <li>STEP</li> <li>THRESHOLD</li> </ul>	Yes

Once the deal price assignment is updated, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal whose price assignments you have updated.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> tag while creating the update request.
modelId	Displays the identification value of the deal version whose price assignments you have updated.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> tag while creating the update request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.

Tag Name	Tag Description
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"><li>• ACPI</li><li>• CUPI</li><li>• PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

Note:  
Only **RM** (Relationship Manager) can create the deal price assignment update request.  
You can update only the agreed price assignments and not the inherited price assignments.  
On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.  
When you create a request to update a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Recommend Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Deal Price Assignment Recommend Request in the XML Format](#) on page 3869 and [Deal Price Assignment Recommend Response in the XML Format](#) on page 3871 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment recommend request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to recommend.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal whose price assignments you want to recommend.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version whose price assignments you want to recommend.  <b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
inquiryModeFlag	Used to indicate whether you want to recommend the price assignments or the commitments of the price item. The valid value is:  <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend.  <b>Note:</b> If you specify the <b>entityType</b> tag, you need to specify the <b>entityId</b> tag.  The <b>entityId</b> should belong to the <b>modelId</b> .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend. The valid values are:  <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul> <b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to recommend.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to recommend the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>RECM</li> </ul>	Yes
priceItemCode	Used to specify the price item whose price assignment you want to recommend for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>RECM</li> </ul> <b>Note:</b> You can recommend a price assignment of a price item only when it is in the <b>RECM</b> status.	Yes
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmVal</b> tag, you need to specify the <b>priceParmCode</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmCode</b> tag, you need to specify the <b>priceParmVal</b> tag.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	<p>Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>	Yes
ignoreSw	<p>Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>N</li> </ul>	
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional) <b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify a value in this tag only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	<b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> tag is set to <b>TRUE</b> .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• IN</li><li>• LIKE</li><li>• NOT IN</li></ul>	
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"><li>• TRUE</li><li>• FALSE</li></ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"><li>• FLAT</li><li>• STEP</li><li>• THRESHOLD</li></ul>	Yes

Once the deal price assignment is recommended, all the details of deal price assignment are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal for which you have recommended the price assignments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> tag while creating the recommend request.
modelId	Displays the identification value of the deal version for which you have recommended the price assignments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> tag while creating the recommend request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.

Tag Name	Tag Description
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"><li>• ACPI</li><li>• CUPI</li><li>• PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

Note:  
Only **RM** (Relationship Manager) can create the deal price assignment recommend request.  
You can recommend only the agreed price assignments and not the inherited price assignments.  
On processing the request, the system creates an agreed pricing for the entity of the deal in the **Recommended** status.  
When you create a request to recommend a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

**Deal Price Assignment and Commitments View Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Price Assignment and Commitments View Request in the XML Format](#) on page 3873 and [Deal Price Assignment and Commitments View Response in the XML Format](#) on page 3874 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment and commitments view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments and commitments you want to view.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealIdentifier</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal whose price assignments and commitments you want to view.  <b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version whose price assignments and commitments you want to view.  <b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
actionflag	Used to indicate that you want to create request to view the price assignment and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> <li>• READ</li> </ul>	Yes
inquiryModeFlag	Used to indicate that you want to view the price assignments and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> <li>• BOTH</li> </ul>	Yes

Once the deal price assignment and commitments view request is created, all the details of the deal price assignment and commitments are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
pricingcmtnmtdtls	Displays the price assignment and commitment details of the entity in the customer hierarchy of the deal.
entityId	Displays the entity whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are:

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• ACCT</li> <li>• PERS</li> </ul>
entityIdentifierValue	Displays the value of the identifier type using which the entity is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity is created in the system.
entityDivision	Indicates the division to which the entity belongs.
pricingdtls	Displays the price assignment details of the entity in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceStatusFlag	Indicates the current status of the price assignment.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity.
endDate	Displays the date till when the price assignment of the price item is effective for the entity.
isEligible	<p>Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• FALSE</li> <li>• TRUE</li> </ul>
assignmentLevel	<p>Indicates the level at which the pricing is defined for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• ACPI</li> <li>• CUPI</li> <li>• PCPI</li> </ul>
paTypeFlag	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• POST</li> <li>• PPIN</li> <li>• PPPR</li> <li>• RGLR</li> </ul>
printIfZero	<p>Indicates whether zero pricing is displayed or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
priceasgnchar	Displays a list of characteristics defined for the price assignment.

Tag Name	Tag Description
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
priceasgnparm	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
priceParmCode	Indicates the pricing parameter which is associated with the price item.
priceParmVal	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• DNRT</li> <li>• AGTR</li> <li>• RITA</li> <li>• RITX</li> </ul>
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
doNotAggSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• DAILY</li> <li>• WEEKLY</li> <li>• MONTHLY</li> <li>• QUARTERLY</li> <li>• YEARLY</li> </ul>
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompTier	Displays the tiering criteria of the price component.
toVal	Displays the upper limit of the pricing range.
fromVal	Displays the lower limit of the pricing range.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
tieSeqNum	Indicates the tiering sequence number.
priceparm	Displays the list of parameters based on which the price items total usage is considered for determining the rate.

Tag Name	Tag Description
	<b>Note:</b> The value in this tag appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
priceParmCode	Indicates the parameter which is associated with the tiering criteria.
parameterVal	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component.  <b>Note:</b> The value in this tag appears only when the <b>isEligible</b> tag is set to <b>TRUE</b> and the eligibility criteria is defined for the price component.
rhsPriceParmCd	Displays the parameter against which you want to compare the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you want to compare the parameter (on the left hand side).
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
rhsPriceParmTypeFlg	Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li><b>VALUE</b> - Indicates that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>
isInsufficientFlag	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isFalseFlag	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isTrueFlag	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> </ul>

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• BETWEEN</li> <li>• IN</li> <li>• LIKE</li> <li>• NOT IN</li> </ul>
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
priceComponentDisplay	<p>Indicates whether the price component is displayed in the bill or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• TRUE</li> <li>• FALSE</li> </ul>
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	<p>Displays the tiering type used for the price component. The valid values are:</p> <ul style="list-style-type: none"> <li>• FLAT</li> <li>• STEP</li> <li>• THRESHOLD</li> </ul>
commitmentDetails	Displays the price item commitment details for the entity (i.e. existing or prospect person or account).
priceItemId	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.

Tag Name	Tag Description
sqiValue	Displays the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.

**Deal Commitments Add Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Commitments Add Request in the XML Format](#) on page 3875 and [Deal Commitments Add Response in the XML Format](#) on page 3876 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments add request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to add.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal for which you want to add commitments.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version for which you want to add commitments.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
inquiryModeFlag	Used to indicate whether you want to add price assignments or commitments of the price item for the deal. The valid value is:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>COMT</li> </ul>	
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to add.	Yes
	<b>Note:</b> If you specify the <b>entityType</b> tag, you need to specify the <b>entityId</b> tag. The <b>entityId</b> should belong to the <b>modelId</b> .	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul>	Yes
	<b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to add for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes
sqiValue	Used to specify the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.	Yes
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>PRPD</li> </ul>	
actionFlag	Used to specify that you want to create request to add commitments for the deal. The valid value is: <ul style="list-style-type: none"> <li>ADD</li> </ul>	Yes

Once the deal commitments are added, all the details of deal commitments are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> tag while creating the add request.
modelId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> tag while creating the add request.

**Note:**

Only **RM** (Relationship Manager) can create the deal commitments add request.

You can add commitments for a price item only when the price item and the parameter combination is valid.

## Deal Commitments Update Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Deal Commitments Update Request in the XML Format](#) on page 3877 and [Deal Commitments Update Response in the XML Format](#) on page 3877 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to update.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.
dealId	Used to specify the deal whose commitments you want to update.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version whose commitments you want to update.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.
inquiryModeFlag	Used to indicate whether you want to update the price assignments or the commitments of the price item for the deal. The valid value is: <ul style="list-style-type: none"><li>• COMT</li></ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to update.	Yes
	<b>Note:</b> If you specify the <b>entityType</b> tag, you need to specify the <b>entityId</b> tag. The <b>entityId</b> should belong to the <b>modelId</b> .	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to update. The valid values are: <ul style="list-style-type: none"><li>• ACCT</li><li>• PERS</li></ul>	Yes
	<b>Note:</b> If you specify the <b>entityId</b> tag, you need to specify the <b>entityType</b> tag.	

Tag Name	Tag Description	Mandatory (Yes or No)
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to update for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes
sqiValue	Used to specify the SQI value for the price item and parameter combination that you want to update for calculating the price item pricing.	Yes
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is: <ul style="list-style-type: none"><li>PRPD</li></ul>	Yes
actionFlag	Used to specify that you want to create request to update commitments for the deal. The valid value is: <ul style="list-style-type: none"><li>UPD</li></ul>	Yes

Once the deal commitments are updated, all the details of deal commitments are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> tag while creating the update request.
modelId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this tag appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> tag while creating the update request.

**Note:**  
Only **RM** (Relationship Manager) can create the deal commitments update request.  
You can update commitments for a price item only when the price item and the parameter combination is valid.

</commitmentDetails>
</pricingcmtmntdtls> '
</C1-DealPriceAsgnCommitmentBS>
```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending deal commitments add request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

**Sample Deal Commitments Update Request and Response in the XML Format**

Using the below example, you can update the deal commitments.

**Sample Deal Commitments Update Request in the XML Format**

```
<C1-DealPriceAsgnCommitmentBS>
  <dealID>5593158511</dealID>
  <inquiryModeFlag>COMT</inquiryModeFlag>
  <pricingcmtmntdtls>
```

```
<entityId>2797545007</entityId>
<entityType>PERS</entityType>
<commitmentDetails>
  <priceItemCode>DEAL_PRERANA3</priceItemCode>
  <priceItemDescription>DealPrerana3</priceItemDescription>
  <parameterDetails>
    <parameterCode>COUNTRY</parameterCode>
    <parameterValue>IND</parameterValue>
  </parameterDetails>
  <SQIDetails>
    <serviceQuantityIdentifier>BK-NBR</
serviceQuantityIdentifier>
    <sqiValue>12.000000000000000000</sqiValue>
    <sqiTypeFlg>PRPD</sqiTypeFlg>
    <actionFlag>UPD</actionFlag>
  </SQIDetails>
</commitmentDetails>
</pricingcmtmntdtls>
</C1-DealPriceAsgnCommitmentBS>
```

**Note:** If you do not want to enter the data in the list tags (i.e. tags where the type is set to list), you should not include them in the request. Adding empty list tags will give erroneous results.

**Sample Deal Commitments Update Response in the XML Format**

```
<C1-DealPriceAsgnCommitmentBS>
  <dealID>5593158511</dealID>
  <modelId>8447774739</modelId>
  <pricingcmtmntdtls>

Deal Price Assignment Override Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Deal Price Assignment Override Request in the JSON Format](#) on page 3929 and [Deal Price Assignment Override Response in the JSON Format](#) on page 3930 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment override request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to override.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal whose price assignments you want to override.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
modelId	Used to specify the deal version whose price assignments you want to override.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.
inquiryModeFlag	Used to indicate whether you want to override the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to override.	Yes
	<b>Note:</b> If you specify the <b>entityType</b> attribute, you need to specify the <b>entityId</b> attribute. The <b>entityId</b> should belong to the <b>modelId</b> .	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to override. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul>	Yes
	<b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to override.	Yes
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to override the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>OVRD</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceItemCode	Used to specify the price item whose price assignment you want to override for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>PRPD</li> </ul>	Yes
	<b>Note:</b> You can override a price assignment of a price item only when it is in the <b>PRPD</b> status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional) <b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item. <b>Note:</b> If you specify the <b>priceParmVal</b> attribute, you need to specify the <b>priceParmCode</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment. <b>Note:</b> If you specify the <b>priceParmCode</b> attribute, you need to specify the <b>priceParmVal</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"><li>• DNRT</li><li>• AGTR</li><li>• RITA</li><li>• RITX</li></ul>	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"><li>• Y</li></ul>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>N</li> </ul>	
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No
	<b>Note:</b> You should specify a value in this attribute only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component. <b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> attribute is set to <b>TRUE</b> .	No
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are:	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> <li>IN</li> <li>LIKE</li> <li>NOT IN</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>TRUE</li> <li>FALSE</li> </ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> <li>FLAT</li> <li>STEP</li> <li>THRESHOLD</li> </ul>	Yes

Once the deal price assignment is overridden, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal whose price assignments you have overridden.  <b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> attribute while creating the override request.
modelId	Displays the deal version whose price assignments you have overridden.  <b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> attribute while creating the override request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are:

Attribute Name	Attribute Description
	<ul style="list-style-type: none"><li>ACPI</li><li>CUPI</li><li>PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

**Note:**

Only **RM** (Relationship Manager) can create the deal price assignment override request.

You can override only the inherited price assignments and not the agreed price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

**Deal Price Assignment Update Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Deal Price Assignment Update Request in the JSON Format](#) on page 3932 and [Deal Price Assignment Update Response in the JSON Format](#) on page 3933 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to update.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal whose price assignments you want to update.	Yes (Conditional)
	<b>Note:</b>  If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
modelId	Used to specify the deal version whose price assignments you want to update.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.
inquiryModeFlag	Used to indicate whether you want to update the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to update.	Yes
	<b>Note:</b> If you specify the <b>entityType</b> attribute, you need to specify the <b>entityId</b> attribute. The <b>entityId</b> should belong to the <b>modelId</b> .	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to update. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul>	Yes
	<b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to update.	Yes
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to update the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>UPD</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
priceItemCode	Used to specify the price item whose price assignment you want to update for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>PRPD</li> </ul>	Yes
	<b>Note:</b> You can update a price assignment of a price item only when it is in the <b>PRPD</b> status.	
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional) <b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item. <b>Note:</b> If you specify the <b>priceParmVal</b> attribute, you need to specify the <b>priceParmCode</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment. <b>Note:</b> If you specify the <b>priceParmCode</b> attribute, you need to specify the <b>priceParmVal</b> attribute.	Yes (Conditional) <b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"><li>• DNRT</li><li>• AGTR</li><li>• RITA</li><li>• RITX</li></ul>	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>	No
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"><li>• Y</li></ul>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>N</li> </ul>	
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No
	<b>Note:</b> You should specify a value in this attribute only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional) <b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component. <b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> attribute is set to <b>TRUE</b> .	No
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are:	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> <li>IN</li> <li>LIKE</li> <li>NOT IN</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.</p>
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>TRUE</li> <li>FALSE</li> </ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> <li>FLAT</li> <li>STEP</li> <li>THRESHOLD</li> </ul>	Yes

Once the deal price assignment is updated, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal whose price assignments you have updated.  <b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> attribute while creating the update request.
modelId	Displays the identification value of the deal version whose price assignments you have updated.  <b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> attribute while creating the update request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.

Attribute Name	Attribute Description
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"><li>• ACPI</li><li>• CUPI</li><li>• PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

Note:

Only **RM** (Relationship Manager) can create the deal price assignment update request.

You can update only the agreed price assignments and not the inherited price assignments.

On processing the request, the system creates an agreed pricing for the entity of the deal in the **Proposed** status.

When you create a request to update a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Recommend Request and Response - Attribute/Value Pairs in the JSON Format

Note:

We recommend you to refer the topics [Deal Price Assignment Recommend Request in the JSON Format](#) on page 3935 and [Deal Price Assignment Recommend Response in the JSON Format](#) on page 3936 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment recommend request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments you want to recommend.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal whose price assignments you want to recommend.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.
modelId	Used to specify the deal version whose price assignments you want to recommend.  <b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.
inquiryModeFlag	Used to indicate whether you want to recommend the price assignments or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>• PRIC</li> </ul>	Yes
pricingcmntmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend.  <b>Note:</b> If you specify the <b>entityType</b> attribute, you need to specify the <b>entityId</b> attribute.  The <b>entityId</b> should belong to the <b>modelId</b> .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignments you want to recommend. The valid values are: <ul style="list-style-type: none"> <li>• ACCT</li> <li>• PERS</li> </ul> <b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to recommend.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to recommend the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"> <li>RECM</li> </ul>	Yes
priceItemCode	Used to specify the price item whose price assignment you want to recommend for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceStatusFlag	Used to indicate the current status of the price item price assignment. The valid value is: <ul style="list-style-type: none"> <li>RECM</li> </ul> <b>Note:</b> You can recommend a price assignment of a price item only when it is in the <b>RECM</b> status.	Yes
priceCurrencyCode	Used to indicate the currency in which the price assignment is defined for the price item.	Yes
rateSchedule	Used to indicate the rate schedule using which the price assignment is defined for the price item.	Yes
startDate	Used to specify the date from when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	Yes
endDate	Used to specify the date till when the price assignment of the price item is effective for the entity (i.e. existing or prospect person or account).	No
isEligible	Used to indicate whether you want to define the eligibility criteria for the price assignment. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>	No
paTypeFlag	Used to indicate the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>	Yes
printIfZero	Used to indicate whether zero pricing should be displayed or not. The valid values are:	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	
priceasgnchar	Used to specify a list of characteristics for the price assignment.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You must specify a characteristic type which is associated with the division to which the price item belongs.	<b>Note:</b> This data is required while defining a characteristic for the price assignment.
effectiveDate	Used to specify the date from when the characteristic is effective for price assignment.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the price assignment.
priceasgnparm	Used to specify a list of price item parameters which are used along with the price item for determining the price assignment.	No
priceParmCode	Used to indicate the pricing parameter which is associated with the price item.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmVal</b> attribute, you need to specify the <b>priceParmCode</b> attribute.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
priceParmVal	Used to indicate the predefined pricing parameter value which is used for the price assignment.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>priceParmCode</b> attribute, you need to specify the <b>priceParmVal</b> attribute.	<b>Note:</b> This data is required while specifying the price assignment parameters for the price item.
txnDailyRatingCrt	<p>Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>	Yes
ignoreSw	Used to indicate whether transaction mapped to price item pricing are considered for billing or not. The valid values are:	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	
doNotAggSw	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
scheduleCode	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>	Yes
priceCompDetails	Used to specify the price component details of the rate component defined for the price item price assignment.	No
priceCompTier	Used to specify the tiering criteria of the price component.	No
toVal	Used to specify the upper limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
fromVal	Used to specify the lower limit of the pricing range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceCriteria	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
tieSeqNum	Used to indicate the tiering sequence number.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the tiering criteria of the price component.
priceparm	Used to specify a list of parameters based on which the price items total usage is considered for determining the rate.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> You should specify a value in this attribute only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
priceParmCode	Used to indicate the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
parameterVal	Used to specify the value for the parameter which is associated with the tiering criteria.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the parameters for the tiering criteria of the price component.
priceCompElig	Used to specify the pricing eligibility criteria for the price component.	No
	<b>Note:</b> You can specify the eligibility criteria for the price component only when the value in the <b>isEligible</b> attribute is set to <b>TRUE</b> .	
rhsPriceParmCd	Used to specify the parameter against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmVal	Used to specify the parameter value against which you want to compare the parameter (on the left hand side).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
lhsPriceParmCd	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
rhsPriceParmTypeFlg	Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>VALUE</b> - Used to indicate that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>	
isInsufficientFlag	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isFalseFlag	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
isTrueFlag	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li><b>COND</b> - Used to indicate that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
operator	<p>Used to indicate the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>IN</li><li>LIKE</li><li>NOT IN</li></ul>	
sequenceNumber	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the pricing eligibility criteria of the price component.
priceCompSequenceNo	Used to specify the sequence number of the price component.	Yes
priceCompDesc	Used to specify the description for the price component.	No
valueAmt	Used to specify the rate for the price component.	Yes
priceComponentDisplay	Used to indicate whether the price component is displayed in the bill. The valid values are: <ul style="list-style-type: none"><li>TRUE</li><li>FALSE</li></ul>	Yes
rcMapId	Used to specify the identification value of the rate component for the price component.	Yes
tieredFlag	Used to specify the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"><li>FLAT</li><li>STEP</li><li>THRESHOLD</li></ul>	Yes

Once the deal price assignment is recommended, all the details of deal price assignment are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal for which you have recommended the price assignments.
	<b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> attribute while creating the recommend request.
modelId	Displays the identification value of the deal version for which you have recommended the price assignments.
	<b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> attribute while creating the recommend request.
entityIdentifierValue	Indicates the identifier using which the entity (i.e. existing or prospect person or account) is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity (i.e. existing or prospect person or account) is created in the system.

Attribute Name	Attribute Description
entityDivision	Indicates the division to which the entity (i.e. existing or prospect person or account) belongs.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the hierarchy to which the price item belongs.
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"><li>• ACPI</li><li>• CUPI</li><li>• PCPI</li></ul>
priceCompId	Displays the identification value of the price component.

Note:  
Only **RM** (Relationship Manager) can create the deal price assignment recommend request.  
You can recommend only the agreed price assignments and not the inherited price assignments.  
On processing the request, the system creates an agreed pricing for the entity of the deal in the **Recommended** status.  
When you create a request to recommend a price assignment, the system replaces the price assignment data instead of editing it. Therefore, you should provide all details of the price assignment including the data that you want to change.

Deal Price Assignment Delete Request and Response - Attribute/Value Pairs in the JSON Format

Note: We recommend you to refer the topics [Deal Price Assignment Delete Request in the JSON Format](#) on page 3938 and [Deal Price Assignment Delete Response in the JSON Format](#) on page 3939 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the JSON format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment delete request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignment you want to delete.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal whose price assignment you want to delete.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.
modelId	Used to specify the deal version whose price assignment you want to delete.  <b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.
inquiryModeFlag	Used to indicate whether you want to delete the price assignment or the commitments of the price item. The valid value is: <ul style="list-style-type: none"> <li>PRIC</li> </ul>	Yes
pricingcmtnmtdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price assignment you want to delete.  <b>Note:</b> If you specify the <b>entityType</b> attribute, you need to specify the <b>entityId</b> attribute.  The <b>entityId</b> should belong to the <b>modelId</b> .	Yes
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price assignment you want to delete. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul> <b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	Yes
pricingdtls	Used to specify the price assignment details for the entity (i.e. existing or prospect person or account).	Yes
priceAsgnId	Used to specify the identification value of the price assignment whose details you want to delete.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>priceAsgnId</b> should belong to the <b>entityId</b> .	
actionFlag	Used to indicate that you want to create request to delete the price assignment of the entity (i.e. existing or prospect person or account) of the deal. The valid value is: <ul style="list-style-type: none"><li>DEL</li></ul>	Yes

Once the deal price assignment is deleted, all the details of deal price assignment are listed in the above mentioned attributes along with the following attribute:

Attribute Name	Attribute Description
isEligible	Indicates the eligibility criteria of the deleted price assignment. The valid values are: <ul style="list-style-type: none"><li>FALSE</li><li>TRUE</li></ul>

**Note:**

Only **RM** (Relationship Manager) can delete the price assignment which is in the **Proposed** status. Whereas, only the **PM** (Product Manager) can delete the price assignment which is in the **Recommended** status.

You cannot delete a price list price assignment.

You cannot delete the same price assignment twice.

**Deal Price Assignment and Commitments View Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Deal Price Assignment and Commitments View Request in the JSON Format](#) on page 3939 and [Deal Price Assignment and Commitments View Response in the JSON Format](#) on page 3940 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are nested in the XML format.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal price assignment and commitments view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose price assignments and commitments you want to view.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealIdentifier</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal whose price assignments and commitments you want to view.  <b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.
modelId	Used to specify the deal version whose price assignments and commitments you want to view.  <b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	Yes (Conditional)  <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.
actionflag	Used to indicate that you want to create request to view the price assignment and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> <li>• READ</li> </ul>	Yes
inquiryModeFlag	Used to indicate that you want to view the price assignments and commitments of the entities in the customer hierarchy of the deal. The valid value is: <ul style="list-style-type: none"> <li>• BOTH</li> </ul>	Yes

Once the deal price assignment and commitments view request is created, all the details of the deal price assignment and commitments are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
pricingcmtnmtdtls	Displays the price assignment and commitment details of the entity in the customer hierarchy of the deal.
entityId	Displays the entity whose price assignment and commitment details you are viewing.

Attribute Name	Attribute Description
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> <li>• ACCT</li> <li>• PERS</li> </ul>
entityIdentifierValue	Indicates the value of the identifier type using which the entity is created in the system.
entityIdentifierType	Indicates the identifier type using which the entity is created in the system.
entityDivision	Indicates the division to which the entity belongs.
pricingdtls	Displays the price assignment details of the entity in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceStatusFlag	Indicates the current status of the price assignment.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity.
endDate	Displays the date till when the price assignment of the price item is effective for the entity.
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> <li>• FALSE</li> <li>• TRUE</li> </ul>
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> <li>• ACPI</li> <li>• CUP</li> <li>• PCPI</li> </ul>
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• POST</li> <li>• PPIN</li> <li>• PPPR</li> <li>• RGLR</li> </ul>
printIfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>N</li> </ul>
priceasgnchar	Displays a list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
priceasgnparm	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
priceParmCode	Indicates the pricing parameter which is associated with the price item.
priceParmVal	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	<p>Indicates how and when the transaction legs mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>
ignoreSw	<p>Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
doNotAggSw	<p>Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
scheduleCode	<p>Indicates the transaction aggregation cycle. The valid values are:</p> <ul style="list-style-type: none"> <li>DAILY</li> <li>WEEKLY</li> <li>MONTHLY</li> <li>QUARTERLY</li> <li>YEARLY</li> </ul>
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompTier	Displays the tiering criteria of the price component.
toVal	Displays the upper limit of the pricing range.
fromVal	Displays the lower limit of the pricing range.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
tieSeqNum	Indicates the tiering sequence number.
priceparm	Displays the list of parameters based on which the price items total usage is considered for determining the rate.

Attribute Name	Attribute Description
	<b>Note:</b> The value in this attribute appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
priceParmCode	Indicates the parameter which is associated with the tiering criteria.
parameterVal	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component. <b>Note:</b> The value in this attribute appears only when the <b>isEligible</b> attribute is set to <b>TRUE</b> and the eligibility criteria is defined for the price component.
rhsPriceParmCd	Displays the parameter against which you want to compare the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you want to compare the parameter (on the left hand side).
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
rhsPriceParmTypeFlg	Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are: <ul style="list-style-type: none"> <li><b>PARAMETER</b> - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li><b>VALUE</b> - Indicates that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>
isInsufficientFlag	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isFalseFlag	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isTrueFlag	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>&lt;</li> <li>&lt;=</li> <li>&lt;&gt;</li> <li>=</li> <li>&gt;</li> <li>&gt;=</li> <li>BETWEEN</li> <li>IN</li> <li>LIKE</li> <li>NOT IN</li> </ul>
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
priceComponentDisplay	<p>Indicates whether the price component is displayed in the bill or not. The valid values are:</p> <ul style="list-style-type: none"> <li>TRUE</li> <li>FALSE</li> </ul>
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	<p>Displays the tiering type used for the price component. The valid values are:</p> <ul style="list-style-type: none"> <li>FLAT</li> <li>STEP</li> <li>THRESHOLD</li> </ul>
commitmentDetails	Displays the price item commitment details for the entity (i.e. existing or prospect person or account).
priceItemId	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item..
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.

Attribute Name	Attribute Description
sqiValue	Displays the SQI value for the price item and parameter combination that you want to use for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.

Before calling the **C1-DealPriceAsgnCommitmentBS** business service through an inbound web service, you need to ensure that the deal commitments add request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal which is created using a particular identifier whose commitments you want to add.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal for which you want to add commitments.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.
modelId	Used to specify the deal version for which you want to add commitments.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.

Attribute Name	Attribute Description	Mandatory (Yes or No)
inquiryModeFlag	Used to indicate whether you want to add price assignments or commitments of the price item for the deal. The valid value is: <ul style="list-style-type: none"> <li>COMT</li> </ul>	Yes
pricingcmtmntdtls	Used to specify the price assignment and commitment details for the entities (i.e. existing or prospect person or account) of the deal.	Yes
entityId	Used to specify the entity (i.e. existing or prospect person or account) whose price items commitments you want to add.	Yes
	<b>Note:</b> If you specify the <b>entityType</b> attribute, you need to specify the <b>entityId</b> attribute. The <b>entityId</b> should belong to the <b>modelId</b> .	
entityType	Used to indicate the type of the entity (i.e. existing or prospect person or account) whose price items commitments you want to add. The valid values are: <ul style="list-style-type: none"> <li>ACCT</li> <li>PERS</li> </ul>	Yes
	<b>Note:</b> If you specify the <b>entityId</b> attribute, you need to specify the <b>entityType</b> attribute.	
commitmentDetails	Used to specify the price item commitment details for the entity (i.e. existing or prospect person or account).	Yes
priceItemCode	Used to specify the price item whose commitments you want to add for the entity (i.e. existing or prospect person or account) of the deal.	Yes
priceItemDescription	Used to specify the description of the price item.	No
parameterDetails	Used to specify the parameters based on which the effective pricing is defined for the price item.	Yes
parameterCode	Used to specify the parameter.	Yes
parameterValue	Used to specify the value of the parameter.	Yes
SQIDetails	Used to specify the service quantity identifier details of the price item.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier associated with the price item.	Yes
sqlValue	Used to specify the SQL value for the price item and parameter combination that you want to use for calculating the price item pricing.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
sqiTypeFlg	Used to indicate the status of the service quantity identifier details for calculating the price item pricing. The valid value is: <ul style="list-style-type: none"><li>PRPD</li></ul>	Yes
actionFlag	Used to specify that you want to create request to add commitments for the deal. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	Yes

Once the deal commitments are added, all the details of deal commitments are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>modelId</b> attribute while creating the add request.
modelId	Displays the identification value of the deal for which you have added the commitments.
	<b>Note:</b> The value in this attribute appears when you specify the <b>dealIdentifier</b> or the <b>dealId</b> attribute while creating the add request.

**Note:**  
Only **RM** (Relationship Manager) can create the deal commitments add request.  
You can add commitments for a price item only when the price item and the parameter combination is valid.

```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending deal price assignment and commitments view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Deal price assignment and commitments view request and response attribute/value pairs in the JSON format	<a href="#">Deal Price Assignment and Commitments View Request and Response - Attribute/Value Pairs in the JSON Format</a> on page 3971

**Sample Deal Commitments Add Request and Response in the JSON Format**

Using the below example, you can add commitments for the deal.

**Sample Deal Commitments Add Request in the JSON Format**

```

{
  -"C1-DealPriceAsgnCommitmentBS"
  {
    -"modelId" -:"8447774739",
    -"inquiryModeflag" -:"COMT",
    -"pricingcmtmntdtls"
    {
      -"entityId" -:"2797545007",
      -"entityType" -:"PERS",
      -"commitmentDetails"
      {
        -"priceItemCode" -:"DEAL_PRERANA3",
        -"priceItemDescription" -:"DealPrerana3",
        -"parameterDetails"
        {
          -"parameterCode" -:"COUNTRY",
          -"parameterValue" -:"IND",
        }
        -"SQIDetails"
        {
          -"serviceQuantityIdentifier" -:"BK-NBR",
          -"sqiValue" -:"12.000000000000000000",
          -"sqiTypeFlg" -:"PRPD",
          -"actionFlag" -:"ADD",
        }
      }
    }
  }
}

```

**Note:** If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

**Sample Deal Commitments Add Response in the JSON Format**

```

{
  -"C1-DealPriceAsgnCommitmentBS"
  {
    -"dealId" -:"5593158511",
    -"modelId" -:"8447774739",
    -"pricingcmtmntdtls"
    {
      -"entityId" -:"2797545007",
      -"entityType" -:"PERS",

## Sample Deal Commitments Update Request and Response in the JSON Format

Using the below example, you can update the deal commitments.

**Sample Deal Commitments Update Request in the JSON Format**

```
{
  -"C1-DealPriceAsgnCommitmentBS"
  {
    -"dealId" -:"5593158511",
    -"inquiryModeflag" -:"COMT",
    -"pricingcmtmntdtls"
    {
      -"entityId" -:"2797545007",
      -"entityType" -:"PERS",
      -"commitmentDetails"
      {
        -"priceItemCode" -:"DEAL_PRERANA3",
        -"priceItemDescription" -:"DealPrerana3",
        -"parameterDetails"
        {
          -"parameterCode" -:"COUNTRY",
          -"parameterValue" -:"IND",
        }
        -"SQIDetails"
        {
          -"serviceQuantityIdentifier" -:"BK-NBR",
          -"sqiValue" -:"12.000000000000000000",
          -"sqiTypeFlg" -:"PRPD",
          -"actionFlag" -:"UPD",
        },
      },
    },
  },
}
```

**Note:** If you do not want to enter the data in the list attributes (i.e. attributes where the type is set to list), you should not include them in the request. Adding empty list attributes will give erroneous results.

**Sample Deal Commitments Update Response in the JSON Format**

```
{
  -"C1-DealPriceAsgnCommitmentBS"
  {
    -"dealId" -:"5593158511",
    -"modelId" -:"8447774739",
    -"pricingcmtmntdtls"
    {
      -"entityId" -:"2797545007",
      -"entityType" -:"PERS",
      -"commitmentDetails"
      {
        -"priceItemCode" -:"DEAL_PRERANA3",
        -"priceItemDescription" -:"DealPrerana3",
        -"parameterDetails"
        {
          -"parameterCode" -:"COUNTRY",
          -"parameterValue" -:"IND",
        -}
        -"SQIDetails"
        {
          -"serviceQuantityIdentifier" -:"BK-NBR",
          -"sqiValue" -:"12.000000000000000000",
          -"sqiTypeFlg" -:"PRPD",
          -"actionFlag" -:"UPD",
        -}
      -}
    -}
  -}
}
```

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending deal commitments update request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

# Deal Creation, Modification, and View through Inbound Web Service

Oracle Revenue Management and Billing enables you to create and edit a deal through a web service. At a time, you can create or edit only one deal version of a deal. It also enables you to view the details of a deal version through a web service. You can send a request from the external system to do the following through an inbound web service:

- Create a deal with or without using a reference and/or a deal template
- Edit the details of a deal version

- View the details of a deal version
- Add a new deal version to a deal
- Simulate a deal version
- Send a deal version for approval
- Approve a deal version
- Return a deal version to the submitter
- Finalize a deal version
- Accept or reject a deal version
- View the price items assigned to the existing customer or account for which the deal is created
- Select the price items for which you want to inherit, override, or edit pricing and add commitments in the deal version

At a time, you can send a request for any one of the above activities. We have shipped the following two inbound web services in this release:

- **C1-Deal** - This is a SOAP based web service. You can use this web service when you want to send the above requests with respect to deal in the XML format.
- **C1-DealREST** - This is a REST based web service. You can use this web service when you want to send the above requests with respect to deal in the XML or JSON format.

Both these inbound web services call the **C1-DealCreationUpdateIWS** business service. This business service is used to do the following:

- **Create a deal with or without using a reference and/or a deal template** - While creating a deal, you can specify the following details:
  - Entity (i.e. existing or prospect customer or account) for which you want to create the deal
  - Details of the customer, main customer (in case of account), or prospect, such as customer segment, customer tier, division, etc.
  - Basic details of the deal, such as simulation type, review frequency, deal and deal version description, price selection date, usage period, etc.
  - Template details in case you want to create the deal using a deal template
  - Characteristics and terms and conditions for the deal
  - Recommended products for the deal
  - Whether you want to refer another entity or deal for pricing and commitments

To add a deal through the web service, you must set the action flag to **ADD**. On processing the request, the system creates the deal and its deal version in the **PSML** or **DHRC** status.

- **Edit the details of a deal version** - While editing a deal version of a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to edit
  - Set the action flag to **UPD**

During the update operation, the system replaces the deal version data instead of editing it. Therefore, you should provide all details of the deal version including the data that you want to change.

- **View the details of a deal version** - While viewing the details of a deal version, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version whose details you want to view
  - Set the action flag to **READ**

On processing the request, the system displays the details of the deal and its deal version.

- **Add a new deal version to a deal** - While adding a deal version to a deal, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal in which you want to add the version
  - Specify the description for the deal version
  - Specify the method using which you want to create the deal version
  - Set the action flag to **ADD** and the operation flag to **CRDV**

On processing the request, the system creates the deal version in the **PSML** or **DHRC** status.

- **Simulate a deal version** - While simulating a deal version of a deal, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to simulate
- Set the action flag to **UPD** and the operation flag to **SMLD**

On processing the request, the status of the deal version is changed to **SMLD** or **DSML**. If the deal version is in the **SMLD** status, the system displays the deal level financial summary, division level financial summary (if any), and product level financial summary (if any) along with the hierarchy level simulation details.

- **Send a deal version for approval** - While sending a deal version for approval, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to send for approval
- Set the action flag to **UPD** and the operation flag to **SNDP**

On processing the request, the system sends the deal version to the deal approval hierarchy. If the product and/or division level approval is required for the deal, the system sends the deal version to the product and/or division approval hierarchy before it goes to the deal approval hierarchy.

- **Approve a deal version** - While approving a deal version, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to approve
- Set the action flag to **UPD** and the operation flag to **APPR**

On processing the request, the system either approves the deal version or sends the deal to the next level in the approval hierarchy. Only the approver at the respective level in the product, division, or deal approval hierarchy can approve the deal version of the deal.

- **Return the deal version to the submitter** - While requesting the submitter to resubmit the deal version for approval, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to return to the submitter
- Set the action flag to **UPD** and the operation flag to **RETN**

On processing the request, the deal is resubmitted to the submitter to incorporate the changes requested by the approver.

- **Finalize a deal version** - While finalizing a deal version, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to finalize
- Set the action flag to **UPD** and the operation flag to **FNAL**

On processing the request, the deal is finalized and its status is changed to **FNAL**.

- **Accept a deal version** - While accepting a deal version, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to review
- Set the action flag to **UPD** and the operation flag to **ACPT**
- Specify the start date from when the deal version will be effective and end date (if it is a contracted deal) till when the deal version will be effective

On processing the request, the status of the deal is changed to **ACPT**.

- **Reject a deal version** - While rejecting a deal version, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal version that you want to review
- Set the action flag to **UPD** and the operation flag to **REJC**
- Reason why you want to reject the deal version

On processing the request, the status of the deal is changed to **REJC**.

- **Discard a deal version** - While discarding a deal version, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal that you want to discard
- Set the action flag to **UPD** and the operation flag to **DSCR**

On processing the request, the status of the deal is changed to **DSCR**.

- **View the price items assigned to the customer or account for which the deal is created** - While viewing the price items assigned to the existing entity for which the deal is created, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal whose details you want to view
  - Set the action flag to **READ** and the operation flag to **PSEL**

On processing the request, the system lists all price items which are currently assigned to the entity using the respective pricing parameters. It also indicates whether any price item and pricing parameters combination is available in the deal version at the moment for defining the proposed pricing and commitments.

- **Select the price items for which you want to inherit, override, or edit pricing and add commitments in the deal version** - While selecting the price items in a deal version, you need to:
  - Specify the deal version ID or deal ID or deal identifier to determine the deal version which you want to edit
  - Set the action flag to **UPD** and the operation flag to **PSEL**
  - Set the **Include** flag of the price item and pricing parameters combination to **true**

On processing the request, the system enables you to define proposed pricing and commitments for the selected price item and pricing parameters combination.

If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions. For more information about the Deal Management functionality, refer to *Oracle Revenue Management and Billing Banking User Guide*.

## Deal Creation Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the deal creation request in the XML Format.

**Deal Creation Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Creation Request in the XML Format](#) on page 4000 and [Deal Creation Response in the XML Format](#) on page 4002 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal creation request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create a deal for an entity (i.e. existing person, account, or	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	prospect person) in the system. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	
	<b>Note:</b> If you do not specify the value in this tag, by default, the system considers it as an <b>ADD</b> action.	
dealDetails	Used to specify basic information about the deal.	Yes
dealEntityDetails	Used to specify basic information about the entity (i.e. existing person, account, or prospect person) for which you want to create a deal.	Yes
personIdentifierType	Used to indicate the identifier type using which the person is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdentifier</b> tag, you need to specify the <b>personIdentifierType</b> tag. If you specify the <b>personIdentifier</b> tag and do not specify the <b>personIdentifierType</b> tag, the system will throw an error message indicating that the person identifier type field is missing. If you specify the <b>personIdentifierType</b> tag, you need not specify the <b>personId</b> tag.	<b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EPER</b> .
personIdentifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>personIdentifierType</b> tag, you need to specify the <b>personIdentifier</b> tag. If you specify the <b>personIdentifierType</b> tag and do not specify the <b>personIdentifier</b> tag, the system will throw an error message indicating that the person identifier field is missing. If you specify the <b>personIdentifier</b> tag, you need not specify the <b>personId</b> tag.	<b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EPER</b> .
personId	Used to specify the existing person for whom you want to create a deal in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>personId</b> tag, you need not specify the <b>personIdentifierType</b> and the <b>personIdentifier</b> tags.</p> <p>If the <b>personId</b> tag is not valid, the system will throw an error message indicating that the person ID is invalid.</p> <p>Based on the specified value in the <b>personId</b> tag, the system fetches the values of the person's <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> tags.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EPER</b>.</p>
accountIdentifierType	<p>Used to indicate the identifier type using which the account is created in the system.</p> <p><b>Note:</b></p> <p>If you specify the <b>accountIdentifier</b> tag, you need to specify the <b>accountIdentifierType</b> tag.</p> <p>If you specify the <b>accountIdentifier</b> tag and do not specify the <b>accountIdentifierType</b> tag, the system will throw an error message indicating that the account identifier type field is missing.</p> <p>If you specify the <b>accountIdentifierType</b> tag, you need not specify the <b>accountId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EACC</b>.</p>
accountIdentifier	<p>Used to specify the value for the account identifier type.</p> <p><b>Note:</b></p> <p>If you specify the <b>accountIdentifierType</b> tag, you need to specify the <b>accountIdentifier</b> tag.</p> <p>If you specify the <b>accountIdentifierType</b> tag and do not specify the <b>accountIdentifier</b> tag, the system will throw an error message indicating that the account identifier field is missing.</p> <p>If you specify the <b>accountIdentifier</b> tag, you need not specify the <b>accountId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EACC</b>.</p>
accountId	Used to specify the existing account for which you want to create a deal in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>accountId</b> tag, you need not specify the <b>accountIdentifierType</b> and the <b>accountIdentifier</b> tags.</p> <p>If the <b>accountId</b> tag is not valid, the system will throw an error message indicating that the account ID is invalid.</p> <p>Based on the specified value in the <b>accountId</b> tag, the system fetches the account's main person ID and further fetches the values of the <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> tags.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> tag is set to <b>EACC</b>.</p>
prsPerIdentifierType	<p>Used to indicate the identifier type using which the prospect person is created in the system.</p> <p><b>Note:</b></p> <p>If you specify the <b>prsPerIdentifier</b> tag, you need to specify the <b>prsPerIdentifierType</b> tag.</p> <p>If you specify the <b>prsPerIdentifier</b> tag and do not specify the <b>prsPerIdentifierType</b> tag, the system will throw an error message indicating that the prospect person identifier type field is missing.</p> <p>If you specify the <b>prsPerIdentifierType</b> tag, you need not specify the <b>prospectPersonId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>PRSP</b>.</p>
prsPerIdentifier	<p>Used to specify the value for the prospect person identifier type.</p> <p><b>Note:</b></p> <p>If you specify the <b>prsPerIdentifierType</b> tag, you need to specify the <b>prsPerIdentifier</b> tag.</p> <p>If you specify the <b>prsPerIdentifierType</b> tag and do not specify the <b>prsPerIdentifier</b> tag, the system will throw an error message indicating that the prospect person identifier field is missing.</p> <p>If you specify the <b>prsPerIdentifier</b> tag, you need not specify the <b>prospectPersonId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>PRSP</b>.</p>
prospectPersonId	Used to specify the prospect person for whom you want to create a deal in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>prospectPersonId</b> tag, you need not specify the <b>prsPerIdentifierType</b> and the <b>prsPerIdentifier</b> tags.</p> <p>If the <b>prospectPersonId</b> tag is not valid, the system will throw an error message indicating that the prospect person ID is invalid.</p> <p>Based on the specified value in the <b>prospectPersonId</b> tag, the system fetches the values of prospect person's <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> tags.</p>	<p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> tag is set to <b>PRSP</b>.</p>
division	<p>Used to indicate the division to which the entity (i.e. existing person, account, or prospect person) belongs.</p> <p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p> <p>If you do not specify the <b>division</b> tag while specifying the identifier type and identifier of the entity (i.e. existing customer, account, or prospect customer), the system throws an error message indicating that the division is mandatory when identifier type and identifier is provided.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the entity's identifier type and identifier.</p>
dealIdentifier	<p>Used to specify the primary identifier using which you want to create the deal in the system.</p> <p><b>Note:</b></p> <p>You should ensure that every deal has a unique deal identifier.</p> <p>An error message appears when you save a deal with a deal identifier which is already used while creating a deal.</p>	Yes
dealEntityType	<p>Used to indicate the type of entity for which you want to create a deal. The valid values are:</p> <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that you want to create deal for an existing person.</li> </ul>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<div><p><b>Note:</b></p><p>If you specify the <b>dealEntityType</b> tag as <b>EPER</b>, you must specify either the <b>personId</b> tag or the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> tags.</p><p>If you do not specify the <b>personId</b> tag, the system will validate the combination of the values provided in the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p></div> <div><ul style="list-style-type: none"><li>• <b>EACC</b> - Used to indicate that you want to create deal for an existing account.</li></ul></div> <div><p><b>Note:</b></p><p>If you specify the <b>dealEntityType</b> tag as <b>EACC</b>, you must specify either the <b>accountId</b> tag or the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> tags.</p><p>If you do not specify the <b>accountId</b> tag, the system will validate the combination of the values provided in the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the account's main person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p></div> <div><ul style="list-style-type: none"><li>• <b>PRSP</b> - Used to indicate that you want to create deal for a prospect person.</li></ul></div>	

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>dealEntityType</b> tag as <b>PRSP</b>, you must specify either the <b>prospectPersonId</b> tag or the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> tags.</p> <p>If you do not specify the <b>prospectPersonId</b> tag, the system will validate the combination of the values provided in the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the prospect person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the prospect person is not found.</p>	
	<p><b>Note:</b> If you do not specify the value of the <b>dealEntityType</b> tag, the system will throw an error message indicating that the <b>Deal Entity Type Flag</b> field is missing.</p>	
contractedDealFlag	<p>Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Yes
currency	<p>Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.</p> <p><b>Note:</b> You can specify only those currencies which are already defined in the system.</p>	Yes
dealTypeCode	Used to specify the deal type using which you want to create the deal in the system.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify a value in the <b>dealTypeCode</b> tag, the customer segment, customer tier, and division of the specified deal type is validated against the <b>customerSegment</b>, <b>customerTier</b>, and <b>division</b> tags specified in the deal creation request using the <b>GETDEALTYPE</b> business service.</p> <p>If the deal type is validated successfully, the system will continue the deal creation process. Whereas, if the deal type is invalid, the system will throw an error message indicating that the deal type is invalid.</p>	
startDate	<p>Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).</p> <p><b>Note:</b> This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment.</p>	Yes
endDate	Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).	No
simulationTypeFlag	<p>Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• CUST</li> <li>• ACCT</li> <li>• DEAL</li> </ul>	Yes
reviewFrequency	<p>Used to specify the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>6</b> - Used to indicate that you want to monitor the deal usage biannually.</li> <li>• <b>12</b> - Used to indicate that you want to monitor the deal usage annually.</li> <li>• <b>24</b> - Used to indicate that you want to monitor the deal usage in every two years.</li> </ul>	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>1</b> - Used to indicate that you want to simulate the deal every month</li> <li>• <b>3</b> - Used to indicate that you want to simulate the deal quarterly</li> <li>• <b>6</b> - Used to indicate that you want to simulate the deal biannually</li> <li>• <b>12</b> - Used to indicate that you want to simulate the deal annually</li> </ul>	
skipReferenceFlag	<p>Used to specify whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b></p> <p>If you do not specify a value in the <b>skipReferenceFlag</b> tag, by default, the system considers it as <b>false</b>.</p> <p>If you specify the value in the <b>skipReferenceFlag</b> tag as <b>false</b>, you need to specify the reference deal details. The system will then copy the reference deal details using the <b>C1-ReferePriceVolumeAdd</b> business service.</p>	No
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>1</b> - Used to indicate that you want to aggregate the deal data every month</li> <li>• <b>3</b> - Used to indicate that you want to aggregate the deal data quarterly</li> <li>• <b>6</b> - Used to indicate that you want to aggregate the deal data biannually</li> <li>• <b>12</b> - Used to indicate that you want to aggregate the deal data annually</li> </ul>	Yes
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while creating a deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the deal details to create a deal for an existing or prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you do not specify a value in the <b>includeHierarchyFlag</b> tag, by default, the system considers it as <b>false</b>.</p> <p>You can specify the value in the <b>includeHierarchyFlag</b> tag as <b>true</b> only when the <b>dealEntityType</b> tag is set to <b>EPER</b> and the <b>simulationTypeFlag</b> tag is set to <b>CUST</b>.</p> <p>You cannot specify the value in the <b>includeHierarchyFlag</b> as <b>false</b> when the value in the <b>dealEntityType</b> tag is set to <b>PRSP</b> and the <b>simulationTypeFlag</b> tag is set to <b>CUST</b>. In such case, the system will throw an error message indicating that you must set the include hierarchy flag to true when deal entity type is <b>PRSP</b> and simulation type is <b>CUST</b>.</p>	
templateFlag	<p>Use to indicate whether you want the deal to be used as a template while searching references for other deals. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b></p> <p>Users who belong to the user group which has the <b>Change</b> access mode provided for the <b>C1-DEALTEMPLATE</b> application service can create the deal templates in the system.</p> <p>If you specify the value in the <b>templateFlag</b> tag as <b>true</b> and you do not belong to the user group which has the <b>Change</b> access mode provided for the <b>C1-DEALTEMPLATE</b> application service, the system will throw an error message indicating that you do not have security rights to create a deal template.</p>	No
templateReferenceDetails	Used to specify the template deal details which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b> Template deal information such as, <b>Deal type</b>, <b>Price Selection Date</b>, <b>End Date</b>, <b>Simulation Type</b>, <b>Currency</b>, <b>Include Hierarchy</b>, <b>Contracted deal</b>, <b>Review Frequency</b>, <b>Deal Frequency</b>, <b>Skip Reference</b>, <b>Usage Period</b>, <b>Deal Description</b> and <b>Deal Version Description</b> are copied when you use a template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>	
templateDealId	Used to specify the template deal which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>templateDealId</b> tag, you need not specify the <b>templateDealIdentifier</b> and <b>templateModelId</b> tags.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal ID in the system. In such case, you need to specify the <b>templateModelId</b> tag of the template deal instead of the <b>templateDealId</b> tag.</p> <p>If the value specified in the <b>templateDealId</b> tag is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
templateDealIdentifier	Used to specify the primary identifier using which the template deal is created in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>templateDealIdentifier</b> tag, you need not specify the <b>templateDealId</b> and <b>templateModelId</b> tags.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal identifier in the system. In such case, you need to specify the <b>templateModelId</b> tag of the template deal instead of the <b>templateDealIdentifier</b> tag.</p> <p>If the value specified in the <b>templateDealIdentifier</b> tag is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Tag Name	Tag Description	Mandatory (Yes or No)
templateModelId	Used to specify the deal version which you want to use as a template for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<b>Note:</b> If you specify the <b>templateModelId</b> tag, you need not specify the <b>templateDealId</b> and <b>templateDealIdentifier</b> tags.  If the value specified in the <b>templateModelId</b> tag is invalid, the system will throw an error message indicating that the deal template is invalid.	<b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).
copyBasicDetailsFlag	Used to indicate whether you want to copy the basic details from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).
	<b>Note:</b> If you specify the values in the <b>copyPricingFlag</b> and <b>copyUsageFlag</b> tags as <b>false</b> , you need to specify the value in the <b>copyBasicDetailsFlag</b> as <b>true</b> .  Details such as, <b>Deal Information</b> , <b>Deal Products</b> , <b>Deal Terms and Conditions</b> and <b>Deal Characteristics</b> are copied from the template deal when you specify the <b>copyBasicDetailsFlag</b> as <b>true</b> .  The <b>Deal Information</b> copied from the template deal gets overridden by the <b>Deal Information</b> specified by the user while creating a deal through the inbound web service.	
copyPricingFlag	Used to indicate whether you want to copy the price list assignments and price assignments from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the values in the <b>copyBasicDetailsFlag</b> and <b>copyUsageFlag</b> tags as <b>false</b> , you need to specify the value in the <b>copyPricingFlag</b> as <b>true</b> .	
copyUsageFlag	Used to indicate whether you want to copy commitments from the SQL-based billable charges from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Yes (Conditional)
	<b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).	
	<b>Note:</b> If you specify the values in the <b>copyBasicDetailsFlag</b> and <b>copyPricingFlag</b> tags as <b>false</b> , you need to specify the value in the <b>copyUsageFlag</b> as <b>true</b> .	
dealCharacteristics	Used to specify a list of characteristics for the deal.	No
	<b>Note:</b> If you create a deal using a template deal as a reference, the characteristics specified in the <b>dealCharacteristics</b> tag will be added with the template deal characteristics.	
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You can specify only those characteristic types where the characteristic entity is set to <b>Deal</b> .  If the <b>Characteristic Type</b> of the template deal matches with the value specified in the <b>characteristicType</b> tag, the system will override the template deal <b>Characteristic Type</b> .	<b>Note:</b> This data is required while specifying a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying a characteristic for the deal.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying a characteristic for the deal.
dealTermsAndConditionsDetails	Used to specify a list of terms and conditions which you want to associate with the deal.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you create a deal using a template deal as a reference, the deal terms and conditions specified in the <b>dealTermsAndConditionsDetails</b> tag will be added with the template deal terms and conditions.	
termsAndConditionsList	Used to specify the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions.	Yes (Conditional)
	<b>Note:</b> If the value specified in the <b>description</b> tag is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	<b>Note:</b> This data is required while associating terms and conditions with a deal.
termsAndCondition	Used to specify the term and condition which you want to associate with the deal.	Yes (Conditional)
	<b>Note:</b> If the value specified in the <b>termsAndCondition</b> tag is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	<b>Note:</b> This data is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify additional information about the term and condition.	No
adhocTermsAndCondition	Used to specify the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to recommend a list of products for the deal.	No
	<b>Note:</b> If you create a deal using a template deal as a reference, the deal products specified in the <b>productDetailsList</b> tag will be added with the template deal recommended products.	
productCode	Used to specify the product which you want to recommend for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while recommending a product for the deal.
referenceDetails	Used to specify the details of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).

Tag Name	Tag Description	Mandatory (Yes or No)
referenceTypeFlg	Used to indicate the type of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li><b>RPER</b> - Used to indicate that you want to use the deal of a person as a reference to create the deal for the existing person or the prospect person.</li> </ul>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p><b>Note:</b></p> <p>If you specify the <b>skipReferenceFlag</b> tag as <b>false</b> and the <b>dealEntityType</b> tag as <b>EPER</b> or <b>PRSP</b>, you need to ensure that the <b>referenceTypeFlg</b> tag is set to either <b>RPER</b> or <b>RDEL</b>.</p> <p>If you specify the <b>referenceTypeFlg</b> tag as <b>RPER</b>, you must specify the values in either the <b>referPersonId</b> tag or <b>refPersonIdentifierType</b>, <b>refPersonIdentifier</b>, and <b>division</b> tags.</p>	
	<ul style="list-style-type: none"> <li><b>RACC</b> - Used to indicate that you want to use the deal of an account as a reference to create the deal for the existing account.</li> </ul>	
	<p><b>Note:</b></p> <p>If you specify the <b>skipReferenceFlag</b> tag as <b>false</b> and the <b>dealEntityType</b> tag as <b>EACC</b>, you need to ensure that the <b>referenceTypeFlg</b> tag is set to either <b>RACC</b> or <b>RDEL</b>.</p> <p>If you specify the <b>referenceTypeFlg</b> tag as <b>RACC</b>, you must specify the values in either the <b>referAccountId</b> tag or <b>refAccountIdentifierType</b>, <b>refAccountIdentifier</b>, and <b>division</b> tags.</p>	
	<ul style="list-style-type: none"> <li><b>RDEL</b> - Used to indicate that you want to use an existing deal as a reference to create the deal for the existing person, account or prospect person.</li> </ul>	
	<p><b>Note:</b> If you specify the <b>referenceTypeFlg</b> tag as <b>RDEL</b>, you must specify the values in either the <b>referenceDealId</b>, <b>referDealIdentifier</b>, or <b>referenceModelId</b> tag.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b> If you do not specify the value of the <b>referenceTypeFlg</b> tag and the <b>skipReferenceFlag</b> is set as <b>false</b>, the system will throw an error message indicating that the <b>Reference Type Flag</b> field is missing.</p>	
refPersonIdentifierType	Used to specify the identifier type of the person using which the reference deal is created in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>refPersonIdentifier</b> tag, you need to specify the <b>refPersonIdentifierType</b> tag.</p> <p>If you specify the <b>refPersonIdentifier</b> tag and do not specify the <b>refPersonIdentifierType</b> tag, the system will throw an error message indicating that the person identifier type in the reference section is missing.</p> <p>If you specify the <b>refPersonIdentifierType</b> tag, you need not specify the <b>referPersonId</b> tag.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>refPersonIdentifierType</b> tag, you need to specify the <b>refPersonIdentifier</b> tag.</p> <p>If you specify the <b>refPersonIdentifierType</b> tag and do not specify the <b>refPersonIdentifier</b> tag, the system will throw an error message indicating that the person identifier in the reference section is missing.</p> <p>If you specify the <b>refPersonIdentifier</b> tag, you need not specify the <b>referPersonId</b> tag.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
referPersonId	Used to specify the person for whom the reference deal is created.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>referPersonId</b> tag, you need not specify the <b>refPersonIdentifierType</b> and the <b>refPersonIdentifier</b> tags.</p> <p>If the <b>referPersonId</b> tag is not valid, the system will throw an error message indicating that the referred person is invalid.</p> <p>Based on the specified value in the <b>referPersonId</b> tag, the system fetches the reference deal details for the deal creation process.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refAccountIdentifierType	Used to specify the identifier type of the account using which the reference deal is created in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>refAccountIdentifier</b> tag, you need to specify the <b>refAccountIdentifierType</b> tag.</p> <p>If you specify the <b>refAccountIdentifier</b> tag and do not specify the <b>refAccountIdentifierType</b> tag, the system will throw an error message indicating that the account identifier type in the reference section is missing.</p> <p>If you specify the <b>refAccountIdentifierType</b> tag, you need not specify the <b>referAccountId</b> tag.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.</p>
refAccountIdentifier	Used to specify the value of the reference account identifier type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>refAccountIdentifierType</b> tag, you need to specify the <b>refAccountIdentifier</b> tag.</p> <p>If you specify the <b>refAccountIdentifierType</b> tag and do not specify the <b>refAccountIdentifier</b> tag, the system will throw an error message indicating that the account identifier in the reference section is missing.</p> <p>If you specify the <b>refAccountIdentifier</b> tag, you need not specify the <b>referAccountId</b> tag.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.</p>
referAccountId		
	Used to specify the account for which the reference deal is created.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>referAccountId</b> tag, you need not specify the <b>refAccountIdentifierType</b> and the <b>refAccountIdentifier</b> tags.</p> <p>If the <b>referAccountId</b> tag is not valid, the system will throw an error message indicating that the referred account is invalid.</p> <p>Based on the specified value in the <b>referAccountId</b> tag, the system fetches the reference deal details for the deal creation process.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.</p>
referDealIdentifier	<p>Used to specify the primary identifier using which the reference deal is created in the system.</p> <p><b>Note:</b></p> <p>If you specify the <b>referDealIdentifier</b> tag, you need not specify the <b>referenceDealId</b> and <b>referenceModelId</b> tags.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal matches with the value specified in the <b>simulationTypeFlag</b> tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>Also, you cannot use a deal whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the <b>referenceModelId</b> tag of the reference deal instead of the <b>referDealIdentifier</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referenceDealId	Used to specify the existing deal which you want to use as a reference.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>referenceDealId</b> tag, you need not specify the <b>referDealIdentifier</b> and <b>referenceModelId</b> tags.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal matches with the value specified in the <b>simulationTypeFlag</b> tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>Also, you cannot use a deal whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the <b>referenceModelId</b> tag of the reference deal instead of the <b>referenceDealId</b> tag.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referenceModelId	Used to specify the deal version which you want to use as a reference.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You need to specify the <b>referenceModelId</b> if the reference deal has multiple deal versions.</p> <p>If you specify the <b>referenceModelId</b> tag, you need not specify the <b>referDealIdentifier</b> and <b>referenceDealId</b> tags.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal version matches with the value specified in the <b>simulationTypeFlag</b> tag of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p> <p>Also, you cannot use a deal version whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal version is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referUsageSw	<p>Used to indicate whether you want to copy commitments from the SQL-based billable charges of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>If you do not specify a value in the <b>referUsageSw</b> tag, by default, the system considers it as <b>false</b>.</p> <p>You should specify values in either <b>referUsageSw</b> or <b>referPriceSw</b> tag or both.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referPriceSw	<p>Used to indicate whether you want to copy the price list assignments and price assignments of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify a value in the <b>referPriceSw</b> tag, by default, the system considers it as <b>false</b> . You should specify values in either <b>referUsageSw</b> or <b>referPriceSw</b> tag or both.	
includeChildHierarchy	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts of the reference deal while creating the deal for an existing or prospect person. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Yes (Conditional)
	<b>Note:</b> By default, the system considers all child and grandchild persons and their accounts in the customer hierarchy while specifying a reference deal for an existing person irrespective of the values provided in the <b>includeChildHierarchy</b> tag.	<b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person.
division	Used to specify the division to which the reference person belongs.	Yes (Conditional)
		<b>Note:</b> This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the reference deal identifier type and identifier.

Once the deal is created, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealResponse	Displays whether the deal creation request is successfully processed or not.
message	Displays the message generated for the deal response.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
dealId	Displays the identification value of the deal.
modelId	Displays the identification value of the deal version.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.

Tag Name	Tag Description
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) for which the deal is created.
createdDate	Displays the date when the deal is created in the system.
status	Displays the current status of the deal.
dealVersionStatus	Displays the current status of the deal version.

**Deal Update Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Update Request in the XML Format](#) on page 4003 and [Deal Update Response in the XML Format](#) on page 4006 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to update a deal. The valid value is: <ul style="list-style-type: none"><li>UPD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in the <b>actionFlag</b> tag, by default, the system considers it as an <b>ADD</b> action.  The <b>RM</b> (i.e. Relationship Manager) can update a deal only when it is in the <b>DRAF</b> , <b>PSML</b> , <b>PFAP</b> , <b>SMLD</b> , <b>DSML</b> , or <b>RFAP</b> status.	
dealOperation	Used to specify the operation that you want to perform while updating the deal.	No
operationFlag	Used to specify the operation that you want to perform on the deal while creating the update request. The valid values are: <ul style="list-style-type: none"><li>APPR</li><li>ACPT</li></ul>	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<div><ul style="list-style-type: none"><li>• REJC</li><li>• FNAL</li><li>• SMLD</li><li>• SNDP</li><li>• RETN</li><li>• PSEL</li><li>• CRDV</li><li>• DSCR</li></ul></div> <div><b>Note:</b> You cannot specify the <b>operationFlag</b> tag as <b>DSCR</b> if the status of the deal version is <b>FORC</b>, <b>PROR</b>, <b>REJC</b>, <b>FNAL</b>, or <b>ACPT</b>.</div>	

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>SMLD</b>, then, the deal version gets simulate.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>SNDP</b>, then, the deal version is send for the approval.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>APPR</b>, then, the deal version is approved or sent to next level in the approval hierarchy.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>RETN</b>, then, the submitter is requested to resubmit the deal version for the approval.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>FNAL</b>, then, the deal version gets finalized.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>ACPT</b>, then, the deal version is accepted.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>REJC</b>, then, the deal version is rejected.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>DSCR</b>, then, the deal version is discarded.</p> <p>To select the price item for which you want to inherit, override, or edit pricing and commitments in the deal version you need to set the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>PSEL</b>, and <b>includeFlag</b> of price item and pricing parameter as <b>true</b>.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>APPR</b>, <b>SNDP</b> or <b>RETN</b>, then, the system will check the value of <b>dealIdentifier</b> and <b>dealId</b>.</p> <p>If you specify the value of <b>dealId</b> as blank and specify the value of <b>dealIdentifier</b> then the system will fetch <b>dealId</b> and <b>modelId</b>.</p> <p>If you specify the value of <b>actionFlag</b> tag as <b>UPD</b> and <b>operationFlag</b> tag as <b>FNAL</b> or <b>REJC</b>, then, the system will check value of <b>dealIdentifier</b> and <b>dealId</b>.</p> <p>If you specify the value of <b>dealId</b> as blank and specify the value of <b>dealIdentifier</b> then the system will fetch <b>dealId</b>.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal identifier using which you want to update the deal in the system.	Yes (Conditional)
	<b>Note:</b> You cannot update the value specified in the <b>dealIdentifier</b> tag if the status of the deal is <b>PSML</b> .	<b>Note:</b> This data is required if the do not specify value of <b>dealId</b> tag.
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional)
		<b>Note:</b> This data is required if the do not specify value of <b>dealIdentifier</b> tag.
modelId	Used to specify the deal version for which you want to create the update request.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of operation flag is <b>APPR</b> and multiple deal version exists in the system.
dealAcceptEffStartDate	Used to specify the date from when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>ACPT</b> .
dealAcceptEffEndDate	Used to specify the date till when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>ACPT</b> .
comments	Used to specify the information about accepting or rejecting the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>REJC</b> .
rejectReasonCode	Used to specify the reason why you want to reject the deal in the system.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of operation flag is set to <b>REJC</b> .
dealVersionDescription	Used to specify the deal version description.	No
dealVersionCreationFlag	Used to indicate the method using which you want to create a new deal version. The valid values are: <ul style="list-style-type: none"> <li><b>CVOC</b> - Used to indicate that you want to copy the customer hierarchy without the pricing and commitment details from the current deal version to the new deal version.</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>CVWC</b> - Used to indicate that you want to copy the customer hierarchy and pricing and commitment details from the current deal version to the new deal version.</li> <li><b>FLHR</b> - Used to indicate that you want to derive the latest customer hierarchy from the system.</li> </ul> <div> <b>Note:</b>            In this case, you will have to select the price items, assign the required price lists to the entities, override or edit the required proposed pricing, and add commitments from scratch in the new deal version.             Also, the system will include all the prospect persons and accounts associated with the customer in the customer hierarchy of the deal version.         </div>	
priceItemGroupSelection	Used to specify the details of price item group selection.	No
priceItemSelectionList	Used to specify a list of price item selection.	No
priceItemCode	Used to specify the price item code which is associated with the deal that you want to update.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
priceItemInfo	Used to specify the information of the price item that you want to update.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
parameterInfo	Used to specify the information of the parameters which are associated with the price item.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
assignmentLevel	Used to indicate the level at which the price item pricing is defined in the person hierarchy.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
hierarchyDetails	Used to specify the details of the person hierarchy.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.

Tag Name	Tag Description	Mandatory (Yes or No)
includeFlag	Used to indicate the flag value of the price item pricing. The valid value are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while updating the price item associated with the deal.
	<b>Note:</b> You have to set the <b>includeFlag</b> of the price item and pricing as <b>true</b> .	
dealDetails	Used to specify the details for a deal.	No
dealEntityDetails	Used to specify the details of the entity for which you want to update the deal.	No
personIdentifierType	Used to indicate the identifier type of the existing person based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifier</b> tag.
personIdentifier	Used to specify the existing person identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifierType</b> tag.
personId	Used to specify the existing person whose deal you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifier</b> tag.
accountIdentifierType	Used to indicate the identifier type of the existing person account based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>accountIdentifier</b> tag.
accountIdentifier	Used to specify the existing person account identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>accountIdentifierType</b> tag.
accountId	Used to specify the existing person account whose deal you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>accountIdentifier</b> tag.
prsPerIdentifierType	Used to indicate the identifier type of the prospect person based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>prsPerIdentifier</b> tag.
prsPerIdentifier	Used to specify the prospect person identifier.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required if you specify the <b>prsPerIdentifierType</b> tag.
prospectPersonId	Used to specify the prospect person whose deal you want to update.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>prsPerIdentifier</b> tag.
division	Used to indicate the division to which the person belongs.	Yes (Conditional) <b>Note:</b> This data is required if you specify the <b>personIdentifier</b> and <b>personIdentifierType</b> tags.
dealIdentifier	Used to specify the deal identifier for which you want to update the deal.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealId</b> or <b>dealversionId</b> tag.
dealInformation	Used to specify the information about the deal which you want to update for the entity.	Yes
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealversionId</b> tag.
modelId	Used to specify the model for which you want to create the update request.	Yes (Conditional)
dealEntityType	Used to indicate the entity type of the entity (i.e. existing person, account, or prospect person) whose deal details you want to update. The valid values are: <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that you want to update deal of an existing person.</li> </ul>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<div><p><b>Note:</b></p><p>If you specify the <b>dealEntityType</b> tag as <b>EPER</b>, you must specify either the <b>personId</b> tag or the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> tags.</p><p>If you do not specify the <b>personId</b> tag, the system will validate the combination of the values provided in the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the person ID and continue the deal update process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p></div> <div><ul style="list-style-type: none"><li>• <b>EACC</b> - Used to indicate that you want to update deal of an existing account.</li></ul></div> <div><p><b>Note:</b></p><p>If you specify the <b>dealEntityType</b> tag as <b>EACC</b>, you must specify either the <b>accountId</b> tag or the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> tags.</p><p>If you do not specify the <b>accountId</b> tag, the system will validate the combination of the values provided in the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the account's main person ID and continue the deal update process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p></div> <div><ul style="list-style-type: none"><li>• <b>PRSP</b> - Used to indicate that you want to update deal of a prospect person.</li></ul></div>	

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>dealEntityType</b> tag as <b>PRSP</b>, you must specify either the <b>prospectPersonId</b> tag or the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> tags.</p> <p>If you do not specify the <b>prospectPersonId</b> tag, the system will validate the combination of the values provided in the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> tags. If the combination is valid, the system will derive the prospect person ID and continue the deal update process. Whereas, if the combination is invalid, the system will throw an error message indicating that the prospect person is not found.</p>	
	<p><b>Note:</b></p> <p>If you do not specify the value of the <b>dealEntityType</b> tag, the system will throw an error message indicating that the <b>Deal Entity Type Flag</b> field is missing.</p> <p>You cannot update the value specified in the <b>dealEntityType</b> tag if the status of the deal is <b>DRAF</b>.</p>	
customerSegment	Used to specify the business component to which the entity (i.e. the existing person or account, prospect person) belongs.	No
	<p><b>Note:</b> You cannot update the value specified in the <b>customerSegment</b> tag if the status of the deal is <b>DRAF</b> or <b>PSML</b>.</p>	
customerTier	Used to specify the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.	No
	<p><b>Note:</b> You cannot update the value specified in the <b>customerTier</b> tag if the status of the deal is <b>DRAF</b> or <b>PSML</b>.</p>	
division	Used to specify the division to which the entity (i.e. existing person, account, or prospect person) belongs.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p> <p>You cannot update the value specified in the <b>division</b> tag if the status of the deal is <b>DRAF</b> or <b>PSML</b>.</p>	
accessGrp	<p>Used to indicate the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).</p> <p><b>Note:</b></p> <p>The value specified in the <b>accessGrp</b> tag should be associated with the <b>division</b> to which the entity belongs.</p> <p>You cannot update the value specified in the <b>accessGrp</b> tag if the status of the deal is <b>DRAF</b> or <b>PSML</b>.</p>	No
dealEntityId	Used to specify the entity (i.e. existing person, account, or prospect person) whose deal details you want to update.	No
contractedDealFlag	<p>Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> You cannot update the value specified in the <b>contractedDealFlag</b> tag if the status of the deal is <b>PSML</b>.</p>	No
currency	<p>Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.</p> <p><b>Note:</b></p> <p>You can specify only those currencies which are already defined in the system.</p> <p>You cannot update the value specified in the <b>currency</b> tag if the status of the deal is <b>PSML</b>.</p>	No
dealTypeCode	Used to specify the deal type using which you want to create request to update the deal in the system.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You cannot update the value specified in the <b>dealTypeCode</b> tag if the status of the deal is <b>PSML</b> .	
startDate	Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).  <b>Note:</b> This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment.  You cannot update the value specified in the <b>startDate</b> tag if the status of the deal is <b>PSML</b> .	No
endDate	Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).  <b>Note:</b> You cannot update the value specified in the <b>endDate</b> tag if the status of the deal is <b>PSML</b> .	No
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"><li>• CUST</li><li>• ACCT</li><li>• DEAL</li></ul> <b>Note:</b> You cannot update the value specified in the <b>simulationTypeFlag</b> tag if the status of the deal is <b>PSML</b> .	Yes
reviewFrequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. <ul style="list-style-type: none"><li>• Biannually</li><li>• Monthly</li><li>• Quarterly</li><li>• Yearly</li></ul>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
skipReferenceFlag	Used to indicate whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>false</b> .	
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> <li>• biannually</li> <li>• monthly</li> <li>• quarterly</li> <li>• yearly</li> </ul>	Yes
includeHierarchyFlag	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while updating the deal. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Yes (Conditional)
	<b>Note:</b> If the entity is prospect person, then you have specify the value of <b>includeHierarchyFlag</b> to <b>true</b> .  If you specify the value of <b>includeHierarchyFlag</b> tag as <b>true</b> and <b>dealEntityType</b> is set as <b>ACCT</b> or <b>DEAL</b> , then, the system will throw an error.  If you specify the value of <b>includeHierarchyFlag</b> tag as <b>false</b> and <b>dealEntityType</b> as <b>PRSP</b> , then, the system will throw an error.	
status	Used to indicate the current status of the deal. The valid values are: <ul style="list-style-type: none"> <li>• DRAFT</li> <li>• PSML</li> <li>• PFAP</li> <li>• SMLD</li> <li>• DSML</li> </ul>	

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>RFAP</li> </ul> <p><b>Note:</b></p> <p>If you specify the value of the deal <b>status</b> as <b>DRFT</b>, then, you cannot update the details of <b>dealEntityType</b>, <b>customerSegment</b>, <b>customerTier</b>, <b>accessGrp</b>, <b>division</b>, and <b>templatedeal</b> else the system will throw an error.</p> <p>If you specify the value of the deal <b>status</b> as <b>PSML</b>, then, you cannot update the details of <b>startDate</b>, <b>createdDate</b>, <b>contractedDealFlag</b>, <b>dealIdentifier</b>, <b>templateDealId</b>, <b>dealTypeCode</b>, <b>dealEntityCode</b>, <b>status</b>, <b>customerTier</b>, <b>customerSegment</b>, <b>accessGrp</b>, <b>division</b>, <b>currency</b>, <b>SimulationTypeFlag</b>, <b>priceSelectionDate</b>, <b>dealFrequency</b>, <b>usagePeriod</b>, <b>templateFlag</b>, <b>skipReferenceFlag</b> or <b>includeHierarchyFlag</b> else the system will throw an error.</p> <p>If you specify the value of the deal <b>status</b> as <b>PFAP</b>, <b>SMLD</b>, <b>DSML</b> or <b>RFAP</b> then, you cannot update the details of <b>dealInformation</b> and <b>dealCharacteristics</b>.</p> <p>If the deal status is set as <b>DRFT</b>, <b>PSML</b>, <b>PFAP</b>, <b>SMLD</b>, <b>DSML</b> or <b>RFAP</b> then, the <b>termsAndCondition</b> can be updated only one who creates the deal, else the system will throw an error.</p> <p>If the deal is approved, then, you cannot update the <b>dealInformation</b>, <b>dealCharacteristics</b>, <b>termsAndCondition</b>, and <b>dealProduct</b> else the system will throw an error.</p>	
dealVersionStatus	Used to indicate the current status of the deal version (model).	No
templateFlag	<p>Use to indicate whether you want the deal to be used as a template while updating the other deals.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> The system will check whether the user has access to update the template deal.</p>	Yes (Conditional)
templateReferenceDetails	Used to specify the details of the template reference of the deal.	No
templateDealId	Used to specify the particular deal whose details you want to use as a template for other deals.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you do not specify the <b>templateDealIdentifier</b> or <b>templateModelId</b> tags, you need to specify the <b>templateDealId</b> tag.</p> <p>If you specify the values of <b>templateDealId</b>, <b>templateDealIdentifier</b>, and <b>templateModelId</b> tags and the value for <b>copyUsageFlag</b>, <b>copyBasicDetailsFlag</b>, and <b>copyPricingFlag</b> tags is set as <b>false</b>, then, the system will throw an error. The value of <b>copyUsageFlag</b>, <b>copyBasicDetailsFlag</b>, or <b>copyPricingFlag</b> tag should be set to <b>true</b>.</p> <p>If you specify <b>templateDealIdentifier</b> or <b>templateDealId</b> tag and there are multiple deal versions then the system will throw an error.</p> <p>If the value of <b>templateDealIdentifier</b> or <b>templateDealId</b> tag is not found in the system then it will throw an error.</p>	<p><b>Note:</b> This data is required while specifying the template deal.</p>
templateDealIdentifier	<p>Used to specify the deal identifier whose details you want to use as a template for other deals.</p> <p><b>Note:</b> If you do not specify the <b>templateDealId</b> or <b>templateModelId</b> tag, you need to specify the <b>templateDealIdentifier</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the template deal.</p>
templateModelId	<p>Used to specify the template deal version whose details you want to use as a template for other deals.</p> <p><b>Note:</b> If you do not specify the <b>templateDealId</b> or <b>templateDealIdentifier</b> tag, you need to specify the <b>templateModelId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the template deal.</p>
copyBasicDetailsFlag	<p>Used to indicate whether you want to use basic details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> If you specify the <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> tags, you need to set the value of the <b>copyBasicDetailsFlag</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the template deal.</p>
copyPricingFlag	<p>Used to indicate whether you want to use pricing details of the deal to update a deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the template deal.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>false</li></ul>	
	<b>Note:</b> If you specify the value for <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> tags, you need to set the value of the <b>copyPricingFlag</b> tag.	
copyUsageFlag	Used to indicate whether you want to use usage details of the deal to update a deal. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the template deal.
	<b>Note:</b> If you specify the value for <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> tags, you need to set the value of the <b>copyUsageFlag</b> tag.  If the <b>templateDealId</b> , <b>templateDealIdentifier</b> , and <b>templateModelId</b> is entered with <b>copyUsageFlag</b> value as <b>true</b> , then system will copy the <b>dealinformation</b> , <b>dealproducts</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealCharacteristics</b> from the deal.  If you specify the value for <b>dealinformation</b> tag, then, it overrides the value of the template <b>dealinformation</b> .  If you specify the value for <b>dealCharacteristics</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealproducts</b> , then, it will add the value along with template <b>dealCharacteristics</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealproducts</b> .	
dealCharacteristics	Used to specify a list of characteristics of the deal.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.
dealTermsAndConditionsDetails	Used to specify the details of the terms and conditions of the deal.	No
termsAndConditionsList	Used to specify a list of the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions of the deal.	No
termsAndCondition	Used to indicate the terms and conditions which you want to associate with the deal.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in the <b>termsAndCondition</b> tag, then, the system will throw an error.	<b>Note:</b> This field is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify the description of terms and conditions for the deal.	Yes (Conditional)
		<b>Note:</b> This field is required while associating terms and conditions with a deal.
adhocTermsAndCondition	Used to indicate the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to specify a list of product details of the deal.	No
productCode	Used to specify the product code.	No
referenceDetails	Used to specify the details of the deal that you want to use as reference to update the deal.	No
referenceTypeFlg	Used to indicate the reference type of the deal that you want to use as reference to update the deal for the entity. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• RPER</li> <li>• RACC</li> <li>• RDEL</li> </ul>	<b>Note:</b> This data is required while specifying the reference deal.
	<b>Note:</b> If you specify the value in the <b>skipReferenceFlag</b> as <b>false</b> , then, you need to specify the value in the <b>referenceTypeFlg</b> tag.	
refPersonIdentifierType	Used to specify the reference person identifier type based on which you want to update the deal for the entity.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the reference deal of the person.

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RPER</b> , then, you need to specify the <b>refPersonIdentifierType</b> tag.	
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RPER</b> , then, you need to specify the <b>refPersonIdentifier</b> tag.	<b>Note:</b> This data is required while specifying the reference deal of the person.
referPersonId	Used to specify the reference person using which you want to update the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RPER</b> , then, you need to specify the <b>referPersonId</b> tag.	<b>Note:</b> This data is required while specifying the reference deal of the person.
refAccountIdentifierType	Used to specify the reference account identifier type based on which you want to update the deal for the entity.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RACC</b> , then, you need to specify the <b>refAccountIdentifierType</b> tag.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
refAccountIdentifier	Used to specify the value of the reference account identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RACC</b> , then, you need to specify the <b>refAccountIdentifier</b> tag.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
referAccountId	Used to specify the reference account using which you want to update the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RACC</b> , then, you need to specify the <b>referAccountId</b> tag.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
referDealIdentifier	Used to specify the value of the reference deal identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RDEL</b> , then, you need to specify the <b>referDealIdentifier</b> tag.	<b>Note:</b> This data is required while specifying the reference deal.
referenceDealId	Used to specify the reference deal using which you want to update the deal.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RDEL</b>, then, you need to specify the <b>referenceDealId</b> tag.</p> <p>If you do not specify the value in the <b>referenceDealId</b>, <b>referDealIdentifier</b>, and <b>referenceModelId</b> tags, then, the system will throw an error.</p> <p>If you specify the values in the <b>referenceDealId</b>, <b>referDealIdentifier</b>, and <b>referenceModelId</b> tags, then, the system will check whether the values are valid or not.</p>	<p><b>Note:</b> This data is required while specifying the reference deal.</p>
referenceModelId	<p>Used to specify the reference deal version using which you want to update the deal.</p> <p><b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> tag as <b>RDEL</b>, then, you need to specify the <b>referenceModelId</b> tag.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
referUsageSw	<p>Used to indicate whether you want to use reference usage details to update the deal.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>false</b>.</p> <p>You need to specify the value of either <b>referUsageSw</b> or <b>referPriceSw</b> as <b>true</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
referPriceSw	<p>Used to indicate whether you want to use reference pricing details to update the deal.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>false</b>.</p> <p>You need to specify the value of either <b>referUsageSw</b> or <b>referPriceSw</b> as <b>true</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
includeChildHierarchy	<p>Used to indicate whether you want to add child hierarchy in the deal of the person.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> By default, the value is set to <b>false</b>.</p>	<p>Yes (Conditional)</p>

Tag Name	Tag Description	Mandatory (Yes or No)
division		

Once the deal is updated, all the details of deal are listed in the above mentioned tags along with the following:

Tag Name	Tag Description
dealResponse	Indicates whether the deal update request is successfully processed or not.
message	Displays the message of successful deal update.
dealId	Displays the deal ID.
modelId	Displays the model ID.
createdDate	Displays the date when the deal is created.
acceptanceDate	Displays the date when the deal is accepted.
finalizedDate	Displays the date when the deal is finalized.
effectiveStartDate	Displays the date from when the deal is effective.
effectiveEndDate	Displays the date till when the deal is effective.
reviewedDate	Displays the date when the deal is reviewed.
dealSimulationDetails	Displays the simulation details of the deal.
dealfinancialsummarylist	Displays a list of the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDealFinancialSummary	Displays the summary of the original financial summary at the deal level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the original cost calculated at the deal level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = ( Revenue - Cost)*100/ Revenue
proposedDealFinancialSummary	Displays the summary of the proposed financial at the deal level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the proposed cost calculated at the deal level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:

Tag Name	Tag Description
	Profit = Revenue - Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage at the recommend deal level from the price item pricing and price assignments.
divisionFinancialSummaryDetails	Displays the summary details of the financial at the division level.
division	Displays the division associated with the deal.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummary	Displays the summary of the original financial at the division level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the original cost calculated at the division level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
proposedDivisionFinancialSummary	Displays the summary of the proposed financial at the division level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the proposed cost calculated at the proposed level.

Tag Name	Tag Description
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the recommended cost calculated at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the recommended profit and proposed profit in percentage. at the division level from the price item pricing and price assignments.
productFinancialSummaryDetails	Displays the summary details of the financial at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Displays the product.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays the summary of the original financial at the product level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the product level.
cost	Displays the original cost calculated at the product level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the product level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue

Tag Name	Tag Description
proposedProductDivisionFinancialSummary	Displays the summary of the financial at the proposed product division level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the proposed product division level.
cost	Displays the cost calculated at the proposed product division level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the proposed product division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the profit created in percentage at the proposed product division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the financial at the recommend deal level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the recommend deal level.
cost	Displays the cost calculated at the recommend deal level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the recommend deal division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the profit created in percentage at the recommend deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage. at the recommend deal level from the price item pricing and price assignments.
hierarchySimulationDetails	Displays the details of the hierarchy simulation.
entityType	Displays the entity type.
entityId	Displays the entity Id of the child.
parentEntityId	Displays the entity Id of the parent.
status	Indicates the status of the deal.
revenueVariation	Displays the average revenue generated from a person or account.
proposedRevenue	Displays the revenue generated from the proposed price item pricing and commitments.
proposedCost	Displays the overall cost of the proposed price item based on the usage.
originalRevenue	Displays the revenue generated through the original price item pricing and commitments.
originalCost	Displays the overall cost of the original price item based on the usage.

## Deal View Request and Response - Tags in the XML Format

**Note:** We recommend you to refer the topics [Deal View Request in the XML Format](#) on page 4009 and [Deal View Response in the XML Format](#) on page 4010 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the deal details of an entity (i.e. existing person, account, or prospect person). The valid value is: <ul style="list-style-type: none"><li>• READ</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this tag, by default, the system considers it as an <b>ADD</b> action.	
dealOperation	Used to specify the operation that you want to perform while viewing the deal details.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> You need to specify the <b>dealOperation</b> tag only when you want to view the price items using which the deal is simulated.	
operationFlag	Used to indicate that you want to create request to view the price items offered in the deal. The valid value is: <ul style="list-style-type: none"> <li>PSEL</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required for viewing the price items offered in the deal.
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system. <b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> or the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealIdentifier</b> tag.	Yes (Conditional) <b>Note:</b> This data is required for viewing the price items offered in the deal.
dealId	Used to specify the deal whose price items you want to view. <b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> or the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	Yes (Conditional) <b>Note:</b> This data is required for viewing the price items offered in the deal.
modelId	Used to specify the deal version whose price items you want to view. <b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> or the <b>dealId</b> tags.	Yes (Conditional) <b>Note:</b> This data is required for viewing the price items offered in the deal.
dealDetails	Used to specify the details of the deal. <b>Note:</b> You need to specify the <b>dealDetails</b> tag only when you want to view the deal details other than the price items offered in the deal (i.e. when you do not specify the <b>dealOperation</b> tag).	No
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> or the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealIdentifier</b> tag.	<b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.
dealId	Used to specify the deal whose details you want to view.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> or the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.
modelId	Used to specify the deal version whose details you want to view.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> or the <b>dealId</b> tags.	<b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.

Once the deal view request is created, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealResponse	Indicates whether the deal view request is successfully processed or not.
message	Displays the message generated for the deal response.
dealAcceptEffStartDate	Displays the date when the deal is accepted in the system.
	<b>Note:</b> The data in this tag appears only when the deal is accepted in the system.
dealAcceptEffEndDate	Displays the date till when you can finalize the deal in the system.
	<b>Note:</b> The data in this tag appears only when the deal is accepted in the system and awaiting finalization.
comments	Displays information about deal acceptance or rejection.
rejectReasonCode	Displays the reason why the deal is rejected in the system.
dealVersionDescription	Displays description of the deal version created for the deal.
dealVersionCreationFlag	Indicates the information using which the deal version is created. The valid values are:

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• <b>CVOC</b> - Indicates that the deal version is created without copying the changes done in the current deal.</li> <li>• <b>CVWC</b> - Indicates that the deal version is created by copying the changes done in the current deal.</li> <li>• <b>FLHR</b> - Indicates that the deal version is created by using the latest hierarchy of the entity from the system for which the current deal is created.</li> </ul>
priceItemGroupSelection	<p>Displays the list of price items offered in the deal.</p> <p><b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b>).</p>
priceItemSelectionList	<p>Displays information about the price item offered in the deal.</p> <p><b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b>).</p>
priceItemCode	<p>Displays the price item.</p> <p><b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b>).</p>
priceItemInfo	<p>Displays the concatenated string of information about the price item.</p> <p><b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b>).</p>
parameterInfo	<p>Displays the parameters using which the pricing is defined for the price item.</p> <p><b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b>).</p>
assignmentLevel	<p>Indicates the level at which the price item pricing is defined in the entity (i.e. exiting person, account, or prospect person) hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account Agreed</b> - Indicates price item pricing is agreed for the account.</li> <li>• <b>Account Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the account.</li> <li>• <b>Account Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account.</li> <li>• <b>Customer Agreed</b> - Indicates price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> - Indicates price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> - Indicates price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Customer Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Parent Customer Agreed</b> - Indicates price item pricing is agreed for the parent customer in the customer hierarchy.</li> </ul>

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• <b>Parent Customer Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> <li>• <b>Product Default Price List</b> - Indicates product defined in the price list is available in the default price list.</li> </ul>
	<b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b> ).
hierarchyDetails	Displays the root level and/or non-root level hierarchy entities to which the price item belongs.
	<b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b> ).
includeFlag	Indicates whether the price item is included in the deal for simulation. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
	<b>Note:</b> The data in this tag appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> tag is set to <b>PSEL</b> ).
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EPER</b> .
personIdentifier	Displays the value of the person identifier type.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EPER</b> .
personId	Displays the existing person for whom the deal is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EPER</b> .
accountIdentifierType	Indicates the identifier type using which the account is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EACC</b> .
accountIdentifier	Displays the value of the account identifier type.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EACC</b> .
accountId	Displays the existing account for which the deal is created in the system.

Tag Name	Tag Description
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>EACC</b> .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system. <b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>PRSP</b> .
prsPerIdentifier	Displays the value of the prospect person identifier type. <b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>PRSP</b> .
prospectPersonId	Displays the prospect person for whom the deal is created in the system. <b>Note:</b> The value in this tag appears only when the value specified in the <b>dealEntityType</b> tag is <b>PRSP</b> .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
modelId	Displays the identification value of the deal version.
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> <li>• <b>EPER</b> - Indicates that the deal is created for an existing person.</li> <li>• <b>EACC</b> - Indicates that the deal is created for an existing account.</li> <li>• <b>PRSP</b> - Indicates that the deal is created for a prospect person.</li> </ul>
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
currency	Indicates the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.
dealTypeCode	Indicates the deal type using which the deal is created in the system.

Tag Name	Tag Description
startDate	Displays the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>• CUST</li> <li>• ACCT</li> <li>• DEAL</li> </ul>
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> <li>• 6 - Used to indicate that you want to monitor the deal usage biannually.</li> <li>• 12 - Used to indicate that you want to monitor the deal usage annually.</li> <li>• 24 - Used to indicate that you want to monitor the deal usage in every two years.</li> </ul>
dealDescription	Displays the description for the deal.
dealVersionDescription	Displays the description for the deal version.
dealFrequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Used to indicate that you want to simulate the deal every month</li> <li>• 3 - Used to indicate that you want to simulate the deal quarterly</li> <li>• 6 - Used to indicate that you want to simulate the deal biannually</li> <li>• 12 - Used to indicate that you want to simulate the deal annually</li> </ul>
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Used to indicate that you want to aggregate the deal data every month</li> <li>• 3 - Used to indicate that you want to aggregate the deal data quarterly</li> <li>• 6 - Used to indicate that you want to aggregate the deal data biannually</li> <li>• 12 - Used to indicate that you want to aggregate the deal data annually</li> </ul>
includeHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy are included in the deal or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
templateFlag	Indicates whether the deal is used as a template while searching references for other deals. The valid values are: <ul style="list-style-type: none"> <li>• true</li> </ul>

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>false</li> </ul>
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	<p>Indicates whether the basic details from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
copyPricingFlag	<p>Indicates whether the price list assignments and price assignments from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
copyUsageFlag	<p>Indicates whether the commitments from the SQI-based billable charges from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealCharacteristics	Displays the list of characteristics of the deal.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions that are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
description	Displays the description of the terms and conditions.
termsAndCondition	Indicates the term and condition which is associated with the deal.
termsAndConditionText	Displays additional information about the term and condition.
adhocTermsAndCondition	Displays the adhoc terms and conditions associated with the deal.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created in the system.
referenceTypeFlg	<p>Indicates the type of the reference deal using which the deal is created in the system. The valid values are:</p> <ul style="list-style-type: none"> <li><b>RPER</b> - Indicates that the deal is created by using the deal of an existing person as a reference.</li> <li><b>RACC</b> - Indicates that the deal is created by using the deal of an existing account as a reference.</li> <li><b>RDEL</b> - Indicates that the deal is created by using an existing deal as a reference.</li> </ul>

Tag Name	Tag Description
refPersonIdentifierType	Displays the identifier type of the person using which the reference deal is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RPER</b> .
refPersonIdentifier	Displays the value of the reference person identifier type.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RPER</b> .
referPersonId	Displays the person for whom the reference deal is created.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RPER</b> .
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
refAccountIdentifier	Displays the value of the reference account identifier type.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
referAccountId	Display the account for which the reference deal is created.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referenceDealId	Displays the existing deal which is used as a reference to create the deal.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	<b>Note:</b> The value in this tag appears only when the value specified in the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal. The valid values are:

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
includeChildHierarchy	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealfinancialsummarylist	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> <li>APPR</li> <li>EROR</li> <li>INIT</li> <li>UNAP</li> </ul>
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.

Tag Name	Tag Description
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the division level in percentage (%).

Tag Name	Tag Description
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the product level in percentage (%).

Tag Name	Tag Description
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
status	Indicates the approval status of the price assignments for the respective entity (i.e. person or account).
revenueVariation	Displays the difference in the original and the proposed revenues at the entity level in percentage (%).
proposedRevenue	Displays the revenue generated at the entity level from the proposed price list assignments and price assignments.
proposedCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.
originalRevenue	Displays the revenue generated at the entity level from the original price list assignments and price assignments.
originalCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.

## Deal Discard through Inbound Web Service

Oracle Revenue Management and Billing enables you to discard a deal and its versions through a web service. You can send a request to discard only one deal at a time. The **C1-DealCreationUpdateIWS** business service is enhanced to provide the ability to discard a deal. While discarding a deal, you need to:

- Specify the deal version ID or deal ID or deal identifier to determine the deal that you want to discard
- Set the action flag to **UPD** and the operation flag to **DSCR**

On processing the request, the deal is discarded. The status of the deal and its deal versions is changed to **DSCR**. The system does not allow you to discard a deal which is in the **Fully Orchestrated**, **Rejected**, **Finalized**, **Customer Accepted**, or **Partially Orchestrated** status. In addition, only the relationship manager of a deal can discard a deal through a web service.

## Sample Deal Creation Request and Response in the XML Format

Using the below example, you can create the deal for 0074771343 person.

**Sample Deal Creation Request in the XML Format**

```

```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a deal submission approval request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

    <refAccountIdentifierType></refAccountIdentifierType>
    <refAccountIdentifier></refAccountIdentifier>
    <referAccountId></referAccountId>
    <referDealIdentifier></referDealIdentifier>
    <referenceDealId></referenceDealId>
    <referenceModelId></referenceModelId>
    <referUsageSw>false</referUsageSw>
    <referPriceSw>false</referPriceSw>
    <includeChildHierarchy>false</includeChildHierarchy>
    <division></division>
  </referenceDetails>
</C1-DealCreationUpdateIWS>

```

**Note:** We have given the above request and response samples to illustrate how the tags should be nested while sending a deal discard request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Deal Creation Request and Response - Attribute Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics[Deal Creation Request in the JSON Format](#) on page 4097 and [Deal Creation Response in the JSON Format](#) on page 4099 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal creation request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create a deal for an entity (i.e. existing person, account, or prospect person) in the system. The valid value is: <ul style="list-style-type: none"><li>ADD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
dealDetails	Used to specify basic information about the deal.	Yes
dealEntityDetails	Used to specify basic information about the entity (i.e. existing person, account, or prospect person) for which you want to create a deal.	Yes
personIdentifierType	Used to indicate the identifier type using which the person is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>personIdentifier</b> attribute, you need to specify the <b>personIdentifierType</b> attribute.</p> <p>If you specify the <b>personIdentifier</b> attribute and do not specify the <b>personIdentifierType</b> attribute, the system will throw an error message indicating that the person identifier type field is missing.</p> <p>If you specify the <b>personIdentifierType</b> attribute, you need not specify the <b>personId</b> attribute.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EPER</b>.</p>
personIdentifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>personIdentifierType</b> attribute, you need to specify the <b>personIdentifier</b> attribute.</p> <p>If you specify the <b>personIdentifierType</b> attribute and do not specify the <b>personIdentifier</b> attribute, the system will throw an error message indicating that the person identifier field is missing.</p> <p>If you specify the <b>personIdentifier</b> attribute, you need not specify the <b>personId</b> attribute.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EPER</b>.</p>
personId	Used to specify the existing person for whom you want to create a deal in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>personId</b> attribute, you need not specify the <b>personIdentifierType</b> and the <b>personIdentifier</b> attributes.</p> <p>If the <b>personId</b> attribute is not valid, the system will throw an error message indicating that the person ID is invalid.</p> <p>Based on the specified value in the <b>personId</b> attribute, the system fetches the values of the person's <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> attributes.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EPER</b>.</p>
accountIdentifierType	Used to indicate the identifier type using which the account is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>accountIdentifier</b> attribute, you need to specify the <b>accountIdentifierType</b> attribute.</p> <p>If you specify the <b>accountIdentifier</b> attribute and do not specify the <b>accountIdentifierType</b> attribute, the system will throw an error message indicating that the account identifier type field is missing.</p> <p>If you specify the <b>accountIdentifierType</b> attribute, you need not specify the <b>accountId</b> attribute.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EACC</b>.</p>
accountIdentifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>accountIdentifierType</b> attribute, you need to specify the <b>accountIdentifier</b> attribute.</p> <p>If you specify the <b>accountIdentifierType</b> attribute and do not specify the <b>accountIdentifier</b> attribute, the system will throw an error message indicating that the account identifier field is missing.</p> <p>If you specify the <b>accountIdentifier</b> attribute, you need not specify the <b>accountId</b> attribute.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EACC</b>.</p>
accountId	Used to specify the existing account for which you want to create a deal in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>accountId</b> attribute, you need not specify the <b>accountIdentifierType</b> and the <b>accountIdentifier</b> attributes.</p> <p>If the <b>accountId</b> attribute is not valid, the system will throw an error message indicating that the account ID is invalid.</p> <p>Based on the specified value in the <b>accountId</b> attribute, the system fetches the account's main person ID and further fetches the values of the <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> attributes.</p>	<p><b>Note:</b> This data is required while creating a deal for an existing account i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>EACC</b>.</p>
prsPerIdentifierType	Used to indicate the identifier type using which the prospect person is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>prsPerIdentifier</b> attribute, you need to specify the <b>prsPerIdentifierType</b> attribute.</p> <p>If you specify the <b>prsPerIdentifier</b> attribute and do not specify the <b>prsPerIdentifierType</b> attribute, the system will throw an error message indicating that the prospect person identifier type field is missing.</p> <p>If you specify the <b>prsPerIdentifierType</b> attribute, you need not specify the <b>prospectPersonId</b> attribute.</p>	<p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>PRSP</b>.</p>
prsPerIdentifier	<p>Used to specify the value for the prospect person identifier type.</p> <p><b>Note:</b></p> <p>If you specify the <b>prsPerIdentifierType</b> attribute, you need to specify the <b>prsPerIdentifier</b> attribute.</p> <p>If you specify the <b>prsPerIdentifierType</b> attribute and do not specify the <b>prsPerIdentifier</b> attribute, the system will throw an error message indicating that the prospect person identifier field is missing.</p> <p>If you specify the <b>prsPerIdentifier</b> attribute, you need not specify the <b>prospectPersonId</b> attribute.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>PRSP</b>.</p>
prospectPersonId	<p>Used to specify the prospect person for whom you want to create a deal in the system.</p> <p><b>Note:</b></p> <p>If you specify the <b>prospectPersonId</b> attribute, you need not specify the <b>prsPerIdentifierType</b> and the <b>prsPerIdentifier</b> attributes.</p> <p>If the <b>prospectPersonId</b> attribute is not valid, the system will throw an error message indicating that the prospect person ID is invalid.</p> <p>Based on the specified value in the <b>prospectPersonId</b> attribute, the system fetches the values of prospect person's <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> attributes.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a deal for a prospect person i.e. when the value of the <b>dealEntityType</b> attribute is set to <b>PRSP</b>.</p>
division	Used to indicate the division to which the entity (i.e. existing person, account, or prospect person) belongs.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p> <p>If you do not specify the <b>division</b> attribute while specifying the identifier type and identifier of the entity (i.e. existing customer, account, or prospect customer), the system throws an error message indicating that the division is mandatory when identifier type and identifier is provided.</p>	<p><b>Note:</b> This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the entity's identifier type and identifier.</p>
dealIdentifier	<p>Used to specify the primary identifier using which you want to create the deal in the system.</p> <p><b>Note:</b></p> <p>You should ensure that every deal has a unique deal identifier.</p> <p>An error message appears when you save a deal with a deal identifier which is already used while creating a deal.</p>	Yes
dealEntityType	<p>Used to indicate the type of entity for which you want to create a deal. The valid values are:</p> <ul style="list-style-type: none"> <li><b>EPER</b> - Used to indicate that you want to create deal for an existing person.</li> </ul> <p><b>Note:</b></p> <p>If you specify the <b>dealEntityType</b> attribute as <b>EPER</b>, you must specify either the <b>personId</b> attribute or the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> attributes.</p> <p>If you do not specify the <b>personId</b> attribute, the system will validate the combination of the values provided in the <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> attributes. If the combination is valid, the system will derive the person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the person is not found.</p> <ul style="list-style-type: none"> <li><b>EACC</b> - Used to indicate that you want to create deal for an existing account.</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>dealEntityType</b> attribute as <b>EACC</b>, you must specify either the <b>accountId</b> attribute or the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> attributes.</p> <p>If you do not specify the <b>accountId</b> attribute, the system will validate the combination of the values provided in the <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> attributes. If the combination is valid, the system will derive the account's main person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the account is not found.</p> <ul style="list-style-type: none"> <li>• <b>PRSP</b> - Used to indicate that you want to create deal for a prospect person.</li> </ul> <p><b>Note:</b></p> <p>If you specify the <b>dealEntityType</b> attribute as <b>PRSP</b>, you must specify either the <b>prospectPersonId</b> attribute or the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> attributes.</p> <p>If you do not specify the <b>prospectPersonId</b> attribute, the system will validate the combination of the values provided in the <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> attributes. If the combination is valid, the system will derive the prospect person ID and continue the deal creation process. Whereas, if the combination is invalid, the system will throw an error message indicating that the prospect person is not found.</p> <p><b>Note:</b> If you do not specify the value of the <b>dealEntityType</b> attribute, the system will throw an error message indicating that the <b>Deal Entity Type Flag</b> field is missing.</p>	
contractedDealFlag	<p>Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>false</li> </ul>	
currency	Used to specify the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.	Yes
	<b>Note:</b> You can specify only those currencies which are already defined in the system.	
dealTypeCode	Used to specify the deal type using which you want to create the deal in the system.	Yes
	<b>Note:</b> If you specify a value in the <b>dealTypeCode</b> attribute, the customer segment, customer tier, and division of the specified deal type is validated against the <b>customerSegment</b> , <b>customerTier</b> , and <b>division</b> attributes specified in the deal creation request using the <b>GETDEALTYPE</b> business service.  If the deal type is validated successfully, the system will continue the deal creation process. Whereas, if the deal type is invalid, the system will throw an error message indicating that the deal type is invalid.	
startDate	Used to specify the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).	Yes
	<b>Note:</b> This date is also used as the effective start date for the proposed price list assignment and start date for the proposed product enrollment.	
endDate	Used to specify the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).	No
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>CUST</li> <li>ACCT</li> <li>DEAL</li> </ul>	Yes
reviewFrequency	Used to specify the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> <li><b>6</b> - Used to indicate that you want to monitor the deal usage biannually</li> </ul>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>12</b> - Used to indicate that you want to monitor the deal usage annually</li> <li><b>24</b> - Used to indicate that you want to monitor the deal usage in every two years</li> </ul>	
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	<p>Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li><b>1</b> - Used to indicate that you want to simulate the deal every month</li> <li><b>3</b> - Used to indicate that you want to simulate the deal quarterly</li> <li><b>6</b> - Used to indicate that you want to simulate the deal biannually</li> <li><b>12</b> - Used to indicate that you want to simulate the deal annually</li> </ul>	Yes
skipReferenceFlag	<p>Used to specify whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>If you do not specify a value in the <b>skipReferenceFlag</b> attribute, by default, the system considers it as <b>false</b>.</p> <p>If you specify the value in the <b>skipReferenceFlag</b> attribute as <b>false</b>, you need to specify the reference deal details. The system will then copy the reference deal details using the <b>C1-ReferePriceVolumeAdd</b> business service.</p>	No
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li><b>1</b> - Used to indicate that you want to aggregate the deal data every month</li> <li><b>3</b> - Used to indicate that you want to aggregate the deal data quarterly</li> </ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• <b>6</b> - Used to indicate that you want to aggregate the deal data biannually</li><li>• <b>12</b> - Used to indicate that you want to aggregate the deal data annually</li></ul>	
includeHierarchyFlag	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while creating a deal. The valid values are: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>	Yes (Conditional)
	<b>Note:</b> If you do not specify a value in the <b>includeHierarchyFlag</b> attribute, by default, the system considers it as <b>false</b> .  You can specify the value in the <b>includeHierarchyFlag</b> attribute as <b>true</b> only when the <b>dealEntityType</b> attribute is set to <b>EPER</b> and the <b>simulationTypeFlag</b> attribute is set to <b>CUST</b> .  You cannot specify the value in the <b>includeHierarchyFlag</b> as <b>false</b> when the value in the <b>dealEntityType</b> attribute is set to <b>PRSP</b> and the <b>simulationTypeFlag</b> attribute is set to <b>CUST</b> . In such case, the system will throw an error message indicating that you must set the include hierarchy flag to true when deal entity type is <b>PRSP</b> and simulation type is <b>CUST</b> .	<b>Note:</b> This data is required while specifying the deal details to create a deal for an existing or prospect person.
templateFlag	Use to indicate whether you want the deal to be used as a template while searching references for other deals. The valid values are: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>	No
	<b>Note:</b> Users who belong to the user group which has the <b>Change</b> access mode provided for the <b>C1-DEALTEMPLATE</b> application service can create the deal templates in the system.  If you specify the value in the <b>templateFlag</b> attribute as <b>true</b> and you do not belong to the user group which has the <b>Change</b> access mode provided for the <b>C1-DEALTEMPLATE</b> application service, the system will throw an error message indicating that you do not have security rights to create a deal template.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
templateReferenceDetails	Used to specify the template deal details which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	No
	<b>Note:</b> Template deal information such as, <b>Deal type</b> , <b>Price Selection Date</b> , <b>End Date</b> , <b>Simulation Type</b> , <b>Currency</b> , <b>Include Hierarchy</b> , <b>Contracted deal</b> , <b>Review Frequency</b> , <b>Deal Frequency</b> , <b>Skip Reference</b> , <b>Usage Period</b> , <b>Deal Description</b> and <b>Deal Version Description</b> are copied when you use a template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).	
templateDealId	Used to specify the template deal which you want to use for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<b>Note:</b>  If you specify the <b>templateDealId</b> attribute, you need not specify the <b>templateDealIdentifier</b> and <b>templateModelId</b> attributes.  If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal ID in the system. In such case, you need to specify the <b>templateModelId</b> attribute of the template deal instead of the <b>templateDealId</b> attribute.  If the value specified in the <b>templateDealId</b> attribute is invalid, the system will throw an error message indicating that the deal template is invalid.	<b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).
templateDealIdentifier	Used to specify the primary identifier using which the template deal is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>templateDealIdentifier</b> attribute, you need not specify the <b>templateDealId</b> and <b>templateModelId</b> attributes.</p> <p>If the specified template deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal identifier in the system. In such case, you need to specify the <b>templateModelId</b> attribute of the template deal instead of the <b>templateDealIdentifier</b> attribute.</p> <p>If the value specified in the <b>templateDealIdentifier</b> attribute is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
templateModelId	Used to specify the deal version which you want to use as a template for creating a deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>templateModelId</b> attribute, you need not specify the <b>templateDealId</b> and <b>templateDealIdentifier</b> attributes.</p> <p>If the value specified in the <b>templateModelId</b> attribute is invalid, the system will throw an error message indicating that the deal template is invalid.</p>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
copyBasicDetailsFlag	Used to indicate whether you want to copy the basic details from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the values in the <b>copyPricingFlag</b> and <b>copyUsageFlag</b> attributes as <b>false</b>, you need to specify the value in the <b>copyBasicDetailsFlag</b> as <b>true</b>.</p> <p>Details such as, <b>Deal Information</b>, <b>Deal Products</b>, <b>Deal Terms and Conditions</b> and <b>Deal Characteristics</b> are copied from the template deal when you specify the <b>copyBasicDetailsFlag</b> as <b>true</b>.</p> <p>The <b>Deal Information</b> copied from the template deal gets overridden by the <b>Deal Information</b> specified by the user while creating a deal through the inbound web service.</p>	
copyPricingFlag	Used to indicate whether you want to copy the price list assignments and price assignments from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p><b>Note:</b> If you specify the values in the <b>copyBasicDetailsFlag</b> and <b>copyUsageFlag</b> attributes as <b>false</b>, you need to specify the value in the <b>copyPricingFlag</b> as <b>true</b>.</p>	
copyUsageFlag	Used to indicate whether you want to copy commitments from the SQI-based billable charges from the template deal to the deal which you want to create for the entity (i.e. existing person, account, or prospect person). The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	<p><b>Note:</b> This data is required while specifying the template deal as a reference to create a deal for an entity (i.e. existing person, account, or prospect person).</p>
	<p><b>Note:</b> If you specify the values in the <b>copyBasicDetailsFlag</b> and <b>copyPricingFlag</b> attributes as <b>false</b>, you need to specify the value in the <b>copyUsageFlag</b> as <b>true</b>.</p>	
dealCharacteristics	Used to specify a list of characteristics for the deal.	No
	<p><b>Note:</b> If you create a deal using a template deal as a reference, the characteristics specified in the <b>dealCharacteristics</b> attribute will be added with the template deal characteristics.</p>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> You can specify only those characteristic types where the characteristic entity is set to <b>Deal</b> .  If the <b>Characteristic Type</b> of the template deal matches with the value specified in the <b>characteristicType</b> attribute, the system will override the template deal <b>Characteristic Type</b> .	<b>Note:</b> This data is required while specifying a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying a characteristic for the deal.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while specifying a characteristic for the deal.
dealTermsAndConditionsDetails	Used to specify a list of terms and conditions which you want to associate with the deal.	No
	<b>Note:</b> If you create a deal using a template deal as a reference, the deal terms and conditions specified in the <b>dealTermsAndConditionsDetails</b> attribute will be added with the template deal terms and conditions.	
termsAndConditionsList	Used to specify the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions.	Yes (Conditional)
	<b>Note:</b> If the value specified in the <b>description</b> attribute is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	<b>Note:</b> This data is required while associating terms and conditions with a deal.
termsAndCondition	Used to specify the terms and conditions which you want to associate with the deal.	Yes (Conditional)
	<b>Note:</b> If the value specified in the <b>termsAndCondition</b> attribute is not valid, the system will throw an error message indicating that the terms and conditions is invalid.	<b>Note:</b> This data is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify additional information about the terms and conditions.	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
adhocTermsAndCondition	Used to specify the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to recommend a list of products for the deal.	No
	<b>Note:</b> If you create a deal using a template deal as a reference, the deal products specified in the <b>productDetailsList</b> attribute will be added with the template deal recommended products.	
productCode	Used to specify the product which you want to recommend for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while recommending a product for the deal.
referenceDetails	Used to specify the details of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person).	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).
referenceTypeFlg	<p>Used to indicate the type of the reference deal using which you want to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are:</p> <ul style="list-style-type: none"> <li><b>RPER</b> - Used to indicate that you want to use the deal of a person as a reference to create the deal for the existing person or the prospect person.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the reference deal to create a deal for an entity (i.e. existing person, account, or prospect person).
	<p><b>Note:</b></p> <p>If you specify the <b>skipReferenceFlag</b> attribute as <b>false</b> and the <b>dealEntityType</b> attribute as <b>EPER</b> or <b>PRSP</b>, you need to ensure that the <b>referenceTypeFlg</b> attribute is set to either <b>RPER</b> or <b>RDEL</b>.</p> <p>If you specify the <b>referenceTypeFlg</b> attribute as <b>RPER</b>, you must specify the values in either the <b>referPersonId</b> attribute or <b>refPersonIdentifierType</b>, <b>refPersonIdentifier</b>, and <b>division</b> attributes.</p> <ul style="list-style-type: none"> <li><b>RACC</b> - Used to indicate that you want to use the deal of an account as a reference to create the deal for the existing account.</li> </ul>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>skipReferenceFlag</b> attribute as <b>false</b> and the <b>dealEntityType</b> attribute as <b>EACC</b>, you need to ensure that the <b>referenceTypeFlg</b> attribute is set to either <b>RACC</b> or <b>RDEL</b>.</p> <p>If you specify the <b>referenceTypeFlg</b> attribute as <b>RACC</b>, you must specify the values in either the <b>referAccountId</b> attribute or <b>refAccountIdentifierType</b>, <b>refAccountIdentifier</b>, and <b>division</b> attributes.</p> <ul style="list-style-type: none"> <li><b>RDEL</b> - Used to indicate that you want to use an existing deal as a reference to create the deal for the existing person, account or prospect person.</li> </ul> <p><b>Note:</b> If you specify the <b>referenceTypeFlg</b> attribute as <b>RDEL</b>, you must specify the values in either the <b>referenceDealId</b>, <b>referDealIdentifier</b>, or <b>referenceModelId</b> attribute.</p> <p><b>Note:</b> If you do not specify the value of the <b>referenceTypeFlg</b> attribute and the <b>skipReferenceFlag</b> is set as <b>false</b>, the system will throw an error message indicating that the <b>Reference Type Flag</b> field is missing.</p>	
refPersonIdentifierType	<p>Used to specify the identifier type of the person using which the reference deal is created in the system.</p> <p><b>Note:</b></p> <p>If you specify the <b>refPersonIdentifier</b> attribute, you need to specify the <b>refPersonIdentifierType</b> attribute.</p> <p>If you specify the <b>refPersonIdentifier</b> attribute and do not specify the <b>refPersonIdentifierType</b> attribute, the system will throw an error message indicating that the person identifier type in the reference section is missing.</p> <p>If you specify the <b>refPersonIdentifierType</b> attribute, you need not specify the <b>referPersonId</b> attribute.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>refPersonIdentifierType</b> attribute, you need to specify the <b>refPersonIdentifier</b> attribute.</p> <p>If you specify the <b>refPersonIdentifierType</b> attribute and do not specify the <b>refPersonIdentifier</b> attribute, the system will throw an error message indicating that the person identifier in the reference section is missing.</p> <p>If you specify the <b>refPersonIdentifier</b> attribute, you need not specify the <b>referPersonId</b> attribute.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
referPersonId	Used to specify the person for whom the reference deal is created.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>referPersonId</b> attribute, you need not specify the <b>refPersonIdentifierType</b> and the <b>refPersonIdentifier</b> attributes.</p> <p>If the <b>referPersonId</b> attribute is not valid, the system will throw an error message indicating that the referred person is invalid.</p> <p>Based on the specified value in the <b>referPersonId</b> attribute, the system fetches the reference deal details for the deal creation process.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing or prospect person.</p>
refAccountIdentifierType	Used to specify the identifier type of the account using which the reference deal is created in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you specify the <b>refAccountIdentifier</b> attribute, you need to specify the <b>refAccountIdentifierType</b> attribute.</p> <p>If you specify the <b>refAccountIdentifier</b> attribute and do not specify the <b>refAccountIdentifierType</b> attribute, the system will throw an error message indicating that the account identifier type in the reference section is missing.</p> <p>If you specify the <b>refAccountIdentifierType</b> attribute, you need not specify the <b>referAccountId</b> attribute.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.</p>
refAccountIdentifier		
	Used to specify the value of the reference account identifier type.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>refAccountIdentifierType</b> attribute, you need to specify the <b>refAccountIdentifier</b> attribute.  If you specify the <b>refAccountIdentifierType</b> attribute and do not specify the <b>refAccountIdentifier</b> attribute, the system will throw an error message indicating that the account identifier in the reference section is missing.  If you specify the <b>refAccountIdentifier</b> attribute, you need not specify the <b>referAccountId</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.
referAccountId	Used to specify the account for which the reference deal is created.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>referAccountId</b> attribute, you need not specify the <b>refAccountIdentifierType</b> and the <b>refAccountIdentifier</b> attributes.  If the <b>referAccountId</b> attribute is not valid, the system will throw an error message indicating that the referred account is invalid.  Based on the specified value in the <b>referAccountId</b> attribute, the system fetches the reference deal details for the deal creation process.	<b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing account.
referDealIdentifier	Used to specify the primary identifier using which the reference deal is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>referDealIdentifier</b> attribute, you need not specify the <b>referenceDealId</b> and <b>referenceModelId</b> attributes.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal matches with the value specified in the <b>simulationTypeFlag</b> attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>Also, you cannot use a deal whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal identifier.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the <b>referenceModelId</b> attribute of the reference deal instead of the <b>referDealIdentifier</b> attribute.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referenceDealId	Used to specify the deal which you want to use as a reference.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the <b>referenceDealId</b> attribute, you need not specify the <b>referDealIdentifier</b> and <b>referenceModelId</b> attributes.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal matches with the value specified in the <b>simulationTypeFlag</b> attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>Also, you cannot use a deal whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal ID.</p> <p>If the specified reference deal has multiple versions, the system will throw an error message indicating that multiple deal versions exist for the deal in the system. In such case, you need to specify the <b>referenceModelId</b> attribute of the reference deal instead of the <b>referenceDealId</b> attribute.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referenceModelId	Used to specify the deal version which you want to use as a reference.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You need to specify the <b>referenceModelId</b> if the reference deal has multiple deal versions.</p> <p>If you specify the <b>referenceModelId</b> attribute, you need not specify the <b>referDealIdentifier</b> and <b>referenceDealId</b> attributes.</p> <p>You need to ensure that the <b>Simulation Type</b> of the reference deal version matches with the value specified in the <b>simulationTypeFlag</b> attribute of the deal which you are creating. If the value does not match, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p> <p>Also, you cannot use a deal version whose status is <b>Draft</b>, <b>Discarded</b>, <b>Hierarchy Creation Deferred</b>, and <b>Inactive</b> as a reference for creating a deal. If the status of the reference deal version is invalid, the system will throw an error message indicating that the system is unable to derive a reference deal using the given deal version ID.</p>	<p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referUsageSw	<p>Used to indicate whether you want to copy commitments from the SQL-based billable charges of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>If you do not specify a value in the <b>referUsageSw</b> attribute, by default, the system considers it as <b>false</b>.</p> <p>You should specify values in either <b>referUsageSw</b> or <b>referPriceSw</b> attribute or both.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>
referPriceSw	<p>Used to indicate whether you want to copy the price list assignments and price assignments of the reference deal. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person, account, or a prospect person.</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify a value in the <b>referPriceSw</b> attribute, by default, the system considers it as <b>false</b> .  You should specify values in either <b>referUsageSw</b> or <b>referPriceSw</b> attribute or both.	
includeChildHierarchy	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts of the reference deal while creating the deal for an existing or prospect person. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Yes (Conditional)
	<b>Note:</b> By default, the system considers all child and grandchild persons and their accounts in the customer hierarchy while specifying a reference deal for an existing person irrespective of the values provided in the <b>includeChildHierarchy</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal to create a deal for an existing person.
division	Used to specify the division to which the reference person belongs.	Yes (Conditional)
		<b>Note:</b> This data is required while creating a deal for an entity (i.e. existing customer, account, or prospect customer) by specifying the reference deal identifier type and identifier.

Once the deal is created, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealResponse	Displays whether the deal creation request is successfully processed or not.
message	Displays the message generated for the deal response.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
dealId	Displays the identification value of the deal.
modelId	Displays the identification value of the deal version.
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.

Attribute Name	Attribute Description
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicate the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) for which the deal is created.
createdDate	Displays the date when the deal is created in the system.
status	Displays the current status of the deal.
dealVersionStatus	Displays the current status of the deal version.

**Deal Update Request and Response - Attribute/Value Pairs in the JSON Format**

**Note:** We recommend you to refer the topics [Deal Update Request in the JSON Format](#) on page 4100 and [Deal Update Response in the JSON Format](#) on page 4103 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal update request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to update a deal. The valid value is: <ul style="list-style-type: none"><li>UPD</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
dealOperation	Used to specify the details of the deal operation.	No
operationFlag	Used to indicate that you want to create request that which operation you want to perform on a deal. The valid values are: <ul style="list-style-type: none"><li>APPR</li><li>ACPT</li><li>REJC</li></ul>	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<div><ul style="list-style-type: none"><li>• FNAL</li><li>• SMLD</li><li>• SNDP</li><li>• RETN</li><li>• PSEL</li><li>• CRDV</li><li>• DSCR</li></ul></div> <div><b>Note:</b> You cannot specify the <b>operationFlag</b> attribute as <b>DSCR</b> if the status of the deal version is <b>FORC</b>, <b>PROR</b>, <b>REJC</b>, <b>FNAL</b>, or <b>ACPT</b>.</div>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>SMLD</b>, then, the deal version gets simulate.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>SNDP</b>, then, the deal version is send for the approval.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>APPR</b>, then, the deal version is approved or send to next level in the approval hierarchy.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>RETN</b>, then, the submitter is requested to resubmit the deal version for the approval.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>FNAL</b>, then, the deal version gets finalized.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>ACPT</b>, then, the deal version is accepted.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>REJC</b>, then, the deal version is rejected.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>DSCR</b>, then, the deal version is discarded.</p> <p>To select the price item for which you want to inherit, override, or edit pricing and commitments in the deal version you need to set the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>PSEL</b>, and <b>includeFlag</b> of price item and pricing parameter as <b>true</b>.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>APPR</b>, <b>SNDP</b> or <b>RETN</b>, then, the system will check the value of <b>dealIdentifier</b> and <b>dealId</b>.</p> <p>If you specify the value of <b>dealId</b> as blank and specify the value of <b>dealIdentifier</b> then the system will fetch <b>dealId</b> and <b>modelId</b>.</p> <p>If you specify the value of <b>actionFlag</b> attribute as <b>UPD</b> and <b>operationFlag</b> attribute as <b>FNAL</b> or <b>REJC</b>, then, the system will check value of <b>dealIdentifier</b> and <b>dealId</b>.</p> <p>If you specify the value of <b>dealId</b> as blank and specify the value of <b>dealIdentifier</b> then the system will fetch <b>dealId</b>.</p> <p>If you specify the value of <b>actionFlag</b> is <b>UPD</b> and <b>operationFlag</b> as <b>APPR</b>, <b>SNDP</b>, <b>RETN</b>, <b>FNAL</b>, <b>ACPT</b>, or <b>REJC</b>, then, the system will throw an error as multiple deal version exist for <b>dealIdentifier</b> or <b>dealId</b>.</p>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the deal identifier using which you want to update the deal in the system.	Yes (Conditional)
		<b>Note:</b> This data is required if the do not specify value of <b>dealId</b> attribute.
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional)
		<b>Note:</b> This data is required if the do not specify value of <b>dealIdentifier</b> tag.
modelId	Used to specify the deal version for which you want to create the update request.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of operation flag is <b>APPR</b> and multiple deal version exists in the system.
dealAcceptEffStartDate	Used to specify the date from when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>ACPT</b> .
dealAcceptEffEndDate	Used to specify the date till when the deal is effective for the existing or prospect person or account.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>ACPT</b> .
comments	Used to specify the information about accepting or rejecting the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of <b>operationFlag</b> is set to <b>REJC</b> .
rejectReasonCode	Used to specify the deal rejectReasonCode which you want to reject.	Yes (Conditional)
		<b>Note:</b> This data is required if the value of operation flag is set to <b>REJC</b> .
dealVersionDescription	Used to specify the deal version description.	No
dealVersionCreationFlag	Used to indicate the method using which you want to create a new deal version. The valid values are: <ul style="list-style-type: none"> <li><b>CVOC</b> - Used to indicate that you want to copy the customer hierarchy without the pricing and commitment details from the current deal version to the new deal version.</li> <li><b>CVWC</b> - Used to indicate that you want to copy the customer hierarchy and pricing</li> </ul>	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p>and commitment details from the current deal version to the new deal version.</p> <ul style="list-style-type: none"> <li><b>FLHR</b> - Used to indicate that you want to derive the latest customer hierarchy from the system.</li> </ul> <div> <p><b>Note:</b></p> <p>In this case, you will have to select the price items, assign the required price lists to the entities, override or edit the required proposed pricing, and add commitments from scratch in the new deal version.</p> <p>Also, the system will include all the prospect persons and accounts associated with the customer in the customer hierarchy of the deal version.</p> </div>	
priceItemGroupSelection	Used to specify the details of price item group selection.	No
priceItemSelectionList	Used to specify a list of price item selection.	No
priceItemCode	Used to specify the price item code which is associated with the deal that you want to update.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
priceItemInfo	Used to specify the information of the price item that you want to update.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
parameterInfo	Used to specify the information of the parameters which are associated with the price item.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
assignmentLevel	Used to indicate the level at which the price item pricing is defined in the person hierarchy.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
hierarchyDetails	Used to specify the details of the person hierarchy.	Yes (Conditional) <b>Note:</b> This data is required while updating the price item associated with the deal.
includeFlag	Used to indicate the flag value of the price item pricing. The valid value are:	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while updating the price item associated with the deal.
	<b>Note:</b> You have to set the <b>includeFlag</b> of the price item and pricing as <b>true</b> .	
dealDetails	Used to specify the details for a deal.	No
dealEntityDetails	Used to specify the details of the entity for which you want to update the deal.	No
personIdentifierType	Used to indicate the identifier type of the existing person based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifier</b> attribute.
personIdentifier	Used to specify the existing person identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifierType</b> attribute.
personId	Used to specify the existing person whose deal you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>personIdentifier</b> attribute.
accountIdentifierType	Used to indicate the identifier type of the existing person account based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>accountIdentifier</b> attribute.
accountIdentifier	Used to specify the existing person account identifier.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>accountIdentifierType</b> attribute.
accountId	Used to specify the existing person account whose deal you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>accountIdentifier</b> attribute.
prsPerIdentifierType	Used to indicate the identifier type of the prospect person based on which you want to update the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you specify the <b>prsPerIdentifier</b> attribute.
prsPerIdentifier	Used to specify the prospect person identifier.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required if you specify the <b>prsPerIdentifierType</b> attribute.
prospectPersonId	Used to specify the prospect person whose deal you want to update.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>prsPerIdentifier</b> attribute.
division	Used to indicate the division to which the person belongs.	Yes (Conditional) <b>Note:</b> This data is required if you specify the <b>personIdentifier</b> and <b>personIdentifierType</b> attributes.
dealIdentifier	Used to specify the deal identifier for which you want to update the deal.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealId</b> or <b>dealversionId</b> attribute.
dealInformation	Used to specify the information about the deal which you want to update for the entity.	Yes
dealId	Used to specify the deal for which you want to create the update request.	Yes (Conditional) <b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> or <b>dealversionId</b> attribute.
modelId	Used to specify the model for which you want to create the update request.	No
dealEntityType	Used to indicate the deal entity type for which you want to update the deal. <ul style="list-style-type: none"><li>• EPER</li><li>• EACC</li><li>• PRSP</li></ul>	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the value of this attribute as <b>EPER</b>, then, you must specify the values for the <b>personId</b>, <b>personIdentifierType</b>, <b>personIdentifier</b>, and <b>division</b> attributes.</p> <p>If you specify the value of this attribute as <b>EPER</b>, then, the system will fetch the details of <b>accessGrp</b>, <b>division</b>, <b>customerSegment</b>, and <b>customerTier</b> from the existing person.</p> <p>If you specify the value of this attribute as <b>EACC</b>, then, you must specify the values for the <b>accountId</b>, <b>accountIdentifierType</b>, <b>accountIdentifier</b>, and <b>division</b> attributes.</p> <p>If you specify the value of this attribute as <b>EACC</b>, then, the system will fetch the details of main <b>personId</b> from existing person's account and <b>division</b>, <b>accessGrp</b>, <b>customerSegment</b>, and <b>customerTier</b> from the existing person.</p> <p>If you specify the value of this attribute as <b>PRSP</b>, then, you must specify the values for the <b>prospectPersonId</b>, <b>prsPerIdentifierType</b>, <b>prsPerIdentifier</b>, and <b>division</b> attributes.</p> <p>If you specify the value of this attribute as <b>PRSP</b>, then, the system will fetch the details of the <b>accessGrp</b>, <b>division</b>, <b>customerSegment</b> and <b>customerTier</b> from the prospect person.</p>	
customerSegment	<p>Used to indicate the business component to which the entity (i.e. the existing person or account, prospect person) belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>• COMM</li> <li>• CORP</li> <li>• SME</li> </ul>	No
customerTier	Used to indicate the customer tier to which the entity (i.e. the existing person or account, prospect person) belongs.	No
division	<p>Used to indicate the division to which the entity (i.e. the existing person or account, prospect person) is associated.</p> <p><b>Note:</b></p> <p>You must specify a division which is already defined in the system.</p>	Yes
accessGrp	Used to indicate the user groups who can view and edit the details of the entity.	Yes

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify an <b>accessGrp</b> which is associated with the <b>division</b> to which the entity belongs.	
dealEntityId	Used to specify the deal entity Id whose details you want to update.	
contractedDealFlag	Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for an existing person, account or prospect person. <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Yes
currency	Used to specify the currency in which you want to calculate the deal or division specific financial summary and profitability of the deal.	Yes
dealTypeCode	Used to indicate the deal type using which you want to create request to update the deal in the system.	Yes
startDate	Used to specify the date from when the deal is effective for the entity (i.e. the person, account, or prospect person).	Yes
endDate	Used to specify the date till when the deal is effective for the entity (i.e. the person, account, or prospect person).	No
simulationTypeFlag	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>CUST</li> <li>ACCT</li> <li>DEAL</li> </ul>	Yes
reviewFrequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
dealDescription	Used to specify the description for the deal.	No
dealVersionDescription	Used to specify the description for the deal version.	No
dealFrequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. <ul style="list-style-type: none"> <li>Biannually</li> <li>Monthly</li> <li>Quarterly</li> <li>Yearly</li> </ul>	Yes
skipReferenceFlag	Used to indicate whether you want to use a deal which is already created in the system as a reference	No

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p>for copying the pricing and commitments in the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> By default, the value is set to <b>false</b>.</p>	
priceSelectionDate	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
usagePeriod	<p>Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• biannually</li> <li>• monthly</li> <li>• quarterly</li> <li>• yearly</li> </ul>	Yes
includeHierarchyFlag	<p>Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while updating the deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b></p> <p>If the entity is prospect person, then you have specify the value of <b>includeHierarchyFlag</b> to <b>true</b>.</p> <p>If you specify the value of <b>includeHierarchyFlag</b> attribute as <b>true</b> and <b>dealEntityType</b> is set as <b>ACCT</b> or <b>DEAL</b>, then, the system will throw an error.</p> <p>If you specify the value of <b>includeHierarchyFlag</b> attribute as <b>false</b> and <b>dealEntityType</b> as <b>PRSP</b>, then, the system will throw an error.</p>	Yes (Conditional)
status	<p>Used to indicate the current status of the deal. The valid values are:</p> <ul style="list-style-type: none"> <li>• DRAFT</li> <li>• PSML</li> <li>• PFAP</li> <li>• SMLD</li> <li>• DSML</li> <li>• RFAP</li> </ul>	

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>You can update the deal only if the value of deal status is set as <b>DRFT</b>, <b>PSML</b>, <b>PFAP</b>, <b>SMLD</b>, <b>DSML</b> or <b>RFAP</b>.</p> <p>If you specify the value of the deal <b>status</b> as <b>DRFT</b>, then, you cannot update the details of <b>dealEntityType</b>, <b>customerSegment</b>, <b>customerTier</b>, <b>accessGrp</b>, <b>division</b>, and <b>templatedeal</b> else the system will throw an error.</p> <p>If you specify the value of the deal <b>status</b> as <b>PSML</b>, then, you cannot update the details of <b>startDate</b>, <b>createdDate</b>, <b>contractedDealFlag</b>, <b>dealIdentifier</b>, <b>templateDealId</b>, <b>dealTypeCode</b>, <b>dealEntityCode</b>, <b>status</b>, <b>customerTier</b>, <b>customerSegment</b>, <b>accessGrp</b>, <b>division</b>, <b>currency</b>, <b>SimulationTypeFlag</b>, <b>priceSelectionDate</b>, <b>dealFrequency</b>, <b>usagePeriod</b>, <b>templateFlag</b>, <b>skipReferenceFlag</b> or <b>includeHierarchyFlag</b> else the system will throw an error.</p> <p>If you specify the value of the deal <b>status</b> as <b>PFAP</b>, <b>SMLD</b>, <b>DSML</b> or <b>RFAP</b> then, you cannot update the details of <b>dealInformation</b> and <b>dealCharacteristics</b>.</p> <p>If the deal status is set as <b>DRFT</b>, <b>PSML</b>, <b>PFAP</b>, <b>SMLD</b>, <b>DSML</b> or <b>RFAP</b> then, the <b>termsAndCondition</b> can be updated only one who creates the deal, else the system will throw an error.</p> <p>If the deal is approved, then, you cannot update the <b>dealInformation</b>, <b>dealCharacteristics</b>, <b>termsAndCondition</b>, and <b>dealProduct</b> else the system will throw an error.</p>	
dealVersionStatus	Used to indicate the current status of the deal version(model).	No
templateFlag	<p>Use to indicate whether you want the deal to be used as a template while updating the other deals.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> The system will check whether the user has access to update the template deal.</p>	Yes (Conditional)
templateReferenceDetails	Used to specify the details of the template reference of the deal.	No
templateDealId	Used to specify the particular deal whose details you want to use as a template for other deals.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you do not specify the <b>templateDealIdentifier</b> or <b>templateModelId</b> attributes, you need to specify the <b>templateDealId</b> attribute.</p> <p>If you specify the values of <b>templateDealId</b>, <b>templateDealIdentifier</b>, and <b>templateModelId</b> attributes and the value for <b>copyUsageFlag</b>, <b>copyBasicDetailsFlag</b>, and <b>copyPricingFlag</b> attributes is set as <b>false</b>, then, the system will throw an error. The value of <b>copyUsageFlag</b>, <b>copyBasicDetailsFlag</b>, or <b>copyPricingFlag</b> attribute should be set to <b>true</b>.</p> <p>If you specify <b>templateDealIdentifier</b> or <b>templateDealId</b> attribute and there are multiple deal versions then the system will throw an error.</p> <p>If the value of <b>templateDealIdentifier</b> or <b>templateDealId</b> attribute is not found in the system then it will throw an error.</p>	<p><b>Note:</b> This data is required while specifying the template deal.</p>
templateDealIdentifier	Used to specify the deal identifier whose details you want to use as a template for other deals.	Yes (Conditional)
	<b>Note:</b> If you do not specify the <b>templateDealId</b> or <b>templateModelId</b> attribute, you need to specify the <b>templateDealIdentifier</b> attribute.	<b>Note:</b> This data is required while specifying the template deal.
templateModelId	Used to specify the template deal version whose details you want to use as a template for other deals.	Yes (Conditional)
	<b>Note:</b> If you do not specify the <b>templateDealId</b> or <b>templateDealIdentifier</b> attribute, you need to specify the <b>templateModelId</b> attribute.	<b>Note:</b> This data is required while specifying the template deal.
copyBasicDetailsFlag	Used to indicate whether you want to use basic details of the deal to update a deal. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while specifying the template deal.
	<b>Note:</b> If you specify the <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> attributes, you need to set the value of the <b>copyBasicDetailsFlag</b> attribute.	
copyPricingFlag	Used to indicate whether you want to use pricing details of the deal to update a deal. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	<b>Note:</b> This data is required while specifying the template deal.

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the value for <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> attributes, you need to set the value of the <b>copyPricingFlag</b> attribute.	
copyUsageFlag	Used to indicate whether you want to use usage details of the deal to update a deal. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while specifying the template deal.
	<b>Note:</b> If you specify the value for <b>templateDealId</b> or <b>templateDealIdentifier</b> or <b>templateModelId</b> attributes, you need to set the value of the <b>copyUsageFlag</b> attribute.  If the <b>templateDealId</b> , <b>templateDealIdentifier</b> , and <b>templateModelId</b> is entered with <b>copyUsageFlag</b> value as <b>true</b> , then system will copy the <b>dealinformation</b> , <b>dealproducts</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealCharacteristics</b> from the deal.  If you specify the value for <b>dealinformation</b> attribute, then, it overrides the value of the template <b>dealinformation</b> .  If you specify the value for <b>dealCharacteristics</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealproducts</b> , then, it will add the value along with template <b>dealCharacteristics</b> , <b>dealTermsAndConditionsDetails</b> , and <b>dealproducts</b> .	
dealCharacteristics	Used to specify a list of characteristics of the deal.	No
characteristicType	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.
effectiveDate	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a characteristic for the deal.

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealTermsAndConditionsDetails	Used to specify the details of the terms and conditions of the deal.	No
termsAndConditionsList	Used to specify a list of the terms and conditions of the deal.	No
description	Used to specify the description of the terms and conditions of the deal.	No
termsAndCondition	Used to indicate the terms and conditions which you want to associate with the deal.	Yes (Conditional)
	<b>Note:</b> If you do not specify the value in the <b>termsAndCondition</b> attribute, then, the system will throw an error.	<b>Note:</b> This field is required while associating terms and conditions with a deal.
termsAndConditionText	Used to specify the description of terms and conditions for the deal.	Yes (Conditional)
		<b>Note:</b> This field is required while associating terms and conditions with a deal.
adhocTermsAndCondition	Used to indicate the adhoc terms and conditions which you want to associate with the deal.	No
productDetailsList	Used to specify a list of product details of the deal.	No
productCode	Used to specify the product code.	No
referenceDetails	Used to specify the details of the deal that you want to use as reference to update the deal.	No
referenceTypeFlg	Used to indicate the reference type of the deal that you want to use as reference to update the deal for the entity. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• RPER</li> <li>• RACC</li> <li>• RDEL</li> </ul>	<b>Note:</b> This data is required while specifying the reference deal.
	<b>Note:</b> If you specify the value in the <b>skipReferenceFlag</b> as <b>false</b> , then, you need to specify the value in the <b>referenceTypeFlg</b> attribute.	
refPersonIdentifierType	Used to specify the reference person identifier type based on which you want to update the deal for the entity.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RPER</b> , then, you need to specify the <b>refPersonIdentifierType</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person.
refPersonIdentifier	Used to specify the value of the reference person identifier type.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RPER</b> , then, you need to specify the <b>refPersonIdentifier</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person.
referPersonId	Used to specify the reference person using which you want to update the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RPER</b> , then, you need to specify the <b>referPersonId</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person.
refAccountIdentifierType	Used to specify the reference account identifier type based on which you want to update the deal for the entity.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RACC</b> , then, you need to specify the <b>refAccountIdentifierType</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
refAccountIdentifier	Used to specify the value of the reference account identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RACC</b> , then, you need to specify the <b>refAccountIdentifier</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
referAccountId	Used to specify the reference account using which you want to update the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RACC</b> , then, you need to specify the <b>referAccountId</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal of the person account.
referDealIdentifier	Used to specify the value of the reference deal identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RDEL</b> , then, you need to specify the <b>referDealIdentifier</b> attribute.	<b>Note:</b> This data is required while specifying the reference deal.
referenceDealId	Used to specify the reference deal using which you want to update the deal.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RDEL</b>, then, you need to specify the <b>referenceDealId</b> attribute.</p> <p>If you do not specify the value in the <b>referenceDealId</b>, <b>referDealIdentifier</b>, and <b>referenceModelId</b> attributes, then, the system will throw an error.</p> <p>If you specify the values in the <b>referenceDealId</b>, <b>referDealIdentifier</b>, and <b>referenceModelId</b> attributes, then, the system will check whether the values are valid or not.</p>	<p><b>Note:</b> This data is required while specifying the reference deal.</p>
referenceModelId	<p>Used to specify the reference deal version using which you want to update the deal.</p> <p><b>Note:</b> If you specify the value in the <b>referenceTypeFlg</b> attribute as <b>RDEL</b>, then, you need to specify the <b>referenceModelId</b> attribute.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
referUsageSw	<p>Used to indicate whether you want to use reference usage details to update the deal.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>false</b>.</p> <p>You need to specify the value of either <b>referUsageSw</b> or <b>referPriceSw</b> as <b>true</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
referPriceSw	<p>Used to indicate whether you want to use reference pricing details to update the deal.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>false</b>.</p> <p>You need to specify the value of either <b>referUsageSw</b> or <b>referPriceSw</b> as <b>true</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the reference deal.</p>
includeChildHierarchy	<p>Used to indicate whether you want to add child hierarchy in the deal of the person.</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> By default, the value is set to <b>false</b>.</p>	<p>Yes (Conditional)</p>

Attribute Name	Attribute Description	Mandatory (Yes or No)
division		

Once the deal is updated, all the details of deal are listed in the above mentioned attributes along with the following:

Attribute Name	Attribute Description
dealResponse	Indicates whether the deal update request is successfully processed or not.
message	Displays the message of successful deal update.
dealId	Displays the deal ID.
modelId	Displays the model ID.
createdDate	Displays the date when the deal is created.
acceptanceDate	Displays the date when the deal is accepted.
finalizedDate	Displays the date when the deal is finalized.
effectiveStartDate	Displays the date from when the deal is effective.
effectiveEndDate	Displays the date till when the deal is effective.
reviewedDate	Displays the date when the deal is reviewed.
dealSimulationDetails	Displays the simulation details of the deal.
dealFinancialSummaryId	Displays a list of the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDealFinancialSummaryId	Displays the summary of the original financial summary at the deal level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the original cost calculated at the deal level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability Percentage = ( Revenue - Cost)*100/ Revenue
proposedDealFinancialSummaryId	Displays the summary of the proposed financial at the deal level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the proposed cost calculated at the deal level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:

Attribute Name	Attribute Description
	Profit = Revenue - Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage at the recommend deal level from the price item pricing and price assignments.
divisionFinancialSummary	Displays the summary details of the financial at the division level.
division	Displays the division associated with the deal.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummary	Displays the summary of the original financial at the division level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the original cost calculated at the division level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
proposedDivisionFinancialSummary	Displays the summary of the proposed financial at the division level.
revenue	Displays the proposed revenue generated from the price item pricing and price assignments at the division level.
cost	Displays the proposed cost calculated at the proposed level.
profit	Displays the proposed profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:

Attribute Name	Attribute Description
	Profit = Revenue - Cost
profitabilityPercentage	Displays the proposed profit created in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the recommended financial at the deal level.
revenue	Displays the recommended revenue generated from the price item pricing and price assignments at the deal level.
cost	Displays the recommended cost calculated at the deal level.
profit	Displays the recommended profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the recommended profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the recommended profit and proposed profit in percentage. at the division level from the price item pricing and price assignments.
productFinancialSummaryDetails	Displays the summary details of the financial at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Displays the product.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays the summary of the original financial at the product level.
revenue	Displays the original revenue generated from the price item pricing and price assignments at the product level.
cost	Displays the original cost calculated at the product level.
profit	Displays the original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the original profit created in percentage at the product level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage = ( Revenue - Cost)*100/ Revenue
proposedProductDivisionFinancialSummary	Displays the summary of the financial at the proposed product division level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the proposed product division level.
cost	Displays the cost calculated at the proposed product division level.

Attribute Name	Attribute Description
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the proposed product division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the profit created in percentage at the proposed product division level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
recommendedDealFinancialSummary	Displays the summary of the financial at the recommend deal level.
revenue	Displays the revenue generated from the price item pricing and price assignments at the recommend deal level.
cost	Displays the cost calculated at the recommend deal level.
profit	Displays the profit in deal currency generated from the price item pricing and price assignments at the recommend deal division level. It is calculated using the following formula:  Profit = Revenue - Cost
profitabilityPercentage	Displays the profit created in percentage at the recommend deal level from the price item pricing and price assignments. It is calculated using the following formula:  Profitability Percentage= ( Revenue - Cost)*100/ Revenue
profitVariationPercentage	Displays the difference between the original profit and proposed profit in percentage. at the recommend deal level from the price item pricing and price assignments.
hierarchySimulationDetails	Displays the details of the hierarchy simulation.
entityType	Displays the entity type.
entityId	Displays the entity Id of the child.
parentEntityId	Displays the entity Id of the parent.
status	Indicates the status of the deal.
revenueVariation	Displays the average revenue generated from a person or account.
proposedRevenue	Displays the revenue generated from the proposed price item pricing and commitments.
proposedCost	Displays the overall cost of the proposed price item based on the usage.
originalRevenue	Displays the revenue generated through the original price item pricing and commitments.
originalCost	Displays the overall cost of the original price item based on the usage.

## Deal View Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Deal View Request in the JSON Format](#) on page 4107 and [Deal View Request in the JSON Format](#) on page 4108 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealCreationUpdateIWS** business service through an inbound web service, you need to ensure that the deal view request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
actionFlag	Used to indicate that you want to create request to view the deal details of an entity (i.e. existing person, account, or prospect person). The valid value is: <ul style="list-style-type: none"><li>• READ</li></ul>	Yes
	<b>Note:</b> If you do not specify the value in this attribute, by default, the system considers it as an <b>ADD</b> action.	
dealOperation	Used to specify the operation that you want to perform while viewing the deal details.	No
	<b>Note:</b> You need to specify the <b>dealOperation</b> attribute only when you want to view the price items using which the deal is simulated.	

Attribute Name	Attribute Description	Mandatory (Yes or No)
operationFlag	Used to indicate that you want to create request to view the price items offered in the deal. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>PSEL</li> </ul>	<b>Note:</b> This data is required for viewing the price items offered in the deal.
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> or the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealIdentifier</b> attribute.	<b>Note:</b> This data is required for viewing the price items offered in the deal.
dealId	Used to specify the deal whose price items you want to view.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> or the <b>modelId</b> tags. If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required for viewing the price items offered in the deal.
modelId	Used to specify the deal version whose price items you want to view.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> or the <b>dealId</b> tags.	<b>Note:</b> This data is required for viewing the price items offered in the deal.
dealDetails	Used to specify the details of the deal.	No
	<b>Note:</b> You need to specify the <b>dealDetails</b> attribute only when you want to view the deal details other than the price items offered in the deal (i.e. when you do not specify the <b>dealOperation</b> attribute).	
dealIdentifier	Used to specify the primary identifier using which the deal is created in the system.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> or the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealIdentifier</b> attribute.	<b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.
dealId	Used to specify the deal whose details you want to view.  <b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> or the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	Yes (Conditional)  <b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.
modelId	Used to specify the deal version whose details you want to view.  <b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> or the <b>dealId</b> tags.	Yes (Conditional)  <b>Note:</b> This data is required for viewing the deal details except the price items offered in the deal.

Once the deal view request is created, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealResponse	Indicates whether the deal view request is successfully processed or not.
message	Displays the message generated for the deal response.
dealAcceptEffStartDate	Displays the date when the deal is accepted in the system.  <b>Note:</b> The data in this attribute appears only when the deal is accepted in the system.
dealAcceptEffEndDate	Displays the date till when you can finalize the deal in the system.  <b>Note:</b> The data in this attribute appears only when the deal is accepted in the system and awaiting finalization.
comments	Displays information about deal acceptance or rejection.
rejectReasonCode	Displays the reason why the deal is rejected in the system.
dealVersionDescription	Displays description of the deal version created for the deal.
dealVersionCreationFlag	Indicates the information using which the deal version is created. The valid values are:

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>• <b>CVOC</b> - Indicates that the deal version is created without copying the changes done in the current deal.</li> <li>• <b>CVWC</b> - Indicates that the deal version is created by copying the changes done in the current deal.</li> <li>• <b>FLHR</b> - Indicates that the deal version is created by using the latest hierarchy of the entity from the system for which the current deal is created.</li> </ul>
priceItemGroupSelection	<p>Displays the list of price items offered in the deal.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
priceItemSelectionList	<p>Displays information about the price item offered in the deal.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
priceItemCode	<p>Displays the price item.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
priceItemInfo	<p>Displays the concatenated string of information about the price item.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
parameterInfo	<p>Displays the parameters using which the pricing is defined for the price item.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
assignmentLevel	<p>Indicates the level at which the price item pricing is defined in the entity (i.e. exiting person, account, or prospect person) hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account Agreed</b> - Indicates price item pricing is agreed for the account.</li> <li>• <b>Account Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the account.</li> <li>• <b>Account Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account.</li> <li>• <b>Customer Agreed</b> - Indicates price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> - Indicates price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> - Indicates price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Customer Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Parent Customer Agreed</b> - Indicates price item pricing is agreed for the parent customer in the customer hierarchy.</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>• <b>Parent Customer Price List</b> - Indicates price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> - Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> <li>• <b>Product Default Price List</b> - Indicates product defined in the price list is available in the default price list.</li> </ul> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
hierarchyDetails	<p>Displays the root level and/or non-root level hierarchy entities to which the price item belongs.</p> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
includeFlag	<p>Indicates whether the price item is included in the deal for simulation. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> The data in this attribute appears only when you are viewing the price items offered in the deal (i.e. when the value in the <b>operationFlag</b> attribute is set to <b>PSEL</b>).</p>
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	<p>Indicates the identifier type using which the person is created in the system.</p> <p><b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EPER</b>.</p>
personIdentifier	<p>Displays the value of the person identifier type.</p> <p><b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EPER</b>.</p>
personId	<p>Displays the existing person for whom the deal is created in the system.</p> <p><b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EPER</b>.</p>
accountIdentifierType	<p>Indicates the identifier type using which the account is created in the system.</p> <p><b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EACC</b>.</p>
accountIdentifier	<p>Displays the value of the account identifier type.</p> <p><b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EACC</b>.</p>
accountId	Displays the existing account for which the deal is created in the system.

Attribute Name	Attribute Description
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>EACC</b> .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system. <b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>PRSP</b> .
prsPerIdentifier	Displays the value of the prospect person identifier type. <b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>PRSP</b> .
prospectPersonId	Displays the prospect person for whom the deal is created in the system. <b>Note:</b> The value in this attribute appears only when the value specified in the <b>dealEntityType</b> attribute is <b>PRSP</b> .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
modelId	Displays the identification value of the deal version.
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> <li>• <b>EPER</b> - Indicates that the deal is created for an existing person.</li> <li>• <b>EACC</b> - Indicates that the deal is created for an existing account.</li> <li>• <b>PRSP</b> - Indicates that the deal is created for a prospect person.</li> </ul>
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
accessGrp	Indicates the user group who can view and edit the details of the entity (i.e. existing person, account, or prospect person).
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
currency	Indicates the currency in which you want to calculate the deal level, division level, or product level financial summary and profitability of the deal.
dealTypeCode	Indicates the deal type using which the deal is created in the system.

Attribute Name	Attribute Description
startDate	Displays the date from when the deal is effective for the entity (i.e. existing person, account, or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>• CUST</li> <li>• ACCT</li> <li>• DEAL</li> </ul>
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> <li>• 6 - Used to indicate that you want to monitor the deal usage biannually.</li> <li>• 12 - Used to indicate that you want to monitor the deal usage annually.</li> <li>• 24 - Used to indicate that you want to monitor the deal usage in every two years.</li> </ul>
dealDescription	Displays the description for the deal.
dealVersionDescription	Displays the description for the deal version.
dealFrequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Used to indicate that you want to simulate the deal every month</li> <li>• 3 - Used to indicate that you want to simulate the deal quarterly</li> <li>• 6 - Used to indicate that you want to simulate the deal biannually</li> <li>• 12 - Used to indicate that you want to simulate the deal annually</li> </ul>
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Used to indicate that you want to aggregate the deal data every month</li> <li>• 3 - Used to indicate that you want to aggregate the deal data quarterly</li> <li>• 6 - Used to indicate that you want to aggregate the deal data biannually</li> <li>• 12 - Used to indicate that you want to aggregate the deal data annually</li> </ul>
includeHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy are included in the deal or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
templateFlag	Indicates whether the deal is used as a template while searching references for other deals. The valid values are: <ul style="list-style-type: none"> <li>• true</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>false</li> </ul>
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	<p>Indicates whether the basic details from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
copyPricingFlag	<p>Indicates whether the price list assignments and price assignments from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
copyUsageFlag	<p>Indicates whether the commitments from the SQI-based billable charges from the template deal are copied to create the deal or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealCharacteristics	Displays the list of characteristics of the deal.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions that are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
description	Displays the description of the terms and conditions.
termsAndCondition	Indicates the term and condition which is associated with the deal.
termsAndConditionText	Displays additional information about the term and condition.
adhocTermsAndCondition	Displays the adhoc terms and conditions associated with the deal.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created in the system.
referenceTypeFlg	<p>Indicates the type of the reference deal using which the deal is created in the system. The valid values are:</p> <ul style="list-style-type: none"> <li><b>RPER</b> - Indicates that the deal is created by using the deal of an existing person as a reference.</li> <li><b>RACC</b> - Indicates that the deal is created by using the deal of an existing account as a reference.</li> <li><b>RDEL</b> - Indicates that the deal is created by using an existing deal as a reference.</li> </ul>

Attribute Name	Attribute Description
refPersonIdentifierType	Displays the identifier type of the person using which the reference deal is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RPER</b> .
refPersonIdentifier	Displays the value of the reference person identifier type.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RPER</b> .
referPersonId	Displays the person for whom the reference deal is created.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RPER</b> .
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
refAccountIdentifier	Displays the value of the reference account identifier type.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
referAccountId	Display the account for which the reference deal is created.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referenceDealId	Displays the existing deal which is used as a reference to create the deal.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal.
	<b>Note:</b> The value in this attribute appears only when the value specified in the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal. The valid values are:

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
includeChildHierarchy	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealfinancialsummarylist	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> <li>APPR</li> <li>EROR</li> <li>INIT</li> <li>UNAP</li> </ul>
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the cost calculated at the deal level from the recommended price list assignments and price assignments.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.

Attribute Name	Attribute Description
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummaryDetails	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummaryDetails	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummaryDetails	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the division level in percentage (%).

Attribute Name	Attribute Description
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the product level in percentage (%).

Attribute Name	Attribute Description
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
status	Indicates the approval status of the price assignments for the respective entity (i.e. person or account).
revenueVariation	Displays the difference in the original and the proposed revenues at the entity level in percentage (%).
proposedRevenue	Displays the revenue generated at the entity level from the proposed price list assignments and price assignments.
proposedCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.
originalRevenue	Displays the revenue generated at the entity level from the original price list assignments and price assignments.
originalCost	Displays the cost calculated at the entity level from the proposed price list assignments and price assignments.

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a deal return to submitter request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

**Note:** We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a price item selection view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

## Sample Price Item Selection Request and Response in the JSON Format

Using the below example, you can select price item for the deal 6287907587.

### Sample Price Item Selection Request in the JSON Format

```
{
  -"C1-DealCreationUpdateIWS":
  {
    -"actionFlag" -:"UPD",
    -"dealOperation"
    {
      -"operationFlag" -:"PSEL",
      -"dealId" -:"6287907587",
    -}
    -"priceItemGroupSelection"
    {
      -"priceItemSelectionList"
      {
        -"priceItemCode" -:"ACH",
        -"priceItemInfo" -:"ACH, Automated Clearing House",
        -"assignmentLevel" -:"Global Price List",
        -"priceAssignmentId" -:"4040864221",
        -"includeFlag" -:"true",
      -}
    -}
  -}
}
```

### Sample Price Item Selection Response in the JSON Format

```
{
  -"C1-DealCreationUpdateIWS":
  {
    -"actionFlag" -:"UPD",
    -"dealResponse"
    {
      message" -:""",
    -}
    -"dealOperation"
    {
      -"operationFlag" -:"PSEL",
      -"dealId" -:"6287907587",
    -}
    -"priceItemGroupSelection"
    {
      -"priceItemSelectionList"
      {
        -"priceItemCode" -:"ACH",

# Deal Extraction through Inbound Web Service

Oracle Revenue Management and Billing enables you to extract the details of a deal through a web service. At a time, you can extract the details of only one deal version of a deal. You can send the extract request from the external system through an inbound web service. We have shipped the following two inbound web services in this release:

- **C1-DealExtract** - This is an SOAP based web service. You can use this web service when you want to send the extract request in the XML format.
- **C1-DealExtractREST** - This is a REST based web service. You can use this web service when you want to send the extract request in the XML or JSON format.

Both these inbound web services call the **C1-DealExtractionWebService** business service. This business service is used to extract the details of a deal version. While extracting the details of a deal version, you need to specify the deal ID, deal version ID, or the deal identifier to determine the deal version whose details you want to view. If both the deal version and deal ID or deal identifier are given in the request, the system considers the deal version. However, if only the deal ID or deal identifier is given in the request, the system derives the deal version. Note that an error occurs when the given deal has multiple deal versions.

On processing the request, the system displays the following:

- Entity for which the deal is created
- Basic details of the deal including its terms and conditions, characteristics, and products
- Template using which the deal is created
- Details of the reference (if any) used in the deal
- Logs of the deal and deal version
- Adhoc cost and revenue details of the deal version
- Pricing and commitment details of each entity in the customer hierarchy
- Deal-specific terms and conditions defined for the price items and hierarchy entities
- Characteristics of different entities in the customer hierarchy
- Characteristics of different price items and hierarchy entities included in the deal

If the deal version is simulated, the system also displays the following information:

- Original, proposed, and recommended deal level financial summary
- Original, proposed, and recommended product level financial summary (if any)
- Original, proposed, and recommended division level financial summary (if any)
- Simulation details of each entity in the customer hierarchy

## Deal Extraction Request in the XML Format

The following code snippet illustrates how the tags should be nested while receiving the deal extract request in the XML format:

```
<C1-DealExtractionWebService>
  <dealDetails>
    <dealIdentifier></dealIdentifier>
    <dealId></dealId>
    <modelId></modelId>
  </C1-DealExtractionWebService>
```

**Deal Extraction Request and Response - Tags in the XML Format**

**Note:** We recommend you to refer the topics [Deal Extraction Request in the XML Format](#) on page 4198 and [Deal Extraction Response in the XML Format](#) on page 4198 in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-DealExtractionWebService** business service through an inbound web service, you need to ensure that the deal extraction request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the primary identifier of the deal using which you want to extract the details of the deal.	Yes (Conditional)
		<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> tags.

Tag Name	Tag Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> tag, you need not specify the <b>dealId</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealIdentifier</b> tag.	
dealId	Used to specify the deal ID using which you want to extract the details of the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> tags.  If the deal has multiple versions, then, you should specify the <b>modelId</b> tag instead of the <b>dealId</b> tag.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> tags.
modelId	Used to specify the deal version using which you want to extract the details of the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> tag, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> tags.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> tags.

Once the deal is extracted, all the details of deal are listed in the above mentioned tags along with the following tags:

Tag Name	Tag Description
dealDetails	Displays basic information about the deal.
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	<b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EPER</b> .
personIdentifier	Displays the value of person identifier type.
	<b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EPER</b> .
personId	Displays the existing person for whom the deal created in the system.

Tag Name	Tag Description
	<b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EPER</b> .
accountIdentifierType	Indicates the identifier type using which the account is created in the system. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EACC</b> .
accountIdentifier	Displays the value of the account identifier type. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EACC</b> .
accountId	Displays the existing account for which the deal is created in the system. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>EACC</b> .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>PRSP</b> .
prsPerIdentifier	Displays the value of the prospect person identifier type. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>PRSP</b> .
prospectPersonId	Displays the prospect person for whom the deal is created in the system. <b>Note:</b> The value in this tag appears only when the value of the <b>dealEntityType</b> tag is <b>PRSP</b> .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> <li>• <b>EPER</b> - Indicates that the deal is created for an existing person.</li> <li>• <b>EACC</b> - Indicates that the deal is created for an existing account.</li> <li>• <b>PRSP</b> - Indicates that the deal is created for a prospect person.</li> </ul>
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the deal belongs.
accessGrp	Indicate the user group who can view and edit the details of the deal.

Tag Name	Tag Description
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) whose deal details you are viewing.
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
currency	Indicates the currency in which the deal level, division level, or product level financial summary and profitability of the deal is calculated.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. the existing person, account or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. the existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which the cost, revenue, and profitability of the deal is analyzed. The valid values are: <ul style="list-style-type: none"> <li>• CUST</li> <li>• ACCT</li> <li>• DEAL</li> </ul>
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> <li>• 6 - Indicates that you want to monitor the deal usage biannually.</li> <li>• 12 - Indicates that you want to monitor the deal usage annually.</li> <li>• 24 - Indicates that you want to monitor the deal usage in every two years.</li> </ul>
dealDescription	Displays the description of the deal.
dealVersionDescription	Displays the description of the deal version.
dealFrequency	Indicates the duration in which the financial summary and profitability of the deal is calculated through simulation. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Indicates that you want to simulate the deal every month.</li> <li>• 3 - Indicates that you want to simulate the deal quarterly.</li> <li>• 6 - Indicates that you want to simulate the deal biannually.</li> <li>• 12 - Indicates that you want to simulate the deal annually.</li> </ul>
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	Indicates the period for which deal data is aggregated to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Indicates that you want to aggregate the deal data every month.</li> </ul>

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• <b>3</b> - Indicates that you want to aggregate the deal data quarterly.</li> <li>• <b>6</b> - Indicates that you want to aggregate the deal data biannually.</li> <li>• <b>12</b> - Indicates that you want to aggregate the deal data annually.</li> </ul>
includeHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy is included in the deal or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
status	Indicates the current status of the deal.
dealVersionStatus	Indicates the current status of the deal version.
templateFlag	Indicates whether the deal is used as a template while searching references for creating other deals. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
createdDate	Displays the date when the deal is created in the system.
acceptanceDate	Displays the date when the deal is accepted in the system after the customer review and acceptance.
	<b>Note:</b> The data in this tag appears only when the deal has reached the <b>Accepted</b> status. If the deal status is <b>Rejected</b> , then the <b>acceptanceDate</b> tag specifies the date when the deal is rejected in the system.
finalizedDate	Displays the date when the deal is finalized in the system.
effectiveStartDate	Displays the date from when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
effectiveEndDate	Displays the date till when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
reviewedDate	Displays the date when the deal usage as per the commitments made by the customer is reviewed in the system.
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	Indicates whether the basic details are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
copyPricingFlag	Indicates whether the price list assignments and price assignments are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> </ul>

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>false</li> </ul>
copyUsageFlag	<p>Indicates whether the commitments from the SQI-based billable charges are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealCharacteristics	Displays the list of characteristics of the deal.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions which are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
termsAndCondition	Displays the term and condition which is associated with the deal.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information about the term and condition.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system.
referenceTypeFlg	<p>Indicates the type of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system. The valid values are:</p> <ul style="list-style-type: none"> <li><b>RPER</b> - Indicates that the deal is created by using the deal of an existing person as a reference.</li> <li><b>RACC</b> - Indicates that the deal is created by using the deal of an existing account as a reference.</li> <li><b>RDEL</b> - Indicates that the deal is created by using an existing deal as a reference.</li> </ul>
refPersonIdentifierType	<p>Displays the identifier type of the person using which the reference deal is created in the system.</p> <p><b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RPER</b>.</p>
refPersonIdentifier	<p>Displays the value of the reference person identifier type.</p> <p><b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RPER</b>.</p>
referPersonId	<p>Displays the person for whom the reference deal is created.</p> <p><b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RPER</b>.</p>
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.

Tag Name	Tag Description
	<b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
refAccountIdentifier	Displays the value of the reference account identifier type. <b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
referAccountId	Display the account for which the reference deal is created. <b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RACC</b> .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system. <b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referenceDealId	Displays the existing deal which is used as a reference to create the deal. <b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal. <b>Note:</b> The value in this tag appears only when the value of the <b>referenceTypeFlg</b> tag is <b>RDEL</b> .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
includeChildHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal for the entity (i.e. existing person, account, or prospect person).. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
division	Indicates the division to which the reference person belongs.
dealComments	Displays information about the actions performed on the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal.

Tag Name	Tag Description
user	Displays the user who has performed the action on the deal.
dealComments	Displays the details about the action performed on the deal.
reasonCode	Displays the reason why the action is performed on the deal.
modelcomments	Displays information about the actions performed on the deal version of the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal version of the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal version of the deal.
user	Displays the user who has performed the action on the deal version of the deal.
modelComments	Displays the details about the action performed on the deal version of the deal.
adhocRevenueCostDetails	Displays information about the adhoc revenue and cost of the deal.
sequence	Displays the sequence number of the adhoc revenue or cost of the deal.
revenueCostGroupFlag	Indicates the group to which the adhoc charge belongs. The valid values are: <ul style="list-style-type: none"> <li>• <b>ADRE</b> - Indicates the charges incurred as the adhoc revenue for the deal.</li> <li>• <b>CUCO</b> - Indicates the charges of the courier services for the deal.</li> <li>• <b>DCOM</b> - Indicates the charges that incurred during deal commissioning.</li> <li>• <b>PRIL</b> - Indicates the price item specific charges for the deal.</li> <li>• <b>TRCO</b> - Indicates the travel cost.</li> </ul>
division	Indicates the division for which the adhoc charge is applicable.
currency	Indicates the currency in which the adhoc charge is specified for the deal.
amount	Displays the amount for the adhoc revenue or cost.
	<b>Note:</b> You can even view the negative value in this tag.
priceItem	Indicates the particular price item for which the adhoc charge is added.
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealFinancialSummaryDetails	Displays information about the financial summary at the deal level.
approvalStatus	Indicates the current approval status of the financial summary at the deal level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.

Tag Name	Tag Description
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.

Tag Name	Tag Description
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.

Tag Name	Tag Description
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
hierarchyDetails	Displays the details of the hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
entityIdentifierTyoe	Displays the identifier type using which the entity is created in the system.
entityIdentifierValue	Displays the value of the entity identifier type.
entityDivision	Indicates the division to which the entity belongs.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
parentEntityIdentifierType	Displays the identifier type using which the parent entity is created in the system.
parentEntityIdentifierValue	Displays the value of the parent entity identifier type.
parentEntityDivision	Indicates the division to which the parent entity belongs.
status	Indicates the current approval status of the price list assignments and price assignments for the respective entity (i.e. person or account) in the customer hierarchy.
revenueVariation	Displays the average revenue generated from the price assignment and commitments of the price items at the entity (i.e. person or account) level in the customer hierarchy.
proposedRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
proposedCost	Displays the cost calculated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.

Tag Name	Tag Description
originalRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
originalCost	Displays the cost calculated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
dealPricingAndCommitment	Displays information about the price assignment and commitments of the entities (i.e. person or account) in the customer hierarchy of the deal.
pricingAndCommitmentsDetails	Displays the price assignment and commitment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
entityId	Displays the entity (i.e. person or account) whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> <li>• ACCT</li> <li>• PERS</li> </ul>
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Indicates the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
pricingDetails	Displays the price assignment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity (i.e. person or account) whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
cost	Displays the cost calculated at the price item level from the proposed price assignment and commitments of the price item.
revenue	Displays the revenue generated from the proposed price assignment and commitments of the price item.
averagePrice	Displays the average price of the price item as per the proposed price assignment and commitments of the price item.
variation	Displays the variation between the original and proposed revenue in percentage (%) generated from the price assignment and commitments of the price item.
pricingStatus	Indicates the current approval status of the price assignment of the price item.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity (i.e. person or account).

Tag Name	Tag Description
endDate	Displays the date till when the price assignment of the price item is effective for the entity (i.e. person or account).
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> <li>ACPI</li> <li>CUPI</li> <li>PCPI</li> </ul>
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>
printfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
priceAssignCharacteristics	Displays the list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
parameterDetails	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
parameterCode	Indicates the pricing parameter which is associated with the price item.
parameterValue	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
aggregateSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are:

Tag Name	Tag Description
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• DAILY</li> <li>• WEEKLY</li> <li>• MONTHLY</li> <li>• QUARTERLY</li> <li>• YEARLY</li> </ul>
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
displaySw	Indicates whether the price component is displayed in the bill or not. The valid values are: <ul style="list-style-type: none"> <li>• TRUE</li> <li>• FALSE</li> </ul>
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	Displays the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> <li>• FLAT</li> <li>• STEP</li> <li>• THRESHOLD</li> </ul>
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompTier	Displays the tiering criteria of the price component.
tierSeqNum	Indicates the tiering sequence number.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
lowerLimit	Displays the lower limit of the pricing range.
upperLimit	Displays the upper limit of the pricing range.
priceCompParameterDetails	Displays the list of parameters based on which the price items total usage is considered for determining the rate.
	<b>Note:</b> The value in this tag appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
parameterCode	Indicates the parameter which is associated with the tiering criteria.
parameterValue	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component.

Tag Name	Tag Description
	<b>Note:</b> The value in this tag appears only when the <b>isEligible</b> tag is set to <b>TRUE</b> and the eligibility criteria is defined for the price component.
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• BETWEEN</li> <li>• IN</li> <li>• LIKE</li> <li>• NOT IN</li> </ul>
rhsPriceParmTypeFlg	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.</p> <ul style="list-style-type: none"> <li>• <b>PARAMETER</b> - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li>• <b>VALUE</b> - Indicates that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>
rhsPriceParmCd	Displays the parameter against which you have compared the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you have compared the parameter (on the left hand side).
isTrueFlag	<p>Indicates what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li>• <b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isFalseFlag	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li>• <b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>

Tag Name	Tag Description
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li>• <b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
commitmentDetails	Displays the price items commitment details for the entity (i.e. person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that is used for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.
termsAndConditionsDetails	Displays the list of terms and conditions associated with the deal at the price item level.
priceItemCode	Displays the price item to which the terms and conditions are associated.
priceItemDescription	Displays the description of the price item.
priceItemGroupCode	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceItemGroupCodeDescription	Displays the description of the root level and/or non-root level hierarchy entity to which the price item belongs.
parameterDetails	Displays the list of the parameters using which the price item pricing is defined in the system.
parameterCode	Indicates the parameter which is associated with the price item.
parameterValue	Displays the value of the parameter which is associated with the price item.
termsAndConditionsList	Displays information about the terms and conditions associated with the price item.
termsAndCondition	Indicates the term and condition which is associated with the price item.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information of the term and condition.

Tag Name	Tag Description
entitycharacteristics	Displays the list of the characteristics defined for the entities (i.e. person or account) in the deal.
entityId	Displays the identification value of the entity (i.e. person or account) for which the characteristic is defined.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"><li>• ACCT</li><li>• PERS</li></ul>
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Displays the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
entityCharacteristicsList	Displays information about the characteristic defined for the entity (i.e. person or account).
effectiveDate	Displays the date from when the characteristic is effective for the entity (i.e. person or account).
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.

## Deal Extraction Request and Response - Attribute/Value Pairs in the JSON Format

**Note:** We recommend you to refer the topics [Deal Extraction Request in the JSON Format](#) on page 4228 and [Deal Extraction Response in the JSON Format](#) on page 4228 in parallel while understanding the below mentioned attributes. This will help you to understand how the attributes are structured in the JSON format.

Before calling the **C1-DealExtractionWebService** business service through an inbound web service, you need to ensure that the deal extract request contains the following attributes:

Attribute Name	Attribute Description	Mandatory (Yes or No)
dealIdentifier	Used to specify the primary identifier of the deal using which you want to extract the details of the deal.	Yes (Conditional)

Attribute Name	Attribute Description	Mandatory (Yes or No)
	<b>Note:</b> If you specify the <b>dealIdentifier</b> attribute, you need not specify the <b>dealId</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealIdentifier</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealId</b> and <b>modelId</b> attributes.
dealId	Used to specify the deal ID using which you want to extract the details of the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>dealId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>modelId</b> attributes.  If the deal has multiple versions, then, you should specify the <b>modelId</b> attribute instead of the <b>dealId</b> attribute.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>modelId</b> attributes.
modelId	Used to specify the deal version using which you want to extract the details of the deal.	Yes (Conditional)
	<b>Note:</b> If you specify the <b>modelId</b> attribute, you need not specify the <b>dealIdentifier</b> and the <b>dealId</b> attributes.	<b>Note:</b> This data is required if you do not specify the <b>dealIdentifier</b> and <b>dealId</b> attributes.

Once the deal is extracted, all the details of deal are listed in the above mentioned attributes along with the following attributes:

Attribute Name	Attribute Description
dealDetails	Displays basic information about the deal.
dealEntityDetails	Displays basic information about the entity (i.e. existing person, account, or prospect person) for which the deal is created in the system.
personIdentifierType	Indicates the identifier type using which the person is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EPER</b> .
personIdentifier	Displays the value of person identifier type.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EPER</b> .
personId	Displays the existing person for whom the deal created in the system.

Attribute Name	Attribute Description
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EPER</b> .
accountIdentifierType	Indicates the identifier type using which the account is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EACC</b> .
accountIdentifier	Displays the value of the account identifier type.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EACC</b> .
accountId	Displays the existing account for which the deal is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>EACC</b> .
prsPerIdentifierType	Indicates the identifier type using which the prospect person is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>PRSP</b> .
prsPerIdentifier	Displays the value of the prospect person identifier type.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>PRSP</b> .
prospectPersonId	Displays the prospect person for whom the deal is created in the system.
	<b>Note:</b> The value in this attribute appears only when the value of the <b>dealEntityType</b> attribute is <b>PRSP</b> .
division	Indicates the division to which the entity (i.e. existing person, account, or prospect person) belongs.
dealInformation	Displays the concatenated string of information about the deal separated by a comma (,).
dealEntityType	Indicates the type of entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> <li>• <b>EPER</b> - Indicates that the deal is created for an existing person.</li> <li>• <b>EACC</b> - Indicates that the deal is created for an existing account.</li> <li>• <b>PRSP</b> - Indicates that the deal is created for a prospect person.</li> </ul>
customerSegment	Indicates the business component to which the entity (i.e. existing person, account, or prospect person) belongs.
customerTier	Indicates the customer tier of the customer segment to which the entity (i.e. existing person, account, or prospect person) belongs.
division	Indicates the division to which the deal belongs.
accessGrp	Indicate the user group who can view and edit the details of the deal.

Attribute Name	Attribute Description
dealEntityId	Displays the entity (i.e. existing person, account, or prospect person) whose deal details you are viewing.
contractedDealFlag	Indicates whether the change in the price item pricing from the price list affects the price item pricing offered in the deal created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
currency	Indicates the currency in which the deal level, division level, or product level financial summary and profitability of the deal is calculated.
dealTypeCode	Indicates the deal type using which the deal is created in the system.
startDate	Displays the date from when the deal is effective for the entity (i.e. the existing person, account or prospect person).
endDate	Displays the date till when the deal is effective for the entity (i.e. the existing person, account, or prospect person).
simulationTypeFlag	Indicates the simulation type using which the cost, revenue, and profitability of the deal is analyzed. The valid values are: <ul style="list-style-type: none"> <li>• CUST</li> <li>• ACCT</li> <li>• DEAL</li> </ul>
reviewFrequency	Indicates the timely monitoring of the deal usage as per the commitments made by the customer. The valid values are: <ul style="list-style-type: none"> <li>• 6 - Indicates that you want to monitor the deal usage biannually.</li> <li>• 12 - Indicates that you want to monitor the deal usage annually.</li> <li>• 24 - Indicates that you want to monitor the deal usage in every two years.</li> </ul>
dealDescription	Displays the description of the deal.
dealVersionDescription	Displays the description of the deal version.
dealFrequency	Indicates the duration in which the financial summary and profitability of the deal is calculated through simulation. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Indicates that you want to simulate the deal every month.</li> <li>• 3 - Indicates that you want to simulate the deal quarterly.</li> <li>• 6 - Indicates that you want to simulate the deal biannually.</li> <li>• 12 - Indicates that you want to simulate the deal annually.</li> </ul>
skipReferenceFlag	Indicates whether the deal is created by referring the pricing and commitments of a deal which is already created in the system. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
priceSelectionDate	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.
usagePeriod	Indicates the period for which deal data is aggregated to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> <li>• 1 - Indicates that you want to aggregate the deal data every month.</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>• <b>3</b> - Indicates that you want to aggregate the deal data quarterly.</li> <li>• <b>6</b> - Indicates that you want to aggregate the deal data biannually.</li> <li>• <b>12</b> - Indicates that you want to aggregate the deal data annually.</li> </ul>
includeHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts in the customer hierarchy is included in the deal or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
status	Indicates the current status of the deal.
dealVersionStatus	Indicates the current status of the deal version.
templateFlag	Indicates whether the deal is used as a template while searching references for creating other deals. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
createdDate	Displays the date when the deal is created in the system.
acceptanceDate	Displays the date when the deal is accepted in the system after the customer review and acceptance.
	<b>Note:</b> The data in this attribute appears only when the deal has reached the <b>Accepted</b> status. If the deal status is <b>Rejected</b> , then the <b>acceptanceDate</b> attribute specifies the date when the deal is rejected in the system.
finalizedDate	Displays the date when the deal is finalized in the system.
effectiveStartDate	Displays the date from when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
effectiveEndDate	Displays the date till when the proposed price list assignments, product enrollments and price assignments are effective for the deal.
reviewedDate	Displays the date when the deal usage as per the commitments made by the customer is reviewed in the system.
templateReferenceDetails	Displays the details of the template deal which is used as a reference for creating the deal.
templateDealId	Displays the particular template deal which is used for creating the deal.
templateDealIdentifier	Displays the primary identifier using which the template deal is created in the system.
templateModelId	Displays the particular template deal version which is used for creating the deal.
copyBasicDetailsFlag	Indicates whether the basic details are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
copyPricingFlag	Indicates whether the price list assignments and price assignments are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are: <ul style="list-style-type: none"> <li>• true</li> </ul>

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>false</li> </ul>
copyUsageFlag	<p>Indicates whether the commitments from the SQI-based billable charges are copied from the template deal to the deal which is created for the entity (i.e. existing person, account, or prospect person) or not. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
dealCharacteristics	Displays the list of characteristics of the deal.
effectiveDate	Displays the date from when the characteristic is effective for the deal.
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.
dealTermsAndConditionsDetails	Displays the list of terms and conditions which are associated with the deal.
termsAndConditionsList	Displays the terms and conditions of the deal.
termsAndCondition	Displays the term and condition which is associated with the deal.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information about the term and condition.
productDetailsList	Displays the list of products recommended for the deal.
productCode	Displays the product which is recommended for the deal.
referenceDetails	Displays the details of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system.
referenceTypeFlg	<p>Indicates the type of the reference deal using which the deal is created for the entity (i.e. existing person, account, or prospect person) in the system. The valid values are:</p> <ul style="list-style-type: none"> <li><b>RPER</b> - Indicates that the deal is created by using the deal of an existing person as a reference.</li> <li><b>RACC</b> - Indicates that the deal is created by using the deal of an existing account as a reference.</li> <li><b>RDEL</b> - Indicates that the deal is created by using an existing deal as a reference.</li> </ul>
refPersonIdentifierType	<p>Displays the identifier type of the person using which the reference deal is created in the system.</p> <p><b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RPER</b>.</p>
refPersonIdentifier	<p>Displays the value of the reference person identifier type.</p> <p><b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RPER</b>.</p>
referPersonId	<p>Displays the person for whom the reference deal is created.</p> <p><b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RPER</b>.</p>
refAccountIdentifierType	Displays the identifier type of the account using which the reference deal is created in the system.

Attribute Name	Attribute Description
	<b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
refAccountIdentifier	Displays the value of the reference account identifier type. <b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
referAccountId	Display the account for which the reference deal is created. <b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RACC</b> .
referDealIdentifier	Displays the primary identifier using which the reference deal is created in the system. <b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referenceDealId	Displays the existing deal which is used as a reference to create the deal. <b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referenceModelId	Displays the existing deal version which is used as a reference to create the deal. <b>Note:</b> The value in this attribute appears only when the value of the <b>referenceTypeFlg</b> attribute is <b>RDEL</b> .
referUsageSw	Indicates whether the commitments from the SQI-based billable charges of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
referPriceSw	Indicates whether the price list assignments and price assignments of the reference deal is copied to create the deal for the entity (i.e. existing person, account, or prospect person). The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
includeChildHierarchyFlag	Indicates whether the child persons, grandchild persons, and their accounts of the reference deal is included while creating the deal for the entity (i.e. existing person, account, or prospect person).. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>
division	Indicates the division to which the reference person belongs.
dealComments	Displays information about the actions performed on the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal.

Attribute Name	Attribute Description
user	Displays the user who has performed the action on the deal.
dealComments	Displays the details about the action performed on the deal.
reasonCode	Displays the reason why the action is performed on the deal.
modelcomments	Displays information about the actions performed on the deal version of the deal.
sequenceNo	Displays the sequence number in which the action is performed on the deal version of the deal.
commentsDateTime	Displays the date and time when the action is performed on the deal version of the deal.
user	Displays the user who has performed the action on the deal version of the deal.
modelComments	Displays the details about the action performed on the deal version of the deal.
adhocRevenueCostDetails	Displays information about the adhoc revenue and cost of the deal.
sequence	Displays the sequence number of the adhoc revenue or cost of the deal.
revenueCostGroupFlag	<p>Indicates the group to which the adhoc charge belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>ADRE</b> - Indicates the charges incurred as the adhoc revenue for the deal.</li> <li>• <b>CUCO</b> - Indicates the charges of the courier services for the deal.</li> <li>• <b>DCOM</b> - Indicates the charges that incurred during deal commissioning.</li> <li>• <b>PRIL</b> - Indicates the price item specific charges for the deal.</li> <li>• <b>TRCO</b> - Indicates the travel cost.</li> </ul>
division	Indicates the division for which the adhoc charge is applicable.
currency	Indicates the currency in which the adhoc charge is specified for the deal.
amount	Displays the amount for the adhoc revenue or cost.
	<b>Note:</b> You can even view the negative value in this attribute.
priceItem	Indicates the particular price item for which the adhoc charge is added.
dealSimulationDetails	Displays the deal level, division level, and product level simulation details of the deal.
dealFinancialSummaryDetails	Displays information about the financial summary at the deal level.
approvalStatus	<p>Indicates the current approval status of the financial summary at the deal level.</p> <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the deal level.

Attribute Name	Attribute Description
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the deal level.
proposedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the proposed price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the deal level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the deal level.
recommendedDealFinancialSummary	Displays information about the financial summary at the deal level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the deal level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the deal level.
profitVariationPercentage	Displays the difference in the original and the proposed profits at the deal level in percentage (%).
divisionFinancialSummaryDetails	Displays information about the financial summary at the division level.
division	Indicates the division for which the financial summary is displayed.
approvalStatus	Indicates the current approval status of the financial summary at the division level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
originalDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the division level.
proposedDivisionFinancialSummary	Displays information about the financial summary at the division level which is calculated using the proposed price list assignments and price assignments.

Attribute Name	Attribute Description
revenue	Displays the revenue generated at the division level from the proposed price list assignments and price assignments.
cost	Displays the cost calculated at the division level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the division level.
recommendedDealFinancialSummary	Displays information about the financial summary at the division level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the division level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the division level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the division level.
productFinancialSummaryDetail	Displays information about the financial summary at the product level.
approvalStatus	Indicates the current approval status of the financial summary at the product level. <ul style="list-style-type: none"> <li>• APPR</li> <li>• EROR</li> <li>• INIT</li> <li>• UNAP</li> </ul>
product	Indicates the product for which the financial summary is displayed.
division	Indicates the division for which the product financial summary is displayed.
originalProductFinancialSummary	Displays information about the financial summary at the product level which is calculated using the original price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the original price list assignments and price assignments.
cost	Displays the cost calculated at the product level from the original price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the original price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the original price list assignments and price assignments at the product level.
proposedProductDivisionFinancialSummary	Displays information about the financial summary at the product level which is calculated using the proposed price list assignments and price assignments for a particular division.
revenue	Displays the revenue generated at the product level from the proposed price list assignments and price assignments.

Attribute Name	Attribute Description
cost	Displays the cost calculated at the product level from the proposed price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the proposed price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit generated in percentage (%) from the proposed price list assignments and price assignments at the product level.
recommendedDealFinancialSummary	Displays information about the financial summary at the product level which is calculated using the recommended price list assignments and price assignments.
revenue	Displays the revenue generated at the product level from the recommended price list assignments and price assignments.
profit	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitabilityPercentage	Displays the profit in deal currency generated from the recommended price list assignments and price assignments at the product level.
profitVariationPercentage	Displays the profit generated in percentage (%) from the recommended price list assignments and price assignments at the product level.
hierarchySimulationDetails	Displays information about the financial summary at the entity level in the customer hierarchy.
hierarchyDetails	Displays the details of the hierarchy.
entityType	Displays the type of the entity for which the financial summary is displayed.
entityId	Displays the entity (i.e. person or account) in the customer hierarchy for which the financial summary is displayed.
entityIdentifierTyoe	Displays the identifier type using which the entity is created in the system.
entityIdentifierValue	Displays the value of the entity identifier type.
entityDivision	Indicates the division to which the entity belongs.
parentEntityId	Displays the parent person to whom the entity (i.e. person or account) belongs in the customer hierarchy.
parentEntityIdentifierType	Displays the identifier type using which the parent entity is created in the system.
parentEntityIdentifierValue	Displays the value of the parent entity identifier type.
parentEntityDivision	Indicates the division to which the parent entity belongs.
status	Indicates the current approval status of the price list assignments and price assignments for the respective entity (i.e. person or account) in the customer hierarchy.
revenueVariation	Displays the average revenue generated from the price assignment and commitments of the price items at the entity (i.e. person or account) level in the customer hierarchy.
proposedRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.
proposedCost	Displays the cost calculated at the entity (i.e. person or account) level from the proposed price assignment and commitments of the price items.

Attribute Name	Attribute Description
originalRevenue	Displays the revenue generated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
originalCost	Displays the cost calculated at the entity (i.e. person or account) level from the original price assignment and commitments of the price items.
dealPricingAndCommitment	Displays information about the price assignment and commitments of the entities (i.e. person or account) in the customer hierarchy of the deal.
pricingAndCommitmentsDetails	Displays the price assignment and commitment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
entityId	Displays the entity (i.e. person or account) whose price assignment and commitment details you are viewing.
entityType	Indicates the type of the entity whose price assignment and commitment details you are viewing. The valid values are: <ul style="list-style-type: none"> <li>• ACCT</li> <li>• PERS</li> </ul>
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Indicates the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
pricingDetails	Displays the price assignment details of the entity (i.e. person or account) in the customer hierarchy of the deal.
priceAsgnId	Displays the identification value of the price assignment for the entity (i.e. person or account) whose price assignment details you are viewing.
priceItemCode	Displays the price item whose price assignment details you are viewing.
priceItemDescription	Displays the description of the price item.
hierarchyDetails	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
cost	Displays the cost calculated at the price item level from the proposed price assignment and commitments of the price item.
revenue	Displays the revenue generated from the proposed price assignment and commitments of the price item.
averagePrice	Displays the average price of the price item as per the proposed price assignment and commitments of the price item.
variation	Displays the variation between the original and proposed revenue in percentage (%) generated from the price assignment and commitments of the price item.
pricingStatus	Indicates the current approval status of the price assignment of the price item.
priceCurrencyCode	Indicates the currency in which the price assignment is defined for the price item.
rateSchedule	Indicates the rate schedule using which the price assignment is defined for the price item.
startDate	Displays the date from when the price assignment of the price item is effective for the entity (i.e. person or account).

Attribute Name	Attribute Description
endDate	Displays the date till when the price assignment of the price item is effective for the entity (i.e. person or account).
isEligible	Indicates whether the eligibility criteria for the price assignment is defined or not. The valid values are: <ul style="list-style-type: none"> <li>FALSE</li> <li>TRUE</li> </ul>
assignmentLevel	Indicates the level at which the pricing is defined for the price item. The valid values are: <ul style="list-style-type: none"> <li>ACPI</li> <li>CUPI</li> <li>PCPI</li> </ul>
paTypeFlag	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>POST</li> <li>PPIN</li> <li>PPPR</li> <li>RGLR</li> </ul>
printfZero	Indicates whether zero pricing is displayed or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
priceAssignCharacteristics	Displays the list of characteristics defined for the price assignment.
characteristicType	Indicates the characteristic type.
effectiveDate	Displays the date from when the characteristic is effective for price assignment.
characteristicValue	Displays the value of the characteristic type.
parameterDetails	Displays the list of price item parameters which are used along with the price item for determining the price assignment.
parameterCode	Indicates the pricing parameter which is associated with the price item.
parameterValue	Indicates the predefined pricing parameter value which is used for the price assignment.
txnDailyRatingCrt	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>DNRT</li> <li>AGTR</li> <li>RITA</li> <li>RITX</li> </ul>
ignoreSw	Indicates whether transaction mapped to price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>
aggregateSw	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are:

Attribute Name	Attribute Description
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
scheduleCode	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• DAILY</li> <li>• WEEKLY</li> <li>• MONTHLY</li> <li>• QUARTERLY</li> <li>• YEARLY</li> </ul>
priceCompDetails	Displays the price component details of the rate component defined for the price item price assignment.
priceCompId	Displays the identification value of the price component.
priceCompDesc	Displays the description for the price component.
valueAmt	Displays the rate of the price component.
displaySw	Indicates whether the price component is displayed in the bill or not. The valid values are: <ul style="list-style-type: none"> <li>• TRUE</li> <li>• FALSE</li> </ul>
rcMapId	Displays the identification value of the rate component for the price component.
tieredFlag	Displays the tiering type used for the price component. The valid values are: <ul style="list-style-type: none"> <li>• FLAT</li> <li>• STEP</li> <li>• THRESHOLD</li> </ul>
priceCompSequenceNo	Displays the sequence number of the price component.
priceCompTier	Displays the tiering criteria of the price component.
tierSeqNum	Indicates the tiering sequence number.
priceCriteria	Indicates the tiering criterion which is used in the tiering range.
lowerLimit	Displays the lower limit of the pricing range.
upperLimit	Displays the upper limit of the pricing range.
priceCompParameterDetails	Displays the list of parameters based on which the price items total usage is considered for determining the rate.  <b>Note:</b> The value in this attribute appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
parameterCode	Indicates the parameter which is associated with the tiering criteria.
parameterValue	Displays the value for the parameter which is associated with the tiering criteria.
priceCompElig	Displays the pricing eligibility criteria defined for the price component.

Attribute Name	Attribute Description
	<b>Note:</b> The value in this attribute appears only when the <b>isEligible</b> attribute is set to <b>TRUE</b> and the eligibility criteria is defined for the price component.
sequenceNumber	Displays the order in which the pricing eligibility criteria is executed in the rule.
lhsPriceParmCd	Displays the left hand side parameter which you want to use along with the price item for price determination.
operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• BETWEEN</li> <li>• IN</li> <li>• LIKE</li> <li>• NOT IN</li> </ul>
rhsPriceParmTypeFlg	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.</p> <ul style="list-style-type: none"> <li>• <b>PARAMETER</b> - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side).</li> <li>• <b>VALUE</b> - Indicates that the parameter (on the left hand side) is compared against a parameter value.</li> </ul>
rhsPriceParmCd	Displays the parameter against which you have compared the parameter (on the left hand side).
rhsPriceParmVal	Displays the parameter value against which you have compared the parameter (on the left hand side).
isTrueFlag	<p>Indicates what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li>• <b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
isFalseFlag	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li>• <b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>

Attribute Name	Attribute Description
isInsufficientFlag	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li><b>COND</b> - Indicates that the condition with the consecutive sequence number is executed.</li> <li><b>RLFS</b> - Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li><b>RLTR</b> - Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
commitmentDetails	Displays the price items commitment details for the entity (i.e. person or account).
priceItemCode	Displays the price item whose commitment details you are viewing.
priceItemDescription	Displays the description of the price item.
parameterDetails	Displays the list of parameters based on which the effective pricing is defined for the price item.
parameterCode	Displays the parameter based on which the effective pricing is defined for the price item.
parameterValue	Displays the value of the parameter.
SQIDetails	Displays the service quantity identifier details of the price item.
serviceQuantityIdentifier	Displays the service quantity identifier associated with the price item.
sqiValue	Displays the SQI value for the price item and parameter combination that is used for calculating the price item pricing.
sqiTypeFlg	Indicates the status of the service quantity identifier details for calculating the price item pricing.
termsAndConditionsDetails	Displays the list of terms and conditions associated with the deal at the price item level.
priceItemCode	Displays the price item to which the terms and conditions are associated.
priceItemDescription	Displays the description of the price item.
priceItemGroupCode	Displays the root level and/or non-root level hierarchy entity to which the price item belongs.
priceItemGroupCodeDescription	Displays the description of the root level and/or non-root level hierarchy entity to which the price item belongs.
parameterDetails	Displays the list of the parameters using which the price item pricing is defined in the system.
parameterCode	Indicates the parameter which is associated with the price item.
parameterValue	Displays the value of the parameter which is associated with the price item.
termsAndConditionsList	Displays information about the terms and conditions associated with the price item.
termsAndCondition	Indicates the term and condition which is associated with the price item.
description	Displays the description of the term and condition.
termsAndConditionText	Displays additional information of the term and condition.

Attribute Name	Attribute Description
entitycharacteristics	Displays the list of the characteristics defined for the entities (i.e. person or account) in the deal.
entityId	Displays the identification value of the entity (i.e. person or account) for which the characteristic is defined.
entityType	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"><li>• ACCT</li><li>• PERS</li></ul>
entityIdentifierType	Indicates the identifier type using which the entity (i.e. person or account) is created in the system.
entityIdentifierValue	Displays the value of the identifier type using which the entity (i.e. person or account) is created in the system.
entityDivision	Indicates the division to which the entity (i.e. person or account) belongs.
entityCharacteristicsList	Displays information about the characteristic defined for the entity (i.e. person or account).
effectiveDate	Displays the date from when the characteristic is effective for the entity (i.e. person or account).
characteristicType	Indicates the characteristic type.
characteristicValue	Displays the value of the characteristic type.

## Chatbot

---

Oracle Revenue Management and Billing Cloud Service provides digital assistance to end-users using Oracle Digital Assistant (ODA). You can use the digital assistant, also known as detective Chatbot, to have conversational experiences with ORMB Cloud Service through text, chat, and voice interfaces. It allows you to interact with the ORMB Cloud Service as if you are communicating with a real person.

We have introduced a menu-based chatbot in Oracle Revenue Management and Billing Cloud Service. The menu-based chatbot facilitates the user to choose from several options, presented in the form of menus and sub menus. It enables you to carry out the following set of functions with utmost ease:

- Viewing the details of a customer
- Viewing the details of an account
- Creating a bill
- Canceling a bill
- Viewing the latest bill details of an account
- Viewing the effective or agreed pricing information of a customer or an account
- Viewing the details of a price list
- Viewing the deals which are pending for approval
- Simulating, approving, or extracting a deal which is pending for approval
- Sending a deal which is pending for approval to the next level in the approval hierarchy
- Returning a deal back to the submitter (i.e., relationship manager) for corrections
- Viewing the details of a deal
- Viewing the status of a batch job or DBMS scheduler job

It helps in simplifying the navigation process and provides enhanced user experience, thereby increasing the operational efficiency of the end-user. For more information about the **Chatbot** feature, see *Oracle Revenue Management and Billing Cloud Service Chatbot User Guide*.

**Note:**

At present, the **Chatbot** feature is tested and certified only for the financial services domain and not for the health insurance domain.

In addition, the **Chatbot** feature is only available in the ORMB Cloud environments and not in the ORMB On Premise solution.

If you want to use the **Chatbot** feature in the Oracle Financial Services Revenue Management and Billing Cloud Service, you can opt for either of the following approach:

- You can simply use Oracle Digital Assistant (ODA) which is embedded in the Oracle Financial Services Revenue Management and Billing Cloud Service. Here, the Chatbot configuration in Oracle Digital Assistant (ODA) and Oracle Financial Services Revenue Management and Billing Cloud Service will be managed by the Oracle's Application Management System (AMS) team.
- Alternatively, if you already have Oracle Digital Assistant (ODA) license, then you need to configure Oracle Digital Assistant (ODA) as mentioned in the **Chatbot Configuration in ODA** section of the *Oracle Revenue Management and Billing Cloud Service Chatbot Configuration Guide*. The Chatbot configuration in the Oracle Financial Services Revenue Management and Billing Cloud Service will be managed by the Oracle's Application Management System (AMS) team.

## Billing Anomaly Detection with Artificial Intelligence (AI) and Machine Learning (ML)

---

### Topics:

- [Lifecycle of a ML Job](#)
- [Prerequisites](#)
- [Seasonality in Billing Anomaly Detection](#)
- [ML Jobs](#)
- [Diagnostic Central](#)

Until now, the system enabled you to detect anomalies in the bills before bill completion using the **Bill Tolerance** feature. Now, in addition, Oracle Revenue Management and Billing enables you to use artificial intelligence and machine learning to detect anomalies in the bills and bill segments before the bill completion. The different steps involved in the machine learning process are:

- Data Preparation
- Model Generation
- Data Prediction

These three steps are referred as ML jobs in the system. An ML Job goes through various statuses in its lifecycle. We have shipped the following three batches to execute the above three steps:

- **C1-MLDPR** - This batch is used to extract the historical bills and their bill segments which are later used to create a machine learning training model. It transforms the historical bills and their bill segments into materialized views.

You can specify the extraction date range to fetch the bills and bill segments which are created within that date range. We recommend you to extract the historical data of at least last three years. This batch provides an option to extract the data incrementally. If you want to extract the data incrementally, then you need to set the **Incremental Data** parameter to **Y** and specify the extraction from date and cutoff days. This option should be used when you want to extract historical data from a particular date till the cutoff date (i.e. system date - cutoff days).

Ideally, you should use this option when you want to use a static from date and a dynamic end date each time the batch is executed. However, if you do not want to extract the data incrementally, then you need to set the **Incremental Data** parameter to **N** and specify the extraction date range (i.e. from and to dates). You can extract the historical bills and their bill segments either separately or together. However, if you have voluminous data, we recommend you to extract the historical bills in the first batch run and then extract the historical bill segments in the next batch run.

This batch also enables you to filter the dataset based on the bill cycle and division. It is a single-threaded batch. Ideally, you must execute this batch every three months to refresh the dataset of the machine learning training model.

- **C1-MLMCR** - This batch is used to create a machine learning training model using the historical data extracted through the **C1-MLDPR** batch. A machine learning training model is a process in which a machine learning (ML) algorithm is fed with sufficient training data to learn and analyze

using the dataset. It enables you to process large volumes of data to detect anomalies and test correlations while searching for patterns across the dataset. At present, you can build a model using the following approach:

- **BUILTIN** - Used when you want to build a model far ahead in time before the anomaly detection.

Once a machine learning training model is created, it is stored in the database as a database object. This batch is a single-threaded batch. Ideally, you must execute this batch every three months to create a new machine learning training model with the latest dataset.

- **C1-MLPRE** - This batch is used to detect anomalies in the current bills and their bills segments based on the patterns observed in the machine learning training model. At a time, you can either detect anomalies in the bills or their bill segments in a single batch run. You must execute this batch after generating bill segments and bills through the billing batches.

While using AI ML for anomaly detection, you should not enable the **Freeze and Complete** option for the bill cycle. This is because you will then have the option to make the required corrections based on anomaly detection before freezing and completing the bills and their bill segments. A To Do notification is created to summarize anomaly detection for a given batch code, batch number and batch rerun number.

While executing the **C1-MLPRE** batch, you need to specify the bill segment generation or bill completion batch control and its batch run number whose bills or bill segments you want to consider for anomaly detection. You can either specify the batch run number or set the incremental run flag to **true** during the **C1-MLPRE** batch execution. This batch is a multi-threaded batch.

At present, the following data mismatch is considered as anomalies by the machine learning process:

- Data mismatch in the bill segments (i.e. SQI or amount mismatch)
- Data mismatch in the bills (i.e. an additional price item is charged in the current bill, a price item (which is billed earlier) is not charged in the current bill, and bill amount mismatch)

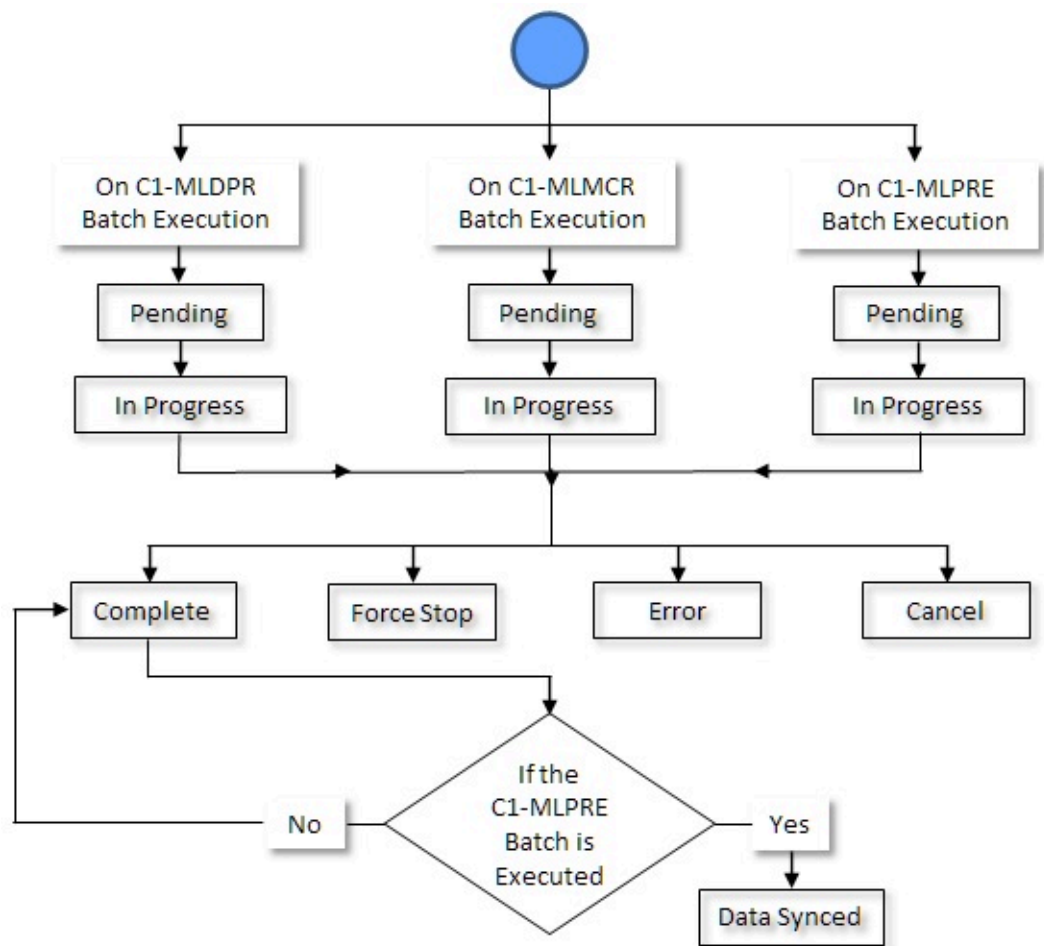

To implement this AI ML feature, the following two screens are introduced in this release:

- **ML Jobs** - Enables you to track the status of different ML jobs.
- **Diagnostics Central** - Enables you to view and close the detected anomalies in the bills and bill segments. After reviewing the anomaly, you can either take any one of the following action:
  - Fix the anomaly in the bill or bill segment and then close the anomaly. In this case, while closing the anomaly, you must set the **Anomaly** field to **Yes** to indicate that it is an anomaly.
  - Ignore the anomaly in the bill or bill segment and then close the anomaly. In this case, while closing the anomaly, you must set the **Anomaly** field to **No** to indicate that it is not an anomaly.

**Note:** The Billing Anomaly Detection feature is certified and supported only for the ORMB Cloud Service and not for the ORMB On-Premises.

# Lifecycle of a ML Job

The following figure graphically indicates how a ML Job moves from one status to another in its lifecycle:

## Prerequisites

To setup the billing anomaly detection with artificial intelligence (AI) and machine learning (ML) feature, you need to do the following:

- Create an algorithm using the **C1-ANMLYCHCK** algorithm type and attach it to the **Pre Bill Completion** algorithm spot of the customer class.
- Set the values for following option types in the **C1-PREBSEG** feature configuration:
  - **ML Invocation Logic Enabled**

### Related Topics

For more information on...	See...
How to setup the <b>C1-PREBSEG</b> feature configuration	<a href="#">Setting the C1-PREBSEG Feature Configuration</a> on page 4274

# Seasonality in Billing Anomaly Detection

Oracle Revenue Management and Billing enables you to build a data model considering seasonality and accordingly predict the billing anomalies. Seasonality is a characteristic of a time series in which the data experiences regular and predictable changes that recur every calendar year. Any predictable fluctuation or pattern that recurs or repeats over a one-year period is said to be seasonal.

We offer this feature based on the assumption that an account's behavior would be similar for a given month across the years. To enable the seasonality feature in billing anomaly detection, you need to set the **Seasonal Prediction Flag** option type of the **C1-BRMLINOPS** feature configuration. It is used to indicate whether seasonality should be considered while extracting the data for model building. The valid values are **Y** and **N**. If you set this option type to **Y**, the system considers the following fields of the respective entities during model building:

Entity	Fields
Bill	INVOICE_ACCT, BILL_ID, BILL_CYC_CD, BILL_AMT, PRICEITEM_VECTOR, CURRENCY_CD, START_DT_MON
Bill Segment	INVOICE_ACCT, BILL_CYC_CD, BSEG_AMT, BSEG_ID, PRICEITEM_CD, PRICE_ASGN_ID, CURRENCY_CD, START_DT_MONTH

If you do not specify the value for this option type, by default, it is set to **N**. If you change the value of this option type, you need to run the **C1-MLDPR** and **C1-MLMCR** batches once again to rebuild the machine learning training model.

## ML Jobs

The **ML Jobs** screen allows you to search and track the status of different ML jobs. It contains the following zone:

- [Search ML Job](#) on page 4266

## Search ML Job

The **Search ML Job** zone allows you to search for various ML jobs using various search criteria. It contains the following section:

- **Search Criteria** - The Search Criteria section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search ML jobs which are executed from a particular date onwards.	Yes
Created Until	Used to search ML jobs which are executed till a particular date.	Yes
ML Job Type	Used to search ML jobs which are classified based on the job type. The valid values are: <ul style="list-style-type: none"><li>• Data Model Creation</li><li>• Data Prediction</li><li>• Data Preparation</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
ML Entity Type	Used to search ML jobs which are created for the specific entity type. The valid values are: <ul style="list-style-type: none"><li>All</li><li>Bill</li><li>Bill Segment</li></ul>	No
ML Job Status	Used to search ML jobs in a particular status. The valid values are: <ul style="list-style-type: none"><li>Canceled</li><li>Completed</li><li>Data Synchronized</li><li>Error</li><li>Force Stopped</li><li>In Progress</li><li>Pending</li></ul>	No

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
ML Job Type	Indicates the type using which the ML job is created.
ML Entity Type	Indicates the type of entity using which the ML job is created.
Batch Job Details	Displays the batch job details such as batch description, batch number, and batch rerun number.
Parent Batch Job Details	Displays the parent batch job details such as batch description, batch number, and batch rerun number.
	<b>Note:</b> The data in this column appears only in case of data prediction batches.
ML Job Status	Indicates the status of the ML job.
Creation Date Time	Displays the date and time when the ML job is created.
Job Start Date Time	Displays the date and time when the ML job is started.
Job End Date Time	Displays the date and time when the ML job is ended.

**Related Topics**

For more information on...	See...
How to search for an ML job	<a href="#">Searching for an ML Job</a> on page 4267

## Searching for an ML Job

**Procedure**

To search for an ML job:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.

- 2. From the **Main** menu, select **Tools** and then click **ML Jobs**.  
The **ML Jobs** screen appears.
- 3. Enter the search criteria in the **Search ML Jobs** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 4. Click **Search**.  
A list of ML jobs that meet the search criteria appears in the **Search Results** section.

**Related Topics**

For more information on...	See...
ML Jobs screen	<a href="#">ML Jobs</a> on page 4266
Search ML Jobs zone	<a href="#">Search ML Job</a> on page 4266

## Diagnostic Central

The **Diagnostic Central** screen allows you to search for anomalies in the bills and bill segments. It contains the following zones:

- [Search Anomaly](#) on page 4268
- [Bill Segment Anomalies](#) on page 4271

## Search Anomaly

The **Search Anomaly** zone allows you to search for anomalies using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account or bill level anomaly, or bill segment anomaly. The valid values are: <ul style="list-style-type: none"><li>• Account/Bill Level Anomaly</li><li>• Bill Segment Level Anomaly</li></ul>	Yes
	<b>Note:</b> By default, the <b>Account/Bill Level Anomaly</b> option is selected.	
Division	Used to search anomalies which includes bills or bill segments of accounts which belong to a particular division.	No
Anomaly Status	Used to search anomalies with a particular status. The valid values are: <ul style="list-style-type: none"><li>• Canceled</li><li>• Closed</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Ignored</li> <li>Open</li> </ul>	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for anomalies.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search the anomalies with a particular identifier.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Account ID	<p>User to search anomalies for a particular account.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.</p> <p>On specifying the value for a predefined account, the description of the account appears corresponding to the <b>Account ID</b> field.</p>	No
Trail Bill	<p>Used to search anomalies based on whether the bill is a trial bill. The valid values are:</p> <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No
Bill Created From	Used to search anomalies which include accounts or bills, or bill segments which are created from a particular date onwards.	Yes
Bill Created Until	Used to search anomalies which include accounts or bills, or bill segments which are created till a particular date.	Yes
Bill Cycle	Used to search anomalies with a particular bill cycle.	No
Bill ID	<p>Used to search anomalies for a particular bill.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.</p> <p>On specifying the value for a predefined bill, the description of the account appears corresponding to the <b>Account ID</b> field.</p>	No
Anomaly Category	<p>Used to search anomalies with a particular category. The valid values are:</p> <ul style="list-style-type: none"> <li>Bill Level Anomaly</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Bill Segment Level Anomaly</li></ul>	
Anomaly Reason	Used to search anomalies with a particular reason.	No
	<b>Note:</b> The list appears when the anomaly category is selected.	

**Note:**

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for an account (associated with the policies) using the policy type and/or source system.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays the account level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Bill Information	Displays the bill level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the bill was generated.
Anomaly Status	Indicates the status of the anomaly. The valid values are: <ul style="list-style-type: none"><li>Canceled</li><li>Closed</li><li>Ignored</li><li>Open</li></ul>
Anomaly Reason	Displays the reason that caused the anomaly.
To Do Information	Displays the To Do that got generated when an anomaly was detected.
	<b>Note:</b> It has a link. On clicking the link, the <b>To Do Entry</b> screen appears where you can view the details of the respective To Do.

In addition, this section contains the following button:

Button Name	Button Description
Close	Used to close a bill level or bill segment level anomaly.

A check box appears corresponding to each account. On selecting the check box, you can close the selected anomaly. You can also select multiple anomalies at the same time. In addition, you can select the check box corresponding to the column header. This allows you to close all the anomalies listed in the respective page.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📢) icon corresponding to the account information column the **Bill Segment Anomaly** zone appears with the anomalies detected at bill segment level.

You can filter the list using the various search criterias available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

**Related Topics**

## Bill Segment Anomalies

The **Bill Segment Anomalies** zone displays the bill segment level anomaly details. It contains the following columns:

Column Name	Column Description
Account Information	Displays the account level information for which the anomaly is detected. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Bill Segment ID	Displays the bill segment ID for which the anomaly is detected.
Bill ID	Displays the bill ID of the bill segment.
Bill Date	Displays the date on which the bill was generated.
Anomaly Status	Indicates the status of the anomaly. The valid values are: <ul style="list-style-type: none"><li>• Cancel</li><li>• Closed</li><li>• Ignore</li><li>• Open</li></ul>

By default, the **Bill Segment Anomalies** zone does not appear in the **Diagnostic Central** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the account information column in the **Search Anomaly** zone.

**Related Topics**

For more information on...	See...

## Searching for a Bill Segment Level Anomaly

### Procedure

To search for a bill segment level anomaly:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Diagnostic Central**.  
The **Diagnostic Central** screen appears.
3. In the **Search Anomaly** zone, enter the search criteria by selecting **Bill Segment Level Anomaly** option in the **Search By** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of bill segment level anomalies that meet the search criteria appears in the **Search Results** section.

### Related Topics

## Closing an Anomaly

### Procedure

To close an anomaly:

1. Search for the bill level or bill segment level anomaly in the **Diagnostic Central** screen.
2. In the **Search Results** section, select an anomaly and then click the **Close** button.  
The **Close Anomaly** window appears. It contains the following fields:

Field Name	Field Description
Anomaly	Used to indicate whether the selected entry is an anomaly. The valid values are: <ul style="list-style-type: none"><li>• No</li><li>• Yes</li></ul>
Comments	Used to specify additional details for closing the anomaly.

3. Select the appropriate option from the Anomaly field and enter the comments in the respective field.
4. Click **Save**.

5. The status of the anomaly is changed to **Closed**.

**Note:** If you close an anomaly the system does not automatically complete the respective To Do entry. You have to manually complete the To Do entry. On the other hand, if a To Do is completed before an anomaly is closed, the system changes the anomaly status to **Closed**.

## Setting the C1-PREBSEG Feature Configuration

The **C1-PREBSEG** feature configuration enables you to validate the bill segment before generating the bill.

**Prerequisites**

To set the **C1-PREBSEG** feature configuration, you should have:

- ML invocation logic defined in the application

**Procedure**

To set the **C1-PREBSEG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PREBSEG** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
ML Invocation Logic Enabled	Used to specify whether the ML invocation logic is enabled when the bill segment is generated.	Yes
	<b>Note:</b> If you want to enable the ML invocation logic, specify <b>True</b> else <b>False</b> in the <b>Value</b> field.	

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

---

## Automatic Refund

---

Oracle Revenue Management and Billing enables you to create automatic refunds when a credit bill or a credit adjustment is created or when there is an overpayment. A new algorithm spot named **Immediate Refund Creation** is introduced in the **Division** screen. A new algorithm type named **C1-IMREFCRET** is introduced in this release. You can create an algorithm using the **C1-IMREFCRET** algorithm type and attach it to the **Immediate Refund Creation** algorithm spot of the required divisions.

The following table lists the fields which are newly introduced in the respective screens to implement the **Automatic Refund** feature:

Screen	Tab	Field Name	Field Description
Account	Main	Immediate Refund	Used to indicate whether you want to process immediate refund for the account.
	Auto Pay	Auto Pay Usage	Used to indicate whether the automatic payment option is available for automatic credit or debit, or for both automatic credit and debit.
Person	Main	Immediate Refund	Used to indicate whether you want to process immediate refund for the person's accounts.
Customer Class	Controls	Immediate Refund	Used to indicate whether you want to process immediate refund for the accounts which belong to the customer class.
Division	Main	Direct Credit Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the direct credit mode.
		Immediate Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division. This field is enabled when the <b>Direct Credit Refund</b> or <b>A/P Request Fund</b> option is selected.
		A/P Request Fund	Used to indicate whether you want to process immediate

Screen	Tab	Field Name	Field Description
			refund for the accounts belonging to the division through the A/P request mode.
Adjustment Type	Main	Refund Option	Used to indicate whether you want to use the adjustment type for creating direct credit refund adjustments or A/P request refund adjustments.
Auto Pay Instruction	Auto Pay	Auto Pay Usage	Used to indicate whether the automatic payment instruction is available for automatic credit or debit, or for both automatic credit and debit.
Auto Pay Route Type	-	Refund Auto Pay Date Calculation Algorithm	Used to calculate the extract date for an automatic refund clearing record in the <b>CI_APAY_CLR_STG</b> table.

**Note:** While creating a person through a customer registration object, you can also set the immediate refund option for the person. Similarly, while creating an account through a customer registration object, you can also set the immediate refund and auto pay usage options for the account.

Now, when a credit bill is completed, when a credit adjustment is frozen, and when an overpayment is frozen, the system checks whether an algorithm is attached to the **Immediate Refund Creation** algorithm spot of the respective account's division. If an algorithm created using the **C1-IMREFCRET** algorithm type is attached to the **Immediate Refund Creation** algorithm spot of the division, the system checks whether the **Immediate Refund on Credit Bill**, **Immediate Refund on Dispute/Credit Adjustments**, or **Immediate Refund on Overpayment** parameter in the algorithm is set to **Y** depending on whether it is a credit bill, credit adjustment, or overpayment.

If the respective parameter is set to **Y**, the system checks whether the **Immediate Refund** option is selected at either of the following levels - Account, Person, Customer Class, or Division. If so, the system checks whether the **Direct Credit Refund** option of the division is set to **Y** and the automatic payment option for automatic credit or for automatic credit and debit exists for the account. If so, the system creates a refund request using the direct credit refund request type which is specified in the **C1-IMREFCRET** algorithm. However, if the **Direct Credit Refund** option of the division is set to **N** and the **A/P Request Fund** option of the division is set to **Y**, the system creates a refund request using the A/P request refund request type which is specified in the **C1-IMREFCRET** algorithm. In addition, if the **Direct Credit Refund** option of the division is set to **Y**, the **A/P Request Fund** option of the division is set to **Y**, and the automatic payment option for automatic credit or for automatic credit and debit does not exist for the account, the system creates a refund request using the A/P request refund request type which is specified in the **C1-IMREFCRET** algorithm.

If the **Direct Credit Refund** option of the division is set to **Y**, the **A/P Request Fund** option of the division is set to **N**, and the automatic payment option for automatic credit or for automatic credit and debit does not exist for the

account, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm. Also, if the **Direct Credit Refund** option of the division is set to **N** and the **A/P Request Fund** option of the division is set to **N**, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm.

In addition, if the **Immediate Refund** option is not selected at any of the following levels - Account, Person, Customer Class, or Division, the system creates a transfer adjustment using the transfer adjustment type which is specified in the **C1-IMREFCRET** algorithm. Note that these transfer adjustments are created on the excess credit contract of the account. If the excess credit contract is not available for the account, the system creates an excess credit contract for the account using the overpayment contract type which is specified in the **C1-IMREFCRET** algorithm.

The refund requests are created in the **Processed** status. While creating a direct access refund request type, you need to ensure that you specify an adjustment type where the refund option is set to **Direct Credit**. However, while creating an A/P request refund request type, you need to ensure that you specify an adjustment type where the refund option is set to **A/P Payment**. The system will then accordingly create the direct credit or A/P request refund adjustments when the refund request is processed. If the **Adjustment Freeze Switch** parameter in the **C1-IMREFCRET** algorithm is set to **Y**, the transfer and refund adjustments are created in the **Frozen** status.

When a credit bill is canceled for which either the refund adjustments or payments are created, the system does the following:

- Creates the transfer adjustments on the excess credit contract of the account

**Note:** The system considers the transfer adjustment type and overpayment contract type specified in the **C1-TRNADJEX** algorithm which is attached to the account's customer class.

The **APAYCRET** batch is enhanced to support the new automatic refund process. Now, if the automatic payment amount stamped against a bill is in credit and the auto pay usage flag is set to **Credit** or **Credit and Debit**, the batch creates a refund request against the bill. Here, in addition, if the refund option is set to **Direct Credit** in the respective refund adjustment type, the batch creates a clearing record for the automatic refund in the **CI\_ADJ\_CLR\_STG** table. However, if the refund option is set to **A/P Request** in the respective refund adjustment type, the batch creates an A/P request entry for the automatic refund in the **CI\_ADJ\_APREQ** table.

## Reporting

---

### Topics:

- [Report Creation Using Apache FOP Framework](#)
- [FOP Reports](#)

Oracle Revenue Management and Billing provides best-in-class enterprise reporting feature which enables its customers to uncover new sights for taking faster and more informed business decisions. The reporting feature is a unique platform which easily integrates with the existing infrastructure and provides reusable design, data elements, and easy access to the application programming interface.

Oracle Revenue Management and Billing Reporting feature provides its customers the following benefits:

- Allows to generate and deliver customized reports to users in various departments and customers on time.
- Allows the implementers to efficiently create and update document templates.
- Supports output in the CSV, JSON, PDF, XML, and XLS formats using custom Formatting Objects Processor (FOP) templates.

## Report Creation Using Apache FOP Framework

Oracle Revenue management and Billing allows you to create reports in the CSV, JSON, PDF, XML, and XLS formats using the Apache FOP (Formatting Objects Processor) framework. Apache FOP is an output arrangement which is driven by the XSL formatting object. It is a Java application that reads the XSL formatting object tree conforming to the XSL 1.1 Recommendation (05 December 2006) and then converts it into a document in the required output format. It allows you to preview the output directly on the screen.

To understand more about the framework, refer to the official Apache FOP site at <https://xmlgraphics.apache.org/fop/> or you can also refer GitHub at <https://github.com/apache/fop>.

### Prerequisites

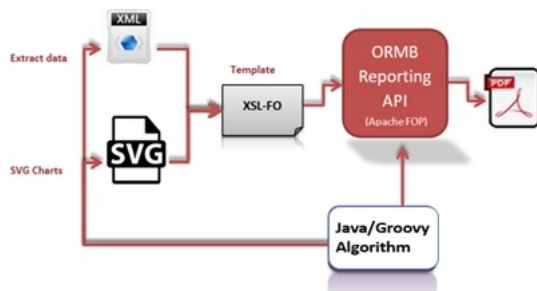

To use the Apache FOP reporting feature in ORMB, you should have:

- **C1-REPORTVW** feature configuration set in the application

### PDF Generation Using Apache FOP

For generating a PDF from an XML file you need an XSLT stylesheet which converts the XML file to an XSL-FO file. The created XSL-FO file is also an XML file which contains all the formatted objects. The ORMB FOP reporting framework reads the XSL-FO file and formats it to a PDF document.

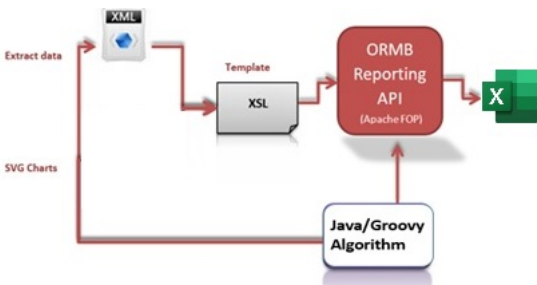

The process overview of PDF generation from an XML file is shown in the below image:

### Excel (XLS) Generation Using XSL Transformation

For generating an Excel (XLS) from an XML file you need an XSLT stylesheet which converts the XML file to an XSL file. The created XSL file is also an XML file which contains all the formatted objects. The ORMB reporting framework reads the XSL file and formats it to an Excel (XLS) document.

The process overview of Excel (XLS) generation from an XML file is shown in the below image:

## Sample XML Format for FOP Reporting

Using the below example, you can create an XML which contains name and a list of friends with contact numbers:

### Sample XML Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<root>
<name>Ryan</name>
<friend>
  <name>David</name>
  <phNo>+1.603.555.0100</phNo>
</friend>
<friend>
  <name>John</name>
  <phNo>+1.603.555.0101</phNo>
</friend>
</root>
```

**Note:** This is how an XML should be generated with encoded UTF-8 format.

## Sample XSL Format for FOP Reporting

Using the below example, you can create an XSL format which renders the table that contains details of friends given in the above sample XML format:

### Sample XSL Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<xsl:stylesheet version="1.1"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:fo="http://www.w3.org/1999/XSL/Format"
  exclude-result-prefixes="fo">
<xsl:template match="root">
<fo:root xmlns:fo="http://www.w3.org/1999/XSL/Format">
  <fo:layout-master-set>
    <fo:simple-page-master master-name="my-page">
      <fo:region-body margin="1in"/>
    </fo:simple-page-master>
  </fo:layout-master-set>
  <fo:page-sequence master-reference="my-page">
    <fo:flow flow-name="xsl-region-body">
      <fo:block>Hello, <xsl:value-of select="name" -/>!/</fo:block>
      <fo:block>
        <fo:table>
          <fo:table-body>
            <fo:table-row>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>No.</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Name</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Phone Number</fo:block>
              </fo:table-cell>
            </fo:table-row>
          </fo:table-body>
        </fo:table>
      </fo:block>
    </fo:flow>
  </fo:page-sequence>
</fo:root>
```

```
<xsl:for-each select="./friend">
<fo:table-row>
  <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
      <xsl:value-of select="position()" -/>
    </fo:block>
  </fo:table-cell>
  <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
      <xsl:value-of select="name" -/>
    </fo:block>
  </fo:table-cell>
  <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
      <xsl:value-of select="phNo" -/>
    </fo:block>
  </fo:table-cell>
</fo:table-row>
</xsl:for-each>
</fo:table-body>
</fo:table>
</fo:block>
</fo:flow>
</fo:page-sequence>
</fo:root>
</xsl:template>
</xsl:stylesheet>
```

**Note:** For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

## Create XSL Template for an FOP Report

The XSL template is required to create an FOP report in the PDF of Excel (XLS) format. The XSL template converts the XML file into XSL-FO file. This XSL-FO is further read by the ORMB FOP reporting framework and formats the XSL-FO file into a PDF/Excel (XLS) file.

**Note:** For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

## XSL Templates shipped with ORMB

The following XSL templates for the corresponding FOP reports are shipped with ORMB:

XSL Template	FOP Report
FOPAGEBPDF	AgingReport.xml
FOPAGEOPDF	
FOPAGEHCBPDF	AgingReportHC.xml
FOPAGEHCOPDF	

<b>XSL Template</b>	<b>FOP Report</b>
FOPAGEHCBXLS	AgingReportHCEXcel.xml
FOPAGEHCOXLS	
RPT_LETTER	AutoPay_Letter.xml
FOPAPAYHBPDF	AutoPayResponseReport.xml
FOPAPAYHOPDF	
FOPAPAYHBXLS	AutoPayResponseReportExcel.xml
FOPAPAYHOXLS	
PLSM_DETEXL	billExtract_Banking_Individual.xml
PLSM_SMRYEXL	
FOPBIPAHBPDF	BinderPaymentReport.xml
FOPBIPAHOPDF	
FOPBIPAHBXLS	BinderPaymentReportExcel.xml
FOPBIPAHOXLS	
DCMR	Deal_Compare_Exl.xml
DLDWLD	Deal_Extract_For_Upload.xml
DEEEXCEL	Deal_Internal_Exl.xml
DEIEXCEL	
DEIPDF	Deal_Internal_Version2.xml
DLPRTEXLR	Deal_Profitability_Exl.xml
DEEPDF	DealExtract_External_Type.xml
FOPDDROPDF	DirectDebitRejection.xml
EFPR_EXT_PDF	Effective_Pricing_Extract.xml
EFPR_EXT_EXL	Effective_Pricing_Extract_Exl.xml
REP_CODE2	ExpiringCreditCard_Letter.xml
FOPASLHCBPDF	FOPAggregateStoplossHCReport.xml
FOPASLHCOPDF	
FOPASLHCBXLS	FOPAggregateStoplossHCReportExcel.xml
FOPASLHCOXLS	
FOPSSLHCBPDF	FOPSpecificStoplossHCReport.xml
FOPSSLHCOPDF	
FOPSSLHCBXLS	FOPSpecificStoplossHCReportExcel.xml
FOPSSLHCOXLS	
FOPHLDBXLS	HoldEntityDetailsReport.xml
FOPHLDOXLS	

<b>XSL Template</b>	<b>FOP Report</b>
FOPPADGHBPDPF	PaymentDetailGroupHCReport.xml
FOPPADGHOPDPF	
FOPPADGHBXLS	PaymentDetailGroupHCReportExcel.xml
FOPPADGHOXLS	
FOPPADIHBPDPF	PaymentDetailHCReport.xml
FOPPADIHOPDPF	
FOPPADIHBXLS	PaymentDetailHCReportExcel.xml
FOPPADIHOXLS	
FOPPAYDTBPDPF	PaymentDetailReport.xml
FOPPAYDTOPDPF	
FOPPASGHBPDPF	PaymentSummaryGroupHCReport.xml
FOPPASGHOPDPF	
FOPPASGHBXLS	PaymentSummaryGroupHCReportExcel.xml
FOPPASGHOXLS	
FOPPASMHPDPF	PaymentSummaryHCReport.xml
FOPPASMHPDPF	
FOPPASMHBXLS	PaymentSummaryHCReportExcel.xml
FOPPASMHOXLS	
FOPPAYSMBPDPF	PaymentSummaryReport.xml
FOPPAYSMPDPF	
FOPWRORBPDPF	RefundWriteOff.xml
FOPWROROPDPF	
FOPWRORBXLS	RefundWriteOffExcel.xml
FOPWROROXLS	
FOPTODOOPDPF	ToDoReport.xml
FOPTODOBPDPF	
FOPTODOOXLS	ToDoReportExcel.xml
FOPTODOBXLS	
FOPTRDTBXLS	TransactionRejectionDetailExcel.xml
FOPTRDTOXLS	
FOPTRSMBXLS	TransactionRejectionSummaryExcel.xml
FOPTRSMOXLS	
FOPUSROPDPF	UserAccessReport.xml

## Create an Algorithm for an FOP Report

Before creating any new custom FOP report an algorithm is created which contains the following content:

- Query for the report
- XML formation code
- Input parameter validation
- Call to report generation algorithm

The algorithm is then associated with the FOP report while defining the FOP report in the application. When the FOP report is generated, the algorithm which is attached to the FOP report does the following:

- Extract data from the system in an XML file
- Present the extracted data in CSV, JSON, PDF, XML, or XLS format using the XSL file associated with the FOP report

The following algorithms for the corresponding FOP reports are shipped with ORMB:

FOP Report	Report Generation Algorithm
FOPADJBXLS	C1_FOPADJUST
FOPADJOXLS	
FOPAGEBPDF	C1_FOPAGING
FOPAGEOPDF	
FOPAGEHCBPDF	C1_FOPAGEHC
FOPAGEHCOPDF	
FOPAGEHCBXLS	C1_FOPAGEHC
FOPAGEHCOXLS	
FOPAPAYHBPDF	C1_FOPAPAY
FOPAPAYHOPDF	
FOPAPAYHBXLS	C1_FOPAPAY
FOPAPAYHOXLS	
PLSM_DETEXL	C1-PLDETXCL
PLSM_SMRYEXL	C1-PLSMEXCL
FOPBIPAHBPDF	C1_FOPBIPA
FOPBIPAHOPDF	
FOPBIPAHBXLS	C1_FOPBIPA
FOPBIPAHOXLS	
DCMR	C1-DLCMPRRPT
DLDWLD	C1-DLDWLD
DEEEXCEL	C1-DLEXTEXCL
DEIEXCEL	C1-DLINTEXCL
DEIPDF	C1-DLINTPDF

FOP Report	Report Generation Algorithm
DLPRTEXLR	C1-DLPRTEXLR
DEEPPDF	C1-DLEXTPDF
FOPDDROPDF	C1_FOPDEBIT
EFPR_EXT_PDF	C1-EFFPRPDF
EFPR_EXT_EXL	C1-EFFPREXL
FOPASLHCBPDF	C1_FOPASLHC
FOPASLHCOPDF	
FOPASLHCBXLS	C1_FOPASLHC
FOPASLHCOXLS	
FOPSSLHCBPDF	C1_FOPSSLHC
FOPSSLHCOPDF	
FOPSSLHCBXLS	C1_FOPSSLHC
FOPSSLHCOXLS	
FOPHLDBXLS	C1_FOPHOLD
FOPHLDOXLS	
FOPPADGHBPDF	C1_FOPPADTGH
FOPPADGHOPDF	
FOPPADGHBXLS	C1_FOPPADTGH
FOPPADGHOXLS	
FOPPADIHBPDF	C1_FOPPAYHDT
FOPPADIHOPDF	
FOPPADIHBXLS	C1_FOPPAYHDT
FOPPADIHOXLS	
FOPPAYDTBPDF	C1_FOPPAY
FOPPAYDTPDF	
FOPPASGHBPDF	C1_FOPPAHGSM
FOPPASGHOPDF	
FOPPASGHBXLS	C1_FOPPAHGSM
FOPPASGHOXLS	
FOPPASMHPDF	C1_FOPPAYHSM
FOPPASMHOPDF	
FOPPASMHBXLS	C1_FOPPAYHSM
FOPPASMHOXLS	
FOPPAYSMBPDF	C1_FOPPAY

FOP Report	Report Generation Algorithm
FOPPAYSMOPDF	
FOPWRORBPDF	C1_FOPRWO
FOPWROROPDF	
FOPWRORBXLS	C1_FOPRWO
FOPWROROXLS	
FOPTODOOPDF	C1_FOPTODO
FOPTODOBPDF	
FOPTODOOXLS	C1_FOPTODO
FOPTODOBXLS	
FOPTRDTBXLS	C1_FOPTXNREG
FOPTRDTOXLS	
FOPTRSMBXLS	C1_FOPTXNREG
FOPTRSMOXLS	C1_FOPTXNREG
FOPUSROPDF	C1_FOPUSER

## Creating a Message for an FOP Report

### Prerequisite

To create a message for an FOP report you should have:

- Error message added in the MessageRepository.java file. For example:

```
public static ServerMessage searchByIsNull()
{
    MessageRepository repo = MessageRepository.getInstance();
    MessageParameters messageParms = new MessageParameters();
    return repo.getMessage(SEARCH_BY_IS_NULL, messageParms);
}
```

- Error code added in the ReportingMessage.java file. For example:

```
public static final int SEARCH_BY_IS_NULL = 2039;
```

### Procedure

To create a message for an FOP report:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **M** and then click **Message**.  
A sub-menu appears
- Click the **Add** option from the **Message** sub-menu.  
The Select Business Object screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Message Business Object	Used to indicate that you want to create a message for a business object.	Yes

4. Select **Message** from the **Message Business Object** list.

5. Click **OK**.

The **Message** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Message Category	Used to indicate the category for which you want to create a message. The valid value is: <ul style="list-style-type: none"><li>• Reports</li></ul>	Yes
Message Number	Used to specify the error code which you have added in the <b>ReportingMessage.java</b> file.	Yes
Message Text	Used to specify the error message.	Yes
Detailed Description	Used to specify additional information about the message.	No

6. Click **Save**.

The message is created.

## Calling the ORMB FOP Reporting API

### Procedure

To call the ORMB FOP reporting API:

1. You should use the ORMB provided business component to call the below reporting API which generates the FOP reports:

**com.splwg.ccb.domain.reportsubmission.FOPReportGenerationComponent\_Impl**

2. Call the reporting API method in the below format:

**public String generateReport(String xslTemplateName, String xmlContent, String outputFileName)**

The parameters for the reporting API method is defined as below:

Parameter Name	Parameter Description
xslTemplateName	Used to pass the XSL-FO/XSL file name. It is given in the below format: <div>&lt;name of report&gt;.xsl</div>
xmlContent	Used to pass the XML content generated by the algorithm.
outputFileName	Used to pass the PDF/Excel (XLS) file name that you want to generated. It is given in the below format: <div>&lt;name_of_report&gt;.pdf/xls</div>

## Setting Master Configuration for Email Notification

**Procedure**

Email notification is configured for FOP reports which are generated in the batch mode. To set master configuration for email notification:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **M** and then click **Master Configuration**.  
The **Master Configuration** screen appears.
- 3. Search for **Reporting Email Sender Configuration** in the **Master Configuration List** zone.
- 4. Click the **Add** (⊕) icon in the **Action** column corresponding to **Reporting Email Sender Configuration**.

The **Master Configuration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Master Configuration	Displays the master configuration	Not Applicable
SMTP Host Name	Used to specify the SMTP application to send and receive emails.	Yes
SMTP Port	Used to specify the communication endpoint to transfer email data over SMTP through a network, from one server to another. The valid value is: <ul style="list-style-type: none"><li>25</li></ul>	Yes
Username	Used to specify the username of the user.	Yes
Password	Used to specify the password for the user.	Yes
Secure Sockets Layer	Used to indicate whether you want to transfer the email data securely across a network.	No
Test	Used to configure the sender's and receiver's email ID.	Yes
From Email Address	Used to specify the user's email ID.	Yes
	<b>Note:</b> This field appears only when you select the check box corresponding to the <b>Test</b> field.	
To Recipient Email ID	Used to specify the receiver's email ID.	Yes
	<b>Note:</b> This field appears only when you select the check box corresponding to the <b>Test</b> field.	

- 5. Enter the required details in the **Master Configuration** screen.
- 6. Click **Save**.  
The master configuration for email notification is set.

# Creating a Custom Algorithm for FOP Reports

**Prerequisite**

To create a custom algorithm for FOP reports you should have:

- The **ReportDataExtractAlgorithmSpot** algorithm spot defined in the application

**Procedure**

To create a custom algorithm for FOP reports:

1. Log into **Eclipse**.
2. In the navigation pane, right click on the **C1** folder.  
A list appears.
3. From the list, select **New** and then click **Others**.

The **Select a Wizard** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Wizard	Used to filter the <b>Algorithm Implementation</b> wizard.	No

**Note:** You can also navigate to the **Algorithm Implementation** wizard in the **Oracle Utilities** section through the navigation window provided below the **Wizard** field.

4. Select **Algorithm Implementation** from the navigation window.
5. Click **Next**.

The **New Algorithm Implementation** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source Folder	Displays the source from where the algorithm spot is called. The valid value is: <div>C1/Java</div>	Not Applicable
Package	Used to specify the directory in the source folder where you want the algorithm to appear. The valid value is: <div>com.splwg.ccb.domain. reportsubmission.custom</div>	Yes
Name	Used to specify the algorithm that you want to create.	Yes
Soft Parameters	Used to specify parameters for the algorithm.	No
Algorithm Interface Spot	Used to specify the algorithm spot used to create custom data extract in the PDF or XLS format. The valid value is: <div>com.splwg.ccb.domain. reportsubmission.ReportDataExtractAlgorithmSpot</div>	Yes
	<b>Note:</b> You can also extract data in the XML, CSV, or JSON formats by calling the CommonUtil_Impl API while generating the respective report.	

6. Click **Finish**.  
The custom algorithm for FOP report is created.

## Configuring the Custom Algorithm from the User Interface

### Prerequisites

To configure the custom algorithm from the user interface you should:

- Define custom algorithm JAVA code
- Generate artifacts, do Web Build and start the WebLogic server to bring the ORMB application up and running

### Procedure

To configure the custom algorithm from the user interface you should:

- Create an algorithm type and associate it with the custom algorithm java code
  - Create an algorithm and associate it with the algorithm type
1. To create an algorithm type, click the **Admin** link in the **Application** toolbar.  
A list appears.
  2. From the **Admin** menu, select **A** and then click **Algorithm Type**.  
A sub-menu appears
  3. Click the **Add** option from the **Algorithm Type** sub-menu.  
The **Algorithm Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Type	Used to specify the algorithm type that you want to create in the system.	Yes
Description	Used to specify the description for the algorithm type.	Yes
Detailed Description	Used to specify additional information about the algorithm type	No
Algorithm Entity	Used to indicate the algorithm entity for which you want to create the algorithm type. The valid value is: <ul style="list-style-type: none"><li>• Report-Data Extract Algorithm</li></ul>	Yes
Program Type	Used to indicate the program code using which the custom algorithm is created. The valid value is: <ul style="list-style-type: none"><li>• JAVA</li></ul>	Yes
Program Name	Used to specify the custom algorithm java code. The valid value is: <div>com.splwg.ccb.domain. reportsubmission.ReportDataExtractAlgorithmSpot</div>	Yes

In addition, the **Algorithm Type** screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the parameter is considered for the algorithm type.	No
Parameter	Used to specify the parameter using which you want to create the algorithm type.	No
Required	Used to indicate whether the parameter is required or not.	No
Owner	Indicates the user who associated the parameter with the algorithm type.	No

- 4. Enter the required details in the **Algorithm Type** screen.
- 5. Click **Save**.  
The algorithm type is saved.
- 6. To create an algorithm, click the **Admin** link in the **Application** toolbar.  
A list appears.
- 7. From the **Admin** menu, select **A** and then click **Algorithm**.  
A sub-menu appears
- 8. Click the **Add** option from the **Algorithm** sub-menu.  
The **Algorithm** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Code	Used to specify the algorithm that you want to create in the system	Yes
Description	Used to specify the description for the algorithm.	Yes
Algorithm Type	Used to specify the algorithm type to which you want to associate the algorithm.	Yes
Algorithm Type Description	Displays the description of the algorithm type.	Not Applicable
Parameter	Displays the parameter of the algorithm.	Not Applicable
Effective Date	Displays the date from when the algorithm type is effective for the algorithm.	Not Applicable

- 9. Enter the required details in the **Algorithm** screen.
- 10. Click **Save**.  
The custom algorithm is configured in the user interface.

## Reporting Template Upload

Information will be available shortly!

## Report Creation

The **Report Creation** screen allows you to define reports for extracting data of a person and/or its accounts using the Apache FOP framework. It also enables you to view, edit, or delete an existing report. It contains the following zone:

[Report Search](#) on page 4295

Report Search

The **Report Search** zone allows you to search for an existing FOP report using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to search for a particular FOP report.	No
Description	Used to search FOP reports with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an FOP report.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Report	Displays the FOP report.
Description	Displays the description of the FOP report.
Output Format	Indicates the format in which the FOP report is extracted from the system.
	<b>Note:</b> At present, you can extract an FOP report in PDF, CSV, and XML formats.
Report Type	Indicates the type of information which is extracted using the FOP report. The valid values are: <ul style="list-style-type: none"><li>• Bill</li><li>• Custom</li><li>• Letter</li></ul>
View	On clicking the <b>View</b> button you can view the details of the FOP report.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Report Creation</b> screen appears where you can edit the details of the FOP report.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the FOP report.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for an FOP Report

### Procedure

To search for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.  
The **Report Creation** screen appears.
3. Enter the search criteria in the **Report Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of FOP reports that meet the search criteria appears in the **Search Results** section.

## Defining an FOP Report

### Prerequisites

To define an FOP report you should have:

- FOP reporting framework configured in the system
- **C1\_FOPONBL** algorithm defined in the system to create FOP reports for bill templates
- Parameters defined for the **C1\_FOPONBL** algorithm
- **C1\_FOPONBL** algorithm attached to the **Online Bill Display** system event
- **C1\_FOPLTRALG** algorithm defined in the system to create FOP reports for letter templates
- Parameters defined for the **C1\_FOPLTRALG** algorithm
- **C1\_FOPLTRALG** algorithm attached to the **Online Letter Image** system event
- Algorithms defined in the application for creating custom FOP reports

### Procedure

To define an FOP report:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.  
The **Report Creation** screen appears.
3. Click the **Add** button available at the upper right corner of the **Report Creation** screen.

The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the FOP report	No
Output Format	<p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> <li>• CSV</li> <li>• DOCX</li> <li>• JSON</li> <li>• PDF</li> <li>• Web</li> <li>• XLS</li> <li>• XML</li> </ul> <p><b>Note:</b></p> <p>At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats.</p> <p>You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p>	Yes
Script	<p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p><b>Note:</b> This field is enabled only when you select the <b>Web</b> option from the <b>Output Format</b> list.</p>	No
Report Type	<p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bill</li> <li>• Custom</li> <li>• Letter</li> </ul> <p><b>Note:</b> This field is disabled when you select the <b>Web</b> option from the <b>Output Format</b> list.</p>	Yes
Report Template	<p>Used to indicate the template using which the FOP report is uploaded in the system.</p> <p><b>Note:</b> This field appears only when you select the <b>Bill</b> or <b>Letter</b> option from the <b>Report Type</b> list.</p>	Yes
XSL Template	Used to indicate the XSL template file using which you want to create the FOP report.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Upload</b> button appears corresponding to the <b>XSL Template</b> field. On clicking the <b>Upload</b> button, the <b>Upload XSL Template</b> window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the <b>Web</b> option from the <b>Output Format</b> list.</p>	
Report Generation Algorithm	Used to indicate the algorithm defined for creating a custom FOP report.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> (Q) icon appears corresponding to the <b>Report Generation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Code/Description</b> window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the <b>Custom</b> option from the <b>Report Type</b> list.</p>	<p><b>Note:</b> This field is required while creating a custom FOP report.</p>
Reporting Mode	<p>Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are:</p> <ul style="list-style-type: none"> <li>Batch</li> <li>Online</li> </ul>	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	<b>Note:</b> The field is required for generating FOP report in the batch mode.
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	<b>Note:</b> The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)
		<b>Note:</b> The field is required for generating FOP report in the batch mode.

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Report Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Field Details</b> window appears where you can search for the required parameter.  On specifying the parameter, the description of the parameter appears corresponding to the <b>Report Parameter</b> field.	

**Note:** The above columns do not appear when you select the **Web** option from the **Output Format** list.

- 4. Enter the required details in the **Report Creation** screen.
- 5. Click **Save**.  
The FOP report is defined.

**Editing an FOP Report**

**Prerequisites**

To edit an FOP report you should have:

- FOP report (whose details you want to edit) defined in the application
- Algorithms defined in the application for creating custom FOP reports

**Procedure**

To edit an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the FOP report whose details you want to edit.

The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	Not Applicable
Description	Used to specify the description for the FOP report	No
Output Format	Used to indicate the format in which you want to generate the FOP report. The valid values are: <ul style="list-style-type: none"><li>• CSV</li><li>• DOCX</li><li>• JSON</li><li>• PDF</li><li>• Web</li><li>• XLS</li><li>• XML</li></ul>	Yes
	<b>Note:</b> At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats.  You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.	
Script	Used to indicate the script using which the FOP report is extracted in the Web format.	No
	<b>Note:</b> This field is enabled only when you select the <b>Web</b> option from the <b>Output Format</b> list.	
Report Type	Used to indicate the type of information that you want to extract using the FOP report. The valid values are: <ul style="list-style-type: none"><li>• Bill</li><li>• Custom</li><li>• Letter</li></ul>	Yes
	<b>Note:</b> This field is disabled when you select the <b>Web</b> option from the <b>Output Format</b> list.	
Report Template	Used to indicate the template using which the FOP report is uploaded in the system.	Yes
	<b>Note:</b> This field appears only when you select the <b>Bill</b> or <b>Letter</b> option from the <b>Report Type</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
XSL Template	Used to indicate the XSL template file using which you want to create the FOP report.	Yes
	<b>Note:</b> The <b>Upload</b> button appears corresponding to the <b>XSL Template</b> field. On clicking the <b>Upload</b> button, the <b>Upload XSL Template</b> window appears where you can choose the required XSL template.  This field is disabled when you select the <b>Web</b> option from the <b>Output Format</b> list.	
Report Generation Algorithm	Used to indicate the algorithm defined for creating a custom FOP report.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Report Generation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Code/Description</b> window appears where you can search for the required algorithm.  This field is enabled only when you select the <b>Custom</b> option from the <b>Report Type</b> list.	<b>Note:</b> This field is required while creating a custom FOP report.
Reporting Mode	Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are: <ul style="list-style-type: none"> <li>• Batch</li> <li>• Online</li> </ul>	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	<b>Note:</b> The field is required for generating FOP report in the batch mode.
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	<b>Note:</b> The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field is enabled only when you select the <b>Batch</b> option from the <b>Reporting Mode</b> list.	<b>Note:</b> The field is required for generating FOP report in the batch mode.

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Report Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Field Details</b> window appears where you can search for the required parameter.  On specifying the parameter, the description of the parameter appears corresponding to the <b>Report Parameter</b> field.	

**Note:** The above columns do not appear when you select the **Web** option from the **Output Format** list.

3. Modify the required details in the **Report Creation** screen.

4. Click **Save**.

The changes made to the FOP report are saved.

**Deleting an FOP Report**

**Procedure**

To delete an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the FOP report that you want to delete.  
A message appears confirming whether you want to delete the FOP report from the system.
3. Click **OK**.

4. The FOP report is deleted.

**Viewing the FOP Report Details**

**Prerequisites**

To view the FOP report details you should have:

- FOP report (whose details you want to view) defined in the system

**Procedure**

To view the FOP report details:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **View** button in the **View** column corresponding to the FOP report whose details you want to view.  
The **Report Details** screen appears.
3. View the details of the FOP report in the **Report Details** screen.

**Report Audit**

The **Report Audit** screen allows you to track the records of the generated FOP reports in the system. It also allows you to do the following:

- Download the FOP reports which are generated successfully in the system
- View the error message of the FOP report which did not generate successfully

The **Report Audit** screen contains the following zone:

[Report Generation List](#) on page 4303

**Related Topics**

For more information on...	See...
How to downloading an FOP Report	<a href="#">Downloading an FOP Report</a> on page 4304

**Report Generation List**

The **Report Generation List** zone allows you to view a list of FOP reports which are generated in the system. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the generated FOP report.
Report ID	Displays the unique identification number which is created automatically by the system for a particular FOP report during report generation process.
Report	Displays the FOP report which is generated in the system.
Created By	Displays the user who has generated the FOP report in the system.
Creation Date Time	Displays the date and time when the FOP report is generated in the system.
Generation Successful	Indicates whether the FOP report generation is successful or not. The valid values are: <ul style="list-style-type: none"><li>No</li><li>Yes</li></ul>
Message Text	Displays information about the FOP report generation.
	<b>Note:</b> If the FOP report generation is successful, then, this column displays the following message: <b>Report Generation Success</b> However, if the FOP report generation is not successful, then, this column displays the reason why the FOP reports is not generated successfully in the system.
Download Report	On clicking the <b>Download</b> link, you can download the FOP report.
	<b>Note:</b> The <b>Download</b> link does not appear for FOP reports which are not generated successfully in the system.

Downloading an FOP Report

Prerequisites

To download an FOP report you should have:

- FOP reports generated successfully in the system

Procedure

To download an FOP report:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **R** and then click **Report Audit**.  
The **Report Audit** screen appears.
- Ensure that the **Report Generation List** zone is expanded in the **Report Audit** screen.
- Click the **Filters** (⌵) icon available at the upper right corner of the **Report Generation List** zone.  
The **Report** field appears below the report list.
- Specify the FOP report which you want to download in the **Report** field.

- 6. Click **Search**.  
The specified FOP report is filtered in the **Report Generation List** zone.
- 7. Click the **Download** link in the **Download** column corresponding to the FOP report that you want to download.  
The FOP report is downloaded.

## Report Generation

The **Report Generation** screen allows you to extract the details of an FOP report.

### Generating an FOP Report

**Prerequisites**

To generate an FOP report you should have:

- FOP reports created in the system

**Procedure**

To generate an FOP report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Reports** and then click **Report Generation**.

The **Report Generation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to indicate the FOP report that you want to generate.	Yes
Description	Displays the description of the FOP report	Not Applicable

In addition, the **Report Generation** screen contains the following columns:

Column Name	Column Description
Display Sequence	Displays the sequence in which the parameter is defined for the FOP report.
Report Parameter	Displays the parameter which is defined for the FOP report.
Report Parameter Value	Used to specify the value of the parameter for generating the FOP report.

3. Select the required FOP report from the **Report** list.
4. Specify the values of the parameters defined for the FOP report in the **Report Parameter Value** column.
5. Click **Generate**.  
The FOP report is generated.

**Related Topics**

## FOP Reports

---

Oracle Revenue Management and Billing enables you to extract data using the following FOP reports:

- [Adjustment Detail Report](#) on page 4306
- [Entity Hold Detail Report](#) on page 4306
- [Invoice Aging Report](#) on page 4307
- [Payment Detail Report](#) on page 4307
- [Payment Summary Report](#) on page 4307
- [Transaction Rejection Detail Report](#) on page 4307
- [Transaction Rejection Summary Report](#) on page 4308
- [To Do Report](#) on page 4308
- [User Access Report](#) on page 4308
- [Quick Response Code Generation](#) on page 4309

For more information about these FOP reports, refer to *Oracle Revenue Management and Billing FOP Reports Guide*

### Adjustment Detail Report

---

The **Adjustment Detail** report enables you to view the adjustments which are created for persons or accounts, or which are created against bills. While generating the adjustment detail report, you can specify the following parameters - Start Date, End Date, Division, Entity Type, and Entity ID. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2022 and entity type as Account, the system will extract all adjustments which are created for the accounts from 01-01-2022 till the current date.

You can generate the adjustment detail report from the user interface or through a batch process in the Excel format. We have shipped the following adjustment detail reports in this release:

- **FOPADJBXLS** - Used when you want to generate the adjustment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPADJOXLS** - Used when you want to generate the adjustment detail report from the user interface in the Excel format.

### Entity Hold Detail Report

---

The **Entity Hold Detail** report enables you to view the entities, such as persons, accounts, or bills for which the business processes, such as bill generation, automatic payment, funding, overdue, or refund, are on hold for a given period. While generating the entity hold detail report, you can specify the following parameters - Start Date, End Date, Division, Hold Entity, Entity ID, Hold Process, and Hold Status. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2021 and hold entity as Bill, the system will extract all hold requests which are created for the bills from 01-01-2021 till the current date.

You can generate the entity hold detail report from the user interface or through a batch process in the Excel format. We have shipped the following entity hold detail reports in this release:

- **FOPHLDBXLS** - Used when you want to generate the entity hold detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPHLDOXLS** - Used when you want to generate the entity hold detail report from the user interface in the Excel format.

## Invoice Aging Report

---

The **Invoice Aging** report enables you to view the invoices which are due for payment in different age buckets. At a time, it enables you to view the invoice aging data of all customers which belong to a particular division. While generating the invoice aging report, you can specify the following parameters - Start Date, End Date, and Division. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date. While generating the invoice aging report, the system does the currency conversion when the accounts' invoice currency is different from the customer's division currency.

You can generate the invoice aging report from the user interface or through a batch process in the PDF format. We have shipped the following invoice aging reports in this release:

- **FOPAGEBPDF** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the PDF format.
- **FOPAGEOPDF** - Used when you want to generate the invoice aging report from the user interface in the PDF format.

## Payment Detail Report

---

The **Payment Detail** report enables you to view the payment details of an account. At a time, it enables you to view the payments made for the accounts of all customers which belong to a particular division. While generating the payment detail report for the financial services domain, you can specify the following parameters - Division, Start Date, and End Date. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in the PDF format. We have shipped the following payment detail reports for the financial services domain in this release:

- **FOPPAYDTBPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPAYDTPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.

## Payment Summary Report

---

The **Payment Summary** report enables you to view the total payment made via a tender type. At a time, it enables you to view the total payments made via a tender type for each customer which belongs to a particular division. While generating the payment summary report for the financial services domain, you can specify the following parameters - Division, Start Date, and End Date. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in the PDF format. We have shipped the following payment summary reports for the financial services domain in this release:

- **FOPPAYSMBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPAYSMPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.

## Transaction Rejection Detail Report

---

The **Transaction Rejection Detail** report enables you to view the details of the transactions which are in the **Error** or **Ignored** status. At a time, it enables you to view the error and ignored transactions of all accounts which belong to a

particular division. While generating the transaction rejection detail report, you can specify the following parameters - Start Date, End Date, Division, and Transaction Header. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date.

You can generate the transaction rejection detail report from the user interface or through a batch process in the Excel format. We have shipped the following transaction rejection detail reports in this release:

- **FOPTRDTBXLS** - Used when you want to generate the transaction rejection detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPTRDTOXLS** - Used when you want to generate the transaction rejection detail report from the user interface in the Excel format.

## Transaction Rejection Summary Report

---

The **Transaction Rejection Summary** report enables you to view the number of transactions mapped to a particular account and price item combination which are in the **Error** or **Ignored** status. At a time, it enables you to view the error and ignored transaction summary of all accounts which belong to a particular division. While generating the transaction rejection summary report, you can specify the following parameters - Start Date, End Date, Division, and Transaction Header. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date.

You can generate the transaction rejection summary report from the user interface or through a batch process in the Excel format. We have shipped the following transaction rejection summary reports in this release:

- **FOPTRSMBXLS** - Used when you want to generate the transaction rejection summary report through the **C1-RPTGN** batch in the Excel format.
- **FOPTRSMOxls** - Used when you want to generate the transaction rejection summary report from the user interface in the Excel format.

## To Do Report

---

The **To Do** report enables you to view the notifications (i.e. To Dos) assigned to a user and its current status. While generating the To Do report, you can specify the following parameters - Start Date, End Date, To Do Type, To Do Type Description, Assigned User, Created By, Status, Operator, and To Do Age. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 06-01-2022 and To Do type as C1-ACCL, the system will extract all To Dos which are created using the C1-ACCL To Do type from 06-01-2022 till the current date. While filtering the data using the To Do age, you need to specify the operator along with the To Do age. The system supports the following operators: Greater Than (>), Less Than (<), Less Than Equal To (<=), Greater Than Equal To (>=), and Equal To (=). For example, if you specify the start date as 06-01-2022, To Do age as 50, and operator as >, the system will extract all To Dos which are open in the system since more than 50 days.

You can generate the To Do report from the user interface or through a batch process in the PDF format. We have shipped the following To Do reports in this release:

- **FOPTODOBPDF** - Used when you want to generate the To Do report through the **C1-RPTGN** batch in the PDF format.
- **FOPTODOOPDF** - Used when you want to generate the To Do report from the user interface in the PDF format.

## User Access Report

---

The **User Access** report enables you to view the permissions granted to different users for accessing the data. While generating the user access report, you can specify the following parameters - User Group, User Group Description, To Do Role, and To Do Role Description.

You can generate the user access report from the user interface in the PDF format. We have shipped the following user access report in this release:

- **FOPUSROPDF** - Used when you want to generate the user access report from the user interface in the PDF format.

## Quick Response Code Generation

---

A Quick Response (QR) code is a type of matrix barcode (or two-dimensional barcode). A barcode is a machine-readable optical label that can contain information about the item to which it is attached. Oracle Revenue Management and Billing provides a QR code generator using which you can generate a QR code. At the moment, the QR code is only supported for the FOP reports which are generated in the PDF format. You can define dataset for the QR string using which you want to generate the QR code. You can insert a QR code on any page in the Portable Document Format (PDF) file.

To insert a QR code in an FOP report, you need to add QR related code snippets in the respective XSL file. Only then, the system will insert the QR code when you generate the FOP report in the PDF format.

## Invoice Extract in UBL Format

---

### Topics:

- [Prerequisites](#)
- [C1-InvoiceChargeExtract Business Service](#)
- [C1-UBLBILEX Algorithm](#)
- [C1-UBLINVOICEEXTRACT Extract Template](#)
- [UBL Format](#)
- [Field Mapping for UBL Format](#)
- [Sample Invoice Extract in the UBL Format](#)

Oracle Revenue Management and Billing provides the capability to extract the invoices in the Universal Business Language (UBL) format. UBL is a structured XML format which contains all the information but in a defined and fixed structure. The invoice extract in UBL format simplifies the process of sending and receiving invoices internationally through an electronic standard to different e-invoicing systems, thereby reducing the data entry cost and manual data entry errors.

A new algorithm type named **C1-UBLBILEX** is introduced in this release. If you want to extract the invoice in the UBL 2.1 format, you need to attach the **C1-UBLBILEX** algorithm to the **Bill Extract Method** algorithm spot of the required bill route type. In this algorithm, you need to specify the extract template using which you want to extract the invoice data in the UBL format. An out-of-box invoice extract template named **C1-UBLINVOICEEXTRACT** is shipped with the product. You can specify either the out-of-box invoice extract template or a custom invoice extract template in the algorithm parameter. This algorithm will accordingly extract the invoice data using the **C1-InvoiceChargeExtract** business service and present it as per the field mapping defined in the invoice extract template.

On executing the **POSTROUT** batch, the system will invoke the **C1-UBLBILEX** algorithm and extract the invoice data in the UBL format.

## Prerequisites

---

To extract invoice in the UBL format, you need to do the following:

- Define the **C1\_STM** feature configuration.
- Define the **C1-InvoiceChargeExtract** business service in the system.
- Define the **C1-UBLINVOICEEXTRACT** extract template in the system and associate it with the **C1-InvoiceChargeExtract** business service.
- Map the required UBL fields with the corresponding fields in the system.
- Define the **C1-UBLBILEX** algorithm using the **C1-UBLBILEX** algorithm type.
- Define the following parameters for **C1-UBLBILEX** algorithm:
  - Extract Folder
  - Dat Folder
  - External System Input String
  - Extract Template Code
- Attach the **C1-UBLBILEX** algorithm with the bill route types using the **POSTROUT** batch control.

## C1-InvoiceChargeExtract Business Service

---

The **C1-InvoiceChargeExtract** business service is used to fetch invoice and invoice line details from the system. Information such as the payer details, invoice details, sender details, receiver details, bill segment details, bill adjustments details, and tax details are extracted using the **C1-InvoiceChargeExtract** business service. These details are further used by the **C1-UBLINVOICEEXTRACT** extract template to extract data in the UBL format.

The above mentioned data is extracted using the below given format:

```
<schema>
  <billId></billId>
  <billDate></billDate>
  <amtDueBeforeTax></amtDueBeforeTax>
  <netAmtDue></netAmtDue>
  <totalInvTaxes></totalInvTaxes>
  <billCurrency></billCurrency>
  <sender>
    <personId></personId>
    <name></name>
    <legalName></legalName>
    <emailAddress></emailAddress>
    <namePrefix></namePrefix>
    <bic></bic>
    <orgOrFi></orgOrFi>
    <orgidType></orgidType>
    <orgidNum></orgidNum>
    <address1></address1>
    <address2></address2>
    <address3></address3>
    <address4></address4>
    <city></city>
    <state></state>
    <postal></postal>
    <country></country>
  </sender>
  <receiver>
    <personId></personId>
    <name></name>
```

```
<legalName></legalName>
<emailAddress></emailAddress>
<namePrefix></namePrefix>
<bic></bic>
<orgOrFi></orgOrFi>
<orgidType></orgidType>
<orgidNum></orgidNum>

C1-UBLINVOICEEXTRACT extract template	<a href="#">C1-UBLINVOICEEXTRACT Extract Template</a> on page 4314

# C1-UBLBILEX Algorithm

The **C1-UBLBILEX** algorithm is invoked when the **POSTROUT** batch is executed within the ORMB system. It selects the bills attached to the associated bill route types for extraction in the UBL format.

The **C1-UBLBILEX** algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Extract Folder	Used to indicate the location where the invoice extract file is saved in the XML format.	Yes
Dat Folder	Used to save the path of the invoice extract file for the external system.	Yes
External System Input String	Used to indicate the location of the path from where the external system will fetch the extracted file in the XML format.	Yes
Extract Template Code	Used to indicate the template using which the invoice is extracted in the UBL format.	Yes

**Note:** Apart from the above mentioned parameters, few additional contextual parameters such as **accountId**, **acctNbr**, **personId**, and **personIdNbr** are added to the parameter list and passed to the extract utility by the algorithm internally. The user should not specify these parameters while defining the **C1-UBLBILEX** algorithm.

## C1-UBLINVOICEEXTRACT Extract Template

The **C1-UBLINVOICEEXTRACT** extract template is used to extract invoice details in the Universal Business Language (UBL) 2.1 XML format. It uses the **C1-InvoiceChargeExtract** business service to fetch the person details, bill segments, adjustments, and tax details with respect to the bills attached to the respective bill route types associated with the **C1-UBLBILEX** algorithm.

The **C1-UBLINVOICEEXTRACT** extract template has the following three types of field mappings:

- Fields Starting with **IN** - Indicates the initial fields which are used as an input to fetch details corresponding to the **C1-InvoiceChargeExtract** business service.
- Fields Starting with **OUT\_INV** - Indicates the extracted fields which contains the invoice information.
- Fields Starting with **OUT\_INV\_LIN** - Indicates the extracted fields which contains the invoice line information.

The **C1-UBLINVOICEEXTRACT** extract template is mapped in the system as shown in the below table:

Extract Template Field Name	Source Xpath	Target Xpath	Parameters/Default Values
IN_ACCOUNT_ID	-	ubl:Invoice/accountId	PARAM(accountId)
IN_ACCT_NBR	-	ubl:Invoice/acctNbr	PARAM(acctNbr)
IN_BILLID_IC	C1-InvoiceChargeExtract/billId	Invoice/InvoiceCharge/billId2	PARAM(billId)
IN_PERSON_ID	-	ubl:Invoice/personId	PARAM(personId)
IN_PER_ID_NUM	-	ubl:Invoice/personIdNbr	PARAM(personIdNbr)
OUT_INV_CURRENCYCD	C1-InvoiceChargeExtract/billCurrency	ubl:Invoice/ cbc:DocumentCurrencyCode	-
OUT_INV_CURRENCY_PYBLAMT	C1-InvoiceChargeExtract/billCurrency	ubl:Invoice/cac:LegalMonetaryTotal/ cbc:PayableAmount/currency	-

---

### Most Commonly Used Tasks

---

**Topics:**

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

## Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 4322
- [Adding a Column to the Zone](#) on page 4322
- [Rearranging Columns in the Zone](#) on page 4322

### Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration** (⚙️) icon in the upper right corner of the zone.  
A panel appears at the bottom of the zone with a list of column names.

**Note:** The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.  
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

#### Related Topics

For more information on...	See...
How to change the layout of the zone	<a href="#">Changing the Layout</a> on page 4322

### Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.  
The position of the column changes in the zone.

#### Related Topics

For more information on...	See...
How to change the layout of the zone	<a href="#">Changing the Layout</a> on page 4322

### Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete** (🗑️) icon corresponding to the column name that you want to remove from the zone.  
The column is removed from the zone and is currently displayed with white background in the panel.

**Note:** Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

## Appendix

# B

---

## Administration

---

### Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

## UI Maps

---

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

### Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

#### **Procedure**

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.  
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.  
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

**Note:** The system uses the CM\_<Approval Workflow Group Code>\_AppTxn\_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.  
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.  
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.  
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.  
The changes are saved.

#### **Related Topics**

For more information on...	See...
How to define an approval workflow group	<a href="#">Defining an Approval Workflow Group</a> on page 755
How to edit an approval workflow group	<a href="#">Editing an Approval Workflow Group</a> on page 764

## Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

### Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.  
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.  
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

**Note:** The system uses the CM\_<Approval Workflow Group Code>\_AppTxn\_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.  
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>"/>
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account"/>
  </account>
</schema>
```

The <approvalTransactionId/> tag is used in the schema to retrieve the approval transaction ID of the respective business object. The <action/> tag is used in the schema to retrieve the action performed by the submitter.

8. Click the **Save** link in the **Actions/Navigation** area.  
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

10. Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

11. Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick=performAction('<Approval Workflow Group Code>');" -
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL" -
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace `<Approval Workflow Group Code>` with the code of the approval workflow group for which you are creating a UI map.

12. Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

**Related Topics**

For more information on...	See...
How to define an approval workflow group	<a href="#">Defining an Approval Workflow Group</a> on page 755

## Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in Oracle Revenue Management and Billing.

### Setting the C1\_ACCTINFO Feature Configuration

**Prerequisites**

To set the **C1\_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

**Procedure**

To set the **C1\_ACCTINFO** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_ACCTINFO** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the <b>Account</b> screen.	Yes
	<b>Note:</b> By default, the <b>C1_F_ATY</b> characteristic type is specified. If you want to use account types other than the ones defined in the <b>C1_F_ATY</b> characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the <b>Account</b> screen.	Yes
	<b>Note:</b> By default, the <b>C1_F_IGA</b> characteristic type is specified. If you want to use any other characteristic type other than <b>C1_F_IGA</b> , you need to create a new predefined characteristic type and add two characteristic values - Y and N. Then, specify the newly created characteristic type as the value for this option type.	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_AXENTITY Feature Configuration

The **C1\_AXENTITY** feature configuration enables you to configure various settings related to the **Approval Workflow** feature.

Prerequisites

To set the **C1\_AXENTITY** feature configuration, you should have:

- An algorithm defined using the **C1-APPTXN** algorithm type in the application
- To Do types defined in the application
- Fields defined in the application
- XSL files that you want to use for the Input and Display UI maps

Procedure

To set the **C1\_AXENTITY** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_AXENTITY** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which you want to highlight the new record or new additions made to the existing record. This helps in comparing the existing and new data while reviewing an approval transaction.	Yes
	<b>Note:</b> You must specify a hexadecimal value for this option type.	
Approval Transaction Compare Value Changed Color	Used to indicate the color in which you want to highlight the modifications made to the existing data. This helps in comparing the existing and new data while reviewing an approval transaction.	Yes
	<b>Note:</b> You must specify a hexadecimal value for this option type.	
Approval Transaction Entity Access Algorithms	Used to specify the algorithm which controls access to the maintenance objects based on the access group and division.	Yes
	<b>Note:</b> By default, the value is set to <b>C1-APPTXN</b> . If you create new maintenance objects and want to control the access of these new maintenance objects based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you will have to define this option type twice - one with the default algorithm (that is, <b>C1-APPTXN</b> ) and another with the custom algorithm.	
Approval Transaction Field Masking	Used to specify the business object for masking the approval transaction field in the approval workflow group schema.	Yes

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify the business object, masking is disabled for the respective field.	
Approval Transaction Resolve To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an approver at any level in the hierarchy rejects an approval transaction.  <b>Note:</b> You must specify a To Do type which is already defined in the system.	Yes
Approval Transaction screen timeout	Used to indicate the time (in minutes) in which the screen timeout message should appear in the <b>Comparison: New versus Existing</b> screen when the system takes longer time to display an approval transaction.	Yes
Disable Approval Transaction Fields in Input UI Maps	Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.  <b>Note:</b> You must specify a field which is already defined in the application.	Yes
Display Existing Panel on Left Side (Y/N)	Used to indicate whether you want to view the existing or new data in the left panel while reviewing an approval transaction. The valid values are:  <ul style="list-style-type: none"> <li>• <b>Y</b> - Used when you want the existing data to appear in the left panel of the <b>Comparison: New versus Existing</b> screen.</li> <li>• <b>N</b> - Used when you want the new data to appear in the left panel of the <b>Comparison: New versus Existing</b> screen.</li> </ul> <b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>N</b> .	No
Display Information String	Used to indicate whether the approval transaction information string should appear in the <b>Comparison: New versus Existing</b> screen when you are reviewing an approval transaction of a construct. The valid values are:  <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Display only Differences of fields on UI	Used to indicate whether you want to view only those fields of a record where the data is added or updated or all fields of a record while reviewing an approval transaction. The valid values are:  <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to view only those fields of a record where the data is added or updated in the <b>Comparison: New versus Existing</b> screen.</li> <li>• <b>No</b> - Used when you want to view all fields of a record in the <b>Comparison: New versus Existing</b> screen.</li> </ul>	Yes

Option Type	Description	Mandatory (Yes or No)
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

## Setting the C1\_DIVFUNCT Feature Configuration

### Procedure

To set the **C1\_DIVFUNCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1\_DIVFUNCT** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the <b>Person</b> , <b>Account</b> and <b>Contract</b> screens. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

## Setting the C1-Deal Feature Configuration

The **C1-Deal** feature configuration enables you to configure various settings related to the **Deal Pricing Management** feature.

### Prerequisites

To set the **C1-Deal** feature configuration, you should have:

- Required FOP based reports defined in the application

**Procedure**

To set the **C1-Deal** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-Deal** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Limit for Online Hierarchy Creation	Used to determine whether the customer hierarchy for a deal should be created in the online or deferred mode. If the number of accounts in the customer hierarchy does not exceed the account limit, the system creates the corresponding prospect persons and accounts for the deal immediately and then changes the status of the deal to <b>Pending Simulation</b> . However, if the number of accounts in the customer hierarchy exceeds the account limit, the status of the deal is changed to <b>Hierarchy Creation Deferred</b> .	Yes
	<b>Note:</b>  This option type is considered when a deal is created for an existing customer or prospect with the simulation type set to <b>Customer</b> .  You must specify a value greater than or equal to zero.  On executing the <b>C1_HRC</b> batch, the system checks whether there are any deals in the <b>Hierarchy Creation Deferred</b> status. If so, the system creates the corresponding prospect persons and accounts for the deal and then changes the status of the deal to <b>Pending Simulation</b> . For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i> .	
Footnote Character for Terms & Conditions in Deal Extract	Used to specify a special character which you want to use while inserting terms and conditions of a price item or hierarchy entity as footnotes in the deal extract report. For example, *, \$, &, #, etc.	Yes

Option Type	Description	Mandatory (Yes or No)
Deal Comparison Report	Used to specify the FOP based report using which you want to extract the deal comparison report in the Excel format.	Yes
	<b>Note:</b> You can set the value of this option type to <b>DCMR</b> or to any custom FOP based report which is designed to show the deal comparison report in the Excel format.	
Company Logo File Name for Deal Extract	Used to specify the company logo file that you want to embed while extracting the deal information in the PDF format for the customer review and acceptance.	Yes
	<b>Note:</b> You must upload the specified company logo file in the required FOP based report using which you want to extract the deal information in the PDF format. It is then stored at the following location:  <pre>/scratch/rmbbuild/spl/INSTALL_DIR/splapp/reporting/xsl/</pre> Here, you must specify a file name along with the extension.	
Price Item Status Characteristic Type	Used to indicate the characteristic type where the status of a price item is stored. This characteristic type is defined for a price item. The system uses this characteristic type while deriving active price items in the price item hierarchy of an existing customer or account in a deal. Here, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	Yes
	<b>Note:</b> The <b>C1-DLPIS</b> characteristic type is shipped with the product.	
Default Period in Deal Dashboard and Deal Approver Dashboard	Used to specify the duration in months. The system calculates the default period considering the specified duration and system date, and accordingly shows the details for the default period in:	Yes
	<ul style="list-style-type: none"> <li><b>Deal Metrics, Deal Statistics, Deal To Dos, and Search Deal</b> zones of the <b>Deal Dashboard</b> screen</li> <li><b>Deal Metrics, Deal To Dos and Search Deal</b> zones of the <b>Deal Approver Dashboard</b> screen</li> </ul> For example, if the system date is 07-11-2021 and the value for this option type is set to 12, then the system displays the following information in the respective zone of the <b>Deal Dashboard</b> screen on 07-11-2021:	
	<ul style="list-style-type: none"> <li><b>Deal Metrics</b> - Indicates number of deals which are created, pending for approval, ready for finalization, pending for client acceptance, won, and rejected between Aug 2020 to July 2021.</li> <li><b>Deal Statistics</b> - Graphically represents the number of deals of an existing customer, existing account, and prospect in a particular status.</li> </ul>	

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>Deal To Dos</b> - Lists the To Dos which are created between Aug 2020 to July 2021.</li> <li><b>Search Deals</b> - Lists deals where start date fall between Aug 2020 to July 2021.</li> </ul>	
Deal Profitability Report	<p>Used to specify the FOP based report using which you want to extract the deal profitability report in the Excel format.</p> <p><b>Note:</b> You can set the value of this option type to <b>DLPRTEXLR</b> or to any custom FOP based report which is designed to show the deal profitability report in the Excel format.</p>	Yes
Deal External Report in Excel	<p>Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the customer review and acceptance.</p> <p><b>Note:</b> You can set the value of this option type to <b>DEEEXCEL</b> or to any custom FOP based report which is designed to show the deal information to the customer in the Excel format.</p>	Yes
Deal External Report in PDF	<p>Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the customer review and acceptance.</p> <p><b>Note:</b> You can set the value of this option type to <b>DEEPDF</b> or to any custom FOP based report which is designed to show the deal information to the customer in the PDF format.</p>	Yes
Deal Internal Report in Excel	<p>Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the internal review.</p> <p><b>Note:</b> You can set the value of this option type to <b>DEIEXCEL</b> or to any custom FOP based report which is designed to show the deal information to the internal user in the Excel format.</p>	Yes
Deal Internal Report in PDF	<p>Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the internal review.</p> <p><b>Note:</b> You can set the value of this option type to <b>DEIPDF</b> or to any custom FOP based report which is designed to show the deal information to the internal user in the PDF format.</p>	Yes
Validate Average Price Against Proposed Price List Pricing	<p>Used to indicate whether the average price of a price item in a deal should be validated against the proposed price list pricing. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Y</b> - Indicates that the average price of a price item in a deal should be validated against the proposed price list pricing.</li> <li><b>N</b> - Indicates that the average price of a price item in a deal should be validated against the eligible price list pricing.</li> </ul>	Yes

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> This option type is considered when the <b>Price Item Approval Required</b> field is set to <b>Yes</b> in the respective deal type.	
Deal Pricing and Commitments - Pagination Limit	Used to specify the maximum number of records that can be displayed on filtering the data in each page of the <b>Deal Pricing and Commitments</b> screen.  <b>Note:</b> You must specify a numeric value greater than zero.	Yes
Deal Questionnaire - Pagination Limit	Used to specify the number of questions that should appear in the <b>Questionnaire</b> page of the <b>Deal Information</b> screen.  <b>Note:</b> You must specify a numeric value greater than zero.	Yes
Refer Volume Aggregation	Used to indicate whether you want to derive the following for an account in a deal from the charge and volume aggregation tables: <ul style="list-style-type: none"> <li>Recurring and non-recurring pass through charges</li> <li>Commitments from recurring and non-recurring SQI based billable charges</li> </ul> The valid values are: <ul style="list-style-type: none"> <li><b>Y</b> - Indicates that you want to extract the charges and commitments of an account from the <b>C1_CHARGE_AGGR</b> and <b>C1_VOLUME_AGGR</b> tables, respectively, while viewing the pricing and commitment details of the account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <b>Note:</b> If you want to refer the data from the <b>C1_CHARGE_AGGR</b> and <b>C1_VOLUME_AGGR</b> tables, you need to execute the <b>PREAGGR</b> and <b>CSTPREAG</b> batches before creating a deal for an existing customer or account. For more information about these batches, see <i>Oracle Revenue Management and Billing Batch Guide</i>. </div> </li> <li><b>N</b> - Indicates that you want to derive the charges and commitments of an account for the deal frequency, at the runtime, while viewing the pricing and commitment details of the account.</li> </ul>	Yes
Thread Count for Price Item Hierarchy	Used to specify the number of threads you want to spawn in parallel. It is used while deriving the price item hierarchy for an existing customer or account in a deal.  <b>Note:</b> You must specify a numeric value greater than zero.	Yes
Valid Period for Seasonal Pricing in Months	Used to specify the maximum duration in months for which you can offer a seasonal pricing for a price item in a deal. The system then validates the end date of a seasonal pricing using the specified duration. For example, if the value for this option type is set to 6 and the seasonal pricing start date is 02-01-2021, then	Yes

Option Type	Description	Mandatory (Yes or No)
	the system checks whether the end date of the seasonal pricing is not beyond 07-31-2021.	
Volume and Commitment Limit Online Simulation	<p>Used to determine whether the cost, revenue, and profitability for a deal version should be calculated in the online or deferred mode. If the proposed commitments do not exceed the specified limit, the system calculates the cost, revenue, and profitability for the deal version immediately and then changes the status of the deal and its version to <b>Simulated</b>. However, if the proposed commitments exceed the specified limit, the status of the deal is changed to <b>Simulation Deferred</b>.</p> <p><b>Note:</b></p> <p>You must specify a value greater than or equal to zero.</p> <p>On executing the <b>C1_SMLD</b> batch, the system checks whether there are any deals in the <b>Simulation Deferred</b> status. If so, the system calculates the cost, revenue, and profitability for the deal version and then changes the status of the deal and its version to <b>Simulated</b>. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes
Deal Dashboard Default View	<p>Used to indicate whether the system should list the information of deals, which are created by the logged in user or which are created by a set of users who belong to the logged in user's access group, by default, in the <b>Deal Dashboard</b> screen. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>U</b> - Used when you want to view the information of deals, which are created by the logged in user, by default, in the <b>Deal Dashboard</b> screen.</li> <li>• <b>UG</b> - Used when you want to view the information of deals, which are created by a set of users who belong to the logged in user's access group, by default, in the <b>Deal Dashboard</b> screen.</li> </ul> <p><b>Note:</b> If you do not set this option type, the system, by default, shows the data of the logged in user in the <b>Deal Dashboard</b> screen.</p>	No

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1-EHRCONFIG Feature Configuration

The **C1-EHRCONFIG** feature configuration enables the system to determine the maximum number of levels that can be included in an entity hierarchy relationship. Accordingly, the system enables you to create hierarchy entities for upto one level less than the level specified in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. For example, if you set the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

**Procedure**

To set the **C1-EHRCONFIG** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-EHRCONFIG** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Maximum Hierarchy Level	Used to indicate the maximum number of levels that you want to include in an entity hierarchy relationship.	Yes
	<b>Note:</b> At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels. The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. By default, the value is set to 10. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in this option type.	

- 7. Enter the value for the required option type in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1\_EXCHRATE Feature Configuration**

**Procedure**

To set the **C1\_EXCHRATE** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_EXCHRATE** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul> By default, the value of this option type is set to <b>N</b> .	Yes

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1\_EXP\_OVRD Feature Configuration**

**Procedure**

To set the **C1\_EXP\_OVRD** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_EXP\_OVRD** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
- The changes made to the feature configuration are saved.

### Setting the C1\_FINTRANOP Feature Configuration

The **C1\_FINTRANOP** feature configuration enables the system to determine various options which should be considered while creating billable charges, determining a price item pricing, generating bill segments, and while creating an actual bill using a trial bill.

**Prerequisites**

To set the **C1\_FINTRANOP** feature configuration, you should have:

- Values defined for the **BIRC\_OPT\_TYP\_FLG** lookup field

**Procedure**

To set the **C1\_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_FINTRANOP** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Financial History Details Switch	Used to indicate whether detailed or summarized information should be displayed for an account in the <b>Account Financial History</b> screen. The valid values are: <ul style="list-style-type: none"> <li>• <b>Y</b> - Used when you want to list all financial transactions of a bill, payment, or adjustment for an account in the <b>Account Financial History</b> screen.</li> <li>• <b>N</b> - Used when you want to summarize all financial transactions of a particular type on an entity (i.e. bill, payment, or adjustment) and display the total amount in the <b>Account Financial History</b> screen.</li> </ul>	No
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>Y</b> .	
Allow Advance Billing of Future Dated Charges	Used to indicate whether you want to use advance billing for future dated billable charges. The valid values are: <ul style="list-style-type: none"> <li>• <b>Y</b></li> <li>• <b>N</b></li> </ul>	No
	<b>Note:</b> If the <b>Allow Advance Billing of Future Dated Charges</b> option type is set to <b>Y</b> , the system considers those billable charges where the bill after date is on or before the cut-off date, irrespective whether the date of those billable charges is past or future dated.  The <b>Allow Advance Billing of Future Dated Charges</b> option type should be defined only in case of non-recurring billable charges.  By default, the value for this option type is set to <b>N</b> .	
Allow Caching Of Rule Based Autopay List	Used to indicate whether you want to cache the rule based auto pay instructions of an account when the <b>C1-APRULEEVL</b> algorithm is invoked. The valid values are: <ul style="list-style-type: none"> <li>• <b>Y</b></li> <li>• <b>N</b></li> </ul>	No
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>N</b> .	
Allow non-significant zero amount FT GL entry	Used to indicate whether you want to allow non-significant zero amount <b>FT GL</b> entries in the system. The valid values are: <ul style="list-style-type: none"> <li>• <b>Y</b></li> <li>• <b>N</b></li> </ul>	Yes (Conditional)
	<b>Note:</b> The <b>FT GL</b> amount is considered significant only when the statistical and total amount are non-zero.	<b>Note:</b> This data is required when you want to allow non-significant zero amount <b>FT GL</b> entries in the system.

Option Type	Description	Mandatory (Yes or No)
Avoid internal match event creation for zero dollar Bill	Used to indicate whether you want to consider a zero balance bill for offsetting against another bills in an offset request. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes (Conditional)
	<b>Note:</b> If you set this option type to <b>Y</b> , the system does not match the credit and debit line items internally of a zero balance bill on the bill completion. If you set this option type to <b>N</b> , the system matches the credit and debit line items internally of a zero balance bill on the bill completion.	<b>Note:</b> This data is required when you want to consider a zero balance bill for offsetting against another bills in an offset request.
Avoid Pricing Crawling if Rate Schedule present at Contract	Used to indicate that the system should not determine the price item pricing using the price assignment search algorithm (which is attached on the account's division) when the effective rate schedule is present on the contract. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>N</b> .	
Bill Segment Regeneration on Freeze	Used to indicate whether you want to regenerate the bill segments before freezing them. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>N</b> .  If the <b>Freeze and Complete</b> option is selected for the respective window period in the bill cycle and the <b>Bill Segment Regeneration on Freeze</b> option type is set to <b>Y</b> , then the bill segments are regenerated and the status of the bill segments is set to <b>Frozen</b> . However, if the <b>Freeze and Complete</b> option is not selected for the respective window period in the bill cycle, then the bill segments are always regenerated irrespective of whether the <b>Bill Segment Regeneration on Freeze</b> option type is set to <b>Y</b> or <b>N</b> .	
Billable Charges Date - Non Recurring	Used to indicate whether you want to consider the non-recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are: <ul style="list-style-type: none"> <li>• S - Used when you want to consider the non-recurring billable charges whose start date is earlier than or equal to the cut-off date.</li> </ul>	No

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>E</b> - Used when you want to consider the non-recurring billable charges whose end date is earlier than or equal to the cut-off date.</li> </ul>	
	<p><b>Note:</b></p> <p>If you do not specify the value for this option type, by default, it is set to <b>S</b>.</p> <p>The system always considers the recurring billable charges whose start date is earlier than the cut-off date and end date is later than the cut-off date irrespective of whether the <b>Billable Charges Date</b> option type is set to <b>S</b> or <b>E</b>.</p>	
Billable Charges Date - Recurring	<p>Used to indicate whether you want to consider the recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> <li><b>S</b> - Used when you want to consider the recurring billable charges whose start date is earlier than or equal to the cut-off date.</li> <li><b>E</b> - Used when you want to consider the recurring billable charges whose end date is earlier than or equal to the cut-off date.</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>S</b>.</p>	No
Catch Up Flag For Recurring Charges	<p>Used to indicate whether you want to consider the recurring billable charges for catch up. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Y</b> - Used when you want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date.</li> <li><b>N</b> - Used when you do not want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when you want to catch up with the recurring billable charges before the bill generation process.</p>
Defer Bill Segment Freeze	<p>Used to indicate whether you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Y</b> - Used when you want the system to freeze the bill segment after the bill routing and bill due date calculation is completed.</li> <li><b>N</b> - Used when you do not want the system to freeze the bill segment after the bill routing and bill due date calculation is completed.</li> </ul> <p><b>Note:</b> This flag is only considered for freezing the bill once the bill's status is set to <b>Complete</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed.</p>

Option Type	Description	Mandatory (Yes or No)
Hide Debt Class Details On Account Main Page	Used to indicate whether you want to hide the debt class details in the <b>Main</b> tab of the <b>Account</b> screen. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li><b>Y</b> - Used when you want the system to hide the debt class details in the <b>Main</b> tab of the <b>Account</b> screen.</li> <li><b>N</b> - Used when you want the system to populate the debt class details in the <b>Main</b> tab of the <b>Account</b> screen.</li> </ul>	<b>Note:</b> This data is required when you want to hide the debt class details in the <b>Main</b> tab of the <b>Account</b> screen.
Rate Component Step Optimization	Used to indicate whether you want to determine the rate for all tiering ranges of a step tiered rate component or for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. The valid values are:	No
	<ul style="list-style-type: none"> <li><b>Y</b> - Used when you want to determine the rate for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. It helps to improve the performance of the billing batches. If you set this option type to <b>Y</b>, always ensure that you define the price components with the tiering ranges in the ascending order.</li> <li><b>N</b> - Used when you want to determine the rate for all tiering ranges of a step tiered rate component.</li> </ul>	
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to N.	
Refund/Write-Off Flush Counter	Used to specify the value for flush counter when the refund or write-off details are defined.	Yes (Conditional)
	<b>Note:</b> You must specify a numeric value greater than zero.  If the total number of refund or write-off records are equal to the flush counter, the system then performs a flush and clear at session level.	<b>Note:</b> This data is required when you are defining the refund or write-off details in the system.
Skip Priceitem Contract Type Validation	Used to indicate whether you want to skip the price item's and billable charge's contract's contract type validation. The valid values are:	No
	<ul style="list-style-type: none"> <li><b>Y</b> - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is not associated.</li> <li><b>N</b> - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is associated.</li> </ul>	
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to N.	
Trial Bill Characteristics Conversion	Used to indicate whether you want to copy the trial bill's characteristics when an actual bill is created using a trial bill. The valid values are:	No

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to N.	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_FM Feature Configuration

Procedure

To set the **C1\_FM** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_FM** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	<b>Note:</b> At present, the system does not support any value other than <b>C1-TXNIP</b> for this option type.	
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	<b>Note:</b> At present, the system does not support any value other than <b>C1-TXNCU</b> for this option type.	
Disaggregation - Price Assignment	Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item	No

Option Type	Description	Mandatory (Yes or No)
	<p>is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> You can use this feature when an algorithm which is created using the <b>TXNDISAGGPRA</b> algorithm type is attached to the <b>Post-Processing</b> system event of the <b>C1_PRASGN_BO</b> business object.</p>	
Allow Duplicate Summary ID	<p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the <b>Service Quantity Calculation (C1-TXNSQ)</b> batch. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b></p> <p>If you set this option type to <b>false</b>, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p>	No
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> <li>• 1</li> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 5</li> <li>• 6</li> <li>• 7</li> </ul>	No

Option Type	Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. <math>2^4</math>) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to <b>2</b>.</p>	
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, <b>Validate Transaction and Derive Price Item</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p>	No
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns <b>Rule Is True</b> irrespective of whether the rule true action is set to <b>Next Dependent</b>, <b>Next Rule by Priority</b>, or <b>Success</b> and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the <b>Ignore Transaction</b>, <b>Aggregate Transaction</b>, and <b>Aggregation Schedule</b> fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes

Option Type	Description	Mandatory (Yes or No)
Use Materialized Views	Used to indicate whether the price item pricing information must be cached in the <b>CI_PRC_AGRD</b> , <b>CI_PRC_PL</b> , and <b>CI_PRC_INH_PL</b> tables. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Yes
Maximum Price Item Parameters Cache Size	Used to indicate the maximum number of price items whose parameter information can be cached in the memory.	Yes
Maximum Price Item Parameter Groups Cache Size	Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.	Yes
SQ Recalculation Required	Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the <b>C1-TXNCU</b> batch. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No
Transaction Detail Account Validation	Used to indicate whether the account must be validated during the transaction validation process. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b></p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	Used to specify the description for the batch which is used for adding a summary record in the <b>CI_TXN_DTL_PRITM_SUMMARY</b> table. For example, <b>Populate CI_TXN_DTL_PRITM_SUMMARY Table</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes (Conditional) <p><b>Note:</b> This data is required when the <b>Use C1-TXNPS During Transaction Aggregation</b> option type is set to <b>true</b>.</p>
Find Price Item Pricing Batch Description	Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, <b>Price Item Pricing Verification</b> . This description appears in the error message	Yes

Option Type	Description	Mandatory (Yes or No)
	when the transaction aggregation batches are not executed in the specified sequence.	
Update Transaction Status Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, <b>Update Status</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Service Quantity Calculation Batch Description	Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, <b>Service Quantity Calculation</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Transaction Completion Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, <b>Mark Completion</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, <b>Clean Up</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Use C1-TXNPS During Transaction Aggregation	Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	No
	<p><b>Note:</b> If you set this option type to <b>true</b>, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> <li>Flush All Caches (F1-FLUSH)</li> <li>Refresh Pricing (C1-TXNRP)</li> <li>Header Validation (C1-TXNHV)</li> <li>Validate Transaction and Derive Price Item (C1-TXNIP)</li> <li>Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)</li> <li>Price Item Pricing Verification (C1-TXNVP)</li> <li>Update Status (C1-TXNEX)</li> <li>Service Quantity Calculation (C1-TXNSQ)</li> <li>Mark Completion (C1-TXNCM)</li> <li>Clean Up (C1-TXNCU) with the <b>Request Type</b> parameter set to <b>EROR</b></li> </ol>	

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-INCT Feature Configuration

The **C1-INCT** feature configuration enables you to configure various settings related to the **Construct Based Billing and Settlement** feature.

Prerequisites

To set the **C1-INCT** feature configuration, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Contract Type**)

Procedure

To set the **C1-INCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-INCT** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Settlement Currency Validation Required	Used to indicate whether you want to enable or disable the linked accounts' and settlement account's currency validation. The valid values are: <ul style="list-style-type: none"><li>• <b>Y</b> - Used when you want to validate whether the linked accounts' currency matches the settlement account's currency.</li><li>• <b>N</b> - Used when you do not want to validate whether the linked accounts' currency matches the settlement account's currency.</li></ul>	No
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to <b>N</b> .	
Target Contract Characteristic Type	Used to indicate the characteristic type which stores the contract type using which the contract should be created for the new invoice account when the construct is activated. This characteristic type must be defined on the usage accounts' contract's contract type.	Yes

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Contract Type</b> .	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_MASPRI Feature Configuration

Procedure

To set the **C1\_MASPRI** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_MASPRI** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Thread Count	Used to specify the number of threads you want to spawn in parallel. It is used while creating a batch job for a mass pricing update request using the <b>C1-GENRQ</b> batch control.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch. It is used while creating a batch job for a mass pricing update request using the <b>C1-GENRQ</b> batch control.	Yes

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_MLTCURACC Feature Configuration

The **C1\_MLTCURACC** feature configuration enables you to configure various settings related to the **Multi-Currency Accounts** feature.

Prerequisites

To set the **C1\_MLTCURACC** feature configuration, you should have:

- Adjustment types and adjustment cancel reasons defined in the application

Procedure

To set the **C1\_MLTCURACC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_MLTCURACC** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)										
Allow Multi-Currency Accounts	<p>Used to indicate whether you want to enable the <b>Multi-Currency Accounts</b> feature. The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Y</b> - If the <b>Allow Multi-Currency Accounts</b> option type is set to <b>Y</b>, the following fields are enabled in the respective screen:</li></ul> <table><tr><th>Screen Name</th><th>Field Name</th></tr><tr><td>Account</td><td>Invoice Currency</td></tr><tr><td>Billable Charge</td><td>Currency Code (for Bill Line)</td></tr><tr><td>Adjustment</td><td>Currency</td></tr><tr><td>Payment Event Add</td><td>Payment Currency</td></tr></table>	Screen Name	Field Name	Account	Invoice Currency	Billable Charge	Currency Code (for Bill Line)	Adjustment	Currency	Payment Event Add	Payment Currency	No
Screen Name	Field Name											
Account	Invoice Currency											
Billable Charge	Currency Code (for Bill Line)											
Adjustment	Currency											
Payment Event Add	Payment Currency											

Option Type	Description		Mandatory (Yes or No)				
	<table><tr><th>Screen Name</th><th>Field Name</th></tr><tr><td>Rate Component</td><td>Allow Currency Conversion</td></tr></table>	Screen Name	Field Name	Rate Component	Allow Currency Conversion	<ul style="list-style-type: none"><li>N - If the <b>Allow Multi-Currency Accounts</b> option type is set to N, the <b>Invoice Currency</b> field is disabled in the <b>Account</b> screen. By default, the base currency of the account's division appears in the <b>Invoice Currency</b> field. If the base currency is not defined for the account's division, the currency code specified in the <b>Installation Options - Framework</b> screen appears in the <b>Invoice Currency</b> field.</li></ul>	
	Screen Name	Field Name					
	Rate Component	Allow Currency Conversion					
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to N.						
Transfer Adjustment Type	Used to specify the adjustment type using which you want to create a transfer adjustment when an amount is converted from one currency to another.		Yes (Conditional)				
	<b>Note:</b> You must specify an adjustment type which is already defined in the system.		<b>Note:</b> This data is required when the <b>Allow Multi-Currency Accounts</b> option type is set to Y.				
Reason Code for Cancelling Original Adjustment	Used to specify the reason code that you want to use while cancelling the original currency conversion adjustment.		Yes (Conditional)				
	<b>Note:</b> You must specify an adjustment cancel reason which is already defined in the system.		<b>Note:</b> This data is required when the <b>Allow Multi-Currency Accounts</b> option type is set to Y.				

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
- The changes made to the feature configuration are saved.

Setting the C1-ODBFC Feature Configuration

Procedure

To set the **C1-ODBFC** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.

- 4. Enter **C1-ODBFC** in the **Feature Name** field.
- 5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Average Record Size	Used to specify the average size of a usage record in bytes. By default, the value is set to 500. You can change the value, if required.	Yes
Billable Charge Chunk Size	Used to specify the number of billable charges you want to create in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes
File Size Limit	Used to specify the size of a usage data file in bytes. By default, the value is set to 100000. You can change the value, if required.	Yes
Online Bill Creation Limit	Used to determine whether adhoc bills must be generated for a usage data file online or through the background process. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, adhoc bills are generated for the usage data file through a batch process. By default, the value is set to 500. You can change the value, if required.	Yes
Staging XML Size	Used to specify the number of usage records you want to parse and map in each XML file. By default, the value is set to 500. You can change the value, if required.	Yes
Thread Count	Used to specify the number of threads you want to spawn in parallel.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No
Transaction Limit	Used to determine whether billable charges for a usage data file must be created online or through the background process. If the total number of valid or approved records in a usage data file exceeds the transaction limit, billable charges are created for the valid or approved records through a batch process.	No
Validation Chunk Size	Used to specify the number of usage records you want to validate or revalidate in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes

- 6. Enter the value for the option types in the **Feature Configuration** screen.
- 7. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

Procedure

To set the **C1-OFFSETREQ** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-OFFSETREQ** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Allow Offsetting Across Persons	Used to indicate whether you want to offset bills across main customer's hierarchy. The valid values are: <ul style="list-style-type: none"><li>• <b>Y</b> - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons.</li></ul>	Yes

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>N - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer.</li></ul>	
Show Warning When Offsetting Across Person Hierarchy	Used to indicate whether the system should display a warning message when a bill added for offsetting is in different person hierarchy than the base bill person hierarchy. The valid values are: <ul style="list-style-type: none"><li>Y - Used when you want the system to display a warning message when a bill is added for offset</li><li>N</li></ul>	Yes (Conditional)
	<b>Note:</b> If you do not specify the value for this option type, by default, it is set to N.	

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
- The changes made to the feature configuration are saved.

**Setting the C1-PAYPORTAL Feature Configuration**

**Procedure**

To set the **C1-PAYPORTAL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-PAYPORTAL** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Yes
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the <b>Edit Payment Amount</b> screen.	Yes
	<b>Note:</b> The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the <b>Edit Payment Amount</b> screen.	Yes
	<b>Note:</b> The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the <b>Edit Payment Amount</b> screen.	Yes
	<b>Note:</b> The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the <b>Edit Payment Amount</b> screen.	No
	<b>Note:</b> At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.	

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

**Setting the C1\_PER\_REL Feature Configuration**

You can define person to person relationship type sequence in the **C1\_PER\_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

**Procedure**

To set the **C1\_PER\_REL** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_PER\_REL** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type.	Yes
	<b>Note:</b> If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1-PLSM Feature Configuration**

The **C1-PLSM** feature configuration enables you to extract the details and summary of a price list simulation in the Excel format. Two FOP based reports are shipped with the product - **PLSM\_DETEXL** and **PLSM\_SMRYEXL**. You can use these FOP based reports or create the custom FOP based reports to extract the data in the Excel format.

**Prerequisites**

To set the **C1-PLSM** feature configuration, you should have:

- Required FOP based reports defined in the application

**Procedure**

To set the **C1-PLSM** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-PLSM** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Detail Report Code Excel	Used to specify the FOP based report using which you want to extract the detailed report of a price list simulation in the Excel format.	Yes
	<b>Note:</b> You can set the value of this option type to <b>PLSM_DETEXL</b> or to any custom FOP based report which is designed to show the detailed report of a price list simulation in the Excel format.	
Summary Report Code Excel	Used to specify the FOP based report using which you want to extract the summarized report of a price list simulation in the Excel format.	Yes
	<b>Note:</b> You can set the value of this option type to <b>PLSM_SMRYEXL</b> or to any custom FOP based report which is designed to show the summarized report of a price list simulation in the Excel format.	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_PPARM\_FLG Feature Configuration

The **C1\_PPARM\_FLG** feature configuration enables the system to determine whether the multi parameter based pricing or variance parameter based pricing feature is enabled. For more information on how to define pricing for a price item or price item bundle based on multiple parameters, see [Multi Parameter Based Pricing](#) on page 201. For more information on how to define pricing for a price item or price item bundle based on variance parameter, see [Variance Parameter Based Pricing](#) on page 201.

Procedure

To set the **C1\_PPARM\_FLG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_PPARM\_FLG** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to enable the multi parameter or variance parameter based pricing feature. The valid values are: <ul style="list-style-type: none"><li>• <b>True</b> - Used when you want to enable the multi parameter based pricing feature.</li><li>• <b>False</b> - Used when you want to enable the variance parameter based pricing feature.</li></ul>	Yes

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

### Setting the C1\_PR\_REC Feature Configuration

Procedure

To set the **C1\_PR\_REC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_PR\_REC** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Effective Pricing Record Set Limit	Used to specify the number of records that can be displayed in the <b>Search Results</b> section of the <b>Effective Price Assignment</b> zone. The value must be an integer and not in decimals. The maximum number of records that can be displayed are 5000.	Yes
	<b>Note:</b> If you enter the value as <b>0</b> or if you do not specify the value for the <b>Effective Pricing RecordSet Limit</b> option type, no records will be displayed in the <b>Search Results</b> section.	

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1\_PRICING Feature Configuration**

The **C1\_PRICING** feature configuration enables the system to determine the following:

- The contract type that should be associated with a price item or price item bundle which is available for pricing.
- The priority that should be defaulted while assigning a price list to a person or an account from the user interface or through a business service.
- Whether the logs should be maintained when the **C1-GetAllAssignedPriceLists**, **C1-AssignPriceList**, **C1-GetEffectivePricing**, **C1-GetAccountRate**, **C1\_PRICEASSIGN\_SERVICE**, **C1-PriceAccount**, and **C1-GetPricing** business services are invoked.

Prerequisites

To set the **C1\_PRICING** feature configuration, you should have:

- Contract types defined in the application

Procedure

To set the **C1\_PRICING** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1\_PRICING** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Default Contract Type	Used to indicate the contract type that you want to associate with a price item or price item bundle which is available for pricing.	Yes
	<b>Note:</b> You must specify a contract type which is already defined in the system. You must ensure that the specified contract type is defined for all divisions in the system.	
Default Price List Priority	Used to indicate the default priority that should appear in the <b>Price List Assignment</b> screen when you assign a price list to a person or an account. You can then edit the priority, if required. It is also used when both the priority and priority indicator are not passed to the <b>C1-AssignPriceList</b> business service.	No
	<b>Note:</b> The value for this option type must be a positive integer.	
Enable Service Logging	Used to indicate whether you want to maintain logs when the <b>C1-GetAllAssignedPriceLists</b> , <b>C1-AssignPriceList</b> , <b>C1-GetEffectivePricing</b> , <b>C1-GetAccountRate</b> , <b>C1_PRICEASSIGN_SERVICE</b> , <b>C1-PriceAccount</b> , and <b>C1-GetPricing</b> business services are invoked. The valid values are: <ul style="list-style-type: none"><li>• True</li><li>• False</li></ul>	No

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1\_PRASNORDR Feature Configuration

The **C1\_PRASNORDR** feature configuration enables the system to determine the manner in which price assignments should be searched for a global customer. For more information on how effective price item pricing is derived, see [Price Assignment Search Mechanism](#) on page 205.

Prerequisites

To set the **C1\_PRASNORDR** feature configuration, you should have:

- An algorithm defined using the **C1\_PRASN\_PP** algorithm type in the application

Procedure

To set the **C1\_PRASNORDR** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1\_PRASNORDR** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Price Assignment Algorithm	Used to specify the algorithm using which the price assignment should be searched for a global customer.	Yes

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> You must specify an algorithm which is already defined in the system.	

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1-PYREQSRT Feature Configuration**

**Procedure**

To set the **C1-PYREQSRT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PYREQSRT** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill	Used to sort columns by the selected option type. The table fields in CI_BILL table are used to set the values for the option type <b>Bill</b> . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"><li>• Ascending</li><li>• Descending</li></ul>	No
Bill Segment	Used to sort columns by the selected option type. The table fields in CI_BSEG table are used to set the values for the option type <b>Bill Segment</b> . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"><li>• Ascending</li><li>• Descending</li></ul>	No

Option Type	Description	Mandatory (Yes or No)
Contract	Used to sort columns by the selected option type. The table fields in CI_SA table are used to set the values for the option type <b>Contract</b> . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"><li>Ascending</li><li>Descending</li></ul>	No

**Note:** Above options types are configured for the **Sort By** field for sorting columns on the **Edit Payment Amount** screen.

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1\_RLENG Feature Configuration

Procedure

To set the **C1\_RLENG** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1\_RLENG** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Logging Rules for Transaction Feed	Used to indicate whether a log should be generated when you execute the <b>Transaction Validation and Initial Product Determination (C1-TXNIP)</b> batch. The valid values are: <ul style="list-style-type: none"><li>True</li><li>False</li></ul>	Yes

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.	
Maximum Number of Rules in Cache	Used to indicate the maximum number of rules whose entry should be created in the log file.	Yes

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.

**Setting the C1-TXNDMYID Feature Configuration**

For manually added transactions, the system can generate header details including the header ID automatically if you set the option types in the **C1-TXNDMYID** feature configuration.

**Procedure**

To set the **C1-TXNDMYID** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-TXNDMYID** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Dummy File Name	Used to specify the dummy file name.	Yes
Dummy Header ID	Used to specify the dummy header ID.	Yes
Dummy Transaction Source	Used to specify the dummy transaction source.	Yes
Dummy Header Date	Used to specify the dummy header date.	Yes

- 7. Enter the values for the required option types in the **Feature Configuration** screen.
- 8. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

**Setting the C1-PAYFLUPLD Feature Configuration**

**Procedure**

To set the **C1-PAYFLUPLD** feature configuration:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 4. In the **Feature Configuration Search** zone, enter **C1-PAYFLUPLD** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Field Mapping for Match Type	Used to specify a field mapping which is created using the <b>Configuration for Match Type - Handling Overpayment</b> preference category.	Yes
	<b>Note:</b>  The system then considers this field mapping during the step-three PUPL batch execution whenever there are multiple payment records of the payee account in the CSV file.  By default, the value is set to <b>MT_CNF</b> . You can change the value, if required.  This option type is only applicable for the health insurance domain.	
Payment Portal Thread Count	Used to specify the number of threads you want to spawn in parallel. This value is used when a batch job is automatically	No

Option Type	Description	Mandatory (Yes or No)
	created for the <b>Create Payments from Payment Staging Records (PUPL)</b> batch.	
	<b>Note:</b> By default, the value is set to <b>1</b> . You can change the value, if required.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch. This value is used when a batch job is automatically created for the following batches: <ul style="list-style-type: none"> <li>• Upload Payment Records in Pre-Staging Area (C1-PYUP1)</li> <li>• Move Payment Records to Staging Area (C1-PYUP2)</li> <li>• Create Payments from Payment Staging Records (PUPL)</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>DEFAULT</b> . You can change the value, if required.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

## Setting the C1-CFS Feature Configuration

The **C1-CFS** feature configuration enables you to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). If the file object storage service of OCI is used, you need to specify the buckets or containers within the Object Storage namespace from where you need to read files for the On Demand Billing and Payment Upload features. Before specifying the buckets to read files from the external location for the On Demand Billing and Payment Upload features, you need to define a file storage extendable lookup value using the **File Storage Configuration (F1-FileStorage)** extendable lookup where the file adapter is set to **Oracle Cloud Object Storage**. For more information on how to define a file storage extendable lookup value, refer to the **Oracle Utilities Application Framework Administrative Processes → Configuration Tools → Miscellaneous Topics → Referencing URIs → External File Storage** in *Oracle Revenue Management and Billing Online Help*.

### Procedure

To set the **C1-CFS** feature configuration:

- Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.
- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-CFS** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.

7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
File Object Storage Usage	<p>Used to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>N</b>.</p> <p>You must ensure that the value of this option type is set to <b>N</b> in the On Premise and Cloud Service environments.</p> <p>If the value of this option type is set to <b>Y</b>, you need to accordingly specify the directory paths while executing the <b>DWLDBILC</b>, <b>C1-PUPSG</b>, <b>C1-APACK</b>, and <b>C1-RECUP</b> batches. For more information, refer to the <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes
ODB Extendable Lookup and Bucket	<p>Used to specify the following information in the &lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the On Demand Billing feature.</li> <li>• The bucket or container from where you want to upload the file using the On Demand Billing feature.</li> </ul> <p><b>Note:</b> This option type is required only when the <b>File Object Storage Usage</b> option type is set to <b>Y</b> and you want to use the On Demand Billing feature.</p>	Yes (Conditional)
Payment Upld Extendable Lookup and Bucket	<p>Used to specify the following information in the &lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the Payment Upload feature.</li> <li>• The bucket or container from where you want to upload the file using the Payment Upload feature.</li> </ul>	Yes (Conditional)

Option Type	Description	Mandatory (Yes or No)
	<b>Note:</b> This option type is required only when the <b>File Object Storage Usage</b> option type is set to <b>Y</b> and you want to use the <b>Payment Upload</b> feature.	

- 8. Set the **File Object Storage Usage** option type to **N**.
- 9. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Setting the C1-FLUPLD Feature Configuration

You need to set the **C1-FLUPLD** feature configuration only when you want to decrypt the encrypted files on the SFTP server while uploading and transforming the files through the **C1-FTRAN** batch. The **C1-FRDALG** algorithm is used to decrypt the file using the keystore. Earlier, the following properties were derived from the `FW_spl.properties.keystore.truststore.include` file to encrypt or decrypt the files using the keystore:

- `com.oracle.ouaf.system.keystore.file`
- `com.oracle.ouaf.system.keystore.passwordFileName`
- `com.oracle.ouaf.system.keystore.type`
- `com.oracle.ouaf.system.keystore.padding`
- `com.oracle.ouaf.system.keystore.mode`
- `com.oracle.ouaf.system.keystore.alias`
- `ouaf.system.fileupload.pgp.pvt.key.filepath`

Now, the **C1-FLUPLD** feature configuration enables you to specify the required details to encrypt or decrypt the files using the keystore.

Procedure

To set the **C1-FLUPLD** feature configuration:

- 1. Log-in to Oracle Revenue Management and Billing Version 6.1.0.0.0
- 2. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 3. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 4. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 5. In the **Feature Configuration Search** zone, enter **C1-FLUPLD** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 6. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
File Decryption Key Alias	Used to specify the alias (i.e. key defined in the keystore) using which you want to encrypt or decrypt the files.	Yes
	<b>Note:</b> By default, the value is set to <b>ouaf.system</b> . You can change the value as per the requirement.	
File Decryption PGP Private Key File Path	Used to specify the directory or bucket from where you want to fetch the private key file for decrypting Pretty Good Privacy (PGP) files.  If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:  <ul style="list-style-type: none"> <li>• <b>@SHARED_DIR</b> – Used when you want to fetch the private key file (for decrypting PGP files) from the shared directory on the server.</li> </ul> However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the <code>file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt;</code> format: <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the private key file (for decrypting PGP files) on OCI.</li> <li>• The bucket or container from where you want the system to fetch the private key file for decrypting PGP files.</li> </ul>	Yes
	<b>Note:</b>  By default, the value is set to <b>@SHARED_DIR/PGP_KEYS/PGP_PRIVATE_KEY.asc</b> . You must change the value as per the requirement.  The shared directory variable (i.e. <b>SHARED_DIR</b> ) is case-sensitive.	
File Decryption PGP Public Key Alias	Used to specify the alias (i.e. key in the public key file) using which you want to encrypt or decrypt the PGP files.	Yes
	<b>Note:</b> By default, the value is set to <b>ouaf.system.fileupload.publickey</b> . You can change the value as per the requirement.	
File Decryption PGP Public Key File Path	Used to specify the directory or bucket from where you want to fetch the public key file for decrypting Pretty Good Privacy (PGP) files.  If the application environment is an <b>On Premise</b> or <b>Cloud Service Environment</b> , you can specify the directory name along with the following relative path:	Yes

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>@SHARED_DIR</b> – Used when you want to fetch the public key file (for decrypting PGP files) from the shared directory on the server.</li> </ul> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the public key file (for decrypting PGP files) on OCI.</li> <li>• The bucket or container from where you want the system to fetch the public key file for decrypting PGP files.</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/PGP_KEYS/PGP_PUBLIC_KEY.asc</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p>	
Key Store File Path	<p>Used to specify the directory or bucket from where you want to fetch the keystore file.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> <li>• <b>@SHARED_DIR</b> - Used when you want to fetch the keystore file from the shared directory on the server.</li> </ul> <p>For example, you can set the value to <b>@SHARED_DIR/.ouaf_keystore</b>.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore file on OCI.</li> <li>• The bucket or container from where you want the system to fetch the keystore file.</li> </ul>	Yes

Option Type	Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/ks.ouaf_keystore</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p>	
Key Store Mode	<p>Used to specify the mode using which you want to encrypt or decrypt the files.</p> <p><b>Note:</b> By default, the value is set to <b>CBC</b> (i.e. Cipher-block Chaining).</p>	Yes
Key Store Padding	<p>Used to specify the padding using which you want to encrypt or decrypt the files.</p> <p><b>Note:</b> By default, the value is set to <b>PKCS5Padding</b>.</p>	Yes
Key Store Password File Path	<p>Used to specify the directory or bucket from where you want to fetch the keystore password file.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> <li><b>@SHARED_DIR</b> - Used when you want to fetch the keystore password file from the shared directory on the server.</li> </ul> <p>For example, you can set the value to <b>@SHARED_DIR/.ouaf_storepass</b>.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the <b>file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt;</b> format:</p> <ul style="list-style-type: none"> <li>The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore password file on OCI.</li> <li>The bucket or container from where you want the system to fetch the keystore password file.</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/ks.ouaf_storepass</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Key Store Type	Used to indicate the type of keystore file.	Yes
	<b>Note:</b> By default, the value is set to <b>JCEKS</b> .	
Private Key File Path	Used to specify the directory or bucket from where you want to fetch the private key file.  If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:  <ul style="list-style-type: none"> <li>• <b>@SHARED_DIR</b> - Used when you want to fetch the private key file from the shared directory on the server.</li> </ul> For example, you can set the value to @SHARED_DIR/.ouaf_storepass.  However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:  <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the private key file on OCI.</li> <li>• The bucket or container from where you want the system to fetch the private key file.</li> </ul>	Yes
	<b>Note:</b>  By default, the value is set to <b>@SHARED_DIR/ks.ouaf_storepass</b> . You must change the value as per the requirement.  The shared directory variable (i.e. <b>SHARED_DIR</b> ) is case-sensitive.	

8. Enter the values for the required option types in the **Feature Configuration** screen.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1-REPORTVW Feature Configuration

You need to set the **C1-REPORTVW** feature configuration only when you are using the Apache FOP Reporting framework in ORMB. It enables you to define the following properties which were earlier derived from the `spl.properties` file:

- `ouaf.runtime.billView.directoryPath`
- `ouaf.runtime.reportView.directoryPath`
- `ouaf.application.reportingDir`

### **Procedure**

To set the **C1-REPORTVW** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.

- 2. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 3. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- 4. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Query** screen appears.
- 5. In the **Feature Configuration Search** zone, enter **C1-REPORTVW** in the **Feature Name** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 6. Click **Search**.  
A list of feature configurations that meet the search criteria appears in the search results.
- 7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Report Download HTTP URL	Used to specify the HTTP servlet using which you want to download and view the FOP reports that are generated in the online mode. You must specify the URL in the following format:  https://ipaddress:port/ouaf/reportView	Yes
	<b>Note:</b> You must override the default value as per the requirement.	
Report Generation (FOP) File Path	Used to specify the directory or bucket where you want to store the FOP reports which are generated either from the user interface or through a batch process.  If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path: <ul style="list-style-type: none"><li>• <b>@SHARED_DIR</b> - Used when you want to store the FOP reports in the shared directory on the server.</li></ul> For example, you can set the value to @SHARED_DIR/output.  However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format: <ul style="list-style-type: none"><li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the FOP reports on OCI.</li></ul>	Yes

Option Type	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>The bucket or container where you want the system to store the FOP reports which are generated in the different formats.</li> </ul>	
	<p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/splapp/reporting/output</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p>	
Report Generation XSL Template File Path	<p>Used to specify the directory or bucket from where the respective XSL file should be fetched while generating the FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> <li><b>@SHARED_DIR</b> - Used when you want to fetch the XSL file from the shared directory on the server.</li> </ul> <p>For example, you can set the value to @SHARED_DIR/xsl.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the XSL file for an FOP report.</li> <li>The bucket or container from where you want the system to fetch the XSL file while generating the FOP report.</li> </ul>	Yes
	<p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/splapp/reporting/xsl</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p> <p>Before generating an FOP report, you need to ensure that the XSL files are copied from the <b>@INSTALL_DIR/splapp/reporting/xsl</b> directory to the specified shared directory.</p>	

Option Type	Description	Mandatory (Yes or No)
Report Generation XML Data File Path	<p>Used to specify the directory or bucket where you want to extract the data from the system in the XML format for an FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> <li>• <b>@SHARED_DIR</b> - Used when you want to store the XML file in the shared directory on the server.</li> </ul> <p>For example, you can set the value to @SHARED_DIR/extractxml.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://&lt;File Storage Extendable Lookup Value&gt;/&lt;Object Storage Bucket&gt; format:</p> <ul style="list-style-type: none"> <li>• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the XML file on OCI.</li> <li>• The bucket or container where you want the system to store the XML file for an FOP report.</li> </ul> <p><b>Note:</b></p> <p>By default, the value is set to <b>@SHARED_DIR/splapp/reporting/extractxml</b>. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. <b>SHARED_DIR</b>) is case-sensitive.</p>	Yes

8. Enter the values for the required option types in the **Feature Configuration** screen.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
