License Restrictions Warranty/Consequential Damages Disclaimer

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Third Party Content, Products, and Services Disclaimer

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

Preface: About this Document.....	lix
Intended Audience.....	lix
Organization of the Document.....	lix
Conventions.....	lxiv
Related Documents.....	lxiv
Change Log.....	lxvi
Chapter 1: Customer Registration.....	69
Customer Registration (Without Approval) Status Transition.....	73
Customer Registration (With Approval) Status Transition.....	73
Customer Registration Template.....	74
Search Customer Registration Template.....	76
Customer Registration Template.....	77
Searching for a Customer Registration Template.....	79
Viewing the Customer Registration Template Details.....	80
Defining a Customer Registration Template.....	80
Adding the Pages and Sections in a Customer Registration Template.....	82
Setting the Field Attributes for a Template Section.....	87
Editing a Customer Registration Template.....	92
Copying a Customer Registration Template.....	94
Deleting a Customer Registration Template.....	95
Customer Registration Type.....	96
Customer Registration Type List.....	97
Customer Registration Type.....	98
Searching for a Customer Registration Type.....	104
Defining a Customer Registration Type.....	105
Defining Additional Data for a Customer Registration Type.....	108
Defining a Characteristic for a Customer Registration Type.....	112
Associating a Customer Registration Template with a Customer Registration Type.....	113
Setting Attributes to Define a Customer Registration Using the Existing Customer Registration.....	115
Editing a Customer Registration Type.....	118
Copying a Customer Registration Type.....	121
Deleting a Customer Registration Type.....	123
Viewing the Customer Registration Type Details.....	124
Customer Registration (Used for Searching).....	124
Search Customer Registration.....	125
Searching for a Customer Registration.....	135
Viewing the Customer Registration Details.....	136
Defining a Customer Registration.....	137
Adding the Names of a Person.....	140
Adding the Phone Details of a Person.....	141
Adding the Identifier Details of a Person.....	142
Adding the Contact Details of a Person.....	143
Defining a Characteristic for a Person.....	146
Defining a Person to Person Relationship for a Person.....	147
Defining a Characteristic for a Person to Person Relationship.....	149
Adding an Account for a Person.....	150

Adding the Identifier Details of an Account.....	154
Adding the Automatic Payment Details of an Account.....	155
Associating a Person to an Account.....	158
Adding the Bill Routing Information for an Account.....	160
Defining a Characteristic for an Account.....	161
Adding the Credit Rating Details for an Account.....	162
Adding the Deal Information for a Person.....	164
Defining a Characteristic for a Customer Registration.....	166
Viewing the Details of an Account.....	167
Editing the Account Details of a Person.....	168
Copying a Customer Registration.....	171
Customer Registration (Used for Viewing).....	174
Customer Registration - Main.....	175
Customer Registration.....	175
Account Information.....	180
Customer Registration - Account.....	181
Account Information.....	181
Customer Registration - Log.....	185
Customer Registration Log.....	185
Editing the Customer Registration Details.....	186
Deleting a Customer Registration.....	189
Submitting a Customer Registration.....	190
Approving a Customer Registration.....	190
Rejecting a Customer Registration.....	191
Requesting to Resubmit a Customer Registration for Approval.....	193
Viewing the Log of a Customer Registration.....	194
Adding a Log Entry for a Customer Registration.....	195

Chapter 2: Unified Search Feature.....197

Chapter 3: Customer 360° View..... 199

Customer 360° View.....	200
360° Search.....	200
Searching for a Person.....	205
Searching for an Account.....	206
Viewing the 360° Information of a Person.....	207
Viewing the 360° Information of an Account.....	209
Viewing Price Lists Assigned to a Person.....	211
Viewing Price Lists Assigned to an Account.....	212
Viewing Price Items of the Price List Assigned to a Person.....	213
Viewing Price Items of the Price List Assigned to an Account.....	213
Viewing Price Items Associated to a Product.....	214
Viewing Enrollment Details of a Product.....	214
Customer 360° Information.....	215
Customer 360° Information - Person.....	215
Person Information.....	216
Person Characteristics.....	217
Linked Accounts.....	217
Person Legal Hierarchy.....	218
Customer Contacts.....	219
Enrolled Products.....	220
Product Enrollment Information.....	220
Customer 360° Information - Account.....	220
Account Information.....	221

Account Characteristics.....	224
Account Persons.....	224
Enrolled Products.....	225
Auto Pay Details.....	226
Timeline.....	226
Billing History.....	229
Payment History.....	230
Dispute Details.....	230
Hold Details.....	231
Overdue Process Details.....	231
Trial Bills.....	232
Customer 360° Information - Product and Pricing.....	232
Product.....	233
Associated Price Items.....	233
Price List Assignments.....	234
Price List Price Items.....	235
Effective Price Assignments for Account.....	236
Effective Price Assignments for Person.....	240
Viewing Enrollment Details of a Product.....	244
Viewing the Bill Information.....	245
Viewing Price Items Associated to a Product.....	246
Bill Information.....	246
Bill Information.....	247
Settlement Activities.....	247
Hold Details.....	248
Offset Details.....	249
Bill Line Items.....	249
Garnishment Details.....	250
Refund and Write Off Details.....	250
Dispute Details.....	251

Chapter 4: Invoicing Group..... 253

Manage Invoicing Groups.....	255
Searching for a Master Account.....	255
Searching for a Member Account.....	257
Viewing the Master Account Details.....	258
Viewing the Member Account Details.....	259
Invoicing Group Maintenance — Add/Edit.....	259
Account Information.....	259
Member Accounts.....	260
Edit Member Account Assignment.....	260
Search Accounts to Add.....	261
Add Member.....	262
Adding a Member to the Master Account.....	263
Editing the Member Account Assignment Details.....	264
Removing a Member from the Master Account.....	265
Invoicing Group Information.....	266
Invoicing Group Information.....	266
Selected Member Account.....	266
Edit Member Account Assignment.....	267
Editing the Member Account Assignment Details.....	268
Removing a Member from the Master Account.....	269

Chapter 5: Pricing Management (Financial Services Business).....271

Prerequisites (Financial Services Business).....	273
Types of Pricing.....	274
Variance Parameter Based Pricing.....	275
Multi Parameter Based Pricing.....	275
Multiple Parameter Based Post-Processing Pricing.....	278
Price Assignment Search Mechanism.....	279
Person Relationship Type Sequence.....	282
Pricing Eligibility.....	284
Persisting Interest Rate for Rate Type Price Items.....	285
Persisting Fee for Fee Type Price Items.....	286
Repricing.....	286
Two-Dimensional Pricing.....	291
Types of Price Item Bundle.....	291
Regular Bundle.....	291
Ratio Bundle.....	293
Phantom Bundle.....	295
Parameter.....	297
Parameter (Used for Searching).....	298
Search Parameter.....	298
Searching for a Parameter.....	301
Defining a Parameter.....	302
Editing a Parameter.....	312
Deleting a Parameter.....	322
Copying a Parameter.....	322
Viewing the Parameter Details.....	333
Parameter (Used for Viewing).....	333
Parameter.....	334
Entity Hierarchy Relationship.....	337
Associate an Entity Hierarchy Relationship with Multiple Divisions.....	339
Hierarchy Entity (Used for Searching).....	340
Search Hierarchy Entity.....	340
Searching for a Hierarchy Entity.....	341
Viewing the Hierarchy Entity Details.....	342
Defining a Hierarchy Entity.....	342
Associating a Hierarchy Entity with a Division.....	345
Defining a Characteristic for a Hierarchy Entity.....	346
Hierarchy Entity (Used for Viewing).....	347
Hierarchy Entity.....	347
Editing a Hierarchy Entity.....	349
Deleting a Hierarchy Entity.....	351
Copying a Hierarchy Entity.....	352
Entity Hierarchy Relationship (Used for Searching).....	354
Search Hierarchy.....	354
Searching for an Entity Hierarchy Relationship.....	355
Defining an Entity Hierarchy Relationship.....	356
Viewing the Entity Hierarchy Relationship Details.....	361
Entity Hierarchy Relationship (Used for Viewing).....	362
Hierarchy.....	362
Hierarchy Relationship Tree.....	363
Editing an Entity Hierarchy Relationship.....	364
Deleting an Entity Hierarchy Relationship.....	369
Copying an Entity Hierarchy Relationship.....	369
Price Item (Financial Services Business).....	374
Price Item (Used for Searching).....	375
Search Price Item.....	376
Searching for a Price Item or Price Item Bundle.....	378

Defining a Price Item or Price Item Bundle.....	379
Associating a Parameter with a Price Item or Price Item Bundle.....	386
Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle.....	390
Associating a Price Item or Price Item Bundle with a Division.....	392
Associating an SQI with a Price Item or Price Item Bundle for a Division.....	395
Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle.....	397
Defining the Accrual Type Criteria of a Price Item or Price Item Bundle for a Division.....	398
Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division.....	400
Defining the Cost of a Price Item or Price Item Bundle for a Division.....	402
Defining the Average Price Floor and Ceil Values of a Price Item or Price Item Bundle for a Division.....	405
Defining the Rate Negotiability Floor and Ceil Values of a Price Item or Price Item Bundle for a Division.....	408
Defining a Characteristic for a Price Item or Price Item Bundle.....	410
Copying a Price Item or Price Item Bundle.....	411
Viewing the Price Item or Price Item Bundle Details.....	420
Price Item (Used for Viewing).....	421
Price Item.....	421
Price Item Characteristics.....	424
Parameters.....	424
Predefined Parameter Values for Price Item.....	425
Divisions.....	425
Division-Specific SQIs for Price Item.....	426
Division-Specific Characteristics for Price Item.....	426
Division-Specific Accrual Type Criteria for Price Item.....	427
Division-Specific Hierarchy for Price Item.....	427
Division-Specific Negotiability Floor and Ceil Values for Price Item.....	428
Division-Specific Cost for Price Item.....	429
Division-Specific Average Price Floor and Ceil Values for Price Item.....	430
Price Item Relationship.....	431
Editing a Price Item or Price Item Bundle.....	432
Price Item Relationship.....	439
Assigned Price Items.....	440
Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item.....	443
Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle.....	443
Associating a Price Item or Price Item Bundle with a Parent Price Item.....	443
Adding a Price Item or Price Item Bundle to a Price Item Bundle.....	446
Setting the Parameters for a Price Item or Price Item Bundle.....	448
Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle.....	450
Disassociating a Price Item or Price Item Bundle from a Parent Price Item.....	451
Removing a Price Item or Price Item Bundle from a Price Item Bundle.....	452
Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item.....	453
Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle.....	453
Price Item Assignments.....	454
Active Price Lists where Price Item is Assigned.....	454
Persons to whom Price Item is Assigned.....	455
Accounts where Price Item is Assigned.....	455
Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned.....	456

Filtering the Approval Workflow Reasons.....	902
Viewing the Approval Workflow Reason Details.....	903
Defining an Approval Workflow Reason.....	903
Approval Workflow Reason (Used for Viewing).....	904
Approval Workflow Reason.....	904
Editing an Approval Workflow Reason.....	905
Deleting an Approval Workflow Reason.....	906

Chapter 8: Multi-Currency Accounts.....907

Creating Adjustments.....	909
Generating Bills.....	909
Applying Payments.....	909
Monitoring Overdue Debt.....	909
Generating History.....	909

Chapter 9: Rules Engine.....911

Rule Type (Used for Searching).....	913
Search Rule Type.....	913
Searching for a Rule Type.....	914
Defining a Rule Type.....	915
Defining Input and Output Parameters for a Rule Type.....	917
Associating a Characteristic Entity with a Rule Type.....	919

Associating an Algorithm with a Rule Type.....	920
Editing a Rule Type.....	921
Deleting a Rule Type.....	924
Copying a Rule Type.....	924
Rule Type (Used for Viewing).....	926
Rule Type.....	927
Viewing the Rule Type Details.....	928
Editing a Rule Type.....	929
Rule.....	931
Search Rule.....	931
Searching for a Rule.....	932
Viewing the Rule Details.....	933
Defining a Rule.....	933
Editing a Rule.....	939
Deleting a Rule.....	945
Copying a Rule.....	946
Rule.....	952
Rule Information.....	952
Viewing the Rule Details.....	954
Rule Check.....	954
Rule Check.....	956

Chapter 10: Alternate Sequential Bill Numbers..... 959

Alternate Sequential Bill Number Generation Algorithms.....	960
C1_ALTBLLSYS.....	960
C1_ALTBLSYS1.....	960
C1_ALTBLDV.....	963
C1_ALTBLDIV1.....	963
Enabling the Alternate Sequential Bill Numbers Feature.....	966

Chapter 11: Currency Conversion..... 969

Prerequisites.....	971
Bill Segment Generation.....	972
Adjustment Creation.....	973
Payment and Tender Creation.....	973
Transaction Aggregation.....	974
FT GL Creation.....	974
Currency Conversion Algorithms.....	975
C1_CURALGBS.....	976
C1_CURALGAD.....	977
C1_CURALGPY.....	979
C1_CURALGTFM.....	981
C1_EXCRTBS.....	983
C1_EXCRTAD.....	984
C1_EXCRTPY.....	986
C1_EXCRTTFM.....	988
FTFREZGLEXTN.....	991
C1_EXCRTOVRD.....	993
Exchange Rate (Used for Searching).....	994
Search Exchange Rate.....	994
Searching for an Exchange Rate.....	997
Defining an Exchange Rate.....	998
Defining a Characteristic for an Exchange Rate.....	1001
Editing an Exchange Rate.....	1002

Deleting an Exchange Rate.....	1004
Exchange Rate (Used for Viewing).....	1005
Exchange Rate - Main.....	1005
Exchange Rate.....	1005
Exchange Rate - Log.....	1007
Exchange Rate Log.....	1007
Viewing the Exchange Rate Details.....	1007

Chapter 12: Transaction Feed Management..... 1009

Prerequisites.....	1010
Transaction Rating Before Billing.....	1010
Transaction Aggregation.....	1019
Header Validation.....	1020
Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain).....	1022
Price Item Pricing Verification.....	1032
Aggregation.....	1036
Clean Up.....	1040
Transaction Aggregation Batch Processing.....	1043
Transaction Disaggregation.....	1045
Transaction Disaggregation Batch Processing.....	1052
Transaction Cancellation.....	1053
Transaction Cancellation Batch Processing.....	1056
Transaction Rollback.....	1057
Feed Status Transition.....	1059
Transaction Status Transition.....	1060
Transaction Leg Status Transition.....	1061
Transaction Data File.....	1069
Error List.....	1072
Alert Notification for Transaction Feed Management.....	1108
Feed Management Dashboard.....	1108
Search.....	1109
Division Level Information.....	1115
Transaction Level Information.....	1116
Transaction Leg Information.....	1117
Transaction Leg Service Quantity.....	1119
Transaction Leg Calculation Lines.....	1119
Transaction Leg Calc Line Characteristics.....	1120
Searching for a Transaction Feed.....	1121
Viewing Division Level Details of a Transaction Feed.....	1122
Viewing Transactions that Belong to a Division.....	1122
Viewing Legs of a Transaction.....	1123
Viewing the SQIs Calculated for a Transaction Leg.....	1123
Viewing the Calculation Lines of a Transaction Leg.....	1124
Viewing Characteristics of a Calculation Line.....	1124
Transaction Details.....	1125
Search.....	1125
Transaction Legs.....	1129
Transaction Error Messages.....	1132
Searching for a Transaction.....	1133
Viewing the Transaction Legs.....	1133
Viewing Error Messages.....	1134
Viewing the Transaction Details.....	1134
Adding a Transaction.....	1135
Copying a Transaction.....	1137

Transaction Source.....	1140
Search Transaction Source.....	1140
Searching for a Transaction Source.....	1141
Defining a Transaction Source.....	1141
Editing a Transaction Source.....	1142
Copying a Transaction Source.....	1143
Deleting a Transaction Source.....	1144
Transaction Record Type.....	1144
Search Transaction Record Type.....	1145
Searching for a Transaction Record Type.....	1146
Defining a Transaction Record Type.....	1146
Editing a Transaction Record Type.....	1152
Deleting a Transaction Record Type.....	1158
Copying a Transaction Record Type.....	1159
Transaction Aggregation Rule.....	1164
Transaction Aggregation Rules.....	1164
Defining Transaction Aggregation Rule for an SQL.....	1165
Editing Transaction Aggregation Rule of an SQL.....	1166
Deleting Transaction Aggregation Rule of an SQL.....	1167
Schedule.....	1168
Search Schedule.....	1168
Searching for a Schedule.....	1169
Viewing the Schedule Details.....	1169
Defining a Schedule.....	1170
Editing a Schedule.....	1171
Deleting a Schedule.....	1172
Disaggregation Request.....	1173
Disaggregation Request from User Interface.....	1173
Disaggregation Request through the C1-DISTG Batch.....	1173
Disaggregation Request through Audit Event.....	1173
Disaggregation Request.....	1174
Search Disaggregation Request.....	1174
Searching for a Disaggregation Request.....	1180
Creating a Disaggregation Request for a Person.....	1180
Creating a Disaggregation Request for an Account.....	1187
Creating a Disaggregation Request for a Price item.....	1193
Creating a Disaggregation Request for a Price Assignment.....	1199
Creating a Disaggregation Request for a Billable Charge.....	1203
Deleting a Disaggregation Request.....	1207

Chapter 13: On Demand Billing..... 1209

Prerequisites.....	1211
CSV File Format for Banking Usage Data.....	1213
CSV File Format for Insurance Usage Data.....	1215
Usage Record Status Transition.....	1218
File Type.....	1219
File Types.....	1220
Defining a File Type.....	1221
Editing a File Type.....	1226
Deleting a File Type.....	1231
On Demand Billing.....	1232
Search.....	1232
Group Files.....	1234
Searching for a File Group.....	1235
Defining a File Group.....	1236

Editing a File Group.....	1237
Deleting a File Group.....	1239
Closing a File Group.....	1239
Generating Adhoc Bills for a File Group.....	1240
Freezing All Bills of a File Group.....	1241
Freezing Selected Bills of a File Group.....	1242
Viewing All Bills Generated for a File Group.....	1243
Viewing Usage Data Files of a File Group.....	1245
Usage Data Processing.....	1245
Search.....	1246
Searching for a Usage Data File.....	1249
Uploading a Usage Data File.....	1249
Replacing an Existing File.....	1252
Viewing All Records of a Usage Data File.....	1255
Viewing Valid Records of a Usage Data File.....	1259
Viewing Invalid Records of a Usage Data File.....	1263
Viewing Submitted Records of a Usage Data File.....	1266
Viewing Processed Records of a Usage Data File.....	1270
Viewing Cancelled Records of a Usage Data File.....	1273
Viewing Rejected Records of a Usage Data File.....	1277
Viewing Billed Records of a Usage Data File.....	1280
Viewing Unbilled Records of a Usage Data File.....	1284
Submitting a Valid Record.....	1287
Approving a Valid Record.....	1289
Rejecting a Valid Record.....	1291
Cancelling a Usage Data File.....	1293
Revalidating a Usage Data File.....	1294
Editing a Valid, Invalid, or Rejected Usage Record.....	1295
Exporting Usage Data into CSV file.....	1296
Filtering Usage Records.....	1296

Chapter 14: Upload Validated Payment Data..... 1299

Payment Upload Process.....	1300
Upload Payment Records in the Pre-Staging Area.....	1300
Move Payment Records to the Staging Area.....	1301
Create Payment Events and Payments.....	1301
Prerequisites.....	1302
CSV File Format.....	1303
Sample CSV.....	1305
Payment Data File Status Transition.....	1305
Payment Record Status Transition.....	1306
Error Messages.....	1308
Payment Upload.....	1312
Search Payment Data File.....	1312
Payment Data Records.....	1315
Payment Staging Records.....	1317
Payment Data File Log.....	1317
Searching for a Payment Data File.....	1318
Uploading a Payment Data File.....	1318
Replacing an Existing File.....	1320
Cancelling a Payment Data File.....	1321
Moving the Payment Records to the Staging Area.....	1322
Editing a Payment Staging Record.....	1322
Viewing the Records of a Payment Data File.....	1323
Viewing the Staging Records of a Payment Data Record.....	1324

Viewing the Log of a Payment Data File.....	1324
Viewing the Errors of a Payment Data Record.....	1324

Chapter 15: Freeze Payments on Notification..... 1327

Freeze Payments on Notification Process.....	1329
Creating Automatic Payments and Refunds.....	1329
Generating a Flat File.....	1329
Uploading Response from Auto Clearing House (ACH).....	1329
Retry Automatic Payment.....	1330
Freezing or Canceling Automatic Payments.....	1331
Voiding Refund Requests and Canceling Refund Adjustments.....	1331
Generating To Do Entries.....	1332
Creating Tender Controls.....	1332
Prerequisites.....	1332
Automatic Payment or Refund Clearing Staging Record Status Transition.....	1333
EDI 824 File Format.....	1334
Sample EDI 824 File Format.....	1335
Automatic Payment and Refund Upload Reason.....	1335
Upload Reasons.....	1336
Defining an Upload Reason.....	1336
Editing an Upload Reason.....	1338
Deleting an Upload Reason.....	1340
Automatic Payment and Refund Clearing Staging.....	1341
Search Clearing Record.....	1341
Associated Clearing Staging Records.....	1343
Clearing Staging Upload Reasons.....	1344
Clearing Staging Characteristics.....	1345
Searching for a Clearing Record.....	1345
Viewing the Clearing Staging Records Associated to a Clearing Record.....	1346
Viewing the Upload Reason Specified in the Clearing Staging Record.....	1346
Viewing the Characteristics of the Clearing Staging Record.....	1347
Editing a Clearing Staging Record.....	1347
Defining a Characteristic for a Clearing Staging Record.....	1349
Deleting a Clearing Staging Record.....	1350

Chapter 16: Construct..... 1353

Prerequisites.....	1355
Construct Status Transition.....	1355
Template.....	1356
Search Template.....	1357
Searching for a Template.....	1358
Defining a Template.....	1359
Defining a Characteristic for a Template.....	1360
Editing a Template.....	1361
Deleting a Template.....	1364
Viewing the Template Details.....	1365
Construct (Used for Searching).....	1365
Search Construct.....	1365
Searching for a Construct.....	1368
Defining a Construct.....	1369
Defining a Characteristic for a Construct.....	1371
Editing a Construct.....	1372
Copying a Construct.....	1375
Viewing the Construct Details.....	1376

Construct (Used for Viewing).....	1377
Construct - Main.....	1377
Construct Information.....	1377
Include Usage/Invoice Accounts.....	1378
Include Billable Charges.....	1379
Include Adjustments.....	1380
Include Bill Segments.....	1380
Linked Accounts.....	1381
Exclude Usage/Invoice Accounts.....	1382
Construct - Log.....	1382
Construct Log.....	1382
Including Usage Accounts in a Construct.....	1383
Including Usage and Invoice Accounts in a Construct.....	1384
Excluding Usage Accounts from a Construct.....	1385
Excluding Usage and Invoice Accounts from a Construct.....	1386
Including Billable Charges in a Construct.....	1387
Including Bill Segments in a Construct.....	1388
Including Adjustments in a Construct.....	1389
Activating a Construct.....	1390
Billing and Settlement Hierarchy.....	1391
Search Hierarchy.....	1391
Linked Accounts.....	1393
Criteria.....	1394
Viewing Person Billing Hierarchy Details.....	1394
Viewing Person Settlement Hierarchy Details.....	1395
Viewing Usage Accounts Billed through an Invoice Account.....	1395
Viewing Invoice Accounts through which a Usage Account is Billed.....	1397
Viewing Settlement Accounts through which a Usage or Invoice Account is Settled.....	1398
Viewing Settlement Hierarchy of a Invoice or Usage Account.....	1398
Chapter 17: Trial Billing.....	1401
Prerequisites.....	1403
Trial Bill (Used for Searching).....	1403
Search Trial Bill	1403
Searching for a Trial Bill.....	1405
Viewing the Trial Bill Details.....	1405
Trial Bill (Used for Viewing).....	1406
Trial Bill.....	1406
Trial Bill Segments.....	1408
Trial Bill Segment Calc Lines.....	1409
Trial Bill Segment SQ Details.....	1410
Trial Bill Segment Financial Details.....	1411
Policy Details.....	1411
Printing a Trial Bill in the PDF Format.....	1412
Viewing the Segments of a Trial Bill.....	1412
Filtering the Trial Bill Segments.....	1413
Viewing the Calc Lines of a Trial Bill Segment.....	1413
Viewing the SQ Details of a Trial Bill Segment.....	1414
Viewing the Financial Details of a Trial Bill Segment.....	1414
Viewing the Policy Details of a Trial Bill Segment.....	1415
Chapter 18: Bill Tolerance.....	1417
Prerequisites.....	1418

Chapter 19: GL Account Validation..... 1421

Static GL Account Validation.....	1422
Dynamic GL Account Validation.....	1422

Chapter 20: Upload Validated Adjustment Data..... 1423

Prerequisites.....	1425
CSV File Format.....	1425
Adjustment Upload Request (Without Approval) Status Transition.....	1427
Adjustment Upload Request (With Approval) Status Transition.....	1428
Algorithms Used in C1-ADJUPLD.....	1429
Upload Request Type.....	1432
Upload Request Type List.....	1433
Upload Request Type.....	1434
Defining an Upload Request Type.....	1437
Defining a Characteristic for an Upload Request Type.....	1442
Editing an Upload Request Type.....	1443
Copying an Upload Request Type.....	1447
Mapping an Upload Request Type.....	1451
Deleting an Upload Request Type.....	1452
Viewing the Upload Request Type Details.....	1453
Adjustment Upload Request (Used for Searching).....	1454
Search Adjustment Upload Request.....	1454
Searching for an Adjustment Upload Request.....	1456
Uploading an Adjustment Data File.....	1456
Replacing an Adjustment Data File.....	1459
Viewing the Adjustment Upload Request Details.....	1461
Viewing All Records of an Adjustment Data File.....	1462
Adjustment Upload Request (Used for Viewing).....	1462
Adjustment Upload Request - Main.....	1463
Adjustment Upload Request.....	1463
Adjustment Data Records.....	1465
Adjustment Upload Request - Log.....	1466
Adjustment Upload Request Log.....	1466
Cancelling an Adjustment Data File.....	1467
Creating Adjustments for an Adjustment Data File.....	1468
Submitting an Adjustment Data File for Approval.....	1469
Approving an Adjustment Data File.....	1470
Rejecting an Adjustment Data File.....	1471
Viewing the Log of an Adjustment Upload Request.....	1472
Adding a Log Entry for an Adjustment Upload Request.....	1473

Chapter 21: Foreign Exchange Gain Loss..... 1475

Foreign Exchange Gain Loss Calculation.....	1476
Prerequisites.....	1476
Foreign Exchange Gain Loss Scenarios.....	1477
Payment Scenarios.....	1477
Credit Adjustment Scenarios.....	1481
Write Off Adjustment Scenarios.....	1482
Write Up/Down Adjustment Scenarios.....	1484

Chapter 22: Payment Request..... 1487

Prerequisites.....	1489
Payment Creation Request (Without Approval) Status Transition.....	1490
Payment Creation Request (With Approval) Status Transition.....	1491
Payment Transfer Request (Without Approval) Status Transition.....	1492
Payment Transfer Request (With Approval) Status Transition.....	1495
Algorithms Used in C1-PaymentRequest.....	1497
C1-PAYRQ-INF.....	1498
C1-PAYREQPOS.....	1499
C1-PAYREQVAL.....	1499

Chapter 26: Hold Request..... 1749

Hold Request (Without Approval) Status Transition.....	1751
Hold Request (With Approval) Status Transition.....	1751
Algorithms Used in C1-HoldRequest.....	1752
Prerequisites.....	1758
Approval Process for Hold Request Release.....	1758
Hold Refund.....	1759
Hold Mass Accounts Using Selection Criteria.....	1760
Hold Request Type.....	1760
Hold Request Type List.....	1761
Hold Request Type.....	1761
Defining a Hold Request Type.....	1763
Defining a Characteristic for a Hold Request Type.....	1766
Editing a Hold Request Type.....	1767
Deleting a Hold Request Type.....	1769
Copying a Hold Request Type.....	1770
Viewing the Hold Request Type Details.....	1773
Hold Request (Used for Searching).....	1774
Search Hold Request.....	1774
Searching for a Hold Request.....	1777
Creating a Hold Request.....	1778
Viewing the Hold Request Details.....	1781
Hold Request (Used for Viewing).....	1781
Hold Request - Main.....	1782
Hold Request.....	1783
Hold Entities.....	1784
Search Account.....	1786
Search Bill.....	1790
Search Person.....	1792
Hold Request - Log.....	1794
Hold Request Log.....	1794
Searching Persons.....	1794
Searching Accounts.....	1795
Searching Bills.....	1796
Adding Persons in a Hold Request.....	1796
Adding Accounts in a Hold Request.....	1797

Adding Bills in a Hold Request.....	1797
Defining an Entity for a Hold Request.....	1798
Defining a Process for a Hold Request.....	1799
Defining a Characteristic for a Hold Request.....	1800
Editing a Hold Request.....	1801
Editing Hold Request Entities.....	1804
Deleting Hold Request Entities.....	1805
Deleting a Hold Request.....	1806
Submitting a Hold Request.....	1806
Approving a Hold Request.....	1807
Releasing a Hold Request.....	1809
Rejecting a Hold Request.....	1809
Resubmitting a Hold Request.....	1811
Viewing the Log of a Hold Request.....	1812
Adding a Log Entry for a Hold Request.....	1813

Chapter 27: Delinquency Central..... 1815

Prerequisites.....	1816
Delinquency Central (Used for Viewing).....	1816
Search Overdue Process.....	1816
Overdue Events.....	1821
Searching for an Overdue Process.....	1822
Viewing Events of an Overdue Process.....	1822
Viewing the Overdue Process Details.....	1823
Overdue Process Information for Account: {Account ID}.....	1823
Person Information.....	1824
Account Information.....	1824
Customer Contact Details.....	1824
Promise To Pay.....	1824
Hold Details.....	1825
Overdue Bills.....	1825
Payment Arrangement.....	1826
Search Bill.....	1826
Searching for a Bill.....	1827
Adding the Customer Contact Details.....	1828
Creating a Hold Request for an Overdue Process.....	1828
Creating a Payment Arrangement for an Overdue Process.....	1829
Defining a Promise To Pay for an Overdue Process.....	1829

Chapter 28: Upload Request..... 1831

Prerequisites.....	1834
Upload Request (Without Approval) Status Transition.....	1835
Upload Request (With Approval) Status Transition.....	1836
Defer Upload Request Validation.....	1837
Algorithms Used in C1-BillCycleUpdateUplReq.....	1838
Algorithms Used in C1-ContractRiderUpdateUplReq.....	1844
Algorithms Used in C1-HoldUploadRequest.....	1849
Algorithms Used in C1-RefundUploadRequest.....	1856
Algorithms Used in C1-WriteOffUploadRequest.....	1860
Algorithms Used in C1-BillableChargeUploadRequest.....	1864
Algorithms Used in C1-ReinstatementUploadRequest.....	1868
Algorithms Used in C1-BillGrpSortUploadRequest.....	1874

CSV File Format for Account Bill Cycle Upload Request.....	1880
CSV File Format for Contract Rider Upload Request.....	1880
CSV File Format for Billable Charge Upload.....	1881
CSV File Format for Hold Upload Request.....	1885
CSV File Format for Refund Request Upload.....	1889
CSV File Format for Write Off Request Upload.....	1890
CSV File Format for Reinstatement Upload Request.....	1891
CSV File Format for Bill Group Sorting Upload Request.....	1892
CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request.....	1893
Upload Request Type.....	1895
Upload Request Type List.....	1896
Upload Request Type.....	1897
Defining an Upload Request Type.....	1900
Defining a Characteristic for an Upload Request Type.....	1905
Editing an Upload Request Type.....	1906
Deleting an Upload Request Type.....	1910
Copying an Upload Request Type.....	1910
Mapping an Upload Request Type.....	1914
Viewing the Upload Request Type Details.....	1916
Upload Request (Used for Searching).....	1916
Search Upload Request.....	1917
Searching for an Upload Request.....	1918
Viewing the Upload Request Details.....	1919
Creating an Upload Request.....	1919
Defining a Characteristic for an Upload Request.....	1922
Upload Request (Used for Viewing).....	1923
Upload Request - Main.....	1923
Upload Request.....	1923
Data Records.....	1926
Upload Request - Log.....	1927
Upload Request Log.....	1927
Editing an Upload Request.....	1928
Deleting an Upload Request.....	1929
Validating an Upload Request.....	1930
Cancelling an Upload Request.....	1930
Submitting an Upload Request.....	1931
Approving an Upload Request.....	1935

Rejecting an Upload Request.....	1938
Viewing the Data Record Details.....	1939
Viewing the Log of an Upload Request.....	1940
Adding a Log Entry for an Upload Request.....	1941

Chapter 29: General Ledger (GL) Accounting Template..... 1943

GL Accounting Template (Without Approval) Status Transition.....	1948
GL Accounting Template (With Approval) Status Transition.....	1948
Algorithms Used in C1- GLAT.....	1949
Prerequisites.....	1951
GL Accounting Template (Used for Searching).....	1951
Search GL Accounting Template.....	1952
GL Accounting Template Lines.....	1953
Searching for a GL Accounting Template.....	1954
Creating a GL Accounting Template.....	1954
Viewing the GL Accounting Template Details.....	1956
Viewing the GL Accounting Template Lines Details.....	1957
GL Accounting Template (Used for Viewing).....	1957
GL Accounting Template - Main.....	1957
GL Accounting Template.....	1957
GL Accounting Template - Log.....	1959
GL Accounting Template Log.....	1959
Editing a GL Accounting Template.....	1960
Deleting a GL Accounting Template.....	1961
Submitting a GL Accounting Template.....	1962
Approving a GL Accounting Template.....	1963
Rejecting a GL Accounting Template.....	1964
Deactivating a GL Accounting Template.....	1966
Viewing the Log of a GL Accounting Template.....	1967
Adding a Log Entry for a GL Accounting Template.....	1967

Chapter 30: Accrual..... 1969

Accrual Created through UI (Without Approval) Status Transition.....	1971
Accrual Created through UI (With Approval) Status Transition.....	1971
Accrual Created through Batch (Without Approval) Status Transition.....	1972
Accrual Created through Batch (With Approval) Status Transition.....	1973
Accrual Processes.....	1974
Account's Eligibility Check for Accrual.....	1975
Accrual Calculation.....	1975
Calculate Accrual at the Bill Level Based on Historical Data.....	1975
Calculate Accrual at the Price Item Level Based on Historical Data.....	1976
Calculate Accrual at the Bill Level Based on Actual Data.....	1976
Calculate Accrual at the Price Item Level Based on Actual Data.....	1976
Accrual Creation.....	1976
Accrual Reversal.....	1977
Accrual Cycle (Used for Searching).....	1977
Search Accrual Cycle.....	1977
Searching for an Accrual Cycle.....	1978
Viewing the Accrual Cycle Details.....	1978
Defining an Accrual Cycle.....	1979
Adding a Schedule Period in an Accrual Cycle.....	1979
Accrual Cycle (Used for Viewing).....	1980
Accrual Cycle.....	1980
Editing an Accrual Cycle.....	1981

Deleting an Accrual Cycle.....	1982
Accrual Type (Used for Searching).....	1983
Search Accrual Type.....	1983
Searching for an Accrual Type.....	1985
Viewing the Accrual Type Details.....	1985
Defining an Accrual Type.....	1986
Associating an Algorithm with an Accrual Type.....	1992
Excluding an Entity from an Accrual Type.....	1994
Associating a Division with an Accrual Type.....	1995
Accrual Type (Used for Viewing).....	1996
Accrual Type.....	1996
Editing an Accrual Type.....	2000
Deleting an Accrual Type.....	2008
Accrual (Used for Searching).....	2008
Search Accrual.....	2008
Searching for an Accrual.....	2011
Viewing the Accrual Details.....	2011
Defining an Accrual.....	2012
Defining a Characteristic for an Accrual.....	2015
Adding the Details for an Accrual.....	2016
Accrual (Used for Viewing).....	2017
Accrual - Main.....	2017
Accrual.....	2018
Accrual Details.....	2020
Accrual Calculation Lines.....	2021
Accrual - Log.....	2022
Accrual Log.....	2022
Viewing the Log of an Accrual.....	2023
Adding a Log Entry for an Accrual.....	2023
Approving an Accrual.....	2024
Rejecting an Accrual.....	2024
Resubmitting an Accrual.....	2025
Editing an Accrual.....	2026
Deleting an Accrual.....	2028

Chapter 31: Payment Agreement Request.....2029

Payment Agreement Request (Without Approval) Status Transition.....	2032
Payment Agreement Request (With Approval) Status Transition.....	2032
Prerequisites.....	2033
Algorithms Used in C1-PaymentAgreementRequest.....	2034
C1-PA-INFO.....	2034
C1-PA-PRE.....	2035
C1-PA-SUBMIT.....	2035
C1-PA-APPENT.....	2035
C1-PA-APPEXT.....	2035
C1-PA-RESUB.....	2035
C1-MONTR.....	2035
C1-ACTENT.....	2035
Payment Agreement Request Type.....	2035
Payment Agreement Request Type List.....	2035
Payment Agreement Request Type.....	2036
Defining a Payment Agreement Request Type.....	2039
Defining a Characteristic for a Payment Agreement Request Type.....	2041
Editing a Payment Agreement Request Type.....	2042
Copying a Payment Agreement Request Type.....	2045

Deleting a Payment Agreement Request Type.....	2047
Viewing the Payment Agreement Request Type Details.....	2048
Payment Agreement Request (Used for Searching).....	2048
Search Payment Agreement Request.....	2049
Bill Details.....	2052
Searching for a Payment Agreement Request.....	2052
Creating a Payment Agreement Request.....	2053
Defining a Characteristic for a Payment Agreement Request.....	2054
Defining Payment Schedule for a Payment Agreement Request.....	2055
Viewing the Bills Added in the Payment Agreement Request.....	2056
Viewing the Payment Agreement Request Details.....	2057
Payment Agreement Request (Used for Viewing).....	2057
Payment Agreement Request - Main.....	2058
Payment Agreement Request.....	2058
Bill Details.....	2060
Payment Schedule.....	2061
Payment Agreement Request - Bills.....	2061
Search Bills.....	2061
Payment Agreement Request - Log.....	2062
Payment Agreement Request Log.....	2063
Editing a Payment Agreement Request.....	2063
Deleting a Payment Agreement Request.....	2066
Submitting a Payment Agreement Request.....	2066
Removing an Overdue Bill from a Payment Agreement Request.....	2067
Approving a Payment Agreement Request.....	2068
Rejecting a Payment Agreement Request.....	2069
Resubmitting a Payment Agreement Request.....	2071
Filtering Overdue Bills of an Account.....	2072
Adding an Overdue Bill in a Payment Agreement Request.....	2073
Viewing the Log of a Payment Agreement Request.....	2073
Adding a Log Entry for a Payment Agreement Request.....	2074

Chapter 32: Dispute Request.....2077

Dispute Request (Without Approval) Status Transition.....	2084
Dispute Request (With Approval) Status Transition.....	2084
Prerequisites.....	2085
Algorithms Used in C1-DisputeRequest.....	2086
Dispute Request Type.....	2091
Dispute Request Type List.....	2094
Dispute Request Type.....	2095
Defining a Dispute Request Type.....	2097
Defining a Characteristic for a Dispute Request Type.....	2100
Editing a Dispute Request Type.....	2101
Deleting a Dispute Request Type.....	2104
Copying a Dispute Request Type.....	2104
Viewing the Dispute Request Type Details.....	2107
Dispute Request (Used for Searching).....	2108
Search Dispute Request.....	2108
Searching for a Dispute Request.....	2111
Viewing the Dispute Request Details.....	2112
Creating a Dispute Request.....	2113
Defining a Characteristic for a Dispute Request.....	2115
Dispute Request (Used for Viewing).....	2116
Dispute Request - Main.....	2117
Dispute Request.....	2117

Dispute Details.....	2119
Dispute Adjustments.....	2119
Previous Dispute Requests.....	2120
Dispute Request - Bills.....	2121
Search Bills.....	2121
Bill Line Items.....	2123
Dispute Request - Log.....	2123
Dispute Request Log.....	2123
Editing a Dispute Request.....	2124
Deleting a Dispute Request.....	2125
Submitting a Dispute Request.....	2126
Approving a Dispute Request.....	2127
Rejecting a Dispute Request.....	2128
Resubmitting a Dispute Request.....	2130
Editing the Dispute Details.....	2130
Deleting a Bill from the Dispute Request.....	2132
Viewing the Bill Line Items.....	2132
Adding a Bill to the Dispute Request.....	2133
Adding a Bill Line Item to the Dispute Request.....	2134
Viewing the Log of a Dispute Request.....	2136
Adding a Log Entry for a Dispute Request.....	2137

Chapter 33: Earnings Credit Rate2139

Prerequisites.....	2143
Financial Transaction Distribution Object Status Transition.....	2143
Algorithms Used in C1-FTDIST.....	2144
Earnings Credit Rate Eligibility.....	2149
Earnings Credit Rate Eligibility.....	2150
Defining Earnings Credit Rate Eligibility for an Account.....	2151
Financial Transaction Distribution Type.....	2152
Financial Transaction Distribution Type List.....	2152
Financial Transaction Distribution Type.....	2154
Defining a Financial Transaction Distribution Type.....	2156
Defining a Characteristic for a Financial Transaction Distribution Type.....	2159
Editing a Financial Transaction Distribution Type.....	2160
Deleting a Financial Transaction Distribution Type.....	2162
Copying a Financial Transaction Distribution Type.....	2163
Viewing the Financial Transaction Distribution Type Details.....	2166
Financial Transaction Distribution Rule.....	2166
Financial Transaction Distribution Rule List.....	2167
Financial Transaction Distribution Rule.....	2168
Financial Transaction Distribution Rule Version List.....	2169
Financial Transaction Distribution Rule Version.....	2170
Defining a Financial Transaction Distribution Rule.....	2172
Editing a Financial Transaction Distribution Rule.....	2173
Deleting a Financial Transaction Distribution Rule.....	2175
Copying a Financial Transaction Distribution Rule.....	2175
Viewing the Financial Transaction Distribution Rule Details.....	2177
Viewing the Financial Transaction Distribution Rule Version List.....	2177
Defining a Financial Transaction Distribution Rule Version.....	2178
Including Objects in a Financial Transaction Distribution Rule Version.....	2181
Excluding Objects in a Financial Transaction Distribution Rule Version.....	2182
Associating Algorithms with a Financial Transaction Distribution Rule Version.....	2183
Editing a Financial Transaction Distribution Rule Version.....	2183
Deleting a Financial Transaction Distribution Rule Version.....	2186

Copying a Financial Transaction Distribution Rule Version.....	2187
Viewing the Financial Transaction Distribution Rule Version Details.....	2190
Expiration Cycle Extendable Lookup.....	2191
Extendable Lookup Search.....	2191
Searching for an Expiration Cycle Extendable Lookup.....	2191
Extendable Lookup (Expiration Cycle).....	2192
Extendable Lookup Value List.....	2192
Extendable Lookup Value.....	2193
Defining an Expiration Cycle.....	2194
Editing an Expiration Cycle.....	2195
Deleting an Expiration Cycle.....	2196
Copying an Expiration Cycle.....	2197
Viewing the Expiration Cycle Details.....	2198
Distribution Hierarchy Extendable Lookup.....	2199
Extendable Lookup Search.....	2199
Searching for a Distribution Hierarchy Extendable Lookup.....	2200
Extendable Lookup (Distribution Hierarchy).....	2200
Extendable Lookup Value List.....	2201
Extendable Lookup Value.....	2201
Defining a Distribution Hierarchy.....	2203
Editing a Distribution Hierarchy.....	2204
Deleting a Distribution Hierarchy.....	2205
Copying a Distribution Hierarchy.....	2206
Viewing the Distribution Hierarchy Details.....	2208
Financial Transaction Distribution Object Extendable Lookup.....	2208
Extendable Lookup Search.....	2208
Extendable Lookup (Financial Transaction Distribution Object).....	2209
Extendable Lookup Value List.....	2209
Extendable Lookup Value.....	2210
Defining a Financial Transaction Distribution Object.....	2212
Editing a Financial Transaction Distribution Object.....	2213
Deleting a Financial Transaction Distribution Object.....	2214
Copying a Financial Transaction Distribution Object.....	2215
Viewing the Financial Transaction Distribution Object Details.....	2217
Financial Transaction Distribution (Used for Searching).....	2217
Financial Transaction Distribution Search.....	2217
Searching for a Financial Transaction Distribution Object.....	2219
Viewing the Financial Transaction Distribution Details.....	2220
Financial Transaction Distribution (Used for Viewing).....	2220
Financial Transaction Distribution - Main.....	2220
Financial Transaction Distribution.....	2221
Financial Transaction Distribution - Log.....	2223
Financial Transaction Distribution Log.....	2223
Viewing the Log of a Financial Transaction Distribution.....	2224
Adding a Log Entry for a Financial Transaction Distribution.....	2224

Chapter 34: Deferred Revenue Recognition..... 2227

Prerequisites.....	2229
Deferred Revenue Recognition Status Transition.....	2229
Algorithms Used in Deferred Revenue Recognition.....	2231
Deferred Revenue Recognition Template (Used for Searching).....	2236
Search Deferred Revenue Recognition Template.....	2236
Searching for a Deferred Revenue Recognition Template.....	2237
Defining a Deferred Revenue Recognition Template.....	2238
Associating Algorithms with a Deferred Revenue Recognition Template.....	2240

Associating Deferred Revenue Recognition Template With A Division.....	2241
Defining a Characteristic for a Deferred Revenue Recognition Template.....	2242
Viewing the Deferred Revenue Recognition Template Details.....	2243
Deferred Revenue Recognition Template (Used for Viewing).....	2244
Deferred Revenue Recognition Template.....	2244
Editing a Deferred Revenue Recognition Template.....	2246
Deleting a Deferred Revenue Recognition Template.....	2247
Viewing the Deferred Revenue Recognition Template Details.....	2247
Deferred Revenue Recognition (Used for Searching).....	2248
Search Deferred Revenue Recognition.....	2248
Searching for a Deferred Revenue Recognition.....	2252
Viewing the Deferred Revenue Recognition Details.....	2253
Deferred Revenue Recognition (Used for Viewing).....	2254
Deferred Revenue Recognition - Main.....	2254
Deferred Revenue Recognition.....	2254
Associated Deferred Revenue Recognitions.....	2256
Recognition Schedule.....	2256
Revenue Recognition Items.....	2257
Deferred Revenue Recognition - Log.....	2257
Deferred Revenue Recognition Log.....	2257
Editing a Deferred Revenue Recognition.....	2258
Creating the Deferred Revenue Recognition Schedule.....	2258
Defining a Characteristic for a Deferred Revenue Recognition.....	2259
Adding Related Deferred Revenue Recognitions.....	2260
Editing the Deferred Revenue Recognition Schedule Details.....	2261
Viewing the Log of a Deferred Revenue Recognition.....	2262
Adding a Log Entry for a Deferred Revenue Recognition.....	2263

Chapter 35: Product Lifecycle Management..... 2265

Prerequisites.....	2267
Product Status Transition through User Interface.....	2267
Product Status Transition through a Batch Process.....	2268
Product Version Status Transition.....	2269
Product Enrollment Status Transition through User Interface.....	2270
Product Enrollment Status Transition through a Batch Process.....	2272
Product Service (Used for Searching).....	2273
Search Product Service.....	2273
Associated Price Items.....	2274
Searching for a Product Service.....	2274
Viewing the Product Service Price Items.....	2275
Defining a Product Service.....	2275
Associating a Product Service with a Price Item.....	2277
Defining a Characteristics for a Product Service.....	2278
Viewing the Product Service Details.....	2279
Product Service (Used for Viewing).....	2280
Product Service.....	2280
Price Items.....	2281
Editing a Product Service.....	2281
Deleting a Product Service.....	2282
Copying a Product Service.....	2283
Product (Used for Searching).....	2284
Search Product.....	2284
Product Version List.....	2286
Searching for a Product.....	2286
Viewing the Product Versions.....	2287

Viewing the Product Details.....	2287
Viewing the Product Version Details.....	2288
Defining a Product.....	2288
Associating a Product with a Division.....	2290
Defining a Product to Product Relationship.....	2290
Defining a Characteristics for a Product.....	2291
Defining a Product Version.....	2293
Adding a Product Service to a Product Version.....	2295
Adding a Standard Product to a Product Version.....	2296
Adding Add-on Services to a Product Version.....	2298
Associating a Price List with a Product Version.....	2299
Defining Eligibility Criteria for a Product Version.....	2300
Defining a Characteristic for a Product Version.....	2302
Product Version (Used for Viewing).....	2303
Product Version - Main.....	2304
Product Version.....	2304
Products.....	2306
Product Services.....	2306
Add-on Product Services.....	2307
Services.....	2307
Price List.....	2308
Eligibility Criteria.....	2308
Product Version - Log.....	2310
Product Version Log.....	2310
Editing a Product Version.....	2310
Deleting a Product Version.....	2312
Copying a Product Version.....	2312
Finalizing a Product Version.....	2314
Viewing the Log of a Product Version.....	2315
Product (Used for Viewing).....	2316
Product - Main.....	2316
Product Details.....	2316
Product Version List.....	2318
Product - Log.....	2318
Product Log.....	2319
Editing a Product.....	2319
Copying a Product.....	2320
Activating a Product.....	2321
Retiring a Product.....	2321
Viewing the Log of a Product.....	2322
Product Enrollment (Used for Searching).....	2323
Search Enrollment.....	2323
Enrolled Products.....	2325
Enrolled Services.....	2326
Enrolled Standard Products.....	2326
Enrolled Add-on Services.....	2327
Searching for a Product Enrollment.....	2327
Viewing the Enrolled Products.....	2328
Viewing the Enrolled Services.....	2328
Viewing the Standard Products Included in an Enrolled Product.....	2329
Viewing the Add-on Services Enrolled with the Product	2329
Enrolling an Account for One or More Products and Services.....	2330
Viewing the Product Priority of an Account.....	2333
Defining a Characteristic for a Product Enrollment.....	2334
Product Enrollment (Used for Viewing).....	2334
Product Enrollment - Main.....	2335

Product Enrollment.....	2335
Enrolled Products.....	2336
Enrolled Services.....	2337
Enrolled Standard Products.....	2337
Enrolled Add-on Product Services.....	2338
Product Priority.....	2338
Product Enrollment - Log.....	2339
Enrollment Log.....	2339
Viewing the Standard Products Included in an Enrolled Product.....	2339
Editing a Product Enrollment.....	2340
Copying a Product Enrollment.....	2341
Enrolling a Product Enrollment.....	2341
Unenrolling a Product Enrollment.....	2342
Viewing the Log of a Product Enrollment.....	2343

Chapter 36: Subscription Billing.....2345

Prerequisites.....	2347
Subscription Type (Used for Searching).....	2347
Search Subscription Type.....	2347
Searching for a Subscription Type.....	2348
Viewing the Subscription Type Details.....	2349
Defining a Subscription Type.....	2349
Defining a Characteristic for a Subscription Type.....	2352
Subscription Type (Used for Viewing).....	2353
Subscription Type.....	2353
Editing a Subscription Type.....	2356
Copying a Subscription Type.....	2358
Deleting a Subscription Type.....	2361
Account Subscription (Used for Searching).....	2361
Search Account Subscription.....	2361
Searching for an Account Subscription.....	2363
Viewing the Account Subscription Details.....	2364
Defining an Account Subscription.....	2364
Defining a Characteristic for an Account Subscription.....	2367
Account Subscription (Used for Viewing).....	2368
Account Subscription - Main.....	2368
Account Subscription.....	2368
Subscription Services.....	2370
Subscription Service Charges.....	2370
Subscription Service Charge Entities.....	2371
Account Subscription Suspension History.....	2371
Account Subscription Termination Charges.....	2372
Account Subscription - Log.....	2372
Account Subscription Log.....	2372
Adding Services and Charges in the Account Subscription.....	2373
Editing an Account Subscription.....	2374
Deleting an Account Subscription.....	2375
Activating an Account Subscription.....	2376
Canceling an Account Subscription.....	2376
Editing the Subscription Service Details.....	2377
Deleting a Service from the Account Subscription.....	2378
Viewing the Charges of a Subscription Service.....	2378
Viewing Related Entities of a Subscription Service Charge.....	2379
Viewing Suspension History of the Account Subscription.....	2379
Viewing Termination Charges of the Account Subscription.....	2380

Suspending an Account Subscription.....	2381
Terminating an Account Subscription.....	2381
Resuming an Account Subscription.....	2382
Viewing the Log of an Account Subscription.....	2383

Chapter 37: Mass Pricing Update.....2385

Prerequisites.....	2387
Mass Pricing Update Request (Without Approval) Status Transition.....	2387
Mass Pricing Update Request (With Approval) Status Transition.....	2388
Algorithms Used in C1-MassPricingReq.....	2389
C1-REQST-INF.....	2390
C1-MPRIVALDN.....	2390
C1-MPRISUBMT.....	2391
C1-MPRIAPTD.....	2391

Chapter 50: Retail Banking Product Inbound Web Services.....3359

Prerequisites.....	3361
C1_GETELIGIBLEPROD Business Service.....	3362
Eligible Market Products, Offers, or Bundles Derivation Request in the XML Format.....	3363
Eligible Market Products, Offers, or Bundles Derivation Response in the XML Format....	3364
Eligible Market Products, Offers, or Bundles Derivation Request and Response - Tags in XML Format.....	3366
Sample Eligible Market Product Derivation Request and Response in the XML Format....	3371
Sample Eligible Offer Derivation Request and Response in the XML Format.....	3398
Sample Eligible Bundle Derivation Request and Response in the XML Format.....	3425
Eligible Market Products, Offers, or Bundles Derivation Request in the JSON Format.....	3451
Eligible Market Products, Offers, or Bundles Derivation Response in the JSON Format..	3452
Eligible Market Products, Offers, or Bundles Derivation Request and Response - Attribute/Value Pairs in JSON Format.....	3454
Sample Eligible Market Product Derivation Request and Response in the JSON Format..	3459
Sample Eligible Offer Derivation Request and Response in the JSON Format.....	3488
Sample Eligible Bundle Derivation Request and Response in the JSON Format.....	3514
C1-GetProdDetail Business Service.....	3542
Market Product, Offer, or Bundle View Request in the XML Format.....	3543
Market Product, Offer, or Bundle View Response in the XML Format.....	3544
Market Product, Offer, or Bundle View Request - Tags in XML Format.....	3546
Sample Market Product View Request and Response in the XML Format.....	3549
Sample Offer View Request and Response in the XML Format.....	3571
Sample Bundle View Request and Response in the XML Format.....	3592
Sample Market Product View Summary Request and Response in the XML Format.....	3613
Sample Market Product View Detail Request and Response in the XML Format.....	3615
Market Product, Offer, or Bundle View Request in the JSON Format.....	3637
Market Product, Offer, or Bundle View Response in the JSON Format.....	3638
Market Product, Offer, or Bundle View Request and Response - Attribute/Value Pairs in JSON Format.....	3640
Sample Market Product View Request and Response in the JSON Format.....	3643
Sample Offer View Request and Response in the JSON Format.....	3647
Sample Bundle View Request and Response in the JSON Format.....	3670
Sample Bundle View Summary Request and Response in the JSON Format.....	3692
Sample Bundle View Detail Request and Response in the JSON Format.....	3694

C1PRDCTENRL Business Service.....	3716
Market Product, Offer, or Bundle Enrollment Request in the XML Format.....	3721
Market Product, Offer, or Bundle Enrollment Response in the XML Format.....	3723
Market Product, Offer, or Bundle Enrollment Request and Response - Tags in XML Format.....	3724
Sample Market Product Enrollment Request and Response in the XML Format.....	3733
Sample Market Product Enrollment Edit Request and Response in the XML Format.....	3734
Sample Market Product Enrollment Close Request and Response in the XML Format.....	3736
Sample Offer Enrollment Request and Response in the XML Format.....	3737
Sample Offer Enrollment Edit Request and Response in the XML Format.....	3738
Sample Offer Enrollment Close Request and Response in the XML Format.....	3740
Sample Bundle Enrollment Request and Response in the XML Format.....	3741
Sample Bundle Enrollment Edit Request and Response in the XML Format.....	3743
Sample Bundle Enrollment Close Request and Response in the XML Format.....	3744
Market Product, Offer, or Bundle Enrollment Request in the JSON Format.....	3745
Market Product, Offer, or Bundle Enrollment Response in the JSON Format.....	3747
Market Product, Offer, or Bundle Enrollment Request and Response - Attribute/Value Pairs in JSON Format.....	3749
Sample Market Product Enrollment Request and Response in the JSON Format.....	3757
Sample Market Product Enrollment Edit Request and Response in the JSON Format.....	3759
Sample Market Product Enrollment Close Request and Response in the JSON Format.....	3760
Sample Offer Enrollment Request and Response in the JSON Format.....	3762
Sample Offer Enrollment Edit Request and Response in the JSON Format.....	3764
Sample Offer Enrollment Close Request and Response in the JSON Format.....	3765
Sample Bundle Enrollment Request and Response in the JSON Format.....	3767
Sample Bundle Enrollment Edit Request and Response in the JSON Format.....	3768
Sample Bundle Enrollment Close Request and Response in the JSON Format.....	3770

Chapter 51: Deal Pricing Management through Inbound Web

Services..... 3773

Standard Pricing Comparison in Deal through Inbound Web Service.....	3774
Prospect Creation, Modification, and View through Inbound Web Service.....	3775
Prospect Add Request in the XML Format.....	3777
Prospect Add Response in the XML Format.....	3778
Prospect Update Request in the XML Format.....	3780
Prospect Update Response in the XML Format.....	3781
Prospect View Request in the XML Format.....	3782
Prospect View Response in the XML Format.....	3783
Prospect Add Request and Response - Tags in the XML Format.....	3784
Prospect Update Request and Response - Tags in the XML Format.....	3792
Prospect View Request and Response - Tags in the XML Format.....	3799
Sample Prospect Creation Request and Response in the XML Format.....	3803
Sample Prospect Update Request and Response in the XML Format.....	3805
Sample Prospect View Request and Response in the XML Format.....	3809
Prospect Add Request in the JSON Format.....	3812
Prospect Add Response in the JSON Format.....	3814
Prospect Update Request in the JSON Format.....	3815
Prospect Update Response in the JSON Format.....	3817
Prospect View Request in the JSON Format.....	3818
Prospect View Response in the JSON Format.....	3819
Prospect Add Request and Response - Attribute/Value Pairs in the JSON Format.....	3820
Prospect Update Request and Response - Attribute/Value Pairs in the JSON Format.....	3828
Prospect View Request and Response - Attribute/Value Pairs in the JSON Format.....	3835
Sample Prospect Creation Request and Response in the JSON Format.....	3839
Sample Prospect Update Request and Response in the JSON Format.....	3842

Sample Prospect View Request and Response in the JSON Format.....	3846
Prospect Account Creation, Modification, and View through Inbound Web Service.....	3849
Prospect Account Add Request in the XML Format.....	3850
Prospect Account Add Response in the XML Format.....	3851
Prospect Account Update Request in the XML Format.....	3852
Prospect Account Update Response in the XML Format.....	3852
Prospect Account View Request in the XML Format.....	3853
Prospect Account View Response in the XML Format.....	3853
Prospect Account Add Request and Response - Tags in the XML Format.....	3854
Prospect Account Update Request and Response - Tags in the XML Format.....	3857
Prospect Account View Request and Response - Tags in the XML Format.....	3860
Sample Prospect Account Creation Request and Response in the XML Format.....	3862
Sample Prospect Account Update Request and Response in the XML Format.....	3863
Sample Prospect Account View Request and Response in the XML Format.....	3864
Prospect Account Add Request in the JSON Format.....	3865
Prospect Account Add Response in the JSON Format.....	3866
Prospect Account Update Request in the JSON Format.....	3866
Prospect Account Update Response in the JSON Format.....	3867
Prospect Account View Request in the JSON Format.....	3868
Prospect Account View Response in the JSON Format.....	3868
Prospect Account Add Request and Response - Attribute/Value Pairs in the JSON Format.....	3869
Prospect Account Update Request and Response - Attribute/Value Pairs in the JSON Format.....	3872
Prospect Account View Request and Response - Attribute/Value Pairs in the JSON Format.....	3876
Sample Prospect Account Creation Request and Response in the JSON Format.....	3877
Sample Prospect Account Update Request and Response in the JSON Format.....	3878
Sample Prospect Account View Request and Response in the JSON Format.....	3880
Price List Assignments in Deal through Inbound Web Service.....	3881
Deal Price List Assignment Add Request in the XML Format.....	3882
Deal Price List Assignment Add Response in the XML Format.....	3883
Deal Price List Assignment Delete Request in the XML Format.....	3883
Deal Price List Assignment Delete Response in the XML Format.....	3884
Deal Price List Assignment Update Request in the XML Format.....	3884
Deal Price List Assignment Update Response in the XML Format.....	3885
Deal Price List Assignment View Request in the XML Format.....	3885
Deal Price List Assignment View Response in the XML Format.....	3886
Deal Price List Assignment Add Request and Response - Tags in the XML Format.....	3887
Deal Price List Assignment Delete Request and Response - Tags in the XML Format.....	3889
Deal Price List Assignment Update Request and Response - Tags in the XML Format.....	3890
Deal Price List Assignment View Request and Response - Tags in the XML Format.....	3893
Sample Deal Price List Assignment Add Request and Response in the XML Format.....	3895
Sample Deal Price List Assignment Delete Request and Response in the XML Format.....	3896
Sample Deal Price List Assignment Update Request and Response in the XML Format.....	3897
Sample Deal Price List Assignment View Request and Response in the XML Format.....	3898
Deal Price List Assignment Add Request in the JSON Format.....	3899
Deal Price List Assignment Add Response in the JSON Format.....	3899
Deal Price List Assignment Delete Request in the JSON Format.....	3900
Deal Price List Assignment Delete Response in the JSON Format.....	3901
Deal Price List Assignment Update Request in the JSON Format.....	3901
Deal Price List Assignment Update Response in the JSON Format.....	3902
Deal Price List Assignment View Request in the JSON Format.....	3903
Deal Price List Assignment View Response in the JSON Format.....	3903
Deal Price List Assignment Add Request and Response - Attribute/Value Pairs in the JSON Format.....	3904

Deal Price List Assignment Delete Request and Response - Attribute/Value Pairs in the JSON Format.....	3906
Deal Price List Assignment Update Request and Response - Attribute/Value Pairs in the JSON Format.....	3908
Deal Price List Assignment View Request and Response - Attribute/Value Pairs in the JSON Format.....	3911
Sample Deal Price List Assignment Add Request and Response in the JSON Format.....	3913
Sample Deal Price List Assignment Delete Request and Response in the JSON Format....	3914
Sample Deal Price List Assignment Update Request and Response in the JSON Format..	3915
Sample Deal Price List Assignment View Request and Response in the JSON Format.....	3916
Deal Price Assignments and Commitments through Inbound Web Service.....	3917
Deal Price Assignment Override Request in the XML Format.....	3919
Deal Price Assignment Override Response in the XML Format.....	3921
Deal Price Assignment Update Request in the XML Format.....	3922
Deal Price Assignment Update Response in the XML Format.....	3923
Deal Price Assignment Recommend Request in the XML Format.....	3925
Deal Price Assignment Recommend Response in the XML Format.....	3926
Deal Price Assignment Delete Request in the XML Format.....	3927
Deal Price Assignment Delete Response in the XML Format.....	3928
Deal Price Assignment and Commitments View Request in the XML Format.....	3928
Deal Price Assignment and Commitments View Response in the XML Format.....	3929
Deal Commitments Add Request in the XML Format.....	3930
Deal Commitments Add Response in the XML Format.....	3931
Deal Commitments Update Request in the XML Format.....	3932
Deal Commitments Update Response in the XML Format.....	3932
Deal Price Assignment Override Request and Response - Tags in the XML Format.....	3933
Deal Price Assignment Update Request and Response - Tags in the XML Format.....	3941
Deal Price Assignment Recommend Request and Response - Tags in the XML Format....	3950
Deal Price Assignment Delete Request and Response - Tags in the XML Format.....	3959
Deal Price Assignment and Commitments View Request and Response - Tags in the XML Format.....	3961
Deal Commitments Add Request and Response - Tags in the XML Format.....	3967
Deal Commitments Update Request and Response - Tags in the XML Format.....	3969
Sample Deal Price Assignment Override Request and Response in the XML Format.....	3972
Sample Deal Price Assignment Update Request and Response in the XML Format.....	3975
Sample Deal Price Assignment Recommend Request and Response in the XML Format.	3978
Sample Deal Price Assignment Delete Request and Response in the XML Format.....	3980
Sample Deal Price Assignment and Commitments View Request and Response in the XML Format.....	3981
Sample Deal Commitments Add Request and Response in the XML Format.....	3983
Sample Deal Commitments Update Request and Response in the XML Format.....	3984
Deal Price Assignment Override Request in the JSON Format.....	3985
Deal Price Assignment Override Response in the JSON Format.....	3987
Deal Price Assignment Update Request in the JSON Format.....	3988
Deal Price Assignment Update Response in the JSON Format.....	3990
Deal Price Assignment Recommend Request in the JSON Format.....	3991
Deal Price Assignment Recommend Response in the JSON Format.....	3993
Deal Price Assignment Delete Request in the JSON Format.....	3994
Deal Price Assignment Delete Response in the JSON Format.....	3995
Deal Price Assignment and Commitments View Request in the JSON Format.....	3995
Deal Price Assignment and Commitments View Response in the JSON Format.....	3996
Deal Commitments Add Request in the JSON Format.....	3998
Deal Commitments Add Response in the JSON Format.....	3998
Deal Commitments Update Request in the JSON Format.....	3999
Deal Commitments Update Response in the JSON Format.....	4000

Deal Price Assignment Override Request and Response - Attribute/Value Pairs in the JSON Format.....	4001
Deal Price Assignment Update Request and Response - Attribute/Value Pairs in the JSON Format.....	4009
Deal Price Assignment Recommend Request and Response - Attribute/Value Pairs in the JSON Format.....	4018
Deal Price Assignment Delete Request and Response - Attribute/Value Pairs in the JSON Format.....	4027
Deal Price Assignment and Commitments View Request and Response - Attribute/Value Pairs in the JSON Format.....	4029
Deal Commitments Add Request and Response - Attribute/Value Pairs in the JSON Format.....	4035
Deal Commitments Update Request and Response - Attribute/Value Pairs in the JSON Format.....	4037
Sample Deal Price Assignment Override Request and Response in the JSON Format.....	4040
Sample Deal Price Assignment Update Request and Response in the JSON Format.....	4043
Sample Deal Price Assignment Recommend Request and Response in the JSON Format.....	4046
Sample Deal Price Assignment Delete Request and Response in the JSON Format.....	4049
Sample Deal Price Assignment and Commitments View Request and Response in the JSON Format.....	4050
Sample Deal Commitments Add Request and Response in the JSON Format.....	4052
Sample Deal Commitments Update Request and Response in the JSON Format.....	4054
Deal Creation, Modification, and View through Inbound Web Service.....	4055
Deal Creation Request in the XML Format.....	4058
Deal Creation Response in the XML Format.....	4059
Deal Update Request in the XML Format.....	4061
Deal Update Response in the XML Format.....	4063

Searching for a Bill Level Anomaly.....	4338
Viewing the Bill Segment Anomaly Details.....	4339
Searching for a Bill Segment Level Anomaly.....	4339
Closing an Anomaly.....	4340
Setting the C1-PREBSEG Feature Configuration.....	4340
Chapter 54: Automatic Refund.....	4343
Chapter 55: Reporting.....	4347
Report Creation Using Apache FOP Framework.....	4348
Prerequisites.....	4348
PDF Generation Using Apache FOP.....	4348
Excel (XLS) Generation Using XSL Transformation.....	4348
Sample XML Format for FOP Reporting.....	4348

Sample XSL Format for FOP Reporting.....	4349
Create XSL Template for an FOP Report.....	4350
XSL Templates shipped with ORMB.....	4350
Create an Algorithm for an FOP Report.....	4353
Creating a Message for an FOP Report.....	4356
Calling the ORMB FOP Reporting API.....	4357
Setting Master Configuration for Email Notification.....	4357
Creating a Custom Algorithm for FOP Reports.....	4358
Configuring the Custom Algorithm from the User Interface.....	4359
Report Creation.....	4361
Report Search.....	4361
Searching for an FOP Report.....	4362
Defining an FOP Report.....	4363
Editing an FOP Report.....	4366
Deleting an FOP Report.....	4370
Viewing the FOP Report Details.....	4370
Report Audit.....	4371
Report Generation List.....	4371
Downloading an FOP Report.....	4372
Report Generation.....	4373
Generating an FOP Report.....	4373
FOP Reports.....	4373
Adjustment Detail Report.....	4374
Entity Hold Detail Report.....	4374
Invoice Aging Report.....	4374
Payment Detail Report.....	4375
Payment Summary Report.....	4375
Transaction Rejection Detail Report.....	4375
Transaction Rejection Summary Report.....	4376
To Do Report.....	4376
User Access Report.....	4376
Quick Response Code Generation.....	4376
Chapter 56: Invoice Extract in UBL Format.....	4377
Prerequisites.....	4378
C1-InvoiceChargeExtract Business Service.....	4378
C1-UBLBILEX Algorithm.....	4379
C1-UBLINVOICEEXTRACT Extract Template.....	4380
UBL Format.....	4383
Field Mapping for UBL Format.....	4384
Sample Invoice Extract in the UBL Format.....	4387
Chapter 57: Cloud Service Features.....	4389
User Status Synchronization.....	4390
Appendix A: Most Commonly Used Tasks.....	4391
Changing the Layout.....	4392
Adding a Column to the Zone.....	4392
Rearranging Columns in the Zone.....	4392
Removing a Column from the Zone.....	4392
Appendix B: Administration.....	4395

UI Maps.....	4396
Creating Display UI Map for an Approval Workflow Group.....	4396
Creating Input UI Map for an Approval Workflow Group.....	4397
Feature Configurations.....	4398
Setting the C1_ACCTINFO Feature Configuration.....	4398
Setting the C1_AXENTITY Feature Configuration.....	4400
Setting the C1_DIVFUNCT Feature Configuration.....	4402
Setting the C1-Deal Feature Configuration.....	4403
Setting the C1-EHRCONFIG Feature Configuration.....	4409
Setting the C1_EXCHRATE Feature Configuration.....	4410
Setting the C1_EXP_OVRD Feature Configuration.....	4411
Setting the C1_FINTRANOP Feature Configuration.....	4412
Setting the C1_FM Feature Configuration.....	4418
Setting the C1-INCT Feature Configuration.....	4423
Setting the C1_MASPRI Feature Configuration.....	4425
Setting the C1_MLTCURACC Feature Configuration.....	4426
Setting the C1-ODBFC Feature Configuration.....	4428
Setting the C1-OFFSETREQ Feature Configuration.....	4429
Setting the C1-PAYPORTAL Feature Configuration.....	4430
Setting the C1_PER_REL Feature Configuration.....	4432
Setting the C1-PLSM Feature Configuration.....	4433
Setting the C1_PPARM_FLG Feature Configuration.....	4434
Setting the C1_PR_REC Feature Configuration.....	4435
Setting the C1_PRICING Feature Configuration.....	4436
Setting the C1_PRASNORDR Feature Configuration.....	4438
Setting the C1-PYREQSRT Feature Configuration.....	4439
Setting the C1_RLENG Feature Configuration.....	4440
Setting the C1-TXNDMYID Feature Configuration.....	4441
Setting the C1-PAYFLUPLD Feature Configuration.....	4442
Setting the C1-CFS Feature Configuration.....	4444
Setting the C1-FLUPLD Feature Configuration.....	4446
Setting the C1-REPORTVW Feature Configuration.....	4450

Preface

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the financial services domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each banking feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Customer Registration	Describes how to create a person and account through a customer registration object.
Chapter 2	Customer 360° View	Explains how to view in-depth information about the person or account in the Customer 360° View screen. It also explains how to view the enrolled products, effective price assignments, and effective price list assignments of a person or account. In addition, it explains how to view the detailed information about the bill.
Chapter 3	Invoicing Group	Describes the invoicing group and explains how to create a master account. It also explains how to add or remove a member from a master account.
Chapter 4	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 5	Division	Describes the different types of division. It also explains how to define a division.

Chapter Number	Chapter Name	Chapter Description
Chapter 6	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 7	Multi-Currency Accounts	Lists and describes the business processes that are enhanced to implement the multi-currency accounts feature.
Chapter 8	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 9	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 10	Currency Conversion	Lists and describes the business processes where the currency conversion feature can be enabled in the system. It explains how to enable the currency conversion feature for each business process. It also explains how to create different types of exchange rates in the system.
Chapter 11	Transaction Management Feed	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 12	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 13	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 14	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 15	Construct	Describes the construct based billing and settlement feature. It explains how to create templates and different types of constructs, such as invoice construct, invoice and settlement construct, and settlement construct. It also explains how to view the billing and settlement hierarchy of a person or account.
Chapter 16	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 17	Bill Tolerance	Explains how to define the tolerance limit for the bill amount. It also describes how the system behaves when the difference between the previous and current bill amount exceeds the positive or negative tolerance limit.

Chapter Number	Chapter Name	Chapter Description
Chapter 18	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 19	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 20	Foreign Exchange Gain Loss	Explains how the system calculates the foreign exchange gain loss on the payment and adjustment financial transactions.
Chapter 21	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 22	Account Receivable Central	Explains how to use the Account Receivable Central screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 23	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 24	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 25	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 26	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the Delinquency Central screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 27	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups
Chapter 28	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the GL Accounting Template feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 29	Accrual	Describes how to calculate, create, and reverse accrual for accounts. It explains how to create the accrual cycles, accrual types, and accruals for the accounts in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 30	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 31	Dispute Request	Describes how to track and close a dispute against a particular bill, bill segment, and/or adjustment through a dispute request. It explains how to create the dispute request types and dispute requests in the system.
Chapter 32	Earning Credit Rate	Explains how to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. It also explains how to distribute the credit or debit amount on the financial transaction distribution object to different accounts based on the distribution hierarchy.
Chapter 33	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 34	Product Lifecycle Management	Describes the entire lifecycle of a product from inception to service and then to the retirement. It explains how to create various types of products, such as standard and packaged products. It explains how to create a product service, product, and product versions in the system. It also explains how to enroll an account for different types of products.
Chapter 35	Subscription Billing	Describes the service based billing wherein the customers pay a subscription price to have access to a product or service. It explains how to create the subscription types and subscriptions on the accounts.
Chapter 36	Mass Pricing Update	Describes how to update multiple price assignments of a person, account, price list, or product at the same time. It explains how to increase or decrease the rate in a price assignment or forcibly end date a price assignment through a mass pricing update request. It also explains how to create the mass pricing update request types and mass pricing update requests in the system.
Chapter 37	Price Item, Parameter, and SQI Upload	Describes how to upload the price item, parameter, and SQI files through the File Upload Interface utility. It explains how information should be structured while uploading the price item, parameter, and SQI files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price items, parameters, and SQIs in different formats.
Chapter 38	Product and Product Version Upload	Describes how to upload the product and product version files through the File Upload Interface utility. It explains how information should be structured while uploading the product and product version files in the XML or CSV format. It also explains how to define different file request types for adding or editing the products and product versions in different formats.

Chapter Number	Chapter Name	Chapter Description
Chapter 39	Price List and Price Item Pricing Upload	Describes how to upload the price list and price assignment files through the File Upload Interface utility. It explains how information should be structured while uploading the price list and price assignment files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price lists and price assignments in different formats.
Chapter 40	Invoice Request	Describes how to create adhoc regular and trial bills for an account through an invoice request. It explains how to create the invoice request types and invoice requests in the system.
Chapter 41	Deal Pricing Management	Describes how to create deals for an existing customer, account, or prospect using various simulation types. It explains how to simulate, approve, finalize, and accept the deals. It also explains how to apply back or orchestrate the deal on customer onboarding.
Chapter 42	Relationship Manager Workbench	Describes how a relationship manager can obtain a holistic view of all its customers.
Chapter 43	Hold Request Creation, Modification, Release, and View Through Inbound Web Service	Lists various business services using which you can create, edit, and release a hold request and view the details of a hold request.
Chapter 44	Hold Direct Debit Instruction	Describes how to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. It explains how to create the auto pay request types and auto pay requests in the system.
Chapter 45	Garbling Customer Information	Explains how to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on, on receiving the data erasure request from the customer.
Chapter 46	Deleting Inactive Customer or Closed Account Information	Explains how to delete all records of a person or account from the system.
Chapter 47	Retail Banking Product Management	Explains how to maintain a variety of products and services for the retail banking domain.
Chapter 48	Retail Banking Product Inbound Web Services	Explains how to derive the eligible market product, offer, and bundle for a person or an account through an inbound web service. It also explains how to view the details of a retail banking product, market product, offer, and bundle through an inbound web service.
Chapter 49	Deal Pricing Management through Inbound Web Services	Explains how to manage prospects and deals through the inbound web services.
Chapter 50	Chatbot	Explains how the system provides digital assistance to the user to have conversational experiences with ORMB through text, chat, and voice interfaces.
Chapter 51	Billing Anomaly Detection with Artificial Intelligence (AI) and Machine Learning (ML)	Explains how to use machine learning to detect anomalies in the bills and bill segments before the bill completion.

Chapter Number	Chapter Name	Chapter Description
Chapter 52	Automatic Refund Process	Explains how to create automatic refunds when a credit bill or a credit adjustment is created or when there is an overpayment.
Chapter 53	FOP Reports	Lists various FOP reports using which you can extract data from the system in the PDF format.
Chapter 54	Invoice Extract in UBL Format	Describes how to extract the invoices in the Universal Business Language (UBL) format using the Extract Template feature.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

Document Name	Description
<i>Oracle Revenue Management and Billing Version 5.1.0.0.0 Release Notes</i>	Provides a brief description about the new features, enhancements, and UI level changes introduced in the current release. The new features and enhancements are classified under three distinct heads – Generic (which is intended for both domains), Financial Services, and Health Insurance. It also contains high-level information about the supported platforms, framework upgrade, supported upgrades, and documentation updates. In addition, it contains a list of discontinued features, planned deprecation notices, customer bugs fixed or forward ported and known issues in the current release.
<i>Oracle Utilities Application Framework Business Process Guide</i>	Explains how to get acquainted with the user interface. It explains the different types of pages or portals that you may come across in the application. It explains how to set the user preferences and how to create, manage, assign, and complete a To Do in the application. It also explains how to submit reports and view historic reports in the application.

Document Name	Description
<i>Oracle Utilities Application Framework Administrative Guide</i>	Explains the general, security, user, designing, developing, and scripting options available in Oracle Utilities Application Framework (OUAF). It describes the user interface, database, configuration, and reporting tools available in OUAF. In addition, it provides information about the application viewer, how to configure incoming and outgoing messages, and how to integrate Lightweight Directory Access Protocol (LDAP), Oracle Identity Manager (OIM), and Batch Scheduler with Oracle Revenue Management and Billing (ORMB).
<i>Oracle Revenue Management and Billing Business Process Guide</i>	Explains how to maintain the demographic, geographic, and financial objects (i.e. accounts) of a customer. It explains how to manage a customer's bills, payments, adjustments, credits, collections processing, statements and deposits in Oracle Revenue Management and Billing (ORMB). It also describes the financial transactions, case management, sales and marketing functions, rates engine, quotations, loans, how to monitor and execute job streams, and how to manage workflows, notifications and overdue processing. In addition, it explains how to extract the data from the system using an extract template. The features listed and described in this document can be used in both financial services and health insurance domains.
<i>Oracle Revenue Management and Billing Administrative Guide</i>	Explains how to configure various features and functionalities in Oracle Revenue Management and Billing (ORMB). For example, billing, payments, adjustments, financial transactions, credits, collections processing, loans, service credits, background processes, quotations, case management, security, overdue processing, batch scheduler, workflow and notifications, etc. The information available in this document can be used in both financial services and health insurance domains.
<i>Oracle Revenue Management and Billing TFM - Batch Execution Guide</i>	Explains the sequence in which the batches should be executed while performing various tasks in the Transaction Feed Management (TFM) module. It provides detailed information about each TFM batch and its parameters. It also indicates the restart and multi-threading ability of each batch. In addition, it recommends values for various parameters which can be used for tuning batch performance as per the available hardware.
<i>Oracle Revenue Management and Billing Batch Guide</i>	Provides detailed information about various batches which are used in different modules, such as billing, payments, financial transaction, pricing management, funding request, offset request, hold request, upload request, inbound message, payment agreement request, accruals, earnings credit rate, ILM, deferred revenue recognition, reconciliation, garbling, repricing, entity audit, statements, etc. It also contains information about the batch parameters and the batch restart and multi-threading abilities.

Chapter 1

Customer Registration

Topics:

- [Customer Registration \(Without Approval\) Status Transition](#)
- [Customer Registration \(With Approval\) Status Transition](#)
- [Customer Registration Template](#)
- [Customer Registration Type](#)
- [Customer Registration \(Used for Searching\)](#)
- [Customer Registration \(Used for Viewing\)](#)

Until now, you were able to create person and account from the different screens. Now, ORMB provides the ability to create a person and multiple accounts for the person from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts and contracts at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- **Customer Registration Template** – A customer registration template encapsulates the following information:
 - List of pages that should appear when you create a person or account using the respective customer registration template
 - List of sections that should appear in each page
 - Field or characteristic attributes, such as:
 - Default value for a field or characteristic type
 - Default value for a person or account identifier type or phone type
 - Primary identifier type for a person or account
 - Mandatory field in each section
 - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person and account. Depending on whether you are creating a customer registration template for person or account, you can include the following pages and define field or characteristic attributes for the following sections:

Template Category	Template Page	Template Section
Person	Main	Person Main
Person	Main	Person Names
Person	Main	Person Identifiers
Person	Main	Person Phones
Person	Contact Information	Person Address
Person	Contact Information	Person Email
Person	Accounts	-

Template Category	Template Page	Template Section
Person	Person Hierarchy	Person Hierarchy – Main
Person	Person Hierarchy	Person Hierarchy – Characteristics
Person	Person Characteristics	Person Characteristics
Person	Deal Information	Deal – Main
Person	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information
Account	Main	Account Identifiers
Account	Auto Pay	Account Autopay
Account	Persons	Main
Account	Persons	Account Address Override Information
Account	Persons	Bill Routing
Account	Account Characteristics	Account Characteristics
Account	Credit Ratings	Credit Rating

- **Customer Registration Type** - A customer registration type encapsulates the following information:
 - Users with a particular access group can only create a customer registration object using the customer registration type.
 - Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility.
 - Whether the approval is required when you create, edit, or delete a customer registration object.
 - The business objects using which the person, account, and address should be created when a customer registration object is created using the customer registration type.
 - A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, or credit rating history, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the **Accounts** page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

Note: The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On clicking the **View/Edit** icon or the **Add New Account** button, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

You can save the person and account details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the **Draft** status. Once all person and account details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person and accounts are created in the system. If an algorithm created using the **C1-CRECONT** algorithm type is attached to the **Post-Processing** system event of the account business object (which is specified in the customer registration type), the system creates the contracts for each account. Finally, the status of the customer registration object is changed to **Complete**.

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval. On approving a customer registration object, the person, accounts, and contracts (if the required algorithm is attached) are created in the system. Finally, the status of the customer registration object is changed to **Complete**.

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer

registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

Note: The system enables you to create maximum 10 accounts for a person through a customer registration object from the user interface.

You can also create a customer registration object using the **File Upload Interface** utility. On creating a customer registration object using the **File Upload Interface** utility, the status of the customer registration object is set to **Draft**. You can then submit the customer registration object manually from the user interface. Note that, at present, only the XML format is supported for creating a customer registration object using the **File Upload Interface** utility.

To implement the **Customer Registration** feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

Customer Registration (Without Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is not configured in the customer registration type:

Customer Registration (With Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is configured in the customer registration type:

Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
 - Default value for a field or characteristic type
 - Default value for a person or account identifier type or phone type
 - Primary identifier type for a person or account
 - Mandatory field in each section
 - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

The following table lists the pages and sections that are available in the respective template category:

Template Category	Template Page	Template Section
Person	Main	Person Main
		Person Names
		Person Identifiers
		Person Phones
	Contact Information	Person Address
		Person Email
	Accounts	-
	Person Hierarchy	Person Hierarchy – Main
		Person Hierarchy – Characteristics
	Person Characteristics	Person Characteristics
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information
		Account Identifiers
	Auto Pay	Account Autopay
	Persons	Main
		Account Address Override Information
		Bill Routing
	Account Characteristics	Account Characteristics
Policy	Policy – Main	Policy Main
		Policy Persons
		Policy Characteristics
Policy Plan	Plan	Plan - Main
		Plan - Characteristics

Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for customer registration templates using the banking template or the healthcare template details. The valid values are:</p> <ul style="list-style-type: none"> • Banking Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplBK business object. • Healthcare Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplHC business object. <p>Note: By default, the Banking Template option is selected.</p>	Yes
Template	Used to search for a particular template.	No
Description	Used to search for customer registration templates having a particular description.	No
Template Category	<p>Used to search for customer registration templates which belong to a particular category. The valid values are:</p> <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan <p>Note: The Policy and Policy Plan options appear when you select the Healthcare Template option from the Search By list.</p>	No

Note: You must specify at least one search criterion while searching for a customer registration template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the customer registration template.

Column Name	Column Description
Description	Displays the description of the customer registration template.
Template Category	Displays the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan
Edit	On clicking the Edit (✎) icon, the Customer Registration Template screen appears where you can edit the details of the customer registration template.
Duplicate	On clicking the Duplicate (📄) icon, the Customer Registration Template screen appears where you can define a new customer registration template using an existing customer registration template.
Delete	On clicking the Delete (🗑) icon, you can delete the customer registration template. Note: You can delete a customer registration template when a customer registration is not yet defined using the customer registration template.

On clicking the **Broadcast** (📡) icon corresponding to a customer registration template, the **Customer Registration Template** zone appears with the details of the respective customer registration template.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It also allows you to edit, copy, and delete the customer registration template. It contains the following sections

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template	Displays the customer registration template.

Field Name	Field Description
Template Category	<p>Indicates the category for which the customer registration template is created in the system. The valid values are:</p> <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan <p>Note: The Policy and Policy Plan template categories appear when the customer registration template is created using the C1-CustomerRegistrationTmplHC business object.</p>
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Pages** - The **Template Pages** section lists the template pages, template sections added for a particular template category in a customer registration template. It contains the following columns:

Column Name	Column Description
Template Page	Indicates the template page which is added for the template category.
Template Section	Indicates the template section which is defined for the template page.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	<p>Used to delete the customer registration template.</p> <p>Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.</p>
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the customer registration template is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears when you click the **Broadcast** () icon corresponding to the customer registration template in the **Search Customer Registration Template** zone.

Searching for a Customer Registration Template

Prerequisites

To search for a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Customer registration templates defined in the application
- Customer registration templates associated with the template categories

Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.
The **Customer Registration Template** screen appears.
4. Enter the search criteria in the **Search Customer Registration Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of customer registration templates that meet the search criteria appears in the **Search Results** section.

Viewing the Customer Registration Template Details

Procedure

To view the details of a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the customer registration template whose details you want to view.

The **Customer Registration Template** zone appears.

3. View the details of the customer registration template in the **Customer Registration Template** zone.

Defining a Customer Registration Template

Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Template** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Customer Registration Template - Banking - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplBK business object. • Customer Registration Template - Health Care - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplHC business object. 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

4. Select the required customer registration template business object from the respective field.
5. Click **OK**.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the selected business object. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you want to define the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

- Enter the required details in the **Main** section.
- Add the template pages and template sections for the customer registration template in the **Template Pages** section.
- Set the field attributes for the template sections in the **Template Pages** section.
- Click **Save**.

The customer registration template is defined.

Adding the Pages and Sections in a Customer Registration Template

Prerequisites

To add a page and its related sections in a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

- Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional)
		Note: This field is required while adding pages and sections in a customer registration template.

Field Name	Field Description	Mandatory (Yes or No)						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template.	Yes (Conditional)						
	<p>Note: On clicking the Add (+) icon, the following columns appear:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Template Section</td> <td>Used to indicate the section for a particular page.</td> </tr> <tr> <td>Field Attributes</td> <td>Used to define the field attributes of a section.</td> </tr> </tbody> </table> <p>Note: On clicking the Add (+) icon, you can define the field attributes for the section.</p>	Column Name	Column Description	Template Section	Used to indicate the section for a particular page.	Field Attributes	Used to define the field attributes of a section.	<p>Note: This field is required while adding pages and sections in a customer registration template.</p>
	Column Name	Column Description						
Template Section	Used to indicate the section for a particular page.							
Field Attributes	Used to define the field attributes of a section.							

The following table lists the various pages and sections that you can include in a customer registration template:

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Account	Auto Pay	No	Account Autopay	No
	Account Characteristics	No	Account Characteristics	No
	Credit Ratings	No	Credit Rating	No
	<p>Note: This template page appears when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.</p>			

Template Category	Template Pages		Template Sections		
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)	
	Main	Yes	Account Identifiers	Yes	
			Account Information	Yes	
	Persons	Yes	Account Address Override Information	No	
			Bill Routing	Yes	
			Main	Yes	
	Person	Accounts	No	-	-
Contact Information		No	Person Address	No	
			Person Email	No	
Deal Information		No	Deal-Main	No	
<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template page appears when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.</p> </div>					
Main		Yes	Person Identifiers	Yes	
	Person Main		Yes		
	Person Names		Yes		
	Person Phones		No		
Person Characteristics	No	Person Characteristics	No		

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Person Hierarchy	No	Person Hierarchy-Characteristics	No
			Person Hierarchy-Main	No
	Policies	No	Parent Policy	No
			Policies	No
	<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplHC business object.</p> </div>			
Registration Characteristics	No	Customer Registration Characteristics	No	
Policy	Policy-Main	Yes	Policy Characteristics	No
			Policy-Main	Yes
			Policy Persons	No
<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template category appears only when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.</p> </div>				

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Policy Plan <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This template category appears when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.</p> </div>	Plan	Yes	Plan-Characteristics	No
Plan-Main			Yes	

2. Enter the required details in the **Template Pages** section.
3. Set the field attributes for the template section, if required.
4. If you want to add more than one page or section for the customer registration template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a page or section from the customer registration template, click the **Delete** (🗑️) icon corresponding to the page or section.

5. Click **Save**.

The pages and sections are added in the customer registration template.

Note:

You can add all the template pages available for a particular template category by clicking the **Select All** check box in the upper left corner of the **Template Pages** section.

You cannot edit or delete a template page or section if a customer registration is already defined using the customer registration template.

Setting the Field Attributes for a Template Section

Prerequisites

To set the field attributes for a template section, you should have:

- Template pages and sections associated with the template category
- Fields for the sections defined in the application

Procedure

To set the field attributes for a template section:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. Note: On clicking the Add  icon, the following columns appear: <table border="1" data-bbox="625 1186 1112 1659"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Template Section</td> <td>Used to indicate the section for a particular page.</td> </tr> <tr> <td>Field Attributes</td> <td>Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.</td> </tr> </tbody> </table>	Column Name	Column Description	Template Section	Used to indicate the section for a particular page.	Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.
Column Name	Column Description							
Template Section	Used to indicate the section for a particular page.							
Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.							

2. Select the template page and template section from the respective columns.
3. Click the **Add**  icon in the **Field Attributes** column corresponding to the template section whose field attributes you want to set.

It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence of the field attribute.	Yes (Conditional) Note: This field is required while setting the field attributes for a template section.
Field	Used to indicate the field for which you want to set attributes. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the field.	Yes (Conditional) Note: This field is required while setting the field attributes for a template section.
Default Field Value	Used to indicate the default value for the field in the template section. Note: On specifying a field, the Search (🔍) icon appears corresponding to the Default Field Value field. On clicking the Search icon, a window appears depending on the field that you have selected. On specifying the default field value, the description of the default field value appears corresponding to the default field value.	Yes (Conditional) Note: This field is required while setting the field attributes for a template section.
Required	Used to indicate whether the field is mandatory in the template section. Note: By default, the check box in the Required column is disabled. It is enabled when you specify the field in the Field column.	Yes (Conditional) Note: This field is required while setting the field attributes for a template section.
Disable Field Value	Used to indicate whether the field is disabled in the template section. Note: By default, the check box in the Disable Field Value column is disabled. It is enabled when you specify the field in the Field column.	Yes (Conditional) Note: This field is required while setting the field attributes for a template section.

Field Name	Field Description	Mandatory (Yes or No)
Identifier Type	Used to indicate the type of identifier for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Identifier Type field. On clicking the Search icon, the Search Zone for Person Identifier window appears.</p> <p>On specifying the identifier type, the description of the identifier type appears corresponding to the Identifier Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Identifier Value	Used to specify the value for the identifier type for which you want to set attributes.	Yes (Conditional)
	<p>Note: By default, this field is disabled. It is enabled when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Primary ID	Used to indicate whether the identifier type and identifier value are primary or not.	Yes (Conditional)
	<p>Note: By default, the check box in the Primary ID field is disabled. It is enabled when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Identifier Type	Used to indicate whether the identifier type is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Identifier Type column is disabled. It is enabled when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Identifier Value	Used to indicate whether the identifier value is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Identifier Value column is disabled. It is enabled when you specify the identifier value in the Identifier Value column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>

Field Name	Field Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Name Type field. On clicking the Search icon, the Search Zone for Person Name Type window appears.</p> <p>On specifying the name type, the description of the name type appears corresponding to the Name Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Name	Used to specify the name of the person.	Yes (Conditional)
	<p>Note: By default, this field is disabled. It is enabled when you specify the name type in the Name Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Name Type	Used to indicate whether the name type is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Name Type column is disabled. It is enabled only when you specify the name type in the Name Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Name	Used to indicate whether the specified name of the person is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Name column is disabled. It is enabled when you specify the name in the Name column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Phone Type	Used to specify the type of phone for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Phone Type field. On clicking the Search icon, the Search Zone for Phone Type window appears.</p> <p>On specifying the phone type, the description of the phone type appears corresponding to the Phone Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>

Field Name	Field Description	Mandatory (Yes or No)
Phone Number	Used to specify the phone number.	Yes (Conditional)
	Note: By default, this field is disabled. It is enabled when you specify the phone type in the Phone Type column.	Note: This field is required while setting the field attributes for a template section.
Disable Phone Type	Used to indicate whether the phone type is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Phone Type column is disabled. It is enabled when you specify the phone type in the Phone Type column.	Note: This field is required while setting the field attributes for a template section.
Disable Phone Number	Used to indicate whether the specified phone number is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Phone Number column is disabled. It is enabled when you specify the phone number in the Phone Number column.	Note: This field is required while setting the field attributes for a template section.
Characteristic Information	Used to indicate the characteristic type and characteristic value for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying the characteristic type, the characteristic value field appears in the Characteristic Information column.</p> <p>On specifying a predefined characteristic type, the Search (🔍) icon appears corresponding to the characteristic value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the characteristic value field..</p>	Note: This field is required while setting the field attributes for a template section.
Disable Characteristic Type	Used to indicate whether the characteristic type is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Characteristic Type column is disabled. It is enabled when you specify the characteristic type in the Characteristic Type column.	Note: This field is required while setting the field attributes for a template section.

Field Name	Field Description	Mandatory (Yes or No)
Disable Characteristic Value	Used to indicate whether the characteristic is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Characteristic Value column is disabled. It is enabled when you specify the characteristic value in the Characteristic Value column.	Note: This field is required while setting the field attributes for a template section.

- Enter the required details in the **Template Pages** section.
- If you want to set more than one field attribute for the template section, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a field attribute from the template section, click the **Delete (🗑)** icon corresponding to the field.

- Click **Save**.

The field attributes are set for the template section.

Editing a Customer Registration Template

Prerequisites

To edit a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To edit a customer registration template:

- Search for the customer registration template in the **Customer Registration Template** screen.
- In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the customer registration template whose details you want to edit.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Displays the customer registration template.	Not applicable
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

3. Modify the details in the **Main** section, if required.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.

The changes made to the customer registration template are saved.

Note: You can edit a customer registration template only when a customer registration it is not yet defined using the customer registration template.

Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the template pages, template sections, and field attributes for the template sections are copied to the new customer registration template. You can then edit the details, if required.

Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To copy a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the customer registration template whose copy you want to create.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template whose copy you want to create is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the CI-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.

The new customer registration template is defined.

Deleting a Customer Registration Template

Procedure

To delete a Customer Registration Template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the customer registration template that you want to delete.

A message appears confirming whether you want to delete the customer registration template.

3. Click **OK**.

The customer registration template is deleted.

Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.

Tip: Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

Customer Registration Type List

The **Customer Registration Type List** zone lists the customer registration types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Edit	On clicking the Edit () icon, the Customer Registration Type screen appears where you can edit the details of the customer registration type.
Duplicate	On clicking the Duplicate () icon, the Customer Registration Type screen appears where you can define a new customer registration type using an existing customer registration type.
Delete	On clicking the Delete () icon, you can delete the customer registration type. Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

You can filter the list using various search criteria (such as, **Customer Registration Type** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to a customer registration type, the **Customer Registration Type** zone appears with the details of the respective customer registration type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

- **Additional Data** - Displays additional information about the customer registration type. It contains the following fields:

Field Name	Field Description
Approval Required	Indicates whether approval is required while creating the customer registration using the customer registration type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for approval.
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	Indicates that users with the specified To Do role can only approve, reject, or resubmit the customer registration for approval.
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>
Submitter To Do Type	Indicates the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	Indicates the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Final Approval Required	Indicates whether the final approval is required once the approver at the first level approves the customer registration.
	<p>Note:</p> <p>This field appears when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p> <p>The final approval is required when the Manual Billing Hierarchy and Pricing option check box is selected.</p>

Field Name	Field Description
Final Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for final approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> <p>This field appears when the Final Approval Required check box is selected.</p>
Final Approval To Do Role	Indicates that users with the specified To Do role can only approve or resubmit the customer registration for final approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> <p>This field appears when the Final Approval Required check box is selected.</p>
Manual Billing Hierarchy and Pricing	Indicates whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration.
	<p>Note:</p> <p>This field appears when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p> <p>This feature is used only for customer registration objects where the person type is set to Parent Customer.</p>
Billing Hierarchy and Pricing To Do Type	Indicates the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> <p>This field appears when the Manual Billing Hierarchy and Pricing check box is selected.</p>
Billing Hierarchy and Pricing To Do Role	Indicates users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> <p>This field appears when the Manual Billing Hierarchy and Pricing check box is selected.</p>

Field Name	Field Description
Person Business Object	Indicates the business object using which the person is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the account is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Policy Plan Business Object	Indicates the business object using which the policy plan is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.
Benefits Business Object	Indicates the business object using which the benefit is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Membership Business Object	Indicates the business object using which the membership is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.
Address Business Object	Indicates the business object using which the address is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created while defining the customer registration.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the customer registration type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Customer Registration Templates** - Lists the templates that are associated with the customer registration type for creating a customer registration. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the customer registration template.
Template Category	Indicates the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> • Person • Account • Policy • Policy Plan <p>Note: The Policy and Policy Plan template categories appear when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p>
Template	Displays the customer registration template associated with the customer registration type. <p>Note: It has a link. On clicking the link, the Customer Registration Template screen appears where you can view the details of the respective customer registration template.</p>

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration type.
Delete	Used to delete the customer registration type. <p>Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.</p>
Duplicate	Used to create a new customer registration type using an existing customer registration type.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

- **Copy Customer Registration Details** - Enables you to specify the type of information you want to copy while defining a customer registration using an existing customer registration. It contains the following fields:

Column Name	Column Description
Person Names	Indicates whether you want to copy the person details while copying a customer registration.
Accounts	Indicates whether you want to copy the account details while copying a customer registration.
Person Identifiers	Indicates whether you want to copy the person identifier details while copying a customer registration.
Account Identifiers	Indicates whether you want to copy the account identifier details while copying a customer registration.
Person Phones	Indicates whether you want to copy the phone details of the person while copying a customer registration.
Account Characteristics	Indicates whether you want to copy the characteristic details of the account while copying a customer registration.
Person Characteristics	Indicates whether you want to copy the characteristic details of the person while copying a customer registration.
Account Auto Pay Information	Indicates whether you want to copy the automatic payment details of the account while copying a customer registration.
Person Addresses	Indicates whether you want to copy the address details of the person while copying a customer registration.
Account Persons	Indicates whether you want to copy the details of the persons related to the account while copying a customer registration.
Person Hierarchy	Indicates whether you want to copy the person hierarchy details while copying a customer registration.
Account Override Address	Indicates whether you want to copy the account override address details while copying a customer registration.
Bill Routing Information	Indicates whether you want to copy the bill routing details of the account while copying a customer registration.

Searching for a Customer Registration Type

Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.

The **Customer Registration Type** screen appears with a list of customer registration types in the **Customer Registration Type List** zone.

4. Click the **Filters** (🔍) icon in the title bar of the **Customer Registration Type List** zone.

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to search for a particular customer registration type.	No
Description	Used to search for customer registration types having a particular description.	No

5. Enter the search criteria in the **Customer Registration Type List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of customer registration types that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Type

Prerequisites

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To define a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: <ul style="list-style-type: none"> • Customer Registration Type - Banking • Customer Registration Type - Healthcare 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

Note: The **Select Business Object** screen appears when there are multiple customer registration type business objects defined in the application. If there is only one customer registration type business object defined in the application, the **Customer Registration Type** screen appears.

4. Select the required customer registration business object from the respective field.
5. Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> Active Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

- Enter the required details in the **Main** section.
- Define additional information about the customer registration type in the **Additional Data** section.
- Define a list of characteristics for the customer registration type in the **Characteristics** section.
- Associate customer registration templates with the customer registration type in the **Customer Registration Templates** section
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
- Click **Save**.

The customer registration type is defined.

Defining a Characteristic for a Customer Registration Type

Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

Procedure

To define a characteristic for a customer registration type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer registration type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Customer Registration Type .	Note: This field is required when you are defining a characteristic for the customer registration type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the customer registration type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the customer registration type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the customer registration type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the customer registration type.

Editing a Customer Registration Type

Prerequisites

To edit a customer registration type, you should have:

- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application

- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To edit a customer registration type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the customer registration type whose details you want to edit.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Not applicable
Business Object	Indicates the business object using which the customer registration type is created in the system.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> Active Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p> </div>	Yes
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

Tip: Alternatively, you can edit the details of a customer registration type by clicking the **Edit** button in the **Customer Registration Type** zone.

- Modify the required details in the **Main** section, if required.
- Modify additional information about the customer registration type in the **Additional Data** section, if required.
- Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section, if required.
- Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section, if required.
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section, if required.
- Click **Save**.

The changes made to the customer registration type are saved.

Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the additional data, characteristics, customer registration templates, and attributes set to define a customer registration from the existing customer registration are copied to the new customer registration type. You can then edit the details, if required.

Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To copy a customer registration type:

1. Search for a customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the customer registration type whose copy you want to create.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> • Active • Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

Tip: Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

- Enter the required details in the **Main** section.
- Enter additional information about the customer registration type in the **Additional Data** section.
- Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section.
- Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section.
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
- Click **Save**.

The new customer registration type is defined.

Deleting a Customer Registration Type

Procedure

To delete a Customer Registration Type:

- Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.

- In the **Customer Registration Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the customer registration type that you want to delete.

A message appears confirming whether you want to delete the customer registration type.

- Click **OK**.

The customer registration type is deleted.

Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

Tip: Alternatively, you can delete a customer registration type by clicking the **Delete** button in the **Customer Registration Type** zone.

Searching for a Customer Registration

Prerequisites

To search for a customer registration, you should have:

- Customer registration business objects defined in the application
- Customer registration statuses and customer registration types defined in the application
- Divisions associated with the access group to which the user belongs
- Person types and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Inbound message statuses, inbound message types, and source systems defined in the application.
- File statuses and file request types defined in the application.

Procedure

To search for a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration** sub-menu.
The **Customer Registration** screen appears.
4. Enter the search criteria in the **Search Customer Registration** zone.

Note:

You must specify at least one search criterion while searching for a customer registration object. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify the division when you are searching for a customer registration of a person using the city.

You must specify division and/or any other criteria in the second group when you are searching for a customer registration using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the customer registration using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **Search Customer Registration** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of customer registrations that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration

Prerequisites

To define a customer registration, you should have:

- Customer registration types, source systems, and person types defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

Procedure

To define a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration** sub-menu.

The **Add Customer Registration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to define the customer registration.	Yes
Source System	Used to indicate the external system from where the customer registration information is received.	No
Person Type	Used to indicate the type of person for whom you want to define the customer registration.	Yes

Tip: Alternatively, you can access the **Add Customer Registration** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration** screen.

4. Select the required **Customer Registration Type** from the respective field.
5. Select the required **Source System** from the respective field, if required.
6. Select the required **Person Type** from the respective field.
7. Click **OK**.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. Note: You can view only those divisions to which you have access in the Division list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	

8. Enter the required details in the **Main** section.
9. Add the names of the person in the **Person Names** section.
10. Add the phone details for the person in the **Person Phones** section.
11. Add the identifier details for the person in the **Person IDs** section.
12. Define the addresses of the person in the **Contact** page, if required.
13. Define a list of characteristics for the person in the **Person Characteristics** page, if required.
14. Define the person to person relationship for the person in the **Hierarchy** page, if required.
15. Add the account details of the person in the **Accounts** page, if required.
16. Add information about the deals created for the person in the **Deal** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

17. Define a list of characteristics for the customer registration in the **Registration Characteristics** page, if required.
18. Click **Validate and Save**.

The customer registration is defined.

Adding an Account for a Person

Prerequisites

To add the account for a person, you should have:

- Customer class, divisions, currencies, account categories, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Collection class defined in the application

Note: The collection class is required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

Procedure

To add an account for a person:

1. Ensure that the **Accounts** section is expanded in the **Accounts** page when you are adding, editing, or removing an account of a person.

The **Accounts** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the account.	Not applicable
Template	Displays the account template using which the account is added for the person.	Not applicable
Customer Class	Indicates the customer class to which the account belongs.	Not applicable
Division	Indicates the division to which the account belongs.	Not applicable
Primary Identifier Type	Indicates the primary identifier type using which the account is added for the person.	Not applicable
Identifier Value	Displays the value of the primary identifier type.	Not applicable
Account Information	Displays the concatenated string of information about the account that is added for the person.	Not applicable
View / Edit	On clicking the View / Edit (✎) icon, you can view or edit the details of the account.	Not applicable

Note: No information appears in the above columns if an account is not yet added for the person.

2. Click the **Add New Account** button in the **Accounts** section.

The **Customer Registration - Add Account** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the account.
- **Auto Pay** - Used to add the automatic payment details of the account.
- **Persons** - Used to associate a person to the account.
- **Account Characteristics** - Used to define a list of characteristics for the account.
- **Credit Ratings** - Used to add the credit rating details for the account.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the account.
- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Set Up Date	Used to specify the date from when the account is configured for the person.	Yes
	Note: By default, the current date appears in this field.	
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account.	Yes
	Note: The list includes only those currencies which are defined in the system.	
Account Category	Used to indicate the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	Yes
	Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field.	
Access Group	Used to indicate the user group that can access the account for the person.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Exclude Accrual	<p>Used to indicate whether the account is eligible for accrual.</p> <p>Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the Exclude Accrual check box. On selecting the Exclude Accrual check box, the Accrual Cycle field is disabled.</p>	No
Accrual Cycle	<p>Used to indicate the accrual cycle of the account in the division.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search for Cust Reg window appears.</p> <p>On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the Accrual Cycle field.</p> <p>This field is disabled when you click the Exclude Accrual check box.</p>	No
Product	<p>Used to indicate the product for which the account is enrolled.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Search Product window appears.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while enrolling an account for a product.</p>
Eligible for Repricing	<p>Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>	No
Bill Cycle	Used to indicate the bill cycle for the account.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes
	Note: In case you don't want to bill the account in advance, you must specify 0 in this field.	
Comments	Used to specify additional information about the account.	No

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
5. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
6. Associate or disassociate persons from the account in the **Persons** page, if required.
7. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
8. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
9. Click **Validate and Save**.

The account is added for the person.

Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

Prerequisites

To copy a customer registration, you should have:

- Customer registration (whose copy you want to create) defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application

- Address type codes and countries defined in the application
- Characteristic Types defined in the application
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

Procedure

To copy a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. Click the **Copy**  icon in the **Copy** column corresponding to the customer registration whose copy you want to create.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which the person belongs.	Not applicable
Person Since Date	Used to specify the date from when the person is the main customer.	No
Customer Segment	Used to indicate the customer segment to which the person belongs. Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	No
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs. Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	No
Access Group	Used to indicate the user group that can access the customer registration. Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.	No

3. Enter the required details in the **Main** section.
4. Add or remove the names of the person in the **Person Names** section.
5. Add or remove the phone details for the person in the **Person Phones** section.
6. Add, edit, or remove the identifier details for the person in the **Person IDs** section.
7. Define, edit, or remove the addresses of the person in the **Contact** page, if required.
8. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
9. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
10. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
11. Add, edit, or remove information about the deals created for the person in the **Deal** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

12. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, if required.
13. Click **Validate and Save**.

The new customer registration is defined.

Editing the Customer Registration Details

Prerequisites

To define a customer registration, you should have:

- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

Procedure

To edit a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs.	Yes
	Note: You can view only those divisions to which you have access in the Division list.	
Person Since Date	Used to specify the date from when the person is the main customer.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the names of the person in the **Person Names** section.
6. Add, edit, or remove the phone details of the person in the **Person Phones** section.
7. Add or remove the identifier details of the person in the **Person IDs** section.
8. Define, edit, or remove the address of the person in the **Contact** page, if required.
9. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
10. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
11. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
12. Add, edit, or remove information about the deals created for the person in the **Deal** page, if required.

Note: This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

13. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, if required.
14. Click **Validate and Save**.

The changes made to the customer registration are saved.

Approving a Customer Registration

You can view the number of customer registrations which are pending for an approval in the **Customer Registration** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the customer registration based on the observations.

Note: The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To approve a customer registration:

1. Do either of the following:

If you want to...	Then...
Approve a customer registration through the Customer Registration screen	<ol style="list-style-type: none"> 1. Search for the customer registration in the Customer Registration screen. 2. In the Search Results section, click the link in the Customer Registration ID column corresponding to the customer registration which you want to review.
Approve a customer registration from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-CustomerRegistration in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. 5. Click Search. The To Do Type Search screen appears.

The **Customer Registration** screen appears.

2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is accurate, then click the **Approve** button in the **Customer Registration** zone.

Note: The **Approve** button appears when:

- The status of customer registration is in the **Approval In Progress**.
- A user with the approval To Do role is reviewing the customer registration.

Rejecting a Customer Registration

Prerequisites

To reject a customer registration, you should have:

- Reasons defined for the **Rejected** status of the **C1-CustomerRegistration** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To reject a customer registration:

1. Do either of the following:

If you want to...	Then...
Reject a customer registration through the Customer Registration screen	<ol style="list-style-type: none"> 1. Search for the customer registration in the Customer Registration screen.

If you want to...	Then...
	<ol style="list-style-type: none"> In the Search Results section, click the link in the Customer Registration Information column corresponding to the customer registration which you want to review.
Reject a customer registration from the To Do List screen	<ol style="list-style-type: none"> Click the Menu link in the Application toolbar. A list appears. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. Enter C1-CustomerRegistration in the To Do Type field. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the customer registration that you want to review.

The **Customer Registration** screen appears.

- Review the details in the **Customer Registration** screen.
- If the information in the customer registration is incorrect, then click the **Reject** button in the **Customer Registration** zone.

The **Reject Customer Registration** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the customer registration. Note: The list includes only those reasons which are defined for the Rejected status of the C1-CustomerRegistration business object in the Status Reason screen.	Yes
Comments	Used to specify additional information while rejecting the customer registration.	No

Note: The **Reject** button appears when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

4. Select the reason for rejection of the customer registration from the **Status Reason** field.
5. Click **Save**.

The status of the customer registration is changed to **Rejected**.

Requesting to Resubmit a Customer Registration for Approval

Procedure

To initiate a resubmission request for a customer registration:

1. Do either of the following:

If you want to...	Then...
Request the submitter to resubmit a customer registration through the Customer Registration screen	<ol style="list-style-type: none"> 1. Search for the customer registration in the Customer Registration screen. 2. In the Search Results section, click the link in the Customer Registration ID column corresponding to the customer registration which you want to review.
Request the submitter to resubmit a customer registration from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-CustomerRegistration in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the customer registration that you want to review.

The **Customer Registration** screen appears.

- Review the details in the **Customer Registration** screen.
- If the information in the customer registration is incomplete and you want the submitter to make the required changes and resubmit the customer registration for approval, then click the **Re Submit** button in the **Customer Registration** zone.

The **Resubmit Customer Registration** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the customer registration before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

- Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the customer registration type. In addition, the status of the customer registration is changed to **Draft**.

Chapter 2

Unified Search Feature

The **Search** field in the **Application** toolbar allows you to search for business entities (such as persons and accounts) in addition to the standard search for menu items. For example, you can search for a person using its name or primary identifier and account using its primary identifier. The unified search feature is a simplified version of search that allows you to search for records using free form search text or hint codes. For more complex queries, you may navigate to the corresponding advanced search screens.

You can use the following hints to search for the respective entities:

Hint	Description	Example
/	Used to search for a menu item to navigate directly to the corresponding page or BPA script rather than using the menus to navigate to the desired page or script.	/Customer Registration
n:	Used to search for a customer using the person or customer name. Here, you can specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the Customer 360° Information screen appears with the details of the respective customer.	n: james n: leo%do

Hint	Description	Example
id:	Used to search for a customer using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the Customer 360° Information screen appears with the details of the respective customer.	id: 344234423
aid:	Used to search for an account using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The accounts that meet the search criteria are shown in the drop-down list. Once you select an account from the list, the Customer 360° Information screen appears with the details of the respective account.	aid: 0586096368

If you want to search for a person or account using any additional search criteria, you can directly access the **Customer 360° View** screen by clicking the **Advanced Search** link in the **Search** field.

Chapter

3

Customer 360° View

Topics:

- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides you with the ability to quickly view in-depth information about the person by aggregating data from the application and presenting the same on a screen named **Customer 360° View**. This data can then be easily used for analysis. You can use the person or account details to view the 360° information of the person, such as:

- Basic details, characteristics, linked accounts, hierarchy, and the customer contacts of a person
- Basic details, characteristics, account persons list, automatic payment options, billing history, payment history, dispute details, hold details, and overdue processes details of the person's account
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, or write off) through which the bill is settled, high level summary and details of the bill segments included the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Customer 360° View

The **Customer 360° View** screen allows you to search for a person and account using various search criteria. You can then view 360° information of the person and the person's account, and vice-versa. By default, whenever you login to the application, the **Customer 360° View** screen appears. This screen consists of the following zone:

- [360° Search](#) on page 200

360° Search

The **360° Search** zone allows you to search for a person and account using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person or account. The valid values are: <ul style="list-style-type: none"> • Person • Account 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search persons or accounts which belong to a particular division.	No
Person Name	Used to search a particular person using its primary or secondary name. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer.	No
	Note: This field appears when: <ul style="list-style-type: none"> • The Person option is selected from the Search By list. • The Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked. 	

Field Name	Field Description	Mandatory (Yes or No)
Person Type	<p>Used to search persons of a particular type. The valid values are:</p> <ul style="list-style-type: none"> • Bill Group • Broker • Business • Group • Parent Customer • Person <p>Note: This field appears when the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	No
Customer Segment	<p>Used to search for a persons which belong to a particular customer segment.</p> <p>Note: This field appears when the Person option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	No
Prospect	<p>Used to search for persons which are prospects for whom a deal is defined in the system. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This field appears when the Person option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	No
Address	<p>Used to search persons with a particular address or accounts' whose main customer has a particular address.</p> <p>Note: This field appears when the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	No
City	<p>Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city.</p> <p>Note: This field appears when the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Phone Number	Used to search a person with a particular phone number.	No
	Note: This field appears when the Person option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Person ID	Used to search a particular person.	No
	Note: This field appears when the Person option is selected from the Search By list.	
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person or account.	Yes (Conditional)
	Note: This field appears when: <ul style="list-style-type: none"> • The Person option is selected from the Search By list. • The Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked. 	
Person Identifier	Used to search for a person or account by specifying the person identifier.	Yes (Conditional)
	Note: This field appears when: <ul style="list-style-type: none"> • The Person option is selected from the Search By list. • The Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked. 	
Characteristic Type	Used to search persons or accounts with a particular type of characteristic.	No
	Note: This field appears when the Advanced Search link available in the right side of the 360° Search zone is clicked.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to search persons or accounts with a particular characteristic.	Yes (Conditional) Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Customer Class	Used to search accounts which belong to a particular customer class.	No
	Note: This field appears when the Account option is selected from the Search By list.	
Account ID	Used to search a particular account.	No
	Note: This field appears when the Account option is selected from the Search By list.	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional) Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
	Note: This field appears when the Account option is selected from the Search By list.	
Primary Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	Note: This field appears when the Account option is selected from the Search By list.	
Account Category	Used to search for accounts which belong to a particular account category. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	No
	Note: This field appears when the Account option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to search for accounts which are enrolled for a particular product.	No
	Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Product Search window appears.	

Note:

You must specify at least one search criterion while searching for a person or account. One more search criterion is required when you are searching for a person or account using the division and/or customer class.

If you have specified any other search criterion along with the person ID or account ID the system ignores the additional search criterion and searches using the person ID or account ID respectively.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. This column appears when the Person option is selected from the Search By list.
Person Name	Displays the name of the person.
	Note: This column appears when the Person option is selected from the Search By list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	Note: This column appears when the Person option is selected from the Search By list.
Primary Person Identifier	Displays the primary person identifier.
	Note: This column appears when the Person option is selected from the Search By list.

Column Name	Column Description
Account Information	<p>Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> <p>This column appears when the Account option is selected from the Search By list.</p>
Primary Account Identifier Type	<p>Indicates the primary identifier type associated with the account.</p> <p>Note: This column appears when the Account option is selected from the Search By list.</p>
Primary Account Identifier	<p>Displays the primary account identifier.</p> <p>Note: This column appears when the Account option is selected from the Search By list.</p>
Main Customer	<p>Indicates the main customer of the account.</p> <p>Note: This column appears when the Account option is selected from the Search By list.</p>
Division	Indicates the division to which the person or account belongs.
Customer Class	<p>Indicates the customer class to which the account belongs.</p> <p>Note: This column appears when the Account option is selected from the Search By list.</p>

Note:

You can view the 360° information of the person or account by clicking the **View** () icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Person

Prerequisites

To search for a person, you should have:

- Divisions, customer segments, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View..**
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer segment when you are searching for a person using the city.

You must specify division, customer segment, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account

Prerequisites

To search for an account, you should have:

- Divisions, customer classes, person types, person identifier types, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the fourth criteria group) and account identifier (in the third criteria group), the system searches using the account identifier instead of the person name.

You must specify division and/or customer class when you are searching for an account using the city.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: The data appears in this column when the type of characteristic value is set to Predefined Value or Foreign Key Value.</p> </div>

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Account Persons

The **Account Persons** zone lists all the persons to which the account is linked. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person to which the account is linked. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Relationship Type	Indicates how the person is related to the account.
Main Customer	Indicates whether the person is a main customer. The valid values are: <ul style="list-style-type: none"> • Yes • No
Financially Responsible	Indicates whether the person is financially responsible. The valid values are: <ul style="list-style-type: none"> • Yes • No

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view additional information about the person in the **Person** tab by clicking the **View** () icon corresponding to the person in the **Account Persons** zone.

Enrolled Products

The **Enrolled Products** zone lists the products for which the account is enrolled. It contains the following columns:

Column Name	Column Description
Product	Displays the product for which the account is enrolled.
	Note: It has a link. On clicking the link, the Product screen appears where you can view the details of the respective product.
Product Version	Displays the version of the enrolled product.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.
Start Date	Displays the start date of the product enrollment.
End Date	Displays the end date of the product enrollment.
Product Type	Indicates the type of product.
Product Priority	Displays the enrollment priority of the product.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view additional information about the enrolled product in the **Product and Pricing** tab by clicking the **View** () icon corresponding to a product in the **Enrolled Products** zone.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit card or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	Note: The data appears in this column when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal .
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Timeline

The **Timeline** zone displays the following information in a graphical presentation:

- Number of regular bills created for the account in a particular month
- Number of adhoc bills created for the account in a particular month
- Number of payments created for the account in a particular month
- Number of dispute requests created for the account in a particular month
- Number of active hold requests created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	Note: By default, the current month appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	Note: By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (🔍) icon.

You can use the **Previous Year** (⏪), **Previous Month** (⏴), **Next Month** (⏵), and **Next Year** (⏩) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Regular Bills	<p>A small icon appears for each regular bill created for the account in the respective month. For example, if three regular bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the bill is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Fully Matched</td> <td>Green</td> </tr> <tr> <td>Unmatched</td> <td>Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.</p> <p>Note:</p> <p>If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red
If the bill is...	Then the icon appears in...						
Fully Matched	Green						
Unmatched	Red						

Row Name	Row Description												
Adhoc Bills	<p>A small icon appears for each adhoc bill created for the account in the respective month. For example, if three adhoc bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1" data-bbox="467 485 1466 638"> <thead> <tr> <th data-bbox="467 485 964 535">If the bill is...</th> <th data-bbox="972 485 1466 535">Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td data-bbox="467 537 964 588">Fully Matched</td> <td data-bbox="972 537 1466 588">Green</td> </tr> <tr> <td data-bbox="467 590 964 638">Unmatched</td> <td data-bbox="972 590 1466 638">Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.</p> <p>Note:</p> <p>If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red						
If the bill is...	Then the icon appears in...												
Fully Matched	Green												
Unmatched	Red												
Payments	<p>A small icon appears for each payment created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table border="1" data-bbox="467 1297 1466 1602"> <thead> <tr> <th data-bbox="467 1297 964 1348">Status</th> <th data-bbox="972 1297 1466 1348">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="467 1350 964 1400">Frozen</td> <td data-bbox="972 1350 1466 1400">Green</td> </tr> <tr> <td data-bbox="467 1402 964 1453">Canceled</td> <td data-bbox="972 1402 1466 1453">Red</td> </tr> <tr> <td data-bbox="467 1455 964 1505">Freezable</td> <td data-bbox="972 1455 1466 1505">Blue</td> </tr> <tr> <td data-bbox="467 1507 964 1558">Error</td> <td data-bbox="972 1507 1466 1558">Red</td> </tr> <tr> <td data-bbox="467 1560 964 1610">Incomplete</td> <td data-bbox="972 1560 1466 1610">Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of the zone. It has a link. On clicking the link, the Payment screen appears where you can view the details of the payment.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-PY-EVT algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

Row Name	Row Description												
Dispute Requests	<p>A small icon appears for each dispute request created for the account in the respective month. For example, if one dispute request is created for the account in the month of Aug 2016, three dispute requests are created in the month of Dec 2016, and four dispute request are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the dispute request was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the dispute request:</p> <table border="1" data-bbox="467 453 1463 753"> <thead> <tr> <th data-bbox="475 459 964 501">Status</th> <th data-bbox="969 459 1455 501">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 508 964 550">Active</td> <td data-bbox="969 508 1455 550">Green</td> </tr> <tr> <td data-bbox="475 556 964 598">Approved</td> <td data-bbox="969 556 1455 598">Green</td> </tr> <tr> <td data-bbox="475 604 964 646">Rejected</td> <td data-bbox="969 604 1455 646">Red</td> </tr> <tr> <td data-bbox="475 653 964 695">Approval In Progress</td> <td data-bbox="969 653 1455 695">Orange</td> </tr> <tr> <td data-bbox="475 701 964 743">Draft</td> <td data-bbox="969 701 1455 743">Orange</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding dispute information appears at the bottom of the zone. It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the dispute.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-DP-EVT algorithm.</p>	Status	Color	Active	Green	Approved	Green	Rejected	Red	Approval In Progress	Orange	Draft	Orange
Status	Color												
Active	Green												
Approved	Green												
Rejected	Red												
Approval In Progress	Orange												
Draft	Orange												
Processes on Hold	<p>A small icon appears for each active hold request for the account in the respective month depending upon the number of processes on hold. For example, if there is one active hold request having two processes on hold for the account in the month of Aug 2016 and two active hold requests as H1 and H2, having one process on hold for H1 hold request and four processes on hold for H2 hold request for the month of Dec 2016, then two icon appears in the Aug 2016 column and five icons appear in the Dec 2016 column. A text indicating the day of the month on which an entity was kept on hold appears on the icon. The following table indicates the color in which the icon appears depending on the status of the hold request:</p> <table border="1" data-bbox="467 1272 1463 1373"> <thead> <tr> <th data-bbox="475 1278 964 1320">Status</th> <th data-bbox="969 1278 1455 1320">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1327 964 1369">Active</td> <td data-bbox="969 1327 1455 1369">Green</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding hold information appears at the bottom of the zone. It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the dispute.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-HR-EVT algorithm.</p>	Status	Color	Active	Green								
Status	Color												
Active	Green												

Billing History

The **Billing History** zone lists all the billing information of the account. It contains the following columns:

Column Name	Column Description
Bill Information	Displays the concatenated string of information about the bill separate by a comma (.). In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.
Bill Amount	Displays the bill amount.
Unpaid Amount	Displays the unpaid amount of the bill.
Days Past Due	Displays the number of days past after the due date.
Billing Method	Displays the method used for generating bill.

You can filter the list using the **On or before Bill Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Note: You can view additional information about the bill in the **Bill Information** screen by clicking the **View** (🔗) icon corresponding to the bill in the **Billing History** zone.

Payment History

The **Payment History** zone lists all the payment information of the account. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays the concatenated string of information about the payment event of the account separated by a comma (.). Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the payment event.
Payment Date	Displays the date when the payment is created or canceled for the account.
Payment Amount	Displays the amount paid through the tender.
Payment Status	Displays the current status of payment. The valid values are: <ul style="list-style-type: none"> • Canceled • Error • Freezable • Frozen • Incomplete
Tender Source	Displays the tender source through which the payment is remitted.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Dispute Details

The **Dispute Details** zone lists the dispute requests that are created for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays the concatenated string of information about the dispute request separated by a comma (,).
	Note: It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the amount which is on dispute for the account.
Status	Displays the status of the dispute request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bills of the account are kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays the concatenated string of information about the hold request separated by a comma (,).
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> • Active • Approval in Progress • Deferred Processing • Draft • Rejected • Released
Entity	Indicates the type of the entity for which the hold request is created in the system. The valid value is: <ul style="list-style-type: none"> • Account
Hold Reason	Displays the reason for which the hold request is created for the account.
Hold Process	Indicates the process that is kept on hold for the account.
Start Date	Displays the date from when the hold request is effective for the account.
End Date	Displays the date till when the hold request is effective for the account.

Overdue Process Details

The **Overdue Process Details** zone lists the overdue processes created for the bills of the account. It contains the following columns:

Column Name	Column Description
Overdue Process Information	Indicates the overdue process which is initiated for the bill and is currently in the Active status. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the respective overdue process.
Overdue Amount	Displays the overdue amount for the account.
Number of Overdue Bills	Displays the total number of bills that are overdue for the account.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Trial Bills

The **Trial Bills** zone lists the trial bills which are created for the account. It contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the trial bill is created.
Trial Bill Information	Displays the concatenated string of information about the trial bill separated by comma (.). Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.

Customer 360° Information - Product and Pricing

The **Product and Pricing** tab allows you to view the details of the following:

- Products and its associated price items to which the account or account's of the person are enrolled
- Assigned price lists and its price items for the account or person
- Effective price assignments for the account or person

The **Product and Pricing** tab contains the following zones:

- [Product](#) on page 233
- [Associated Price Items](#) on page 233

Note: By default, the **Associated Price Items** zone does not appear in the **Product and Pricing** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the product in the **Product** zone.

- [Price List Assignments](#) on page 234
- [Price List Price Items](#) on page 235

Note: By default, the **Price List Price Items** zone does not appear in the **Product and Pricing** tab. It appears when you click the **Broadcast** (📡) icon corresponding to a price list in the **Price List Assignments** zone.

- [Effective Price Assignments for Account](#) on page 236

Note: The **Effective Price Assignments for Account** zone appears when you viewing the enrolled products of an account.

- [Effective Price Assignments for Person](#) on page 240

Note: The **Effective Price Assignments for Person** zone appears when you viewing the enrolled products for the persons account.

Product

The **Product** zone lists the following in a tree structure:

- Information string about the product for which the account or account's of the person are enrolled

Note: It has a link. On clicking the link, the **Product** screen appears where you can view the details of the respective product.

- Information string about the product version

Note: It has a link. On clicking the link, the **Product Version** screen appears where you can view the details of the respective product.

- Information about the product services which are offered by the product version
- Information about the add-on product services which are offered in the packaged product.

Note:

By default, the data does not appear in the **Product** zone. It appears when you click the **View** () icon corresponding to a product in the **Enrolled Products** zone of the **Account** or **Person** tab of the **Customer 360° Information** screen.

On clicking the **Broadcast** () icon corresponding to the product, the **Associated Price Items** zone appears where you can view the associated price items of the product.

Associated Price Items

The **Associated Price Items** zone displays information about the price items associated with the product. It contains the following columns:

Field Name	Field Description
Sequence No.	Displays the sequence number of the associated price item.

Field Name	Field Description
Pricing Information	Displays the concatenated string of information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.
Price Item	Displays the price item code.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Associated Price Items** zone does not appear in the **Product and Pricing** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the product in the **Product** zone.

Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or account's of the person. You will not find any records in this zone if the account of account's of the person does not have any price lists assigned to it. It contains the following columns:

Column Name	Column Description
Sequence No.	Displays the sequence number of the assigned price list.
Price List Information	Displays information about the price list which is assigned to the account or account's of the person.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the assigned price list.

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed – Indicates price item pricing is agreed for the account. • Account Price List – Indicates price item pricing is defined in the price list which is assigned to the account. • Account Inherited Price List – Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Customer Agreed – Indicates price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List – Indicates price item pricing is defined in the price list which is assigned to the main customer. • Default Price List – Indicates price item pricing defined in the price list is available in the default price list. • Global Price List – Indicates price item pricing defined in the price list is available in the global price list. • Customer Inherited Price List – Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Parent Customer Agreed – Indicates price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List – Indicates price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List – Indicates price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Product Default Price List – Indicates product defined in the price list is available in the default price list.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string of information about the price item pricing for the price list separated by a comma (,).</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.</p>

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

By default, the **Price List Price Items** zone does not appear in the **Product and Pricing** tab of the **Customer 360° Information** screen. It appears when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using the **Price Item**, **Effective Start Date** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

Note:

The **Effective Price Assignments for Account** zone appears when the **Customer 360° Information** is searched for account.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

The **Effective Price Assignments for Account** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the system date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Pending For Approval • Proposed 	No
	Note: By default, the Active option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Product, Default, and Global Pricing	<p>Used to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list <p>Note: By default, the No option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the account.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	<p>Displays multiple parameters based on which the pricing is defined for the price item or price item bundle for assignment.</p> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>

Column Name	Column Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Default Price List • Global Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List • Product Default Price List
Price List Information	<p>Displays information about the price list which is assigned to the account.</p> <p>Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>
Rate Schedule	<p>Indicates the rate schedule which is used for defining the price item pricing.</p> <p>Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the respective rate schedule.</p>
View Rate	<p>On Clicking the View () icon, the Effective Pricing Information screen appears where you can view the details of the persisted rate of the price item pricing.</p> <p>Note: The View icon appears when the Price Item Type is set to Rate.</p>
Edit	<p>On clicking the Edit () icon, the Price Item Pricing screen appears where you can edit the details of the existing price item pricing.</p> <p>Note: The Edit icon appears when the assignment level is Account Agreed.</p>

Column Name	Column Description
Override	<p>On clicking the Override () icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

<p>Note:</p> <p>Pagination is used to display limited number of records in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.</p> <p>The number of records that can be displayed in the Search Results section is controlled via the C1_PR_REC feature configuration. You can change the number of records that can be displayed using the Effective Pricing RecordSet Limit option type of the C1_PR_REC feature configuration. For more information, refer to Setting the C1_PR_REC Feature Configuration on page 4435</p>
--

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person

either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

Note:

The **Effective Price Assignments for Person** zone appears when the **Customer 360° Information** is searched for person.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

The **Effective Price Assignments for Person** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the system date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Pending For Approval • Proposed 	No
	Note: By default, the Active option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Product, Default, and Global Pricing	Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are: <ul style="list-style-type: none"> Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> Default price list defined for the division Global price list No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> Default price list defined for the division Global price list 	No
	Note: By default, the No option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Displays multiple parameters based on which the pricing is defined for the price item or price item bundle for assignment.
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Customer Agreed • Customer Price List • Customer Inherited Price List • Default Price List • Global Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List
Price List Information	<p>Displays information about the price list which is assigned to the person.</p> <p>Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>

Viewing the Bill Information

Procedure

To view the bill information:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.
The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Billing History** zone, click the **View** () icon corresponding to the bill whose details you want to view.
The **Bill Information** screen appears. It consists of the following zones:
 - [Bill Information](#) on page 247
 - [Settlement Activities](#) on page 247
 - [Hold Details](#) on page 248
 - [Offset Details](#) on page 249
 - [Bill Line Items](#) on page 249
 - [Garnishment Details](#) on page 250
 - [Refund and Write Off Details](#) on page 250
 - [Dispute Details](#) on page 251
4. View the basic details of the bill in the **Bill Information** zone.
5. View the settlement activities of the bill in the **Settlement Activities** zone.
6. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.

7. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
8. View the selected bill's bill line item in the **Bill Line Items** zone.
9. View the garnishment adjustments of the bill in the **Garnishment Details** zone.
10. View the refund and write off requests through which the bill or its bill segment is either refunded or written off in the **Refund and Write Off Details** zone.
11. View the dispute requests that are created against the bill in the **Dispute Details** zone.

Viewing Price Items Associated to a Product

Procedure

To view the price items associated to a product:

1. Search for the account or person whose accounts are enrolled for a product in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account or person whose details you want to view.
The **Account** or **Person** tab appears in the **Customer 360° Information** screen respectively.
3. Click the **View** (🔗) icon corresponding to a product in the **Enrolled Products** zone.
The **Product and Pricing** tab appears.
4. In the **Product** zone, click the **Broadcast** (📡) icon corresponding to the product whose associated price items you want to view.
The **Associated Price Items** zone appears.
5. View the associated price items of the product in the **Associated Price Items** zone.

Bill Information

The **Bill Information** screen allows you to view:

- Basic details about the bill
- Settlement activities, such as payment, offset, refund, or write off through which the bill is settled
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Bill line items of the bill
- Garnishment adjustments of the bill

- Refund and write off requests through which the bill or its bill segment is either refunded or written off
- Dispute requests due to which bill is kept on hold

The **Bill Information** screen contains of the following zones:

- [Bill Information](#) on page 247
- [Settlement Activities](#) on page 247
- [Hold Details](#) on page 248
- [Offset Details](#) on page 249
- [Bill Line Items](#) on page 249
- [Garnishment Details](#) on page 250
- [Refund and Write Off Details](#) on page 250
- [Dispute Details](#) on page 251

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	<p>Displays the concatenated string of information about the bill separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.</p>
Alternate Bill ID	<p>Displays the alternate bill ID.</p> <p>Note: This field appears only when the respective data is available for the bill.</p>
Account Information	<p>Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.</p>

Settlement Activities

You may settle a bill by making a payment, offsetting a bill, refunding a bill, or by writing off a bill against the pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.

Column Name	Column Description
Activity Type	Indicates the type of the activity. The valid values are: <ul style="list-style-type: none"> • Payment • Offset • Refund • Write Off
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Displays the concatenated string of information about the payment, offset request, refund request, or write off request depending on the type of the settlement activity. <p>Note: It has a link. On clicking the link, the Payment, Offset Request, Refund Request, or Write Off Request screen appears where you can view the details of the respective settlement activity.</p>

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request. <p>Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.</p>
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> • Active • Approval in Progress • Deferred Processing • Draft • Rejected • Released
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill
Entity Information	Displays the concatenated string of information about the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Person, Account, or Bill screen appears where you can view the details of the respective entity.</p>

Column Name	Column Description
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays the concatenated string of information about the offset request separated by a comma (.). Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Indicates the bill amount which is offset against another bill.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Bill Line Items

The **Bill Line Items** zone lists the information about the selected bill's bill line item. It contains the following columns:

Column Name	Column Description
Bill Line Item	Displays the concatenated string of information about the bill line item of the selected bills separated by a comma (.). The valid values are: <ul style="list-style-type: none"> • Bill Segment • Adjustment
Bill Line Item Information	Displays the concatenated string of information about the bill line item separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill Segment or Adjustment screen appears where you can view the details of the respective bill segment or adjustment
Amount	Displays the amount of the bill line item.

Column Name	Column Description
Contract Information	Displays the concatenated string of information about the contract against which the bill segment or adjustment is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Bill Segment Date From** and **To** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Garnishment Details

The **Garnishment Details** zone lists the garnishment adjustments that are created against the bill. It contains the following columns:

Column Name	Column Description
Garnishment Contract ID	Displays the garnishment contract ID. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the contract.
Garnishment Amount	Displays the garnishment amount.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays the concatenated string of information about the refund or write off request separated by a comma (,).
	Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears depending on whether the request is created for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.

Column Name	Column Description
Status	Indicates the status of the refund or write off request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Deferred Processing • Draft • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off
Account Information	Displays the concatenated string of information about the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.</p>
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

Dispute Details

The **Dispute Details** zone lists the dispute requests that are created for the bill of an account. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the dispute request is created for the bill.
Dispute Request ID	Displays the concatenated string of information about the dispute request separated by a comma (.). <p>Note: It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the respective dispute request.</p>
Dispute Amount	Displays the amount which is on dispute for the bill.
Status	Displays the status of the dispute request.

Column Name	Column Description
Account Information	Displays the concatenated string of information about the account for which the bill dispute request is created separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.
Created By	Indicates the user who has created the dispute request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Chapter 4

Invoicing Group

Topics:

- [Manage Invoicing Groups](#)
- [Invoicing Group Maintenance — Add/Edit](#)
- [Invoicing Group Information](#)

Invoicing group allows you to combine the charges for multiple accounts onto one bill for each billing period. It consists of the following:

- **Master Account** - The group level account that controls the billing.
- **Member Accounts** - The accounts whose bills are aggregated at the group level.

The following figure is a graphical representation of an invoicing group:

You can create an invoicing group by adding member accounts to the master account. An account can be the master account in the invoicing group when its **Invoice Group Account** characteristic type is set to **Y**. On the other hand, an account can be added as a member to the master account when its **Invoice Group Account** characteristic type is set to **N**.

Note: You can define the Invoice Group Account characteristic for the account when the **Invoice Group Account** option type in the **C1_ACCTINFO** feature configuration is set. If the **Invoice Group Account** option type in the **C1_ACCTINFO** feature configuration is not set, you will not be able to indicate whether the account is a master or member account. For more information, refer to [Setting the C1_ACCTINFO Feature Configuration](#) on page 4398.

There is no restriction on the number of accounts that can be added to the master account. The accounts in the invoicing group can belong to different persons and may have different currencies, but they should be from the same banking division and person hierarchy. If the member accounts have a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.

Balances are maintained at the master account level. Bills are added to the master account's balance, and payments are subtracted from that balance. However, the charges can be traced back to the originating member accounts. The master account cannot have charges of its own; all charges come from the member accounts. However, when an account does not belong to any master account, it is billed individually with its charges appearing on the bill.

The contracts linked at the member level are duplicated at the master level when member accounts are added to the master account. However, note that only contracts which are eligible for billing are duplicated at the master level. Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

Manage Invoicing Groups

The **Manage Invoicing Groups** screen allows you to search for the master and member accounts using various search criteria. Through this screen, you can navigate to the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens.

This screen contains the following two sections:

- Search Criteria
- Search Results

Searching for a Master Account

Prerequisites

To search for a master account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Master accounts created in the application

Procedure

To search for a master account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Billing Management** and then click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears.

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) Note: If you specify the billing cycle or person class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Person Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

Note: You must specify at least one search criterion while searching for a master account.

3. Select **Master** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The master accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the master account ID. Note: It has a link. On clicking the link, the Invoicing Group Maintenance – Add/Edit screen appears where you can view the details of the respective master account.
Account Identifier Type	Displays the account identifier type of the master account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the master account.
Division	Displays the division to which the master account belongs.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.

Searching for a Member Account

Prerequisites

To search for a member account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Accounts added as a member to the master accounts

Procedure

To search for a member account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, click **Billing Management** and then click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) Note: If you specify the billing cycle or customer class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Customer Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

Note: You must specify at least one search criterion while searching for a member account.

3. Select **Member** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The member accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the member account ID. Note: It has a link. On clicking the link, the Invoicing Group Information screen appears where you can view the details of the respective member account.
Account Identifier Type	Displays the account identifier type of the member account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the member account. Note: If the member account has a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.
Division	Displays the division to which the member account belongs.
Person Name	Displays the main person of the member account.
Customer Class	Displays the customer class of the member account.
Master Account Identifier Type	Displays the primary account identifier type of the master account.
Master Account Identifier	Displays the value of the primary account identifier type.
Master Person Name	Displays the main person of the master account.
Billing Cycle	Displays the billing cycle during which the member account is billed.

Viewing the Master Account Details

Procedure

To view the master account details:

1. Search for the master account in the **Manage Invoicing Groups** screen.
2. In the **Search Results** section, click the link in the **Account ID** column corresponding to the master account whose details you want to view.

The **Invoicing Group Maintenance – Add/Edit** screen appears.

- View the accounts that are already added to the master account in the **Member Accounts** zone.

Viewing the Member Account Details

Procedure

To view the member account details:

- Search for the member account in the **Manage Invoicing Groups** screen.
- In the **Search Results** section, click the link in the **Account ID** column corresponding to the member account whose details you want to view.

The **Invoicing Group Information** screen appears.

- View the member account details in the **Selected Member Account** zone, and its master account details in the **Invoicing Group Information** zone.

Invoicing Group Maintenance — Add/Edit

The **Invoicing Group Maintenance – Add/Edit** screen allows you to view the details of the master account. It also allows you to add, edit, and remove member accounts from the master account. This screen consists of the following zones:

- [Account Information](#) on page 259
- [Member Accounts](#) on page 260
- [Edit Member Account Assignment](#) on page 260
- [Search Accounts to Add](#) on page 261
- [Add Member](#) on page 262

Account Information

The **Account Information** zone displays the details of the master account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that the selected account is a master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

Note: All fields in the **Account Information** zone are read-only.

Member Accounts

The **Member Accounts** zone lists the member accounts of the master account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.
Account Currency	Displays the invoice currency of the member account. Note: During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed. Note: If the account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast** (📢) icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	Note: You can modify the date when it is a future date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	Note: You can modify the date when it is not a past date.	
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

Note: If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Maintenance – Add/Edit** screen. It appears when you click the **Broadcast** () icon corresponding to the member account in the **Member Accounts** zone.

Search Accounts to Add

The **Search Accounts to Add** zone lists accounts defined within the division and person hierarchy to which the master account belongs. The list also includes those accounts that are already added to the master account. You can filter the accounts using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to specify the account ID.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Person Name	Used to specify the person whose accounts you want to search.	No
Billing Cycle	Used to specify the billing cycle of the account.	No
Customer Class	Used to specify the customer class of the account.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Customer Name	Displays the name of the main customer.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the account.
Division	Displays the division to which the account belongs.
Customer Class	Displays the customer class of the account.
Billing Cycle	Displays the billing cycle during which the account is billed.

On clicking the **Broadcast** () icon corresponding to the account, the **Add Member** zone appears with the details of the respective account.

How to add a member to the master account	Adding a Member to the Master Account on page 263

Adding a Member to the Master Account

Prerequisites

To add a member to the master account, you should have:

- Accounts within the same banking division and person hierarchy where the value of the **Invoice Group Account** characteristic type is set to **N**
- Accounts with active contracts

Note: You cannot add an account as a member to a master account if that account is already a member of another master during that overlapping period.

Procedure

To add a member to the master account:

1. Access the **Invoicing Group Maintenance – Add/Edit** screen.
2. In the **Search Accounts to Add** zone, click the **Broadcast** () icon corresponding to the account that you want to add to the master account.
The **Add Member** zone appears.
3. Enter the date from when you want the charges for the member account to appear on the bill of the master account in the **Effective Start Date** field.

Note: The effective start date should be earlier than or equal to the member account's contract end date.

4. Click **Save**.

The account is added to the master account. The contracts at the member level are duplicated at the master level.

Note: Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

Invoicing Group Information

The **Invoicing Group Information** screen allows you to view the details of the member account. It also allows you to edit and remove the member account from the master account. This screen consists of the following zones:

- [Invoicing Group Information](#) on page 266
- [Selected Member Account](#) on page 266
- [Edit Member Account Assignment](#) on page 267

Invoicing Group Information

The **Invoicing Group Information** zone displays the master account details of the member account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that this zone displays information about the member's master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

Note: All fields in the **Invoicing Group Information** zone are read-only.

Selected Member Account

The **Selected Member Account** zone displays the details of the member account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.

Column Name	Column Description
Account Currency	Displays the invoice currency of the member account.
	Note: During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed.
	Note: If the member account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast** () icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	Note: You can modify the date when it is a future date. The effective start date should be earlier than or equal to the member account's contract end date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	Note: You can modify the date when it is not a past date. The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

Note: If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the member account in the **Selected Member Account** zone.

- [Price List](#)
- [Pricing \(Account\)](#)
- [Pricing \(Person\)](#)
- [Price Item Pricing \(Used for Viewing\)](#)
- [Pricing Simulation](#)

Oracle Revenue Management and Billing allows you to define prices for price item and services offered to the customers. These prices are either standard prices defined in the price lists or override prices that are specific to a customer or an account. The system allows you to define prices at various levels in a customer hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define prices in the account's price list, main customer's price list, parent customer's price list, price list's parent price list. As prices can be defined at multiple places, the order in which the system searches for effective price item pricing will affect the price charged to the customer. The search order is configurable, and can vary with each division. You need to define the search order in the price assignment search algorithm (which is also known as crawling algorithm) and then attach the algorithm to the division. You can change the search order at any time.

You need to define the price assignment search algorithm using the C1_PRASN algorithm type. The price assignment search algorithm is used while:

- Listing effective price item pricing for an account or a customer
- Fetching effective price item pricing while creating recurring and non-recurring bill segments
- Fetching effective post processing pricing while creating post processing bill segments
- Fetching effective price item pricing in the **Price Item Pricing Verification (C1-TXNVP)** batch

For more information about the price assignment search algorithm, see [Price Assignment Search Mechanism](#) on page 279.

Since a global customer is not associated to any division, the system cannot determine the price assignment search order for a global customer. Hence, the default search order is defined for global customers through the **C1_PRASNORDR** feature configuration. You can change this default search order, if required.

The prices that are specific to a customer or an account are referred to as customer agreed or account agreed prices, respectively. You can override these agreed prices. Customer agreed or account agreed prices are effective for a particular duration and do not expire until you manually specify the end date. However, if you set the **Expire Override Switch** option type of the **C1_EXP_OVRD** feature configuration to **Y**, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the **Expire Override Switch** option type of the **C1_EXP_OVRD** feature configuration to **N**.

The system allows you to define the following types of pricing:

- [Eligible Price List](#)
- [Rate Definition](#)
- [Tiering Criterion](#)
- [Variance Parameter](#)
- [Person to Person Relationship Type Sequence](#)

- Flat Pricing
- Tiered Pricing

For more information about the types of pricing, see [Types of Pricing](#) on page 274.

The price for a price item or service may differ depending upon various transaction, customer or account attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. This multi parameter based pricing feature enables the price analyst to define price item and its parameters which influence pricing. You can then define pricing for the price item based on these parameters. Bundles are offered to customers to provide discounted rates. You can also define pricing for bundles based on multiple parameters. To enable the multi parameter based pricing feature, you must set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration to **True**. For more information about the multi parameter based pricing feature, see [Multi Parameter Based Pricing](#) on page 275.

Prerequisites (Financial Services Business)

To setup the pricing management feature, you need to do the following:

- Define the required SQIs, divisions, To Do types, and To Do roles in the system.
- Define the required parameters in the system.
- Define the required variance parameters and tiering criterion in the system.
- Define the tiering setup for rate components in the system.
- Define the required hierarchy entities in the system.
- Define the required entity hierarchy relationships in the system.
- Define the required price items and price item relationships in the system.
- Define the required price lists in the system.
- Define an algorithm using the **C1_PRASN_PP** algorithm type and attach it to the **Price Assignment Search** algorithm spot of the required divisions.
- Define an algorithm using the **C1-CUSRLALGT** algorithm type and attach it to the **Person relationship type sequence algorithm** parameter of the **C1_PRASN_PP** algorithm.
- Set the following feature configurations in the system:
 - C1-EHRCONFIG
 - C1_EXP_OVRD
 - C1_FM
 - C1_PER_REL
 - C1_PPARAM_FLG
 - C1_PR_REC
 - C1_PRASNORDR
 - C1_PRICING
- Set the **Skip Priceitem Contract Type Validation** option type of the **C1_FINTRANOP** feature configuration.
- Set the batch control type of the **Identify Entities for Repricing (C1-REPC1)** and **Process Repricing Request (C1-REPC2)** batches to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Types of Pricing

The system allows you to define the following types of pricing:

- **Flat Pricing** — Used when you want to charge a fixed price per unit to the customer.
- **Tiered Pricing** — Used when standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization. For example, CG Limited uses wire transfer services provided by a large bank. If CG Limited initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If CG Limited initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, the following tiered pricing is defined:

Quantity Range	Rate (\$) per transfer
0 – 1000	5
1000+	3

You can define two types of tiered pricing:

- **Step Tiered Pricing** — The rate of the first tiering range is used to calculate the charge for the maximum quantity in the range, and for incremental service quantity utilization, the rate of the progressive tiering range is used. This happens till the utilized quantity is exhausted. For example, when you define the following step tiered pricing for Price Item A and the user consumes 60,000 units of the same, the system will charge the first 45,000 units at \$2 per unit and the remaining 15,000 units at \$1 per unit:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

- **Threshold Tiered Pricing** — The rate of the tiering range within which the service quantity utilization falls is used to calculate the charge for the entire volume. For example, when you define the following threshold tiered pricing for Price Item A and the user consumes 75,000 units of the same, the system will charge 75,000 units at \$1 per unit as the service quantity utilization falls within 45000+ tiering range:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

Variance Parameter Based Pricing

Information will be available shortly!

Multi Parameter Based Pricing

Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. You can also define pricing for bundles based on multiple parameters. You can enable or disable the multi parameter based pricing feature by setting the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration. For more information, see [Setting the C1_PPARM_FLG Feature Configuration](#) on page 4434.

If the multi parameter based pricing feature is disabled, you can define pricing for a price item based on the variance parameter. If the multi parameter based pricing feature is enabled, you can define pricing for a price item based on multiple parameters. For example:

Price Item A	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Price Item A based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price item (i.e. Price item A).

Then, when you define Pricing 1 for Price item A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item A	US, USD		0	5000
20	1	Number of Transactions	Price Item A	US, USD		5000	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Price Item A	Germany, USD		0	1000

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
20	3	Number of Transactions	Price Item A	Germany, USD		1000	

Now, when the user performs 1500 transactions (in USD) of Price Item A in Germany, 12000 transactions (in USD) of Price Item A in US, the system creates two billable charges. In one billable charge (with Price Item A, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Price Item A, Germany and USD combination), the system uses \$3 as the rate for calculating charges.

Note that in this case the parameters based on which you have defined pricing and tiering ranges are same. You can use different parameters while defining pricing and tiering ranges, if required. You can also use another price item or bundle and its parameters while defining tiering ranges. For example:

The following table lists the tiering ranges of Pricing 1 defined for Price Item A where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item B	Germany, USD		0	100
20	1	Number of Transactions	Price Item B	Germany, USD		100	200
30	0.5	Number of Transactions	Price Item B	Germany, USD		200	

Now, when the user performs 1500 transactions (in USD) of Price Item A in US, 200 transactions (in USD) of Price Item B in Germany, the system creates one billable charge. The system adds the transactions with the following combinations and then determines the range of Price Item A within which the total units (i.e. 200) fall:

- Price Item B, Germany, USD

In this case, the total units fall in the 100 – 200 range of Price Item A, and therefore the system uses \$1 as the rate for calculating charges (i.e. $1500 * 1 = 1500$).

Some parameters might be mandatory and some might be optional while defining price item pricing. You can define price item pricing based on these parameters at various levels, such as:

- Account Agreed
- Account Price List
- Account Inherited Price List
- Customer Agreed
- Customer Price List
- Customer Inherited Price List
- Parent Customer Agreed
- Parent Customer Price List
- Parent Customer Inherited Price List
- Default Price List
- Global Price List

As prices can be defined at multiple levels, the system first searches for exact match at all levels (using the search order). If the system finds the exact match at multiple levels, the price assignment at the higher precedence level is considered. Let us understand this with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters at the Account Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 2 is defined for Price Item A with the following parameters at the Parent Customer Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters at the Account Price List level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	—

Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system searches for price with exact match (Type — BT, Country — US, and Currency — USD). The exact match is available at two levels — Account Agreed and Parent Customer Agreed. The system considers the price at the Account Agreed level because this level has higher precedence.

Depending on the search order defined for the division (to which the account belongs), the level with higher precedence changes. Accordingly, the price assignment at the higher precedence level is considered for calculating the charges.

If the system does not find the exact match at any level, it searches for the best fit match at all levels. Let us understand how the best fit match is determined with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	-

Pricing 2 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	-

Pricing 4 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	GBP

The system has Pricing 1, Pricing 2, Pricing 3, and Pricing 4 defined for Price Item A. Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system does not find price with exact match (Type — BT, Country — US, and Currency — USD). Therefore, it searches for the best fit match.

While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Currency) and checks whether the price (with Type — BT and Country — US) is available. If the price is available, the system considers the price as the best fit match. Therefore, in this case, Pricing 1 is considered as the best fit match.

Suppose, if the price (with Type — BT and Country — US) is not available, then the system rules out the optional parameter with next lowest priority (i.e. Country) and checks whether the price (with Type — BT and Currency — USD) is available. If the price is available, the system considers the price as the best fit match. In this case, Pricing 2 would be considered as the best fit match. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered.

Multiple Parameter Based Post-Processing Pricing

Until now, while deriving the post-processing bill segments, the system aggregated the regular bill segments of related price items without considering the price item parameters. Now, if you specify a price item parameter while associating regular price items with a post-processing price item and if the pricing for the post-processing price item is based on the price item parameter, the system aggregates the bill segments of regular price item and price item parameter combination. The system searches for the exact match. In this case, if the exact match is not found, the system does not aggregate the bill segments of the related price item. For example, the PR1 post processing price item is associated with the following regular price items:

Regular Price Item	Price Item Parameter
R1	Country = US
R2	Country = US

And, the pricing for PR1 post processing price item is based on Country = US. Now, if the following bill segments are generated for R1 and R2 in a bill:

Bill Segment	Price Item	Parameter 1	Parameter 2
BS1	R1	Country = US	-
BS2	R1	Country = US	Currency = USD
BS3	R1	Country = US	-

Bill Segment	Price Item	Parameter 1	Parameter 2
BS4	R1	-	-
BS5	R2	Country = US	-
BS6	R2	Country = US	-

Then, the system will aggregate the following regular bill segments while creating the post-processing bill segment for PR1:

- BS1
- BS3
- BS5
- BS6

However, if you specify a price item parameter while associating regular price items with a post-processing price item, but the pricing for the post-processing price item is not based on the price item parameter, the system aggregates all bill segments of regular price item irrespective of the price item parameter. For example, the PR1 post processing price item is associated with the following regular price items:

Regular Price Item	Price Item Parameter
R1	Country = US
R2	-

And, the pricing for PR1 post processing price item is not based on a price item parameter. Now, if the following bill segments are generated for R1 and R2 in a bill:

Bill Segment	Price Item	Parameter 1	Parameter 2
BS1	R1	Country = US	-
BS2	R1	Country = US	Currency = USD
BS3	R1	Country = US	-
BS4	R1	-	-
BS5	R2	Country = US	-
BS6	R2	-	-

Then, the system will aggregate the following regular bill segments while creating the post-processing bill segment for PR1:

- BS1
- BS2
- BS3
- BS4
- BS5
- BS6

Price Assignment Search Mechanism

The price assignment search algorithm searches effective price item pricing based on the following parameters:

- **Search Order** — Used to indicate the order in which the system must search effective price item pricing at various levels in the customer hierarchy. This is a mandatory parameter. The valid values are:

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_PRICELIST	<ol style="list-style-type: none"> 1. Account Agreed — Means price item pricing is agreed for the account in the hierarchy. 2. Account Price List — Means price item pricing is defined within the price list which is assigned to the account. 3. Account Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account. 4. Customer Agreed — Means price item pricing is agreed for the customer in the hierarchy. 5. Customer Price List — Means price item pricing is defined within the price list which is assigned to the customer. 6. Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer. 7. Parent Customer Agreed — Means price item pricing is agreed for the parent customer in the hierarchy. 8. Parent Customer Price List — Means price item pricing is defined within the price list which is assigned to the parent customer. 9. Parent Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_FIRST	<ol style="list-style-type: none"> 1. Account Agreed — Means price item pricing is agreed for the account in the hierarchy. 2. Customer Agreed — Means price item pricing is agreed for the customer in the hierarchy. 3. Parent Customer Agreed — Means price item pricing is agreed for the parent customer in the hierarchy. 4. Account Price List — Means price item pricing is defined within the price list which is assigned to the account. 5. Account Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account. 6. Customer Price List — Means price item pricing is defined within the price list which is assigned to the customer. 7. Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer. 8. Parent Customer Price List — Means price item pricing is defined within the price list which is assigned to the parent customer. 9. Parent Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.

Note: In these price assignment search orders, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.

- **Default Price List ID** — Used to indicate the default price list. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list.
- **Global Price List** — Used to indicate whether the system should consider the price item pricing defined in the global price list. If the effective price item pricing is not available in the default price list or if the default price list is not specified in the price assignment search algorithm, the system checks whether it should consider the price item pricing defined in the global price list. The valid values are:

- Y
- N

Finally, if the effective price item pricing is not available in either default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Prefer Price Item Over Bundle** — Used to indicate whether to prefer price item, regular bundle, or parent bundle pricing when the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) are assigned at the same level. The valid values are:

- Y
- N

If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

- **Person Relationship Type Sequence Algorithm** — Used to attach an algorithm which is defined using the C1-CUSRLALGT algorithm type. The attached algorithm is used while searching effective price item pricing at the parent customer level. It indicates whether the system should search person to person relationship type sequence defined:
 - For the division, price item, and price item parameters combination
 - For the division
 - In the C1_PER_REL feature configuration

Person to Person Relationship Type Sequence	Person Relationship Type Sequence on page 282

Person Relationship Type Sequence

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

Sequence Number	Relationship Type
10	Subsidiary
20	Franchise Owner

In the above example, the system will inherit effective price item pricing (if available) from Parent 1 or within its hierarchy. If the effective price item pricing is not available in the Parent 1 hierarchy, the system will inherit effective price item pricing (if available) from Parent 2 or within its hierarchy. If the effective price item pricing is not available in the Parent 2 hierarchy, an error message occurs indicating that the effective price item pricing is not available.

While searching effective pricing at the parent customer level based on the person to person relationship type sequence, the system will use the depth first search mechanism. Let us understand this with the help of an example.

Person To Person Relationship Type Sequence	
Sequence Number	Relationship Type
10	Subsidiary (S)
20	Branch (B)
30	Franchise Owner (F)

In the above example, if the effective pricing is not available at the account or customer level, the system will search effective pricing at the parent customer level in the following order:

- P1 (because the first relationship type in the sequence is Subsidiary)
- P2 (grandparent of P1 irrespective of the relationship type)
- P3 (because the second relationship type in the sequence is Branch)
- P4 (because the second relationship type in the sequence is Branch)
- P6 (grandparent of P4 irrespective of the relationship type)
- P5 (because the third relationship type in the sequence is Franchise Owner)

The system provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1_PER_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration and accordingly search the effective price item pricing at the parent customer level.

To enable the system to search person to person relationship type sequence at different levels, you need to create an algorithm of the C1-CUSRLALGT algorithm type and attach it to the **Person Relationship Type Sequence Algorithm** parameter in the price assignment search algorithm. The C1-CUSRLALGT algorithm type has the following parameters:

- **Check on Division, Price Item and Price Item Parameters Combination** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division, price item, and price item parameters combination. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Division** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Feature Configuration** – Used to indicate whether you want the system to consider the person to person relationship type sequence defined in the **C1_PER_REL** feature configuration. This is a mandatory parameter. The valid values are:

- **A** – Used when you want to consider all person to person relationship types defined in the feature configuration (in the specified sequence).
- **F** – Used when you want to only consider the person to person relationship type defined with the lowest sequence in the feature configuration.
- **N** – Used when you do not want to consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration.

By default, the value is set to **F**.

Pricing Eligibility

Oracle Revenue Management and Billing enables you to define pricing eligibility criteria using the account, person, and product attributes while defining a price item pricing. For example, a bank offers a product named 12 Month Standard Certificate of Deposit (CD). The interest rate charged to a person for this product differs based on two parameters – Deposit Amount and Person Type (Preferred and Non-Preferred). The following table lists the interest rates offered for the 12 Month Standard Certificate of Deposit (CD) product:

Deposit Amount	Non-Preferred	Preferred
Less than \$5,000	0.13%	0.20%
Greater than \$5,000	0.15%	0.22%

Earlier, you were able to define different interest rates based on different parameters using the rate eligibility feature at the rate component level. Considering the above example, you had to define four rate components. The respective rate component would appear while defining price item pricing based on the following:

- The value defined for the **Deposit Amount** characteristic on the account

- The value defined for the **Customer Type** characteristic on the main customer

However, now, you can implement the above scenario using a single rate component instead of maintaining four different rate components. Now, while defining price item pricing, you need to define four different price components for a rate component. For each price component, you need to define the pricing eligibility criteria in the following manner:

Price Component	Rate	Pricing Criteria	Eligibility	If True	If False
P1	0.13%	Deposit Amount > 5000		Check Next Condition	Return False
P1	0.13%	Person Type = Non-Preferred		Return True	Return False
P2	0.15%	Deposit Amount < 5000		Check Next Condition	Return False
P2	0.15%	Person Type = Non-Preferred		Return True	Return False
P3	0.20%	Deposit Amount > 5000		Check Next Condition	Return False
P3	0.20%	Person Type = Preferred		Return True	Return False
P4	0.22%	Deposit Amount < 5000		Check Next Condition	Return False
P4	0.22%	Person Type = Preferred		Return True	Return False

You can define pricing eligibility criteria when the appropriate parameters are created in the system. These parameters must be mapped to either of the following:

- Account attributes, characteristics, usage amounts, or usage counters
- Person attributes, characteristics, usage amounts, or usage counters
- Product attributes or characteristics
- Service Quantity Identifier
- Custom algorithm which returns the appropriate value

In the above example, you can define the pricing eligibility criteria when the following parameters are defined in the system:

Parameter	Source Entity	Source Type	Source Type Code	Value Type
Deposit Amount	Account	Usage Amount	Deposit Amount	Adhoc
Customer Type	Person	Characteristic	Person Type	Predefined

You can define pricing eligibility criteria for rate components whose tiering type is set to **Flat**, **Threshold**, or **Step**. Each criterion in the pricing eligibility criteria is executed in the specified sequence. If the value of the pricing eligibility criteria is **True**, the rate of the respective price component is passed to the rate component for further calculations.

Persisting Interest Rate for Rate Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**.

Related Topics

For more information on...	See...
Repricing	Repricing on page 286

Persisting Fee for Fee Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate
- Fees

The input elements Pricing Frequency, Advance Pricing should be populated if **Price Item** is available for **Pricing Only**, **Price Item Type** is **Fees** and **Price Assignment Type** is **Post-Processing**.

If the type of a price item is **Fee**, the system calculates and persist the fee for the price item.

Note: The **Process Fees Request and Persist Fees for an Account (C1-ACFEE)** batch is used to calculate and persist the fees for the account. It must be executed when a user wants to store fees.

Related Topics

For more information on...	See...
Repricing	Repricing on page 286

Repricing

If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**. The **Repricing** process is triggered in the following scenarios when:

- You edit the attributes and characteristics of an account.
- You add or delete the usage amount and counter details of an account.
- You edit the attributes and characteristics of a person.
- You add or delete the usage amount and counter details of a person.
- You define or edit the price item pricing of an active price list which is assigned to an account or a person.
- You define, edit, override, or copy the price item pricing of an account or a person.
- You assign a price list to an account or a person, or edit the price list assignment details of an account or a person.

The system behaves in the following manner in the above scenarios:

Scenario	System Behaviour
On editing the attributes and characteristics of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the account attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: On editing the account attributes, the effective date is set to the date when you edit the account attributes. However, on editing the account's characteristic, the effective date is set to the date from when the characteristic is effective for the account.</p>
On adding or deleting the usage amount and counter details of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The effective date is set to the date from when the usage amount or counter is effective for the account.</p>
On editing the attributes and characteristics of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the person attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>On editing the person attributes, the effective date is set to the date when you edit the person attributes. However, on editing the person's characteristic, the effective date is set to the date from when the characteristic is effective for the person.</p>

Scenario	System Behaviour
On adding or deleting the usage amount and counter details of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The effective date is set to the date from when the usage amount or counter is effective for the person.</p>
On assigning a price list to an account or editing the price list assignment details of an account	<p>The system creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date. • If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date. <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day. • If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day. <p>On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
<p>On assigning a price list to a person or editing the price list assignment details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date. • If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date. <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day. • If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day. <p>Note: If the Price List Assignment Start Date and Price List Assignment End Date are earlier than the current date, repricing requests for the accounts are not created in the CI_REPRC_REQ_DTL table.</p> <p>On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
<p>On defining, editing, overriding, or copying the price item pricing of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
On defining, editing, overriding, or copying the price item pricing of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
On defining or editing the price item pricing of an active price list which is assigned to an account or a person	<p>The system creates an entry for the price item pricing in the CI_REPRC_ENTITY_DTL table. On executing the Identify Accounts for Repricing (C1-REPC1) batch, the system identifies the following in the specified order:</p> <ol style="list-style-type: none"> 1. Price list on which the price item pricing is assigned 2. Account or Person on which the price list is assigned 3. All accounts which belong to the person and its child persons when the price list is assigned to a person <p>Once the accounts are identified, the system checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, a repricing request is created for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: Only accounts where the person and child person are the main customers are considered for repricing.</p>

For more information about the **Identify Accounts for Repricing (C1-REPC1)** and **Process Repricing Request and Persist Pricing for an Account (C1-REPC2)** batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

To enable the repricing feature, you need to do the following:

- Define an algorithm using the **C1-REPRCACCT** algorithm type and attach it to the **Audit** algorithm spot of the **C1-AccountBO** business object
- Define an algorithm using the **C1-REPRCACBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-ACCBALCNT** business object

- Define an algorithm using the **C1-REPRCPERS** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PERSON_BO** business object
- Define an algorithm using the **C1-REPRCPNBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-PERBALCNT** business object
- Define an algorithm using the **C1_PLASGNAUD** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PLASGNADD** and **C1_PLASGNEDIT** business objects
- Define an algorithm using the **C1-PRCASGNAD** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PRICEASGN_BO** business object
- Define an algorithm using the **C1-REPRCPPLPA** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PRICEASGN_BO** business object
- Define the required parameters for the account and person attributes, characteristics, usage amount and usage counter

Two-Dimensional Pricing

Oracle Revenue Management and Billing enables you to define two-dimensional pricing for a price item. In the two-dimensional pricing, you can offer rates based on utilization of two service quantity identifiers (SQIs). For example, the rate for a price item can vary for each customer depending on the number of ATM transactions and current monthly balance as shown below: Current Monthly Balance Number of ATM Transactions 0-25 25-50 50-75 75-100 0-10000 2 1.9 1.8 1.7 10000-50000 1.6 1.5 1.4 1.3 50000-100000 1.2 1.1 1.0 0.9 100000-500000 0.8 0.7 0.6 0.5 The system allows you to define two-dimensional pricing in a grid which has X-axis and Y-axis. Both, the X-axis and Y-axis should contain service quantity identifiers (SQIs). The two-dimensional pricing is composed of threshold and step tiered pricing. The X-axis is a threshold tier and Y-axis is a step tier. On creating two-dimensional pricing, one price component is created for each X-axis and Y-axis combination. The step tier is stored as the tiering range whereas the threshold tier is stored as the eligibility criteria in the price component. Note that the tiering ranges and eligibility criteria are automatically created in the price component. You cannot manually add a tiering range and eligibility criteria in the price component. You can define two-dimensional pricing when the tiering type of the rate components in the rate schedule is set to STEP. A new field named Pricing Rule Type is added in the Price Item Pricing screen. If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item. However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item. Besides selecting the Two-Dimensional option from the Pricing Rule Type list, you also need to select the Pricing Eligibility option while defining the two-dimensional pricing for the price item.

Types of Price Item Bundle

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 291
- [Phantom Bundle](#) on page 295
- [Ratio Bundle](#) on page 293

Regular Bundle

In case of a regular bundle, pricing is defined at the bundle level. The system determines the rate by identifying the tiering range within which the total service quantities used for all price items in the bundle fall. Note that the rate is determined from the tiering range of the price component whose pricing eligibility criteria is met. Let us understand this with the help of an example.

Bundle X, which is a regular bundle, contains the following three price items:

- Price Item A

- Price Item B
- Price Item C

The following tiered pricing is defined for Bundle X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 4000	2
4001 – 8000	1

Note: In the above example, the assumption is that there only one rate component, one price component within the rate component, and pricing eligibility criteria is not defined for the price component.

Now, when the user consumes 1500 units of Price Item A, 1000 units of Price Item B, and 2000 units of Price Item C, the system adds the quantities of services used for all price items in Bundle X (i.e. $1500+1000+2000=4500$), and then determines the range within which the total units (i.e. 4500) fall. In this case, the total units fall in the 4001 – 8000 range, and therefore the system uses \$1 as the rate for calculating charges.

If the multi parameter based pricing feature is enabled, you can define pricing for regular bundles based on multiple parameters. For example:

Bundle X	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Bundle X based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the regular bundle (i.e. Bundle X) and then add price items (i.e. Price Item A, Price Item B, and Price Item C) to the bundle. Note that you can add a price item to a regular bundle when the regular bundle and price item have same parameters associated with them for the specified date range. Therefore, before adding Price Item A, Price Item B, and Price Item C to Bundle X, you should ensure that Country and Currency are also associated with these price items.

Then, when you define Pricing 1 for Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X	US, USD		0	500
20	1	Number of Transactions	Bundle X	US, USD		500	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Bundle X	Germany, USD		0	1000
20	3	Number of Transactions	Bundle X	Germany, USD		1000	

Now, when the user performs 500 transactions (in USD) of Bundle X in Germany, 1200 transactions (in USD) of Bundle X in US, the system creates two billable charges. In one billable charge (with Bundle X, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Bundle X, Germany and USD combination), the system uses \$4 as the rate for calculating charges.

Ratio Bundle

In case of a ratio bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle.

A ratio expresses the magnitude of quantities relative to each other. It has two factors — Numerator and Denominator. For ratio bundle, the ratio of price item quantities is used to determine the rate for volume based pricing. To determine within which range of ratio limit does the price item utilization falls, the ratio of price item quantities is used. Once the range limits are determined, the rate specified for that range is applied to the quantity of the price item used. Let us understand this with the help of an example.

Bundle X, which is a ratio bundle, contains the following price items:

- **Price Item A** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	4
0.6 – 0.9	3
0.9+	2

- **Price Item B** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	5
0.6 – 0.9	4
0.9+	3

- **Price Item C** — It has been added to the bundle using the price item relationship type as Denominator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	3
0.6 – 0.9	2
0.9+	1

Now, when the user consumes 500 units of Price Item A, 2500 units of Price Item B, and 4000 units of Price Item C, the system calculates the ratio of price item quantities (i.e. $(500+2500)/4000=0.75$). Once the ratio is calculated, the system determines the range of each price item within which the ratio (i.e. 0.75) falls. In this case, the ratio falls in the 0.6 –

0.9 range of Price Item A, B, and C. Therefore, the system uses \$3, \$4, and \$2, respectively, as the rate for calculating charges (i.e. $(500*3)=1500$, $(2500*4)=10000$, and $(4000*2)=8000$).

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a ratio bundle based on multiple parameters. For example:

Bundle X	Country	Currency
Price Item A	US	USD
Price Item B	Germany	USD
Price Item C	England	USD

Price Item A, Price Item B, and Price Item C are added in Bundle X. Price Item A, Price Item B, and Price Item C utilization in Bundle X is determined based on two parameters — Country and Currency. Before you add price item to a ratio bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item A, Price Item B, and Price Item C) and then add these price items to the bundle (i.e. Bundle X).

While adding Price Item A to Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Price Item B to Bundle X with Country set to Germany and Currency set to USD, and Price Item C with Country set to England and Currency set to USD.

The following table lists the tiered pricing defined for Price Item A:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle X			0	1.75
20	4	Number of Transactions	Bundle X			1.75	2.50
30	3	Number of Transactions	Bundle X			2.50	

The following table lists the tiered pricing defined for Price Item B:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle X			0	3.5
20	4	Number of Transactions	Bundle X			3.5	

The following table lists the tiered pricing defined for Price Item C:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X			0	2.0
20	1	Number of Transactions	Bundle X			2.0	

Now, when the user performs 5000 transactions (in USD) of Price Item A in US, 6000 transactions (in USD) of Price Item B in Germany, and 5000 transactions (in USD) of Price Item C in England, the system creates three billable charges — one for each price item (i.e. Price Item A, Price Item B, and Price Item C). The system calculates the ratio of transactions with the following combinations and then determines the range of each price item within which the ratio (i.e. 2.2) falls:

- Price Item A, US, USD

- Price Item B, Germany, USD
- Price Item C, England, USD

In this case, the ratio falls in the 1.75 – 2.50 range of Price Item A, the 0 – 3.5 range of Price Item B, and in the 2.0 — Infinite range of Price Item C. Therefore, the system uses \$4, \$5, and \$1 as the rate for calculating charges (i.e. $(5000*4)=20000$, $(6000*5)=30000$, and $(5000*1)=5000$).

You can also add a price item more than once in a ratio bundle with different set of parameters. For example:

Bundle X	Relationship Type	Country	Currency
Price Item A	Numerator	US	USD
Price Item A	Numerator	England	USD
Price Item B	Numerator	Germany	USD
Price Item C	Denominator	England	USD
Price Item C	Denominator	US	USD

In this case, the system calculates the ratio of transactions with the following combinations and then determines the range of each price item (i.e. Price Item A, Price Item B, and Price Item C) within which the ratio falls:

- Price Item A, US, USD
- Price Item A, England, USD
- Price Item B, Germany, USD
- Price Item C, England, USD
- Price Item C, US, USD

Phantom Bundle

In case of a phantom bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle. The system determines the price by identifying the tiering range of each price item within which the total quantities of services used for all price items in the bundle fall. Let us understand this with the help of an example.

Bundle A, which is a phantom bundle, contains the following two price items:

- **Price Item X** — The following tiered pricing is defined for Price Item X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 6000	2

- **Price Item Y** — The following tiered pricing is defined for Price Item Y:

Quantity Range	Rate (\$) per unit
1 – 5000	2
5001 – 10000	1

Now, when the user consumes 2500 units of Price Item X and 3500 units of Price Item Y, the system adds the quantities of services used for all price items in Bundle A (i.e. $2500+3500=6000$), and then determines the range of each price item within which the total units (i.e. 6000) fall. In this case, the total units fall in the 3001 – 6000 range of Price Item X and the 5001 – 10000 range of Price Item Y, and therefore the system uses \$2 and \$1, respectively, as the rate for calculating charges (i.e. $(2500*2)= 5000$ and $(3500*1)=3500$). This helps the customer to take advantage of the lowest rate.

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a phantom bundle based on multiple parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item Y	Germany	USD

Price Item X and Price Item Y are added in Bundle A. Price Item X and Price Item Y utilization in Bundle A is determined based on two parameters — Country and Currency. Before you add price item to a phantom bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item X and Price Item Y) and then add these price items to the bundle (i.e. Bundle A).

While adding Price Item X to Bundle A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Product Y to Bundle A with Country set to Germany and Currency set to USD.

The following table lists the tiered pricing defined for Price Item X:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	3	Number of Transactions	Bundle A			0	5000
20	2	Number of Transactions	Bundle A			5000	10000
30	1	Number of Transactions	Bundle A			10000	

The following table lists the tiered pricing defined for Price Item Y:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle A			0	5000
20	4	Number of Transactions	Bundle A			5000	

Now, when the user performs 5000 transactions (in USD) of Price Item Y in Germany, 6000 transactions (in USD) of Price Item X in US, the system creates two billable charges — one for Price Item X and another for Price Item Y. The system adds the transactions with the following combinations and then determines the range of each price item within which the total units (i.e. 11000) fall:

- Price Item X, US, USD
- Price Item Y, Germany, USD

In this case, the total units fall in the 10000 – Infinite range of Price Item X and the 5000 – Infinite range of Price Item Y, and therefore the system uses \$1 and \$4, respectively, as the rate for calculating charges (i.e. $(5000*4)=20000$ and $(6000*1)=6000$).

You can also add a price item more than once in a phantom bundle with different set of parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item X	Germany	USD
Price Item Y	Germany	USD

Bundle A	Country	Currency
Price Item Y	US	USD

In this case, the system adds the transactions with the following combinations and then determines the range of each price item (i.e. Price Item X and Price Item Y) within which the total units fall:

- Price Item X, US, USD
- Price Item X, Germany, USD
- Price Item Y, Germany, USD
- Price Item Y, US, USD

Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

Another example, you can create a parameter named **Health Coverage Class** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

In such case, while defining the pricing for a price item using the **Health Coverage Class** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI_COUNTRY_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI_COUNTRY_L** table in the parameter value.

Parameter (Used for Searching)

The **Parameter** screen allows you to define, view, edit, delete, and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 298

Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No
Value Type	Used to search parameters in which a particular type of value is stored. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	No

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction 	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter 	No
Description	Used to search parameters having a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter.
Description	Displays the description of the parameter.

Column Name	Column Description
Value Type	<p>Indicates the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Source Entity	<p>Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter
View	<p>On clicking the View () icon corresponding to a parameter, the Parameter screen appears where you can view the details of the respective parameter.</p>
Edit	<p>On clicking the Edit () icon corresponding to a parameter, the Parameter screen appears where you can edit the details of the parameter.</p>

Column Name	Column Description
Delete	<p>On clicking the Delete (🗑️) icon corresponding to a parameter, you can delete the parameter.</p> <p>Note: You can delete a parameter when the following conditions are met:</p> <ul style="list-style-type: none"> • It is not yet associated to any price item or price item bundle. • It is not yet used while defining the pricing, price list, or pricing eligibility criteria.
Copy	On clicking the Copy (📄) icon corresponding to a parameter, the Parameter screen appears where you can define a new parameter using an existing parameter.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Parameter**, **Value Type**, **Source Entity**, **Source Type**, and **Description**) available in the **Filter** area. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Searching for a Parameter

Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

Defining a Parameter

Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Click the **Add** button available in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Health Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership Person <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Yes
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Source Entity	Source Type	Source Type Code												
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.												
State	Characteristic	Lists all characteristics where the characteristic entity is set to State .												
State	Field	Lists all fields of the CI_STATE table.												
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Health Product , or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria.	Yes (Conditional)
	Note: This option appears only when the Account, Customer Class, Delinquency Event Type, Division, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter is used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

4. Enter the required details in the **Parameter** screen.
5. Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Editing a Parameter

Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To edit a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter.	Not applicable
	Note: This is a read-only field.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Health Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership Person <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Displays the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Policy	Field	Lists all fields of the CI_POLICY table. Note: This option is not applicable for the banking business.																					
Policy Plan	Characteristic	Lists all characteristics where the characteristic entity is set to Plan . Note: This option is not applicable for the banking business.																					
Policy Plan	Field	Lists all fields of the CI_POLICY_PLAN table. Note: This option is not applicable for the banking business.																					
Product	Characteristic	Lists all characteristics where the characteristic entity is set to Product . Note: This option is not applicable for the health insurance business.																					
Product	Field	Lists all fields of the C1_PRODUCT table. Note: This option is not applicable for the health insurance business.																					

Field Name	Field Description	Mandatory (Yes or No)												
	<p>Note:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Service Quantity Identifier</td> <td>—</td> <td>Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> <tr> <td>State</td> <td>Characteristic</td> <td>Lists all characteristics where the characteristic entity is set to State.</td> </tr> <tr> <td>State</td> <td>Field</td> <td>Lists all fields of the CI_STATE table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.	State	Characteristic	Lists all characteristics where the characteristic entity is set to State .	State	Field	Lists all fields of the CI_STATE table.	
Source Entity	Source Type	Source Type Code												
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.												
State	Characteristic	Lists all characteristics where the characteristic entity is set to State .												
State	Field	Lists all fields of the CI_STATE table.												
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria.	Yes (Conditional)
	Note: This option appears only when the Account, Customer Class, Delinquency Event Type, Division, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

How to search for a parameter	Searching for a Parameter on page 301
Parameter screen	Parameter (Used for Searching) on page 298

Deleting a Parameter**Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

3. Click **OK**.

The parameter is deleted.

Note:

You can delete a parameter only when:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, business rule, price list, product eligibility, or rule eligibility criteria.

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with the parameter usage details. You can then edit the details, if required.

Note: You cannot change the value type that is stored in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Health Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership Person <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Product	Characteristic	Lists all characteristics where the characteristic entity is set to Product . <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This option is not applicable for the health insurance business. </div>																								
Product	Field	Lists all fields of the CI_PRODUCT table. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This option is not applicable for the health insurance business. </div>																								

Field Name	Field Description	Mandatory (Yes or No)												
	<p>Note:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Service Quantity Identifier</td> <td>—</td> <td>Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> <tr> <td>State</td> <td>Characteristic</td> <td>Lists all characteristics where the characteristic entity is set to State.</td> </tr> <tr> <td>State</td> <td>Field</td> <td>Lists all fields of the CI_STATE table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.	State	Characteristic	Lists all characteristics where the characteristic entity is set to State .	State	Field	Lists all fields of the CI_STATE table.	
Source Entity	Source Type	Source Type Code												
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.												
State	Characteristic	Lists all characteristics where the characteristic entity is set to State .												
State	Field	Lists all fields of the CI_STATE table.												
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Health Product , or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based business eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen.
- Click **Save**.

The new parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the parameter whose details you want to view.

The **Parameter** screen appears.

- View the details of the parameter in the **Parameter** zone.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 334

Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Validation Algorithm	Indicates the algorithm using which you want to validate the adhoc parameter value. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> </div>
Referenced Table	Indicates the table whose primary key (i.e. column) is used to validate the parameter value. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>This field appears when the Reference option is selected from the Value Type list. It has a link. On clicking the link, the Table screen appears where you can view the details of the respective table.</p> </div>

Field Name	Field Description
Source Entity	<p data-bbox="602 212 1468 268">Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul data-bbox="631 291 935 604" style="list-style-type: none"> <li data-bbox="631 291 760 317">• Account <li data-bbox="631 338 781 363">• Algorithm <li data-bbox="631 384 748 409">• Benefit <li data-bbox="631 430 837 455">• Customer Class <li data-bbox="631 476 935 501">• Delinquency Event Type <li data-bbox="631 522 764 548">• Division <li data-bbox="631 569 797 594">• Health Plan <div data-bbox="662 625 1321 667" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 632 1317 663">Note: This option is not applicable for the banking business.</p> </div> <ul data-bbox="631 690 829 716" style="list-style-type: none"> <li data-bbox="631 690 829 716">• Health Product <div data-bbox="662 747 1321 789" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 753 1317 785">Note: This option is not applicable for the banking business.</p> </div> <ul data-bbox="631 812 805 837" style="list-style-type: none"> <li data-bbox="631 812 805 837">• Membership <div data-bbox="662 869 1321 911" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 875 1317 907">Note: This option is not applicable for the banking business.</p> </div> <ul data-bbox="631 934 883 959" style="list-style-type: none"> <li data-bbox="631 934 883 959">• Membership Person <div data-bbox="662 991 1321 1033" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 997 1317 1029">Note: This option is not applicable for the banking business.</p> </div> <ul data-bbox="631 1056 743 1081" style="list-style-type: none"> <li data-bbox="631 1056 743 1081">• Person <li data-bbox="631 1102 737 1127">• Policy <li data-bbox="631 1148 792 1173">• Policy Plan <div data-bbox="662 1205 1321 1247" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 1211 1317 1243">Note: This option is not applicable for the banking business.</p> </div> <ul data-bbox="631 1270 756 1295" style="list-style-type: none"> <li data-bbox="631 1270 756 1295">• Product <div data-bbox="662 1327 1409 1369" style="border: 1px solid black; padding: 2px;"> <p data-bbox="667 1333 1404 1365">Note: This option is not applicable for the health insurance business.</p> </div> <ul data-bbox="631 1392 954 1493" style="list-style-type: none"> <li data-bbox="631 1392 954 1417">• Service Quantity Identifier <li data-bbox="631 1438 724 1463">• State <li data-bbox="631 1484 797 1509">• Transaction

Field Name	Field Description
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note: This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p>Note: This field does not appear when the Transaction option is selected from the Source Entity list.</p>

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the value of the parameter.
Description	Displays the description of the parameter value.

Note: The **Parameter Values** section appears when the **Predefined** option is selected from the **Value Type** list.

- **Parameter Usage** – Indicates where you can use the parameter in the system. It contains the following options:

Option Name	Option Description
Price Item	<p>Indicates whether the parameter is associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <p>Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list.</p>
Pricing Eligibility Criteria	<p>Indicates whether the parameter is used for defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>

Option Name	Option Description
Pricing Rule Eligibility Criteria	Indicates whether the parameter is used for defining a rule based pricing eligibility criteria. Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.
Business Rule Eligibility Criteria	Indicates whether the parameter is used for defining a rule based business eligibility criteria. Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.
Price List Eligibility Criteria	Indicates whether the parameter is used for defining the price list eligibility criteria. Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.
Product Eligibility Criteria	Indicates whether the parameter is used for defining the product eligibility criteria. Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.
Rule Eligibility Criteria	Indicates whether the parameter is used while defining the parameter based rule type. Note: This option does not appear when the Health Product, Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.

Entity Hierarchy Relationship

An entity hierarchy relationship enables you to group related services (i.e. price items) offered to the customers under one group header for the reporting purposes. You can define group headers as hierarchy entities in the system. For example, you can group all payment services, such as Auto Clearing House (ACH) Transfer, Auto Clearing House (ACH) Reversal, Lockbox Service, Dealer Debit, and so on under a group header (i.e. hierarchy entity) named Payments.

You can include hierarchy entities at different levels and thereby design the structure for an entity hierarchy relationship. For example, you can create three hierarchy entities named `Cash Management`, `Payments`, and `e-Statements`. Then, while designing the structure of an entity hierarchy relationship named `CASHMGT`, you include the `Cash Management` hierarchy entity at the first or root level and then the `Payments` and `e-Statements` hierarchy entities at the second level.

While defining a hierarchy entity, you need to specify the following:

- Level at which you can include the hierarchy entity in an entity hierarchy relationship.
- Division to which the hierarchy entity is associated.

You can include a hierarchy entity in an entity hierarchy relationship when the hierarchy entity is associated with the division for which the entity hierarchy relationship is created. You can associate a hierarchy entity with one or more divisions. While associating a hierarchy entity with a division, you need to specify the date from when the hierarchy entity is associated with the division. The system allows you to include a hierarchy entity in an entity hierarchy relationship when the hierarchy entity is effective for the division on the entity hierarchy relationship start date.

At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels (i.e. Level 1, Level 2, ..., Level 9). The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. However, note that the system will allow you to create a hierarchy entity upto one level less than the level specified in the **Maximum Hierarchy Level** option type. For example, if you set the value of the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

While defining an entity hierarchy relationship, you need to specify the following:

- Division for which you want to create the entity hierarchy relationship.
- The date range for which the entity hierarchy relationship is effective for the division.
- The hierarchy entity that you want to include at the first or root level (i.e. Level 1) in the entity hierarchy relationship. Here, you can only specify a hierarchy entity where the entity level is set to Level 1.

Note: This is the root from where the entity hierarchy relationship starts and hence only Level 1 entities are allowed to be placed at the root of the entity hierarchy relationship.

- The hierarchy entities that you want to include at the subsequent levels (i.e. Level 2, Level 3, and so on) in the entity hierarchy relationship and their respective parent hierarchy entity.

Note: You can include only those hierarchy entities which are associated with the division for which the entity hierarchy relationship is created and which are effective for the division on the entity hierarchy relationship start date.

You can include multiple hierarchy entities at the same level. But, you need to ensure that the parent hierarchy entity for such parallel levels is same. For example, when you include the `Payments` and `e-Statements` hierarchy entities at the same level, you need to ensure that their parent hierarchy entity is set to `Cash Management`.

```
Cash Management
  Payments
    ACH Transfer
```

Associating a price item or price item bundle with a hierarchy entity does not have any impact on the billing module. At present, the price item hierarchy is only displayed in the Deal Modelling and Simulation module.

While editing an entity hierarchy relationship, you cannot change the hierarchy entity at the first level when a price item is associated with a hierarchy entity either at the first or subsequent level in the entity hierarchy relationship. In addition, you cannot delete an entity level from the entity hierarchy relationship or change the details of an entity level when a price item is associated with the hierarchy entity at the respective entity level or at any level in the vertical hierarchy of the entity hierarchy relationship. Let us assume we have the following entity hierarchy relationship...

```
Cash Management
```

```

Payments
  ACH Transfer
  ACH Reversal
  Lockbox Service
  Dealer Debit
e-Statements
  TWIST Statement
  CAMT Statement
  SWIFT Statement

```

In the above entity hierarchy relationship, you cannot remove the Payments or e-Statements entity level or change the details of the Payments or e-Statements entity level because the price items are associated with the Payments and e-Statements hierarchy entities. In addition, you cannot change the hierarchy entity at the root level because the price items are associated with the Payments and e-Statements entity levels which is in the vertical hierarchy of Cash Management.

Associate an Entity Hierarchy Relationship with Multiple Divisions

Until now, you were able to associate an entity hierarchy relationship with only one division at a time. Now, you can associate an entity hierarchy relationship with multiple divisions. You can include a hierarchy entity in an entity hierarchy relationship only when the hierarchy entity is associated with all the divisions to which the entity hierarchy relationship is associated. Let us understand this with the help of an example. Let us assume that the following hierarchy entities exist in the system:

Hierarchy Entity	Entity Level	Divisions
Cash Management	Level 1	New England, Middle Atlantic
Payments	Level 2	New England, Middle Atlantic, East North Central, East South Central, West South Central
e-Statements	Level 2	New England, Middle Atlantic, Mountain, Pacific, West South Central
ACH Transfer	Level 3	New England, Middle Atlantic, West South Central, East North Central
ACH Reversal	Level 3	Middle Atlantic, East North Central, West North Central, South Atlantic
TWIST Statement	Level 3	East North Central, West North Central, South Atlantic
CAMT Statement	Level 3	New England
Lockbox Service	Level 3	West South Central, East North Central

Let us assume that an entity hierarchy relationship named H1 is associated with the New England and Middle Atlantic divisions. Now, if you want to include the hierarchy entities in the H1 entity hierarchy relationship, you can only associate those hierarchy entities that are associated with the divisions to which the H1 entity hierarchy relationship is associated. In this case, you can include the following hierarchy entities in the H1 entity hierarchy relationship at the above-mentioned levels:

- Cash Management
- Payments
- e-Statements
- ACH Transfer

Hierarchy Entity (Used for Searching)

The **Hierarchy Entity** screen allows you to search for a hierarchy entity using various search criteria. It also allows you to define a hierarchy entity. It contains the following zone:

- [Search Hierarchy Entity](#) on page 340

Through this screen, you can navigate to the following screen:

- [Hierarchy Entity \(Used for Viewing\)](#) on page 347

Search Hierarchy Entity

The **Search Hierarchy Entity** zone allows you to search for a hierarchy entity using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	Used to search a particular hierarchy entity.	No
Description	Used to search hierarchy entities with a particular description.	No
Entity Level	Used to search hierarchy entities which can be included at a particular level in an entity hierarchy relationship. The valid values are: <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 	No
Status	Used to search hierarchy entities with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No
Division	Used to search hierarchy entities which are associated with a particular division.	No

Note: You must specify at least one search criterion while searching for a hierarchy entity.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Hierarchy Entity Information	Displays information about the hierarchy entity.
	Note: It has a link. On clicking the link, the Hierarchy Entity screen appears where you can view the details of the respective hierarchy entity.
Entity Level	Indicates the level at which the hierarchy entity can be included in an entity hierarchy relationship. The valid values are: <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9
Status	Indicates the status of the hierarchy entity. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Division	Indicates the division to which the hierarchy entity is associated.
Effective Date	Displays the date from when the hierarchy entity is associated with the division.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Hierarchy Entity

Prerequisites

To search for a hierarchy entity, you should have:

- Divisions defined in the application

Procedure

To search for a hierarchy entity:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **H** and then click **Hierarchy Entity**.

A sub-menu appears.

- Click the **Search** option from the **Hierarchy Entity** sub-menu.

The **Hierarchy Entity** screen appears.

- Enter the search criteria in the **Search Hierarchy Entity** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of hierarchy entities that meet the search criteria appears in the **Search Results** section.

Viewing the Hierarchy Entity Details

Procedure

To view the details of a hierarchy entity:

- Search for the hierarchy entity in the **Hierarchy Entity** screen.
- In the **Search Results** section, click the link in the **Hierarchy Entity Information** column corresponding to the hierarchy entity whose details you want to view.

The **Hierarchy Entity** screen appears. It contains the following zone:

- [Hierarchy Entity](#) on page 347

- View the details of the hierarchy entity in the **Hierarchy Entity** zone.

Defining a Hierarchy Entity

Prerequisites

To define a hierarchy entity, you should have:

- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To define a hierarchy entity:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **H** and then click **Hierarchy Entity**.

A sub-menu appears.

- Click the **Add** option from the **Hierarchy Entity** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity Business Object	Used to indicate the business object using which you want to create the hierarchy entity in the system.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hierarchy Entity** screen.

Note: The **Select Business Object** screen appears when there are multiple hierarchy entity business objects defined in the application. If there is only one hierarchy entity business object defined in the application, the **Hierarchy Entity** screen appears.

- Select the required hierarchy entity business object from the respective field.

- Click **OK**.

The **Hierarchy Entity** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the hierarchy entity.
- **Divisions** - Used to associate the hierarchy entity with one or more divisions.
- **Characteristics** - Used to define the characteristics for the hierarchy entity.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	Used to specify the hierarchy entity.	Yes
Description	Used to specify the description for the hierarchy entity.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity Level	<p>Used to indicate the level at which the hierarchy entity can be included in an entity hierarchy relationship. The valid values are:</p> <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels (i.e. Level 1, Level 2,, Level 9). The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in the Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. However, note that the system will allow you to create a hierarchy entity upto one level less than the level specified in the Maximum Hierarchy Level option type. For example, if you set the value of the Maximum Hierarchy Level option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements. In such case, the system will list only the first four levels in the Entity Level field.</p>	Yes
Status	Indicates the status of the hierarchy entity. By default, the value is set to Active .	Not applicable
Business Object	Indicates the business object using which you are defining the hierarchy entity.	Not applicable
Sort Sequence	Used to specify the sequence in which the hierarchy entity should appear in the price item hierarchy of the deal pricing management module.	No

6. Enter the required details in the **Main** section.
7. Associate the hierarchy entity with one or more divisions in the **Division** section.
8. Define characteristics for the hierarchy entity in the **Characteristics** section, if required.
9. Click **Save**.

The hierarchy entity is defined.

Associating a Hierarchy Entity with a Division

Prerequisites

To associate a hierarchy entity with a division, you should have:

- Divisions defined in the application

Procedure

To associate a hierarchy entity with a division:

1. Ensure that the **Divisions** section is expanded when you are defining, editing, or copying a hierarchy entity.

The **Divisions** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when you want to associate the hierarchy entity with the division.	Yes
Division	Used to indicate the division to which you want to associate the hierarchy entity.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	

2. Enter the required details in the **Divisions** section.

Note: You cannot change the details of a division when the hierarchy entity is included in an entity hierarchy relationship which is created for the division.

3. If you want to associate the hierarchy entity with more than one division, click the **Add (+)** icon and then repeat step 2.

Note: If you want to remove the hierarchy entity from a division, click the **Delete** (🗑️) icon corresponding to the division. However, note that you cannot remove a hierarchy entity from a division when the hierarchy entity is included in an entity hierarchy relationship which is created for the division.

4. Click **Save**.

The hierarchy entity is associated with the division.

Defining a Characteristic for a Hierarchy Entity

Prerequisites

To define a characteristic for a hierarchy entity, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hierarchy Entity**)

Procedure

To define a characteristic for a hierarchy entity:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hierarchy entity.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hierarchy entity.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the hierarchy entity.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hierarchy Entity .	Note: This field is required when you are defining a characteristic for the hierarchy entity.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the hierarchy entity.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the hierarchy entity, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hierarchy entity, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the hierarchy entity.

Hierarchy Entity (Used for Viewing)

The **Hierarchy Entity** screen allows you to view the details of the hierarchy entity. It also allows you to edit, delete, and copy the hierarchy entity. It contains the following zone:

- [Hierarchy Entity](#) on page 347

Hierarchy Entity

The **Hierarchy Entity** zone displays the details of the hierarchy entity. It contains the following sections:

- Main** - Displays basic information about the hierarchy entity. It contains the following fields:

Field Name	Field Description
Hierarchy Entity	Displays the hierarchy entity.
Description	Displays the description of the hierarchy entity.

Field Name	Field Description
Entity Level	Indicates the level at which the hierarchy entity can be included in an entity hierarchy relationship. The valid values are: <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9
Status	Indicates the status of the hierarchy entity. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Sort Sequence	Displays the sequence in which the hierarchy entity appears in a particular hierarchy entity level.

- **Divisions** - Lists the divisions to which the hierarchy entity is associated. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the hierarchy entity is associated with the division.
Division	Indicates the division to which the hierarchy entity is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics defined for the hierarchy entity. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the hierarchy entity.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hierarchy entity.
Delete	Used to delete the hierarchy entity. Note: You can delete a hierarchy entity only when it is not yet included in any entity hierarchy relationship.

Button Name	Button Description
Duplicate	Used to create a new hierarchy entity using an existing hierarchy entity.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the hierarchy entity is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing a Hierarchy Entity

Prerequisites

To edit a hierarchy entity, you should have:

- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To edit a hierarchy entity:

1. Search for the hierarchy entity in the **Hierarchy Entity** screen.
2. In the **Search Results** section, click the link in the **Hierarchy Entity Information** column corresponding to the hierarchy entity whose details you want to edit.

The **Hierarchy Entity** screen appears.

3. Click the **Edit** button in the **Hierarchy Entity** zone.

The **Hierarchy Entity** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the hierarchy entity.
- **Divisions** - Used to associate the hierarchy entity with one or more divisions.
- **Characteristics** - Used to define the characteristics for the hierarchy entity.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	Displays the hierarchy entity.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the hierarchy entity.	Yes
Entity Level	<p>Used to indicate the level at which the hierarchy entity can be included in an entity hierarchy relationship. The valid values are:</p> <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note:</p> <p>At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels (i.e. Level 1, Level 2, ..., Level 9). The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in the Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. However, note that the system will allow you to create a hierarchy entity upto one level less than the level specified in the Maximum Hierarchy Level option type. For example, if you set the value of the Maximum Hierarchy Level option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements. In such case, the system will list only the first four levels in the Entity Level field.</p> <p>You cannot change the entity level of a hierarchy entity when the hierarchy entity is already included in an entity hierarchy relationship.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the hierarchy entity. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot inactivate a hierarchy entity when the hierarchy entity is already included in an entity hierarchy relationship.	
Business Object	Indicates the business object which is used while defining the hierarchy entity.	Not applicable
Sort Sequence	Used to specify the sequence in which the hierarchy entity should appear in the price item hierarchy of the deal pricing management module.	No

- Modify the required details in the **Main** section.
- Associate or disassociate the hierarchy entity from the divisions, if required.

Note: If the hierarchy entity is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

- Define, edit, or remove characteristics from the hierarchy entity, if required.
- Click **Save**.

The changes made to the hierarchy entity are saved.

Deleting a Hierarchy Entity

Procedure

To delete a hierarchy entity:

- Search for the hierarchy entity in the **Hierarchy Entity** screen.
- In the **Search Results** section, click the link in the **Hierarchy Entity Information** column corresponding to the hierarchy entity that you want to delete.

The **Hierarchy Entity** screen appears.

- Click the **Delete** button in the **Hierarchy Entity** zone.

A message appears confirming whether you want to delete the hierarchy entity.

Note: You can delete a hierarchy entity only when it is not yet included in any entity hierarchy relationship.

- Click **OK**.

The hierarchy entity is deleted.

Copying a Hierarchy Entity

Instead of creating a hierarchy entity from scratch, you can create a new hierarchy entity using an existing hierarchy entity. This is possible through copying a hierarchy entity. On copying a hierarchy entity, the details including the divisions and characteristics are also copied to the new hierarchy entity. You can then edit the details, if required.

Prerequisites

To copy a hierarchy entity, you should have:

- Hierarchy entity (whose copy you want to create) defined in the application
- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To copy a hierarchy entity:

- Search for the hierarchy entity in the **Hierarchy Entity** screen.
- In the **Search Results** section, click the link in the **Hierarchy Entity Information** column corresponding to the hierarchy entity whose copy you want to create.

The **Hierarchy Entity** screen appears.

- Click the **Duplicate** button in the **Hierarchy Entity** zone.

The **Hierarchy Entity** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the hierarchy entity.
- Divisions** - Used to associate the hierarchy entity with one or more divisions.
- Characteristics** - Used to define the characteristics for the hierarchy entity.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	Used to specify the hierarchy entity.	Yes
Description	Used to specify the description for the hierarchy entity.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity Level	<p>Used to indicate the level at which the hierarchy entity can be included in an entity hierarchy relationship. The valid values are:</p> <ul style="list-style-type: none"> • Level 1 • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels (i.e. Level 1, Level 2,, Level 9). The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in the Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. However, note that the system will allow you to create a hierarchy entity upto one level less than the level specified in the Maximum Hierarchy Level option type. For example, if you set the value of the Maximum Hierarchy Level option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements. In such case, the system will list only the first four levels in the Entity Level field.</p>	Yes
Status	Indicates the status of the hierarchy entity. By default, the value is set to Active .	Not applicable
Business Object	Indicates the business object which is used while defining the hierarchy entity.	Not applicable
Sort Sequence	Used to specify the sequence in which the hierarchy entity should appear in the price item hierarchy of the deal pricing management module.	No

4. Enter the required details in the **Main** section.
5. Associate or disassociate the hierarchy entity from the divisions, if required.

Note: If the hierarchy entity is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

6. Define, edit, or remove characteristics of the hierarchy entity, if required.
7. Click **Save**.

The new hierarchy entity is defined.

Entity Hierarchy Relationship (Used for Searching)

The **Entity Hierarchy Relationship** screen allows you to search for an entity hierarchy relationship using various search criteria. It also allows you to define an entity hierarchy relationship. It contains the following zone:

- [Search Hierarchy](#) on page 354

Through this screen, you can navigate to the following screen:

- [Entity Hierarchy Relationship \(Used for Viewing\)](#) on page 362

Search Hierarchy

The **Search Hierarchy** zone allows you to search for an entity hierarchy relationship using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Used to search a particular entity hierarchy relationship.	No
Start Date	Used to search entity hierarchy relationships which are effective from a particular date onwards.	No
Division	Used to search entity hierarchy relationships which are created for a particular division.	No

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to search entity hierarchy relationships which are effective till a particular date.	No
Description	Used to search entity hierarchy relationships having a particular description.	No

Note: You must specify at least one search criterion while searching for an entity hierarchy relationship.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Hierarchy Information	Displays information about the entity hierarchy relationship.
	Note: It has a link. On clicking the link, the Entity Hierarchy Relationship screen appears where you can view the details of the respective entity hierarchy relationship.
Division	Indicates the division for which the entity hierarchy relationship is created.
Start Date	Displays the date from when the entity hierarchy relationship is effective for the division.
End Date	Displays the date till when the entity hierarchy relationship is effective for the division.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

How to view the details of an entity hierarchy relationship	Viewing the Entity Hierarchy Relationship Details on page 361

Searching for an Entity Hierarchy Relationship

Prerequisites

To search for an entity hierarchy relationship, you should have:

- Divisions defined in the application

Procedure

To search for an entity hierarchy relationship:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Entity Hierarchy Relationship**.
A sub-menu appears.
3. Click the **Search** option from the **Entity Hierarchy Relationship** sub-menu.

The **Entity Hierarchy Relationship** screen appears.

- Enter the search criteria in the **Search Hierarchy** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of entity hierarchy relationships that meet the search criteria appears in the **Search Results** section.

Defining an Entity Hierarchy Relationship

Prerequisites

To define an entity hierarchy relationship, you should have:

- Hierarchy entities defined in the application
- Hierarchy entities associated with the division for which you want to create an entity hierarchy relationship
- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To define an entity hierarchy relationship:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Entity Hierarchy Relationship**.
A sub-menu appears.
- Click the **Add** option from the **Entity Hierarchy Relationship** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Entity Hierarchy Relationship Business Object	Used to indicate the business object using which you want to create the entity hierarchy relationship.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Entity Hierarchy Relationship** screen.

Note: The **Select Business Object** screen appears when there are multiple entity hierarchy relationship business objects defined in the application. If there is only one entity hierarchy relationship business object defined in the application, the **Entity Hierarchy Relationship** screen appears.

4. Select the required entity hierarchy relationship business object from the respective field.
5. Click **OK**.

The **Entity Hierarchy Relationship** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity hierarchy relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Used to specify the entity hierarchy relationship.	Yes
Description	Used to specify the description for the entity hierarchy relationship.	Yes
Division	Used to indicate the division for which you want to create the entity hierarchy relationship.	Yes
Start Date	Used to specify the date from when the entity hierarchy relationship is effective for the division.	Yes
	Note: The entity hierarchy relationship start date cannot be later than the entity hierarchy relationship end date.	
End Date	Used to specify the date till when the entity hierarchy relationship is effective for the division.	No
	Note: The entity hierarchy relationship end date cannot be earlier than the entity hierarchy relationship start date.	
Entity Level	Indicates the level at which you want to include the hierarchy entity. By default, the value is set to Level 1 .	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	<p>Used to indicate the hierarchy entity that you want to include at the first level in the entity hierarchy relationship.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Hierarchy Entity field. On clicking the Search icon, the Hierarchy Entity Child Search window appears where you can search for the respective hierarchy entity.</p> <p>The search results appear in the Hierarchy Entity Child Search window only when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the first level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date 	Yes
Business Object	Indicates the business object using which you are defining the entity hierarchy relationship.	Not applicable

- **Hierarchy Details** - Used to design the entity hierarchy relationship structure (i.e. specify the child and parent hierarchy entities for each level (i.e. Level 2, Level 3, Level 4,, Level 9)). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Entity Level	<p>Used to indicate the subsequent level at which you want to include the hierarchy entity. The valid values are:</p> <ul style="list-style-type: none"> • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note: The levels listed in this field vary depending on the value specified in Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. For example, if the Maximum Hierarchy Level option type is set to 5, the system will list only three levels (i.e. Level 2, Level 3, and Level 4) in the Entity Level field. However, if the Maximum Hierarchy Level option type is set to 10, the system will list only eight levels (i.e. Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, and Level 9) in the Entity Level field.</p>	Yes
Hierarchy Entity	<p>Used to indicate the hierarchy entity that you want to include at the specified level (for example, Level 2) in the entity hierarchy relationship.</p> <p>Note:</p> <p>This field is enabled when you select the entity level from the respective field.</p> <p>The list appears only when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parent Hierarchy Entity	Used to indicate the parent hierarchy entity.	Yes
	<p>Note:</p> <p>This field is enabled when you select the entity level from the respective field.</p> <p>The list appears when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level minus one level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date <p>For example, if you specify the hierarchy entity for Level 2, the system will list hierarchy entities which can be included at the first level in the Parent Hierarchy Entity field. And, if you specify the hierarchy entity for Level 5, the system will list hierarchy entities which can be included at the fourth level in the Parent Hierarchy Entity field. Here, note that you must select the hierarchy entity which is already included in the entity hierarchy relationship.</p>	
Start Date	Used to specify the date from when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	Yes
	Note: The Start Date cannot be later than the End Date .	
End Date	Used to specify the date till when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	No
	Note: The End Date cannot be earlier than the Start Date .	
Price Items	Used to associate price items with the hierarchy entity at the specified entity level of the entity hierarchy relationship.	No

6. Enter the required details in the **Main** section.

7. Enter the hierarchy entity and its parent hierarchy entity for the subsequent levels in the **Hierarchy Details** section.

Note: You can include multiple hierarchy entities at the same level. But, you need to ensure that the parent hierarchy entity for such parallel levels is same.

- If you want to add more than two levels in the entity hierarchy relationship, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove an entity level from the entity hierarchy relationship, click the **Delete** (🗑️) icon corresponding to the entity level.

- Associate price items or price item bundles with the hierarchy entity for the subsequent levels in the **Hierarchy Details** section, if required.
- Click **Save**.

The entity hierarchy relationship is defined.

Note: You cannot define multiple entity hierarchy relationships for a division with the same entity hierarchy relationship start date.

Viewing the Entity Hierarchy Relationship Details

Procedure

To view the details of an entity hierarchy relationship:

- Search for the entity hierarchy relationship in the **Entity Hierarchy Relationship** screen.
- In the **Search Results** section, click the link in the **Hierarchy Information** column corresponding to the entity hierarchy relationship whose details you want to view.

The **Entity Hierarchy Relationship** screen appears. It contains the following zones:

- [Hierarchy](#) on page 362
 - [Hierarchy Relationship Tree](#) on page 363
- View the basic details of the entity hierarchy relationship in the **Hierarchy** zone.
 - View the structure of the entity hierarchy relationship (i.e. how the hierarchy entities are included at different levels) in the **Hierarchy Relationship Tree** zone.

Related Topics

For more information on...	See...
How to search for an entity hierarchy relationship	Searching for an Entity Hierarchy Relationship on page 355

Entity Hierarchy Relationship (Used for Viewing)

The **Entity Hierarchy Relationship** screen allows you to view the details of the entity hierarchy relationship. It also allows you to edit, delete, and copy the entity hierarchy relationship. It contains the following zones:

- [Hierarchy](#) on page 362
- [Hierarchy Relationship Tree](#) on page 363

Hierarchy

The **Hierarchy** zone displays the details of the entity hierarchy relationship. It contains the following sections:

- **Main** - Displays basic information about the entity hierarchy relationship. It contains the following fields:

Field Name	Field Description
Hierarchy	Displays the entity hierarchy relationship code.
Description	Displays the description of the entity hierarchy relationship.
Division	Indicates the division for which the entity hierarchy relationship is created. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.
Hierarchy Entity	Indicates the hierarchy entity that is included at the first level in the entity hierarchy relationship.
Start Date	Displays the date from when the entity hierarchy relationship is effective for the division.
End Date	Displays the date till when the entity hierarchy relationship is effective for the division.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the entity hierarchy relationship.
Delete	Used to delete the entity hierarchy relationship. Note: You can delete an entity hierarchy relationship when price items are not yet associated with a hierarchy entity at any level in the entity hierarchy relationship.
Duplicate	Used to define a new entity hierarchy relationship using an existing entity hierarchy relationship.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the entity hierarchy relationship is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Related Topics

For more information on...	See...
How to edit an entity hierarchy relationship	Editing an Entity Hierarchy Relationship on page 364
How to delete an entity hierarchy relationship	Deleting an Entity Hierarchy Relationship on page 369
How to copy an entity hierarchy relationship	Copying an Entity Hierarchy Relationship on page 369

Hierarchy Relationship Tree

The **Hierarchy Relationship Tree** zone lists the following in a tree structure:

- Information string of the hierarchy entity at the first level in the entity hierarchy relationship
- Information string of the hierarchy entities at the subsequent levels in the entity hierarchy relationship
- Information string of the price items which are associated with the hierarchy entities at different levels in the entity hierarchy relationship

For example,

▲	Cash Management, US
▲	Payments, US
>	ACH Payment
>	ACH Return
>	ACH Reversal
▲	Statements, US
>	Mini Statement
>	Yearly Statement

The following table indicates the node type of each node shown in the above example:

Node	Node Type
Cash Management, US (at the first level)	Hierarchy Entity
Payments, US (at the second level)	Hierarchy Entity
ACH Payment	Price Item
ACH Return	Price Item
ACH Reversal	Price Item
Statements, US (at the second level)	Hierarchy Entity
Mini Statement	Price Item
Yearly Statement	Price Item

Each node in the tree has a link. If you click the link on the hierarchy entity node, the **Hierarchy Entity** screen appears where you can view the details of the respective hierarchy entity. However, if you click the link on the price item node, the **Price Item** screen appears where you can view the details of the respective price item.

It contains the following field:

Field Name	Field Description
Hierarchy	Displays the entity hierarchy relationship code.

In addition, it contains the following buttons:

Button Name	Button Description
Expand All	Used to expand all nodes at once in the entity hierarchy relationship.
Collapse All	Used to collapse all nodes at once in the entity hierarchy relationship.

Note: The hierarchy entities and price items are sorted in the **Hierarchy Relationship Tree** zone based on their respective sort sequence. If two or more hierarchy entities and price items have the same sort sequence, then the system sorts them in the ascending alphabetical order of the information string. Also, if the sort sequence is not defined for the hierarchy entities and price items, then the system sorts them in the ascending alphabetical order of the information string.

Editing an Entity Hierarchy Relationship

Prerequisites

To edit an entity hierarchy relationship, you should have:

- Hierarchy entities defined in the application
- Hierarchy entities associated with the division whose entity hierarchy relationship you want to edit
- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To edit an entity hierarchy relationship:

1. Search for the entity hierarchy relationship in the **Entity Hierarchy Relationship** screen.
2. In the **Search Results** section, click the link in the **Hierarchy Information** column corresponding to the entity hierarchy relationship whose details you want to edit.

The **Entity Hierarchy Relationship** screen appears.

3. Click the **Edit** button in the **Hierarchy** zone.

The **Entity Hierarchy Relationship** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity hierarchy relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Displays the entity hierarchy relationship code.	Not applicable
Description	Used to specify the description for the entity hierarchy relationship.	Yes
Division	Used to indicate the division for which you want to create the entity hierarchy relationship.	Yes
	Note: This field is editable only when price items are not yet associated with the hierarchy entity at any level in the entity hierarchy relationship.	

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the entity hierarchy relationship is effective for the division.</p> <p>Note:</p> <p>This field is editable only when price items are not yet associated with the hierarchy entity at any level in the entity hierarchy relationship.</p> <p>The entity hierarchy relationship start date cannot be later than the entity hierarchy relationship end date.</p>	Yes
End Date	<p>Used to specify the date till when the entity hierarchy relationship is effective for the division.</p> <p>Note: The entity hierarchy relationship end date cannot be earlier than the entity hierarchy relationship start date.</p>	No
Entity Level	Indicates the level at which you want to include the hierarchy entity. By default, the value is set to Level 1 .	Not applicable
Hierarchy Entity	<p>Used to indicate the hierarchy entity that you want to include at the first level in the entity hierarchy relationship.</p> <p>Note:</p> <p>The list appears when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the first level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date <p>You cannot change the hierarchy entity at the first level because a price item is associated with a hierarchy entity either at the first or subsequent level in the entity hierarchy relationship.</p>	Yes
Business Object	Indicates the business object which is used while defining the entity hierarchy relationship.	Not applicable

- **Hierarchy Details** - Used to design the entity hierarchy relationship structure (i.e. specify the child and parent hierarchy entities for each level (i.e. Level 2, Level 3, Level 4,, Level 9)). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Entity Level	<p>Used to indicate the subsequent level at which you want to include the hierarchy entity. The valid values are:</p> <ul style="list-style-type: none"> • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note: The levels listed in this field vary depending on the value specified in Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. For example, if the Maximum Hierarchy Level option type is set to 5, the system will list only three levels (i.e. Level 2, Level 3, and Level 4) in the Entity Level field. However, if the Maximum Hierarchy Level option type is set to 10, the system will list only eight levels (i.e. Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, and Level 9) in the Entity Level field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	<p>Used to indicate the hierarchy entity that you want to include at the specified level (for example, Level 2) in the entity hierarchy relationship.</p> <p>Note:</p> <p>This field is enabled when you select the entity level from the respective field.</p> <p>The list appears only when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date 	Yes
Parent Hierarchy Entity	<p>Used to indicate the parent hierarchy entity.</p> <p>Note:</p> <p>This field is enabled when you select the entity level from the respective field.</p> <p>The list appears when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level minus one level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date <p>For example, if you specify the hierarchy entity for Level 2, the system will list hierarchy entities which can be included at the first level in the Parent Hierarchy Entity field. And, if you specify the hierarchy entity for Level 5, the system will list hierarchy entities which can be included at the fourth level in the Parent Hierarchy Entity field. Here, note that you must select the hierarchy entity which is already included in the entity hierarchy relationship.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	Yes
	Note: The Start Date cannot be later than the End Date .	
End Date	Used to specify the date till when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	No
	Note: The End Date cannot be earlier than the Start Date .	
Price Items	Used to associate price items with the hierarchy entity at the specified entity level of the entity hierarchy relationship.	No

Note: You cannot delete an entity level from the entity hierarchy relationship or change the details of an entity level when a price item is associated with the hierarchy entity at the respective entity level or at any level in the vertical hierarchy of the entity hierarchy relationship.

- Modify the required details in the **Main** section.
- Add or remove levels from the entity hierarchy relationship, if required.

Note:

If you want to add more levels in the entity hierarchy relationship, click the **Add (+)** icon and then enter the details for the entity level. However, if you want to remove an entity level from the entity hierarchy relationship, click the **Delete (🗑)** icon corresponding to the entity level.

You can include multiple hierarchy entities at the same level. But, you need to ensure that the parent hierarchy entity for such parallel levels is same.

- Associate or disassociate price items or price item bundles from the hierarchy entity for the subsequent levels in the **Hierarchy Details** section, if required.
- Click **Save**.

The changes made to the entity hierarchy relationship are saved.

How to associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship	Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship

Deleting an Entity Hierarchy Relationship

Procedure

To delete an entity hierarchy relationship:

1. Search for the entity hierarchy relationship in the **Entity Hierarchy Relationship** screen.
2. In the **Search Results** section, click the link in the **Hierarchy Information** column corresponding to the entity hierarchy relationship that you want to delete.

The **Entity Hierarchy Relationship** screen appears.

3. Click the **Delete** button in the **Hierarchy** zone.

A message appears confirming whether you want to delete the entity hierarchy relationship.

Note: You can delete an entity hierarchy relationship when price items are not yet associated with a hierarchy entity at any level in the entity hierarchy relationship.

4. Click **OK**.

The entity hierarchy relationship is deleted.

Copying an Entity Hierarchy Relationship

Instead of creating an entity hierarchy relationship from scratch, you can create a new entity hierarchy relationship using an existing entity hierarchy relationship. This is possible through copying an entity hierarchy relationship. On copying an entity hierarchy relationship, the details including the entity levels are copied to the new entity hierarchy relationship. You can then edit the details, if required.

Note: On copying an entity hierarchy relationship, if a price item is associated to a hierarchy entity at any level in the entity hierarchy relationship, the price item is not copied to the new entity hierarchy relationship.

Prerequisites

To copy an entity hierarchy relationship, you should have:

- Entity hierarchy relationship (whose copy you want to create) defined in the application
- Hierarchy entities defined in the application
- Hierarchy entities associated with the division for which you want to create an entity hierarchy relationship
- Value defined for the **Maximum Hierarchy Level** option type in the **C1-EHRCONFIG** feature configuration

Procedure

To copy an entity hierarchy relationship:

1. Search for the entity hierarchy relationship in the **Entity Hierarchy Relationship** screen.

2. In the **Search Results** section, click the link in the **Hierarchy Information** column corresponding to the entity hierarchy relationship whose copy you want to create.

The **Entity Hierarchy Relationship** screen appears.

3. Click the **Duplicate** button in the **Hierarchy** zone.

The **Entity Hierarchy Relationship** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity hierarchy relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Used to specify the entity hierarchy relationship code.	Yes
Description	Used to specify the description for the entity hierarchy relationship.	Yes
Division	Used to indicate the division for which you want to create the entity hierarchy relationship.	Yes
Start Date	Used to specify the date from when the entity hierarchy relationship is effective for the division.	Yes
	Note: The entity hierarchy relationship start date cannot be later than the entity hierarchy relationship end date.	
End Date	Used to specify the date till when the entity hierarchy relationship is effective for the division.	No
	Note: The entity hierarchy relationship end date cannot be earlier than the entity hierarchy relationship start date.	
Entity Level	Indicates the level at which you want to include the hierarchy entity. By default, the value is set to Level 1 .	Not applicable
Hierarchy Entity	Used to indicate the hierarchy entity that you want to include at the first level in the entity hierarchy relationship.	Yes
	<p>Note:</p> <p>The list appears when the division and start date is specified for the entity hierarchy relationship.</p> <p>The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the first level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date 	

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining the entity hierarchy relationship.	Not applicable

- **Hierarchy Details** - Used to design the entity hierarchy relationship structure (i.e. specify the child and parent hierarchy entities for each level (i.e. Level 2, Level 3, Level 4,, Level 9)). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Entity Level	<p>Used to indicate the subsequent level at which you want to include the hierarchy entity. The valid values are:</p> <ul style="list-style-type: none"> • Level 2 • Level 3 • Level 4 • Level 5 • Level 6 • Level 7 • Level 8 • Level 9 <p>Note: The levels listed in this field vary depending on the value specified in Maximum Hierarchy Level option type of the C1-EHRCONFIG feature configuration. For example, if the Maximum Hierarchy Level option type is set to 5, the system will list only three levels (i.e. Level 2, Level 3, and Level 4) in the Entity Level field. However, if the Maximum Hierarchy Level option type is set to 10, the system will list only eight levels (i.e. Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, and Level 9) in the Entity Level field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Entity	<p>Used to indicate the hierarchy entity that you want to include at the specified level (for example, Level 2) in the entity hierarchy relationship.</p> <p>Note: This field is enabled when you select the entity level from the respective field. The list appears only when the division and start date is specified for the entity hierarchy relationship. The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date 	Yes
Parent Hierarchy Entity	<p>Used to indicate the parent hierarchy entity.</p> <p>Note: This field is enabled when you select the entity level from the respective field. The list appears when the division and start date is specified for the entity hierarchy relationship. The list includes only those hierarchy entities:</p> <ul style="list-style-type: none"> • Which can be included at the specified level minus one level in the entity hierarchy relationship • Which are effective for the specified division on the entity hierarchy relationship start date <p>For example, if you specify the hierarchy entity for Level 2, the system will list hierarchy entities which can be included at the first level in the Parent Hierarchy Entity field. And, if you specify the hierarchy entity for Level 5, the system will list hierarchy entities which can be included at the fourth level in the Parent Hierarchy Entity field. Here, note that you must select the hierarchy entity which is already included in the entity hierarchy relationship.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	Yes
	Note: The Start Date cannot be later than the End Date .	
End Date	Used to specify the date till when the hierarchy entity is associated in the entity hierarchy relationship at the specified entity level.	No
	Note: The End Date cannot be earlier than the Start Date .	
Price Items	Used to associate price items with the hierarchy entity at the specified entity level of the entity hierarchy relationship.	No

- Enter the required details in the **Main** section.
- Add or remove levels from the entity hierarchy relationship, if required.

Note:

If you want to add more levels in the entity hierarchy relationship, click the **Add (+)** icon and then enter the details for the entity level. However, if you want to remove an entity level from the entity hierarchy relationship, click the **Delete (🗑)** icon corresponding to the entity level.

You can include multiple hierarchy entities at the same level. But, you need to ensure that the parent hierarchy entity for such parallel levels is same.

- Associate price items or price item bundles with the hierarchy entity for the subsequent levels in the **Hierarchy Details** section, if required.
- Click **Save**.

The new entity hierarchy relationship is defined.

Note: You cannot define multiple entity hierarchy relationships for a division with the same entity hierarchy relationship start date.

How to associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship	Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship

Price Item (Financial Services Business)

A bank may offer wide range of services to its customers. For example, Direct Debit, Credit Transfer, Stop Payment, etc. Oracle Revenue Management and Billing enables you to define each service as a price item. Once a price item is created, you can define pricing for the price item and then create charges against it in the system. You can define pricing at various levels in the customer hierarchy. For more information, see [Price Assignment Search Mechanism](#) on page 279.

You can group two or more price items together. While associating a price item with another price item, you need to indicate how the child price item is related to the parent price item. The system enables you to relate two price items using either of the following relationship types:

- Child Price Item
- Custom
- Other
- Price Item
- Product Group
- Service
- Service Group

For example, you can create two price items named Credit Transfer (CRTRN) and Credit Refund (CRRFD) and then associate the CRRFD price item with the CRTRN price item using the **Child Price Item** relationship type. The grouping of price items is done only for the informational purposes and it does not has any billing impact.

You can also create a price item bundle and then add price items to the price item bundle. For example, you can create a price item bundle named Fund Transfer (FDTRN) and then add the CRTRN and CRRFD price items to the bundle. You may use a price item bundle in the following scenarios:

- To offer volume discounts by charging a lower price for a group of services
- To group high and low selling services together

Based on the requirements, you can define the following types of price item bundles in the system:

- [Regular Bundle](#) on page 291
- [Phantom Bundle](#) on page 295
- [Ratio Bundle](#) on page 293

The system enables you to create price items or price item bundles which can be used for:

- **Pricing** - It means that pricing can be defined for the price item or price item bundle, but no charges can be created against it in the system.
- **Pricing and Billing** - It means that pricing can be defined for the price item or price item bundle and charges can be created against it in the system.

The system enables you to create the following types of price items or price item bundles:

- **Rate Based Price Items** - The interest rate based services would include services on which interest is charged to the customers (for example, loan interest which is calculated on the borrowed amount) or services on which the interest is paid to the customers (for example, savings interest which is calculated on the daily outstanding balance). At present, you can define interest rate based price items which can be used for only pricing and not pricing and billing. Also, you cannot create interest rate based price item bundles in the system.
- **Fees Based Price Items** - The fees based services would include services on which fees is charged to the customers either annually or at regular intervals (for example, ATM service for which the bank charges annual fee). You

can create fees based price items or price item bundles which can be used for pricing or pricing and billing in the system.

You need to associate a contract type with a price item or price item bundle. The system allows you to create a charge (i.e. billable charge) for a price item or price item bundle on an account when a contract of the contract type which is associated with the price item or price item bundle is already present on the account. You can specify a contract type when a price item or price item bundle is used for pricing and billing. If a price item or price item bundle is used for only pricing and not pricing and billing, the system automatically associates the contract type, which is specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration, with the price item or price item bundle.

You can assign a price item or price item bundle to a person, account, or price list. While assigning a price item or price item bundle, you need to define a pricing for the price item or price item bundle. You can define a standard price for a price item or price item bundle in the price list and then assign the price list to one or more persons or accounts. For more information about price list, see [Price List](#) on page 457. You can also define an override price for a price item or price item bundle that is specific to a person or account.

You can create price items or price item bundles which can be assigned to any price list except global price list or which can assigned to only global price lists. For more information about global price list, see [Price List](#) on page 457.

You can define a price item manager To Do type and To Do role for each price item or price item bundle. The system creates a To Do using the price item manager To Do type when the deal creator or approver requests the price item manager (i.e. clicks the **Send Price Items for Approval** button) to approve the average price for the price item or price item bundle offered in a deal. The users with the price item manager To Do role can only approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits of the price item manager To Do role.

You can associate one or more parameters where the parameter usage is set to **Price Item** with a price item or price item bundle. These parameters can then be used for:

- Aggregating transactions which are mapped to the price item or price item bundle
- Defining multi parameter based pricing for the price item or price item bundle

If the parameter usage is set to **Aggregation** while associating a parameter with a price item or price item bundle, the parameter is only used for aggregating transactions which are mapped to the price item or price item bundle. However, if the parameter usage is set to **Pricing** while associating a parameter with a price item or price item bundle, the parameter is used for aggregating transactions as well as for defining multi parameter based pricing for the price item or price item bundle. Note that you can associate parameters only to regular price item bundles and not to ratio and phantom price item bundles.

You can associate a price item or price item bundle to one or more divisions. You can assign a price item or price item bundle to an account, person, or price list when the account, person, or price list belongs to the division to which the price item or price item bundle is associated. In addition, you can do the following when a price item or price item bundle is associated to a division:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item or Price Item Bundle for the Division
- Define the Accrual Type Criteria of the Price Item or Price Item Bundle for the Division
- Associate the Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of the Division
- Define the Cost of the Price Item or Price Item Bundle for the Division
- Define the Average Price Floor and Ceil Limits of the Price Item or Price Item Bundle for the Division
- Define the Division-Specific Characteristics for the Price Item or Price Item Bundle

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It also allows you to create and copy a price item or price item bundle. It contains the following zone:

- [Search Price Item](#) on page 376

Through this screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 421
- [Price Item Relationship](#) on page 439
- [Price Item Assignments](#) on page 454

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> • Price Item Details 	Yes
	Note: By default, the Price Item Details option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Usage	Used to search price items or price item bundles which is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	No
	Note: By default, the Pricing and Billing option is selected.	
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> • Fees • Rate 	No
	Note: This field appears when the Pricing option is selected from the Price Item Usage list.	

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular However, if the price item bundle is available for pricing and its price item type is set to Fees , the valid value is: <ul style="list-style-type: none"> • Regular
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees
Price Item Usage	Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Duplicate	On clicking the Duplicate  icon, the Price Item screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.
Price Item Assigned To	On clicking the View  icon in the Price Item Assigned To column, the Price Item Assignments screen appears where you can view the persons, accounts, and active price lists to which the price item or price item bundle is assigned.

Column Name	Column Description
Price Item Relationship	On clicking the View () icon in the Price Item Relationship column, the Price Item Relationship screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <p>Note: By default, the Pricing and Billing option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. By default, the Fees option is selected. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: By default, the No option is selected. This field is not applicable for the health insurance business.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> on page 291 • <i>Phantom Bundle</i> on page 295 • <i>Ratio Bundle</i> on page 293 <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Average Price Floor and Ceil Type	<p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. 	Yes (Conditional)
	<p>Note:</p> <ul style="list-style-type: none"> • In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business. 	<p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p>
Sort Sequence	Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module.	No

Field Name	Field Description	Mandatory (Yes or No)
Variable Price	Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.	No
	<p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p>	

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

6. Associate the price item or price item bundle with the required divisions.
7. Associate the SQIs with the price item or price item bundle for the required divisions.
8. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define the division-specific characteristics for the price item or price item bundle. if required.

14. Define the characteristics for the price item or price item bundle, if required.

15. Click **Save**.

The price item is defined.

Note: While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

You can define multi parameter based pricing for a price item or price item bundle when the parameters using which you want to define the price item pricing are associated with the respective price item or price item bundle during the pricing date range. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a financial institution can offer different price for a price item based on the return codes:

Service	Price Item	Parameter	Parameter Value	Price
SEPA Direct Debit Return	SEPADDR	Return Code (RTURNCD)	AC01	0.1\$
			AC04	0.2\$
			AC06	0.3\$
			AG01	0.10\$

In such case, you need to first define a predefined parameter named Return Code where the parameter usage is set to **Price Item**). In the Return Code parameter, you must specify the above listed return codes (i.e. AC01, AC04, AC06, and AG01) as the predefined values. Then, in order to define multi parameter based pricing for the SEPADDR price item using the Return Code parameter, you must associate the Return Code parameter with the SEPADDR price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Return Code	10	Yes	-

Let us understand this with the help of another example from the health insurance domain.

The following table illustrates how a self-funded customer can be charged different admin fee for the services based on health coverage class and network type:

Service	Price Item	Health Coverage Class	Network Type	Fees
Claim Based Fees	CLBDFS	Medical	In	\$100
		Medical	Out	\$150
		Dental	In	\$50
		Dental	Out	\$75

In such case, you need to first define two predefined parameters named Health Coverage Class and Network Type where the parameter usage is set to **Price Item**). In the Health Coverage Class parameter, you must specify the above listed values (i.e. Medical and Dental)) as the predefined values. And, in the Network Type parameter, you must specify the above listed values (i.e. In and Out)) as the predefined values. Then, in order to define parameter based pricing for the CLBDFS price item using the Health Coverage Class and Network Type parameters, you must associate these parameters with the CLBDFS price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Health Coverage Class	10	Yes	-
Network Type	20	Yes	-

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the parameter usage is set to **Price Item**)

Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is associated with the price item or price item bundle.	Yes
Effective End Date	Used to specify the date till when the parameter is associated with the price item or price item bundle.	No
Parameter	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> <p>In the Parameter Search window, the system allows you to search only those parameters where the parameter usage is set to Price Item.</p> <p>If you select a predefined parameter, the Add (+) icon appears corresponding to the Parameter field. On clicking the Add icon, a grid appears where you can specify a list of predefined parameter values which are valid for the price item or price item bundle while defining its pricing. If you do not list any predefined parameter value in this grid, the system enables you to specify any predefined value of the parameter while defining the pricing for the price item or price item bundle.</p>	Yes
Business Label	Used to specify a business label for the parameter. If you specify the business label for a parameter, the business label appears throughout the application instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should appear in the pricing parameter information string across the application.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation – Used when you want to use the parameter for aggregating transactions. • Pricing – Used when you want to use the parameter for aggregating transactions as well as for defining the price item pricing. 	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional)
	Note: This field is disabled when the Mandatory option is selected.	Note: This field is required when the Mandatory option is not selected.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

2. Enter the required details in the **Parameters** section.
3. If you want to associate more than one parameter with the price item or price item bundle, click the **Add (+)** icon and then repeat step 2.

Note:

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

4. For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.
5. Click **Save**.

The parameters are associated with the price item or price item bundle.

Note: By default, the priority of all parameters which are mandatory is set to 0.

How to define a price item or price item bundle	Defining a Price Item or Price Item Bundle on page 379
How to edit a price item or price item bundle	Editing a Price Item or Price Item Bundle on page 432
How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 411
How to define the valid predefined parameter values for a price item or price item bundle	Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle on page 390

Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle

A predefined parameter may have hundreds of values defined in the system. But, there might be situations when only certain predefined parameter values are applicable for a price item or price item bundle while defining its pricing. In such case, you can define a set of valid predefined parameter values for a price item or price item bundle. For example, the Return Code parameter has the following predefined parameter values:

Parameter Value	Description
AC01	Account Identifier Incorrect (i.e. invalid IBAN)
AC04	Account Closed
AC06	Account Blocked
AG01	Direct Debit Forbidden for Regulatory Reasons
AG02	Operation/Transaction Code Incorrect
AM04	Insufficient Funds
AM05	Duplicate Collection
MD01	Unauthorized Transaction
MD06	Disputed Authorized Transaction

If only the MD01 and MD06 predefined parameter values are applicable for the SEPA Debit Refund (SEPADRF) price item, you can define MD01 and MD06 as the valid predefined parameter values for the SEPADRF price item. In such case, the system will allow you to define the pricing for the SEPADRF price item only using the MD01 or MD06 parameter value. However, if all the above listed predefined parameter values are applicable for the SEPA Direct Debit Return (SEPADDR) price item, you must not define the valid predefined parameter values for the SEPADDR price item. In such case, the system will allow you to define the pricing for the SEPADDR price item using any of the above listed parameter value.

Another example, the Health Coverage Class parameter has the following predefined parameter values:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

If only the MEDICAL and DENTAL predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you can define MEDICAL and DENTAL as the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item only using the MEDICAL or DENTAL parameter value. However, if all the above listed predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you must not define the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item using any of the above listed parameter value.

Prerequisites

To define the valid predefined parameter values for a price item or price item bundle, you should have:

- Predefined values defined for the parameter which is associated with the price item or price item bundle
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

2. Click the **Add** () icon in the **Parameter** column corresponding to the predefined parameter which is associated with the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search () icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the predefined parameter value appears corresponding to the Parameter Value field.</p>	<p>Note: This field is required when you are defining the valid predefined parameter values for the price item or price item bundle.</p>

3. Enter a predefined parameter value which is valid for the price item or price item bundle while defining its pricing.
4. If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

Note: However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter value. You can remove a valid predefined parameter value from the price item or price item bundle when the parameter value is not yet used for defining the price item pricing.

5. Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

How to associate a parameter with a price item or price item bundle	Associating a Parameter with a Price Item or Price Item Bundle on page 386

Associating a Price Item or Price Item Bundle with a Division

You can assign a price item or price item bundle to a person or account when the price item or price item bundle is associated with the division to which the person or account belongs. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a price item can be associated with one or more divisions in the financial institution domain:

Price Item	Division
SEPA Direct Debit Return (SEPADDR)	001-AL
	002-CA
	003-FL
	004-IN
Stop Payment (STPPMT)	002-CA
	003-FL
	004-IN

In such case, you can assign the SEPADDR price item to any person or account which belongs to the 001-AL, 002-CA, 003-FL, or 004-IN division. However, you can assign the STPPMT price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Let us understand this with the help of an example from the health insurance domain.

The following table illustrates how a price item can be associated with one or more divisions in the health insurance domain:

Price Item	Division
Claim Based Fees (CLBDFS)	002-CA
	003-FL
	004-IN

In such case, you can charge the CLBDFS price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application
- Divisions associated with the access group to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the Add  icon, you can associate an SQI with the price item or price item bundle for the division.	Not applicable
Division Characteristics	On clicking the Add  icon, you can define a division-specific characteristic for the price item or price item bundle.	Not applicable
Accrual Type Criteria	On clicking the Add  icon, you can define the accrual type criteria of the price item or price item bundle for the division. Note: This feature is not applicable for the health insurance business.	Not applicable
Entity Hierarchy	On clicking the Add  icon, you can associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the division. Note: This feature is not applicable for the health insurance business.	Not applicable
Costs	On clicking the Add  icon, you can define the cost of the price item or price item bundle for the division. Note: This feature is not applicable for the health insurance business.	Not applicable
Average Price Floor and Ceil Limits	On clicking the Add  icon, you can define the average price floor and ceil limits of the price item or price item bundle for the division. Note: This feature is not applicable for the health insurance business.	Not applicable
Negotiability	On clicking the Add  icon, you can define the negotiability floor and ceil limits of the price item or price item bundle for the division. Note: This feature is not applicable for the health insurance business.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle. Note: You can only view those divisions to which you have access in the Division list.	Yes (Conditional) Note: This field is required while associating the price item or price item bundle with a division.

2. Select the division from the respective field.
3. If you want to associate the price item or price item bundle with more than one division, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove the price item or price item bundle from a division, click the **Delete (🗑)** icon corresponding to the division. You cannot remove the price item or price item bundle from a division when it is assigned to a person or account which belongs to the division.

4. Associate the SQIs with the price item or price item bundle for the required divisions.
5. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

6. Associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the required divisions.

Note: This step is not applicable for the health insurance business object.

7. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

8. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

9. Define the rate negotiability floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

10. Define the division-specific characteristics for the price item or price item bundle. if required.

11. Click **Save**.

The price item or price item bundle is associated with the divisions.

Tip: Alternatively, you can associate a price item or price item bundle with a division using the **Division** screen. For more information, see [Associating a Price Item or Price Item Bundle with a Division](#) on page 775.

How to define a division-specific characteristic for a price item or price item bundle	<i>Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle</i> on page 397

Associating an SQI with a Price Item or Price Item Bundle for a Division

In the transaction aggregation process, an SQI based billable charge is created for a price item or price item bundle (to which a transaction is mapped) when:

- The SQIs are associated with the price item or price item bundle for the division to which the account (i.e. for which the billable charge is created) belongs.
- The transaction aggregation rules are defined for such SQIs in the system.

Let us assume that the A1 account belongs to the 201-NJ division and the A2 account belongs to the 209-CA division.

The following table illustrates how you can define division-specific SQIs for a price item in the financial institution domain:

Price Item	Division	Service Quantity Identifiers (SQIs)
Stop Payments (STPY)	201-NJ	Number of Transactions (NBRTXN)
		Transaction Volume (TXNVOL)
		Transaction Amount (TXNAMT)
	209-CA	Number of Transactions (NBRTXN)
		Transaction Amount (TXNAMT)

Now, when an SQI based billable charge is created for the A1 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Volume (TXNVOL)
- Transaction Amount (TXNAMT)

And, when an SQI based billable charge is created for the A2 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Amount (TXNAMT)

Another example, you can calculate the enrollment based fees for a self-funded customer based on Per Subscriber Per Month or Per Member Per Month for the 201-NJ and 209-CA divisions. Therefore, you need to associate two SQIs — Subscriber Count and Member Count with the Enrollment Based Fees (ERBDFS) price item.

The following table illustrates how you can define division-specific SQIs for a price item in the health insurance domain:

Price Item	Division	Service Quantity Identifiers (SQIs)
Enrollment Based Fees (ERBDFS)	201-NJ	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)
	209-CA	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)

Prerequisites

To associate an SQI with a price item or price item bundle for a division, you should have:

- Service Quantity Identifiers (SQIs) defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate an SQI with a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **SQIs** column corresponding to the division for which you want to associate SQIs with the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI that you want to associate with the price item or price item bundle for the division.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the SQI field. On clicking the Search icon, the Service Quantity Identifier Search window appears.</p> <p>On specifying the SQI, the description of the SQI appears corresponding to the SQI field.</p>	<p>Note: This field is required while associating an SQI with the price item or price item bundle for the division.</p>

3. Enter the required details in the **SQIs** grid.
4. If you want to associate more than one SQI with the price item or price item bundle for the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove an SQI from the price item or price item bundle for the division, click the **Delete**  icon corresponding to the SQI. You cannot remove an SQI from the price item or price item bundle for the division when an SQI based billable charge is created using the SQI.

5. Click **Save**.

The SQIs are associated with the price item or price item bundle for the division.

Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle**Prerequisites**

To define a division-specific characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define a division-specific characteristic for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination .
		Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.</p>

- Enter the required details in the **Divisions** section.
- If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

Defining the Accrual Type Criteria of a Price Item or Price Item Bundle for a Division

The accrual type criteria of a price item or price item bundle is referred when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria of a price item or price item bundle is set to...	Then...
Actual	<p>The system considers the billable charges of the price item for accrual when the following conditions are met:</p> <ul style="list-style-type: none"> The price item is not excluded in the accrual type. The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual.

If the accrual type criteria of a price item or price item bundle is set to...	Then...
Historical	The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> The price item is not excluded in the accrual type. The accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical.
Not Applicable	The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> The price item is not excluded in the accrual type The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual or Historical.

The system enables you to define accrual type criteria of a price item or price item bundle for each division. For example, you can maintain different accrual type criteria of the Stop Payments (STPY) price item for each division as shown below:

The following table illustrates how you can define different accrual type criteria for a price item in each division:

Price Item	Division	Accrual Type Criteria
Stop Payments (STPY)	201-NJ	Actual
	209-CA	Historical
	210-FL	Not Applicable
	215-OX	Actual
	220-AL	Historical
	223-NJ	Not Applicable

Prerequisites

To define the accrual type criteria of a price item or price item bundle for a division, you should have:

- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the accrual type criteria of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Accrual Type Criteria** column corresponding to the division for which you want to define accrual type criteria of the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	<p>Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are:</p> <ul style="list-style-type: none"> • Actual - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual. • Historical - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Historical. • Not Applicable - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual or Historical. 	Yes (Conditional)
		<p>Note: This field is required while defining the accrual type criteria of the price item or price item bundle for the division.</p>
	<p>Note: By default, the Not Applicable option is selected.</p>	

3. Select the accrual type criteria from the respective field.
4. Click **Save**.

The accrual type criteria of the price item or price item bundle is defined for the division.

Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division

Once you design the structure of an entity hierarchy relationship, you can associate a price item or price item bundle with a hierarchy entity at any level in the entity hierarchy relationship. You can associate a price item or price item bundle with a hierarchy entity only from the **Price Item** screen. The system enables you to define division-specific hierarchy for a price item or price item bundle. Therefore, while associating a price item or price item bundle with a hierarchy entity, you can select a hierarchy entity from any entity hierarchy relationship which is created for the division. However, the system checks whether the association date range is within the entity hierarchy relationship date range.

For example, you can associate the ACH Transfer (ACHTRN) price item with the Payments hierarchy entity in the Cash Management entity hierarchy relationship as shown below:

```
Cash Management
  Payments
    ACH Transfer
```

Associating a price item or price item bundle with a hierarchy entity does not have any impact on the billing module. At present, the price item hierarchy is only displayed in the Deal Modelling and Simulation module.

Prerequisites

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division, you should have:

- Entity hierarchy relationships defined for the required divisions
- Hierarchy entities included at the required levels in the entity hierarchy relationship
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Entity Hierarchy** column corresponding to the division for which you want to define price item or price item bundle hierarchy.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Used to indicate the entity hierarchy relationship in which you want to include the price item or price item bundle.	Yes (Conditional)
	Note: The Search  icon appears corresponding to the Hierarchy field. On clicking the Search icon, the Hierarchy Search window appears.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.
Parent Entity	Used to indicate the hierarchy entity to which you want to associate the price item or price item bundle.	Yes (Conditional)
	Note: The list appears when the entity hierarchy relationship is specified in the Hierarchy field. It contains the hierarchy entities which are included at the root and subsequent levels in the entity hierarchy relationship.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.
Start Date	Used to specify the date from when the price item or price item bundle is associated with the hierarchy entity in the entity hierarchy relationship.	Yes (Conditional)
	Note: The start date cannot be later than the end date. The start date cannot be earlier than the entity hierarchy relationship start date.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the price item or price item bundle is associated with the hierarchy entity in the entity hierarchy relationship.	No
	<p>Note:</p> <p>The end date cannot be earlier than the start date.</p> <p>The end date cannot be later than the entity hierarchy relationship end date.</p>	

- Enter the required details in the **Entity Hierarchy** grid.
- If you want to associate the price item or price item bundle to more the one hierarchy entity in the same or different entity hierarchy relationship, click the **Add (+)** icon and then repeat step 3.

<p>Note:</p> <p>You cannot associate the price item or price item bundle to multiple hierarchy entities in the same or different entity hierarchy relationship for the same or overlapping date range.</p> <p>However, if you want to disassociate the price item or price item bundle from a hierarchy entity of an entity hierarchy relationship, click the Delete (🗑️) icon corresponding to the hierarchy and parent entity combination.</p>
--

- Click **Save**.

The price item or price item bundle is associated with a hierarchy entity in an entity hierarchy relationship of the division.

Defining the Cost of a Price Item or Price Item Bundle for a Division

Oracle Revenue Management and Billing enables you to maintain the different types of fixed and variable costs of a price item or price item bundle for each division. The system uses the fixed and variable cost information while calculating the cost of a price item or price item bundle in a deal. It considers the cost which is defined for the division to which the account or person belongs. It derives the fixed and/or variable cost which is effective on the deal start date.

The system enables you to maintain the following types of costs in different currencies:

- Additional Fixed Cost
- Additional Variable Cost
- Fixed Third Party Cost
- Fixed Internal Cost
- Variable Internal Cost

- Variable Third Party Cost

While calculating the cost of a price item or price item bundle in a deal, the system converts the cost in the deal currency when the cost currency is different from the deal currency. As the name implies, the fixed cost is an expense that does not change with the increase or decrease in the price item volume or commitments. Therefore, the total fixed cost is equal to the sum of fixed cost which is effective on the deal start date for the division. However, the variable cost is an expense that change with the increase or decrease in the price item volume or commitments. Therefore, the total variable cost is equal to the sum of multiplication of variable cost (which is effective on the deal start date for the division) and price item volume or commitments.

Let us understand this with the help of an example:

The following table illustrates how you can define division-specific costs for a price item:

Price Item	Division	Cost Type	Cost Amount
PI1	201-NJ	Fixed Third Party Cost	\$5
		Fixed Internal Cost	\$3
		Additional Fixed Cost	\$1
		Variable Third Party Cost	\$0.1
		Variable Internal Cost	\$0.65
		Additional Variable Cost	\$0.5

If a deal is created for a person who belongs to the 201-NJ division and if the PI1 price item is assigned to the person in the deal and if the original volume and proposed commitment of the PI1 price item in the deal is set to 100 and 200, respectively, the system calculates the cost of the PI1 price item in the following manner:

The following table illustrates how the original and proposed cost is calculated for a price item in a deal:

Original Cost	
Total Fixed Cost	$\$5 + \$3 + \$1 = \9
Total Variable Cost	$(100 * \$0.1) + (100 * \$0.65) + (100 * \$0.5) = \$10 + \$65 + \$50 = \$125$
Total Cost	$\$9 + \$125 = \$134$
Proposed Cost	
Total Fixed Cost	$\$5 + \$3 + \$1 = \9
Total Variable Cost	$(200 * \$0.1) + (200 * \$0.65) + (200 * \$0.5) = \$20 + \$130 + \$100 = \$250$
Total Cost	$\$9 + \$250 = \$259$

Here, the assumption is the deal and cost currency is same (i.e. USD). The system then uses the total original and proposed costs for calculating the original and proposed profitability of the deal.

Prerequisites

To define the cost of a price item or price item bundle for a division, you should have:

- Currencies defined in the application

- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the cost of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** (+) icon in the **Costs** column corresponding to the division for which you want to define the costs of the price item or price item bundle.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the cost of the price item or price item bundle is effective for the division.	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.
Cost Type	Used to indicate the type of cost incurred in the division for the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost 	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.
Cost Value	Used to specify the cost amount.	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.
Cost Currency	Used to specify the currency in which you want to define the cost. The system does currency conversion when the cost currency is different from the deal currency.	Yes (Conditional)
		Note: The list includes only those currencies which are already defined in the system.
		Note: This field is required while defining the cost of the price item or price item bundle for the division.

3. Enter the required details in the **Costs** grid.
4. If you want to define more than one cost of the price item or price item bundle for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove the cost of the price item or price item bundle from the division, click the **Delete** (🗑️) icon corresponding to the cost.

5. Click **Save**.

The cost of the price item or price item bundle is defined for the division.

Defining the Average Price Floor and Ceil Values of a Price Item or Price Item Bundle for a Division

Oracle Revenue Management and Billing enables you to define the average price floor and ceil limits of a price item or price item bundle for each division. Before you define the average price floor and ceil limits, you need to specify the floor and ceiling type for the price item or price item bundle. At present, the system supports the following floor and ceiling types for a price item or price item bundle:

- Absolute Value Range

Once the floor and ceiling type of a price item or price item bundle is set to **Absolute Value Range**, you can define the average price floor and ceil limits of the price item or price item bundle for the required divisions. The system enables you to define different average price floor and ceil limits for different To Do roles. The system uses the average price floor and ceil limits while approving the average price of the price item or price item bundle in a deal. The deal creator or an approver at any level in the division or deal approval hierarchy can approve the average price of a price item or price item bundle when the average price is within the floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the average price of the P1 price item in a deal is \$25 and the floor and ceil limits of the deal creator's To Do role is set to \$10-\$15, then the deal creator cannot approve the average price of the P1 price item in the deal.

If the average price floor and ceil limits is not defined for the deal creator's or approver's To Do role, the status of the price item or price item bundle in the deal is changed to **Error**. If the average price floor and ceil limits is defined for the deal creator's or approver's To Do role, but the average price of the price item or price item bundle is not within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Pending for Approval**. However, if the average price floor and ceil limits is defined for the deal creator's or approver's To Do role and the average price of the price item or price item bundle is within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Approved**.

Here, you can also define the average price floor and ceil limits for the price item manager's To Do role. Note that the price item manger can approve the average price of the price item or price item bundle in a deal when the average price of the price item or price item bundle is within the floor and ceil limits of the price item manager's To Do role.

- Spread Amount

Once the average price floor and ceil type of a price item or price item bundle is set to **Spread Amount**, the system calculates the average price floor and ceil limits based on the average price and spread amount. The system calculates the average price of the price item or price item bundle. The system searches for the eligible price list in the price assignments assigned to the To Do roles. If a flat pricing is defined in the price assignment, then the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

Average Price = Price Item Revenue/Price Item Commitments

The system then considers the spread amount specified for the relationship manager's To Do role in the price item. Using the spread amount and average price, the system calculates the average price floor and ceil limit values. The deal creator or an approver at any level in the division or deal approval hierarchy can approve the average price of a price item or price item bundle when the average price is within the floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the spread amount set by you is 10 and the system calculated average price of the P1 price item in a deal is \$25 then the system sets the floor and ceil limits of the deal creator's To Do role to \$15-\$35. In this case the deal creator can approve the average price of the P1 price item in the deal.

The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

- Spread Percentage

Once the average price floor and ceil type of a price item is set to the **Spread Percentage**, the system calculates the average price floor and ceil limits based on the average price and spread percentage. The system calculates the average price of the price item or price item bundle. The system searches for the eligible price list in the price assignments assigned to the To Do roles. If a flat pricing is defined in the price assignment, then the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

Average Price = Price Item Revenue/Price Item Commitments

The system then considers the spread parentage specified for the relationship manager's To Do role in the price item. Using the spread percentage and average price, the system calculates the average price floor and ceil values. The deal creator or an approver at any level in the division or approver system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the spread percentage set by you is 10 and the system calculated average price of the P1 price item in a deal is \$50 then the system sets the floor and ceil limits of the deal creator's To Do role to \$45-\$55. In this case the deal creator can approve the average price of the P1 price item in the deal.

The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

Prerequisites

To define the average price floor and ceil limits of a price item or price item bundle for a division, you should have:

- To Do roles and currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the average price floor and ceil limits of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Average Price Floor and Ceil Limits** column corresponding to the division for which you want to define the average price floor and ceil limits of the price item or price item bundle.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Role	Used to indicate that users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the To Do Role Search window appears.</p> <p>On specifying the To Do role, the description of the To Do role appears corresponding to the To Do Role field.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Floor Value	Used to specify the floor (i.e. lower) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is below the floor limit.	Yes (Conditional)
	<p>Note: The floor value cannot be greater than the ceil value.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Ceil Value	Used to specify the ceil (i.e. upper) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is above the ceil limit.	Yes (Conditional)
	<p>Note: The ceil value cannot be lower than the floor value.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Spread Amount	Used to specify the spread amount specified while defining a price item or price item bundle or assigned to a To Do role.	Yes (Conditional)
	<p>Note: This column appears when you select the Spread Amount option from the Average Price Floor and Ceil Type list for a price item or price item bundle.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Spread Percentage	Used to specify the spread percentage specified while defining a price item or price item bundle or assigned to a To Do role.	Yes (Conditional)
	<p>Note: This column appears only when you select the Spread Percentage option from the Average Price Floor and Ceil Type list for a price item or price item bundle.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>

Field Name	Field Description	Mandatory (Yes or No)
Floor and Ceil Currency	Used to indicate the currency in which you want to define the floor and ceil limits. The system does the currency conversion when the pricing currency is different from the floor and ceil currency.	Yes (Conditional)
		Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.
	Note: The list includes only those currencies which are already defined in the system.	

- Enter the required details in the **Average Price Floor and Ceil Limits** grid.
- If you want to define the average price floor and ceil limits for more than one To Do role, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the average price floor and ceil limits of a To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do role.

- Click **Save**.

The average price floor and ceil limits of the price item or price item bundle are defined for the division.

Defining the Rate Negotiability Floor and Ceil Values of a Price Item or Price Item Bundle for a Division

Oracle Revenue Management and Billing enables you to indicate whether the rate is negotiable for a price item or price item bundle for each division. If you wish to enable the rate negotiability, you need to define the negotiability floor and ceil limits for a division of a price item at the price item level or at the price assignment level. You can set different negotiability criteria for the divisions with which the price item is associated. If the rate negotiability feature is configured for a price item, the system enables:

- The relationship manager to propose a negotiated rate for the price item
- The product level approver, division level approver, and deal level approver to recommend a rate for the price item

In order to indicate whether the rate is negotiable or not, the **Rate Negotiability** field is introduced in the system. On enabling this field, the system allows you to edit or override rate of the deal. Once the negotiability option is set, you need to specify the rate negotiability floor and ceil limits for a price item or price item bundle.

Once the floor and ceil limits are defined, you can also choose to validate whether the negotiated rate is within the range of negotiability floor and ceil limits or not. To implement this, the **Negotiate Rate Only within Range** field is introduced. If this field is enabled, the system validates the negotiated rate is within the specified range or not. However, you can disable this validation as well. If the negotiated rate is found to be within the specified negotiability floor and ceil limits, the system allows you to edit or override the rate of a price item in a deal. However, if the negotiated rate is not within the negotiability floor and ceil limits then an error occurs indicating the negotiability rate is not within the specified negotiability floor and ceil limits.

Once you enable the rate negotiability option for a division of a price item, you can edit or override the rate of a price item in a deal when the customer or account to which the price item is assigned belongs to the division. If you disable the rate negotiability option, you cannot edit or override the rate of a price item in a deal when the customer or account to which the price item is assigned belongs to the division.

Prerequisites

To define the rate negotiability floor and ceil limits of a price item or price item bundle for a division, you should have:

- Currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the rate negotiability floor and ceil limits of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Rate Negotiability** column corresponding to the division for which you want to define the rate negotiability floor and ceil limits of the price item or price item bundle.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Rate Negotiability	Used to specify whether the rate is negotiable for a price item or not. The valid values are: <ul style="list-style-type: none"> • Yes • No If you select yes option then you can edit or override the rate of a price item or price item bundle in a deal when the customer or account to which is the price item is assigned belongs to the division otherwise not.	No
Negotiate Rate Only Within Range	Used to validate whether the negotiated rate is within the floor and ceil limits or not. The valid values are: <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 2px;">Note: This field is enabled when you select Yes option for the Rate Negotiability field.</div>	No
Floor Value	Used to specify the floor (i.e. lower) limit for the rate negotiation. <div style="border: 1px solid black; padding: 2px;">Note: The floor value cannot be greater than the ceil value.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Ceil Value	Used to specify the ceil (i.e. upper) limit for the rate negotiation.	No
	Note: The ceil value cannot be lower than the floor value.	
Floor and Ceil Currency	Used to indicate the currency in which you want to define the rate negotiability floor and ceil limits. The system does the currency conversion when the pricing currency is different from the floor and ceil currency.	No
	Note: The list includes only those currencies which are already defined in the system.	

- Enter the required details in the **Rate Negotiability** grid.
- If you want to define more than one rate negotiability floor and ceil value of a price item or price item bundle for the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the rate negotiability floor and ceil value of a price item or price item bundle from the division, click the **Delete (🗑)** icon corresponding to the To Do role.

- Click **Save**.

The rate negotiability floor and ceil limits of the price item or price item bundle are defined for the division.

Defining a Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item or price item bundle:

- Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Note: This field is required while defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required while defining a characteristic for the price item or price item bundle.

- Enter the required details in the **Price Item Characteristics** section.
- If you want to define more than one characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 411

Copying a Price Item or Price Item Bundle

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle.

On copying a price item or price item bundle, the details including the following are copied to the new price item or price item bundle:

- Parameters and Divisions associated with the price item or price item bundle
- SQIs associated with the price item or price item bundle for the divisions
- Division-specific characteristics of the price item or price item bundle
- Accrual type criteria of the price item or price item bundle for the divisions
- Hierarchy entity to which the price item or price item bundle is associated in the divisions
- Cost of the price item or price item bundle for the divisions
- Average price floor and ceil limits of the price item or price item bundle for the divisions
- Negotiability floor and ceil values of the price item or price item bundle for the required divisions

You can then edit the details, if required.

Prerequisites

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user (i.e. who is performing this action) belongs
- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To copy a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the price item or price item bundle whose copy you want to create.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle

- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This field is not applicable for the health insurance business.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> on page 291 • <i>Phantom Bundle</i> on page 295 • <i>Ratio Bundle</i> on page 293 <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p>	Yes
	<p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Floor and Ceiling Type	<p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. 	Yes (Conditional)
	<p>Note:</p> <ul style="list-style-type: none"> • In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business. 	<p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p>
Sort Sequence	Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module.	No

Field Name	Field Description	Mandatory (Yes or No)
Variable Price	Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.	No
	<p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p>	

3. Enter the required details in the **Main** section.

4. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

5. Associate or disassociate the price item or price item bundle from the required divisions.

6. Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.

7. Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

8. Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

9. Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define, edit or remove the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.

13. Define, edit, or remove characteristics of the price item or price item bundle, if required.

14. Click **Save**.

The new price item is defined.

Note:

While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

Viewing the Price Item or Price Item Bundle Details

Procedure

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 421
- [Price Item Characteristics](#) on page 424
- [Parameters](#) on page 424
- [Predefined Parameter Values for Price Item](#) on page 425
- [Divisions](#) on page 425
- [Division-Specific SQIs for Price Item](#) on page 426
- [Division-Specific Characteristics for Price Item](#) on page 426
- [Division-Specific Accrual Type Criteria for Price Item](#) on page 427
- [Division-Specific Hierarchy for Price Item](#) on page 427
- [Division-Specific Cost for Price Item](#) on page 429
- [Division-Specific Average Price Floor and Ceil Values for Price Item](#) on page 430
- [Division-Specific Negotiability Floor and Ceil Values for Price Item](#) on page 428
- [Price Item Relationship](#) on page 431

3. View the basic details of the price item or price item bundle in the **Price Item** zone.
4. View the characteristics of the price item or price item bundle in the **Price Item Characteristics** zone.
5. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
6. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
7. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
8. View the SQIs associated with the price item or price item bundle for a division in the **Division-Specific SQIs for Price Item** zone.
9. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
10. View the accrual type criteria of the price item or price item bundle for a division in the **Division-Specific Accrual Type Criteria for Price Item** zone.

Note: This step is not applicable for the health insurance business.

11. View the hierarchy entity to which the price item or price item bundle is associated in a division in the **Division-Specific Hierarchy for Price Item** zone.

Note: This step is not applicable for the health insurance business.

12. View the cost of the price item or price item bundle for a division in the **Division-Specific Cost for Price Item** zone.

Note: This step is not applicable for the health insurance business.

13. View the average price floor and ceil limits of the price item or price item bundle for a division in the **Division-Specific Floor and Ceil Values for Price Item** zone.

Note: This step is not applicable for the health insurance business.

14. View the negotiability floor and ceil values of the price item or price item bundle for a division in the **Division-Specific Negotiability Floor and Ceil Values for Price Item** zone.

Note: This step is not applicable for the health insurance business.

15. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

Note: This step is not applicable for the health insurance business.

- [Price Item Relationship](#) on page 431

Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees
	Note: This field appears when the Pricing option is selected from the Price Item Usage list.
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular
	Note: This field appears when the Yes option is selected from the Bundle list.
Global Price List	Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No
Contract Type	Displays the contract type to which the price item or price item bundle is associated.
Price Item Manager To Do Type	Indicates the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.
	Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.

Field Name	Field Description
Price Item Manager To Do Role	<p>Indicates that users with the specified To Do role can approve the average price of the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits of the To Do role.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Average Price Floor and Ceil Type	<p>Indicates the manner in which you want to define the average price floor and ceil limits of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Absolute Value Range • Spread Amount • Spread Percentage
Sort Sequence	Displays the sequence in which the price item appears in the price item hierarchy of the deal pricing management module.
Variable Price	<p>Indicates whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal management module.</p> <p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p>

- **Record Actions** – The **Record Actions** section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the price item or price item bundle is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

Price Item Characteristics

The **Price Item Characteristics** zone lists the characteristics of the price item or the price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic.

Related Topics

For more information on...	See...
Price Item screen	Price Item (Used for Viewing) on page 421

Parameters

The **Parameters** zone lists the parameters which are associated with the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is associated with the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is associated with the price item or price item bundle.
Parameter	Indicates the parameter which is associated with the price item or price item bundle. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter.
Display Order	Indicates the order in which the parameter and its value should appear in the pricing parameter information string across the application.
Parameter Usage	Indicates whether you can use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation • Pricing
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast** (📡) icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the predefined parameter value.
Description	Displays the description of the predefined parameter value.

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a parameter in the **Parameters** zone.

Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

Column Name	Column Description
Division	Indicates the division to which the price item or price item bundle is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

On clicking the **Broadcast** (📡) icon corresponding to a division, the **Division-Specific SQIs for Price Item, Division-Specific Characteristics for Price Item, Division-Specific Accrual Type Criteria for Price Item, Division-Specific Hierarchy for Price Item, Division-Specific Cost for Price Item, Division-Specific Average Price Floor and Ceil Values for Price Item** and **Division-Specific Negotiability Floor and Ceil Values for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Division-Specific SQIs for Price Item

The **Division-Specific SQIs for Price Item** zone lists the SQIs associated with the price item or price item bundle for the division. It contains the following column:

Column Name	Column Description
SQI	Indicates the SQI associated with the price item or price item bundle for the division. Note: It has a link. On clicking the link, the Service Quantity Identifier screen appears where you can view the details of the respective SQI.

By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📢) icon corresponding to a division in the **Divisions** zone.

Division-Specific Characteristics for Price Item

The **Division-Specific Characteristics for Price Item** zone lists the characteristics of the price item or price item bundle which are defined for the division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the price item or price item bundle characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type. Note: It has a link. On clicking the link, the Characteristic Type screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📢) icon corresponding to a division in the **Divisions** zone.

Division-Specific Accrual Type Criteria for Price Item

The **Division-Specific Accrual Type Criteria for Price Item** zone lists the accrual type criteria of the price item or price item bundle which is defined for the division. It contains the following column:

Column Name	Column Description
Accrual Type Criteria	Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual • Historical • Not Applicable

By default, the **Division-Specific Accrual Type Criteria for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a division in the **Divisions** zone.

Division-Specific Hierarchy for Price Item

The **Division-Specific Hierarchy for Price Item** zone lists the following in a tree structure:

- Information string of the hierarchy entity at the first level in the entity hierarchy relationship
- Information string of the hierarchy entities at the subsequent levels in the entity hierarchy relationship
- Information string of the price items which are associated with the hierarchy entities at different levels in the entity hierarchy relationship

For example,

- ▲ [Cash Management, US](#)
 - ▲ [Payments, US](#)
 - [ACH Payment](#)
 - [ACH Return](#)
 - [ACH Reversal](#)
 - ▲ [Statements, US](#)
 - [Mini Statement](#)
 - [Yearly Statement](#)

Here, the Cash Management, US (at the first level), Payments, US (at the second level), and Statements, US (at the second level) are the hierarchy entity nodes. And, the ACH Payment, ACH Return, ACH Reversal, Mini Statement, and Yearly Statement are the price item nodes.

Each node in the tree has a link. If you click the link on the hierarchy entity node, the **Hierarchy Entity** screen appears where you can view the details of the respective hierarchy entity. However, if you click the link on the price item node, the **Price Item** screen appears where you can view the details of the respective price item.

It contains the following field:

Field Name	Field Description
Hierarchy	Displays the entity hierarchy relationship code.

In addition, it contains the following buttons:

Button Name	Button Description
Expand All	Used to expand all nodes at once in the entity hierarchy relationship.
Collapse All	Used to collapse all nodes at once in the entity hierarchy relationship.

By default, the **Division-Specific Hierarchy for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Negotiability Floor and Ceil Values for Price Item

The **Division-Specific Negotiability Floor and Ceil Values for Price Item** zone lists the negotiability floor and ceil limits of a price item or price item bundle which are defined for the division. It contains the following columns:

Column Name	Column Description
Floor Value	Indicates the floor (i.e. lower) limit for the rate negotiation.
Ceil Value	Indicates the ceil (i.e. upper) limit for the rate negotiation.
Floor and Ceil Currency	Indicates the currency used to define the rate negotiability floor and ceil limits. Note: The system does the currency conversion when the pricing currency is different from the floor and ceil currency.
Rate Negotiability	Indicates if the rate of a price item is negotiable or not in a deal. The valid values are: <ul style="list-style-type: none"> • Yes • No

Column Name	Column Description
Negotiate Rate Only Within Range	Indicates that the system should validate whether the negotiated rate is within the negotiability floor and ceil limits or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field is enabled when the Yes option is selected for the Negotiability Switch list

By default, the **Division-Specific Negotiability Floor and Ceil Values for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Cost for Price Item

The **Division-Specific Cost for Price Item** zone lists the costs of the price item or price item bundle which is defined for the division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the cost of the price item or price item bundle is effective for the division.
Cost Type	Indicates the type of cost incurred in the division for the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost
Cost Value	Displays the cost amount.
Cost Currency	Indicates the currency in which the cost is specified. <p>Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the respective currency.</p>

By default, the **Division-Specific Cost for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Average Price Floor and Ceil Values for Price Item

The **Division-Specific Average Price Floor and Ceil Values for Price Item** zone lists the average price floor and ceil limits of the price item or price item bundle which are defined for the division. It contains the following columns:

Column Name	Column Description
To Do Role	Indicates that users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Floor Value	Displays the floor (i.e. lower) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Limits list for a price item or price item bundle.
Ceil Value	Displays the ceil (i.e. upper) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Floor and Ceil Currency	Indicates the currency in which the average price floor and ceil limits are defined for the price item or price item bundle. Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the respective currency.
Spread Amount	Indicates the spread amount specified while defining a price item or price item bundle or assigned to a To Do role. Note: This column appears when the Spread Amount option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Spread Percentage	Indicates the spread percentage specified while defining a price item or price item bundle or assigned to a To Do role. Note: This column appears when the Spread Percentage option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.

By default, the **Division-Specific Average Price Floor and Ceil Values for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Price Item Relationship

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Bundle • Child Price Item • Custom • Denominator • Numerator • Other • Price Item • Product Group • Service • Service Group
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular
	Note: The data appears in this column when the associated price item is a bundle.
Price Item Parameters	Displays the parameters and their values based on which you want to determine pricing for the price item or price item bundle.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Editing a Price Item or Price Item Bundle

Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.

The **Price Item** screen appears.

3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle

- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <p>Note: You can change the price item usage of a price item or price item bundle from Pricing to Pricing and Billing. But, you cannot change the price item usage of a price item or price item bundle from Pricing and Billing to Pricing.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This field is not applicable for the health insurance business.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> on page 291 • <i>Phantom Bundle</i> on page 295 • <i>Ratio Bundle</i> on page 293 <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p>	Yes
	<p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Average Price Floor and Ceil Type	<p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. 	Yes (Conditional)
	<p>Note:</p> <ul style="list-style-type: none"> • In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business. 	<p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p>
Sort Sequence	Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module.	No

Field Name	Field Description	Mandatory (Yes or No)
Variable Price	Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.	No
	<p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p>	

4. Modify the required details in the **Main** section.
5. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

Note:

You can edit the parameter details and remove a parameter from the price item or price item bundle when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

Note: If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.
8. Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define, edit or remove the rate negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.

14. Define, edit, or remove characteristics of the price item or price item bundle, if required.

15. Click **Save**.

The changes made to the price item or price item bundle are saved.

Price Item Relationship

Oracle Revenue Management and Billing allows you to associate two or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. In other words, you can define a price item to price

item relationship. The price item to which a set of price items are associated is called a parent price item. You can also create a price item bundle and then add price items to the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items.

While associating a price item with a parent price item or adding a price item to a price item bundle, you need to specify how the price item is related to the parent price item or price item bundle. You can add a price item to a price item bundle using the following relationship types:

- **Bundle** – Used while adding price items in the regular and phantom price item bundles.
- **Denominator** – Used while adding price items in the ratio price item bundles.
- **Numerator** – Used while adding price items in the ratio price item bundles.

However, you can associate a price item or price item bundle with a parent price item using the following relationship types:

- Other
- Custom
- Price Item
- Service
- Service Group

Note:

You cannot add same set of price items using the same relationship type while defining two or more bundles with the same bundle type. For example, you cannot add P1 and P2 using the relationship type as Bundle while defining regular bundles named BUN1 and BUN2. However, you can use same set of price items while defining two or more price item to price item relationships.

If the multi parameter based pricing feature is enabled, you can add same set of price item and price item parameter combination (using the same relationship type) in more than one bundle (having the same bundle type) provided the price item parameter values are different.

The **Price Item Relationship** screen allows you to view the price items that are already associated with the parent price item or added to the price item bundle. It also allows you to associate or disassociate a price item or price item bundle from the parent price item, or add or remove a price item or price item bundle from the price item bundle. This screen consists of the following zone:

- [Assigned Price Items](#) on page 440

Assigned Price Items

The **Assigned Price Items** zone lists the price items or price item bundles that are already associated with the parent price item or added to the price item bundle. You will not find any records in this zone if the parent price item does not have any price item or price item bundle associated with it or if the price item bundle does not have any price item or price item bundle added to it. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle which is associated with the parent price item or added to the price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price items or price item bundles which are associated with the parent price item or added to the price item bundle from a particular date.	No
Relationship Type	Used to search price items or price item bundles which are related to the parent price item or added to the price item bundle using a particular relationship type. The valid values are: <ul style="list-style-type: none"> • Bundle • Child Price Item • Custom • Denominator • Numerator • Other • Price Item • Product Group • Service • Service Group 	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.

Column Name	Column Description
Relationship Type	<p>Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Bundle • Child Price Item • Custom • Denominator • Numerator • Other • Price Item • Product Group • Service • Service Group <p>Note: The Bundle relationship type is used while adding price items in the regular and phantom price item bundles. The Denominator and Numerator relationship types are used while adding price items in the ratio price item bundles. And, all other relationship types, such as Other, Custom, Price Item, Service, and Service Group are used while associating price items to the parent price item.</p>
Price Item Parameters	Indicates the parameters based on which you want to determine pricing for the price item.

You can associate or disassociate a price item or price item bundle from a parent price item, or add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Associating a Price Item or Price Item Bundle with a Parent Price Item

Prerequisites

To associate a price item or price item bundle with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

- Price item or price item bundle associated to at least one division to which the parent price item belongs.

Procedure

To associate a price item or price item bundle with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship**  icon in the **Price Item Relationship** column corresponding to the parent price item to which you want to associate a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	
Relationship Type	Used to indicate how the price item or price item bundle is related with the parent price item. The valid values are: <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group 	Yes
	Note: You can use the Other , Custom , Price Item , Service , or Service Group relationship type while associating a price item or price item bundle to the parent price item.	
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item.	Yes
	Note: The effective start date cannot be later than the effective end date.	

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price Item Parameters	Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.	Not applicable
	<p>Note:</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.</p> <p>You must not use the Price Item Parameters field while associating a price item or price item bundle with a parent price item. This is because it is designed to be used while adding a price item or price item bundle to the ratio and phantom price item bundles.</p>	
Characteristics	On clicking the Add (➕) icon, you can define relationship-specific characteristics for the price item or price item bundle.	Not applicable

- Enter the required details in the **Price Item Relationship** screen.

Note: You can associate the same set of price items or price item bundles using the same relationship type to more than one parent price item. For example, you can associate the **P1** and **P2** price items using the **Service** relationship type to the **PP1** and **PP2** price items.

- Define relationship-specific characteristics for the price item or price item bundle, if required.
- If you want to associate more than one price item or price item bundle with the parent price item, click the **Add** (➕) icon and then repeat the steps from 4 to 5.

Note: However, if you want to disassociate a price item or price item bundle from a parent price item, click the **Delete** (🗑️) icon corresponding to the price item or price item bundle.

- Click **Save**.

The price item or price item bundle is associated with the parent price item.

Adding a Price Item or Price Item Bundle to a Price Item Bundle

Prerequisites

To add a price item or price item bundle to a price item bundle, you should have:

- Price item bundle (to which you want to add a price item or price item bundle) associated with the division to which the user belongs
- Price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated to the same contract type
- Parameters associated with the price item or price item bundle (which you want to add) when you want to determine pricing for the price item based on the parameters in the ratio and phantom price item bundles
- Regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated with the same parameters

Note: Not only the parameters, but also their details such as parameter usage, mandatory flag, and priority should be identical. Also, the date from when the parameters are effective for the price item bundle (to which you want to add a price item or price item bundle) should be earlier than or equal to the date from when the parameters are effective for the price item or price item bundle (which you want to add).

- Price item or price item bundle (which you want to add) associated to at least one division to which the price item bundle (to which you want to add a price item or price item bundle) belongs

Procedure

To add a price item or price item bundle to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the price item bundle to which you want to add a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to add to the price item bundle.	Yes
	Note: The Search () icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	<p>Used to indicate how the price item or price item bundle is related to the price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group <p>Note: You can use the Bundle relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the Denominator and Numerator relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	Yes
Effective Start Date	<p>Used to specify the date from when the price item or price item bundle is added to the price item bundle.</p> <p>Note: The effective start date cannot be later than the effective end date.</p>	Yes
Effective End Date	<p>Used to specify the date till when the price item or price item bundle is added to the price item bundle.</p> <p>Note: The effective end date cannot be earlier than the effective start date.</p>	No
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p>Note:</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameters field. On clicking the Search icon, the Price Item Parameters screen appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Characteristics	On clicking the Add (⊕) icon, you can define relationship-specific characteristics for the price item or price item bundle.	Not applicable

- Enter the required details in the **Price Item Relationship** screen.

Note:

You can add a price item or price item bundle to a regular price item bundle when the regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) are associated with the same parameters for the specified date range.

You cannot add the same set of price items using the same relationship type to two or more price item bundles with the same bundle type. For example, you cannot add **P1** and **P2** using the **Bundle** relationship type to the **BUN1** and **BUN2** regular price item bundles.

If the multi parameter based pricing feature is enabled, you can add the same set of price item and price item parameter combination (using the same relationship type) to more than one bundle (with the same bundle type) provided the price item parameter values are different.

You cannot add the same price item or price item bundle in numerator and denominator while defining a ratio price item bundle.

- Define relationship-specific characteristics for the price item or price item bundle, if required.
- If you want to add more than one price item or price item bundle to the price item bundle, click the **Add** (⊕) icon and then repeat the steps from 4 to 5.

Note: However, if you want to remove a price item or price item bundle from a price item bundle, click the **Delete** (🗑️) icon corresponding to the price item or price item bundle.

- Click **Save**.

The price item or price item bundle is added to the price item bundle.

Setting the Parameters for a Price Item or Price Item Bundle

Prerequisites

To set the parameters for a price item or price item bundle, you should have:

- Parameters (where the **Parameter Usage** field is set to **Pricing**) associated with the price item or price item bundle

Procedure

To set the parameters for a price item or price item bundle:

1. Click the **Search** (🔍) icon corresponding to the **Price Item Parameters** field.

The **Price Item Parameters** screen appears. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for which you want to set the parameters.
Description	Displays the description of the price item or price item bundle.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Indicates the parameter which is associated with the price item or price item bundle.	Not applicable
	Note: Here, the system displays the price item parameter where the Parameter Usage field is set to Pricing .	
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Not applicable
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Not applicable
	Note: The priority for all parameters which are mandatory is set to 0.	
Parameter Value	Used to specify the parameter value.	Yes (Conditional)
	Note: If the parameter value type is Predefined or Reference , the Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, you can search for a parameter value. You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	
		Note: This field is required when you want to determine pricing for the price item or price item bundle based on the parameter.

2. Enter the required details in the **Price Item Parameters** screen.
3. Click **OK**.

A comma-separated list of values appear in the **Price Item Parameters** column corresponding to the price item or price item bundle. The order in which parameter values appear in the price item parameter information string is controlled by the display order (which is defined while associating a parameter with a price item).

Note: The value specified for a parameter whose value type is set to **Adhoc** is validated using the validation algorithm attached to the respective parameter.

Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle

Prerequisites

To define relationship-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Relationship**)

Procedure

To define relationship-specific characteristics for a price item or price item bundle:

1. Click the **Add** (+) icon in the **Characteristics** column corresponding to the price item or price item bundle for which you want to define relationship-specific characteristics.

A grid appears corresponding to the price item or price item bundle with the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional)
		Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Price Item Relationship .
		Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>

- Enter the required details in the **Characteristics** grid.
- If you want to define more than one relationship-specific characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a relationship-specific characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The relationship-specific characteristics are defined for the price item or price item bundle.

Disassociating a Price Item or Price Item Bundle from a Parent Price Item

Prerequisites

To disassociate a price item or price item bundle from a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

Procedure

To disassociate a price item or price item bundle from a parent price item:

- Search for the parent price item in the **Price Item** screen.
- In the **Search Results** section, click the **View** (🔗) icon in the **Price Item Relationship** column corresponding to the parent price item from which you want to disassociate a price item or price item bundle.

The **Price Item Relationship** screen appears.

- Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears.

4. Filter the price items or price item bundles associated to the parent price item, if required.
5. In the **Search Results** section, click the **Delete** (🗑️) icon corresponding to the price item or price item bundle that you want to disassociate from the parent price item.
6. Click **Save**.

The price item or price item bundle is disassociated from the parent price item.

Removing a Price Item or Price Item Bundle from a Price Item Bundle

Prerequisites

To remove a price item or price item bundle from a price item bundle, you should have:

- Price item bundle associated with the division to which the user belongs

Procedure

To remove a price item or price item bundle from a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **Price Item Relationship** column corresponding to the price item bundle from which you want to remove a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears.

4. Filter the price items or price item bundles added to the price item bundle, if required.
5. In the **Search Results** section, click the **Delete** (🗑️) icon corresponding to the price item or price item bundle that you want to remove from the price item bundle.
6. Click **Save**.

The price item or price item bundle is removed from the price item bundle.

Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item

Prerequisites

To filter the price items or price item bundles associated with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

Procedure

To filter the price items or price item bundles associated with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item whose details you want to view.

The **Price Item Relationship** screen appears.

3. Enter the search criteria in the **Assigned Price Items** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned

Procedure

To view the price lists, persons, or accounts where a price item or price item bundle is assigned:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **Price Item Assigned To** column corresponding to the price item or price item bundle whose assignment details you want to view.
The **Price Item Assignments** screen appears.
3. View the price lists where the pricing is defined for the price item or price item bundle in the **Active Price Lists where Price Item is Assigned** zone.
4. View the accounts for which the pricing is defined for the price item or price item bundle in the **Accounts where Price Item is Assigned** zone.
5. View the persons for whom the pricing is defined for the price item or price item bundle in the **Persons to whom Price Item is Assigned** zone.

Price List

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.
- **Global Price List** – You can create one global price list in the system. It is used when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item

pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to define a price list. It contains the following zones:

- [Search Price List](#) on page 458
- [Price List Price Items](#) on page 461
- [Price Item Pricing](#) on page 463
- [Price Assignment Tree](#) on page 468

Through this screen, you can navigate to the following screens:

- [Price List Price Item Pricing](#) on page 488
- [Price List Assignments](#) on page 544
- [Entities Eligible for Price List Assignment](#) on page 546
- [Price Item Pricing \(Used for Viewing\)](#) on page 639

Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> • Price List Details 	Yes
	Note: By default, the Price List Details option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date onwards.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to search price lists which belong to a particular type. The valid values are: <ul style="list-style-type: none"> Promotional Standard 	No
	Note: By default, the Standard option is selected.	
Global Price List	Used to indicate whether you want to search global price lists. The valid values are: <ul style="list-style-type: none"> Yes No 	No
Availability Start Date	Used to search price lists which are available for assignment to an account or a person from a particular date.	No
	Note: This field appears when you click the Advanced Search link in the top right corner of this zone.	
Availability End Date	Used to search price lists which are available for assignment to an account or a person till a particular date.	No
	Note: This field appears when you click the Advanced Search link in the top right corner of this zone.	
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive Proposed Template 	No
	Note: This field appears when you click the Advanced Search link in the top right corner of this zone.	
Division	Used to search price lists which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	Used to search price lists which inherit pricing from a particular parent price list.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears where you can search for the respective parent price list.</p> <p>This field appears when you click the Advanced Search link in the top right corner of this zone.</p>	
Parent Price List Effective Date	Used to search price lists that inherit pricing from a particular parent price list which is effective from a particular date onwards.	No
	<p>Note: This field appears when you click the Advanced Search link in the top right corner of this zone.</p>	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays the concatenated string of information about the price list separated by a comma (,).
	<p>Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>
Status	<p>Indicates the current status of the price list. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive • Proposed • Template
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Duplicate	On clicking the Duplicate (📄) icon, the Price List screen appears where you can create a new price list using an existing price list.

Column Name	Column Description
Price List Pricing	On clicking the View () icon in the Price List Pricing column, the Price List Price Item Pricing screen appears where you can view and edit a list of price items pricing information assigned to the price list.
Price List Assigned To	On clicking the View () icon in the Price List Assigned To column, the Price List Assignments screen appears where you can view the details of the persons and accounts to which the price list is assigned.
Eligible Accounts/Persons	On clicking the View () icon in the Eligible Accounts/Persons column, the Entities Eligible for Price List Assignment screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division.

Note:

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for the price list.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price list.</p>
Price Item	Displays the price item or price item bundle.
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p>
Pricing Status	<p>Displays the status of pricing for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
Rate Info	<p>Displays the rate of the price item.</p> <p>Note:</p> <p>If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column.</p> <p>However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.</p>
Start Date	Displays the date from when the price item pricing is effective for the price list.
End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p>
Duplicate	<p>On clicking the Duplicate () icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.</p>

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears when you click the **Broadcast** () icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📢) icon corresponding to the **Pricing Information** field, the **Price Item Pricing** and **Pricing Structure** zones appear where you can view the details about the price item pricing and its structure.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Main** - Displays basic information about the pricing of the price item. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the pricing of the price item is effective.
End Date	Displays the date till when the pricing of the price item is effective.

Field Name	Field Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Indicates that the pricing is used to generate regular bill segment. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees. By default, the Regular option is selected in the Bundle Type field for price item which are applicable for Pricing and cannot be edited. The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div>
Pricing Eligibility	Indicates whether the price item pricing is eligible for pricing assignment or not.
Pricing Status	<p>Indicates the pricing assignment status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Draft • Active • Inactive • Proposed • Rejected • Template
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the currency.</p> </div>

Field Name	Field Description
Rate Schedule	Indicates the rate schedule that is used to define the price item pricing. Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the rate schedule.
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> Two-Dimensional
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> Yes No
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers

- **Deal Information** – Displays the average price floor and ceil type defined in a price item pricing. It contains the following fields:

Field Name	Field Description
Average Price Floor and Ceil Type	Indicates the manner in which you want to define the average price floor and ceil limits of the price item or price item bundle in a deal. The valid values are: <ul style="list-style-type: none"> Absolute Value Range Spread Amount Spread Percentage

- **TFM Information** – Displays the transactions mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item pricing is considered for billing or not. The valid values are: <ul style="list-style-type: none"> Yes No
Aggregate Transactions	Indicates whether the transactions mapped to the price item pricing is aggregated for billing or not. The valid values are: <ul style="list-style-type: none"> Yes No

Field Name	Field Description
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions

Note:

TFM Information section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Usage** field is set to **Pricing and Billing**.

TFM Information section does not appear when the **Price Item Usage** field is set to **Only Pricing** and the **Price Item Type** field is set to **Fees**, then, only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Price Item and Parameter Information** – Displays the parameter details for the price item pricing. It contains the following field:

Field Name	Field Description
Price Item Information	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the parameter value.

- **Division-Specific Average Price Floor and Ceil Values for Price Item** – lists the characteristics of the price item pricing. It contains the following columns:

Column Name	Column Description
To Do Role	Indicates that the users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Floor Value	Displays the floor (i.e. lower) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Ceil Value	Displays the ceil (i.e. upper) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Spread Amount	Indicates the spread amount specified while defining a price item or price item bundle or assigned to a To Do role. Note: This column appears when the Spread Amount option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Spread Percentage	Indicates the spread percentage specified while defining a price item or price item bundle or assigned to a To Do role. Note: This column appears when the Spread Percentage option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle.
Floor and Ceil Currency	Indicates the currency in which the average price floor and ceil limits are defined for the price item or price item bundle.
Division	Indicates the division to which the price item belongs.

- **Division-Specific Negotiability Floor and Ceil Values for Price Item** – lists the characteristics of the price item pricing. It contains the following columns:

Column Name	Column Description
Division	Indicates the division to which the price item belongs.
Floor Value	Indicates the floor (i.e. lower) limit for the rate negotiation.
Ceil Value	Indicates the ceil (i.e. lower) limit for the rate negotiation.

- **Division-Specific SQIs for Price Item** – lists the characteristics of the price item pricing. It contains the following columns:

Column Name	Column Description
SQI	Displays the Service Quantity Identifier (SQI) associated with the price item or price item bundle for a division.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

Column Name	Column Description
Usage Period	Displays the period for which you want to aggregate the deal data to determine the scope of the deal.
Division	Indicates the division to which the price item belongs.

- **Division-Specific Cost for Price Item** – lists the characteristics of the price item pricing. It contains the following columns:

Column Name	Column Description
Cost Type	Indicates the type of cost incurred in the division for the price item or price item.
Cost Value	Displays the cost amount.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the price item pricing.
	Note: The Edit button appears when the price item pricing is in the Draft status.
Delete	Used to delete the price item pricing.
	Note: The Delete button appears when the price item pricing is in the Draft status.
Submit	Used to submit the price item pricing for validation and processing.
	Note: The Submit button appears when the price item pricing is in the Draft status.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Price Item Pricing** zone does not appear in the **Price List** screen. It appears when you click the **Broadcast** () icon corresponding to the price item pricing in the **Price List Price Item** zone.

Price Assignment Tree

The **Price Assignment Tree** zone displays the details about the rate components and its price components for the price item along with the tiering criteria and pricing eligibility details.

It also allows you to do the following:

- Define, edit, copy, or delete the price component of the rate component

Note: You can define, edit, copy, or delete the price component of the rate component when the price item pricing is in **Draft, Proposed, or Template** status.

- Define, edit, copy, or delete the tiering criteria of the price component

Note: You can define, edit, copy, or delete the tiering criteria of the price component when the price item pricing is in **Draft, Proposed, or Template** status.

- Define, edit, copy, or delete the pricing eligibility criteria of the price component

Note: You can define, edit, copy, or delete the eligibility criteria of the price component when the price item pricing is in **Draft, Proposed, or Template** status.

Note: You cannot define, edit, copy, or delete a price component when you are accessing the **Price Assignment Tree** zone from the **Price List** screen.

Searching for a Price List

Prerequisites

To search for a price list, you should have:

- Divisions defined in the application
- Price list associated with the division to which the user belongs

Procedure

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Pricing Management** and then click **Price List**.

A sub-menu appears.

- Click the **Search** option from the **Price List** sub-menu.

The **Price List** screen appears.

- Enter the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Viewing Price Items Assigned to a Price List

Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Procedure

To view price items assigned to a price list:

- Search for the price list in the **Price List** screen.
- In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the price list whose price items details you want to view.

The **Price List Price Items** zone appears.

- View the price items that are assigned to the price list in the **Price List Price Items** zone.

Defining a Price List

Procedure

To define a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It consists the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a particular duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define the characteristics for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	Note: By default, the current date appears in this field.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
	Note: By default, the Standard option is selected.	
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	Note: At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	

Field Name	Field Description	Mandatory (Yes or No)
Availability End Date	Used to specify the date till when the price list is available for assignment to an account or a person. Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	No
Available for Deal Pricing	Used to indicate whether the price list is available for deal pricing or not.	No
Standard for Deal Pricing	Used to indicate whether the price list is applicable for defining costs or floor and ceil limits or commitments at the time of deal pricing.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active - Used to indicate that the price list is used for billing. • Inactive - Used to indicate that the price list is no longer used for billing. • Proposed - Used to indicate that the price list is used for quotations. • Template - Used to indicate that the price list is a template price list. Note: By default, the Active option is selected.	Yes

Tip: Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

Note: By default the **Main** section is displayed.

5. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:
 - Associate the price list with one or more parent price list, if required.
 - Associate price list with one or more divisions, if required.
 - Define eligibility criteria for the price list, if required.
 - Define characteristics for the price list, if required.
6. Click **Save**.

Note: The price list ID is generated automatically when the price list is created.

Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list inherits pricing from the parent price list.	Yes (Conditional) Note: This field is required when you are associating the price list with a parent price list.
Parent Price List Effective To Date	Used to specify the date till when the price list inherits pricing from the parent price list. Note: The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date.	No

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	Used to specify the parent price list ID to which you want to associate the price list.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.</p> <p>On specifying the parent price list, the description of the parent price list appears corresponding to the Parent Price List field.</p>	<p>Note: This field is required when you are associating the price list with a parent price list.</p>

- Enter the required details in the **Hierarchy** section.

Note: You can search for a price list by clicking the **Search** (🔍) icon corresponding to the **Parent Price List** field.

- If you want to associate the price list with more than one parent price list, click the **Add** (+) icon corresponding to the parent price list and then repeat step 2.

Note:

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

If you want to remove a parent price list from the price list hierarchy, click the **Delete** (🗑️) icon corresponding to the parent price list.

- Click **Save**.

The price list is associated with the parent price lists.

Defining a Characteristic for a Price List

Prerequisites

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

Procedure

To define a characteristics for a price list:

- Click the **Characteristics** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list.

Associating a Price List with a Division

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

Prerequisites

To associate a price list with a division, you should have:

- Divisions defined in the application

Procedure

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.	No
	Note: You can only view those divisions to which you have access in the Division list.	

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add (+)** icon corresponding to the division and then repeat step 2.

Note: However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the divisions.

Tip: Alternatively, you can associate a price list with a division using the **Division** screen.

Defining Eligibility Criteria for a Price List**Prerequisites**

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

Procedure

To define eligibility criteria for a price list:

1. Click the **Eligibility** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Criteria	On clicking the Add (+) icon, you can associate eligibility criteria of parameters for the price list.	Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list.
Effective Start Date	Used to specify the date from when the criteria is effective for the price list.	Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list.
Effective End Date	Used to specify the date till when the criteria is effective for the price list.	No
Description	Used to specify the description for the criteria type.	Yes

- Enter the required details in the **Eligibility** section.
- If you want to define more than one eligibility criteria for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the eligibility criteria, click the **Delete** (🗑️) icon corresponding to the criteria.

- Associate eligibility criteria of parameter for the price list, if required.
- If you want to define more than one eligibility criteria of parameter for the price item, click the **Add** (+) icon corresponding to the parameter.

Note: However, if you want to remove the eligibility criteria of parameter for the price item, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The eligibility criteria are defined for the price list.

Associating Eligibility Criteria of Parameters for a Price List

Prerequisites

To associate eligibility criteria of parameter for a price list, you should have:

- Parameter value types defined in the application
- Price list eligibility criteria associated with the parameter

Procedure

To associate eligibility criteria of parameters for a price list:

1. Click the **Eligibility** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing or copying a price list.

The **Eligibility** section appears.

2. Click the **Add**  icon in the **Criteria** column to associate eligibility criteria of parameters for the price list.

The following fields appear in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the price list eligibility criteria should be executed.	Yes
Parameter	Used to indicate the parameter (on the left hand side) which is used in the pricing eligibility criteria.	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value Type	Used to indicate whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.	Yes
Parameter	Used to indicate the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes
Parameter Value	Used to indicate the parameter value against which you want to compare the parameter (on the left hand side).	Yes
Is True	Used to indicate what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

3. Enter the required details for the **Eligibility Criteria Parameters** in the **Eligibility Criteria** section.

Note: You can search for a parameter by clicking the **Search** (🔍) icon appears corresponding to the respective field.

4. If you want to associate more than one parameter with eligibility-criteria for the price list, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a parameter with eligibility-criteria from the price list, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The parameter with eligibility-criteria are associated for the price list.

Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions,

characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define the characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
Global Price List	Used to Indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to specify the date from when the price list is available for assignment to an account or a person.	Yes
Availability End date	Used to specify the date till when the price list is available for assignment to an account or a person.	No
Available for Deal Pricing	Used to indicate whether the price list is available for deal pricing or not.	No

Field Name	Field Description	Mandatory (Yes or No)
Standard for Deal Pricing	Used to indicate whether the price list is applicable for defining costs or floor and ceil limits or commitments at the time of deal pricing.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	Yes
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Proposed • Template 	Yes
Copy Pricing	Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> • All • None 	Yes (Conditional)

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the parent price list details, if required.
5. Associate or disassociate the price list from the required divisions.
6. Define, edit, or remove the price list eligibility criteria and parameter eligibility criteria for price list in the, if required.
7. Define, edit, or remove characteristics of the price list, if required.
8. Click **Save**.

The new price list is defined.

Note: The price list ID is generated automatically when the price list is defined.

Viewing the Price List Details

Procedure

To view the details of a price list:

1. Search for the price list in the **Price List** screen.

2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following zones:

- [Price List](#) on page 483
 - [Eligibility Criteria](#) on page 485
 - [Price List Price Items](#) on page 461
3. View the basic details, hierarchy, divisions, and characteristics of the price list in the **Price List** zone.
 4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.
 5. View the price items that are assigned to the price list in the **Price List Price Items** zone.

Viewing Accounts and Persons Eligible for Price List Assignment

Prerequisites

To view accounts and persons eligible for price list assignment, you should have:

- Accounts and Persons created in the application.
- Price list defined in the application

Procedure

To view accounts and persons eligible for price list assignment:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
The **Price List** screen appears.
3. You can search for a price list by entering the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of price lists that meet the search criteria appears in the search results.
5. In the **Search Results** section, click the **Eligible Accounts and Persons** () icon in the **Eligible Accounts and Persons** column corresponding to the price list whose details you want to view.
The **Eligible Accounts and Persons** screen appears.
6. You can search for the accounts and persons which are eligible for Price List Assignment in the **Accounts Eligible for Price List Assignment** zone and **Persons Eligible for Price List Assignment** zone respectively.

Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.
- **Price Item Pricing**
 - Displays the price item pricing for price items that are assigned to the price list.
- **Pricing Structure**
 - Displays the structure of the price item pricing for price item that are assigned to the price list.

Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional
Global Price List	Indicates whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Available for Deal Pricing	Indicates whether the price list can be assigned with a person or an account.

Field Name	Field Description
Standard for Deal Pricing	Indicates whether the price list can be considered to compare the average floor and ceil limit with the standard and average price of a price item associated with a price list.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active – Indicates that the price list is used for billing. • Inactive – Indicates that the price list is no longer used for billing. • Proposed – Indicates that the price list is used for quotations. • Template – Indicates that the price list is a template price list.

- **Hierarchy** - Lists the parent price list from which the price list has inherited the price item pricing for a particular duration. It contains the following columns:

Column Name	Column Description
Parent Price List ID	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

Column Name	Column Description
Division	Displays the division to which the price list is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Eligibility Criteria

The **Eligibility Criteria** zone lists the eligibility criteria of the price list. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the criteria is effective for the price list.
Effective End Date	Displays the date till when the criteria is effective for the price list.
Description	Displays the description for the criteria type.
Sequence	Indicates the order in which the price list eligibility criteria should be executed.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.

Field Name	Field Description
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.

Editing a Price List

Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to define parent price list to inherit price item pricing for the price list for a particular duration.
- **Divisions** - Used to associate price list with one or more divisions.
- **Eligibility Criteria** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define the characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	<p>Note: The system will not allow you to change the effective start date when:</p> <ul style="list-style-type: none"> • There is a price item assigned to the price list on that date. • The price list is assigned to an account or a person on that date. 	
Effective End Date	Used to specify the date till when the price list is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	<p>Note: At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.</p>	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	<p>Note:</p> <p>The availability end date cannot be earlier than the availability start date.</p> <p>At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.</p>	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> • Active – Used to indicate that the price list is used for billing. This value appears when you are editing a proposed price list • Proposed – Used to indicate that the price list is used for quotations. • Template – Used to indicate that the price list is a template price list. <p>Note: You cannot change the status of an active and a template price list.</p>	Yes

4. Modify the details in the **Main** section, if required.

Note: By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.
6. Associate or disassociate the price list from the divisions, if required.

Note: You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

7. Define, edit, or remove eligibility criteria from the price list, if required
8. Define, edit, or remove characteristics of the price list, if required.
9. Click **Save**.

The changes made to the price list are saved.

Price List Price Item Pricing

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

The **Price List Price Item Pricing** screen contains the following zones:

- [Price List Price Items](#) on page 489
- [Search Price Item or Price Item Pricing](#) on page 491

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string of information about the price item pricing separated by a comma (,).</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle.
Pricing Parameters	<p>Displays a comma-separated list of parameter values based on which the pricing is defined for the price item. The order in which the parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).</p> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
Pricing Status	<p>Indicates the current status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Active – Indicates that the price assignment is used for billing. • Draft – Indicates that the price assignment is created as a draft. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Rejected – Indicates that the price assignment is rejected. • Template – Indicates that the price assignment is a template price list.
Rate Info	<p>Displays the rate of the price item.</p> <p>Note:</p> <p>If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column.</p> <p>However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.</p>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.

Column Name	Column Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Indicates that the pricing is used to generate regular bill segment. <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
Edit	On clicking the Edit () icon, you can edit the price item pricing for the price list.
Delete	<p>On clicking the Delete () icon, you can remove the price item pricing from the price list.</p> <p>Note:</p> <p>The Delete icon appears in this column only when the price list is not yet assigned to any account or person.</p> <p>This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Search Price Item or Price Item Pricing

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item or Price Item Pricing** zone allows you to search for a price item pricing which is assigned to an account, person, or price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item or Price Item Pricing** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price item, pricing assigned to price list and override pricing for an account, or person. The valid values are: <ul style="list-style-type: none"> • Price Item • Price list Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list.	No
	Note: This field appears when you select the Price List Pricing option from the Search By list.	
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.	Yes
	Note: This field appears when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.	Yes
	Note: This field appears when you select the Person Override Pricing option from the Search By list.	
Product Code		

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

You can search for an account, person by clicking the **Search** (🔍) icon corresponding to the respective field.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	Note: It has a link. On clicking the link, the View Price Item Pricing window appears with the details of the respective price item pricing.

Column Name	Column Description
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears when you select the Account Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> <p>The account information string appears when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears only when you select the Person Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>The person information string appears when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears when you select the Price List Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective person.</p>
Variance Parameter	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item	Displays the price item or price item bundle code.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can define the pricing for the respective price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Global Price List	Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Y • N

Column Name	Column Description
Unit of Measure	Indicates the unit of measure associated with the price item or price item bundle.
Bundle	Indicates whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Y • N
Owner ID	Displays the ID of the person for whose account the price list is created.
Party ID	Displays the third party ID.
Price List ID	Indicates the price list to which the price item pricing is assigned. Note: This column appears when you select the Price List Pricing option from the Search By list.
Price Assignment ID	Displays the price assignment ID.
Price Assignment Owner Type Flag	Displays whether price list or party is the owner of the price assignment.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular <p>However, if the price item bundle is available for only pricing and the price item type is Fees then the valid value is Regular.</p> Note: This column appears when you select the Yes option from the Bundle list.
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees

Editing a Price Item Pricing of a Price List

Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a price list:

1. Do either of the following:

If you want to...	Then...
Edit pricing of a price item that is assigned to a price list from Price List screen	<ol style="list-style-type: none"> 1. Search for the price list in the Price List screen. 2. In the Search Results section of Price List Price Items zone, click the link in the Pricing

If you want to...	Then...
	<p>Information column corresponding to the price item whose pricing details you want to view.</p> <p>The Price Item Pricing screen appears.</p> <p>3. Click the Edit button in the Record Actions section.</p> <p>The Price Item Pricing screen appears to edit the pricing details of a price item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div>
<p>Edit pricing of a price item that is assigned to a price list from Price List Price Item Pricing screen</p>	<p>1. Search for the price list in the Price List screen.</p> <p>In the Search Results section, click the Price List Pricing () icon corresponding to the price list whose <i>details</i> you want to view.</p> <p>The Price List Price Item Pricing screen appears.</p> <p>2. Price items assigned to the price list appears in the Price List Price Items zone.</p> <p>3. You can edit the pricing item pricing through the following alternatives:</p> <p style="margin-left: 20px;">a. First alternative,</p> <ul style="list-style-type: none"> • In the Search Results section of Price List Price Items zone, click the Edit () icon in the Edit column corresponding to the price item pricing whose details you want to edit. <p style="margin-left: 40px;">The Price Item Pricing screen appears to edit the pricing details of a price item.</p> <p style="margin-left: 20px;">b. Second alternative,</p> <ul style="list-style-type: none"> • Search for a price item in the Search Price Item or Price Item Pricing zone. <p style="margin-left: 40px;">In the Search Results section, click the Assign () icon corresponding to the price item.</p> <ul style="list-style-type: none"> • Enter the required details in the Price Item Pricing screen and click Save. <p style="margin-left: 40px;">The Price Item Pricing screen appears.</p>

If you want to...	Then...
	<ul style="list-style-type: none"> Click the Edit button in the Record Actions section. <p>The Price Item Pricing screen appears to edit the pricing details of a price item.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div>

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item pricing.
- Deal Information** – Used to indicate the average price floor and ceil type to define the floor and ceil limits for the price item or price item bundle
- TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Characteristics** – Used to define the characteristics for the price item pricing.
- Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

- Commitments** – Used to indicate the basic details about the pricing and commitments such as costs, floor and ceil limits, and negotiability specific to a division.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the price item pricing is effective.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the price item pricing is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
	Note: This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Template – Indicates that the price assignment is a template price list. <p>Note: If a price assignment is in Active status, you can change its status to Inactive. If a price assignment is in Draft status, you cannot change its status to Proposed.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p>Note: Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> • Two-Dimensional 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are editing a two-dimensional pricing rule.</p>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, Yes is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	

2. Modify the details in the **Main** section, if required.
3. Edit the deal information in a price item pricing, if required.
4. Edit the TFM information in a price item pricing, if required.
5. Edit the characteristics for a price item pricing, if required.
6. Edit the parameters for a price item pricing, if required.
7. Edit the pricing commitments, if required.
8. Click **Save**.

The changes made to the price item pricing are saved.

Assigning a Price Item to a Price List

Prerequisites

To assign a price item to a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To assign a price item to a price list:

1. Do either of the following:

If you want to...	Then...
Define pricing of a price item that is assigned to a price list from Price List screen	<ol style="list-style-type: none"> 1. Search for the price list in the Price List screen. 2. In the Search Results section of Price List Price Items zone, click the link in the Pricing Information column corresponding to the price item whose pricing details you want to view. The Price Item Pricing screen appears. 3. Click the Edit button in the Record Actions section. The Price Item Pricing screen appears to edit the pricing details of a price item. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div>
Define pricing of a price item that is assigned to a price list from Price List Price Item Pricing screen	<ol style="list-style-type: none"> 1. Search for the price list in the Price List screen. In the Search Results section, click the Price List Pricing (🔗) icon corresponding to the price list whose <i>details</i> you want to view. The Price List Price Item Pricing screen appears. 2. Price items assigned to the price list appears in the Price List Price Items zone. 3. You can edit the pricing item pricing through the following alternatives: <ol style="list-style-type: none"> a. First alternative, <ul style="list-style-type: none"> • In the Search Results section of Price List Price Items zone, click the Edit (🔗) icon in the Edit column corresponding to the price

If you want to...	Then...
	<p>item pricing whose details you want to edit.</p> <p>The Price Item Pricing screen appears to edit the pricing details of a price item.</p> <p>b. Second alternative,</p> <ul style="list-style-type: none"> • Search for a price item in the Search Price Item or Price Item Pricing zone. <p>In the Search Results section, click the Assign  icon corresponding to the price item.</p> <ul style="list-style-type: none"> • Enter the required details in the Price Item Pricing screen and click Save. <p>The Price Item Pricing screen appears.</p> <ul style="list-style-type: none"> • Click the Edit button in the Record Actions section. <p>The Price Item Pricing screen appears to edit the pricing details of a price item.</p> <div data-bbox="1003 1073 1396 1188" style="border: 1px solid black; padding: 5px;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div>

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **Deal Information** – Used to indicate the average price floor and ceil type to define the floor and ceil limits for the price item or price item bundle
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

- **Commitments** – Used to indicate the basic details about the pricing and commitments such as costs, floor and ceil limits, and negotiability specific to a division.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="607 642 1203 884" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="607 1108 1203 1192" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="607 1417 1203 1501" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1577 1203 1692" style="border: 1px solid black; padding: 5px;"> <p>Note: This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Template – Indicates that the price assignment is a template price list. <p>Note: If a price assignment is in Active status, you can change its status to Inactive. If a price assignment is in Draft status, you cannot change its status to Proposed.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p>Note: Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> • Two-Dimensional 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are editing a two-dimensional pricing rule.</p>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, Yes is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	

- Define the details in the **Main** section.
- Define the deal information in a price item pricing.
- Define the TFM information in a price item pricing.
- Define the characteristics for a price item pricing.
- Define the parameters for a price item pricing.
- Select the required division from the **Commitments** section to define the commitments of a price item pricing.
- Define the cost of the price item or price item bundle for the required divisions
- Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.
- Define the negotiability floor and ceil values of the price item or price item bundle for the required divisions
- Click **Save**.

The pricing is defined for a price item.

Defining the Deal Information in a Price Item Pricing

Procedure

To define the deal information in a price item pricing:

1. Ensure that the **Deal Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Deal Information** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Average Price Floor and Ceil Type	Used to indicate the manner in which the average price floor and ceil limits of the price item pricing is defined for the deal. The valid values are: <ul style="list-style-type: none"> • Absolute Value Range - Used to indicate that the average price floor and ceil limits for the price item pricing is defined using absolute values. • Spread Amount - Used to indicate that the average price floor and ceil limits for the price item pricing is defined based on the spread amount. • Spread Percentage - Used to indicate that the average price floor and ceil limits for the price item pricing is defined based on the spread percentage. 	Yes (Conditional)
	Note: Incase of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage the average floor and ceil limits of the price item are derived for the deal.	Note: This field is required while defining the average price floor and ceil limits of the price item for the deal.

2. Enter the required details in the **Deal Information** section.
3. Click **Save**.

The deal information is defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or rating criteria to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

1. Ensure that the **TFM Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	Note: By default, the No option is selected.	Note: This field is required while defining the TFM information in a price item pricing.
Aggregate Transactions	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. 	Yes (Conditional)
	Note: By default, the Yes option is selected.	Note: This field is required while defining the TFM information in a price item pricing.
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> Aggregate Transactions and Then Rate Aggregated SQs Do Not Rate Transactions Rate Transaction and Aggregate Calc Lines 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
	Note: By default, the Do Not Rate Transactions option is selected.	

- Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Click **Save**.

The TFM information is defined in the price item pricing.

Defining a Characteristic for a Price Item Pricing

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a characteristic for the price item pricing.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price item pricing.

Defining a Parameter for a Price Item Pricing

Prerequisites

To define a parameter for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define a parameter for a price item pricing:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for whom you want to define a parameter.

In addition, this section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. Note: The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Price Item Parameter Search window appears where you can search for the required parameter. The search results displays only those parameters where the Price Item check box is selected.	Yes
Parameter Information	Displays the concatenated string of information about the parameter separated by a comma (,).	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a parameter from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameter is defined for the price item pricing.

Defining the Division-Specific Cost of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific cost of a price item in the price item pricing you should have:

- Price items or price item bundles associated with the division to which the user belongs

Procedure

To define the division-specific cost of a price item in the price item pricing:

1. Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.
2. Click the **Add** (+) icon in the **Costs** column corresponding to the division for which you want to define the cost of the price item in the price item pricing.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Cost Type	Used to indicate the type of cost incurred in the division for the price item pricing. The valid values are: <ul style="list-style-type: none"> • Additional Cost-Fixed • Additional Cost-Variable • Fixed Internal • Fixed Third Party • Variable Internal • Variable Third Party 	Yes (Conditional)
		Note: This field is required while defining the division-specific cost of the price item in the price item pricing.
Cost Value	Used to specify the cost amount.	Yes (Conditional)
		Note: This field is required while defining the division-specific cost of the price item in the price item pricing.

Note: By default, the **Pricing Currency** is considered as the currency for defining the division-specific cost of the price item in the price item pricing.

3. Enter the required details in the **Costs** grid.
4. If you want to define more than one division-specific cost of the price item in the price item pricing, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove the division-specific cost of the price item from the price item pricing, click the **Delete** (🗑️) icon corresponding to the cost.

5. Click **Save**.

The division-specific cost of the price item in the price item pricing is defined.

Defining the Division-Specific Average Price Limits of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific average price limits of a price item in the price item pricing, you should have:

- To Do roles and currencies defined in the application
- Price items or price item bundles associated with the division to which the user belongs

Procedure

To define the division-specific average price limits of the price item in the price item pricing:

1. Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.
2. Click the **Add**  icon in the **Floor and Ceiling Type** column corresponding to the division for which you want to define the division-specific average price item in the price item pricing.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Role	Used to indicate that users with the specified To Do role can approve the average price of the price item in the price item pricing when it is within the specified floor and ceil limits.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the To Do Role field. On clicking the Search icon, the To Do Role Search window appears.</p> <p>On specifying the To Do role, the description of the To Do role appears corresponding to the To Do Role field.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Floor Value	Used to specify the floor (i.e. lower) limit of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The floor value cannot be greater than the ceil value.</p> <p>This field appears only when you select Absolute Value Range option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>

Field Name	Field Description	Mandatory (Yes or No)
Ceil Value	Used to specify the ceil (i.e. upper) limit of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The ceil value cannot be lower than the floor value.</p> <p>This field appears only when you select Absolute Value Range option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Spread Amount	Used to specify the spread amount of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note: This field appears only when you select the Spread Amount option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Spread Percentage	Used to specify the spread percentage of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note: This field appears only when you select the Spread Percentage option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Floor and Ceil Currency	Used to indicate the currency in which you want to define the average price floor and ceil limits of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those currencies which are already defined in the system.</p> <p>The system does the currency conversion when the pricing currency is different from the floor and ceil currency.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>

- Enter the required details in the **Floor and Ceiling Type** grid.

Note: The **Floor and Ceiling Type** grid appears only when you select an option from the **Average Price Floor and Ceil Type** field in the **Deal Information** section.

- If you want to define the average price limits for more than one To Do role in the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the average price limits of a To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do role.

5. Click **Save**.

The division-specific average price limits of the price item in the price item pricing is defined.

Defining the Division-Specific Rate Negotiability Limits of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific rate negotiability limits of a price item in the price item pricing, you should have:

- Currencies defined in the application
- Price items associated with the division to which the user belongs

Procedure

To define the division-specific rate negotiability limits of a price item in the price item pricing:

1. Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.
2. Click the **Add** (+) icon in the **Negotiability** column corresponding to the division for which you want to define the division-specific rate negotiability limits

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Negotiability Floor Value	Used to specify the floor (i.e. lower) limit for the rate negotiation.	Yes (Conditional)
	Note: The floor value cannot be greater than the ceil value.	Note: This field is required while defining the division-specific rate negotiability limits of the price item in the price item pricing.
Negotiability Ceil Value	Used to specify the ceil (i.e. upper) limit for the rate negotiation.	Yes (Conditional)
	Note: The ceil value cannot be lower than the floor value.	Note: This field is required while defining the division-specific rate negotiability limits of the price item in the price item pricing.

Note: By default, the **Pricing Currency** is considered as the currency for defining the division-specific rate negotiability limits of the price item in the price item pricing.

3. Enter the required details in the **Negotiability** grid.

4. Click **Save**.

The division-specific rate negotiability limits of the price item in the price item pricing is defined.

Copying a Price Item Pricing

Prerequisites

To copy a price item pricing and assign it to a price list, you should have:

- Price list (to which you want to assign the price item pricing) defined in the application
- Price list associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

Procedure

To copy a price item pricing and assign it to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Price List Pricing** () icon in the **Price List Pricing** column corresponding to the price list to which you want to assign a price item pricing.

The **Price List Price Item Pricing** screen appears.

3. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

4. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the price list.
5. Click **Search**.

A list of price item pricing that meet the search criteria appears in the **Search Results** section.

6. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

7. Modify the required pricing details.

Note:

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active**, **Proposed**, or **Template** status.

8. Edit the characteristics of the price item pricing, if required.

9. Click **Save**.

A new price item pricing is defined and assigned to the price list.

Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 521
- [Price List Price Items](#) on page 524
- [Search Price List for Assignment](#) on page 525

Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> • Current Price List Assignments • Inactive Price List Assignments • Historical Price List Assignments 	Yes
	Note: By default, the Current Price List Assignments option is selected.	
Price List ID	Used to search a particular price list assigned to an account or a person.	No
	Note: The Search (🔍) icon appears corresponding to the Price List ID field. On clicking the Search icon, the Price List Search window appears.	
Price List Description	Used to search price lists which are assigned to the account or person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	Used to search price list assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive 	No
	Note: The Inactive option is not available in the Assignment Status list when you have selected the Current Price List Assignments or Historical Price List Assignments option from the Search By list. This field is disabled, and by default, the Inactive option is selected when you select the Inactive Price List Assignments option from the Search By list.	
Price List Inheritance	Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Note: You must specify at least one search criterion while searching for price list assignments.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person. Note: It has a link. On clicking the link, the Price List screen appears with the details of the respective price list.
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the Edit  icon, the Price List Assignment screen appears where you can edit the price list assignment details.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template
Rate Info	Displays the rate of the price item.
	Note: If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column. However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price assignment for price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Copy	On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> • Price List • Assigned Price List <p>Note: By default, the Price List option is selected.</p>	Yes
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective till a particular date. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account. Note: This field appears when you have selected the Assigned Price List option from the Search By list.	No
Person ID	Used to search price lists assigned to a particular person. Note: This field appears when you have selected the Assigned Price List option from the Search By list.	No
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed Note: This field appears when you have selected the Price List option from the Search By list.	No
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional Note: This field appears when you have selected the Price List option from the Search By list.	No
Only Eligible Price Lists	Used to search price lists which are eligible for the account or person. Note: This field appears when you have selected the Price List option from the Search By list.	No

Field Name	Field Description	Mandatory (Yes or No)
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date.	No
	<p>Note:</p> <p>This field appears only when you have selected the Price List option from the Search By list.</p> <p>By default, the current date appears in this field when the Only Eligible Price Lists option is selected. You can change the value, if required.</p>	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign  icon, the Price List Assignment screen appears where you can assign the price list to the account or person.
Price List Information	Displays the information about the price list.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Account Information	Displays the information about the account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Displays the information about the person.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the Price List option from the Search By list, the date from when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the Price List option from the Search By list, the date till when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

Assigning a Price List to an Account

Prerequisites

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to an account:

- Search for the account in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to edit.

A menu appears.

- Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- Price List Assignments** – Lists the price lists that are already assigned to the account.
- Price List Price Items** – Lists the price items that are assigned to the price list.
- Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the account.

4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the account.
- **Characteristics** – Used to define the characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when you want to assign the price list to the account.	Yes
	Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.	

Field Name	Field Description	Mandatory (Yes or No)										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the account.</p> <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="521 751 1141 1129"> <tbody> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	Price List Effective Start Date	01-Jan-2015	Price List Effective End Date	31-Jan-2015	Validity Period	15 Days	Price List Assignment Start Date	15-Jan-2015	Price List Assignment Validity End Date	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
Price List Effective Start Date	01-Jan-2015											
Price List Effective End Date	31-Jan-2015											
Validity Period	15 Days											
Price List Assignment Start Date	15-Jan-2015

Assigning a Price List to a Person

Prerequisites

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the person.
- **Price List Price Items** – Lists the price items that are assigned to the price list.
- **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the person.

4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign**  icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the person.
- **Characteristics** – Used to define the characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Information	Indicates the person to whom you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when you want to assign the price list to the person.	Yes
	Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.	

Field Name	Field Description	Mandatory (Yes or No)

Defining a Characteristic for a Price List Assignment

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing characteristics for a price list assignment.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .	Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are assigning a price list to multiple persons or accounts or when you are editing the price list assignment details of multiple persons or accounts.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .	Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the price list assignment.

Price List Simulation

Oracle Revenue Management and Billing provides you a price list simulator wherein you can simulate the pricing and analyze the revenue impact. A new screen named **Price List Simulation** is introduced in this release. It enables you to search for a price list whose price item pricing you want to simulate. You can search for:

- Price lists assigned to customers or accounts where a particular characteristic is defined
- Price lists where a particular price item is assigned
- Price list which is associated with a particular product
- Price lists with a particular description

Once you search for a price list, you can simulate the pricing in a particular currency. On clicking the icon in the **Price List Simulation – Proposal** column, the **Price List Simulation – Proposal** screen appears where you can individually update the price and/or volume of a price item or mass update the price and/or volume of the price items in the price list. On simulating the price list, the **Price List Simulation Results** screen appears where you view the details of the simulation. The details include:

- List of accounts which would be affected with the change in price
- Original and proposed revenue and the revenue impact due to change in the price

On clicking the **Simulate** button, the system creates the simulation in the **Pending** status. On clicking the **Request Approval** button corresponding to a simulation, the system changes the status of the simulation to **Approved**. The system enables you to extract the effective pricing and simulation results in the Excel format.

Price List Simulation

The **Price List Simulation** screen allows you to search for a price list whose price item pricing you want to simulate using various search criteria. You can create a price list simulation request and also view the simulation details of a price list. This screen contains the following zone:

- [Search Price List](#) on page 555

Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following sections:

- **Characteristic Filters** - The **Characteristic Filters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to indicate whether you want to search for a price list using the entities. The valid value is: <ul style="list-style-type: none"> • Account • Person 	No
Characteristic Type	Used to search price lists defined for entities using a particular characteristic type.	No

Field Name	Field Description	Mandatory (Yes or No)
Operator	Used to indicate relational operators used to define the relation between the characteristic type and characteristic value. The valid values are: <ul style="list-style-type: none"> • < • <= • = • > • >= • In • Between 	No
Characteristic Value	Used to specify the value of the characteristic type using which you want to search customer registrations of persons.	No

- **Search By Price List, Product, or Price Item** - Used to search a price list using price list, price item or product. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a price list associated with a particular price item. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	No
Product	Used to search price lists assigned to a particular product. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	No
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search a price list with a particular description.	No

- **Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID.
Price List Information	Displays the description of the price list.

Column Name	Column Description
Status	Displays the status of the price list. The valid values are: <ul style="list-style-type: none"> Active Inactive
Effective Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Effective End Date	Displays the date till when the price list is available for assignment to an account or a person.
Simulation Currency	Used to specify the currency for simulation.
Price List Simulation Request	On clicking the Price List Simulation Request (+) icon in the Price List Simulation Request column, the Price List Simulation Request screen appears where you can modify volume and pricing of the price items to simulate a price list. Note: The Price List Simulation Request icon appears when you select the required currency from the Simulation Currency list.
Price List Simulation Results	On clicking the Price List Simulation Results (🔗) icon in the Price List Simulation Results column, the Price List Simulation Results screen appears where you can view the results for all simulated versions for the price lists for a particular entity.

Searching for a Price List

Prerequisites

To search for a price list, you should have:

- Price list simulation entities and their characteristics defined in the application

Procedure

To search for a price list:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Price List Simulation**.
The **Price List Simulation** screen appears.
- Enter the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of price lists that meet the search criteria appears in the **Results** section.

Viewing the Price List Simulation Details

Procedure

To view the details of a price list simulation:

1. Search for the price list in the **Price List Simulation** screen.
2. In the **Results** section, click the **Price List Simulation Results** ( icon in the **Price List Simulation Results** column corresponding to the price list whose details you want to view.
The **Price List Simulation Results** screen appears. It contains the following zones:
 - Price List Simulation View
3. View the basic details of the price list simulation **Price List Simulation View** zone.
4. View the simulation details for each price item associated with the price list.
5. View the revenue impact of the simulation for the price list and the price items that are assigned to the price list.

Creating a Request for Price List Simulation

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

To define a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List Simulation**.

The **Price List Simulation** screen appears.

3. Do either of the following:

If you want to...	Then...
Create a new simulation request for a price list	<ol style="list-style-type: none"> 1. Search for the required price list which you want to simulate from the Search Price List zone. A list of the price lists matching the search criteria appears in the Results section. 2. Select the simulation currency from the Simulation Currency list corresponding to the price list which you want to simulate. Click the Add (+) icon in the Price List Simulation Request column corresponding to the price list whose details you want to simulate.
Create a new simulation request for an already simulated price list	<ol style="list-style-type: none"> 1. Search for the price list whose simulation details you want to view from the Search Price List zone. A list of price lists matching with the search criteria appears in the Results zone. 2. Click on the Price List Simulation Results  icon in the Price List Simulation Results column corresponding to the price list whose price list simulation details you want to view. The Price List Simulation Results screen appears. 3. View the price list simulation details. 4. If you want to further simulate the respective price list then click on the Perform Simulation link in the upper right corner of the Price List Simulation View zone.

The **Price List Simulation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

4. Select the required mass pricing update request type from the respective field.
5. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> Decrease Price End Date Price Increase Price 	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> Absolute Percentage 	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price .	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Rate Value	Used to specify the rate by which you want to increase or decrease the price.	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price . You cannot specify a negative value or zero in the Rate Value field.	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Currency	Used to indicate the currency in which the rate is specified.	Yes (Conditional)
	Note: This field appears when the mass pricing update type is set to Absolute . If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the Currency Conversion For Bill Segments algorithm spot of the respective division.	Note: This field is required when the mass pricing update type is set to Absolute .

Field Name	Field Description	Mandatory (Yes or No)
Update Date	<p>Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. <p>Note: You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.</p>	Not applicable

6. Enter the required details in the **Price List Simulation Request** screen.
7. Propose new pricing and/or volume for the price items of the price list.
8. Click **Simulate** to simulate the price list.

Price List Simulation Request

The **Price List Simulation Request** screen allows you to propose or modify the volume and/or pricing of the price items in a price list in order to simulate a price list. You can individually or mass update the volume and/or pricing of the price items associated with the price list. Once an update is proposed in the volume and/or pricing of the price item, you can simulate the price list to analyze the results and the overall revenue impact. This screen contains the following zone:

- [Propose Price and Volume](#) on page 561

Propose Price and Volume

The **Propose Price and Volume** zone allows you to propose or modify the volume and/or pricing for the price items associated with a price list/product/price item pricing. You can either increase or decrease the volume and/or pricing of the price items. Once an update is proposed in the volume and/or pricing of the price item, you can simulate the respective price list. It contains the following sections:

- **Filters** - This section contains the following fields:

Field Name	Field Description
Price List ID	Indicates the price list whose details you want to simulate.
Product	Used to search a product with a particular description.
Simulation Period	Used to specify the period which is back calculated from the system date to fetch the validity for the proposed pricing. The valid values are: <ul style="list-style-type: none"> • 1 month • 3 months • 6 months • 12 months • 36 months
	Note: By default, the 12 months option is selected.

- **Simulation Details** - Used to propose or modify the volume and/or pricing for the price items associated with a price list, product, or price item hierarchy. It contains the following columns:

Field Name	Field Description
Description	Used to specify the description of the price list simulation version.
Detailed Description	Used to specify the additional information about the price list simulation.
Simulation Currency	Used to specify the currency in which you want to calculate the simulation results of the price list. <p>Note: If the simulation currency is different from the pricing currency, the system does the currency conversion.</p>
Mass Volume Update	Used to update the mass commitments in percentage which is applicable for the entire price list. You can slide the range slider in the backward or forward direction in order to increase or decrease the volume respectively. <p>Note: You can exclude a price item of the price list, product, or price item hierarchy from the Mass Volume Update by selecting the Exclude checkbox corresponding to the respective price item.</p>
Mass Price Update	Used to update the mass pricing of the price items in percentage which is applicable for the entire price list. You can slide the range slider in the backward or forward direction in order to increase or decrease the pricing respectively. <p>Note: You can exclude a price item of the price list, product, or price item hierarchy from the Mass Price Update by selecting the Exclude checkbox corresponding to the respective price item.</p>
Total Affected Accounts	Displays the total number of affected price items or products associated with a particular account for which you want to perform the simulation.
SQI	Indicates the SQI associated with the price item pricing.

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of the pricing information such as rate component, pricing type and pricing currency which are separated by a comma (,) for the price list. Note: This link appears when you expand the respective price item. It has a link. On clicking the link, the Rate Component Tree screen appears where you can view the pricing structure details of the respective price item.
Actual Volume	Displays the actual commitments of the price item for a particular account.
Actual Average Unit Price	Displays the actual average price charged for each unit of a price item. It is represented by the following formula: Actual Average Unit Price = Actual Revenue / Actual Volume
Actual Revenue	Displays the revenue generated through the actual price item pricing and actual volume of a price item.
Proposed Volume	Displays the proposed commitments of the price item for a particular account.
Proposed Average Unit Price	Displays the proposed average price charged for each unit of a price item. Proposed Average Unit Price = Proposed Revenue / Proposed Volume
Exclude Simulation	Used to specify whether you want to exclude a price item of a price list, product, or a price item hierarchy from the mass volume and/or pricing update.

Simulating a Price List

Prerequisites

To simulate a price list, you should have:

- Account details defined in the application
- Price items of a price list associated with a product
- Price item pricing defined for the respective price list associated with the account
- Bill generated for the account

Procedure

To simulate a price list:

1. Search for the price list in the **Price List Simulation** screen.
2. In the **Results** section, select the required currency from the **Simulation Currency** list corresponding to the price list which you want to simulate..
3. On selecting the currency, the **Price List Simulation Request** (+) icon appears.

4. Click **Price List Simulation Request** icon.

The **Price List Simulation Request** screen appears. It contains the following zone:

- **Propose Price and Volume** - Used to propose or modify the volume and pricing of the price items associated with a price list/product/price item hierarchy. It contains following sections:
- **Filters** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Indicates the price list that is to be simulated.	No
Product	Used to search a product with a particular description.	No
Simulation Period	Used to specify the period which is back calculated from the system date to fetch the validity for the proposed pricing. The valid values are: <ul style="list-style-type: none"> • 1 month • 3 months • 6 months • 12 months • 36 months 	No
	Note: By default, the 12 months option is selected.	

- **Simulation Details** - Used to propose or modify the volume and/or pricing for the price items associated with a price list, product, or price item hierarchy. It contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify description for the price list simulation version.	No
Detailed Description	Used to specify additional information about the price list simulation.	No
Simulation Currency	Used to specify the currency in which you want to calculate the simulation results of the price list. Note: <ul style="list-style-type: none"> • By default, it displays the currency value selected while requesting a simulation from the Price List Simulation screen. • If the simulation currency is different from the currency which is specified in the price list simulation request, the system does the currency conversion. 	No

Field Name	Field Description	Mandatory (Yes or No)
Mass Volume Update	Used to update the mass commitments in percentage which is applicable for the entire price list. You can slide move the range slider in the backward or forward direction in order to increase or decrease the volume respectively.	No
	Note: You can exclude a price item of the price list, product, or price item hierarchy from the Mass Volume Update by selecting the Exclude checkbox corresponding to the respective price item.	
Mass Price Update	Used to update the mass pricing of the price items in percentage which is applicable for the entire price list. You can move the range slider backward or forward direction in order to increase or decrease the pricing respectively.	No
	Note: You can exclude a price item of the price list, product, or price item hierarchy from the Mass Price Update by selecting the Exclude checkbox corresponding to the respective price item.	
Affected Accounts	Displays the total number of affected price items or products of a particular account for which you want to perform the simulation.	No
SQI	Indicates the SQIs associated with the price item pricing.	No
Pricing Information	Displays the concatenated string consisting of pricing information such as rate component, pricing type and pricing currency which are separated by a comma (,) for the price list.	
	Note: This link appears when you expand the respective price item. It has a link. On clicking the link, the Rate Component Tree screen appears where you can view the pricing structure details of the respective price item.	
Actual Volume	Displays the actual commitments of the price item for a particular account.	No
Actual Average Unit Price	Displays the actual average price charged for each unit of a price item. It is represented by the following formula: Actual Average Unit Price = Actual Revenue / Actual Volume	No
Actual Revenue	Displays the revenue generated through the actual price item pricing and actual volume of a price item.	No
Proposed Volume	Displays the proposed commitments of the price item for a particular account.	No

Field Name	Field Description	Mandatory (Yes or No)
Proposed Average Unit Price	Displays the proposed average price charged for each unit of a price item. Proposed Average Unit Price = Proposed Revenue / Proposed Volume	No
Exclude Simulation	Used to specify whether you want to exclude a price item of a price list, product, or a price item hierarchy from the mass volume and/or pricing update.	No

5. Filter the results using the **Filters** section, if required.
6. Propose or modify new values for **Mass Volume Update** and/or **Mass Price Update** fields, if required.
7. Click **Simulate**.

The **Price List Simulation Results** screen appears where you can analyze the simulation results.

Price List Simulation Results

The **Price List Simulation Results** screen allows you to view all the simulation results of a price list. You can analyze the simulation results of a price list. You can also request the approval for the price list simulation. The system enables you to extract the effective pricing and simulation results in the Excel format. This screen contains the following zone:

- **Price List Simulation List**

Price List Simulation List

The **Price List Simulation List** zone lists all the simulations associated with the price list. You can view the details of all the simulations performed for the associated price list. Also, you can request approval for a particular price list simulation. It allows you to extract the effective pricing and/or simulation results in excel format. This zone contains the following sections:

- **Filters** - The **Filters** section contains the following fields:

Field Name	Field Description
Price List ID	Used to specify the price list for which the simulation is requested.
Product	Used to search a product with a particular description.

Field Name	Field Description
Simulation Period	<p>Used to specify the period which is back calculated from the system date to fetch the validity for the proposed pricing. The valid values are:</p> <ul style="list-style-type: none"> • 1 month • 3 months • 6 months • 12 months • 36 months <p>Note: By default, the Simulation Period is set to 12 months option is selected.</p>
View Person and Account Level Details	Used to indicate whether you want to show or hide the person or account details associated with the price list.
Price List Simulation Request	On clicking this link, you can create a new simulation request for the price list whose simulation details you are viewing.
Total Affected Accounts	<p>Displays the total number of affected price items or products of a particular account whose simulation details you are viewing.</p> <p>Note: This field appears when you expand the simulation details which you want to view.</p>
Pricing Information	Displays the price item pricing information associated with a particular account.
Actual Volume	Displays the actual commitments of the price item for a particular account.
Proposed Volume	Displays the proposed commitments of the price item for a particular account
Actual Average Unit Price	<p>Displays the actual average price charged for each unit of a price item. It is represented by the following formula:</p> $\text{Actual Average Unit Price} = \text{Actual Revenue} / \text{Actual Volume}$
Proposed Average Unit Price	<p>Displays the proposed average price charged for each unit of a price item. It is represented by the following formula:</p> $\text{Proposed Average Unit Price} = \text{Proposed Revenue} / \text{Proposed Volume}$
Original Revenue	Displays the revenue generated from the actual price item pricing and actual volume of a price item.
Proposed Revenue	Displays the revenue generated from the proposed price item pricing and proposed volume of a price item..
Revenue Variation (%)	<p>Displays the average revenue generated from the price item pricing and commitments. It is represented by the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}$
Extract Effective Pricing	Used to extract the effective pricing details in the excel format.
Extract Simulation Results	Used to extract the simulation results in the excel format.

Field Name	Field Description
Approve Simulation	On clicking this button, the system updates the status of the corresponding price list simulation as Approved .

Legend	Legend Description
 ORIGINAL	Indicates the original commitments and pricing statistics of a price item.
 PROPOSED	Indicates the proposed commitments and pricing statistics of a price item.

Analyzing the Results of a Price List Simulation

Procedure

To analyze the results of a price list simulation:

1. Search for the price list in the **Price List Simulation** screen.
2. In the **Results** section, click the **Price List Simulation Request** (+ icon in the **Price List Simulation Request** column corresponding to the price list you want to simulate.
The **Price List Simulation Request** screen appears.
3. Propose new volume and price for the price item of the price list you want to simulate.
4. Click **Simulate**.

Note: Alternatively, you can click on the **Price List Simulation Results** (🔗) icon in the **Price List Simulation Results** column corresponding to the price list whose simulation results you want to analyze in the price list search results section.

The **Price List Simulation Results** screen appears. It contains the following zone:

- **Price List Simulation List** - Lists all the simulation results associated with a particular price list. It contains the following section:
 - Filters** - The **Filters** section contains the following fields:

Field Name	Field Description
Price List ID	Used to specify the price list for which the simulation is requested.
Product	Used to search a product with a particular description.
Simulation Period	<p>Used to specify the period which is back calculated from the system date to fetch the validity for the proposed pricing. The valid values are:</p> <ul style="list-style-type: none"> • 1 month • 3 months • 6 months • 12 months • 36 months <p>Note: By default, the Simulation Period is set to 12 months option is selected.</p>
View Person and Account Level Details	Used to indicate whether you want to show or hide the person or account details associated with the price list.
Price List Simulation Request	On clicking this link, you can create a new simulation request for the price list whose simulation details you are viewing.
Total Affected Accounts	<p>Displays the total number of affected price items or products of a particular account whose simulation details you are viewing.</p> <p>Note: This field appears when you expand the simulation details which you want to view.</p>
Pricing Information	Displays the price item pricing information associated with a particular account.
Actual Volume	Displays the actual commitments of the price item for a particular account.
Proposed Volume	Displays the proposed commitments of the price item for a particular account
Actual Average Unit Price	<p>Displays the actual average price charged for each unit of a price item. It is represented by the following formula:</p> $\text{Actual Average Unit Price} = \text{Actual Revenue} / \text{Actual Volume}$
Proposed Average Unit Price	<p>Displays the proposed average price charged for each unit of a price item. It is represented by the following formula:</p> $\text{Proposed Average Unit Price} = \text{Proposed Revenue} / \text{Proposed Volume}$
Original Revenue	Displays the revenue generated from the actual price item pricing and actual volume of a price item.
Proposed Revenue	Displays the revenue generated from the proposed price item pricing and proposed volume of a price item..

Field Name	Field Description
Revenue Variation (%)	Displays the average revenue generated from the price item pricing and commitments. It is represented by the following formula: Revenue Variation (%) = (Proposed Revenue – Original Revenue)*100 / Original Revenue
Extract Effective Pricing	Used to extract the effective pricing details in the excel format.
Extract Simulation Results	Used to extract the simulation results in the excel format.
Approve Simulation	On clicking this button, the system updates the status of the corresponding price list simulation as Approved .

Legend	Legend Description
 ORIGINAL	Indicates the original commitments and pricing statistics of a price item.
 PROPOSED	Indicates the proposed commitments and pricing statistics of a price item.

- Expand the simulation version that you want to view.
- Analyze the updated volume and pricing for the price items of the price list.
- Analyze the percentage variation in the revenue of the price items.

Submitting a Price List Simulation for Approval

Prerequisites

To submit a price list simulation for approval, you should have:

- Price list simulation available in the pending status

Procedure

To submit a price list simulation for approval:

- Search for the price list whose simulation details you want submit for approval in the **Price List Simulation** screen.
- In the **Results** section, click the **Price List Simulation Result** () icon in the **Price List Simulation Result** column corresponding to the price list whose simulation results you want to submit for an approval.

Note: Alternatively, you can click on the **Price List Simulation Results** () icon in the **Price List Simulation Results** column corresponding to the price list whose simulation results you want to submit for approval.

The **Price List Simulation Result** screen appears.

- Analyze the details of the price list simulation which you want to submit for approval.

4. Click

Approve Simulation button corresponding to the price list simulation which you want to submit for approval.

The price list simulation is approved.

Extracting the Effective Pricing of a Price List Simulation**Procedure**

To extract the effective pricing of a price list simulation:

1. Search for the price list whose simulation details you want submit for approval in the **Price List Simulation** screen.
2. In the **Results** section, click the **Price List Simulation Result** (🔗) icon in the **Price List Simulation Result** column corresponding to the price list whose simulation results you want to submit for an approval.
The **Price List Simulation Result** screen appears.
3. Click on the **Extract Effective Pricing** link corresponding to the price list simulation whose effective pricing details you want to extract.
The effective pricing details are extracted in the excel format.

Pricing (Account)

The **Pricing (Account)** screen allows you to:

- View effective price assignments of an account
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to an account
- Edit or override a price item pricing
- Copy a price item pricing and assign it to an account

This screen consists of the following zones:

- [Effective Price Assignments for Account](#) on page 572
- [Search Price Item or Price Item Pricing](#) on page 577

Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the system date.	
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed – Means price item pricing is agreed for the account. • Account Price List – Means price item pricing is defined in the price list which is assigned to the account. • Account Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Customer Agreed – Means price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List – Means price item pricing is defined in the price list which is assigned to the main customer. • Default Price List – Means price item pricing defined in the price list is available in the default price list. • Global Price List – Means price item pricing defined in the price list is available in the global price list. • Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Parent Customer Agreed – Means price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List – Means price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Product Default Price List – Means product defined in the price list is available in the default price list. 	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
	Note: By default, the Active option is selected.	
Show Default and Global Pricing	Used to search price assignments inherited from the default or global price list. The valid values are: <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list 	No
	Note: By default, the No option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	Used to search the price list using the following values: <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	Note: By default, the Exact Match option is selected.	

Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search price assignments which are defined using a particular parameter.	No
	Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	

Note:

The **Search** (🔍) icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search** (🔍) icon appears corresponding to the **Parameter Value** field when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the account.
	Note: It has a link. On clicking the link, the View Price Item Pricing screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Default Price List • Global Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List • Product Default Price List
Rate Info	<p>Displays the rate of the price item.</p> <div style="border: 1px solid black; padding: 5px; background-color: #f0f0f0;"> <p>Note:</p> <p>If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column.</p> <p>However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.</p> </div>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the Edit (✎) icon, the Price Item Pricing screen appears where you can edit the details of the price item pricing.</p> <div style="border: 1px solid black; padding: 5px; background-color: #f0f0f0;"> <p>Note: The Edit icon appears when the assignment level is Account Agreed.</p> </div>

Column Name	Column Description
Override	<p>On clicking the Override  icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

Note: The number of records that can be displayed in the **Search Results** section is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 4435.

Search Price Item or Price Item Pricing

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> • Price Item • Price List Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	Note: This field appears when you select the Price List Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	Note: This field appears when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	Note: This field appears when you select the Person Override Pricing option from the Search By list.	

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search** (🔍) icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the account belongs. It may also include price items or price item bundles that are already assigned to the account in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the Assign (📌) icon, the Price Item Pricing screen appears where you can define a new price item pricing.</p> <p>Note: This column appears when you select the Price Item option from the Search By list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. This column appears when you select the Price Item option from the Search By list.</p>
Copy	<p>On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: This column appears when you select the Account Override Pricing option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. The account information string appears when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>

Column Name	Column Description
Person Information	Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears only when you select the Person Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>The person information string appears when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears when you select the Price List Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Effective End Date	Displays the date till when the price item pricing is effective.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Pricing Currency	Indicates the currency in which the price item pricing is defined.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>

Column Name	Column Description
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
	<p>Note:</p> <p>It has a link. On clicking the link Rate Schedule screen appears.</p> <p>This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> Regular Post Processing Post Processing – Invoice Based Post Processing – Price Item Based
	<p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

Viewing Effective Price Assignments of an Account

Prerequisites

To view effective price assignments of an account, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To view effective price assignments of an account:

- Search for the account in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. View the pricing for price items or price item bundles assigned to the account (either directly or through the customer hierarchy) in the **Effective Price Assignments for Account** zone.
5. Filter the effective price assignments of the account, if required.

Related Topics

For more information on...	See...
How to search for an account	Searching for an Account on page 206

Filtering Effective Price Assignments of an Account

Prerequisites

To filter effective price assignments of an account, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To filter effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Account** zone.

Note:

You can search for a price item, parameter, or parameter value by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** (+) icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the **Delete** (🗑️) icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Account** zone.

Exporting Effective Price Assignments of an Account

Prerequisites

To export effective price assignments of an account in the CSV format, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To export effective price assignments of an account in the CSV format:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▼) icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Filter the effective price assignments of the account, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.
A message appears confirming whether you want to open or save the EffectivePricing.csv file.
6. Select the **Save As** option from the **Save** list.
The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List

Column Name	Column Description
Price List Description	Displays the description of the price list.
	Note: The description appears when the assignment level is Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List.
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> • Rate Component Sequence • Tiering Setup of the Rate Component
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.

Column Name	Column Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item is billed individually or at the price item bundle level.

Copying a Price Item Pricing

Prerequisites

To copy a price item pricing and assign it to an account, you should have:

- Account (to which you want to assign the price item pricing) defined in the application
- Account associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

Procedure

To copy a price item pricing and assign it to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the account.

6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

Note:

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the account.

Viewing a Price Item Pricing

Procedure

To view a price item pricing and assignment details:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
 - **Pricing Information** – Displays the pricing information of the price item.
 - **TFM Information** – Displays the transaction feed management information of the price item.
 - **Characteristics** – Displays the details of price item pricing characteristics.
 - **Price Item and Parameter Information** – Displays the price item parameter details.
 - **Record Actions** – Displays the record actions of the price item pricing.
 - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

Note: This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

Note: This zone appears when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

Editing a Price Item Pricing of an Account

Prerequisites

To edit a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="607 1171 1117 1255" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="607 1512 1117 1596" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes

Overriding a Price Item Pricing of an Account

Prerequisites

To override a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. Defining a Characteristic for a Price Item Pricing

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.

- If you want to define more than one characteristic for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price item pricing.

Defining a Parameter for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected.	

Column Name	Column Description	Mandatory (Yes or No)
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> Parameter Description Mandatory (Yes or No) Priority 	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete (🗑)** icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or rating criteria to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item are considered for billing or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes (Conditional)
	Note: By default, the No option is selected.	Note: This field is required while defining the TFM information in a price item pricing.

Field Name	Field Description	Mandatory (Yes or No)
Aggregate Transactions	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
	Note: By default, the Do Not Rate Transactions option is selected.	

2. Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The TFM information is defined in the price item pricing.

Pricing (Person)

The **Pricing (Person)** screen allows you to:

- View effective price assignments of a person
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to a person
- Edit or override a price item pricing
- Copy a price item pricing and assign it to a person

You can also view effective price assignments of a global person (i.e. a person who is not associated to any division) in this screen. The pricing for all price items or price item bundles assigned to the global person either directly or through a price list appears in this screen. However, you will be able to view pricing for only those price items or price item bundles that are associated to the division to which you have access.

Since a global person is not associated to any division, the system cannot determine the price assignment search order for a global person. Hence, the default search order is defined for global persons through the **C1_PRASNORDR** feature configuration. This feature configuration contains the **Price Assignment Algorithm** option type where you need to specify the algorithm which contains default search order for global persons. You can change this default search order, if required. The valid search order values are — **AGREED_PRICELIST** and **AGREED_FIRST**. You can also create a custom search order, if required.

This screen consists of the following zones:

- [Effective Price Assignments for Person](#) on page 606
- [Search Price Item or Price Item Pricing](#) on page 611

Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the current date.	
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Customer Agreed – Means price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List – Means price item pricing is defined in the price list which is assigned to the main customer. • Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Default Price List – Means price item pricing defined in the price list is available in the default price list. • Global Price List – Means price item pricing defined in the price list is available in the global price list. • Parent Customer Agreed – Means price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List – Means price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. 	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Active • Proposed 	No
	Note: By default, the Active option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list 	No
	Note: By default, the No option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	Note: By default, the Exact Match option is selected.	

Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to search price assignments which are defined using a particular parameter.</p>	No
	<p>Note:</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	

Note: The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, you can search for a parameter. You can only use those parameters where the source entity is set to Transaction . The Search (🔍) icon appears corresponding to the Parameter Value field when the value type of the parameter is Predefined or Reference . If the value type of the parameter is Predefined then on clicking the Search icon, you can search for a predefined parameter value. However, if the value type of the parameter is Reference then on clicking the Search icon, you can search for a reference parameter value.
--

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.
	Note: It has a link. On clicking the link, the View Price Item Pricing screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Customer Agreed • Customer Price List • Customer Inherited Price List • Default Price List • Global Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List
Rate Info	<p>Displays the rate of the price item.</p> <p>Note:</p> <p>If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column.</p> <p>However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.</p>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the Edit  icon, the Price Item Pricing screen appears where you can edit the details of the price item pricing.</p> <p>Note: The Edit icon appears when the assignment level is Customer Agreed.</p>
Override	<p>On clicking the Override  icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.

Column Name	Column Description
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

Note: The number of records that can be displayed in the **Search Results** section is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 4435.

Search Price Item or Price Item Pricing

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> • Price Item • Price List Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search price items or price item bundles with a particular description.	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when you select the Price Item option from the Search By list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	Note: This field appears when you select the Price List Pricing option from the Search By list.	
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	Note: This field appears when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	Note: This field appears when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	No
	Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	Note: This field appears when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	Note: This field appears when you select the Person Override Pricing option from the Search By list.	

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID, Price Item, Account ID, and Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the person belongs. However, if the person does not belong to any division, the search will be performed against all price items or price item bundles defined in the system. It may also include price items or price item bundles that are already assigned to the person in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the Assign () icon, the Price Item Pricing screen appears where you can define a new price item pricing.</p> <p>Note: This column appears when you select the Price Item option from the Search By list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. This column appears when you select the Price Item option from the Search By list.</p>
Copy	<p>On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: This column appears when you select the Account Override Pricing option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. The account information string appears when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>

Column Name	Column Description
Person Information	Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears only when you select the Person Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>The person information string appears when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears when you select the Price List Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Effective End Date	Displays the date till when the price item pricing is effective.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Pricing Currency	Indicates the currency in which the price item pricing is defined.
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>

Column Name	Column Description
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
	<p>Note:</p> <p>It has a link. On clicking the link Rate Schedule screen appears.</p> <p>This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers
	<p>Note: This column appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> Regular Post Processing Post Processing – Invoice Based Post Processing – Price Item Based
	<p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

How to assign a price item or price item bundle to a person	Assigning a Price Item to a Person on page 631

Viewing Effective Price Assignments of a Person

Prerequisites

To view effective price assignments of a person, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To view effective price assignments of a person:

- Search for the person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. View the pricing for price items or price item bundles assigned to the person (either directly or through the customer hierarchy) in the **Effective Price Assignments for Person** zone.
5. Filter the effective price assignments of the person, if required.

Related Topics

For more information on...	See...
How to search for a person	Searching for a Person on page 205

Filtering Effective Price Assignments of a Person

Prerequisites

To filter effective price assignments of a person, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To filter effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Person** zone.

Note:

You can search for a price item, parameter, or parameter value by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** (+) icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the **Delete** (🗑️) icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Person** zone.

Exporting Effective Price Assignments of a Person

Prerequisites

To export effective price assignments of a person in the CSV format, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To export effective price assignments of a person in the CSV format:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▼) icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Filter the effective price assignments of the person, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.
A message appears confirming whether you want to open or save the EffectivePricing.csv file.
6. Select the **Save As** option from the **Save** list.
The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Customer Agreed • Customer Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List
Price List Description	Displays the description of the price list. Note: The description appears when the assignment level is Customer Price List , Customer Inherited Price List , Parent Customer Price List , or Parent Customer Inherited Price List .

Column Name	Column Description
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> • Rate Component Sequence • Tiering Setup of the Rate Component
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N

Column Name	Column Description
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item or price item bundle's total usage is considered for determining the rate.

Copying a Price Item Pricing

Prerequisites

To copy a price item pricing and assign it to a person, you should have:

- Person (to which you want to assign the price item pricing) defined in the application
- Person associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

Procedure

To copy a price item pricing and assign it to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▼) icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the person.
6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

Note:

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the person.

Viewing a Price Item Pricing

Procedure

To view a price item pricing and assignment details:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
 - **Pricing Information** – Displays the pricing information of the price item.
 - **TFM Information** – Displays the transaction feed management information of the price item.
 - **Characteristics** – Displays the details of price item pricing characteristics.
 - **Price Item and Parameter Information** – Displays the price item parameter details.
 - **Record Actions** – Displays the record actions of the price item pricing.
 - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

Note: This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

Note: This zone appears when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

Editing a Price Item Pricing of a Person

Prerequisites

To edit a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective. Note: The effective start date cannot be later than the effective end date. If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range. This field will be in read-only mode when the price assignment has been used.	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the price item pricing is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <p>Note:</p> <p>The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
	Note: This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.	
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is used for quotations. 	Yes
	Note: If a price assignment is in Active status, you can change its status to Inactive . If a price assignment is in Draft status, you cannot change its status to Proposed .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes (Conditional)
		Note: This field is required when you are editing a two-dimensional pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, Yes is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	

6. Modify the details in the **Main** section, if required.
7. Edit the TFM Information in a price item pricing, if required.
8. Edit the characteristics for a price item pricing, if required.
9. Edit the parameters for a price item pricing, if required.
10. Click **Save**.

The changes made to the price item pricing are saved.

Overriding a Price Item Pricing of a Person

Prerequisites

To override a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>

Assigning a Price Item to a Person**Prerequisites**

To assign a price item to a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To assign a price item to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Search for the price item that you want to assign to the person in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the person.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>

Defining a Characteristic for a Price Item Pricing

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Price Item . Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

2. Enter the required details in the **Characteristics** section.

- If you want to define more than one characteristic for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price item pricing.

Defining a Parameter for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected.	

Column Name	Column Description	Mandatory (Yes or No)
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> Parameter Description Mandatory (Yes or No) Priority 	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete (🗑)** icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or rating criteria to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item are considered for billing or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes (Conditional)
	Note: By default, the No option is selected.	Note: This field is required while defining the TFM information in a price item pricing.

Field Name	Field Description	Mandatory (Yes or No)
Aggregate Transactions	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
	Note: By default, the Yes option is selected.	
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
	Note: By default, the Do Not Rate Transactions option is selected.	

2. Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The TFM information is defined in the price item pricing.

Price Item Pricing (Used for Viewing)

Once the pricing is defined for a price item pricing which is assigned to an account, person, or price list, the **Price Item Pricing** screen allows you to:

- Edit the details of a price item pricing
- Delete a price item pricing
- Submit a price item pricing for processing
- View the details of price components of the rate component
- View the details of tiering criteria, pricing eligibility criteria of a price component
- Add price components of the rate components
- Add tiering components, pricing eligibility criteria of the price components
- Edit price components, tiering criteria, pricing eligibility criteria
- Delete price components, tiering criteria, pricing eligibility criteria

Note:

When the price assignment is in **Draft** status and when:

- Approval Workflow is off then status is changed from **Draft** to **Active**.
- Approval Workflow is on then status is changed from **Draft** to **Pending in Approval**.

The **Price Item Pricing** screen contains the following zones:

- [Price Item Pricing](#) on page 639
- [Price Item Pricing](#) on page 640
- [Price Assignment Tree](#) on page 468
- [Price Component](#) on page 647

Note: By default, the **Price Component** zone does not appear in the **Price Item Pricing** screen. It appears only when you click the **Add (+)** icon corresponding to the rate component in the **Price Assignment Tree** zone and when the status of the price item pricing is **Draft**, **Proposed**, or **Template**.

- [Two-Dimensional Pricing](#) on page 650

Note: The **Two-Dimensional Pricing** zone appears in the **Price Item Pricing** screen only when the **Two-Dimensional** option is selected from the **Pricing Rule Type** field while defining the price item pricing.

Price Item Pricing

The **Price Item Pricing** zone displays the basic information about the price item pricing. It contains the following sections:

- **Pricing Information** - Displays information about the price item pricing. It contains the following fields:

Field Name	Field Description
Pricing Status	<p>Indicates the current status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Rejected – Indicates that the price assignment is rejected in the system. • Template – Indicates that the price assignment is a template price list.
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <p>Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the currency.</p>

- **Record Actions** – The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the price item pricing.</p> <p>Note: The Edit button appears only when the price item pricing is in the Draft status.</p>
Delete	<p>Used to delete the price item pricing.</p> <p>Note: The Delete button appears only when the price item pricing is in the Draft status.</p>
Submit	<p>Used to submit the price item pricing for validation and processing.</p> <p>Note: The Submit button appears only when the price item pricing is in the Draft status.</p>

Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Pricing Information** - Displays basic information about the pricing of the price item. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the pricing of the price item is effective.
End Date	Displays the date till when the pricing of the price item is effective.

Field Name	Field Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Indicates that the pricing is used to generate regular bill segment. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: This field is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees. By default, the Regular option is selected in the Price Assignment Type field for price item which are applicable for Pricing and cannot be edited. The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div>
Pricing Eligibility	Indicates whether the pricing eligibility criteria is defined for the price item or not.
Pricing Status	<p>Indicates the pricing assignment status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Rejected – Indicates that the price assignment is rejected. • Template – Indicates that the price assignment is a template price list.

Field Name	Field Description
Pricing Currency	Indicates the currency in which the price item pricing is defined.
	Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the currency.
Rate Schedule	Indicates the rate schedule that is used to define the price item pricing.
	Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the rate schedule.
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> Two-Dimensional
	<p>Note:</p> <p>If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item.</p> <p>However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item.</p> <p>Also, you need to select the Pricing Eligibility option while defining a two-dimensional pricing for the price item.</p>
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> Yes No
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers
	Note: This field appears when you are viewing the details of a price item pricing assigned to a price list.
Pricing Frequency	Indicates the pricing frequency for the price item.
	Note: This field appears when you select the Price Item Usage as Pricing and Price Item Type as Fees while defining the price item.

- **TFM Information** – Displays the transaction feed management information mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item pricing are considered for billing or not. The valid values are: <ul style="list-style-type: none"> Yes No

Field Name	Field Description
Do Not Aggregate Switch	Indicates whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing.
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item pricing are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines

Note:

TFM Information section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Usage** field is set to **Pricing and Billing**.

TFM Information section does not appear when the **Price Item Usage** field is set to **Only Pricing** and the **Price Item Type** field is set to **Fees**, then, only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Deal Information** – Displays information about how the average price floor and ceil limits of the price item pricing is mapped to a deal. It contains the following field:

Field Name	Field Description
Average Price Floor and Ceil Type	<p>Indicates the manner in which the average price floor and ceil limits of the price item pricing is defined for the deal. The valid values are:</p> <ul style="list-style-type: none"> • Absolute Value Range - Indicates that the average price floor and ceil limits for the price item pricing is defined using absolute values. • Spread Amount - Indicates that the average price floor and ceil limits for the price item pricing is defined based on the spread amount. • Spread Percentage - Indicates that the average price floor and ceil limits for the price item pricing is defined based on the spread percentage. <p>Note: In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage the average floor and ceil limits are derived.</p>

- **Price Item and Parameter Information** – Lists the parameters based on which the price item pricing is defined. It contains the following field:

Field Name	Field Description
Price Item	<p>Displays the concatenated string of information about the price item or price item bundle for which the pricing is defined separated by a comma (,).</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the value of the parameter.

- **Division-Specific SQIs for Price Item** - Lists the SQIs associated with the price item pricing for a particular division. It contains the following columns:

Column Name	Column Description
SQI	<p>Displays the SQI associated with the price item for pricing.</p> <p>Note: It has a link. On clicking the link, the Service Quantity Identifier screen appears where you can view the details of the respective SQI.</p>
Daily Service Quantity	Displays the SQI usage for a single day.
Usage Period	Displays the duration for which the SQI is associated with the price item for pricing.
Division	Indicates the division for which the SQI is associated with the price item for pricing.

- **Division-Specific Floor and Ceil Values for Price Item** - Lists the average price floor and ceil limits of the price item pricing defined for a particular division. It contains the following columns:

Column Name	Column Description
To Do Role	<p>Indicates the users with the specified To Do role who can approve the average price of the price item in the price item pricing when it is within the specified floor and ceil limits.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Ceil Value	<p>Displays the ceil (i.e. upper) limit of the To Do role for approving the average price of the price item in the price item pricing.</p> <p>Note: This column appears when the Absolute Value Range option is selected from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>
Floor Value	<p>Displays the floor (i.e. lower) limit of the To Do role for approving the average price of the price item in the price item pricing.</p> <p>Note: This column appears when the Absolute Value Range option is selected from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>
Currency Code	<p>Indicates the currency in which the average price floor and ceil limits are defined for the price item pricing.</p> <p>Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the respective currency.</p>
Spread Amount	<p>Displays the spread amount of the To Do role for approving the average price of the price item in the price item pricing.</p> <p>Note: This column appears when the Spread Amount option is selected from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>
Spread Percentage	<p>Displays the spread percentage of the To Do role for approving the average price of the price item in the price item pricing.</p> <p>Note: This column appears when the Spread Percentage option is selected from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>
Division	<p>Indicates the division for which the average price floor and ceil values of the price item in the price item pricing is defined.</p>

- **Division-Specific Cost for Price Item** - Lists the costs of the price item pricing defined for a particular division. It contains the following columns:

Column Name	Column Description
Cost Type	Indicates the type of cost incurred in the division for the price item pricing. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost
Cost Value	Displays the cost amount.

Note: By default, the **Pricing Currency** is considered as the currency code in which the cost is specified.

- **Division-Specific Negotiability Floor and Ceil Values for Price Item** - Lists the negotiability floor and ceil limits of the price item pricing defined for a particular division. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the negotiability floor and ceil limits of the price item pricing is defined.
Floor Value	Displays the floor (i.e. lower) limit for the rate negotiation.
Ceil Value	Displays the ceil (i.e. upper) limit for the rate negotiation.

Note: By default, the **Pricing Currency** is considered as the currency code in which the negotiability floor and ceil limits of the price item pricing is defined.

- **Record Information** – The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is defined in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Price Assignment Tree

The **Price Assignment Tree** zone displays the details about the rate components and its price components for the price item along with the tiering criteria and pricing eligibility details.

It also allows you to do the following:

- Define, edit, copy, or delete the price component of the rate component

Note: You can define, edit, copy, or delete the price component of the rate component when the price item pricing is in **Draft**, **Proposed**, or **Template** status.

- Define, edit, copy, or delete the tiering criteria of the price component

Note: You can define, edit, copy, or delete the tiering criteria of the price component when the price item pricing is in **Draft**, **Proposed**, or **Template** status.

- Define, edit, copy, or delete the pricing eligibility criteria of the price component

Note: You can define, edit, copy, or delete the eligibility criteria of the price component when the price item pricing is in **Draft**, **Proposed**, or **Template** status.

Note: You cannot define, edit, copy, or delete a price component when you are accessing the **Price Assignment Tree** zone from the **Price List** screen.

Price Component

The **Price Component** zone displays information about the price component of the rate component for the price item pricing that is assigned to an account, person, or price list. It contains the following fields:

Field Name	Field Description
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> Rate Component Sequence Tiering Type of the Rate Component
Display Sequence	Displays the sequence of price component whose rate is used for calculating the pricing of the price item
Show Price Component	Indicates whether the price component is displayed in the bill.
Description	Displays the description of the price component.

Field Name	Field Description
Rate	Indicates the rate defined for the price component.
Save	On clicking the Save button, the Price Component zone saves the changes you made for the price component.
Clear	On clicking the Clear button, the changes you made to the price component are discarded.
Close	On clicking the Close button, the Price Component zone is closed.

In addition, the **Price Component** zone contains the following buttons:

Button Name	Button Description
Save	Used to save the changes made to the price component.
Clear	Used to discard the changes made to the price component.
Close	Used to close the Price Component zone.

By default, the **Price Component** zone does not appear in the **Price Item Pricing** screen. It appears when you click the **Add (+)** icon corresponding to a rate component in the **Price Assignment Tree** zone.

On clicking the **Show Price Component Tier** link, the **Tiering Criteria** section appears in the **Price Component** zone with the details of the respective tiering criteria of the price component.

The **Tiering Criteria** section contains the following fields in a grid:

Field Name	Field Description
Display Sequence	Displays the sequence number of the tiering criteria.
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Lower Limit	Displays the lower limit of the tiering range.
Upper Limit	Displays the upper limit of the tiering range.
Price Item	Displays the price item.
Price Item Parameters	Displays information about the parameter associated with the price item for the tier. Note: The Edit (✎) icon appears corresponding to the Price Item Parameters field. On clicking the Edit icon, the Tier Parameters section appears where you can add, edit, or delete the price item parameters for the tier.

Note: The **Tiering Criteria** section appears in the **Price Component** zone only when the **Tiering Type** of the rate component is **STEP** or **Threshold**.

On clicking the **Show Price Component Eligibility** link, the **Pricing Eligibility Criteria** section appears in the **Price Component** zone with the details of the respective pricing eligibility criteria of the price component.

The **Pricing Eligibility Criteria** section contains the following fields in a grid:

Field Name	Field Description
Display Sequence	Indicates the sequence number in which the pricing eligibility criteria is executed in the rule.

Field Name	Field Description
Parameter	Displays the left hand side parameter which is used along with the price item for price determination.
Operator	<p>Indicates the relational operator used to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • Between • In • Like • Not In
Parameter Value Type	<p>Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:</p> <ul style="list-style-type: none"> • Parameter - Indicates that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • Value - Indicates that the parameter (on the left hand side) is compared against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	<p>Indicates what happens when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number is executed. • Rule Is False – Indicates that the action specified in the Rule False Action field is executed. • Rule Is True – Indicates that the action specified in the Rule True Action field is executed.

Field Name	Field Description
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number is executed. • Rule Is False – Indicates that the action specified in the Rule False Action field is executed • Rule Is True – Indicates that the action specified in the Rule True Action field is executed.
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number is executed. • Rule Is False – Indicates that the action specified in the Rule False Action field is executed • Rule Is True – Indicates that the action specified in the Rule True Action field is executed.

Note: The **Pricing Eligibility Criteria** section appears in the **Price Component** zone only when the **Pricing Eligibility** check box is selected in the **Price Item Pricing** screen.

Two-Dimensional Pricing

The **Two-Dimensional Pricing** zone displays the details of the two-dimensional pricing. It contains the following field:

Field Name	Field Description
Pricing Information	Displays the concatenated string of information about the price item pricing for an account, person, or price list separated by a comma (,).

In addition, this zone contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Displays the Price Criteria of the price component
Threshold Parameter	Displays the parameter of the price component eligibility
Tiering Range	Displays the tiering range of the pricing.

Note: The **Two-Dimensional Pricing** zone appears in the **Price Item Pricing** screen only when the **Two-Dimensional** option is selected from the **Pricing Rule Type** field while defining the price item pricing.

Defining a Price Item Pricing

Prerequisites

To define pricing for a price item, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)
- Currencies defined in the application

Procedure

To define a price item pricing:

1. Do either of the following:

If you want to...	Then...
Define pricing for a price item that you want assign to a customer	<ol style="list-style-type: none"> 1. Ensure that the Search Price Item or Price Item Pricing zone is expanded in the Pricing (Person) screen when you are defining the price item pricing for a customer. 2. Search for the price item in the Search Price Item or Price Item Pricing zone. 3. In the Search Results section, click the Assign  icon in the Assign column corresponding to the price item that you want to assign to the customer.
Define pricing for a price item that you want assign to an account	<ol style="list-style-type: none"> 1. Ensure that the Search Price Item or Price Item Pricing zone is expanded in the Pricing (Account) screen when you are defining the price item pricing for an account. 2. Search for the price item in the Search Price Item or Price Item Pricing zone.

If you want to...	Then...
	<p>3. In the Search Results section, click the Assign  icon in the Assign column corresponding to the price item that you want to assign to the account.</p>
Define pricing for a price item that you want assign to a price list	<p>1. Ensure that the Search Price Item or Price Item Pricing zone is expanded in the Price List Price Item Pricing screen when you are defining the price item pricing for a price list.</p> <p>2. Search for the price item in the Search Price Item or Price Item Pricing zone.</p> <p>3. In the Search Results section, click the Assign  icon in the Assign column corresponding to the price item that you want to assign to the price list.</p>

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **Deal Information** - Used to specify how the average price floor and ceil limits of the price item pricing is mapped to a deal.
- **TFM Information** - Used to specify the transaction feed management information mapped to the price item pricing..

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** - Used to define a list of characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to specify the parameters based on which the price item pricing is defined.

Note: This section appears when **Price Assignment Type** is **Regular**.

- **Commitments** - Used to specify the following details about the pricing and commitments for the price item pricing:
 - Division-specific cost for the price item
 - Division-specific floor and ceil values for the price item
 - Division-specific negotiability floor and ceil values for the price item

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the pricing of the price item is effective.	Yes
	<p>Note:</p> <p>The Start Date cannot be later than the End Date.</p> <p>If you change the start date and the end date while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the pricing of the price item is effective.	No
	<p>Note: The End Date cannot be earlier than the Start Date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="690 562 1183 835" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="690 1094 1183 1171" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="690 1430 1183 1507" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> Used to define the pricing eligibility criteria for the price item pricing. Used to define the pricing eligibility criteria for the price item pricing. Regular – Used to indicate that the pricing must be used to generate regular bill segment. <div data-bbox="630 1818 1183 2074" style="border: 1px solid black; padding: 5px;"> <p>Note: By default, the Regular option is selected in the Price Assignment Type field. This field is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item.	Yes (Conditional)
	Note: If you select the check box you can define the pricing eligibility criteria of the price item in the Price Component zone.	Note: This field is required while defining the pricing eligibility criteria of the price item.
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Used to indicate that the price assignment is created as a draft. • Active – Used to indicate that the price assignment is used for billing. • Inactive – Used to indicate that the price assignment is no longer used for billing. • Proposed – Used to indicate that the price assignment is to be used for quotations. • Template – Used to indicate that the price assignment is a template price list. <p>Note: If a price assignment is in Active status, you can change its status to Inactive. If a price assignment is in Draft status, you cannot change its status to Proposed.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p>Note: Rate schedules controls how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to the Rate Schedule field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> Two-Dimensional 	Yes (Conditional)
	<p>Note:</p> <p>If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item.</p> <p>However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item.</p> <p>Also, you need to select the Pricing Eligibility option check box while defining a two-dimensional pricing for the price item.</p>	<p>Note: This field is required for defining a two-dimensional pricing rule.</p>
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
	<p>Note: By default, Yes is selected.</p>	
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes
	<p>Note:</p> <p>By default, the All Customers option is selected.</p> <p>This field appears when you are defining a price item pricing which you want to assign to a price list.</p>	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<p>Note: This field appears when you select the Price Item Usage as Pricing and Price Item Type as Fees while defining the price item.</p>	

- Enter the required details in the **Main** section.
- Define the deal information for the price item pricing in the **Deal Information** section.
- Define the transaction feed management information for the price item pricing in the **TFM Information** section.
- Define the characteristics for the price item pricing in the **Characteristics** section.

6. Define parameters for the price item pricing in the **Price Item and Parameter Information** section.
7. Define the division-specific cost of the price item in the **Commitments** section, if required.
8. Define the division-specific average price floor and ceil limits of the price item in the **Commitments** section, if required.
9. Define the division-specific rate negotiability floor and ceil limits of the price item in the **Commitments** section, if required.
10. Click **Save**

The pricing item pricing is defined.

Defining the Deal Information in a Price Item Pricing

Procedure

To define the deal information in a price item pricing:

1. Ensure that the **Deal Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Deal Information** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Average Price Floor and Ceil Type	Used to indicate the manner in which the average price floor and ceil limits of the price item pricing is defined for the deal. The valid values are: <ul style="list-style-type: none"> • Absolute Value Range - Used to indicate that the average price floor and ceil limits for the price item pricing is defined using absolute values. • Spread Amount - Used to indicate that the average price floor and ceil limits for the price item pricing is defined based on the spread amount. • Spread Percentage - Used to indicate that the average price floor and ceil limits for the price item pricing is defined based on the spread percentage. 	Yes (Conditional)
	Note: Incase of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage the average floor and ceil limits of the price item are derived for the deal.	Note: This field is required while defining the average price floor and ceil limits of the price item for the deal.

2. Enter the required details in the **Deal Information** section.
3. Click **Save**.

The deal information is defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or rating criteria to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

1. Ensure that the **TFM Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	Note: By default, the No option is selected.	Note: This field is required while defining the TFM information in a price item pricing.
Aggregate Transactions	Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. 	Yes (Conditional)
	Note: By default, the Yes option is selected.	Note: This field is required while defining the TFM information in a price item pricing.
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes (Conditional)
		Note: This field is required while defining the TFM information in a price item pricing.
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines 	Yes (Conditional)
	Note: By default, the Do Not Rate Transactions option is selected.	Note: This field is required while defining the TFM information in a price item pricing.

2. Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The TFM information is defined in the price item pricing.

Defining a Characteristic for a Price Item Pricing

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Note: This field is required while defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the price item pricing.

Defining a Parameter for a Price Item Pricing

Prerequisites

To define a parameter for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define a parameter for a price item pricing:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for whom you want to define a parameter.

In addition, this section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Price Item Parameter Search window appears where you can search for the required parameter.</p> <p>The search results displays only those parameters where the Price Item check box is selected.</p>	
Parameter Information	Displays the concatenated string of information about the parameter separated by a comma (,).	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a parameter from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameter is defined for the price item pricing.

Defining the Division-Specific Cost of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific cost of a price item in the price item pricing you should have:

- Price items or price item bundles associated with the division to which the user belongs

Procedure

To define the division-specific cost of a price item in the price item pricing:

- Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.

- Click the **Add** (+) icon in the **Costs** column corresponding to the division for which you want to define the cost of the price item in the price item pricing.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Cost Type	Used to indicate the type of cost incurred in the division for the price item pricing. The valid values are: <ul style="list-style-type: none"> • Additional Cost-Fixed • Additional Cost-Variable • Fixed Internal • Fixed Third Party • Variable Internal • Variable Third Party 	Yes (Conditional) Note: This field is required while defining the division-specific cost of the price item in the price item pricing.
Cost Value	Used to specify the cost amount.	Yes (Conditional) Note: This field is required while defining the division-specific cost of the price item in the price item pricing.

Note: By default, the **Pricing Currency** is considered as the currency for defining the division-specific cost of the price item in the price item pricing.

- Enter the required details in the **Costs** grid.
- If you want to define more than one division-specific cost of the price item in the price item pricing, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove the division-specific cost of the price item from the price item pricing, click the **Delete** (🗑️) icon corresponding to the cost.

- Click **Save**.

The division-specific cost of the price item in the price item pricing is defined.

Defining the Division-Specific Average Price Limits of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific average price limits of a price item in the price item pricing, you should have:

- To Do roles and currencies defined in the application
- Price items or price item bundles associated with the division to which the user belongs

Procedure

To define the division-specific average price limits of the price item in the price item pricing:

1. Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.
2. Click the **Add**  icon in the **Floor and Ceiling Type** column corresponding to the division for which you want to define the division-specific average price item pricing.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Role	Used to indicate that users with the specified To Do role can approve the average price of the price item in the price item pricing when it is within the specified floor and ceil limits.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the To Do Role field. On clicking the Search icon, the To Do Role Search window appears.</p> <p>On specifying the To Do role, the description of the To Do role appears corresponding to the To Do Role field.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Floor Value	Used to specify the floor (i.e. lower) limit of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The floor value cannot be greater than the ceil value.</p> <p>This field appears only when you select Absolute Value Range option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>

Field Name	Field Description	Mandatory (Yes or No)
Ceil Value	Used to specify the ceil (i.e. upper) limit of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The ceil value cannot be lower than the floor value.</p> <p>This field appears only when you select Absolute Value Range option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Spread Amount	Used to specify the spread amount of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note: This field appears only when you select the Spread Amount option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Spread Percentage	Used to specify the spread percentage of the To Do role for approving the average price of the price item in the price item pricing.	Yes (Conditional)
	<p>Note: This field appears only when you select the Spread Percentage option from the Average Price Floor and Ceil Type list while defining the deal information in the price item pricing.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>
Floor and Ceil Currency	Used to indicate the currency in which you want to define the average price floor and ceil limits of the price item in the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those currencies which are already defined in the system.</p> <p>The system does the currency conversion when the pricing currency is different from the floor and ceil currency.</p>	<p>Note: This field is required while defining the division-specific average price floor and ceil limits of the price item in the price item pricing.</p>

- Enter the required details in the **Floor and Ceiling Type** grid.

Note: The **Floor and Ceiling Type** grid appears only when you select an option from the **Average Price Floor and Ceil Type** field in the **Deal Information** section.

- If you want to define the average price limits for more than one To Do role in the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the average price limits of a To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do role.

5. Click **Save**.

The division-specific average price limits of the price item in the price item pricing is defined.

Defining the Division-Specific Rate Negotiability Limits of a Price item in the Price Item Pricing

Prerequisites

To define the division-specific rate negotiability limits of a price item in the price item pricing, you should have:

- Currencies defined in the application
- Price items associated with the division to which the user belongs

Procedure

To define the division-specific rate negotiability limits of a price item in the price item pricing:

1. Ensure that the **Commitments** section is expanded when you are defining, editing, or overriding a price item pricing.
2. Click the **Add** (➕) icon in the **Negotiability** column corresponding to the division for which you want to define the division-specific rate negotiability limits

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Negotiability Floor Value	Used to specify the floor (i.e. lower) limit for the rate negotiation.	Yes (Conditional)
	Note: The floor value cannot be greater than the ceil value.	Note: This field is required while defining the division-specific rate negotiability limits of the price item in the price item pricing.
Negotiability Ceil Value	Used to specify the ceil (i.e. upper) limit for the rate negotiation.	Yes (Conditional)
	Note: The ceil value cannot be lower than the floor value.	Note: This field is required while defining the division-specific rate negotiability limits of the price item in the price item pricing.

Note: By default, the **Pricing Currency** is considered as the currency for defining the division-specific rate negotiability limits of the price item in the price item pricing.

3. Enter the required details in the **Negotiability** grid.
4. Click **Save**.

The division-specific rate negotiability limits of the price item in the price item pricing is defined.

Enter the required details in the Price Item Pricing screen and click Save. 4. The Price Item Pricing screen appears.

If you want to define...	Then...
Price component of a price item pricing assigned to a price list	<ol style="list-style-type: none"> 1. . Search for the price list in the Price List screen. 2. In the Search Results section, click the Broadcast (📡) icon corresponding to the price list whose price item pricing details you want to view. The Price List Price Items zone appears. 3. Click the link in the Pricing Information column corresponding to the price item whose price item pricing details you want to define. 4. The Price Item Pricing screen appears. <p>Tip: Alternatively, you can click on the Broadcast (📡) icon corresponding to the price item whose pricing details you want to view. The Price Assignment Tree zone appears in the Price List screen.</p>

2. Ensure that the **Price Assignment Tree** zone is expanded when you are defining a price component for the rate component.
3. Click the **Add** (+) icon corresponding to the rate component whose price component you want to define.

Note: You can define a price component of a rate component only when the price item pricing is in the **Draft**, **Proposed**, or **Template** status.

The **Price Component** zone appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Component Information	Displays the concatenated string of information about the rate component for which you want to define the price component.	Not applicable
Display Sequence	Used to specify the sequence of the price component whose rate is used for calculating the pricing of the price item.	Yes (Conditional) Note: This field is required while defining the price component of a rate component.
Show Price Component	Used to indicate whether the price component is displayed in the bill. Note: If you select the check box, the price component will be displayed in the bill.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the price component.	Yes (Conditional) Note: This field is required while defining the price component of a rate component.
Rate	Used to specify the rate for the price component.	Yes (Conditional) Note: This field is required while defining the price component of a rate component.

In addition, this zone contains the following buttons:

Button Name	Button Description
Show Price Component Tier	Used to define, edit, or delete the tiering criteria of the price component. Note: The Show Price Component Tier button appears only when Tiering Type of the rate component is STEP or Threshold .
Show Price Component Eligibility	Used to define, edit, or delete the pricing eligibility criteria of the price component. Note: The Show Price Component Eligibility button appears only when the Pricing Eligibility check box is selected in the Price Item Pricing screen.

4. Enter the required details in the **Price Component** zone.
5. Define the tiering criteria for the price component, if required.
6. Define the pricing eligibility criteria for the price component, if required.
7. Click **Save**.

The price component is defined for the rate component.

Defining a Tiering Criteria for a Price Component

Prerequisites

To define a tiering criteria for a price component, you should have:

- Tiering criterion defined in the application
- Tiering setup for the rate components defined in the application.

Procedure

To define a tiering criteria for a price component:

1. Ensure that the **Price Assignment Tree** zone is expanded in the **Price Item Pricing** screen.
2. Click the **Add (+)** icon corresponding to the rate component whose price component you want to define.
The **Price Component** zone appears.
3. Click the **Show Price Component Tier** button.

Note:

The **Show Price Component Tier** button appears only when **Tiering Type** of the rate component is **STEP** or **Threshold**.

The **Tiering Criteria** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Display Sequence	Used to specify the sequence in which the tiering criteria of the price component should be considered for the price item pricing.	Yes (Conditional)
		Note: This field is required while defining the tiering criteria of a price component.

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to indicate the tiering criterion which is used in the tiering range.	Yes (Conditional)
		Note: This field is required while defining the tiering criteria of a price component.
Lower Limit	Used to specify the lower limit of the pricing range.	Yes (Conditional)
	Note: The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.	Note: This field is required while defining the tiering criteria of a price component.
Upper Limit	Used to specify the upper limit of the pricing range.	Yes (Conditional)
	Note: The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range. When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.	Note: This field is required while defining the tiering criteria of a price component.
Price Item	Used to indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.	Yes (Conditional)
	Note: The Search  icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search screen appears where you can search for the required price item.	Note: This field is required while defining the tiering criteria of a price component.

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters based on which the price item or price item bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameter (where the Pricing flag is set to Yes, if required. However, you can only select parameter associated with the price item or price item bundle which is used for defining the tiering criteria.</p> <p>Note:</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Edit (✎) appears corresponding to this field. On clicking the Edit icon, the Tier Parameters section appears where you can screen appears where you can specify the required parameters.</p>	No

- Enter the required details in the **Tiering Criteria** section.
- If you want to define more than one tiering criteria for the price component, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a tiering criteria from the price component, click the **Delete** (🗑) icon corresponding to the tiering criterion.

- Click **Save**.

The tiering criteria is defined for the price component.

Note: You can define a tiering criteria for a price component only when the price item pricing is in the **Draft**, **Proposed**, or **Template** status.

Defining a Pricing Eligibility Criteria for a Price Component

Procedure

To define a pricing eligibility criteria for a price component:

1. Ensure that the **Price Assignment Tree** zone is expanded in the **Price Item Pricing** screen..
2. Click the **Add (+)** icon corresponding to the rate component whose price component you want to define.
The **Price Component** zone appears.
3. Click the **Show Price Component Eligibility** button.

Note:

The **Show Pricing Component Eligibility** button appears only when **Pricing Eligibility** check box is selected in the **Price Item Pricing** screen.

The **Pricing Eligibility Criteria** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Display Sequence	Used to specify the order in which the pricing eligibility criteria is executed in the rule.	Yes (Conditional)
		Note: This field is required while defining the pricing eligibility criteria of a price component.
Parameter	Used to specify the left hand side parameter which you want to use along with the price item for price determination.	Yes (Conditional)
	<p>Note:</p> <p>The Search (Q) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears where you can search for the required parameter.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (ERROR).</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p>	<p>Note: This field is required while defining the pricing eligibility criteria of a price component.</p>

Field Name	Field Description	Mandatory (Yes or No)
Operator	<p>Used to indicate the relational operator to define the relation between the parameter name and the parameter value. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • Between • In • Like • Not In 	<p>Yes (Conditional)</p> <p>Note: This field is required while defining the pricing eligibility criteria of a price component.</p>
Parameter Value Type	<p>Used to indicate whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:</p> <ul style="list-style-type: none"> • Parameter - Used to indicate that the parameter (on the left hand side) is compared against another parameter (on the right hand side). • Value - Used to indicate that the parameter (on the left hand side) is compared against a parameter value. 	<p>Yes (Conditional)</p> <p>Note: This field is required while defining the pricing eligibility criteria of a price component.</p>

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	<p>Used to specify the parameter value against which you want to compare the parameter (on the left hand side). The valid values are:</p> <p>Note:</p> <p>This field is enabled only when you specify the parameter in the Parameter field.</p> <p>The Search (🔍) icon appears corresponding to the Parameter Value field when the Parameter option is selected from Parameter Value Type field. On clicking the Search icon, the Parameter Search window appears.</p> <p>When the Parameter option is selected from the Parameter Value Type field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (ERROR).</p> <p>When the Value option is selected for the Parameter Value Type field then you can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while defining the pricing eligibility criteria of a price component.</p>
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number is executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field is executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field is executed. 	<p>Yes (Conditional)</p> <p>Note: This field is required while defining the pricing eligibility criteria of a price component.</p>

Field Name	Field Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number is executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field is executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional) Note: This field is required while defining the pricing eligibility criteria of a price component.
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number is executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field is executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field is executed. 	Yes (Conditional) Note: This field is required while defining the pricing eligibility criteria of a price component.

4. Enter the required details in the **Pricing Eligibility Criteria** section.
5. If you want to define more than one pricing eligibility criteria for the price component, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a pricing eligibility criteria from the price component, click the **Delete** (🗑️) icon corresponding to the parameter.

6. Click **Save**.

The pricing eligibility criteria is defined for the price component.

Note: You can define a pricing eligibility criteria for a price component only when the price item pricing is in the **Draft**, **Proposed**, or **Template** status.

The **Tiering Criteria** section appears. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria is to be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Lower Limit	<p>Used to specify the lower limit of the pricing range.</p> <p>Note: The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.</p>	Yes
Upper Limit	<p>Used to specify the upper limit of the pricing range.</p> <p>Note: The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range. When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.</p>	Yes
Price Item	<p>Used to Indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you defined the pricing appears in this field. You can specify any other price item or bundle code, if required.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search screen appears.</p>	Yes
Price Parameters	<p>Item</p> <p>Used to specify the parameters based on which price item or bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the Pricing flag is set to Yes), if required. However, note that you can only select parameters associated with the price item or bundle which is used for defining the tiering criteria.</p> <p>Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True. The Edit (✎) appears corresponding to this field. On clicking the Edit icon, the Parameters Search screen appears.</p>	No

5. Modify the tiering criteria for a price component.
6. Click **Save**.

The tiering criteria is edited for a price component.

Overriding a Price Item Pricing

Prerequisites

To override a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing:

1. Do either of the following:

If you want to...	Then...
Override price item pricing assigned to the customer either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> 1. Access the Pricing (Person) screen. 2. In the Effective Price Assignment zone, click the Override  icon in the Override column corresponding to the price item pricing that you want to override.
Override price item pricing assigned to the account either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> 1. Access the Pricing (Account) screen. 2. In the Effective Price Assignment zone, click the Override  icon in the Override column corresponding to the price item pricing that you want to override.

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

Note:

If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.

While overriding a price item pricing, you can not only edit the existing tiering combination details, but also add additional tiering combinations until the maximum tiering combinations limit is met.

3. Modify the price assignment characteristics, if required.
4. Click **Save**.

The price item pricing is overridden.

Editing the Two-Dimensional Pricing

Procedure

To edit a two-dimensional pricing:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Search for the price item pricing in the **Search Price Item or Price Item Pricing** screen.
5. Click the **Assign** icon () corresponding to the **Price Item Information**.
The **Price Item Pricing** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the price item pricing is effective.	Yes
End Date	Displays the date till when the price item pricing is effective.	No
Rate Schedule	Indicates the rate schedule used while defining price item pricing.	Yes
	Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the rate schedule.	
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Pricing Currency	Indicates the currency in which the price item pricing is defined.	Yes
	Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the currency.	
Pricing Status	Indicates the status of the price assignment. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Inactive • Proposed • Rejected • Template 	Yes
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	Yes
Pricing Eligibility	Displays the pricing eligibility criteria for price item pricing.	Yes
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes

6. Click **Save**.

The **Price Item Pricing** screen appears.

- Click the **Edit** link in the top-right of the **Two-Dimensional Pricing** zone.

The **Two-Dimensional Pricing** screen appears. It contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Used to search by the various criterion.
Threshold Parameter	Used to search by the threshold parameter.
Tiering Range	Displays the tiering range of the pricing.

- Modify the details in the **Two-Dimensional Pricing** screen, if required.
- If you want to add more than one threshold parameter, click the **Add (+)** icon and then enter the threshold parameter name and its value.

However, if you want to remove a threshold parameter, click the **Delete (🗑)** icon corresponding to the parameter.

- If you want to add more than one tiering range, click the **Add (+)** icon and then enter the specific range.

However, if you want to remove a tiering range, click the **Delete (🗑)** icon corresponding to the range that you want to remove.

- Click **Save**.

The changes made to the two-dimensional pricing are saved.

Related Topics

For more information on...	See...
How to search for a price list	Searching for a Price List on page 469

Pricing Simulation

The **Pricing Simulation** screen allows you to:

- View pricing simulation details for account or price list
- View effective pricing information
- Search simulation details of account or price list

This screen consists of the following zones:

- [Search Pricing](#) on page 720

Through the **Pricing Simulation** screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 421
- [Simulation - Effective Pricing Information](#) on page 725

Search Pricing

The **Search Pricing** zone allows you to search pricing for an account.

In case of bundles, the order in which the price item pricing is listed in this zone is based on the following condition:

- If the system finds pricing for price items that belong to a bundle before finding pricing for the bundle, then the system lists the pricing for price items that belong to the bundle, and not the pricing for the bundle. For example,

let say, B0001 is a bundle, and contains C0001 and C0002 price items. If the system finds pricing for B0001, it validates whether the pricing for C0001 and C0002 has already been found. If yes, then the system lists the pricing for C0001 and C0002. If the system does not find pricing for C0001 and C0002 before finding pricing for B0001, it lists the pricing for B0001.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following two options:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for pricing using price list or account or person details. The valid values are: <ul style="list-style-type: none"> • Price List • Account /Person 	Yes
	Note: By default, Price List option is selected.	
Price List ID	Used to indicate Price List ID for which simulation must be created.	Yes
	Note: This field appears when the Price List ID option is selected for the Search By field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search screen appears.	
Account ID	Used to specify the account for which simulation must be created.	Yes
	Note: This field appears when the Account option is selected for the Search By field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to specify the person for which simulation must be created. This field gets auto populated once the Account ID value is defined.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search screen appears.	
Simulation Date	Used to search price simulations which are effective from a particular date onwards.	Yes
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
Search Type	Used to indicate whether you want to search the price list using the following values: <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	Note: By default, Exact Match option is selected.	
Show Default and Global Pricing	Used to indicate whether the product is assigned to a default and global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item	Used to specify the price items for pricing simulation.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search screen appears.	
Description	Used to search price assignments of a price item having a particular description.	No
View Type	Used to indicate whether you want to view summary or tiering details of price components. The valid values are: <ul style="list-style-type: none"> • Detail — Used when you want to view the details of price component with pricing eligibility and tiering criteria. • Summary — Used when you want to view the summary of effective price component. 	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.	No
	<p>Note:</p> <p>This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search screen appears.</p>	
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field when the value type for the Parameter is Reference or Predefined.</p> <p>If the value type of the Parameter is Reference then on clicking the Search icon, the Reference Parameter Value Search screen appears.</p> <p>If the value type of the Parameter is Predefined then on clicking the Search icon, the Predefined Parameter Value Search screen appears.</p>	

To add more than one **Parameter**, click the **Add** (+) icon and to delete the parameters click the **Delete** (🗑️) icon corresponding to the **Parameter** field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Note: If default Price List ID is added to the Price List Value and if **Yes** is selected for **Show Default and Global Pricing**, also if Price List is added to the product for selected account then **Search Results** section will display price list assignments for the value and product will be displayed along with the default price list assignments.

Column Name	Column Description
Price Item	Displays the price item code.
	Note: It has a link. On clicking the link, the View Price Item screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Variance Parameters	Indicates the variance parameter which is used for defining the price item pricing.
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .

Column Name	Column Description
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values used for defining the price item pricing.
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	Note: The description appears when the pricing assignment type is Account Price List, or Account Inherited Price List.
Rate Description	Displays the description of the tiering setup of the rate component.
Simulate	On clicking the Simulate () icon, the Simulation — Effective Pricing Information screen appears where you can add the Price Item SQIs and Pricing Eligibility Parameters details that can be passed for pricing simulation.
	Note: This column appears when the price item is Rate and Fees .
Effective Start Date	Displays the date from when the pricing is effective.
Effective End Date	Displays the date till when the pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

Note:

The number of records that can be displayed in the **Search Results** section of the **Search Pricing** zone is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 4435.

Simulation - Effective Pricing Information

The **Simulation — Effective Pricing Information** screen contains the following sections:

- **SQIs** — This section contains the following fields:

Field Name	Field Description
SQI	<p>Used to indicate the SQI that you want to associate with the price item.</p> <p>Note:</p> <p>If you want to define more than one price item SQI, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI, click the Delete (🗑) icon corresponding to this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the search icon, the Search for Service Quantity Identifier screen appears.</p> <p>This field is required when you want to view the effective pricing simulation.</p>
Value	<p>Used to indicate the SQI value that you want to associate with the price item.</p> <p>Note:</p> <p>If you want to define more than one value, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI value, click the Delete (🗑) icon corresponding to this field.</p>

- **Pricing Eligibility Parameters** — This section contains the following fields:

Field Name	Field Description
Parameter	<p>Used to specify multiple parameter codes based on which you want to define the pricing</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to true.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the search icon, the Parameter Search screen appears.</p> <p>If you want to define more than one parameter, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a parameter, click the Delete (🗑) icon corresponding to this field.</p>

Field Name	Field Description
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field appears when the value type for the Parameter is defined as Reference or Predefined. If the value type of the Parameter is Reference, then the Reference Parameter Value Search screen appears and if the value type of the Parameter is Predefined, then the Predefined Parameter Value Search screen appears.</p> <p>If you want to define more than one value, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a parameter value, click the Delete (🗑️) icon corresponding to this field.</p>

After providing the required information, when you click on **Simulate** button, the **Effective Pricing Information** zone appears where you can view the effective pricing simulation. This zone contains the following sections:

- **Rate Information** — This section contains the following fields:

Field Name	Field Description
Applicable Rate	Displays the rate applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

Note: This section appears when **Price Item Type** is **Rate** .

- **Fee Information** — This section contains the following fields:

Field Name	Field Description
Applicable Fee	Displays the fee applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

Note: This section appears when **Price Item Type** is **Fees** .

- **Price Item and Parameter Information** — This section contains the following fields:

Field Name	Field Description
Price Item	Displays the price item for which pricing is defined.
Description	Displays the description of the price item

The Parameter Information appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

This segment contains the following fields:

Field Name	Field Description
Parameter	Specifies multiple parameter codes associated with the price items based on which pricing is defined.

Field Name	Field Description
Parameter Information	Displays the parameter information with concatenated comma separated values.
Parameter Value	Displays the value of the parameter.

- **TFM Information** — This section contains the following fields:

Field Name	Field Description
Ignore Transaction	Displays whether the transactions mapped to the price item is considered for billing.
Aggregation Schedule	Displays the aggregation cycle.
Aggregation Transaction	Specifies whether the transactions mapped to the price item are aggregated for billing.
Rating Criteria	Specifies how and when you rate the transaction legs mapped to the price item.

Note: This section appears when the **Price Item** is available for **Pricing and Billing**.

- **Pricing Information** — This section contains the following fields.

Field Name	Field Description
Effective Start Date	Displays the date from when the price item pricing is effective.
Pricing Currency	Specifies the currency in which you define the price item pricing.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Status	Displays the status of price assignment.
Variance Parameter	Specifies the variance based on which price item pricing is defined. Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Rate Schedule	Specifies the rate schedule used for defining price item pricing.
Price Assignment Type	Displays the type of price assignment.
Print Zero	Specifies whether zero pricing should be displayed in the bill.
Apply To	Displays whether the price item pricing is applied to all customers or only to the new customers.
Pricing Frequency	Displays the frequency for pricing where Price Item Type is fees.
Advance Pricing	Displays only if Price Item is defined as Pricing Only , Price Item Type is defined as Fees and Price Assignment Type is defined as Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No

Pricing Eligibility Criteria and **Tiering Criteria** for each eligibility or tier range are displayed in following fields:

Field Name	Field Description
Rate Component Sequence	Displays the sequence number of the rate component.
Tiering Type	Displays the tiering type of the rate component.
Price Component Sequence	Specifies the sequence of price component whose rate is used for calculation.
Price Component Description	Displays the description of the rate component.
Rate	Specifies the price for the price item.
Contributing Factor	Displays the availability of contributing factor.
Eligibility/Tier Details	On clicking the Add (+) icon, expandable details of Tiering Criteria and Pricing Eligibility Criteria are displayed.

When you click the **Add (+)** icon, if the price component is scheduled for Flat Rate then, only **Pricing Eligibility Criteria** segment appears. If the price component is scheduled for Step or Threshold then both the segments, **Tiering Criteria** and **Pricing Eligibility Criteria** appears.

Tiering Criteria segment contains the following fields:

Field Name	Field Description
Tiering Criteria	Displays the tiering criteria.
Price Item	Specifies whether the price item or bundle's total usage is considered for determining the rate.
Variance Parameter	Specifies the variance based on which price item or bundle's total usage is considered for determining the rate. Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Specifies the parameters based on which price item or bundle's total usage is considered for determining the rate. Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
From	Specifies the lower limit of the tiering range.
To	Specify the upper limit of the tiering range.

Pricing Eligibility Criteria segment contains the following fields:

Field Name	Field Description
Sequence Number	Specifies the order in which the criteria should be executed in the rule.

Field Name	Field Description
Parameter	Specifies the left hand side parameter which you want to use along with the price item for price determination. Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Operator	Specifies the relational operator to define the relation between the left hand side and right hand side parameters.
Parameter Value Type	Displays the type of pricing eligibility.
Parameter	Specifies the right hand side parameter which you want to use along with the price item for price determination. Note: This field appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Parameter Value	Specifies the parameter value.
Is True	Displays what should happen when the condition is true (satisfied).
Is False	Displays what should happen when the condition is false (not satisfied).
Is Sufficient	Displays what should happen when the data is insufficient.

This section contains the following links:

Link Name	Link Description
Expand All	Used to define all the Tiering Criteria and Pricing Eligibility Criteria segments.
Collapse All	Used to un-define the displayed Tiering Criteria and Pricing Eligibility Criteria segments.
Expand Only Contributing Factors	Used to define only those Tiering Criteria and Pricing Eligibility Criteria segments with contributing factors.

Searching Pricing Simulation for Account or Price List

Prerequisites

To search pricing simulation for an account or price list, you should have:

- Price Item, Account or Person details defined in the application

Procedure

To search pricing simulation for an account or price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. In the **Search Pricing** zone, select **Account** or **Price List** depending on what you want search pricing simulation.
4. Enter the additional search criteria, if required.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pricing details that meet the search criteria appears in the **Search Results** section.

Viewing Pricing Simulation

Prerequisites

To view pricing simulation details of an account, you should have:

- Price items assigned to the account

Procedure

To view pricing simulation of an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Exporting Effective Price Simulation**Procedure**

To export effective price simulation for an account in the CSV format:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Export to Excel** link in the **Search Pricing** zone.
The **File Download** dialog box appears.
5. Click **Save**.
The **Save As** dialog box appears.
6. Browse to the location where you want to save the file.
7. Enter the file name in the respective field, and click **Save**.
The search results are exported in CSV format.
8. Open the CSV file in Microsoft Excel.

It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
Description	Displays the description of the price item.
Variance	Indicates the variance parameter which is used for defining the price item pricing.
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .

Column Name	Column Description
Price Item Parameters	Indicates the parameters which are used for defining the price item pricing.
	Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	Note: The description appears when the pricing assignment type is Account Price List, Customer Price List, or Parent Customer Price List.
Rate	Displays the price of the price item. It also indicates whether the price is a Flat, Threshold, or Step price. The price can be agreed pricing, price list pricing, or pricing inherited from the price list hierarchy. If the price is applicable only to new customers, an asterisk (*) symbol appears corresponding to the price.
Price Component Description	Displays the description of the price component whose rate is used for calculation.
	Note: The data appears in this column only when the rate corresponding to the price component in the price item pricing is used for calculation.
Effective Start Date	Displays the date from when the pricing assignment is effective.
Effective End Date	Displays the date till when the pricing assignment is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price assignment is applicable to all customers or only to the new customers.
Price Assignment ID	Displays the ID that is generated automatically when the price assignment is done.
Parent Level	Displays the numerical level of the parent in the hierarchy from whom the pricing is inherited.
Price List ID	Displays the price list ID from where the pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

Column Name	Column Description
Parent Pricelist Level	Indicates the parent level when pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item should be considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregate Transaction	Indicates whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the aggregation cycle.
Tiering Criterion	Indicates the tiering criterion.
Tiering Price Item	Indicates whether the price item is billed individually or at the bundle level.

Eligible Price List

The **Eligible Price List** screen allows you to:

- View eligible price list details for account or person
- View pricing simulation details of account or person

This screen consists of the following zones:

- [Search Eligible Price Lists](#) on page 733
- [Pricing Simulation](#) on page 720

Search Eligible Price Lists

The **Search Eligible Price List** zone allows you to search eligible price list for account and person. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible Date	Used to specify the date on which the eligibility check need to be searched.	Yes
Person ID	Used to specify the person for which eligible price list to be searched. Note: The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Person Search screen appears.	No
Account ID	Used to specify the account for which eligible price list to be searched. Note: The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Account Search screen appears.	No
Status	Used to search eligible price list based on status.	Yes
Division	Used to search eligible price list based on division.	Yes
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing. Note: This field appears only when the MultiPrice Parameter option type of the MultiParameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True. The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Parameter Search screen appears.	No
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value. Note: The Search (🔍) icon appears corresponding to this field when the value type for the Parameter is defined as Reference or Predefined . If the value type of the Parameter is Reference then on clicking the search icon, the Reference Parameter Value Search screen appears else if the value type of the Parameter is Predefined then on clicking the search icon, the Predefined Parameter Value Search screen appears.	No

Note: To add more than one **Parameter**, click the add (+) icon and to delete the parameters click the delete (🗑️) icon corresponding to this field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID.
	Note: It has a link. On clicking the link, the Price List Price Item Assignments screen appears where you can view the details of the respective price list.
Price List Description	Displays the price list description.
	Note: It has a link. On clicking the link, the Price List Price Item Assignments screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Proposed
Availability Start Date	Used to search price lists which are available for assignment from a particular date.
Availability End Date	Used to search price lists which are available for assignment till a particular date.
Effective Start Date	Used to search price lists which are effective from a particular date.
Effective End Date	Used to search price lists which are effective till a particular date.
Simulate	On clicking the Simulate  icon, the Pricing Simulation Screen appears with the price list ID, account and person fields prepopulated.

Rate Definition

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard

flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 736
- [Create/Edit Rate Definition](#) on page 737

Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component. Note: Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> • Add — Allows you to define the tiering setup of the rate component • Edit — Allows you to edit the tiering setup of the rate component
Rate Component Map ID	Displays the rate component map ID. Note: This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast** () icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

Create/Edit Rate Definition

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes
	Note: This field is non-editable when you edit the tiering setup of the rate component.	
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component.	Yes
	Note: This field is non-editable when you: <ul style="list-style-type: none"> • Select the tiering type as FLAT or STEP • Edit the tiering setup of the rate component By default, 0 appears in this field when you select the tiering type as FLAT , and 1 appears when you select the tiering type as STEP .	
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter Price Per Transaction in the Rate Component Map Description field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	Note: This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.
		Note: You can delete the tiering setup when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

Defining Tiering Setup of a Rate Component

Prerequisites

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

Procedure

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Rates** and then click **Rate Definition**.
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast** () icon corresponding to the rate component whose tiering setup you want to define.
The **Create/Edit Rate Definition** zone appears.
6. Select the tiering type from the list.
7. Enter the maximum number of tiering ranges supported by the rate component.

Note:

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**. By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

- Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

Editing Tiering Setup of a Rate Component

Procedure

To edit tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Rates** and then click **Rate Definition**.
The **Rate Definition** screen appears.
- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.
The rate components of the rate schedule appear as the search results.
- Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to edit.
The **Create/Edit Rate Definition** zone appears.
- Modify the details of the tiering setup.

Note: You can only modify the rate component map description.

- Click **Save**.

The changes made to the tiering setup are saved.

Deleting Tiering Setup of a Rate Component

Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Rates** and then click **Rate Definition**.

The **Rate Definition** screen appears.

3. Select the rate schedule in the **Rate Schedule Components** zone.

4. Click **Search**.

The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to delete.

The **Create/Edit Rate Definition** zone appears.

6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup when the rate component is not yet used for any product pricing.

Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 741
- [Edit Tiering Criterion](#) on page 741
- [Create Tiering Criterion](#) on page 742

Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

On clicking the **Broadcast** (📡) icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

Related Topics

Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion. Note: During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

Creating a Tiering Criterion

Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.

The tiering criterion is created.

Variance Parameter

Oracle Revenue Management and Billing allows you to define pricing for a product based on the variance parameter. This helps you to maintain variance based pricing for a product. For example, you can define different product pricing for each country or currency, if required. Before you define product pricing based on a variance parameter, you need to define the variance parameter. The **Variance Parameter** screen allows you to define, edit, and delete a variance parameter. It also allows you to filter the variance parameters using a search criteria.

Filtering the Variance Parameters

Procedure

To filter the variance parameters:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	No

- **Search Results** — On clicking the **Search** button corresponding to the **Variance Parameter** field, the search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Variance Parameter	Displays the variance parameter.
Description	Displays the description of the variance parameter.

3. Enter the search criteria in the **Variance Parameter** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Search** button corresponding to the **Variance Parameter** field.

The search results are filtered based on the specified criteria.

Defining a Variance Parameter

Procedure

To define a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	Yes
Description	Used to specify the description for the variance parameter.	Yes

3. Enter the required details.
4. If you want to define more than one variance parameter, click the **Add (+)** icon and then repeat step 4.

Note: However, if you want to remove a variance parameter, click the **Delete** (🗑️) icon corresponding to the variance parameter that you want to delete.

- Click **Save**.

The variance parameter is defined.

Editing a Variance Parameter

Procedure

To edit a variance parameter:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears.

- If required, you can filter the variance parameters in the **Variance Parameter** screen.

A list of variance parameters that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Displays the variance parameter.	Not applicable
Description	Used to specify the description for the variance parameter.	Yes

- Modify the required details.
- Click **Save**.

The changes made to the variance parameter are saved.

Deleting a Variance Parameter

Procedure

To delete a variance parameter:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears.

- If required, you can filter the variance parameters in the **Variance Parameter** screen.

A list of variance parameters that meet the search criteria appears in the **Search Results** section.

- Click the **Delete** (🗑) icon corresponding to the variance parameter that you want to delete.
- Click **Save**.

The variance parameter is deleted.

Note: You can only delete a variance parameter which is not yet used.

Person to Person Relationship Type Sequence

Oracle Revenue Management and Billing provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1_PER_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration and accordingly search effective price item pricing at the parent customer level.

The **Person to Person Relationship Type Sequence** screen allows you to define, edit, and delete person to person relationship type sequence of:

- a division
- a division, price item, and price item parameters combination

This screen consists of the following zones:

- [Search Person Relationship Type Sequence for Price Item](#) on page 747
- [Search Person Relationship Type Sequence for Division](#) on page 748

Search Person Relationship Type Sequence for Price Item

The **Search Person Relationship Type Sequence for Price Item** zone allows you to search person to person relationship type sequence defined for a division, price item, and price item parameters combination. You can also define, edit, and delete person to person relationship type sequence of a division, price item, and price item parameters combination.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item code.	No
Price Item Description	Used to specify the description of the price item.	No
Division	Used to specify the division.	No
	Note: You can only view those divisions to which you have access in the Division list.	

Note: You must specify at least one search criterion while searching person to person relationship type sequence defined for a division, price item, and price item parameters combination.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
	Note: It has a link. On clicking the link, the View Price Item screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
View	On clicking the View () icon, the Person Relationship Type Sequence for Division and Price Item screen appears where you can view person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Edit	On clicking the Edit () icon, the Person Relationship Type Sequence for Division and Price Item screen appears where you can edit person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Delete	On clicking the Delete () icon, you can delete person to person relationship type sequence defined for the division, price item, and price item parameters combination.

You can define person to person relationship type sequence for a division, price item, and price item parameters combination by clicking the **Add** link in the upper right corner of this zone.

Search Person Relationship Type Sequence for Division

The **Search Person Relationship Type Sequence for Division** zone allows you to search person to person relationship type sequence defined for a division. You can also define, edit, and delete person to person relationship type sequence of a division.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division. Note: You can only view those divisions to which you have access in the Division list.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division for which person to person relationship type sequence is defined.
Description	Displays the description of the division.
View	On clicking the View () icon, the Person Relationship Type Sequence for Division screen appears where you can view person to person relationship type sequence of the division.
Edit	On clicking the Edit () icon, the Person Relationship Type Sequence for Division screen appears where you can edit person to person relationship type sequence of the division.
Delete	On clicking the Delete () icon, you can delete the person to person relationship type sequence of the division.

You can define person to person relationship type sequence for a division by clicking the **Add** link in the upper right corner of this zone.

Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

Prerequisites

To search person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application

Procedure

To search person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.
The **Person to Person Relationship Type Sequence** screen appears.
3. Enter the search criteria in the **Search Person Relationship Type Sequence for Price Item** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually whenever required.

4. Click **Search**.

A list of division, price item, and price item parameters combinations that meet the search criteria and for which person to person relationship type sequence is defined appears in the **Search Results** section.

Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

Prerequisites

To define person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application
- Price items associated with the division to which the user belongs
- Parameters associated with the price item
- Person relationship types defined in the application

Procedure

To define person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Price Item** zone.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define price item and price item parameters specific person to person relationship type sequence.	Yes
Price Item	Used to specify the price item code. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search screen appears.	Yes
Price Item Parameters	Used to specify the price item parameters. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameters Search screen appears.	No

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.

Note: You can search for a price item and price item parameters by clicking the **Search** (🔍) icon corresponding to the respective field.

5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑️) icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division, price item, and price item parameters combination.

Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

Prerequisites

To edit person to person relationship type sequence of a division, price item, and price item parameters combination, you should have:

- Person relationship types defined in the application

Procedure

To edit person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.

- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.	Not applicable
Price Item	Displays the price item code.	Not applicable
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).	Not applicable

In addition, this screen contains the following section:

- Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑) icon corresponding to the relationship type.

- Click **Save**.

The changes made to the person to person relationship type sequence are saved.

Defining Relationship Type Sequence for a Division

Prerequisites

To define person to person relationship type sequence for a division, you should have:

- Divisions defined in the application

Procedure

To define person to person relationship type sequence for a division:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Division** zone.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define person to person relationship type sequence.	Yes

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.
5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add (+)** icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete (🗑)** icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division.

Editing Relationship Type Sequence of a Division

Procedure

To edit person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the division whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which person to person relationship type sequence is defined.	Not applicable

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

3. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑) icon corresponding to the relationship type.

4. Click **Save**.

The changes made to the person to person relationship type sequence are saved.

Deleting Relationship Type Sequence of a Division

Procedure

To delete person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the division whose person to person relationship type sequence you want to delete.
A message appears confirming whether you want to delete the person to person relationship type sequence.
3. Click **OK**.

The person to person relationship type sequence of the division is deleted.

Viewing Relationship Type Sequence of a Division

Procedure

To view person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **View** column corresponding to the division whose person to person relationship type sequence you want to view.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description
Division	Indicates the division for which person to person relationship type sequence is defined.

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to view person to person relationship type sequence defined for the division. It contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the sequence in which relationship type will be considered while searching for effective price item pricing at the parent customer level.
Relationship Type	Indicates the person to person relationship type.

3. View the person to person relationship type sequence defined for the division in the **Person Relationship Type Sequence for Division** screen.

Division

Topics:

- [Division](#)
- [Division Group](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

Division

The **Division** screen allows you to define, edit, and delete a division. It consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details of a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the Division list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in a division.	No
	Note: Once the price item is created, you need to associate it with a division.	
Price Lists	Used to define which price lists are available to persons or accounts in a division.	No
	Note: Once the price list is created, you need to associate it with a division. You can associate a price list with a division when all price items in the price list are already associated with the division.	
Languages	Used to limit the languages that you can select for a person's bills and correspondence in a division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in a division.	No
	Note: Invoice currency is a currency in which the accounts in the division can be billed.	
Person Identifier Types	Used to limit the person identifier types that you can select for persons in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the Price Assignment Search algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the Algorithm screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> • AGREED_PRICELIST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 961 1114 1104" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> • AGREED_FIRST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 1394 1114 1537" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define the characteristics for a division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in a division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in a division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in a division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with the division.	No

Division - Main

The **Main** tab displays the basic information about the division. It contains the following fields:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.
Description	Displays the description of the division.
Work Calendar	Indicates the work calendar which is associated with the division.

Field Name	Field Description
Status	Indicates the status of the division. The valid values are: <ul style="list-style-type: none"> Active Pending Retired
Bill Format	Indicates the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> Detailed Summary
Bill Route Type	Indicates how the bills must be sent to the main customer of the accounts which belong to the division.
Base Currency	Indicates the currency in which the GL entries should be created for the accounts which belong to the division.
Time Zone	Indicates the time zones in which the division is operational.
Eligible for Accrual	Indicates whether accrual should be calculated for the accounts which belong to the division.
Accrual Cycle	Indicates the accrual cycle of the accounts which belong to the division.
Direct Credit Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the direct credit mode.
A/P Request Fund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the A/P request mode.
Immediate Refund	Used to indicate whether you want to process immediate refund for the accounts belonging to the division. Note: This field is enabled when the Direct Credit Refund or A/P Request Refund option is selected.
Comments	Displays additional details about the division.
Business Object	Indicates the business object using which the division is created in the system.

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description
To Do Type	Indicates the To Do type for which division-specific To Do role is defined.
To Do Role	Indicates the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.

Division - Access Groups

The **Access Groups** tab lists the access groups which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Access Group	Indicates the access group which is associated with the division.
Description	Displays the description of the access group.

Related Topics

Division - Price Items

The **Price Items** tab lists the price items which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price Item	Indicates the price item which is associated with the division.
Description	Displays the description of the price item.
Accrual Type Criteria	Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual • Historical • Not Applicable

Division - Price Lists

The **Price Lists** tab lists the price lists which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price List ID	Indicates the price list.
Description	Displays the description of the price list.

Related Topics

Division - Invoice Currencies

The **Invoice Currencies** tab lists the currencies which you can use for generating the invoice of the accounts in the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Currency	Indicates the currency.
Rounding Type	Indicates the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> • Down • Nearest • Up

Related Topics

Division - Algorithms

The **Algorithms** tab lists the algorithms which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Division Algorithm Entity	Indicates the algorithm entity to which you want to attach the algorithm.
Sequence Number	Displays the order in which the algorithms with the same entity should be executed.
Algorithm	Indicates the algorithm.
Description	Displays the description of the algorithm.

Related Topics

Division - Characteristics

The **Characteristics** tab lists the characteristics which are defined for the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Indicates the value for the characteristic type.

Related Topics

Division - Bill Messages

The **Bill Messages** tab lists the bill messages which are valid for the accounts in the division for a specified duration. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Start Date	Indicates the date from when you want the bill message to appear on the bill.
End Date	Indicates the date till when you want the bill message to appear on the bill.
Bill Message	Indicates the bill message that is valid for the accounts in the division.
Description	Displays the description of the bill message.

Related Topics

Searching for a Division

Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.

The **Division Search** window appears. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search for a particular division.	No
Description	Used to search division with a particular name.	No

Note: You must specify at least one search criterion while searching for a division.

- **Search Results** - On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division.
Description	Displays the description of the division.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the division whose details you want to view or edit.

The **Division** screen appears.

Defining a Division

Prerequisites

To define a division, you should have:

- Required division business object defined in the application
- Work calendars, bill route types, currencies, time zones, accrual cycles, To Do types, and To Do roles defined in the application
- Values defined for the **BILL_FORMAT_FLG** lookup field

Procedure

To define a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Add** option from the **Division** sub-menu.
The **Division** screen appears.
4. Ensure that the **Main** tab is selected.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.	Yes
Description	Used to specify the description for the division.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Work Calendar	Used to indicate the work calendar that you want to associate with the division. The work calendar indicates the days when the division is operational. It is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.	Yes
	Note: The list includes only those work calendars which are already defined in the system.	
Status	Used to indicate the status of the division. The valid values are: <ul style="list-style-type: none"> • Active - Indicates that you can use the division in the system. • Pending - Indicates that the division is not yet available for use. • Retired - Indicates that the division is no longer available for use. 	No
	Note: The list includes only those statuses which are defined in the DIVISION_STATUS_FLG lookup field.	
Bill Format	Used to specify the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> • Detailed • Summary 	No
	Note: The list includes only those bill formats which are defined in the BILL_FORMAT_FLG lookup field.	
Bill Route Type	Used to indicate how the bills must be sent to the main customer of the accounts which belong to the division.	No
	Note: The list includes only those bill route types which are already defined in the system.	

Field Name	Field Description	Mandatory (Yes or No)
Base Currency	Used to specify the currency in which the GL entries should be created for the accounts which belong to the division. If the account's invoice currency and division's base currency are different, the system converts the GL amount from the account's invoice currency to the division's base currency. In such cases, the system creates the financial transactions for the accounts in both the currencies (i.e. account's invoice currency and division's base currency).	Yes
	Note: The list includes only those currencies which are already defined in the system.	
Time Zone	Used to indicate the time zone in which the division is operational.	No
	Note: The list includes only those time zones which are already defined in the system.	
Eligible for Accrual	Used to indicate whether you can calculate accrual for the accounts which belong to the division.	No
Accrual Cycle	Used to indicate the accrual cycle for the accounts which belong to the division.	Yes (Conditional)
	Note: This field is enabled when the Eligible for Accrual option is selected. The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search window appears.	
Comments	Used to specify additional details about the division.	No
Business Object	Used to indicate the business object using which you want to create the division.	Yes
	Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the Search icon, the Business Object Search window appears.	

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when you are defining the division-specific To Do role for a To Do type.
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears.	Note: This field is required when you are defining the division-specific To Do role for a To Do type.

5. Enter the required details in the **Main** tab.
6. Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
7. Define characteristics for the division, if required.
8. Define division-specific characteristics for the price items, if required.
9. Click the **Save** button in the **Page Title** area.

The division is defined. The status of the division is set to **Pending**.

Associating an Access Group with a Division

On associating an access group with a division, the users which belong to the access group can view the division in the respective list across the system. These users can then create and edit the accounts of the division.

Prerequisites

To associate an access group with a division, you should have:

- Access groups defined in the application

Procedure

To associate an access group with a division:

1. Search for the division to which you want to associate an access group.
2. Click the **Access Groups** tab in the **Division** screen.

The **Access Groups** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to indicate the access group which you want to associate with the division. Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying an access group, the description of the access group appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating an access group with the division.
Description	Displays the description of the access group.	Not applicable

3. Enter the required details in the **Access Groups** tab.

- If you want to associate more than one access group with the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove an access group from the division, click the **Delete (🗑)** icon corresponding to the access group.

- Click the **Save** button in the **Page Title** area.

The access group is associated with the division.

Associating a Price Item or Price Item Bundle with a Division

On associating a price item with a division, you can assign the price item to the persons and accounts which belong to the division. While associating a price item with a division, you can specify the accrual type criteria for the price item. The accrual type criteria is referred when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria is set to...	Then...
Actual	The system considers the billable charges of the price item when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual .
Historical	The system considers the billable charges of the price item when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical .

Prerequisites

To associate a price item with a division, you should have:

- Price items defined in the application

Procedure

To associate a price item with a division:

- Search for the division to which you want to associate a price item.
- Click the **Price Items** tab in the **Division** screen.

The **Price Items** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to associate with the division.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying a price item, the description of the price item appears in the Description field.</p>	<p>Note: This field is required when you are associating a price item with the division.</p>
Description	Displays the description of the price item.	Not applicable
Accrual Type Criteria	<p>Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are:</p> <ul style="list-style-type: none"> • Actual <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Actual. • Historical <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Historical. • Not Applicable <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual irrespective of the accrual criteria specified in the accrual type 	No

3. Enter the required details in the **Price Items** tab.
4. If you want to associate more than one price item with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a price item from the division, click the **Delete** (🗑️) icon corresponding to the price item.

5. Click the **Save** button in the **Page Title** area.

The price item is associated with the division.

Associating a Price List with a Division

Prerequisites

To associate a price list with a division, you should have:

- Price lists defined in the application

Procedure

To associate a price list with a division:

1. Search for the division to which you want to associate a price list.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to specify the price list which you want to associate with the division. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears. On specifying a price list, the description of the price list appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating a price list with a division.
Description	Displays the description of the price list.	Not applicable

3. Enter the required details in the **Price Lists** tab.
4. If you want to associate more than one price list with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a price list from the division, click the **Delete** (🗑️) icon corresponding to the price list.

- Click the **Save** button in the **Page Title** area.

The price list is associated with the division.

Associating a Language with a Division

Prerequisites

To associate a language with a division, you should have:

- Languages defined in the application

Procedure

To associate a language with a division:

- Search for the division to which you want to associate a language.
- Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language which you want to select for generating invoice and correspondence for the accounts in the division.	No

- Select the language from the list.
- If you want to associate more than one language with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a language from the division, click the **Delete** (🗑️) icon corresponding to the language.

- Click the **Save** button in the **Page Title** area.

The language is associated with the division.

Associating an Invoice Currency with a Division

Prerequisites

To associate an invoice currency with a division, you should have:

- Currencies defined in the application

Procedure

To associate an invoice currency with a division:

1. Search for the division to which you want to associate an invoice currency.
2. Click the **Invoice Currencies** tab in the **Divisions** screen.

The **Invoice Currencies** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search () icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to indicate the currency which you want to use for generating the invoice of the accounts in the division.	Yes (Conditional)
		Note: This field is required when you are associating an invoice currency with the division.
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> • Down • Nearest • Up 	Yes (Conditional)
		Note: This field is required when you are associating an invoice currency with the division.

3. Select the currency and its rounding type from the respective list.
4. If you want to associate more than one invoice currency with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an invoice currency from the division, click the **Delete** () icon corresponding to the currency.

- Click the **Save** button in the **Page Title** area.

The invoice currency is associated with the division.

Associating a Person Identifier Type with a Division

Prerequisites

To associate a person identifier type with a division, you should have:

- Person identifier types defined in the application

Procedure

To associate a person identifier type with a division:

- Search for the division to which you want to associate a person identifier type.
- Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional) Note: This field is required when you are associating a person identifier type with a division.

- Select the person identifier type from the list.
- If you want to associate more than one person identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a person identifier type from the division, click the **Delete** (🗑️) icon corresponding to the person identifier type.

- Click the **Save** button in the **Page Title** area.

The person identifier type is associated with the division.

Associating an Algorithm with a Division

Prerequisites

To associate an algorithm with a division, you should have:

- Required algorithms defined in the application

Procedure

To associate an algorithm with a division:

- Search for the division to which you want to associate the algorithm.

The **Division** screen appears.

- Click the **Algorithms** tab.

The **Algorithms** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division Algorithm Entity	<p>Used to indicate the algorithm entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • ASL Accumulation Post-Processing - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on the aggregate stop-loss accumulation amount. This algorithm is invoked when you execute the C1-ACASL batch. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> <ul style="list-style-type: none"> • ASL Accumulation Pre-Processing - Used to attach an algorithm which must be triggered for undertaking some pre-processing activities on the aggregate stop-loss accumulation records. This algorithm is invoked when you execute the C1-ACASL batch. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> <ul style="list-style-type: none"> • Account - Post Processing - Used to attach an algorithm which must be triggered when you create or edit an account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The C1-CLSACCT and C1-UACM-IC algorithm types are shipped with the product. Defining a Characteristic for a Division

Prerequisites

To define a characteristic for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To define a characteristic for a division:

- Search for the division for which you want to define a characteristic.
- Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.
Characteristic Value	Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.

- Enter the required details in the **Characteristics** tab.
- If you want to define more than one characteristic for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the division, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.
The characteristic is defined for the division.

Associating a Bill Message with a Division

Prerequisites

To associate a bill message with a division, you should have:

- Bill messages defined in the application

Procedure

To associate a bill message with a division:

1. Search for the division to which you want to associate a bill message.
2. Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill for the accounts in the division.	Yes (Conditional) Note: This field is required when you are associating a bill message with the division.
End Date	Used to specify the date till when you want the bill message to appear on the bill for the accounts in the division.	No
Bill Message	Used to specify the bill message which is valid for the accounts in the division. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Bill Message Search window appears. On specifying a bill message, the description of the bill message appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating a bill message with the division.
Description	Displays the description of the bill message.	Not applicable

3. Enter the required details in the **Bill Messages** tab.
4. If you want to associate more than one bill message with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill message from the division, click the **Delete** (🗑️) icon corresponding to the bill message.

5. Click the **Save** button in the **Page Title** area.

The bill message is associated with the division.

Associating a Party Characteristic Type with a Division

Prerequisites

To associate a party char type with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To associate a party char type with a division:

1. Search for the division to which you want to associate a party char type.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in the division.	Yes (Conditional) Note: This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional) Note: This field is required when you are associating a party char type with the division.

3. Enter the required details in the **Party Char Types** tab.
4. If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

5. Click the **Save** button in the **Page Title** area.

The party char type is associated with the division.

Associating a Bill Cycle with a Division

Prerequisites

To associate a bill cycle with a division, you should have:

- Bill cycles defined in the application

Procedure

To associate a bill cycle with a division:

1. Search for the division to which you want to associate a bill cycle.
2. Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle that is valid for the accounts associated with the division.	Yes (Conditional) Note: This field is required when you are associating a bill cycle with the division.

3. Select the bill cycle from the list.
4. If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

5. Click the **Save** button in the **Page Title** area.

The bill cycle is associated with the division.

Associating an Account Identifier Type with a Division**Prerequisites**

To associate an account identifier type with a division, you should have:

- Account identifier types defined in the application

Procedure

To associate an account identifier type with a division:

1. Search for the division to which you want to associate an account identifier type.
2. Click the **Account Identifier Types** tab in the **Division** screen.

The **Account Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type valid for the accounts associated with the division.	Yes (Conditional) Note: This field is required when you are associating an account identifier type with the division.

3. Select the account identifier type from the list.
4. If you want to associate more than one account identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an account identifier type from the division, click the **Delete** (🗑️) icon corresponding to the account identifier type.

5. Click the **Save** button in the **Page Title** area.

The account identifier type is associated with the division.

Defining a Division-Specific Characteristic for a Price Item

Prerequisites

To define a division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

Procedure

To define a division-specific characteristic for a price item:

1. Search for the division for which you want to define a price item characteristic.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item count associated with the selected division.	No
Price Item	Indicates the price item code associated with the division to which the user belongs.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.	Note: This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a division-specific characteristic for the price item.

- If the division has multiple price items associated with it, navigate to define a characteristic for the required price item.

Note: You can use the **Previous** (←) and **Next** (→) buttons to navigate through the price items while defining their characteristics.

- Enter the required details in the **Price Item Characteristics** tab.
- If you want to define more than one division-specific characteristic for the price item, click the **Add** (+) icon and then repeat step 4.

Note: However, if you want to remove a division-specific characteristic from the price item, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The division-specific characteristic is defined for the price item.

Associating a To Do Type and To Do Role with a Division

Prerequisites

To associate a To Do type and To Do role with a division, you should have:

- To Do types and to do roles defined in the application
- To Do roles associated to the respective to do types

Procedure

To associate a To Do type and To Do role with a division:

1. Search for the division to which you want to associate a To Do type and To Do role.
2. Click the **Main** tab in the **Divisions** screen.
The **Main** tab appears.
3. The **To Do** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when you are defining a To Do type for the division
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears.	Note: This field is required when you are defining a division-specific To Do role for a To Do type

4. If you want to associate more than one To Do type and To Do role with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a To Do type and To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do type.

5. Click the **Save** button in the **Page Title** area.

The To Do type and To Do role is associated with the division.

Related Topics

For more information on...	See...

How to define a division	Defining a Division on page 770

Division Group

Oracle Revenue Management and Billing enables you to group one or more divisions into a geographic region or segment. This grouping can be based on various factors, such as business cut-off time, source data file availability and volume, etc. You can then process the source data of a geographic region or segment via a single job schedule. This is done with the objective to support data processing from multiple divisions in the same batch job, and thereby achieve maximum utilization of resources and improved business performance. Note that each division in the geographic region or segment is a stand-alone entity and can be processed in any order.

To introduce this new feature, the following changes are made to the system:

- A new maintenance object named **C1-DIVGROUP** and a new business object named **C1-DivisionGroup** are introduced in this release.
- A new screen named **Division Group** is introduced in this release.

The **Division Group** screen is accessible from the **Admin** menu. It enables you to define a division group where you can include one or more divisions that are already defined in the system. It also enables you edit, delete, and copy a division group. You can set the status of a division group to **Active** or **Inactive**. The system will then allow you to use active division groups while executing batches in the system. Note that the **Division Group** parameter will be added in the required batches in the future release of ORMB. However, at present, if you want you can create the required division groups and add the **Division Group** parameter in the required custom batches.

Chapter 7

Approval Workflow

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason
(Used for Viewing)*

Most Commonly Used Terms

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

Approval Workflow Process

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 854
- [Approval Workflow Chain \(Used for Searching\)](#) on page 871
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 878
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 884
- [Approval Workflow Reason \(Used for Searching\)](#) on page 901
- [Approval Workflow Setting \(Used for Searching\)](#) on page 894

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1_PRICEITEM_BO business object
- **C1PRICELST** – Contains the C1_F_ADDPLBO business object
- **C1PRICEASG** – Contains the C1_PRICECOMP and C1_PRICEASGN_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICEITEM maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEITEM_BO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEITEM MO. 3. Link the C1PRODUCT group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRODUCT group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
----------------	---

For Price List	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICELIST maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_F_ADDPLBO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICELIST MO. 3. Link the C1PRICELST group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRICELST group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
For Price Assignments	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICECOMP maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICECOMP as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICECOMP MO. 3. If a Determine BO algorithm is not specified for the C1_PRICEASGN maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEASGN_BO as the business object on this algorithm. 4. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEASGN MO. 5. Link the C1PRICEASG group to the appropriate approval workflow chain. 6. Activate the approval workflow for the C1PRICEASG group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

Note: You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information about the **C1_AXENTITY** feature configuration, see [Setting the C1_AXENTITY Feature Configuration](#) on page 4400.
- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the C1_AXENTITY Feature Configuration](#) on page 4400.
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

Note: User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you

can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 4397.

- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 4396.

Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#) on page 803
- [Approval Transaction Log](#) on page 807

Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> • Task Details • Approval Transaction Details 	Yes
	Note: By default, the Task Details option is selected.	
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Deleted 	No
	Note: This field appears when you select the Approval Transaction Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Task	Used to search approval transactions with a particular task. The valid values are: <ul style="list-style-type: none"> • Approve • Modify • Resolve 	Yes (Conditional)
	Note: This field appears when you select the Task Details option from the Search By list.	Note: This field is required when you want to search approval transactions using the task details.
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	Used to search approval transactions which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	Used to search approval transactions which are created by a particular submitter.	No
	Note: This field appears either when you select the Task Details from the Search By list and Approve option from the Task list or when you select the Approval Transaction Details from the Search By list and Processing, Pending, or Deleted option from the Approval Transaction Status list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Submitter Id for Status window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	Used to search approval transactions which are rejected by a particular approver. Note: The Approver ID is displayed when the approval transaction is searched by Task Details and Task is Resolve . It is also displayed when the approval transaction is searched by Approval Transaction Details and Status is Approved, Canceled, or Rejected . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approver ID Search window appears.	No

Note: You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID. Note: It has a link. The link appears when you select Task Details option from the Search By list. If the Approve option is selected from the Task list then on clicking the link, Comparison: New versus Existing window appears with the compared details of the new and existing approval transactions. If the Modify option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment. If the Resolve option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment.
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	Displays the name of submitter who submits the approval transaction details list. Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Processing, Pending, or Deleted option from the Approval Transaction Status list.
Approver Name	Displays the name of an approver who approves an approval transaction details list. Note: This column appears either when you select the Resolve option from the Task list or when you select the Approved, Canceled, or Rejected option from the Approval Transaction Status list.

Column Name	Column Description
Submitted On	Displays the date and time on which approval transaction is submitted for approval.
	Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Approved , Pending , or Deleted option from the Approval Transaction Details list.
Action	Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> • Add • Delete (DEL) • Update (UPD)
Division	Displays the division to which the approval transaction belongs.
Status	Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Processing • Pending • Deleted
	Note: This column appears either when you select Approval Transaction Details option from the Search By list of the search criteria.
To Do Type	Displays the type of To Do (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	Displays the date and time on which the transaction is rejected.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected , option from the Approval Transaction Details list.
Reject Reason	Displays the reason for which the approval transaction is rejected by the approver.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected option from the Approval Transaction Details list.
Canceled On	Displays the date and time on which the approval transaction is canceled by the user.
	Note: This column appears when you select the Cancelled option from the Approval Transaction Details list.

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.
	Note: This column appears either when you select the Canceled option from the Approval Transaction Details list.
Withdraw	Displays a link to withdraw an approval transaction.
	Note: This column appears either when you select the Modify or Resolve option from the Task list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast** () icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

Related Topics

How to view the log of an approval transaction	Viewing the Log of an Approval Transaction on page 808

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • InProcess • Pending • Deleted
View	It has a link. On clicking the View link, the Comparison: New versus Existing window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears when you click the **Broadcast** () icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4392.

Searching for an Approval Transaction**Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow** and then click **Approval Transaction**.
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

Note: The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

Procedure

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4400.

6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

Rejecting an Approval Transaction**Prerequisites**

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To reject an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.

4. Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

Canceling an Approval Transaction

Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

Note:

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4400.

6. Click OK.

The approval transaction is removed from the search results.

Modifying an Approval Transaction**Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 814
- [List of Price Assignments](#) on page 817
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 818
- [Approval Transaction Log](#) on page 807

Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears when you select the Person or Account option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears when you select the Person option from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears when you select the Submitter ID option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	This field appears when you select the Approval Transaction ID option from the Search By list.	No
	<p>Note:</p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears when you select the Transaction ID option from the Search By list.</p>	

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	Displays the account ID.
	Note: This column appears only when you select the Account option from the Search By list.
Account Identifier Type	Indicates the account identifier type of the account for the price assignments.
	Note: This column appears when you select the Account option from the Search By list.
Account Identifier	Displays the value of the account identifier type.
	Note: This column appears when you select the Account option from the Search By list.
Price List ID	
	Note: This column appears when you select the Price List option from the Search By list.
Price List Description	Displays the description for the price list.
	Note: This column appears when you select the Price List option from the Search By list.
Person Identifier	
	Note: This column appears when you select the Person option from the Search By list.
Person Name	Displays the name of the person.
	Note: This column appears when you select the Person option from the Search By list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.
	Note: This column appears when you select the Submitter ID option from the Search By list.
Approval Transaction ID	Displays the approval transaction ID.
	Note: This column appears when you select the Approval Transaction ID option from the Search By list.

On clicking the **Broadcast** () icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

Approve Price Assignment - Comparison: New versus Existing

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> • Add – Allows you to define the tiering setup of the price assignment • DEL – Allows you to delete the tiering setup of the price assignment. • UPD – Allows you to upload the tiering setup of the price assignment.

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

Note:

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** () icon corresponding to the account whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast** () icon corresponding to the price assignment whose details you want to review and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4400.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.
A message appears with confirmation on transaction approved successfully.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

2. From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.

The **Approve Price Assignment** screen appears.

3. In the **Search** zone, enter the search criteria by selecting either **Account** in the **Search By** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📡) icon corresponding to the account whose price assignments you want to review for approval.

The **List of Price Assignments** zone appears.

6. Click the **Broadcast** (📡) icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.

The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4400.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are not appropriate, then click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

- Select the reason for rejecting the price assignment request and enter the comments in the respective field.
- Click **OK**.

The **Approve** and **Revert to Original** buttons are disabled. You will no longer be able to view this request in your workflow for approval.

Rejecting a Price Assignment for a Person

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To reject a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
- Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📡) icon corresponding to the person whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast** (📡) icon corresponding to the price assignment whose details you want to review.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4400.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason Code	Used to specify the reason why the approval workflow request is rejected.	Yes
Rejection/Cancellation Comment	Used to specify additional information while rejecting/cancelling the approval workflow request.	Yes

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to add additional comments.	No

9. Enter the required details.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Note: Alternatively, you can cancel the price assignment by selecting the check box corresponding to the price assignment which you want to cancel and then click the **Revert to Original** button in the **List of Price Assignments** zone.

Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 832
- [List of Price Assignments](#) on page 847

Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears when you select the Person or Account option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.	Yes (Conditional)
	Note: This field appears when you select the Person option from the Search By list.	
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.	
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	Note: This field appears when you select the Account option from the Search By list.	
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.
	Note: This column appears when you select the Person or Submitter ID option from the Search By list.
Person Name	Displays the name of the person.
	Note: This column appears when you select the Person or Submitter ID option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears when you select the Submitter ID option from the Search By list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	<p>Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: This column appears when you select the Account or Submitter ID option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears when you select the Account or Submitter ID option from the Search By list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p>Note: This column appears when you select the Account or Submitter ID option from the Search By list.</p>
Price List ID	<p>Displays the price list ID.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p>Note: This column appears when you select the Price List option from the Search By list.</p> <p>Note: This column appears when you are searching for price assignment requests of a price list.</p>
Submitter ID	<p>Displays the ID of the submitter.</p> <p>Note: This column appears when you select the Submitter ID option from the Search By list.</p>

On clicking the **Broadcast** () icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.
	Note: This information string is generated using the C1-APPTXNINF algorithm.
Modify	It has a link. On clicking the Modify link, the Modify/Resolve Price Assignment screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the Withdraw link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the Log link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the account, person, or price list in the **Search** zone.

Withdrawing a Price Assignment for an Account

Procedure

To withdraw a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the Main menu, select Approval Workflow and then click Modify Price Assignment . The Modify Price Assignment screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the Main menu, select Approval Workflow and then click Resolve Price Assignment . The Resolve Price Assignment screen appears.

3. In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** () icon corresponding to the account whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

Note: The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

6. Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

7. Click **OK**.

You will no longer be able to view this request in your workflow.

Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver’s comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 843
- [List of Price Assignments](#) on page 847

Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approver Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Person Identifier Type	Used to specify the identifier type based on which you want to search for price assignment requests of a person.	Yes (Conditional)
	Note: This field appears when you select the Person option from the Search By list.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears when you select the Person option from the Search By list.	
Account ID	Used to search for price assignment requests created for an account.	No
	Note: This field appears when you select the Account option from the Search By list.	
Account Identifier Type	Used to specify the account identifier type of the account whose price assignment requests you want to search.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.	No
	Note: This field appears when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.
	Note: This column appears when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.
	Note: This column appears when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: This column appears when you are searching for price assignment requests of an account. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type.
	Note: This column appears when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type.
	Note: This column appears when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID.
	Note: This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list.
	Note: This column appears when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears when you are searching for price assignment requests of a person.

On clicking the **Broadcast** () icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction ID is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item code.
Description	Displays the description of the product.
Pricing Currency	Indicates the currency in which the product pricing is defined.
Start Date	Displays the date from when the product pricing is effective.
End Date	Displays the date till when the product pricing is effective.
Approver Name	Indicates the approver who has rejected the price assignment request.
Rejected On	Displays the date and time when the price assignment request was rejected by an approver.
Reject Reason	Indicates the reason why the price assignment request was rejected.
Rejection Comments	Displays the additional details entered by an approver on rejecting the price assignment request.
Approval Transaction Information	Displays information about the approval transaction.
	Note: This information string is generated using the C1-APPTXNINF algorithm.
Resolve	On clicking the Resolve link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy.
Withdraw	On clicking the Withdraw link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request.
View	On clicking the Log link, you can view the log of the price assignment request from the Resolve Price Assignment screen before resolving or withdrawing a request.

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the account, person, or price list in the **Search** zone.

Viewing the Approval Workflow Group Details

Procedure

To view the details of an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to view.

The **Approval Workflow Group** screen appears. It consists of the **Main** tab with the following zone:

- [Approval Workflow Group](#) on page 864
3. View the details of the approval workflow group in the **Approval Workflow Group** zone.

Defining an Approval Workflow Group

Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

Note: Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	<p>Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.</p> <p>Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Display UI Map field.</p> <p>Note: If you clear the Display UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.</p>	No
Input UI Map	<p>Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.</p> <p>Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Input UI Map field.</p> <p>Note: If you clear the Input UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.</p>	No
Dependency Algorithm	<p>Used to specify the algorithm that will be triggered before creating the approval workflow group.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Dependency Algorithm field.</p> <p>Note: This algorithm can be used to check all prerequisites before creating the approval workflow group.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPPROD - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB. • C1-APPPL - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB. • C1-APPASG - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB. • C1-APPALG - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required. <p>You can also create your own approval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Algorithm field.</p>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPASGCR - Used to create approval workflow group for price assignment. • C1-AXPROD - Used to create approval workflow group for price item. • C1-AXUSR - Used to create approval workflow group for user. • C1-IGCREATE - Used to create approval workflow group for invoicing group. • C1-AXCREATE - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects. <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Transaction Creation Algorithm field.</p>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPIGDR - Used to retrieve data for invoicing group. • C1-AXPRICEOV - Used to retrieve data for price assignment. • C1_APPDATA - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects. <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Data Retrieval Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	

4. Enter the required details.
5. Add business objects and group BO relation with the approval workflow group, if required.
6. Click **Save**.

The approval workflow group is defined.

How to add business objects and group BO relation	Adding a Business Object on page 860

Adding a Business Object

Prerequisites

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

Procedure

To add a business object in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

- Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- Main** - Used to specify basic details of the approval workflow group.
- Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object and parent business object, by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add** (+) icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

Note: When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** (🔄) icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this when you are using automatically generated UI maps, and not otherwise.

Defining a Group BO Relation

Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
 - **Main** - Used to specify basic details of the approval workflow group.
 - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
 - a) **Parent Business Object**
 - b) **From Key**
 - c) **To Key**

Note: If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑️) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

Approval Workflow Group (Used for Viewing)

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 864

Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request. Note: This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

Editing an Approval Workflow Group

Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

Editing a Business Object

Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object or parent business object by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add** (+) icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

Note: When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** (🔄) icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this when you are using automatically generated UI maps, and not otherwise.

Search Approval Workflow Chain

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to search a particular approval workflow chain.	No
Description	Used to search approval workflow chains with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Chain	Displays the approval workflow chain.
Description	Displays the description of the approval workflow chain.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears where you can view the details of the respective approval workflow chain.

Note: You must specify at least one search criterion while searching for an approval workflow chain.

Searching for an Approval Workflow Chain

Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

Viewing the Approval Workflow Chain Details

Procedure

To view the details of an approval workflow chain:

1. Search for the approval workflow chain in the **Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Chain** screen appears. It contains the following zone:

- [Approval Workflow Chain](#) on page 875
3. View the details of the approval workflow chain in the **Approval Workflow Chain** zone.

Defining an Approval Workflow Chain

Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.
The **Approval Workflow Chain** screen appears. It contains the following sections:
 - **Main** - Used to specify basic details of the approval workflow chain.
 - **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

Defining Approval Levels for an Approval Workflow Chain

Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request. Note: You can search for an action algorithm by clicking the Search (🔍) icon corresponding to the Action Algorithm field.	Yes
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy. Note: You can search for an approver to do role by clicking the Search (🔍) icon corresponding to the Approver To Do Role field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	Note: You can search for an approver to do type by clicking the Search (🔍) icon corresponding to the Approver To Do Type field.	

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑️) icon corresponding to the approval level.

Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 875

Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Approval Workflow Chain

Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

Defining Group Chain Linkage Criteria for an Approval Workflow

Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	Note: The data appears in this field when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add (+)** icon, and then repeat step 2.

Note: However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete (🗑)** icon corresponding to the group chain linkage criteria.

Defining a Field Approval Rule

Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

Procedure

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

Field Approval Rule Criteria section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> • Add • Update • Add and Update 	Yes
Business Object	Used to indicate the business object in which the field is included.	Yes
	Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the search icon, the Search Group Based Business Object search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	Note: The Search (🔍) icon appears corresponding to the Field search field. On clicking the search icon, the Field Search search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	Note: The Search (🔍) icon appears corresponding to the Approval Workflow Chain field. On clicking the search icon, the Approval Workflow Chain Search search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	Note: This field is enabled when the data type of the field is Numeric .	

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value. Note: The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears. Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑️) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Group screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.
	Note: It has a link. On clicking the link, the Approval Workflow Criterion Type screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> EQUALS IN
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	Note: The Context Menu () icon appears corresponding to the Field search field. On clicking the context menu icon, the Go to Field menu appears. On clicking the Go to Field menu item, the Field screen appears with the details of the respective field.
	Note: It has a link. On clicking the link, the Field screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	Note: This field is enabled when the data type of the field is Numeric .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	Note: This field is enabled when the Value Range check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.
	Note: The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears.
	Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

Editing an Approval Workflow Group Chain Linkage

Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

Deleting an Approval Workflow Group Chain Linkage

Procedure

To delete an approval workflow group chain linkage:

1. Search for an approval workflow group chain linkage in the **Search Approval Workflow Group Chain Linkage** zone.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain that you want to delete.

The **Approval Workflow Group Chain Linkage** screen appears.

3. Click the **Delete** button in the **Approval Workflow Group Chain Linkage** zone.

A message appears confirming whether you want to delete the approval workflow group chain linkage.

4. Click **OK**.

The approval workflow group chain linkage is deleted.

Searching for an Approval Workflow Group

Prerequisites

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.
The **Approval Workflow Setting** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

Defining Approval Workflow Group Settings

Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	
	Note: You can search for an approval chain selection algorithm by clicking the Search (🔍) icon corresponding to the Approval Chain Selection Algorithm field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: You can search for a prevalidation by clicking the Search (🔍) icon corresponding to the Prevalidation field.	
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.	Yes
	Note: This field appears when the Conditional option is selected from the Active list.	

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	Note: This field appears when the Conditional option is selected from the Active list.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective conditional algorithm.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing Approval Workflow Group Settings

Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

Chapter 8

Multi-Currency Accounts

Topics:

- [Creating Adjustments](#)
- [Generating Bills](#)
- [Applying Payments](#)
- [Monitoring Overdue Debt](#)
- [Generating History](#)

Oracle Revenue Management and Billing allows you to change the currency in which an account is invoiced. While the charges on a bill must be in a single currency, accounts can now be billed in different currencies over time. For example, when a person opens an account, he/she might be billed in US Dollars. However, with the Multi-Currency Accounts feature enabled, the same account can be billed in Euros in the near future. You can use the Multi-Currency Accounts functionality when:

- You set the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration.
- The account's person class is enabled for open item accounting. In other words, the **Open Item Accounting** check box of the account's customer class is selected.
- The account does not have any active or pending loans, payment plans, payment arrangements, or recurring charge contracts.

The following are some limitations while using the Multi-Currency Accounts functionality:

- Overdue charges in multiple currencies may not be referred to a collection agency. Such cases would be handled via a manual referral.
- Because the account's customer class must be enabled for open-item accounting, you can only use Overdue Processing to collect overdue bills. The Collections and Severance processes are not supported for open-item accounting.
- Write offs involving multiple currencies must be performed manually.
- Budgets, deposits, pay plans, and payment arrangements are not supported.

Note: If there is an outstanding debt for an account in more than one currency, the system displays "***" instead of the total account balance across the application.

To use the Multi-Currency Accounts functionality, you need to:

- Set the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration
- Define required currencies along with currency symbols
- Define invoice currencies for divisions. This is because while changing the invoice currency of an account, you can only view those invoice currencies that are associated to the account's division.
- Define the required exchange rates for currency conversion

- Create tender control and deposit control for every invoice currency defined in the system
- Define an adjustment type that you want to use during currency conversion, and link it to the relevant adjustment profile
- Define an adjustment type that you want to use during Write off process, and link it to the relevant adjustment profile
- Define a contract type that you want to use during over payments to transfer the credit balance to other contracts
- Set the collection method of the account's customer class to **Overdue**
- Setup auto-pay to debit the bill amount, and not the account's balance
- Setup the account's customer class to keep credits on a separate contract

The following business processes are enhanced for implementing the Multi-Currency Accounts functionality:

- [Creating Adjustments](#) on page 909
- [Generating Bills](#) on page 909
- [Applying Payments](#) on page 909
- [Monitoring Overdue Debt](#) on page 909
- [Generating History](#) on page 909

How to set the Multi-Currency Accounts (C1_MLTCURACC) feature configuration	Setting the C1_MLTCURACC Feature Configuration on page 4426

Creating Adjustments

If you are using the Multi-Currency Accounts functionality, you can create adjustments in the currency which is different from the account's invoice currency.

Generating Bills

A bill is generated in the account's invoice currency. If you change the invoice currency of an account, any new bills will be generated in the new currency. For example, if you have changed the invoice currency of an account from US Dollars to Euros on 1st Feb 2010, all bills generated thereafter will be generated in Euros.

When a bill is completed and adjustments are swept onto the bill, adjustments that are created in the currency which is different from the account's invoice currency will be converted to the account's invoice currency. The system will create a transfer adjustment for each adjustment that is converted to provide complete audit information. The adjustment type specified in the **Transfer Adjustment Type for Currency Conversion** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration will be used for the conversion. The original adjustment and to-side of the transfer adjustment will be placed on the same match event.

Also, during bill completion, the Contract Type – Bill Completion algorithm type, **CREDIT-XFER**, which is usually specified on the credit contract, will automatically convert credit amounts in one currency to the invoice currency before distributing those credits.

Applying Payments

If you are using the Multi-Currency Accounts feature, you can apply payments in the currency which is different from the account's invoice currency. However, note that the currency used for payment cannot be different from the one used for billing.

When applying a payment, you can only select **Bill ID** as the match type. Also, all tenders for the same payment event must be in the same currency.

Monitoring Overdue Debt

Currency code is now optional while defining collection class overdue rules. When a batch job is processed, the Overdue Debt Monitor will search for overdue rules that match the account's collection class, division, and currency. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the Overdue Debt Monitor will search for overdue rules that match the account's collection class and division. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the account will be skipped.

Generating History

If the account has financial transactions in multiple currencies, zero appears throughout the **Current Balance** and **Payoff Balance** columns in the following screens:

- Account Financial History
- Contract Financial History
- View Account Financial Transaction History

Chapter 9

Rules Engine

Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

Is True and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

Note: The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 913

Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> • ASO Billing Line Item Eligibility • ASO Billing Markup/Down Eligibility • • Auto Pay 	No
	Note: If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.

Column Name	Column Description
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.
View	On clicking the View () icon, the Rule Type screen appears where you can view the details of the rule type.
Edit	On clicking the Edit () icon, the Rule Type screen appears where you can edit the details of the rule type.
Delete	On clicking the Delete () icon, you can delete the rule type.
	Note: You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Duplicate	On clicking the Duplicate () icon, the Rule Type screen appears where you can create a new rule type using an existing rule type.

Searching for a Rule Type

Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

Defining a Rule Type

Prerequisites

To define a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field
- Values defined for the **RULE_TYPE_CAT_FLG** lookup field

Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	<p>Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are:</p> <ul style="list-style-type: none"> Line Item Eligibility Mark Up/Mark Down Eligibility Domestic Provider Eligibility Auto Pay File Upload Interface Price Item Eligibility Related Pricing Rule Type Eligibility <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when you select the Auto Pay option from the Rule Type Usage list. The maximum rule count cannot be less than or equal to zero.</p>	No
Rule Type Category	<p>Used to indicate whether you want to create a field based or parameter based rule type. The valid values are:</p> <ul style="list-style-type: none"> Field Based Parameter Based <p>Note: This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list. By default the value of this option type is set to Field Based.</p>	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.

Note: On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- Associate one or more characteristic entities with the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

Defining Input and Output Parameters for a Rule Type

Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

Procedure

To define the input and output parameters for a rule type:

- Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Field	Used to indicate the field that you want to use as the input or output parameter while defining a business rule.	Yes
	<p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the Field.</p>	
Parameter	Used to indicate the parameter that you want to use as the input or output parameter while defining a business rule.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter field.</p> <p>This field appears when you select the Parameter Based option from the Rule Type Category field.</p>	
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are:	Yes
	<ul style="list-style-type: none"> • Input • Input and Output • Output <p>Note:</p> <p>By default, the Input option is selected.</p> <p>This field appears when you do not select the Auto Pay option from the Rule Type Usage list.</p>	
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone Search window appears.</p> <p>This field appears when you select the Auto Pay option from the Rule Type Usage list.</p>	

2. Enter the required details in the **Input and Output Parameters** section.

Note:

At present, the following fields are only supported while defining a rule type where the **Rule Type Usage** field is set to **Auto Pay**:

- Policy Number
- Plan Number
- Price Item

If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.

3. If you want to define more than one input or output parameter for the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an input or output parameter from the rule type, click the **Delete (🗑)** icon corresponding to the parameter.

Associating a Characteristic Entity with a Rule Type**Prerequisites**

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE_CRITERIA_ENTITY_FLG** lookup field

Procedure

To associate a characteristic entity with a rule type:

1. Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item 	Yes
	<p>Note: At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Characteristic Entities** section.
3. If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

Associating an Algorithm with a Rule Type

Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

Procedure

To associate an algorithm with a rule type:

1. Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
	Note: This is a read-only field.	
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility 	Not applicable
	Note: This is a read-only field.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	Note: This field appears when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> Field Based Parameter Based 	No
	<p>Note:</p> <p>This field appears when you have selected the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining a rule type.</p> <p>This is a read-only field.</p>	

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Deleting a Rule Type

Procedure

To delete a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

Note: You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type.

3. Click **OK**.

The rule type is deleted.

How to search for a rule type	Searching for a Rule Type on page 914

Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1_RULE_USAGE_FLG** lookup field
- Values defined for the **RULE_TYPE_CAT_FLG** lookup field

Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Rule Type Usage	<p>Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are:</p> <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when you select the Auto Pay option from the Rule Type Usage list. The maximum rule count cannot be less than or equal to zero.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> Field Based Parameter Based 	No
	<p>Note:</p> <p>This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list.</p> <p>By default the value of this option type is set to Field Based.</p>	

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 927

Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	<p>Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are:</p> <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility <p>Note: This field appears when the rule type usage is specified while defining the rule type.</p>
Description	Displays the description of the rule type.
Maximum Rule Count	<p>Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when the Rule Type Usage field is set to Auto Pay.</p>
Rule Type Category	<p>Indicates whether you want to create a field based or parameter based rule type. The valid values are:</p> <ul style="list-style-type: none"> • Field Based • Parameter Based <p>Note: This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining the rule type.</p>

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Parameter	Indicates the parameter that you want to use as the input or output parameter.
Rule Input/Output	Indicates whether the field is used as input and/or output parameter while defining a business rule.

Column Name	Column Description
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions.
	Note: It has a link. On clicking the link, the Zone screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

Viewing the Rule Type Details

Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
	Note: This is a read-only field.	

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	<p>Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are:</p> <ul style="list-style-type: none"> Line Item Eligibility Mark Up/Mark Down Eligibility Domestic Provider Eligibility Auto Pay File Upload Interface Price Item Eligibility Related Pricing Rule Type Eligibility <p>Note: This is a read-only field.</p>	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when the Rule Type Usage field is set to Auto Pay. The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.</p>	No
Rule Type Category	<p>Used to indicate whether you want to create a field based or parameter based rule type. The valid values are:</p> <ul style="list-style-type: none"> Field Based Parameter Based <p>Note: This field appears when you have selected the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining a rule type. This is a read-only field.</p>	No

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search Rule](#) on page 931

Search Rule

The **Search Rule** zone allows you to search for a rule. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Priority	Displays the priority of the rule.
Rule	Displays the rule code.
Description	Displays the description of the rule.
Rule Type	Displays the type of rule.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Pre-Processing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Post-Processing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the View () icon, the View Rule screen appears where you can view the details of the rule.
Edit	On clicking the Edit () icon, the Edit Rule screen appears where you can edit the details of the rule.
Delete	On clicking the Delete () icon, you can delete the rule.
	Note: You can delete a rule only if it is not used.
Duplicate	On clicking the Duplicate () icon, the Copy Rule screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Rule

Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of rules that meet the search criteria appears in the **Search Results** section.

Viewing the Rule Details

Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.
The **View Rule** screen appears.
3. View the details of the rule in the **Rule Information** zone.

Defining a Rule

Prerequisites

To define a rule, you should have:

- Rule types defined in the application

- Pre-processing and post-processing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Add** option from the **Rule** sub-menu.

The **Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule. Note: You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective. Note: The effective end date cannot be earlier than the effective start date.	No
Pre-Processing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Pre-Processing Algorithm field.	No

Field Name	Field Description	Mandatory (Yes or No)
Post-Processing Algorithm	<p>Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Post-Processing Algorithm field.</p>	No
Rule True Action	<p>Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	<p>Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you select Next Dependent Rule from the Rule True Action list.</p>
Rule False Action	<p>Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain) on page 1022. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Input or Output Parameter window appears. On specifying the parameter, the parameter description appears corresponding to the Parameter Name field.	Yes
Parameter Value	Used to specify the value for the parameter. Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;), in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)						
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are:</p> <ul style="list-style-type: none"> • Field • Algorithm <p>Note:</p> <p>By default, the Field option is selected.</p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field.</p> <table border="1" data-bbox="586 638 1252 1352"> <thead> <tr> <th data-bbox="586 638 773 785">If the parameter name is selected as ...</th> <th data-bbox="773 638 1252 785">Then...</th> </tr> </thead> <tbody> <tr> <td data-bbox="586 785 773 1066">Field</td> <td data-bbox="773 785 1252 1066"> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Input or Output Parameter window appears.</p> <p>On specifying the field, the field description appears corresponding to the Parameter Name field.</p> </td> </tr> <tr> <td data-bbox="586 1066 773 1352">Algorithm</td> <td data-bbox="773 1066 1252 1352"> <p>The Search (🔍) icon appears corresponding to this field. Algorithm	<p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the algorithm description appears corresponding to the Parameter Value field.</p>							
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes						

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
