## Searching for an Approval Workflow Chain

### Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Chain** zone.  
ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.  
A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

## Viewing the Approval Workflow Chain Details

**Procedure**

To view the details of an approval workflow chain:

1. Search for the approval workflow chain in the **Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Chain** screen appears. It contains the following zone:

- [Approval Workflow Chain](#) on page 773

3. View the details of the approval workflow chain in the **Approval Workflow Chain** zone.

## Defining an Approval Workflow Chain

**Prerequisites**

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

**Procedure**

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.

The **Approval Workflow Chain** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the approval workflow chain.
- **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the approval workflow chain	Yes
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- 4. Enter the required details.
- 5. Define approval levels for the approval workflow chain, if required.
- 6. Click **Save**.  
The approval workflow chain is defined.

**Related Topics**

## Defining Approval Levels for an Approval Workflow Chain

**Prerequisites**

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

**Procedure**

To define an approval levels for an approval workflow chain:

- 1. Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.  
The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
	<b>Note:</b> You can search for an action algorithm by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Action Algorithm</b> field.	
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
	<b>Note:</b> You can search for an approver to do role by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approver To Do Role</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	<b>Note:</b> You can search for an approver to do type by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approver To Do Type</b> field.	

- 2. Enter the required details in the **Approval Levels** section.
- 3. If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑) icon corresponding to the approval level.

## Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 773

## Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- **Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- **Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.
Level	Indicates the level in the hierarchy.

Field Name	Field Description
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Chain

### Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.  
The **Approval Workflow Chain** screen appears.
3. Click the **Edit** button in the **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
  - **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

- 4. Modify the required details in the **Main** section.
- 5. Edit, or remove approval levels from the approval workflow chain, if required.
- 6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

## Defining an Approval Workflow Criterion Type

**Prerequisites**

To define an approval workflow criterion type, you should have:

- Algorithm, Business object, and Field object defined in the application.

**Procedure**

To define an approval workflow criterion type:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.  
The **Approval Workflow Criterion Type** screen appears.
- 3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Criterion Type** screen.  
The **Approval Workflow Criterion Type** screen appears. It contains the following section:
  - **Main** - Used to specify basic details about the approval workflow criterion type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Used to specify the approval workflow criterion type.	Yes
Description	Used to specify the description for the approval workflow criterion type.	Yes
Derived From	Used to indicate the option which triggers the approval workflow. The valid values are: <ul style="list-style-type: none"><li>• Algorithm</li><li>• Business Object</li></ul>	Yes
Algorithm	Used to indicate the algorithm for which you want to define the approval workflow criterion type.	Yes
	<b>Note:</b> The <b>Search</b> (Q) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.  This field appears when you select the Algorithm option form the Derived From list.	
Business Object	Used to indicate the business object for which you want to define the approval workflow criterion type.	Yes
	<b>Note:</b> The <b>Search</b> (Q) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.  This field appears when you select the Business Object option form the Derived From list.	
Field	Used to indicate the field that you want to use to define the criteria for associating approval workflow requests with the approval workflow chains.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b>  The <b>Search</b> (🔍) icon corresponding to this field. On clicking the Search icon, the Field Search window appears.  This field appears when you select the Business Object option from the Derived From list.	

- 4. Enter the required details.
- 5. Click **Save**.  
The approval workflow criterion type is created.

## Defining an Approval Workflow Group Chain Linkage

**Prerequisites**

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

**Procedure**

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group chain linkage.
- **Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to indicate the approval workflow group.	Yes
	<b>Note:</b> You can search for an approval workflow group type by clicking the Search (🔍) icon corresponding to the field.	
Approval Workflow Chain	Used to indicate the approval workflow chain.	Yes
	<b>Note:</b> You can search for an approval workflow chain by clicking the Search (🔍) icon corresponding to the field.	
Field Approval Rule	Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>	Yes

- 4. Enter the required details.
- 5. Define group chain linkage criteria for the approval workflow, if required.
- 6. Define field approval rule criteria for the approval workflow, if required.
- 7. Click **Save**.  
The approval workflow group chain linkage is created.

## Defining Group Chain Linkage Criteria for an Approval Workflow

**Prerequisites**

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

**Procedure**

To define group chain linkage criteria for an approval workflow:

- 1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.  
The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	<b>Note:</b> The data appears in this field when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	<b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add (+)** icon, and then repeat step 2.

**Note:** However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete** (🗑️) icon corresponding to the group chain linkage criteria.

**Related Topics**

Defining a Field Approval Rule

**Prerequisites**

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

**Procedure**

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the **Field Approval Rule Criteria** section is expanded when you select the Yes option from the Field Approval Rule field of the Main section.

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"><li>• Add</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Update</li> <li>Add and Update</li> </ul>	
Business Object	Used to indicate the business object in which the field is included.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Business Object</b> field. On clicking the search icon, the <b>Search Group Based Business Object</b> search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Field</b> search field. On clicking the search icon, the <b>Field Search</b> search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval Workflow Chain</b> field. On clicking the search icon, the <b>Approval Workflow Chain Search</b> search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	<b>Note:</b> This field is enabled when the data type of the field is <b>Numeric</b> .	
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value.

Field	Field Description
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.
	<b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- 2. Enter the required details in the **Field Approval Rule Criteria** section.
- 3. If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑) icon corresponding to the sequence field.
- 4. Click **Save**.  
The approval workflow field rule is defined.

# Approval Workflow Group Chain Linkage (Used for Viewing)

Once you define an approval workflow group chain linkage, the **Approval Workflow Group Chain Linkage** screen allows you to:

- Edit an approval workflow group chain linkage
- Delete an approval workflow group chain linkage

This screen contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 788

For more information on...	See...
How to view the details of an approval workflow group chain linkage	<a href="#">Viewing the Approval Workflow Group Chain Linkage Details</a> on page 784

## Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created.

Field Name	Field Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.
Criterion Type	Displays the criterion type needed for defining the criterion.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Criterion Type</b> screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> <li>• EQUALS</li> <li>• IN</li> </ul>
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	<b>Note:</b> The <b>Context Menu</b> (▼) icon appears corresponding to the <b>Field</b> search field. On clicking the context menu icon, the <b>Go to Field</b> menu appears. On clicking the <b>Go to Field</b> menu item, the <b>Field</b> screen appears with the details of the respective field.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	<b>Note:</b> This field is enabled when the data type of the field is <b>Numeric</b> .
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	<b>Note:</b> This field is enabled when the <b>Value Range</b> check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.

Field	Field Description
	<b>Note:</b> The <b>Search</b> (Q) icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.
	<b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

## Editing an Approval Workflow Group Chain Linkage

### Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

### Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.  
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

<b>Approval Workflow Group Chain Linkage</b> zone	<a href="#">Approval Workflow Group Chain Linkage</a> on page 788

## Deleting an Approval Workflow Group Chain Linkage

### Procedure

To delete an approval workflow group chain linkage:

1. Search for an approval workflow group chain linkage in the **Search Approval Workflow Group Chain Linkage** zone.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain that you want to delete.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Delete** button in the **Approval Workflow Group Chain Linkage** zone.  
A message appears confirming whether you want to delete the approval workflow group chain linkage.
4. Click **OK**.  
The approval workflow group chain linkage is deleted.

## Search Approval Workflow Group

The **Search Approval Workflow Group** zone allows you to search for an approval workflow group using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields::

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a particular approval workflow group.	Yes
Description	Used to search approval workflow group with a particular description.	Yes

**Note:** You must specify at least one search criterion while searching for an approval workflow group.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Group	Displays the approval workflow group.
Description	Displays the description of the approval workflow group.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears where you can view the details of the respective approval workflow group.

# Searching for an Approval Workflow Group

**Prerequisites**

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

**Procedure**

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Setting** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

## Defining Approval Workflow Group Settings

### Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

### Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.  
The **Approval Workflow Settings** screen appears. It contains the following section:
  - **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> You can search for an approval chain selection algorithm by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approval Chain Selection Algorithm</b> field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> You can search for a prevalidation by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Prevalidation</b> field.	Yes
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>	Yes
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated. <b>Note:</b> This field appears when the <b>Conditional</b> option is selected from the <b>Active</b> list.	Yes

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

## Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"><li>• Yes</li></ul>

Field Name	Field Description
	<ul style="list-style-type: none"><li>No</li></ul>
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"><li><b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li><li><b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li><li><b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li></ul>
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	<b>Note:</b> This field appears when the <b>Conditional</b> option is selected from the <b>Active</b> list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective conditional algorithm.

- Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing Approval Workflow Group Settings

### Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

### Procedure

To edit approval workflow group settings:

- 1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
- 2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.  
The **Approval Workflow Settings** screen appears.
- 3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.  
The **Approval Workflow Group Settings** screen appears.
- 4. Edit the settings for the approval workflow group, if required.
- 5. Click **Save**.  
The changes made to the approval workflow group settings are saved.

**Related Topics**

## Defining an Approval Workflow Reason

**Prerequisites**

To define an approval workflow reason, you should have:

- Values defined in the **APPTXN\_REASON\_TYPE** lookup field

**Procedure**

To define an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following section:

- **Main** - Used to specify the basic details for the approval workflow reason. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to specify the approval workflow reason.	Yes
Description	Used to specify the description for the approval workflow reason.	Yes
Reason Category	<p>Used to indicate the category to which the approval workflow reason belongs. The valid values are:</p> <ul style="list-style-type: none"> <li> <b>Approve</b> - Used when you want to avail the reason while approving an approval transaction. The system will then list the reason in the respective field of the <b>Approval Reason</b> screen. </li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>Approval Reason</b> screen appears when you click the <b>Approve</b> button in the <b>Comparison: New versus Existing</b> screen. It appears only when the <b>Approval Reason Required</b> field of the respective approval workflow group is set to <b>Yes</b>.</p> </div> <ul style="list-style-type: none"> <li> <b>Cancel</b> - Used when you want to avail the reason while canceling an approval transaction. The system will then list the reason in the respective field of the <b>Rejection/Cancellation Reason</b> screen. </li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>Rejection/Cancellation Reason</b> screen appears when you click the <b>Revert to Original</b> button in the <b>Comparison: New versus Existing</b> screen.</p> </div> <ul style="list-style-type: none"> <li> <b>Deal General</b> - Used when you want to avail the reason while adding comments at the deal level. The system will then list the reason in the respective field of the <b>Deal Logs and Comments</b> screen. </li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>Deal Logs and Comments</b> screen appears when you click the <b>Deal Log</b> link in the <b>Deal Information</b> screen.</p> </div> <ul style="list-style-type: none"> <li> <b>Deal Reject</b> - Used when you want to avail the reason while rejecting a deal. The system will then list the reason in the respective field of the <b>Deal Rejection</b> screen. </li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>Deal Rejection</b> screen appears when you click the <b>Reject Deal</b> button in the <b>Deal Information</b> screen.</p> </div> <ul style="list-style-type: none"> <li> <b>Deal Return</b> - Used when you want to avail the reason while requesting the submitter to resubmit the deal. The system </li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	will then list the reason in the respective field of the <b>Deal Approval Return To Submitter</b> screen.	
	<b>Note:</b> The <b>Deal Approval Return To Submitter</b> screen appears when you click the <b>Resubmit Deal</b> button in the <b>Deal Information</b> screen.	
	<ul style="list-style-type: none"><li><b>Reject</b> - Used when you want to avail the reason while rejecting an approval transaction. The system will then list the reason in the respective field of the <b>Rejection/Cancellation Reason</b> screen.</li></ul>	
	<b>Note:</b> The <b>Rejection/Cancellation Reason</b> screen appears when you click the <b>Return to Submitter</b> button in the <b>Comparison: New versus Existing</b> screen.	
	<b>Note:</b> The <b>Approve, Cancel, and Reject</b> reason categories are applicable only for the <b>Approval Workflow</b> feature. However, the <b>Deal General, Deal Reject, and Deal Return</b> reason categories are applicable only for the <b>Deal Pricing Management</b> feature.	

**Tip:** You can also define an approval workflow reason from the [Approval Workflow Reason \(Used for Viewing\)](#) on page 802 screen.

- 4. Enter the required details in the **Main** section.
- 5. Click **Save**.  
The approval workflow reason is defined.

**Related Topics**

For more information on...	See...
<a href="#">Approval Workflow Reason</a> screen	<a href="#">Approval Workflow Reason</a> on page 799

## Approval Workflow Reason (Used for Viewing)

The **Approval Workflow Reason** screen enables you to do the following:

- View the details of an approval workflow reason
- Edit an approval workflow reason
- Delete an approval workflow reason

It contains the following zone:

- [Approval Workflow Reason](#) on page 803

## Approval Workflow Reason

The **Approval Workflow Reason** zone displays the details of the approval workflow reason. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow reason. It contains the following fields:

Field Name	Field Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"><li>• Approve</li><li>• Cancel</li><li>• Deal General</li><li>• Deal Reject</li><li>• Deal Return</li><li>• Reject</li></ul>

- **Record Actions** - Enables you to perform various actions on the approval workflow reason. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow reason.
Delete	Used to delete the approval workflow reason.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Reason

### Prerequisites

To edit an approval workflow reason, you should have:

- Values defined in the **APPTXN\_REASON\_TYPE** lookup field

**Procedure**

To edit an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
4. In the **Approval Workflow Reason List** zone, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to edit.  
The **Approval Workflow Reason** screen appears.
5. Click the **Edit** button in the **Approval Workflow Reason** zone.

The **Approval Workflow Reason** screen appears. It contains the following section:

- **Main** - Used to specify the basic details for the approval workflow reason. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Displays the approval workflow reason.	Not applicable
Description	Used to specify the description for the approval workflow reason.	Yes
Reason Category	<div>Used to indicate the category to which the approval workflow reason belongs. The valid values are:</div> <div><ul style="list-style-type: none"><li><b>Approve</b> - Used when you want to avail the reason while approving an approval transaction. The system will then list the reason in the respective field of the <b>Approval Reason</b> screen.</li></ul></div> <div><b>Note:</b> The <b>Approval Reason</b> screen appears when you click the <b>Approve</b> button in the <b>Comparison: New versus Existing</b> screen. It appears only when the <b>Approval Reason Required</b> field of the respective approval workflow group is set to <b>Yes</b>.</div> <div><ul style="list-style-type: none"><li><b>Cancel</b> - Used when you want to avail the reason while canceling an approval transaction. The system will then list the reason in the respective field of the <b>Rejection/Cancellation Reason</b> screen.</li></ul></div> <div><b>Note:</b> The <b>Rejection/Cancellation Reason</b> screen appears when you click the <b>Revert to Original</b> button in the <b>Comparison: New versus Existing</b> screen.</div> <div><ul style="list-style-type: none"><li><b>Deal General</b> - Used when you want to avail the reason while adding comments at the deal level. The system will then list the</li></ul></div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<div>reason in the respective field of the <b>Deal Logs and Comments</b> screen.</div> <div><b>Note:</b> The <b>Deal Logs and Comments</b> screen appears when you click the <b>Deal Log</b> link in the <b>Deal Information</b> screen.</div> <div><ul style="list-style-type: none"><li><b>Deal Reject</b> - Used when you want to avail the reason while rejecting a deal. The system will then list the reason in the respective field of the <b>Deal Rejection</b> screen.</li></ul></div> <div><b>Note:</b> The <b>Deal Rejection</b> screen appears when you click the <b>Reject Deal</b> button in the <b>Deal Information</b> screen.</div> <div><ul style="list-style-type: none"><li><b>Deal Return</b> - Used when you want to avail the reason while requesting the submitter to resubmit the deal. The system will then list the reason in the respective field of the <b>Deal Approval Return To Submitter</b> screen.</li></ul></div> <div><b>Note:</b> The <b>Deal Approval Return To Submitter</b> screen appears when you click the <b>Resubmit Deal</b> button in the <b>Deal Information</b> screen.</div> <div><ul style="list-style-type: none"><li><b>Reject</b> - Used when you want to avail the reason while rejecting an approval transaction. The system will then list the reason in the respective field of the <b>Rejection/Cancellation Reason</b> screen.</li></ul></div> <div><b>Note:</b> The <b>Rejection/Cancellation Reason</b> screen appears when you click the <b>Return to Submitter</b> button in the <b>Comparison: New versus Existing</b> screen.</div> <div><b>Note:</b> The <b>Approve, Cancel, and Reject</b> reason categories are applicable only for the <b>Approval Workflow</b> feature. However, the <b>Deal General, Deal Reject, and Deal Return</b> reason categories are applicable only for the <b>Deal Pricing Management</b> feature.</div>	

6. Modify the required details in the **Main** section.
7. Click **Save**.  
The changes made to the approval workflow reason are saved.

## Deleting an Approval Workflow Reason

---

### Procedure

To delete an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
4. In the **Approval Workflow Reason List** zone, click the link in the **Description** column corresponding to the approval workflow reason that you want to delete.  
The **Approval Workflow Reason** screen appears.
5. Click the **Delete** button in the **Approval Workflow Reason** zone.  
A message appears confirming whether you want to delete the approval workflow reason.
6. Click **OK**.  
The approval workflow reason is deleted.

# Chapter

# 8

---

## Multi-Currency Accounts

---

### Topics:

- [Creating Adjustments](#)
- [Generating Bills](#)
- [Applying Payments](#)
- [Monitoring Overdue Debt](#)
- [Generating History](#)

Oracle Revenue Management and Billing allows you to change the currency in which an account is invoiced. While the charges on a bill must be in a single currency, accounts can now be billed in different currencies over time. For example, when a person opens an account, he/she might be billed in US Dollars. However, with the Multi-Currency Accounts feature enabled, the same account can be billed in Euros in the near future. You can use the Multi-Currency Accounts functionality when:

- You set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.
- The account's person class is enabled for open item accounting. In other words, the **Open Item Accounting** check box of the account's customer class is selected.
- The account does not have any active or pending loans, payment plans, payment arrangements, or recurring charge contracts.

The following are some limitations while using the Multi-Currency Accounts functionality:

- Overdue charges in multiple currencies may not be referred to a collection agency. Such cases would be handled via a manual referral.
- Because the account's customer class must be enabled for open-item accounting, you can only use Overdue Processing to collect overdue bills. The Collections and Severance processes are not supported for open-item accounting.
- Write offs involving multiple currencies must be performed manually.
- Budgets, deposits, pay plans, and payment arrangements are not supported.

**Note:** If there is an outstanding debt for an account in more than one currency, the system displays “\*\*\*” instead of the total account balance across the application.

To use the Multi-Currency Accounts functionality, you need to:

- Set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration
- Define required currencies along with currency symbols
- Define invoice currencies for divisions. This is because while changing the invoice currency of an account, you can only view those invoice currencies that are associated to the account's division.
- Define the required exchange rates for currency conversion
- Create tender control and deposit control for every invoice currency defined in the system
- Define an adjustment type that you want to use during currency conversion, and link it to the relevant adjustment profile

- Define an adjustment type that you want to use during Write off process, and link it to the relevant adjustment profile
- Define a contract type that you want to use during over payments to transfer the credit balance to other contracts
- Set the collection method of the account's customer class to **Overdue**
- Setup auto-pay to debit the bill amount, and not the account's balance
- Setup the account's customer class to keep credits on a separate contract

The following business processes are enhanced for implementing the Multi-Currency Accounts functionality:

- [Creating Adjustments](#) on page 809
- [Generating Bills](#) on page 809
- [Applying Payments](#) on page 809
- [Monitoring Overdue Debt](#) on page 809
- [Generating History](#) on page 809

For more information on...	See...
How to set the <b>Multi-Currency Accounts (C1_MLTCURACC)</b> feature configuration	<a href="#">Setting the C1_MLTCURACC Feature Configuration</a> on page 4352

## Creating Adjustments

---

If you are using the Multi-Currency Accounts functionality, you can create adjustments in the currency which is different from the account's invoice currency.

## Generating Bills

---

A bill is generated in the account's invoice currency. If you change the invoice currency of an account, any new bills will be generated in the new currency. For example, if you have changed the invoice currency of an account from US Dollars to Euros on 1<sup>st</sup> Feb 2010, all bills generated thereafter will be generated in Euros.

When a bill is completed and adjustments are swept onto the bill, adjustments that are created in the currency which is different from the account's invoice currency will be converted to the account's invoice currency. The system will create a transfer adjustment for each adjustment that is converted to provide complete audit information. The adjustment type specified in the **Transfer Adjustment Type for Currency Conversion** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration will be used for the conversion. The original adjustment and to-side of the transfer adjustment will be placed on the same match event.

Also, during bill completion, the Contract Type - Bill Completion algorithm type, **CREDIT-XFER**, which is usually specified on the credit contract, will automatically convert credit amounts in one currency to the invoice currency before distributing those credits.

## Applying Payments

---

If you are using the Multi-Currency Accounts feature, you can apply payments in the currency which is different from the account's invoice currency. However, note that the currency used for payment cannot be different from the one used for billing.

When applying a payment, you can only select **Bill ID** as the match type. Also, all tenders for the same payment event must be in the same currency.

## Monitoring Overdue Debt

---

Currency code is now optional while defining collection class overdue rules. When a batch job is processed, the Overdue Debt Monitor will search for overdue rules that match the account's collection class, division, and currency. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the Overdue Debt Monitor will search for overdue rules that match the account's collection class and division. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the account will be skipped.

## Generating History

---

If the account has financial transactions in multiple currencies, zero appears throughout the **Current Balance** and **Payoff Balance** columns in the following screens:

- Account Financial History
- Contract Financial History
- View Account Financial Transaction History

---

## Rules Engine

---

### Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Oracle Revenue Management

and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1\_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1\_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

**Note:** The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

# Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 813

## Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"><li>• ASO Billing Line Item Eligibility</li><li>• ASO Billing Markup/Down Eligibility</li><li>• </li><li>• Auto Pay</li></ul> <b>Note:</b> If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the <b>View</b> (🔍) icon, the <b>Rule Type</b> screen appears where you can view the details of the rule type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Rule Type</b> screen appears where you can edit the details of the rule type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the rule type.
	<b>Note:</b> You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Rule Type</b> screen appears where you can create a new rule type using an existing rule type.

# Searching for a Rule Type

**Prerequisites**

To search for a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

**Procedure**

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.  
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of rule types that meet the search criteria appears in the **Search Results** section.

**Related Topics**

For more information on...	See...
Rule Type screen	<a href="#">Rule Type (Used for Searching)</a> on page 813
Search Rule Type zone	<a href="#">Search Rule Type</a> on page 813

## Defining a Rule Type

### Prerequisites

To define a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field
- Values defined for the **RULE\_TYPE\_CAT\_FLG** lookup field

### Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"><li>• Line Item Eligibility</li><li>• Mark Up/Mark Down Eligibility</li><li>• Domestic Provider Eligibility</li><li>• Auto Pay</li><li>• File Upload Interface</li><li>• Price Item Eligibility</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Related Pricing Rule Type Eligibility</li></ul>	
	<b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b> . However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	<b>Note:</b> This field appears when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list. The maximum rule count cannot be less than or equal to zero.	
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"><li>Field Based</li><li>Parameter Based</li></ul>	No
	<b>Note:</b> This field appears when you select the <b>Price Item Eligibility</b> or <b>Related Pricing Rule Type Eligibility</b> option from the <b>Rule Type Usage</b> list. By default the value of this option type is set to <b>Field Based</b> .	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- 4. Enter the required details in the **Main** section.
- 5. Define input and output parameters for the rule type.

**Note:** On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- 6. Associate one or more characteristic entities with the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- 7. Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

8. Click **Save**.  
The rule type is defined.

**Defining Input and Output Parameters for a Rule Type**

**Prerequisites**

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

**Procedure**

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter while defining a business rule.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears. On specifying the field, the description of the field appears corresponding to the <b>Field</b> .	
Parameter	Used to indicate the parameter that you want to use as the input or output parameter while defining a business rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears. On specifying the parameter, the description of the parameter appears corresponding to the <b>Parameter</b> field.</p> <p>This field appears when you select the <b>Parameter Based</b> option from the <b>Rule Type Category</b> field.</p>	
Rule Input/Output	<p>Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are:</p> <ul style="list-style-type: none"> <li>• Input</li> <li>• Input and Output</li> <li>• Output</li> </ul> <p><b>Note:</b></p> <p>By default, the <b>Input</b> option is selected.</p> <p>This field appears when you do not select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p>	Yes
Search Zone	<p>Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone Search</b> window appears.</p> <p>This field appears when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p>	No

- Enter the required details in the **Input and Output Parameters** section.

**Note:**

At present, the following fields are only supported while defining a rule type where the **Rule Type Usage** field is set to **Auto Pay**:

- Policy Number
- Plan Number
- Price Item

If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.

- If you want to define more than one input or output parameter for the rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove an input or output parameter from the rule type, click the **Delete** (🗑️) icon corresponding to the parameter.

### Related Topics

## Associating a Characteristic Entity with a Rule Type

### Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE\_CRITERIA\_ENTITY\_FLG** lookup field

### Procedure

To associate a characteristic entity with a rule type:

1. Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul>	Yes
	<b>Note:</b> At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.	

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Characteristic Entities** section.
3. If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

## Associating an Algorithm with a Rule Type

### Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

### Procedure

To associate an algorithm with a rule type:

1. Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	Used to attach an algorithm which you want to use for deriving the following from the financial transaction: <ul style="list-style-type: none"><li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li><li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li></ul>	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

### Related Topics

## Editing a Rule Type

### Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
	<b>Note:</b> This is a read-only field.	
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"><li>• Line Item Eligibility</li><li>• Mark Up/Mark Down Eligibility</li><li>• Domestic Provider Eligibility</li><li>• Auto Pay</li><li>• File Upload Interface</li><li>• Price Item Eligibility</li><li>• Related Pricing Rule Type Eligibility</li></ul>	Not applicable
	<b>Note:</b> This is a read-only field.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> .  The maximum rule count cannot be less than or equal to zero.  You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"><li>Field Based</li><li>Parameter Based</li></ul> <b>Note:</b> This field appears when you have selected the <b>Price Item Eligibility</b> or <b>Related Pricing Rule Type Eligibility</b> option from the <b>Rule Type Usage</b> list while defining a rule type.  This is a read-only field.	No

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- 3. Modify the required details in the **Main** section.
- 4. Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- 5. Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- 6. Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- 7. Click **Save**.  
The changes made to the rule type are saved.

## Deleting a Rule Type

### Procedure

To delete a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rule type that you want to delete.  
A message appears confirming whether you want to delete the rule type.

**Note:** You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type.

3. Click **OK**.  
The rule type is deleted.

## Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

### Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field
- Values defined for the **RULE\_TYPE\_CAT\_FLG** lookup field

### Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"><li>• Line Item Eligibility</li><li>• Mark Up/Mark Down Eligibility</li><li>• Domestic Provider Eligibility</li><li>• Auto Pay</li><li>• File Upload Interface</li><li>• Price Item Eligibility</li><li>• Related Pricing Rule Type Eligibility</li></ul>	No
	<b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b> . However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	<b>Note:</b> This field appears when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list. The maximum rule count cannot be less than or equal to zero.	
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"><li>• Field Based</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Parameter Based</li></ul>	
	<b>Note:</b> This field appears when you select the <b>Price Item Eligibility</b> or <b>Related Pricing Rule Type Eligibility</b> option from the <b>Rule Type Usage</b> list.  By default the value of this option type is set to <b>Field Based</b> .	

- 3. Enter the required details in the **Main** section.
- 4. Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- 5. Associate or remove one or more characteristic entities from the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- 6. Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- 7. Click **Save**.  
The new rule type is defined.

# Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 826

## Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"><li>• Line Item Eligibility</li><li>• Mark Up/Mark Down Eligibility</li><li>• Domestic Provider Eligibility</li><li>• Auto Pay</li><li>• File Upload Interface</li><li>• Price Item Eligibility</li><li>• Related Pricing Rule Type Eligibility</li></ul>
	<b>Note:</b> This field appears when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.
	<b>Note:</b> This field appears when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> .
Rule Type Category	Indicates whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"><li>• Field Based</li><li>• Parameter Based</li></ul>
	<b>Note:</b> This field appears when you select the <b>Price Item Eligibility</b> or <b>Related Pricing Rule Type Eligibility</b> option from the <b>Rule Type Usage</b> list while defining the rule type.

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Parameter	Indicates the parameter that you want to use as the input or output parameter.
Rule Input/Output	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions.

Column Name	Column Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Zone</b> screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"><li>• Adjustment</li><li>• Billable Charge</li><li>• Policy</li><li>• Policy Plan</li><li>• Price Item</li></ul>

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"><li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li><li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li></ul>

**Note:** The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

## Editing a Rule Type

### Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
	<b>Note:</b> This is a read-only field.	
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"><li>• Line Item Eligibility</li><li>• Mark Up/Mark Down Eligibility</li><li>• Domestic Provider Eligibility</li><li>• Auto Pay</li><li>• File Upload Interface</li><li>• Price Item Eligibility</li><li>• Related Pricing Rule Type Eligibility</li></ul>	Not applicable
	<b>Note:</b> This is a read-only field.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	<b>Note:</b> This field appears when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	
Rule Type Category	Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> <li>Field Based</li> <li>Parameter Based</li> </ul>	No
	<b>Note:</b> This field appears when you have selected the <b>Price Item Eligibility</b> or <b>Related Pricing Rule Type Eligibility</b> option from the <b>Rule Type Usage</b> list while defining a rule type. This is a read-only field.	

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.  
The changes made to the rule type are saved.

# Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search Rule](#) on page 830

## Search Rule

The **Search Rule** zone allows you to search for a rule. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Priority	Displays the priority of the rule.
Rule	Displays the rule code.
Description	Displays the description of the rule.
Rule Type	Displays the type of rule.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Pre-Processing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.

Column Name	Column Description
Post-Processing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the <b>View</b> (🔍) icon, the <b>View Rule</b> screen appears where you can view the details of the rule.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Edit Rule</b> screen appears where you can edit the details of the rule.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the rule.
	<b>Note:</b> You can delete a rule only if it is not used.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Copy Rule</b> screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

**Searching for a Rule**

**Procedure**

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.  
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rules that meet the search criteria appears in the **Search Results** section.

## Defining a Rule

**Prerequisites**

To define a rule, you should have:

- Rule types defined in the application
- Pre-processing and post-processing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

**Procedure**

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule** sub-menu.

The **Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	<b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Pre-Processing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Pre-Processing Algorithm</b> field.	
Post-Processing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Post-Processing Algorithm</b> field.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** - Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.	Yes
	<p><b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain)</a> on page 914.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.</p> <p>On specifying the parameter, the parameter description appears corresponding to the <b>Parameter Name</b> field.</p>	
Parameter Value	Used to specify the value for the parameter.	Yes

Column Name	Column Description	Mandatory (Yes or No)
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	

- **Criteria** - Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)						
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes						
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are: <ul style="list-style-type: none"><li>Field</li><li>Algorithm</li></ul>	Yes						
	<b>Note:</b> By default, the <b>Field</b> option is selected. If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.							
	<table><tr><th>If the parameter name is selected as ...</th><th>Then...</th></tr><tr><td>Field</td><td>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.  On specifying the field, the field description appears corresponding to the <b>Parameter Name</b> field.</td></tr><tr><td>Algorithm</td><td>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Name</b> field.</td></tr></table>		If the parameter name is selected as ...	Then...	Field	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.  On specifying the field, the field description appears corresponding to the <b>Parameter Name</b> field.	Algorithm	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Name</b> field.
	If the parameter name is selected as ...		Then...					
	Field		The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.  On specifying the field, the field description appears corresponding to the <b>Parameter Name</b> field.					
Algorithm	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Name</b> field.							
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes						
Parameter Value	Used to specify the parameter value. The valid values are: <ul style="list-style-type: none"><li>Field</li><li>Algorithm</li></ul>	Yes						

Column Name	Column Description	Mandatory (Yes or No)						
	<p><b>Note:</b></p> <p>By default, the <b>Field</b> option is selected.</p> <p>You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <table><tr><th>If the parameter value is selected as ...</th><th>Then...</th></tr><tr><td>Field</td><td><p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.</p><p>On specifying the field, the field description appears corresponding to the <b>Parameter Value</b> field.</p></td></tr><tr><td>Algorithm</td><td><p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p><p>On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Value</b> field.</p></td></tr></table>	If the parameter value is selected as ...	Then...	Field	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.</p> <p>On specifying the field, the field description appears corresponding to the <b>Parameter Value</b> field.</p>	Algorithm	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Value</b> field.</p>	
If the parameter value is selected as ...	Then...							
Field	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Input or Output Parameter</b> window appears.</p> <p>On specifying the field, the field description appears corresponding to the <b>Parameter Value</b> field.</p>							
Algorithm	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Value</b> field.</p>							
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	Yes						
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	Yes						
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li></ul>	Yes						

Column Name	Column Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li><b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li><b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	

**Tip:** Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

4. Enter the required details.

**Note:**

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑) icon corresponding to it.

5. Click **Save**.  
The rule is defined.

## Editing a Rule

**Prerequisites**

To edit a rule, you should have:

- Pre-processing and post-processing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

**Procedure**

To edit a rule:

- Search for the rule in the **Rule** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Priority	Used to specify the priority of the rule.	Yes
	<b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Pre-Processing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Pre-Processing Algorithm</b> field.	
Post-Processing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Post-Processing Algorithm</b> field.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional) <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** - Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain)</a> on page 914.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.  On specifying the rule type field, the description of the rule type field appears corresponding to the <b>Parameter Name</b> field.	Yes
Parameter Value	Used to specify the value for the parameter.	Yes

Column Name	Column Description	Mandatory (Yes or No)
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	

- **Criteria** - Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)						
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes						
Parameter Name	<div>Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are:<ul style="list-style-type: none"><li>Field</li><li>Algorithm</li></ul></div> <div><b>Note:</b> By default, the <b>Field</b> option is selected. Algorithm	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Value</b> field.</p>							
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	Yes						
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	Yes						
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li></ul>	Yes						

Column Name	Column Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li><b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li><b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	

**Tip:** Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

**Note:** You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

**Note:** If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑) icon corresponding to it.

5. Click **Save**.  
The changes made to the rule are saved.

**Related Topics**

## Deleting a Rule

**Procedure**

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rule that you want to delete.  
A message appears confirming whether you want to delete the rule.

**Note:** You can delete a rule when it is not yet used in the system.

3. Click **OK**.  
The rule is deleted.

## Copying a Rule

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

### Prerequisites

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

### Procedure

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** (📋) icon corresponding to the rule whose copy you want to create.

The **Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	<b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Pre-Processing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Pre-Processing Algorithm</b> field.	
Post-Processing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Post-Processing Algorithm</b> field.</p>	
Rule True Action	<p>Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional) <div> <p><b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.</p> </div>
Rule False Action	<p>Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> - Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> - Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> - Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional) <div> <p><b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.</p> </div>

In addition, it contains the following two sections:

- **Rule Output Parameters** - Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.	Yes
	<b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain)</a> on page 914.	
	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.  On specifying the rule type field, the description of the rule type field appears corresponding to the <b>Parameter Name</b> field.	
Parameter Value	Used to specify the value for the parameter.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	

- **Criteria** - Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are: <ul style="list-style-type: none"><li>• Field</li><li>• Algorithm</li></ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)						
	<div><div>Note:</div><div>By default, the <b>Field</b> option is selected.</div><div>If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.</div><table><tr><td>If the parameter name is selected as ...</td><td>Then...</td></tr><tr><td>Field</td><td>The <b>Search</b> (🔍) icon appears corresponding to this field. Algorithm	<p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the algorithm description appears corresponding to the <b>Parameter Value</b> field.</p>							
Is True	<div><p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p><ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul></div>	Yes						
Is False	<div><p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p><ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li><li>• <b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li>• <b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul></div>	Yes						
Is Insufficient	<div><p>Used to indicate what should happen when the data is insufficient. The valid values are:</p><ul style="list-style-type: none"><li>• <b>Check next condition</b> - Used to indicate that the condition with consecutive sequence number should be executed.</li></ul></div>	Yes						

Column Name	Column Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li><b>Rule is false</b> - Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li><li><b>Rule is true</b> - Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>	

- 3. Modify the required details.
- 4. Add or remove the output parameters or criteria from the new rule, if required.

**Note:**

You can specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it. For more information on the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination \(Specific to Financial Services Domain\)](#) on page 914.

- 5. Click **Save**.  
The new rule is defined.

# Rule

The **Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 848

## Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule.

Field Name	Field Description
	<b>Note:</b> You can use the <b>Move Up</b> (⬆) and <b>Move Down</b> (⬇) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available when you access the <b>View Rule</b> screen through the <b>Rule</b> screen.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Pre-Processing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Post-Processing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** - Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the <b>Field</b> screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** - Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> </ul>

Column Name	Column Description
	<ul style="list-style-type: none"><li><b>Rule is true</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>
Is False	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"><li><b>Check next condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li><li><b>Rule is false</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li><li><b>Rule is true</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>
Is Insufficient	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"><li><b>Check next condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li><li><b>Rule is false</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li><li><b>Rule is true</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li></ul>

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

**Related Topics**

For more information on...	See...
How to view the details of a rule	<a href="#">Viewing the Rule Details</a> on page 832

## Viewing the Rule Details

**Procedure**

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the rule whose *details* you want to view.  
The **View Rule** screen appears.
3. View the details of the rule in the **Rule Information** zone.

How to search for a rule	<a href="#">Searching for a Rule Type</a> on page 814

# Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

## Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
	<b>Note:</b> If you do not specify the effective date, the system executes all rules which are effective on the system date.	
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

## Rule Output Parameters

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"><li>• <b>Success</b> - Indicates that one of the rule was successfully executed and returned the output parameters.</li><li>• <b>Fail</b> - Indicates that none of the rules with the specified rule type were successfully executed.</li><li>• <b>Error</b> - Indicates that an error occurred while executing a rule.</li></ul>
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

**Rule Execution**

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

**Rule Check**

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** - This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** - This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"><li>• <b>Success</b> - Indicates that one of the rule was successfully executed and returned the output parameters.</li><li>• <b>Fail</b> - Indicates that none of the rules with the specified rule type were successfully executed.</li><li>• <b>Error</b> - Indicates that an error occurred while executing a rule.</li></ul>
Execution Time	Displays the total time taken to execute a set of rules.

Field Name	Field Description
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** - Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

## Alternate Sequential Bill Numbers

---

**Topics:**

- [Alternate Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers for the pending or completed bills, you must select the **Use Sequential Bill Numbers** option in the **Billing** tab of the **Installation Options** screen. You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for the completed or pending bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

**Related Topics**

For more information on...	See...
How to enable the Alternate Sequential Bill Numbers feature	<a href="#">Enabling the Alternate Sequential Bill Numbers Feature</a> on page 861

# Alternate Sequential Bill Number Generation Algorithms

The following table lists the alternate sequential bill number generation algorithm types which are shipped with the product:

If you want to generate...	Then create an algorithm using the following algorithm type...
Alternate sequential bill numbers unique throughout the system	<a href="#">C1_ALTBLLSYS</a> on page 856
Alternate sequential bill numbers unique within the division	<a href="#">C1_ALTBLDV</a> on page 859
Alternate sequential bill numbers unique throughout the system in the required format using a set of parameters	<a href="#">C1_ALTBLSYS1</a> on page 856
	<b>Note:</b> The alternate sequential bill number will be unique throughout the system when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division in the required format using a set of parameters	<a href="#">C1_ALTBLDIV1</a> on page 859
	<b>Note:</b> The alternate sequential bill number will be unique within the division when you configure the algorithm parameters appropriately.

## C1\_ALTBLLSYS

The **C1\_ALTBLLSYS** algorithm type is used to generate an alternate bill ID for the completed and pending bills. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

If you attach an algorithm created using the **C1\_ALTBLLSYS** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

## C1\_ALTBLSYS1

The **C1\_ALTBLSYS1** algorithm type is used to generate an alternate bill ID for the completed and pending bills. You can generate an alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	Here, you need to specify the following information separated by a comma:

Parameter	Description
	<ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddyy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• "yyyy" or "yy" for year</li> </ul>

Parameter	Description
	<ul style="list-style-type: none"> <li>"MM" or "M" for month</li> <li>"dd" or "d" for day</li> </ul>
	<b>Note:</b> The date format should either start or end with the year.
SEQ_NBR	The sequence number generated by the database. It should not be more than 12 characters.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	or Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLSYS1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 - CIS\_DIVISION
- Field2 - '|'
- Field3 - SEQ\_NBR
- Field4 - '-'
- Field5 - FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|SEQ\_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ\_NBR** parameter while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1\_ALTBLSYS1** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

## C1\_ALTBLDV

The **C1\_ALTBLDV** algorithm type is used to generate a unique alternate bill ID for the completed and pending bills within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameter:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing.	No
	<b>Note:</b> If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	

If you attach an algorithm created using the **C1\_ALTBLDV** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

## C1\_ALTBLDIV1

The **C1\_ALTBLDIV1** algorithm type is used to generate an alternate bill ID for the completed and pending bills. You can generate an alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_INDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"><li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li><li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li><li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li></ul>

Parameter	Description
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddyy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• "yyyy" or "yy" for year</li> <li>• "MM" or "M" for month</li> <li>• "dd" or "d" for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	<p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p>
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 - CIS\_DIVISION
- Field2 - '|'
- Field3 - BILL\_DT=MMddyy
- Field4 - '-'
- Field5 - FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|MMddyy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for the completed and pending bills.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1\_ALTBLDIV1** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

## Enabling the Alternate Sequential Bill Numbers Feature

---

### Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1\_ALTBLSYS**, **C1\_ALTBLSYS1**, **C1\_ALTBLDV**, or **C1\_ALTBLDIV1** algorithm type that you want to use for alternate sequential bill number generation

### Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Installation Options**.  
The **Installation Options** screen appears.
3. Click the **Billing** tab.  
The **Billing** tab appears.
4. Select the **Use Sequential Bill Numbers** option to indicate that you want to generate alternate sequential bill numbers for the completed and pending bills.  
The **Sequential Invoice** field is enabled.

5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.
6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<p>a. # Chapter 11

---

## Currency Conversion

---

### Topics:

- [Prerequisites](#)
- [Bill Segment Generation](#)
- [Adjustment Creation](#)
- [Payment and Tender Creation](#)
- [Transaction Aggregation](#)
- [FT GL Creation](#)
- [Currency Conversion Algorithms](#)
- [Exchange Rate \(Used for Searching\)](#)
- [Exchange Rate \(Used for Viewing\)](#)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

## Prerequisites

---

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV\_TYPE\_FLG** and **EXCH\_RATE\_SRC\_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration:
  - Allow Multi-Currency Accounts
  - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
  - Bill Segment Generation
  - FT GL Creation for Bill Segments

**Note:** The **C1\_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
  - Adjustment Creation
  - FT GL Creation for Adjustments

**Note:** The **C1\_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
  - Payment and Tender Creation
  - FT GL Creation for Payments

**Note:** The **C1\_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

**Note:** The **C1\_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

## Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** - If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** - If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

#### Related Topics

<b>C1_CURALGBS</b> algorithm type	<a href="#">C1_CURALGBS</a> on page 872
<b>C1_EXCRTBS</b> algorithm type	<a href="#">C1_EXCRTBS</a> on page 878

# Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.

The currency conversion is done when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

C1_CURALGAD algorithm type	<a href="#">C1_CURALGAD</a> on page 873
C1_EXCRTAD algorithm type	<a href="#">C1_EXCRTAD</a> on page 880

# Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

**Note:**

The currency conversion feature is available when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

**Related Topics**

C1_CURALGPY algorithm type	<a href="#">C1_CURALGPY</a> on page 875
C1_EXCRTPY algorithm type	<a href="#">C1_EXCRTPY</a> on page 882

## Transaction Aggregation

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done when you have an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

<b>C1_EXCRTTFM</b> algorithm type	<a href="#">C1_EXCRTTFM</a> on page 884

## FT GL Creation

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

# Currency Conversion Algorithms

The following table lists the currency conversion algorithm types shipped with the product:

If you want to use...	Then create algorithm using the following algorithm type....
Date based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Bill Segment Generation</li> <li>• FT GL Creation for Bill Segments</li> </ul>	<a href="#">C1_CURALGBS</a> on page 872
Date based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Adjustment Creation</li> <li>• FT GL Creation for Adjustments</li> </ul>	<a href="#">C1_CURALGAD</a> on page 873
Date based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Payment and Tender Creation</li> <li>• FT GL Creation for Payments</li> </ul>	<a href="#">C1_CURALGPY</a> on page 875
Date based exchange rate during currency conversion while aggregating transactions	<a href="#">C1_CURALGTFM</a> on page 877
Date and time based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Bill Segment Generation</li> <li>• FT GL Creation for Bill Segments</li> </ul>	<a href="#">C1_EXCRTBS</a> on page 878
Date and time based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Adjustment Creation</li> <li>• FT GL Creation for Adjustments</li> </ul>	<a href="#">C1_EXCRTAD</a> on page 880
Date and time based exchange rate during currency conversion while: <ul style="list-style-type: none"> <li>• Payment and Tender Creation</li> <li>• FT GL Creation for Payments</li> </ul>	<a href="#">C1_EXCRTPY</a> on page 882
Date and time based exchange rate during currency conversion while aggregating transactions	<a href="#">C1_EXCRTTFM</a> on page 884
Currency conversion for FT GL extension in the following financial transaction (FT) types: <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Adjustment Cancellation</li> <li>• Bill Segment</li> <li>• Bill Cancellation</li> <li>• Pay Segment</li> </ul>	<a href="#">FTFREZGLEXTN</a> on page 886

If you want to use...	Then create algorithm using the following algorithm type....
<ul style="list-style-type: none"><li>Pay Cancellation</li></ul>	
Fetching the exchange rate available corresponding to the transaction in the <b>CI_TXN_DETAIL</b> table.	<a href="#">C1_EXCRTOVRD</a> on page 888

## C1\_CURALGBS

The **C1\_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No

Parameter	Description	Mandatory (Yes or No)
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

### Related Topics

Bill Segment Generation	<a href="#">Bill Segment Generation</a> on page 868
FT GL Creation	<a href="#">FT GL Creation</a> on page 870
How to setup the currency conversion feature	<a href="#">Prerequisites</a> on page 867

## C1\_CURALGAD

The **C1\_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen,

and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Global direct exchange rate
- 3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 5. Division-specific exchange rate through base currency
- 6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 3. Division-specific exchange rate through base currency
- 4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_CURALGAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are:	No

Parameter	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p>	
Global Reverse Rate (Valid Values: Yes, No)	<p>Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	No

## C1\_CURALGPY

The **C1\_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency

- 4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_CURALGPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_CURALGTFM

The **C1\_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_CURALGTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No

Parameter	Description	Mandatory (Yes or No)
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## **C1\_EXCRTBS**

The **C1\_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through

base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Global direct exchange rate
- 3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 5. Division-specific exchange rate through base currency
- 6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 3. Division-specific exchange rate through base currency
- 4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.

## C1\_EXCRTAD

The **C1\_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

- 3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 5. Division-specific exchange rate through base currency
- 6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 3. Division-specific exchange rate through base currency
- 4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_EXCRTAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>	No

Parameter	Description	Mandatory (Yes or No)
	If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.

## C1\_EXCRTPY

The **C1\_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)

7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_EXCRTPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> </ul>	No

Parameter	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.

## C1\_EXCRTTFM

The **C1\_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)

- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_EXCRTTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No

Parameter	Description	Mandatory (Yes or No)
	<b>Note:</b> A sample algorithm type named <b>C1_EXCRTOVRD</b> is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the <b>CI_TXN_DETAIL</b> table. The exchange rate is then used by the algorithm which is created using the <b>C1_EXCRTTFM</b> algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the <b>Transaction Detail Field for Exchange Rate</b> parameter.	
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.	No

**FTFREZGLEXTN**

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments when you have an algorithm of the **C1\_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1\_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1\_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Will	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Will</b> option. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> - Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes
Exchange Rate Date Type for Adjustments with Freeze At Bill Completion	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Bill Completion</b> option. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> - Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes
Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> - Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes
Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E)	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> - Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes

Parameter	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li><b>E (Bill Segment End Date)</b> - Used to search for an exchange rate which is effective on the bill segment end date.</li></ul>	
	<b>Note:</b> If you set the <b>Exchange Rate Date Type for Bill Segments</b> parameter to <b>R</b> , ensure that you set the <b>Bill Segment Freeze Option</b> to <b>Freeze At Bill Completion</b> in the <b>Billing</b> tab of the <b>Installation Options</b> screen. Otherwise, erroneous results might occur.

**C1\_EXCRTOVRD**

The **C1\_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI\_TXN\_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1\_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI\_TXN\_DETAIL** table, you need to create an algorithm using the **C1\_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1\_EXCRTTFM** algorithm type.

The **C1\_EXCRTOVRD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Transaction Detail Field for Exchange Rate	Used to indicate the column of the <b>CI_TXN_DETAIL</b> table from where the exchange rate must be picked during currency conversion.	Yes

**Related Topics**

For more information on...	See...
<b>C1_EXCRTTFM</b> algorithm type	<a href="#">C1_EXCRTTFM</a> on page 884

**Exchange Rate (Used for Searching)**

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- [Search Exchange Rate](#) on page 889

## Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: <ul style="list-style-type: none"><li>• Date/Time and Exchange Rate Source</li><li>• Date</li></ul>	Yes
	<b>Note:</b> By default, the <b>Date/Time and Exchange Rate Source</b> option is selected.	
From Currency	Used to search exchange rates with a particular source currency.	No
To Currency	Used to search exchange rates with a particular target currency.	No
Division	Used to search exchange rates which are defined for a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Conversion Type	Used to search exchange rates which are defined using a particular conversion type.	No
Effective Start Date/Time	Used to search exchange rates which are effective from a particular date and time onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	
Effective End Date/Time	Used to search exchange rates which are effective till a particular date and time. <b>Note:</b> This field appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	No
Effective Start Date	Used to search exchange rates which are effective from a particular date onwards. <b>Note:</b> This field appears when you select the <b>Date</b> option from the <b>Search By</b> list.	No
Effective End Date	Used to search exchange rates which are effective till a particular date. <b>Note:</b> This field appears when you select the <b>Date</b> option from the <b>Search By</b> list.	No
Exchange Rate Source	Used to search exchange rates which are received from a particular source. <b>Note:</b> This field appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Exchange Rate ID	Displays the exchange rate ID. <b>Note:</b> It has a link. On clicking the link, the <b>Exchange Rate</b> screen appears with the details of the respective exchange rate.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Division	Indicates the division for which the exchange rate is defined. <b>Note:</b> The data does not appear in this column when the exchange rate is a global exchange rate.
Exchange Rate Source	Indicates the source from where the exchange rate is received.

Column Name	Column Description
	<b>Note:</b> This column appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Conversion Type	Indicates the conversion type of the exchange rate.
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective. <b>Note:</b> This column appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective. <b>Note:</b> This column appears when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective. <b>Note:</b> This column appears when you select the <b>Date</b> option from the <b>Search By</b> list.
Effective End Date	Displays the date till when the exchange rate is effective. <b>Note:</b> This column appears when you select the <b>Date</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.
Inverse Rate	Displays the reverse exchange rate.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Add/Edit Exchange Rate</b> screen appears where you can edit the details of the exchange rate.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the exchange rate.

**Note:**

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

Exchange Rate	Effective Start Date and Time	Effective End Date and Time
RT1	01-01-2014 12:00:00 PM	-
RT2	02-01-2014 12:00:00 PM	-
RT3	03-01-2014 12:00:00 PM	-

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

Search Criteria	Search Results
Effective Start Date and Time: 01-01-2014 12:00:00 PM	All three exchange rates - RT1, RT2, and RT3 - will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM	RT1 will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM	RT1 and RT2 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM	RT2 and RT3 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM	RT2 will appear in the search results.
Effective Start Date and Time: 03-01-2014 12:00:00 PM	RT3 will appear in the search results.

# Searching for an Exchange Rate

**Prerequisites**

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application

- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

**Procedure**

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.  
The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and time based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.  
A list of exchange rates that meet the search criteria appears in the **Search Results** section.

## Defining an Exchange Rate

**Prerequisites**

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

**Procedure**

To define an exchange rate:

- 1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
- 2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
- 3. Click the **Add** option from the **Exchange Rate** sub-menu.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining an exchange rate.	Not applicable
From Currency	Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency.	Yes
To Currency	Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency.	Yes
Conversion Type	Used to indicate the conversion type for the exchange rate.	Yes
Division	Used to indicate the division for which you want to define the exchange rate.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. You must leave this field blank while defining a global exchange rate.	<b>Note:</b> This field is required when you are defining a division-specific exchange rate.
Exchange Rate Source	Used to indicate the source from where the exchange rate is received.	No
	<b>Note:</b> This field appears when you are defining a date and time based exchange rate.	
Effective Start Date/ Time	Used to specify the date and time from when the exchange rate is effective.	Yes
	<b>Note:</b> This field appears when you are defining a date and time based exchange rate. By default, the time is set to 12:00 AM. You can change the time, if required.	
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The effective end date and time cannot be earlier than the effective start date and time.  You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time.  This field appears when you are defining a date and time based exchange rate.  By default, the time is set to 12:00 AM. You can change the time, if required.	<b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Used to specify the date from when the exchange rate is effective.  <b>Note:</b> This field appears when you are defining a date based exchange rate.	Yes
Effective End Date	Used to specify the date till when the exchange rate is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.  You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date.  This field appears when you are defining a date based exchange rate.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.  <b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).	Yes
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

- 4. Enter the required details in the **Add/Edit Exchange Rate** screen.
- 5. Define characteristics for the exchange rate, if required.

**Note:** You can define characteristics when you are defining a date and time based exchange rate.

- 6. Click **Save**.

The exchange rate is defined in the system.

**Note:** If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

**Related Topics**

Exchange Rate screen	<a href="#">Exchange Rate (Used for Searching)</a> on page 888
Search Exchange Rate zone	<a href="#">Search Exchange Rate</a> on page 889
How to define a characteristic for an exchange rate	<a href="#">Defining a Characteristic for an Exchange Rate</a> on page 896
How to set the C1_EXCHRATE feature configuration	<a href="#">Setting the C1_EXCHRATE Feature Configuration</a> on page 4338

**Defining a Characteristic for an Exchange Rate**

**Prerequisites**

To define a characteristic for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

**Procedure**

To define a characteristic for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the exchange rate.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Exchange Rate</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.

**Note:** The **Characteristics** section appears when you are defining or editing a date and time based exchange rate.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the exchange rate, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the exchange rate, click the **Delete** (🗑️) icon corresponding to the characteristic.

**Related Topics**

## Editing an Exchange Rate

**Procedure**

To edit an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the exchange rate whose details you want to edit.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exchange Rate ID	Displays the exchange rate ID.	Not applicable
Business Object	Indicates the business object used while defining an exchange rate.	Not applicable
From Currency	Indicates the currency which is translated. In other words, it is the source currency.	Not applicable
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.	Not applicable
Conversion Type	Indicates the conversion type of the exchange rate.	Not applicable
Division	Indicates the division for which the exchange rate is defined.	Not applicable
	<b>Note:</b> The data does not appear corresponding to this field when the exchange rate is a global exchange rate.	
Exchange Rate Source	Indicates the source from where the exchange rate is received.	Not applicable
	<b>Note:</b> This field appears when you are editing a date and time based exchange rate.	

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date/ Time	Displays the date and time from when the exchange rate is effective.	Not applicable
	<b>Note:</b> This field appears when you are editing a date and time based exchange rate.	
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective.	Yes (Conditional)
	<b>Note:</b> The effective end date and time cannot be earlier than the effective start date and time. This field appears when you are editing a date and time based exchange rate.	<b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
	This field is non-editable when you are editing a date and time based global exchange rate. This is because a global exchange rate does not have an end date and time.	
Effective Start Date	Displays the date from when the exchange rate is effective.	Not applicable
	<b>Note:</b> This field appears when you are editing a date based exchange rate.	
Effective End Date	Used to specify the date till when the exchange rate is effective.	Yes (Conditional)
	<b>Note:</b> The effective end date cannot be earlier than the effective start date. This field appears when you are editing a date based exchange rate.	<b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
	This field is non-editable when you are editing a date based global exchange rate. This is because a global exchange rate does not have an end date.	
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes
	<b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).	
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can click the **Edit** button in the **Exchange Rate** zone to edit the details of the exchange rate.

3. Modify the required details in the **Add/Edit Exchange Rate** screen.

4. Define, edit, or remove characteristics of the exchange rate, if required.

**Note:** The **Characteristics** section appears when you are editing a date and time based exchange rate.

5. Click **Save**.  
The changes made to the exchange rate are saved.

## Deleting an Exchange Rate

**Procedure**

To delete an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the exchange rate that you want to delete.  
A message appears confirming whether you want to delete the exchange rate.

**Tip:** Alternatively, you can click the **Delete** button in the **Exchange Rate** zone to delete the exchange rate.

3. Click **OK**.  
The exchange rate is deleted.

## Exchange Rate (Used for Viewing)

The **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

It consists of the following tabs:

- [Exchange Rate - Main](#) on page 900
- [Exchange Rate - Log](#) on page 901

## Exchange Rate - Main

The **Main** tab displays information about the exchange rate. It contains the following zones:

- [Exchange Rate](#) on page 900

### Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- **Main** - This section provides basic information about the exchange rate. It contains the following fields:

Field Name	Field Description
Exchange Rate ID	Displays the exchange rate ID.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Conversion Type	Indicates the conversion type of the exchange rate.
Division	Indicates the division for which the exchange rate is defined.
	<b>Note:</b> The data does not appear corresponding to this field when the exchange rate is a global exchange rate.  It has a link. On clicking the link, the <b>Division</b> screen appears with the details of the respective division.
Exchange Rate Source	Indicates the source from where the exchange rate is received.
	<b>Note:</b> This field appears when you are viewing the details of a date and time based exchange rate.
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.
	<b>Note:</b> This field appears when you are viewing the details of a date and time based exchange rate.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.
	<b>Note:</b> This field appears when you are viewing the details of a date and time based exchange rate.  The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.
	<b>Note:</b> This field appears when you are viewing the details of a date based exchange rate.
Effective End Date	Displays the date till when the exchange rate is effective.

Field Name	Field Description
	<b>Note:</b> This field appears when you are viewing the details of a date based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.

- **Characteristics** - This section lists the characteristics of the exchange rate. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the exchange rate.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

**Note:** The **Characteristics** section appears when you are viewing the details of a date and time based exchange rate.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the exchange rate.
Delete	Used to delete the exchange rate.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the exchange rate is created.

**Related Topics**

How to delete an exchange rate	<a href="#">Deleting an Exchange Rate</a> on page 899

## Exchange Rate - Log

The **Log** tab contains the following zone:

- [Exchange Rate Log](#) on page 902

## Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the exchange rate.
Details	Displays the details about the action performed on the exchange rate.
User	Indicates the user who has performed the action on the exchange rate.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the exchange rate.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status was changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle.

## Viewing the Exchange Rate Details

### Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange rate whose details you want to view.

The **Exchange Rate** screen appears. It contains the following zones:

- **Exchange Rate** - Displays the details of the exchange rate.
- **Exchange Rate Log** - Lists the complete trail of actions performed on the exchange rate.

3. View the details of the exchange rate in the **Exchange Rate** zone.
4. View the log of the exchange rate in the **Exchange Rate Log** zone.

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 950.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#) on page 911
- [Transaction Disaggregation](#) on page 936
- [Transaction Cancellation](#) on page 944
- [Transaction Rollback](#) on page 948

## Prerequisites

---

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item -division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1\_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE\_NUMBER lookup field
- Create an algorithm of the **C1\_RTCL\_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- [Setting the C1\\_RLENG Feature Configuration](#) on page 4365
- [Setting the C1-TXNDMYID Feature Configuration](#) on page 4366
- [Setting the C1\\_PPARM\\_FLG Feature Configuration](#) on page 4359
- [Setting the C1\\_FM Feature Configuration](#) on page 4345

## Transaction Rating Before Billing

---

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** - In this approach, you can use either of the following ways:
  - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
  - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** - In this approach, you can use either of the following ways:
  - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
  - b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. **Ignore the Transaction Leg for Billing** - In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

**Note:**  
Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups - Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created when you attach an algorithm of the **C1\_RTCL\_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to the rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1, T2-A1P1PG1-PA1	RC1	$300 \times 0.1 = 30$ , $200 \times 0.1 = 20$	$30 + 20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1, T2-A1P1PG1-PA1	RC2	$300 \times 0.2 = 60$ , $200 \times 0.2 = 40$	$60 + 40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
							of the rate components are same.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
							the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
A3P1PG1- PA3- Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	$200 * 0.3 = 60,$ $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

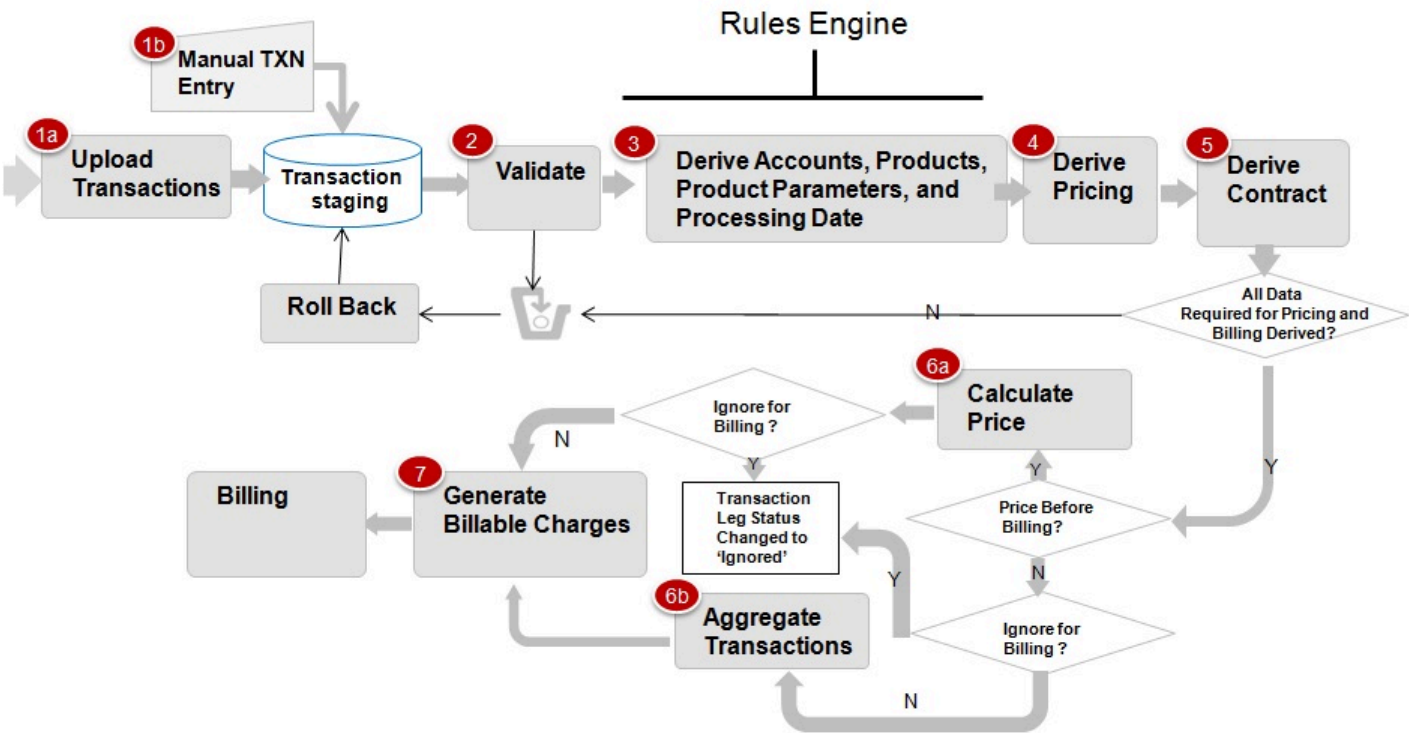

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

## Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 912
- [Transaction Validation and Initial Price Item Determination \(Specific to Financial Services Domain\)](#) on page 914
- [Price Item Pricing Verification](#) on page 923
- [Aggregation](#) on page 927
- [Clean Up](#) on page 930

The following figure graphically explains the transaction aggregation process:

## Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No

Parameter Name	Description	Mandatory (Yes or No)
Checksum Validation Required	<p>Used to indicate whether the following should be validated:</p> <ul style="list-style-type: none"> <li>The number of transaction records in the file matches the total transaction records in the header.</li> <li>The sum of transaction amount matches the total transaction amount in the header.</li> <li>The sum of transaction volume matches the total transaction volume in the header.</li> </ul> <p>The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Duplicate Check Required	<p>Used to indicate whether the following should be validated:</p> <ul style="list-style-type: none"> <li>File with the same header date and external header ID is not available in the system.</li> </ul> <p>The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> The duplicate check is done only against the transaction feeds which are in the <b>Validated (VALID)</b> status and not against the transaction feeds which are in the <b>Uploaded (UPLD)</b> status.</p>	No
Allow Positive Transaction Volume in Header	<p>Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>Y</b>.</p>	Yes
Allow Negative Transaction Volume in Header	<p>Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>N</b>.</p>	Yes
Allow Zero Transaction Volume in Header	<p>Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>N</b>.</p>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain)

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
  - Transaction source is defined in the system.
  - Transaction record type is defined for the transaction source in the system.
  - Division and currencies are defined in the system.
  - The account with the specified account identifier, account identifier type and division exists in the system.

**Note:** This validation is done when the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

**Note:** The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to BATCH\_DT, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to TXN\_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT\_NO1\_Val - Account 1
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT\_NO1\_Val, DIVISION1\_VAL and PRODUCT1\_1\_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT\_NO1\_Val set to Account 1, DIVISION1\_VAL set to D1, PRODUCT1\_1\_Val set to Price Item X, and PRODUCT1\_2\_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - US
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - US
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1

- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - UK
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - UK
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD
- ACCT\_NO2\_Val - Account B
- DIVISION2\_VAL - D2
- PRODUCT2\_1\_Val - Price Item A
- PCD2\_1\_1\_VAL - Country
- PVL2\_1\_1\_VAL - US
- PCD2\_1\_2\_VAL - Currency
- PVL2\_1\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

Charges Borne By	Division to which the account belongs...	Price Item	Country	Currency
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 1031. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE\_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, ....	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type

Output Parameter	Naming Convention	Example	Description
			corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, ...	Used to indicate the price item to which the transaction must be mapped.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
Price Item Column Name	PRODUCTX_Y_Col	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
TOU	TOUX_Y_Val	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination.  <b>Note:</b> This output parameter appears when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
TOU Column Name	TOUX_Y_Col	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked.  <b>Note:</b> This output parameter appears when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.

Output Parameter	Naming Convention	Example	Description
<b>Note:</b> At present, the system does not support the Parameter Code Column output parameter.	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		<b>Note:</b> This output parameter appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  You must not specify any special character except underscore ( _ ) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
Parameter Value	PVLX_Y_Z_VAL	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		<b>Note:</b> This output parameter appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
Parameter Value Column Name	PVLX_Y_Z_COL	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		<b>Note:</b> This output parameter appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
Processing Date Type	PRCS_DTX_Y_TYP	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:
	<b>Note:</b> Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
			<ul style="list-style-type: none"><li>• <b>TXN_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date.</li><li>• <b>Batch_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.</li></ul> <p><b>Note:</b> Based on the <b>Processing Date for Transaction Feed Management</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_TYP output parameter. In other words, the PRCS_DTX_Y_TYP output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p>
Processing Date	PRCS_DTX_Y_VAL	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ....	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
			<b>Note:</b>  The custom date must be a date other than the transaction or batch business date.  Based on the <b>Processing Date for Transaction Feed Management</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.
Ignore Transaction	IGNORE_SW		Used to ignore transactions based on the transaction attributes. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Parameters	Item
T2	A1	D1	P1	-	Country - US, Currency - USD	
T2	A2	D2	P2	USD	-	
T3	A1	D1	P3	-	Country - Germany, Currency - USD	

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

- Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:
  - Account A, Price Item X, Country - US, Currency - USD
  - Account A, Price Item Y, Country - Germany, Currency - USD
  - Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.	No

Parameter Name	Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the <b>C1-TXNIP</b> batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p>	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	<p>Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to N.</p>	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1\_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

**Note:**

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1\_PRDR\_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_PRDR\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

## Price Item Pricing Verification

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the effective pricing is not</p>

If the Multi Parameter Based Pricing feature is...	Then...
	available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b> .
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see <a href="#">Multi Parameter Based Pricing</a> on page 201. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>

**Note:**

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.

- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 904.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
	<b>Note:</b> By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI\_PRC\_AGRD
- CI\_PRC\_PL
- CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Aggregation**

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the SQI values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>
Enabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate</b></p>

If the Multi Parameter Based Pricing feature is...	Then...
	<p><b>Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p>
	<p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item - division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 904.

**Note:** If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQLs are not defined for the price item - division combination, the transaction aggregation rule is not defined for the SQL, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>Yes</b> and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding billable charge and calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The corresponding calculation lines of the transaction leg are deleted.

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
Ignore Transaction is set to No, Aggregate Transaction is set to Yes, and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The corresponding billable charge and calculation lines are not deleted.
Ignore Transaction is set to No, Aggregate Transaction is set to No, and Rating Criteria is set to Do Not Rate Transactions	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error**

**(EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The SQIs are recalculated in the billable charge.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The aggregated billable charge is deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The aggregated billable charge and the corresponding calculation lines are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The aggregated billable charge is deleted.

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** - During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** - During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.	Yes (Conditional)
	<b>Note:</b> This parameter should not be used during the disaggregation process.	<b>Note:</b> This parameter is required when you set the request type to <b>CNCL</b> .
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.	No
	<b>Note:</b> This parameter should not be used during the cancellation and disaggregation processes.	
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.	No
	<b>Note:</b> This parameter should not be used during the cancellation process.	
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.	No

Parameter Name	Description	Mandatory (Yes or No)
	<b>Note:</b> This parameter should be used only during the disaggregation process.	
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.  <b>Note:</b> This parameter should be used only during the disaggregation process.	No
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	Yes (Conditional)  <b>Note:</b> This parameter is required when you set the request type to <b>DISAGG</b> .
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"><li>• CNCL</li><li>• EROR</li><li>• DISAGG</li></ul>	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 952
How to set the C1_FM feature configuration	<a href="#">Setting the C1_FM Feature Configuration</a> on page 4345

# Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

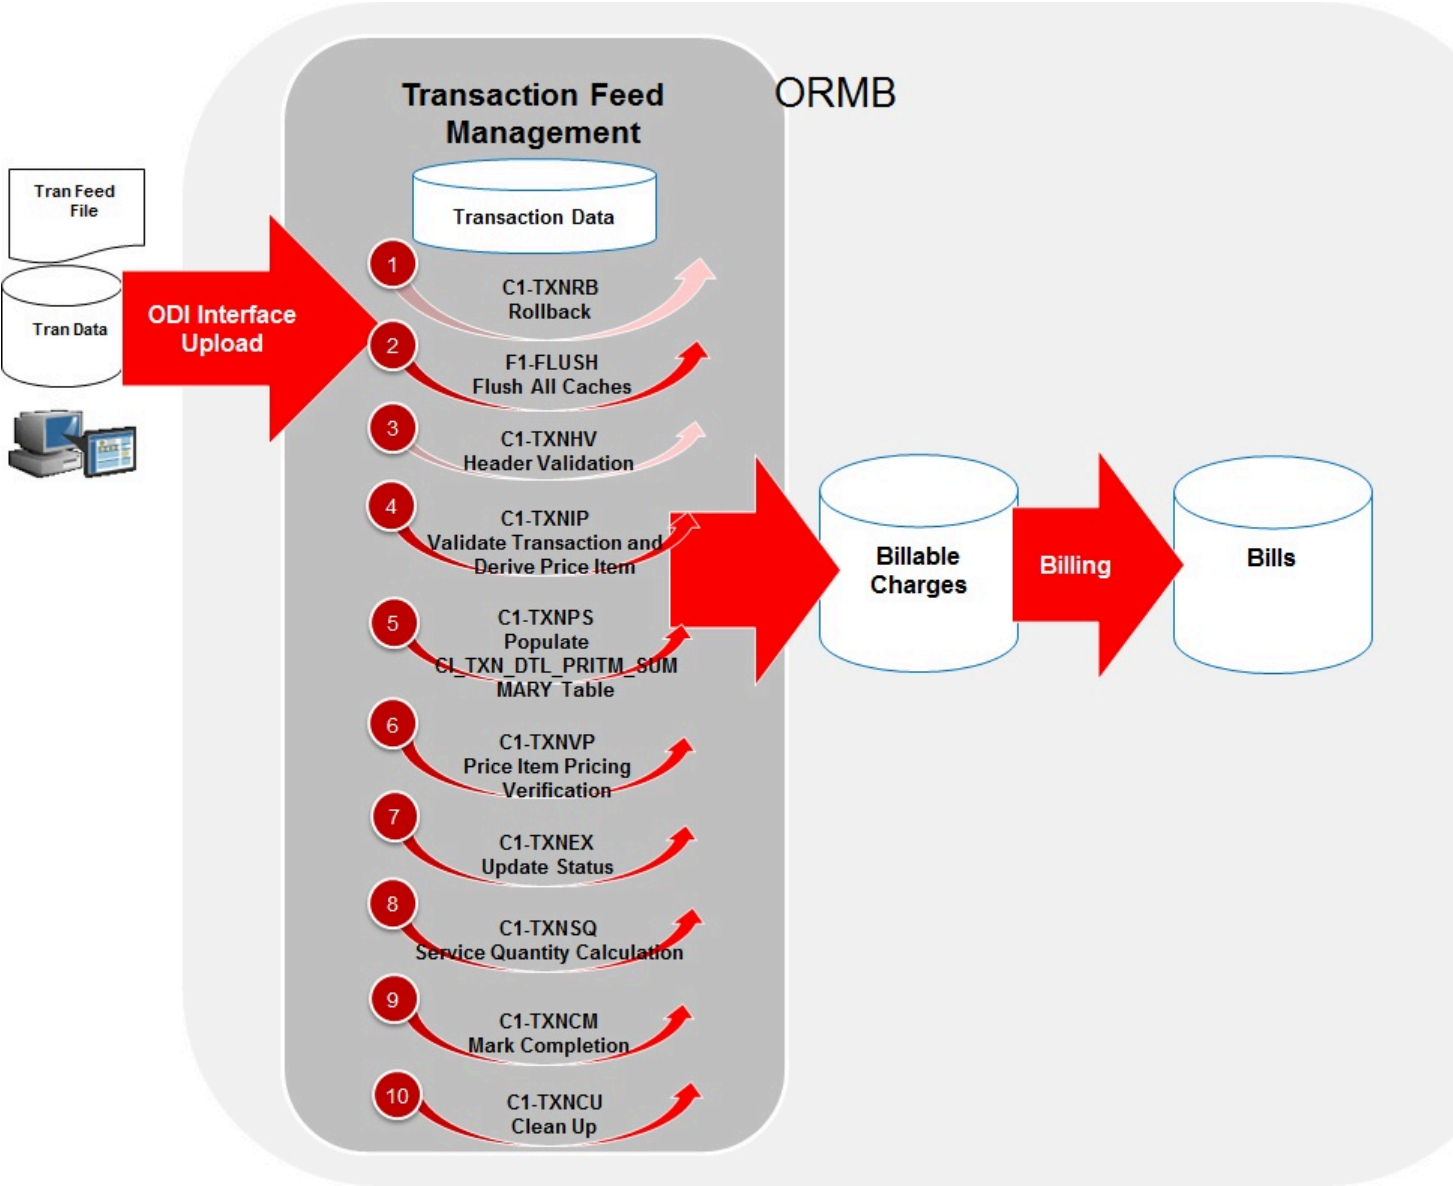

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)

6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI\_TXN\_DTL\_PRITM\_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

**Note:**

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
  - CI\_PRC\_AGRD
  - CI\_PRC\_PL
  - CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

# Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI\_TXN\_DISAGG\_REQ table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.
The following values in the price item pricing assigned to an account is changed: <ul style="list-style-type: none"><li>• Effective Start Date</li><li>• Effective End Date</li><li>• Aggregation Schedule</li></ul>	A disaggregation request is created for the account.

If...	Then
<ul style="list-style-type: none"> <li>Ignore Transaction</li> <li>Aggregate Transaction</li> <li>Rating Criteria</li> <li>Price Item Parameter</li> </ul>	
A price item is assigned to a person	A disaggregation request is created for each account of the person and its child person.
The following values in the price item pricing assigned to a person is changed: <ul style="list-style-type: none"> <li>Effective Start Date</li> <li>Effective End Date</li> <li>Aggregation Schedule</li> <li>Ignore Transaction</li> <li>Aggregate Transaction</li> <li>Rating Criteria</li> <li>Price Item Parameter</li> </ul>	A disaggregation request is created for each account of the person and its child person.
A price list is assigned to an account.	A disaggregation request is created for the account.
The following values in the price list assigned to an account is changed: <ul style="list-style-type: none"> <li>Effective Start Date</li> <li>Effective End Date</li> <li>Priority</li> <li>Price List Inheritance</li> </ul>	A disaggregation request is created for the account.
A price list is assigned to a person.	A disaggregation request is created for each account of the person and its child person.
The following values in the price list assigned to a person is changed: <ul style="list-style-type: none"> <li>Effective Start Date</li> <li>Effective End Date</li> <li>Priority</li> <li>Price List Inheritance</li> </ul>	A disaggregation request is created for each account of the person and its child person.

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CI\_TXN\_DISAGG\_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.

- The following details in the price item pricing assigned to a price list is changed:
  - Variance Parameter
  - Effective Start Date
  - Effective End Date
  - Aggregation Schedule
  - Ignore Transaction
  - Rating Criteria
  - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:** The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI\_TXN\_DISAGG\_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No
Disaggregate Transactions From Date	<p>Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.</p> <p><b>Note:</b></p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the <b>Disaggregate Transactions From Date</b> parameter.</p>	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes

Parameter Name	Description	Mandatory (Yes or No)
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the <b>Canceled</b> status during the disaggregation process. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
	<b>Note:</b> If you do not specify any value, by default, the parameter value is set to <b>N</b> .	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The corresponding transaction leg and calculation lines (if any) are deleted.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards.	Yes
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes

Parameter Name	Description	Mandatory (Yes or No)
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_DSAG\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_DSAG\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 930.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the CI\_TXN\_DISAGG\_REQ table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the <b>Pending Cancel</b> or <b>Frozen</b> status.	Yes
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to <b>COMPLETE</b> .	No
	<b>Note:</b> If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to <b>COMPLETE</b> when the canceled billable charges are excluded during the disaggregation process. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.  You must specify the same value for this parameter while executing the <b>Identify Transactions for Disaggregation (C1-IDENT)</b> and <b>Update Disaggregation Request Status (C1-DRSUA)</b> batches during the disaggregation process. Otherwise, erroneous results will occur.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

# Transaction Cancellation

---

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
A bill (with the <b>Pending</b> status) is already generated in the system	The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

When you cancel a transaction feed for which...	Then
	<p><b>Note:</b></p> <p>If a pending bill has a bill segment in the <b>Frozen</b> or <b>Pending Cancel</b> status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the <b>Cancel</b> status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> <li>Deletes all other bill segments which are not in the <b>Cancel</b> status.</li> <li>The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is deleted if the billable charge is in the <b>Billable</b> status and if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is not deleted or recalculated if the billable charge is in the <b>Cancelled</b> status.</li> <li>The billable charge corresponding to the bill segment which is in the <b>Cancel</b> status is cancelled if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds.</li> </ul> <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>The bill and their corresponding bill segments are deleted.</li> <li>The SQIs are recalculated in the corresponding billable charges.</li> <li>The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
A bill (with the <b>Complete</b> status) already exists in the system	The system does not allow you to cancel the transaction feed.
A bill (with the <b>Complete</b> status) has all bill segments in the <b>Cancelled</b> status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .
A billable charge (with the <b>Billable</b> status) exists in the system	The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

When you cancel a transaction feed for which...	Then
	<p><b>Note:</b></p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The SQIs are recalculated in the billable charge.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
A billable charge (with the <b>Cancelled</b> status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** - This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** - This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 930.
3. **Cancellation (C1-TXCNC)** - This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_CNCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_CNCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 952

# Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

- 1. Pending Bill Deletion (C1-DELBL)
- 2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
- 3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

## Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item - division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)

**Note:** You must execute the **Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)** batch when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)

**9. Mark Completion (C1-TXNCM)****10. Clean Up (C1-TXNCU)**

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the <b>Ignored</b> or <b>Error</b> status. The valid values are: <ul style="list-style-type: none"> <li>IGNR</li> <li>EROR</li> </ul>	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.	
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

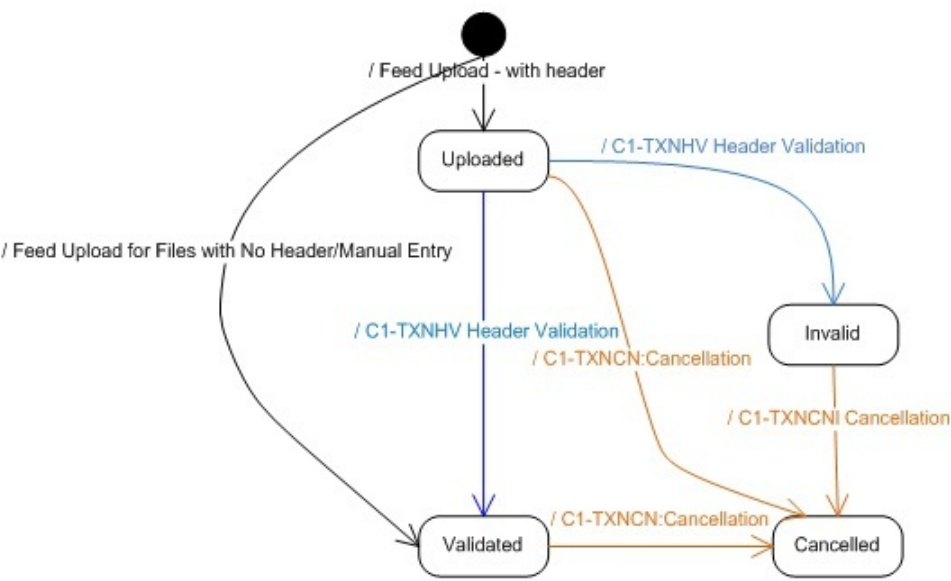

A sample preprocessing algorithm type named **C1\_ROBK\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_ROBK\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

# Feed Status Transition

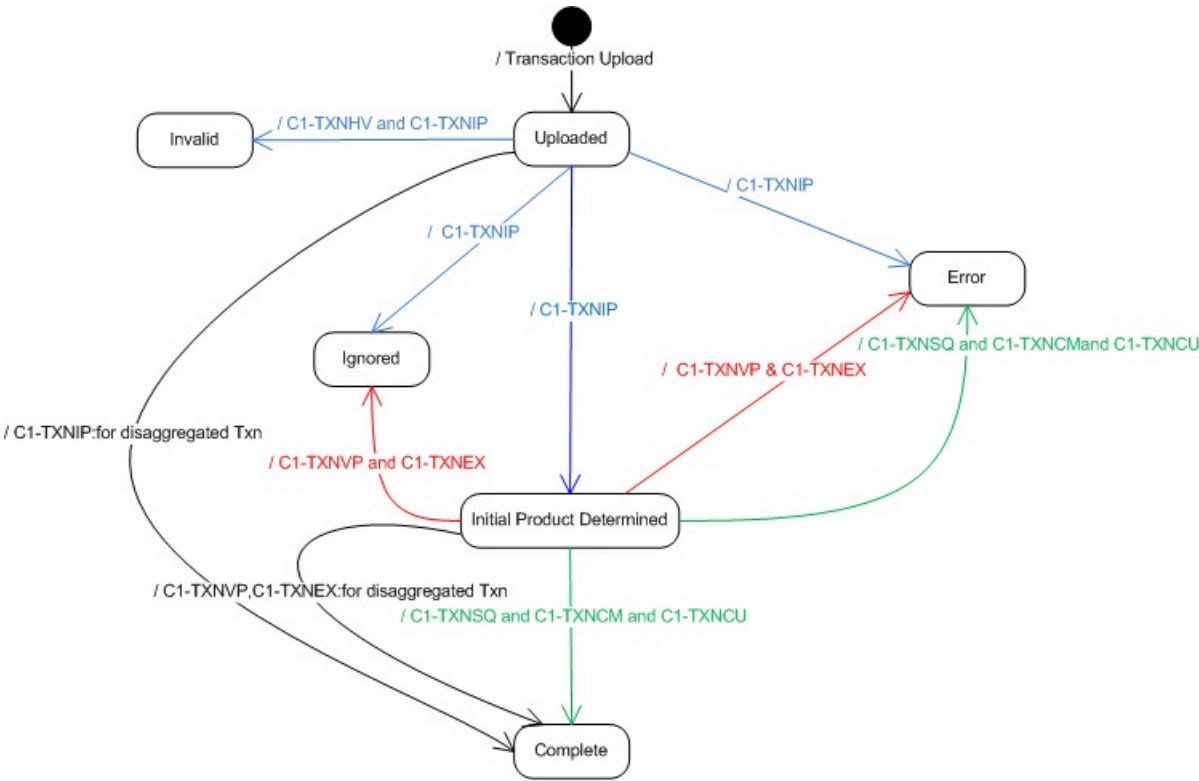

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

# Transaction Status Transition

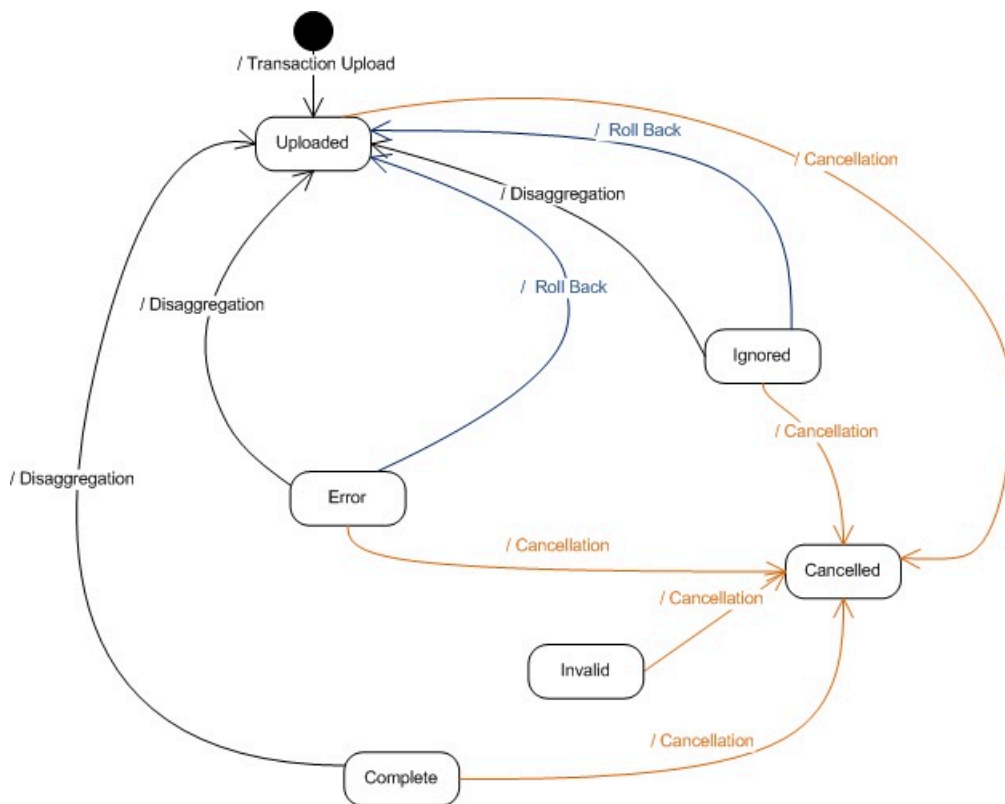

**Aggregation**

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

**Disaggregation, Rollback, and Cancellation**

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

## Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

**Note:** This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

**Note:** This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

## Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
		due to incomplete transaction data				
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when <b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing) INITIAL PRODUCT DETERMINED (when <b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing)
8	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED
9	C1-TXNVP	<b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
	and C1-TXNEX	for all transaction legs				
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product - division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

### **Transaction Rollback**

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

### **Transaction Cancellation**

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED,	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
			INVALID, or IGNORED			

**Transaction Disaggregation**

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which	UPLOADED	UPLOADED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
		were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.				
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

**Transaction Reaggregation**

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs - two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED  Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
		product was derived for the transaction.				Existing Legs: None
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs - two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs - two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED  Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product - division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED	COMPLETED, ERROR	ERROR	Derived Legs: ERROR  Existing Legs: No change in the status
			<b>Note:</b> There must be no legs for the transaction in the IGNORED status.			
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED  Existing Legs: No change in the status
			<b>Note:</b> There must be no legs for the transaction in the IGNORED status.			

# Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values

- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to specify the currency in which the transaction was performed.	Yes
	<b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	

Record Data	Description	Mandatory (Yes or No)
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"><li>Plus (+)</li><li>Minus (-)</li></ul>	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)
		<b>Note:</b> The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3, ..., UDF_CCY_10	Used to specify additional transaction currency.	Yes (Conditional)
	<b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	<b>Note:</b> The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2, ..., UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.	No
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	

## Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be:

Batch Name	Message Number	Error Message	Message Category	Possible Issues
				<ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Checksum Validation Required</b> parameter.</li> </ul>
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Duplicate Check Required</b> parameter.</li> </ul>
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Source</b> column.</li> </ul>
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The same file is uploaded multiple times in the system.</li> </ul>
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The data is not available in the required format.</li> </ul>
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The value available in the <b>Number of Transactions</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Volume</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	<p>The possible issues could be:</p>

Batch Name	Message Number	Error Message	Message Category	Possible Issues
				<ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Header ID</b> column.</li> </ul>
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Amount</b> column is less than or equal to zero.</li> </ul>
C1-TXNIP	102	{Chunk Size} field invalid	11001	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The value specified for the <b>Chunk Size</b> parameter is less than or equal to one.</li> </ul>

## Alert Notification for Transaction Feed Management

Oracle Revenue Management and Billing enables you to configure alert notification for the **Transaction Feed Management** feature. At present, the system supports the following two alert notifications:

- To Do Creation
- Email Notification

The objective of these notifications is to create an alert for the records which are in the **Ignored** or **Error** status. Once a To Do is created, it indicates the number of records which are in the **Ignored** or **Error** status. However, the email notification provides the error summary statistics.

A new batch named **C1-ERRAL** is introduced in this release. While executing the **C1-ERRAL** batch, you need to set the **To Do Created For** parameter to **TFM**. In addition, you need to specify the transaction status (for example, **EROR** or **IGNR**) for which you want to create an alert notification. On executing the **C1-ERRAL** batch, the system creates a To Do using the **C1-TXNER** To Do type.

The **C1-ERRAL** batch must be executed only after all the transaction feed management batches are executed successfully. If the **C1-ERRAL** batch is executed for the first time, the system considers all the transactions whose **CURR\_SYS\_PRS\_DT** is earlier than or equal to the batch business date. However, in the subsequent execution, the system considers only those transactions whose **CURR\_SYS\_PRS\_DT** is later than the last To Do generation date and earlier than or equal to the batch business date.

On clicking the To Do notification in the **To Do List** screen, you can view the error records in the **Feed Management Dashboard** screen. Note that the system will not create a new To Do when the To Do for the same drill key combination already exists in the **Open** status.

To create an email notification, you need to attach an algorithm which is created using the **C1-TFMERREML** algorithm type to the **To Do Post-Processing** system event of the **C1-TXNER** To Do type. On creating a To Do, the batch creates an email outbound message which contains the error summary statistics.

## Feed Management Dashboard

---

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics of each calculation line

The **Feed Management Dashboard** screen contains the following zones:

- [Search](#) on page 995
- [Division Level Information](#) on page 1001
- [Transaction Level Information](#) on page 1002
- [Transaction Leg Information](#) on page 1004
- [Transaction Leg Service Quantity](#) on page 1005
- [Transaction Leg Calculation Lines](#) on page 1005
- [Transaction Leg Calc Line Characteristics](#) on page 1007

## Search

---

The **Search** zone allows you to search for a transaction feed using various search criteria. It also allows you to view the details of a transaction feed which is already uploaded in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the transaction volume details of a feed at	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	the division level or transaction level. The valid values are:	<b>Note:</b> This field is required for searching the transaction volume details at the division or transaction level.
	<ul style="list-style-type: none"> <li>• <b>Feed Level Details</b> - Used to indicate that you want to search for the transaction volume details of a feed at the division level.</li> <li>• <b>Transaction Level Details</b> - Used to indicate that you want to search for the transaction volume details of a feed at the transaction level.</li> </ul>	
	<b>Note:</b> By default, the <b>Feed Level Details</b> option is selected.	
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Account Identifier Type	Used to indicate the identifier type based on which you want to search transaction feed details of an account.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	<b>Note:</b> If you enter the primary account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to search transaction feed for a particular account.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	<b>Note:</b> If you select the account identifier type as a search criteria, you have to enter the primary account identifier.
Transaction Record Type	Used to search transaction feeds for transactions with a particular record type.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Transaction Source	Used to search transaction feeds received from a particular transaction source.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Transaction ID	Used to search for a particular transaction feed.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Transaction Date From	Used to search transaction feeds for transactions which are performed on or later than the specified date.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	<b>Note:</b> This field is required while searching for transactions which are in the <b>Error</b> status.
External Reference Number	Used to search transaction feed with a particular external reference number.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Transaction Date To	Used to search transaction feeds for transactions which are performed on or earlier than the specified date.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.  If you do not specify the date in the <b>Transaction Date To</b> field, the system by default sets it to the system date.	
Transaction Status	Used to search transaction feeds for transactions which are in a particular status. The valid values are: <ul style="list-style-type: none"><li>Cancelled</li><li>Completed</li><li>Error</li><li>Ignored</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Initial Product Derived</li><li>Invalid</li><li>Uploaded</li></ul>	
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Division	Used to search transaction feeds that belong to a particular division.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.  You can view only those divisions to which you have access in the <b>Division</b> list.	
Error Code/Message	Used to search transaction feeds for transactions which are in the <b>Error</b> status and with a particular error message or error code.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	
Error Category	Used to search transaction feeds for transactions which are in the <b>Error</b> status and which belong to a particular error category.	No
	<b>Note:</b> This field appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.	

**Note:** You must specify at least one search criterion while searching for a transaction feed.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID.
	<b>Note:</b> The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.

Column Name	Column Description
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> <li>• <b>Uploaded</b> - Indicates that the transaction feed is uploaded.</li> <li>• <b>Validated</b> - Indicates that the file header is validated.</li> <li>• <b>Cancelled</b> - Indicates that the transaction feed is cancelled.</li> <li>• <b>Invalid</b> - Indicates that the file header validation failed.</li> </ul>
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Total Amount	Displays the total amount of the transaction feeds.
Uploaded	Displays the total transactions which are uploaded in the system.
Price Item	Displays the total transactions which are validated and for which price items are determined in the system.
Completed	Displays the total transactions for which the billable charges are created and completed in the system.
Error Message	Displays the total transactions which could not pass through the validation, price item determination, or billable charge creation process. <p><b>Note:</b> If a transaction has only one transaction leg, the error message is displayed from the <b>CI_TXN_DETAIL_EXCP</b> table instead of the <b>CI_TXN_DETAIL</b> table. The objective is that the user should be able to view the transaction leg level error instead of the transaction level error.</p>
Cancelled	Displays the total transactions which are cancelled in the system.
Ignored	Displays the total transactions which are ignored in the system.
Invalid	Displays the total transactions which are invalid.
Transactions Archived	Displays the total transaction volume which is archived in the system.
Transaction ID	Displays the transaction record number for which the transaction information is saved in the system. <p><b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.</p>
External Reference Number	Displays the external reference number of the transaction. <p><b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.</p>
Division	Indicates the division to which the transaction belongs. <p><b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.</p>
Transaction Record Type	Displays the record type of the transaction.

Column Name	Column Description
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Transaction Date	Displays the date when the transaction is performed.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Processing Date	Displays the date when the transaction is processed in the system.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Account Information	Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (.).
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Account Identifier Type	Indicates the identifier type based on which the transaction is created for the account.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Primary Account Identifier	Indicates the account for which the transaction is performed.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Transaction Volume	Displays the total transaction volume of the account.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Transaction Amount	Displays the total transaction amount of the account.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Customer Reference Number	Indicates the customer who has performed the transaction.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.

Column Name	Column Description
Transaction Status	Indicates the status of the transaction.
	<b>Note:</b> This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Rule	Indicates the rule which was met while determining the initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> window appears where you can view the details of the rule that was applied while determining the initial price item for the transaction.  This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.
Transaction Information	Displays the concatenated string of information about the transaction separated by a comma (,).
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Detail View</b> window appears where you can view the details of the respective transaction.  This column appears when you select the <b>Transaction Level Details</b> option from the <b>Search By</b> field.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search Results** section, the **Division Level Information** zone or the **Transaction Leg Information** zone appears depending on whether you select the **Feed Level Details** or the **Transaction Level Details** option from the **Search By** field respectively.

## Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
Price Item Determined	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you select the **Feed Level Details** option from the **Search By** field and click the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search Results** section of the **Search** zone.

**Related Topics**

How to view the division level details of a transaction feed	<a href="#">Viewing Division Level Details of a Transaction Feed</a> on page 1008

## Transaction Level Information

The **Transaction Level Information** zone lists the transactions in a feed which belong to a particular division. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.

Column Name	Column Description
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Information	Displays the account for which the transaction is performed.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screens appears where you can view the details of the respective account.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction is performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the respective rule.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the respective transaction.

By default, the **Transaction Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a division in the **Division Level Information** zone.

On clicking the **Broadcast** (📡) icon corresponding to a transaction, the **Transaction Leg Information** zone appears where you can view a list of transaction legs of a particular transaction.

You can filter the list using various search criteria (such as, **External Reference Number**, **Primary Account Identifier**, **Account Identifier Type**, **Transaction Source**, **Transaction Record Type**, and **Transaction Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon available in the upper right corner of this zone.

## Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Display Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Primary Account Identifier	Indicates the account which will bear the charges for the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Price Item	Indicates the price item to which the transaction is mapped.
	<b>Note:</b> It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Billable Charge ID	Indicates the billable charge which is created for the transaction leg.
	<b>Note:</b> The data appears in this column when the billable charge is created for the transaction leg. It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the billable charge.
Transaction Calculation ID	Displays the transaction calculation ID.
	<b>Note:</b> The data appears in this column when the transaction leg is rated before billing.
Initial Price Item Code	Indicates the initial price item to which the transaction was mapped.
Bill ID	Indicates the bill in which the transaction leg of the billable charge is included for billing.
Bill Segment ID	Indicates the bill segment to which the bill belongs.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction in the **Transaction Level Information** zone.

## Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item-division combination.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

**Related Topics**

## Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line is created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate Information	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line is then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

**Related Topics**

## Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics of each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

## Searching for a Transaction Feed

### Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Feed Management Dashboard**.  
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

## Viewing Division Level Details of a Transaction Feed

---

### Procedure

To view the division level details of a transaction feed:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the division level details of a transaction feed.
2. Click **Search**.  
The search results appear based on the specified search criteria.
3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction feed whose *division* level details you want to view.  
The **Division Level Information** zone appears.
4. View the transaction volume details of each division in the **Division Level Information** zone.

## Viewing Transactions that Belong to a Division

---

### Procedure

To view the transactions that belong to a division:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the transactions that belong to a division.
2. Click **Search**.  
The search results appear based on the specified search criteria.
3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction feed whose *details* you want to view.  
The **Division Level Information** zone appears.
4. Click the **Broadcast** (📡) icon corresponding to the division whose transaction details you want to view.  
The **Transaction Level Information** zone appears.
5. View the list of the transactions that belong to the division in the **Transaction Level Information** zone.

<b>Transaction Leg Calc Line Characteristics</b> zone	<a href="#">Transaction Leg Calc Line Characteristics</a> on page 1007

## Viewing Characteristics of a Calculation Line

**Procedure**

To view the characteristics of a calculation line:

- 1. Ensure that the **Transaction Leg Information** zone is expanded in the **Feed Management Dashboard** screen.
- 2. Click the **Broadcast** (📡) icon corresponding to the transaction leg (which is rated before billing) whose calculation line characteristics you want to view.  
The **Transaction Leg Service Quantity**, **Transaction Leg Calculation Lines**, and **Transaction Leg Calc Line Characteristics** zones appear.
- 3. View the characteristics of each calculation line in the **Transaction Leg Calc Line Characteristics** zone.

## Transaction Details

The **Transaction Details** screen allows you to search for a transaction using various search criteria. It also allows you to add and copy an existing transaction. It contains the following zones:

- [Search](#) on page 1011
- [Transaction Legs](#) on page 1015
- [Transaction Error Messages](#) on page 1017

## Search

The **Search** zone allows you to search for a transaction using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search transactions based on their current status. The valid values are: <ul style="list-style-type: none"><li>• <b>Uploaded</b> - Used to search transactions which are uploaded in the system.</li><li>• <b>Initial Price Item Determined</b> - Used to search transactions for which a price item is determined.</li><li>• <b>Ignored</b> - Used to search transactions which are ignored in the system.</li></ul>	Yes (Conditional)
		<b>Note:</b> This field is required for searching transactions which are in a particular status.

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li><b>Error</b> - Used to search transactions with an error.</li> <li><b>Cancelled</b> - Used to search for transactions which are cancelled.</li> <li><b>Completed</b> - Used to search for transactions whose billable charge is completed.</li> <li><b>Invalid</b> - Used to search for invalid transactions.</li> </ul>	
	<b>Note:</b> By default the <b>Uploaded</b> option is selected.	
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	Yes (Conditional)
		<b>Note:</b> If you enter the primary account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to search transactions which are performed for a particular account.	Yes (Conditional)
		<b>Note:</b> If you select the account identifier type as a search criteria, you have to enter the primary account identifier.
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
	<b>Note:</b> This field appears when you select the <b>Uploaded</b> , <b>Ignored</b> , <b>Error</b> , <b>Cancelled</b> , or <b>Invalid</b> options from the <b>Search By</b> field.	
Price Item	Used to search transactions which are mapped to a particular price item.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Initial Price Item Determined</b> option from the <b>Search By</b> field.	
Billable Charge ID	Used to search transactions which are included in a particular billable charge. <b>Note:</b> This field appears when you select the <b>Completed</b> option from the <b>Search By</b> field.	No
Disaggregated	Used to indicate whether you want to search transactions which are disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a transaction.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Detail View</b> screen appears where you can view the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction is received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction is uploaded in the system. <b>Note:</b> This column appears when you select the <b>Uploaded, Initial Price Item Determined, Ignored, Error, Cancelled, or Invalid</b> options from the <b>Search By</b> list.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system. <b>Note:</b> This column appears when you select the <b>Uploaded, Ignored, Cancelled, or Invalid</b> options from the <b>Search By</b> list.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Displays the reference number of the customer for the particular transaction. <b>Note:</b> This column appears when you select the <b>Error</b> option from the <b>Search By</b> field.
Disaggregation Status	Indicates whether the transaction was disaggregated or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> </ul>

Column Name	Column Description
	<ul style="list-style-type: none"><li>No</li></ul>
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"><li>Yes</li><li>No</li></ul>
	<b>Note:</b> This column appears when you select the <b>Uploaded</b> or <b>Cancelled</b> options from the <b>Search By</b> list.
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Error Message	Displays the reason why the validation, price item determination, or billable charge creation process failed.
	<b>Note:</b> This column appears when you select the <b>Error</b> , or <b>Invalid</b> options from the <b>Search By</b> list.
Account Information	Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (.). The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the respective rule.  This column appears when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , <b>Error</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Detail View</b> screen appears where you can view the details of the respective transaction.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📢) icon corresponding to a transaction in the **Search Results** section, the **Transaction Legs** or the **Transaction Error Messages** zone appears based on the status of the transaction.

**Note:** The **Broadcast** (📢) icon does not appear for transactions which are in the **Cancelled** status.

## Transaction Legs

The **Transaction Legs** zone allows you to view the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"><li>• Uploaded</li><li>• Initial Price Item Derived</li><li>• Ignored</li><li>• Error</li><li>• Cancelled</li><li>• Completed</li><li>• Invalid</li></ul>
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list and when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Final Price Item Code	Indicates the final price item to which the transaction is mapped.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Pricing Rule Information	
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> option from the <b>Search By</b> list and when the transaction is uploaded for the health care domain.

Column Name	Column Description
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Transaction Source	Displays the transaction source from where the transaction is received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction is uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Displays the reference number using which the error message is created for the transaction performed by particular customer.
	<b>Note:</b> This column appears only when you select the <b>Error</b> option from the <b>Search By</b> list.
Disaggregation Status	Indicates whether the transaction is disaggregated or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction is performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the total transaction volume.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence	Displays the sequence number of the transaction leg.
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed.

Column Name	Column Description
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , <b>Error</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Account Information	Displays the concatenated string of information about the account which bears the charges for the transaction separated by a comma (.). The string includes the account identifier type, account identifier, and division (to which the derived account belongs).
	<b>Note:</b> This column appears only when you select the <b>Initial Price Item Determined</b> , <b>Ignored</b> , <b>Error</b> , or <b>Completed</b> options from the <b>Search By</b> list.
Rule	Indicates the rule which was met while determining the initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the respective rule.  This column appears only when you select the <b>Ignored</b> , <b>Error</b> , or <b>Completed</b> options from the <b>Search By</b> list and when the transaction is uploaded for the financial services domain.
Transaction Information	Displays the concatenated string of information about the transaction separated by a comma (.).
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Detail View</b> screen appears where you can view the details of the respective transaction.

**Note:**

The **Transaction Legs** zone does not appear for transactions which are in the **Uploaded**, **Cancelled**, or **Invalid** status. However, the **Transaction Legs** zone appears for transactions which are in the **Uploaded** status and partially disaggregated.

**Transaction Error Messages**

The **Transaction Error Messages** zone allows you to view the reason why the transaction is in the **Error** or **Invalid** status. It contains the following column:

Column Name	Column Description
Error Message	Displays the reason why the transaction is in the <b>Error</b> or <b>Invalid</b> status.

**Note:** The **Transaction Error Messages** zone appears for transactions which are in the **Invalid** status only when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

# Searching for a Transaction

**Procedure**

To search for a transaction:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section.

# Viewing the Transaction Legs

**Procedure**

To view the legs of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose legs you want to view.  
  
The **Transaction Legs** zone appears.

Note:

The **Broadcast** (📡) icon appears corresponding to a transaction which is in the **Uploaded, Initial Price Item Determined, Ignored, Error, and Completed** status. This is because you can only view legs of an uploaded, initial price item determined, ignored, error, or completed transaction

You can only view the legs of an uploaded transaction which is partially disaggregated.

3. View the details of the transaction legs in the **Transaction Legs** zone.

**Related Topics**

For more information on...	See...
How to search for a transaction	<a href="#">Searching for a Transaction</a> on page 1018
<b>Transaction Legs</b> zone	<a href="#">Transaction Legs</a> on page 1015

## Viewing Error Messages

**Procedure**

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid** or **Error** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose error messages you want to view.  
The **Transaction Error Messages** zone appears.
3. View the error messages in the **Transaction Error Messages** zone.

Note:

The **Transaction Error Messages** zone appears for transactions which are in the **Invalid (INVL)** status only when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

## Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Details** screen.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction is received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction is performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to indicate the account for which the transaction is performed.	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction is performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional) <b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional) <b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	

Field Name	Field Description	Mandatory (Yes or No)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	

- 4. Enter the required details in the **Transaction Details** screen.
- 5. Click **Save**.

The transaction is added in the system.

**Note:**  
If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

**Related Topics**

## Copying a Transaction

Instead of creating a manual transaction from scratch, you can create a manual transaction using an existing transaction. This is possible through copying a transaction. On copying a transaction, the details including the division, account identifier type, primary account identifier, transaction source, transaction record type, external reference number, and customer reference number are also copied to the new transaction. You can then edit the details, if required.

**Prerequisites**

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

**Procedure**

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** or the **Transaction Information** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears.

**Note:** The fields are in the read-only mode.

3. Click the **Copy** button available in the lower right corner of this screen.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction is received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction is performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to indicate the account for which the transaction is performed.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction is performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No

Field Name	Field Description	Mandatory (Yes or No)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear when you select the transaction source and record type from the respective list.	

- 4. Enter the required details in the **Transaction Details** screen.
- 5. Click **Save**.  
The new transaction is added in the system.

# Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. It contains the following zone:

- [Search Transaction Source](#) on page 1025

## Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search for a particular transaction source.	No
Description	Used to search transaction sources having a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Transaction Source</b> screen appears where you can edit the details of the existing transaction source.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the transaction source.
	<b>Note:</b> You can delete a transaction source only when it is not yet used in the system.
Copy	On clicking the <b>Copy</b> (📋) icon, the <b>Transaction Source</b> screen appears where you can define a new transaction source using an existing transaction source.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon available in the upper right corner of this zone.

# Searching for a Transaction Source

**Procedure**

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.  
The **Transaction Source** screen appears.
3. Enter the search criteria in the **Search Transaction Source** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of transaction sources that meet the search criteria appears in the **Search Results** section.

# Defining a Transaction Source

**Prerequisites**

To define a transaction source, you should have:

- Account identifier types defined in the application

**Procedure**

To define a transaction source:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.  
The **Transaction Source** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Source** screen.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the <b>Transaction Source</b> field.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

4. Enter the required details in the **Transaction Source** screen.
5. Click **Save**.  
The transaction source is defined.

**Related Topics**

For more information on...	See...
Transaction Source screen	<a href="#">Transaction Source</a> on page 1025

## Editing a Transaction Source

**Prerequisites**

To edit a transaction source, you should have:

- Account identifier types defined in the application

**Procedure**

To edit a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- 3. Modify the required details in the **Transaction Source** screen.
- 4. Click **Save**.  
The changes made to the transaction source are saved.

**Related Topics**

For more information on...	See...
How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 1026

## Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. On copying a transaction source, the details including the description and account identifier type are also copied to the new transaction source. You can then edit the details, if required.

**Prerequisites**

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

**Procedure**

To copy a transaction source:

- 1. Search for the transaction source in the **Transaction Source** screen.
- 2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the <b>Transaction Source</b> field.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- 3. Enter the required details in the **Transaction Source** screen.
- 4. Click **Save**.  
The new transaction source is defined.

## Deleting a Transaction Source

### Procedure

To delete a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the transaction source that you want to delete.  
A message appears confirming whether you want to delete the transaction source.
3. Click **OK**.  
The transaction source is deleted.

**Note:** You can delete a transaction source only when it is not yet used in the system.

How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 1026

## Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

**Note:** At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 1030

## Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.
Rule Type	Indicates the rule type that is invoked for the transaction record type. <b>Note:</b> It has a link. On clicking the link, the <b>View Rule Type</b> screen appears where you can view the details of the respective rule type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Transaction Record Type</b> screen appears where you can edit the details of the transaction record type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the transaction record type. <b>Note:</b> You can delete a transaction record type when: <ul style="list-style-type: none"><li>• It is not yet used.</li><li>• Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.</li></ul>
Copy	On clicking the <b>Copy</b> (📄) icon, the <b>Transaction Record Type</b> screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

## Defining a Transaction Record Type

### Prerequisites

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.  
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	<b>Note:</b> This algorithm checks whether: <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.	No
	<b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• 11</li><li>• 12</li><li>• 13</li><li>• 14</li><li>• 15</li></ul>	
	<b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	Used to specify a business label for the user defined fields.	No
	<b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.	

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule - Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

4. Enter the required details.

**Note:** You can search for a transaction source and algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑) icon corresponding to the temporary field.

7. Click **Save**.
- The transaction record type is defined.

## Editing a Transaction Record Type

**Prerequisites**

To edit a transaction record type, you should have:

- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

**Procedure**

To edit a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	<b>Note:</b> This algorithm checks whether: <ul style="list-style-type: none"> <li>The values specified against the output parameters exist in the system</li> <li>The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.	No
	<b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Maximum Accounts to be charged	Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• 01</li><li>• 02</li><li>• 03</li><li>• 04</li><li>• 05</li><li>• 06</li><li>• 07</li><li>• 08</li><li>• 09</li><li>• 10</li></ul> <div><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</div>	
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"><li>• 01</li><li>• 02</li><li>• 03</li><li>• 04</li><li>• 05</li><li>• 06</li><li>• 07</li><li>• 08</li><li>• 09</li><li>• 10</li></ul> <div><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</div>	Yes
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"><li>• 00</li><li>• 01</li><li>• 02</li><li>• 03</li><li>• 04</li><li>• 05</li><li>• 06</li><li>• 07</li><li>• 08</li><li>• 09</li><li>• 10</li><li>• 11</li><li>• 12</li><li>• 13</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>14</li><li>15</li></ul>	
	<b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.	

In addition, this screen contains the following two sections:

- Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	Used to specify a business label for the user defined fields.	No
	<b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.	

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule - Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

3. Modify the required details.

**Note:**  
You can search for an algorithm and field by clicking the **Search** (🔍) icon corresponding to the respective field.  
You can edit and remove an input or output parameter from a rule type when it is not yet used in a rule (which is created using the rule type).  
If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑) icon corresponding to the temporary field.

4. Click **Save**.  
The changes made to the transaction record type are saved.

**Related Topics**

For more information on...	See...
How to search for a transaction record type	<a href="#">Searching for a Transaction Record Type</a> on page 1031

## Deleting a Transaction Record Type

**Procedure**

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the transaction record type that you want to delete.  
A message appears confirming whether you want to delete the transaction record type.
3. Click **OK**.  
The transaction record type is deleted.

**Note:** You can delete a transaction record type only when it is not yet used in the system.

**Related Topics**

For more information on...	See...
How to search for a transaction record type	<a href="#">Searching for a Transaction Record Type</a> on page 1031

## Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. On copying of a transaction record type, the details including the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

### Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears where you can search for the required transaction source.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( _ ) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b> This algorithm checks whether:</p> <ul style="list-style-type: none"> <li>The values specified against the output parameters exist in the system</li> <li>The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears where you can search for the required algorithm.</p>	
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.</p> <p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears where you can search for the required algorithm.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>01</li> <li>02</li> <li>03</li> <li>04</li> <li>05</li> <li>06</li> <li>07</li> <li>08</li> <li>09</li> <li>10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>01</li> <li>02</li> <li>03</li> <li>04</li> <li>05</li> <li>06</li> <li>07</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• 08</li><li>• 09</li><li>• 10</li></ul>	
	<b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.	
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"><li>• 00</li><li>• 01</li><li>• 02</li><li>• 03</li><li>• 04</li><li>• 05</li><li>• 06</li><li>• 07</li><li>• 08</li><li>• 09</li><li>• 10</li><li>• 11</li><li>• 12</li><li>• 13</li><li>• 14</li><li>• 15</li></ul> <p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	Used to specify a business label for the user defined fields.	No
	<b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.	

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule - Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

3. Enter the required details.

**Note:** You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
5. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

6. Click **Save**.
- The new transaction record type is defined.

# Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 1046

## Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Column Name	Column Description
SQL Description	Displays the description of the service quantity identifier (SQL).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQL.
Function	Indicates the function used for aggregation.

Column Name	Column Description
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Transaction Aggregation Rule</b> screen appears where you can edit the aggregation rule.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4322.

**Related Topics**

How to delete transaction aggregation rule of an SQI	<a href="#">Deleting Transaction Aggregation Rule of an SQI</a> on page 1049

## Defining Transaction Aggregation Rule for an SQI

**Prerequisites**

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

**Procedure**

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI for which you want to define the transaction aggregation rule.	Yes
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"><li>• SUM()</li><li>• MIN()</li><li>• MAX()</li><li>• COUNT()</li></ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are:	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• TXN_AMT</li><li>• TXN_VOL</li><li>• UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li><li>• UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li></ul>	

4. Enter the required details.
5. Click **Save**.  
The transaction aggregation rule is defined for the SQL.

**Related Topics**

## Editing Transaction Aggregation Rule of an SQL

**Procedure**

To edit the transaction aggregation rule of an SQL:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
3. Click the **Edit** (✎) icon in the **Edit** column corresponding to the SQL whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQL	Indicates the SQL for which the transaction aggregation rule is defined.	Not applicable
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"><li>• SUM()</li><li>• MIN()</li><li>• MAX()</li><li>• COUNT()</li></ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"><li>• TXN_AMT</li><li>• TXN_VOL</li><li>• UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li></ul>	

- 4. Modify the required details.
- 5. Click **Save**.  
The changes made to the transaction aggregation rule are saved.

**Related Topics**

For more information on...	See...
Transaction Aggregation Rule screen	<a href="#">Transaction Aggregation Rule</a> on page 1046
Transaction Aggregation Rules zone	<a href="#">Transaction Aggregation Rules</a> on page 1046

## Deleting Transaction Aggregation Rule of an SQI

**Procedure**

To delete the transaction aggregation rule of an SQI:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
- 3. Click the **Delete** (🗑) icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.  
A message appears confirming whether you want to delete the transaction aggregation rule.
- 4. Click **OK**.  
The transaction aggregation rule is deleted.

**Related Topics**

For more information on...	See...
Transaction Aggregation Rule screen	<a href="#">Transaction Aggregation Rule</a> on page 1046
Transaction Aggregation Rules zone	<a href="#">Transaction Aggregation Rules</a> on page 1046

## Schedule

The **Schedule** screen allows you to view, define, edit, and delete a schedule. It contains the following zone:

- [Search Schedule](#) on page 1049

### Search Schedule

The **Search Schedule** zone allows you to search for a schedule using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to search for a particular schedule.	No
Description	Used to search schedules with a particular description	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Aggregation Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the <b>View</b> (🔍) icon, the <b>View Schedule UI Map</b> screen appears where you can view the details of the schedule.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Edit Schedule</b> screen appears where you can edit the details of the schedule.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the schedule.
	<b>Note:</b> You can delete a schedule only when it is not yet used in the system.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon available in the upper right corner of this zone.

# Searching for a Schedule

**Procedure**

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.  
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of schedules that meet the search criteria appears in the **Search Results** section.

**Related Topics**

Schedule screen	<a href="#">Schedule</a> on page 1049
Search Schedule zone	<a href="#">Search Schedule</a> on page 1049

## Viewing the Schedule Details

**Procedure**

To view the details of a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the schedule whose details you want to view.  
The **View Schedule UI Map** screen appears.
3. View the details of the schedule in the **View Schedule UI Map** screen.

## Defining a Schedule

**Prerequisites**

To define a schedule, you should have:

- Schedule types defined in the application.

**Procedure**

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.  
The **Schedule** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to specify the schedule code.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the schedule.	Yes

In addition, the **Add/Edit Schedule UI Map** screen contains the following two sections:

- **Schedule Periods** - Used to specify schedule periods for the schedule. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	<b>Note:</b> The end date cannot be earlier than the start date.	

**Note:** At least one schedule period must be defined for the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** - Used to associate schedule types with the schedule. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule.	Yes
	<b>Note:</b> You can associate multiple schedule types with a schedule.	

4. Enter the required details in the **Add/Edit Schedule UI Map** screen.
5. If you want to define more than one schedule period for the schedule, click the **Add (+)** icon corresponding to the schedule period and then specify the *details*.

**Note:** However, if you want to remove a schedule period from the schedule, click the **Delete** (🗑️) icon corresponding to the schedule period.

6. Similarly, If you want to associate more than one schedule type with the schedule, click the **Add (+)** icon corresponding to the schedule type and then specify the *details*.

**Note:** However, if you want to remove a schedule type from the schedule, click the **Delete** (🗑️) icon corresponding to the schedule type.

7. Click **Save**.  
The schedule is defined.

## Editing a Schedule

### Prerequisites

To edit a schedule, you should have:

- Schedules (which you want to edit) defined in the application
- Schedule types defined in the application.

### Procedure

To edit a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the schedule whose details you want to edit.

The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Displays the schedule code.	Not applicable
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** - Used to add, edit, or delete the schedule periods from the schedule. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	<b>Note:</b> The end date cannot be earlier than the start date.	

- **Schedule Types** - Used to associate or disassociate schedule types from the schedule. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule.	Yes

3. Modify the required details in the **Add/Edit Schedule UI Map** screen.
4. Click **Save**.  
The changes made to the schedule are saved.

How to search for a schedule	<a href="#">Searching for a Schedule</a> on page 1050

## Deleting a Schedule

### Procedure

To delete a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the schedule that you want to delete.  
A message appears confirming whether you want to delete the schedule.

**Note:** You can delete a schedule only when it is not yet used in the system.

3. Click **OK**.  
The schedule is deleted.

## Disaggregation Request

Oracle Revenue Management and Billing allows you to create disaggregation request of a person, account, price item, price assignment, billable charge, and parent accumulation group. You can create disaggregation request through either of the following:

- Disaggregation Request from User Interface
- Disaggregation Request through the C1-DISTG Batch
- Disaggregation Request through Audit Event

### Disaggregation Request from User Interface

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account from the user interface in various ways. For more information, refer to [Disaggregation Request](#) on page 1056.

### Disaggregation Request through the C1-DISTG Batch

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account through the **Disaggregation Request Creation (C1-DISTG)** batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Transaction Feed Management (TFM) - Batch Execution Guide*.

## Disaggregation Request through Audit Event

Until now, the system enabled you to disaggregate transactions when a disaggregation request was created for an account. The system enabled you to manually create a disaggregation request for an account from the user interface. Now, the system enables you to automatically create a disaggregation request for an account through an audit event. The system enables you to create an automatic disaggregation request in the following scenarios:

- While changing the person's attributes (i.e. when a person's fields or characteristics are updated)
- While changing the account's attributes (i.e. when an account's fields or characteristics are updated)
- While adding or updating a price list
- While assigning a price list to a person or an account
- While updating the price list assignment of a person or an account
- While assigning a price item to a person, account, or price list
- While updating the price assignment of a person, account, or price list

To enable the automatic disaggregation request creation, you need to do the following:

- Attach the **C1-READEVNT** algorithm to the **Audit** system event of the **C1\_PERSON\_BO**, **C1\_PLASGNEDIT**, **C1\_PRICEASN\_BO**, **C1\_F\_ADDPLBO**, or **C1-AccountBO** business object, respectively
- Set the **Eligible for Audit Event** option type of the entity business object to **Y**
- Define an active audit event type for the entity business object in the system

For more information on how to create an audit event type, refer to the **Entity Audit** section in *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

If the **C1-READEVNT** algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you create, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Creating an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

**Note:** Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

Once the audit event is created in the **Pending** status, you need to execute the **Disaggregation Request through Audit Event (C1-DISTA)** batch. Until now, the **Disaggregation Request through Audit Event (C1-DISTA)** batch was used to process audit events which are created for a self-funded pricing rule. Now, this batch is used to process the audit events which are created for the persons, accounts, self-funded pricing rules, price lists, price list assignments, and price assignments.

Once a disaggregation request is created for an audit event, you need to execute the following batches in the specified sequence:

1. Pending Bill Segments Deletion (C1-BSEGD)
2. Pending Bill Deletion (C1-PNBD)
3. Identify Transactions for Disaggregation (C1-IDENT)
4. Process Non-Aggregated Transactions (C1-PDTXN)
5. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**

6. Update Disaggregation Request Status (C1-DRSUA)

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person, account, price item, price assignment, billable charge, and parent accumulation group. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. It contains the following zone:

- [Search Disaggregation Request](#) on page 1056

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for a disaggregation request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a disaggregation request using the person, account, or accumulation group details. The valid values are: <ul style="list-style-type: none"><li>• Person</li><li>• Account</li><li>• Accumulation Group</li></ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Person ID	Used to search disaggregation requests which are created for accounts of a particular person.	No
	<b>Note:</b> This field appears only when the <b>Person</b> option is selected from the <b>Search By</b> list.	
Division	Used to search disaggregation requests which are created for accounts belonging to a particular division.	Yes (Conditional)
	<b>Note:</b> This field is required while searching for a disaggregation request using the account details.	
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when the <b>Person</b> or <b>Account</b> option is selected from the <b>Search By</b> list.	
Person Name	Used to search disaggregation requests which are created for accounts belonging to persons with a particular name.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears only when the <b>Person</b> option is selected from the <b>Search By</b> list.	
Request Source	Used to search disaggregation requests which are created using a particular process. The valid values are: <ul style="list-style-type: none"> <li>AUTOMATIC</li> <li>BATCH</li> <li>MANUAL</li> </ul>	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search disaggregation requests created for a person. <p><b>Note:</b> This field appears when the <b>Person</b> option is selected from the <b>Search By</b> list.</p>	Yes (Conditional) <p><b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.</p>
Person Identifier	Used to specify the value for the person identifier type based on which you want to search disaggregation requests created for a person. <p><b>Note:</b> This field appears only when the <b>Person</b> option is selected from the <b>Search By</b> list.</p>	Yes (Conditional) <p><b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.</p>
Request Created From	Used to search disaggregation requests which are created from a particular date onwards.	Yes (Conditional) <p><b>Note:</b> This field is required while searching for a disaggregation request using the person or account details.</p>
Request Created Until	Used to search disaggregation requests which are created till a particular date.	Yes (Conditional) <p><b>Note:</b> This field is required while searching for a disaggregation request using the person or account details.</p>
From Processing Date	Used to search disaggregation requests which are processed from a particular date onwards.	No
To Processing Date	Used to search disaggregation requests which are processed till a particular date.	No
Request Type	Used to search disaggregation requests with a particular request type. The valid values are: <ul style="list-style-type: none"> <li><b>Account</b> - Used to search disaggregation requests which are created for accounts.</li> <li><b>Billable Charge</b> - Used to search disaggregation requests which are created for billable charges.</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Person</b> - Used to search disaggregation requests which are created for all the accounts of a person.</li> <li>• <b>Price Assignment</b> - Used to search disaggregation requests which are created for price assignments.</li> <li>• <b>Price Item</b> - Used to search disaggregation requests which are created for price items.</li> </ul> <p><b>Note:</b> This field appears only when the <b>Person</b> or <b>Account</b> option is selected from the <b>Search By</b> list.</p>	
Request Status	Used to search disaggregation requests which are in a particular status. The valid values are: <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• PENDING</li> </ul>	No
Price Item	Used to search disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. <p><b>Note:</b> This field appears only when the <b>Person</b> or <b>Account</b> option is selected from the <b>Search By</b> list.</p>	No
Billable Charge ID	Used to search disaggregation request for an account for which a particular billable charge is created. <p><b>Note:</b> This field appears only when the <b>Person</b> or <b>Account</b> option is selected from the <b>Search By</b> list.</p>	No
Price Assignment ID	Used to search disaggregation request for an account with a particular price assignment. <p><b>Note:</b> This field appears only when the <b>Person</b> or <b>Account</b> option is selected from the <b>Search By</b> list.</p>	No
Account ID	Used to search disaggregation requests which are created for a particular account. <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value for the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Accumulation Type	Used to indicate the accumulation type based on which you want to search disaggregation requests created for an accumulation group.	No
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	
Parent Accumulation Group ID	Used to search disaggregation requests created for a particular parent accumulation group.	No
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Creation Date	Displays the date when the disaggregation request is created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• PENDING</li> </ul>
Account ID	Indicates the account for which the disaggregation request is created.
Person ID	Indicates the person for whom the disaggregation request is created.
Person Information	Displays the concatenated string of information about the person separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective person.
Account Information	Displays the concatenated string of information about the account separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Column Name	Column Description
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.</p> <p>This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Processing Date	Displays the date when the disaggregation request is processed.
Request Type	<p>Displays the request type based on which the disaggregation request is processed. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account</b> - Indicates that the disaggregation request is created for an account.</li> <li>• <b>Billable Charge</b> - Indicates that the disaggregation request is created for a billable charge.</li> <li>• <b>Person</b> - Indicates that the disaggregation request is created for a all the accounts of a person.</li> <li>• <b>Price Assignment</b> - Indicates that the disaggregation request is created for a price assignment.</li> <li>• <b>Price Item</b> - Indicates that the disaggregation request is created for a price item.</li> </ul>
Price Item Information	<p>Displays the concatenated string of information about the price item for which the disaggregation request is created separated by a comma (,).</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.</p> <p>The information in this column appears only when the disaggregation request is created for a price item</p>
Pricing Information	<p>Displays the pricing details using which the disaggregation request is processed.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Pricing</b> screen appears where you can view the details of the respective pricing.</p>
Billable Charge ID	<p>Displays the charge id billable for the processed disaggregation request.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge ID</b> screen appears where you can view the details of the respective billable charge.</p>
Delete	<p>On clicking the <b>Delete</b> (🗑️) icon, you can delete the disaggregation request.</p> <p><b>Note:</b> You can delete a disaggregation request only when it is in the <b>Pending</b> status.</p>
Accumulation Information	<p>Displays the accumulation information.</p> <p><b>Note:</b> This column appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.</p>

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

**Related Topics**

How to delete a disaggregation request	<a href="#">Deleting a Disaggregation Request</a> on page 1083

**Searching for a Disaggregation Request**

**Procedure**

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Enter the search criteria in the **Search Disaggregation Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section.

**Creating a Disaggregation Request for a Person**

**Prerequisites**

To create a disaggregation request for a person, you should have:

- Person (for whom you want to create the disaggregation request) defined in the application
- Person associated with the division to which the user belongs
- Price list assigned to the person (in case you want to search a person based on an assigned price list)

**Procedure**

To create a disaggregation request for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	<p>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</p> <ul style="list-style-type: none"> <li> <b>Account</b> - Used to create a disaggregation request for an account.           <div> <b>Note:</b> In this case, the system will disaggregate all billable charges of the account. </div> </li> <li> <b>Billable Charge</b> - Used to create a disaggregation request for an account for which a particular billable charge is created.           <div> <b>Note:</b> In this case, the system will disaggregate a specific billable charge of the account. </div> </li> <li> <b>Parent Accumulation Group</b> - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement).           <div> <b>Note:</b> The <b>Parent Accumulation Group</b> option is used to create reseeding requests for accounts which belong to the healthcare domain. </div> </li> <li> <b>Person</b> - Used to create a disaggregation request for one or more accounts of a person and its child persons.           <div> <b>Note:</b> In this case, the system will disaggregate all billable charges of the account. </div> </li> <li> <b>Price Assignment</b> - Used to create a disaggregation request for an account with a particular price assignment.           <div> <b>Note:</b> In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment. </div> </li> <li> <b>Price Item</b> - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned.           <div> <b>Note:</b> In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item. </div> </li> </ul>	Yes

4. Select the **Person** option from the **Disaggregation Request Type** list.
5. Click **OK**.

The **Add Disaggregation Request For Person** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for a person and its child persons for whose accounts you want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> <li>Person</li> </ul>	Not applicable
Division	Used to search persons which belong to a particular division.	Yes
	<b>Note:</b> You can view only those divisions to which you have access in the <b>Division</b> list.	
Person ID	Used to search for a particular person.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Person ID</b> field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears where you can search for the person.	
Person Name	Used to search persons having a particular name.	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type using which you want to search for a person.	Yes (Conditional)
		<b>Note:</b> If you select the person identifier type as a search criteria, you have to specify the person identifier.
Price List Assignment Start Date	Used to search for a person based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional)
		<b>Note:</b> If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for a person based on an assigned price list which is effective till a particular date.	Yes (Conditional)

Filed Name	Field Description	Mandatory (Yes or No)
		<b>Note:</b> If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.
Assigned Price List	Used when you want to search for a person to which a particular price list is assigned.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Assigned Price List</b> field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears where you can search for the price list.	<b>Note:</b> If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.
Price Assignment ID	Used to search for a person to whom a particular price item pricing is assigned.	No
Price Item	Used to search for persons to whom a particular price item is assigned.	No
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears where you can search for the price item.  On specifying the price item, the details of the price item appears corresponding to the <b>Price Item</b> field.	
Billable Charge ID	Used to search for a person for whose accounts a particular billable charge is created.	No
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge ID</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Search</b> window appears where you can search for the billable charge.  On specifying the billable charge, the details of the billable charge appears corresponding to the <b>Billable Charge ID</b> field.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system.

Column Name	Column Description
	<b>Note:</b> The data appears in this column when you search for an account.
Account Identifier	Displays the value of the account identifier type. <b>Note:</b> The data appears in this column when you search for an account.
Division	Displays the division to which the person belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system.
Person Identifier	Displays the value of the person identifier type.
Person Name	Displays the name of the person.
Assigned Price List	Displays the price list assigned to the person. <b>Note:</b> The data appears in this column when you search for a person based on an assigned price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the person. <b>Note:</b> The data appears in this column when you search for a person based on an assigned price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the person. <b>Note:</b> The data appears in this column when you search for a person based on an assigned price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (.). <b>Note:</b> The data appears in this column when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account. <b>Note:</b> The data appears in this column when you search for an account.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The **Page Limit** list includes only those values which are defined in the **PAGE\_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (◀), **Previous** (⏪), **Next** (⏩), and **Last** (▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons	<p>a. In the <b>Search Results</b> section, select the check box corresponding to the person for which you want to create a disaggregation request.</p> <p>b. **Creating a Disaggregation Request for an Account**

Prerequisites

To create a disaggregation request for an account, you should have:

- Account (for whom you want to create the disaggregation request) defined in the application
- Account associated with the division to which the user belongs
- Price list assigned to the account (in case you want to search an account based on an assigned price list)

Procedure

To create a disaggregation request for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	Used to indicate the entity for which you want to create a disaggregation request. The valid values are:	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Account</b> - Used to create a disaggregation request for an account.  <div> <b>Note:</b> In this case, the system will disaggregate all billable charges of the account. </div> </li> <li>• <b>Billable Charge</b> - Used to create a disaggregation request for an account for which a particular billable charge is created.  <div> <b>Note:</b> In this case, the system will disaggregate a specific billable charge of the account. </div> </li> <li>• <b>Parent Accumulation Group</b> - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement).  <div> <b>Note:</b> The <b>Parent Accumulation Group</b> option is used to create reseeding requests for accounts which belong to the healthcare domain. </div> </li> <li>• <b>Person</b> - Used to create a disaggregation request for one or more accounts of a person and its child persons.  <div> <b>Note:</b> In this case, the system will disaggregate all billable charges of the account. </div> </li> <li>• <b>Price Assignment</b> - Used to create a disaggregation request for an account with a particular price assignment.  <div> <b>Note:</b> In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment. </div> </li> <li>• <b>Price Item</b> - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned.  <div> <b>Note:</b> In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item. </div> </li> </ul>	

4. Select the **Account** option from the **Disaggregation Request Type** list.

5. Click **OK**.

The **Add Disaggregation Request For Account** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for an account for whose billable charges you want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> <li>Account</li> </ul>	Not applicable
Division	Used to search accounts which belong to a particular division.	Yes
	<b>Note:</b> You can view only those divisions to which you have access in the <b>Division</b> list.	
Account ID	Used to search for a particular account.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears where you can search for the account.	
Bill Cycle	Used to search accounts having a particular bill cycle.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type using which you want to search for an account.	Yes (Conditional)
		<b>Note:</b> If you select the account identifier type as a search criteria, you have to specify the account identifier.
Invoice Currency	Used to search accounts whose billable charges are defined using a particular invoice currency.	No
Assigned Price List	Used when you want to search for an account to which a particular price list is assigned.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Assigned Price List</b> field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears where you can search for the price list.	<b>Note:</b> If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.

Filed Name	Field Description	Mandatory (Yes or No)
Price List Assignment Start Date	Used to search for an account based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional)
		<b>Note:</b> If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for an account based on an assigned price list which is effective till a particular date.	Yes (Conditional)
		<b>Note:</b> If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.
Price Assignment ID	Used to search for an account to which a particular price item pricing is assigned.	No
Price Item	Used to search for accounts to which a particular price item is assigned.	No
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears where you can search for the price item.  On specifying the price item, the details of the price item appears corresponding to the <b>Price Item</b> field.	
Billable Charge ID	Used to search for an account for which a particular billable charge is created.	No
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge ID</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Search</b> window appears where you can search for the billable charge.  On specifying the billable charge, the details of the billable charge appears corresponding to the <b>Billable Charge ID</b> field.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system.
Account Identifier	Displays the value of the account identifier type.
Division	Displays the division to which the account belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system.
	<b>Note:</b> The data appears in this column when you search for a person.
Person Identifier	Displays the value of the person identifier type.
	<b>Note:</b> The data appears in this column when you search for a person.
Person Name	Displays the name of the person to whom the account belongs.
Assigned Price List	Displays the price list assigned to the account.
	<b>Note:</b> The data appears in this column when you search for an account based on an assigned price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the account.
	<b>Note:</b> The data appears in this column when you search for an account based on an assigned price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the account.
	<b>Note:</b> The data appears in this column when you search for an account based on an assigned price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (,).
Bill Cycle	Indicates the bill cycle defined for the account.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The **Page Limit** list includes only those values which are defined in the **PAGE\_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more accounts	<div>a. In the <b>Search Results</b> section, select the check box corresponding to the account for which you want to create a disaggregation request.</div> <div>b. Creating a Disaggregation Request for a Price item

Prerequisites

To create a disaggregation request for a price item, you should have:

- Price item (for which you want to create the disaggregation request) defined in the application
- Price item associated with the division to which the user belongs
- Person or accounts defined in the application (in case you want to search for a price item associated to a person or an account)
- Price item associated with the price list (in case you want to search a price item based on an assigned price list)

Procedure

To create a disaggregation request for a price item:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	<div>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</div> <div><ul style="list-style-type: none"><li>• <b>Account</b> - Used to create a disaggregation request for an account.</li></ul></div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<div><b>Note:</b> In this case, the system will disaggregate all billable charges of the account.</div> <ul style="list-style-type: none"><li><b>Billable Charge</b> - Used to create a disaggregation request for an account for which a particular billable charge is created.</li></ul> <div><b>Note:</b> In this case, the system will disaggregate a specific billable charge of the account.</div> <ul style="list-style-type: none"><li><b>Parent Accumulation Group</b> - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement).</li></ul> <div><b>Note:</b> The <b>Parent Accumulation Group</b> option is used to create reseeding requests for accounts which belong to the healthcare domain.</div> <ul style="list-style-type: none"><li><b>Person</b> - Used to create a disaggregation request for one or more accounts of a person and its child persons.</li></ul> <div><b>Note:</b> In this case, the system will disaggregate all billable charges of the account.</div> <ul style="list-style-type: none"><li><b>Price Assignment</b> - Used to create a disaggregation request for an account with a particular price assignment.</li></ul> <div><b>Note:</b> In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</div> <ul style="list-style-type: none"><li><b>Price Item</b> - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned.</li></ul> <div><b>Note:</b> In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</div>	

- 4. Select the **Price Item** option from the **Disaggregation Request Type** list.
- 5. Click **OK**.

The **Add Disaggregation Request For Price Item** screen appears. It contains the following two sections:

- Search Criteria** - Used to search for a price item assigned to an account for whose billable charges want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> <li>Price Item</li> </ul>	Not applicable
Division	Used to search price items which belong to a particular division.	Yes
	<b>Note:</b> You can view only those divisions to which you have access in the <b>Division</b> list.	
Account ID	Used to search price items which are assigned to a particular account.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears where you can search for the account.	<b>Note:</b> This field is required when you specify the price item in the <b>Price Item</b> field as a search criteria.
Person ID	Used to search price items which are assigned to a particular person.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Person ID</b> field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears where you can search for the person.	<b>Note:</b> This field is required when you specify the price item in the <b>Price Item</b> field as a search criteria.
Account Identifier Type	Used to search price items assigned to accounts which are created using a particular identifier type.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
		<b>Note:</b> If you select the account identifier type as a search criteria, you have to specify the account identifier.
Person Identifier Type	Used to search price items assigned to persons which are created using a particular identifier type.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional)

Filed Name	Field Description	Mandatory (Yes or No)
		<b>Note:</b> If you select the person identifier type as a search criteria, you have to specify the person identifier.
Bill Cycle	Used to search price items assigned to accounts or accounts of a person having a particular bill cycle.	No
Invoice Currency	Used to search price items assigned to accounts or accounts of a person whose billable charges are defined using a particular invoice currency.	No
Price Item	Used to search for a particular price item.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears where you can search for the price item.  On specifying the price item, the details of the price item appears corresponding to the <b>Price Item</b> field.	Yes
Assigned Price List	Used to search price items which belong to a price list assigned to accounts or accounts of a person.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Assigned Price List</b> field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears where you can search for the price list.	Yes (Conditional)  <b>Note:</b> If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.
Price List Assignment Start Date	Used to search for price items based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional)  <b>Note:</b> If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for price items based on an assigned price list which is effective till a particular date.	Yes (Conditional)  <b>Note:</b> If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system.
	<b>Note:</b> The data appears in this column when you search for a price item which is assigned to an account.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> The data appears in this column when you search for a price item which is assigned to an account.
Division	Displays the division to which the price item belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system.
	<b>Note:</b> The data appears in this column when you search for a price item which is assigned to a person.
Person Identifier	Displays the value of the person identifier type.
	<b>Note:</b> The data appears in this column when you search for a price item which is assigned to a person.
Person Name	Displays the name of the person.
Assigned Price List	Displays the assigned price list of the account or the account of a person to which the price item is associated.
	<b>Note:</b> The data appears in this column when you search for a price item based on an assigned price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the account or the account of a person.
	<b>Note:</b> The data appears in this column when you search for a price item based on an assigned price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the account or the account of a person.
	<b>Note:</b> The data appears in this column when you search for a price item based on an assigned price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (,).
Bill Cycle	Indicates the bill cycle defined for the account or accounts of the person to which the price item is assigned.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Account</b> - Used to create a disaggregation request for an account.</li></ul> <div>Note: In this case, the system will disaggregate all billable charges of the account.</div> <ul style="list-style-type: none"><li>• <b>Billable Charge</b> - Used to create a disaggregation request for an account for which a particular billable charge is created.</li></ul> <div>Note: In this case, the system will disaggregate a specific billable charge of the account.</div> <ul style="list-style-type: none"><li>• <b>Parent Accumulation Group</b> - Used to create reseeding requests for the accounts</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<div>using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement).</div> <div><b>Note:</b> The <b>Parent Accumulation Group</b> option is used to create reseeding requests for accounts which belong to the healthcare domain.</div> <div><ul style="list-style-type: none"><li><b>Person</b> - Used to create a disaggregation request for one or more accounts of a person and its child persons.</li></ul></div> <div><b>Note:</b> In this case, the system will disaggregate all billable charges of the account.</div> <div><ul style="list-style-type: none"><li><b>Price Assignment</b> - Used to create a disaggregation request for an account with a particular price assignment.</li></ul></div> <div><b>Note:</b> In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</div> <div><ul style="list-style-type: none"><li><b>Price Item</b> - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned.</li></ul></div> <div><b>Note:</b> In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</div>	

4. Select the **Billable Charge** option from the **Disaggregation Request Type** list.
5. Click **OK**.

The **Add Disaggregation Request For Billable Charge** screen appears. It contains the following two sections:

- Search Criteria** - Used to search for a billable charge of an account for which you want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"><li>Billable Charge</li></ul>	Not applicable
Billable Charge ID	Used to search for a particular billable charge of an account.	Yes

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system.
	<b>Note:</b> The data appears in this column when the billable charge belongs to an account.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> The data appears in this column when the billable charge belongs to an account.
Division	Displays the division to which the account belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system.
	<b>Note:</b> The data appears in this column when the billable charge belongs to an account of a person or child person.
Person Identifier	Displays the value of the person identifier type.
	<b>Note:</b> The data appears in this column when the billable charge belongs to an account of a person or child person.
Person Name	Displays the name of the person to whom the account belongs.
Assigned Price List	Displays the price list assigned to the account.
	<b>Note:</b> The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the account.
	<b>Note:</b> The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the account.
	<b>Note:</b> The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (,).
Bill Cycle	Indicates the bill cycle defined for the account.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The**Page Limit** list includes only those values which are defined in the **PAGE\_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

If you want to...	Then...
Create disaggregation request for billable charge of one or more accounts	<div><div>a. In the <b>Search Results</b> section, select the check box corresponding to the account for whose billable charge you want to create a disaggregation request.</div><div>b. Click <b>Disaggregate</b>.</div><div>A message appears confirming that the disaggregation request is created successfully.</div><div>c. Click <b>OK</b>.</div><div>The disaggregation request is created for the billable charge of the selected account.</div></div>
Create disaggregation request for all billable charges that meet the search criteria	<div><div>a. Click <b>Disaggregate All</b>.</div><div>The <b>Disaggregate All Confirmation</b> window appears confirming whether you want to create disaggregation requests for all records.</div><div>b. Click <b>OK</b>.</div><div>The disaggregation request is created for all the billable charges of all accounts.</div></div>

Deleting a Disaggregation Request

Procedure

To delete a disaggregation request:

1.

Search for the disaggregation request in the **Disaggregation Request** screen.
2.

In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

3. Click **OK**.

The disaggregation request is deleted.

**Note:**

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

## On Demand Billing

---

### Topics:

- [Prerequisites](#)
- [CSV File Format for Banking Usage Data](#)
- [CSV File Format for Insurance Usage Data](#)
- [Usage Record Status Transition](#)
- [File Type](#)
- [On Demand Billing](#)
- [Usage Data Processing](#)

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date - Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date - Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date - Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date - Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see [Usage Record Status Transition](#) on page 1094.

# Prerequisites

To setup the on demand billing process, you need to do the following:

- Ensure approver's user group has access to the **F1-DFLT**S application service
- Create a To Do Type for submitter named **C1-ODBSU** using the following information:
  - **Navigation Option** - C1\_SUBMIT
  - **Priority** - Priority 10 - Highest
  - **Message Category** - 17000
  - **Message Number** - 1470
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME
CI_BCHG_STG	BCHG_STG_STAT_FLG

- Create a To Do Type for approver named **C1-ODBAP** using the following information:
  - **Navigation Option** - CI\_NDAP
  - **Priority** - Priority 10 - Highest
  - **Message Category** - 17000
  - **Message Number** - 1470
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME

- Create a To Do role named **C1-ODBSU** for submitter and **C1-ODBAP** for approver
- Assign the **C1-ODBSU** To Do type to the **C1-ODBSU** To Do role
- Assign the **C1-ODBAP** To Do type to the **C1-ODBAP** To Do role
- Create a To Do role named **C1-ODFU** and assign users to this To Do role. The users who have the **C1-ODFU** To Do role will receive the To Do entries generated while executing the **Upload and Validate Usage Data File (C1-ODFU)** batch.
- Assign the **C1-ODFU** To Do type to the **C1-ODFU** To Do role
- Create a To Do role named **C1-ODBCH** and assign users to this To Do role. The users who have the **C1-ODBCH** To Do role will receive the To Do entries generated while executing the **Billable Charge Creation (C1-ODBCH)** batch.
- Assign the **C1-ODBCH** To Do type to the **C1-ODBCH** To Do role

- Create a To Do role named **C1-FABL** and assign users to this To Do role. The users who have the **C1-FABL** To Do role will receive the To Do entries generated while executing the **Adhoc Billing (C1-FABL)** batch.
- Assign the **C1-FABL** To Do type to the **C1-FABL** To Do role
- Create a To Do role named **C1-FCADH** and assign users to this To Do role. The users who have the **C1-FCADH** To Do role will receive the To Do entries generated while executing the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch.
- Assign the **C1-FCADH** To Do type to the **C1-FCADH** To Do role
- Set e-mail address for the users who are going to use the **On Demand Billing** screen (otherwise To Do entry will not be generated on executing the above batches)
- Create a mapping algorithm using the **C1-CSVPMALGO** algorithm type
- Create a validation algorithm using the **C1-VLDALGO** algorithm type
- Create an extract algorithm using the **C1-EXTALGO** algorithm type
- Create a To Do algorithm using the **C1\_ODBDALGO** algorithm type and set the following parameters in the algorithm:
  - **To Do Role for Submitter** - Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.
  - **To Do Type for Submitter** - Used to indicate that a To Do entry of the specified To Do type must be created when the approver rejects the records.
  - **To Do Role for Approver** - Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.
  - **To Do Type for Approver** - Used to indicate that a To Do entry of the specified To Do type must be created when the submitter submits the valid records for approval.
- Define the required file types in the system
- Define values for the following lookup fields:
  - ODB\_CAN\_RSN\_FLG
  - ODB\_REJ\_RSN\_FLG
  - PAGE\_NUMBER
- If you want to create billable charges with future date for a contract, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.
- Create an algorithm using the **C1-ODBFILEIN** algorithm type and attach it to the **Upload File Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.

Besides this, you need to setup the following feature configurations:

- On Demand Billing (C1-ODBFC)
- Multi Parameter Based Pricing (C1\_PPARM\_FLG)

**Note:** If you want to use the **On Demand Billing** feature in an ORMB Cloud Service Premium Edition environment, you need to set the **ODB Extendable Lookup and Bucket** option type of the **C1-CFS** feature configuration.

# CSV File Format for Banking Usage Data

Before uploading a usage data file for banking, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No
ACCOUNT ID TYPE	Used to specify the account identifier type.	Yes
ACCOUNT IDENTIFIER	Used to indicate the account to which the usage record belongs.	Yes
START DATE	Used to specify the date from when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
END DATE	Used to specify the date till when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
DIVISION	Used to specify the division to which the usage record belongs.	Yes
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Used to specify the description for the line item (charge).	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2, ....., AMOUNT10	Used to specify the charge amount.	Yes (Conditional)
		<b>Note:</b> This data is required when the bill line description or currency is specified.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Used to specify the currency in which the amount is charged.	Yes (Conditional)
	<b>Note:</b> If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	<b>Note:</b> This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	No

Column Name	Description	Mandatory (Yes or No)
	<b>Note:</b> By default, the value will be set to <b>false</b> if the column does not contain any value.	
SUMMARY1, SUMMARY2, SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
SHOW ON BILL1, SHOW ON BILL2, ..., SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ..., GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) <b>Note:</b> This data is required when <b>false</b> is specified in the <b>Memo Only</b> column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No
PARAM TYPE1, PARAM TYPE2, ..., PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. <b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) <b>Note:</b> This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2, ..., PARAM VALUE15	Used to specify the parameter value. <b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) <b>Note:</b> This data is required when the parameter type is specified.
SQI1, SQI2, ..., SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) <b>Note:</b> This data is required when the service quantity is specified.

Column Name	Description	Mandatory (Yes or No)
SQIVALUE1, SQIVALUE2, SQIVALUE10 .....	Used to specify the number of units of the service quantity.	Yes (Conditional)
		<b>Note:</b> This data is required when the SQI is specified.
CHARTYPE1, CHARTYPE2, CHARTYPE10 .....	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2, CHARVAL10 .....	Used to specify the value of the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic type is specified.

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

## CSV File Format for Insurance Usage Data

Before uploading a usage data file for insurance, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No
START DATE	Used to specify the date from when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
END DATE	Used to specify the date till when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
CONTRACT ID	Used to specify the contract ID.	Yes
CHARGE TYPE	Used to indicate the charge type.	No
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL DESCRIPTION1, LINE BILL	Used to specify the description for the line item (charge).	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10		<b>Note:</b> This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2, ....., AMOUNT10	Used to specify the charge amount.	Yes (Conditional)
		<b>Note:</b> This data is required when the bill line description or currency is specified.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Used to specify the currency in which the amount is charged.	Yes (Conditional)
	<b>Note:</b> If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	<b>Note:</b> This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>false</b> if the column does not contain any value.	No
SUMMARY1, SUMMARY2, ....., SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)
		<b>Note:</b> This data is required when <b>false</b> is specified in the <b>Memo Only</b> column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes

Column Name	Description	Mandatory (Yes or No)
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter type is specified.
SQI1, SQI2, ....., SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		<b>Note:</b> This data is required when the service quantity is specified.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Used to specify the number of units of the service quantity.	Yes (Conditional)
		<b>Note:</b> This data is required when the SQI is specified.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Used to specify the value of the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic type is specified.
RECURRING FLAG	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency.	No
BILL PERIOD	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional)
		<b>Note:</b> This data is required when the recurring flag is equal to Bill Period.
FREQUENCY	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		<b>Note:</b> This data is required when the recurring flag is equal to Frequency.

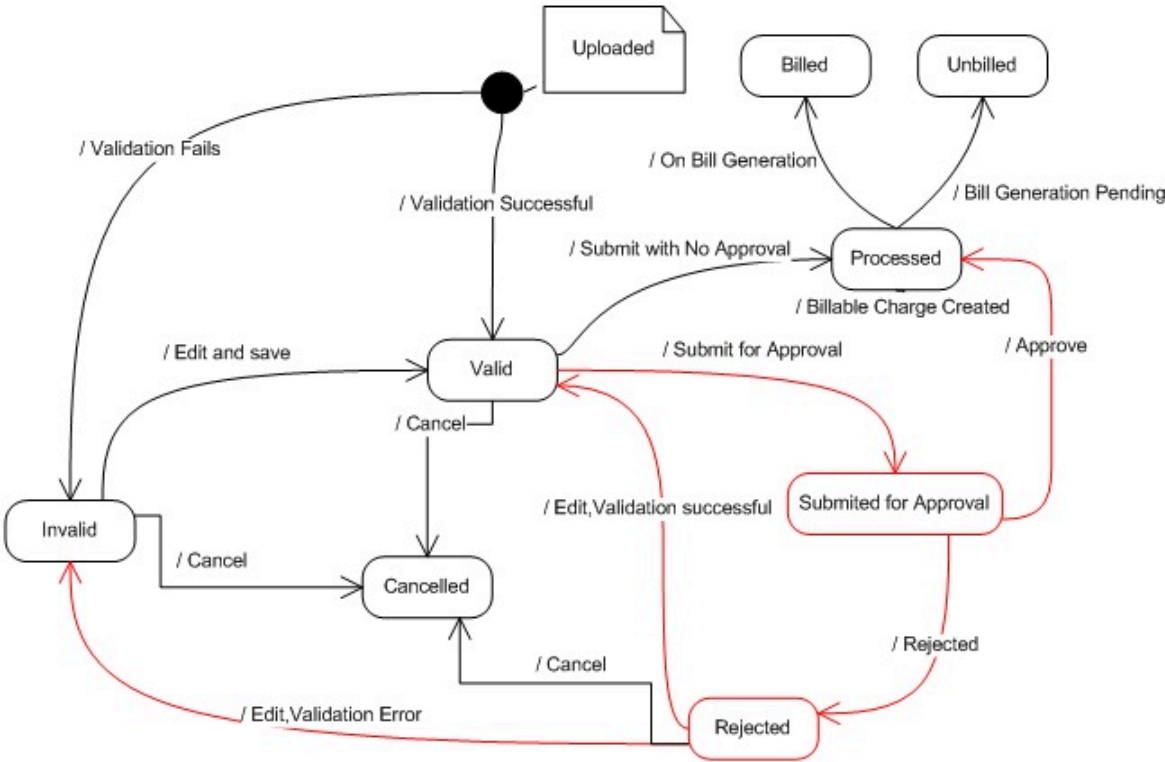

**Note:**

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

## Usage Record Status Transition

The following figure graphically indicates how a usage record moves from one status to another during the on demand billing process:

## File Type

Oracle Revenue Management and Billing allows you to define file types using which you can upload a usage or payment data file. It is the file type which helps the system to understand how to process the file. The feed type specified in the file type indicates the type of data that you can upload using the file type. You can upload the following types of data using a file type:

- Banking Usage Data
- Insurance Usage Data

**Note:** This file type is not applicable for financial services.

- Payment Upload Data

The following table lists the algorithms that you need to specify while defining file types for uploading usage or payment data:

Feed Type	Algorithm	Mandatory (Yes or No)	Algorithm Type Shipped with the Product...	Algorithm Type Purpose
Payment Upload Data	Mapping algorithm	Yes	C1-CSVUPLPAY	Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database.
Payment Upload Data	Validation algorithm	Yes	C1-PUPLVALID	Validates a payment data file.
Banking Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b> .
Banking Usage Data	Validation algorithm	No	C1-VLDALGO	Validates a usage data file.
Banking Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Banking Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.
Insurance Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b> .
Insurance Usage Data	Validation algorithm	No	None	-
			<b>Note:</b> You need to design custom algorithm type to validate insurance usage data.	
Insurance Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Insurance Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.

The **File Type** screen allows you to define, edit, and delete a file type. This screen consists of the following zones:

- [File Types](#) on page 1096

## File Types

The **File Types** zone lists the file types that are already defined in the system. You can define, edit and delete a file type through this zone.

This zone contains the following columns:

Column Name	Column Description
File Type	Displays the file type.
Description	Displays the description of the file type.
Feed Type	Indicates the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"><li>• Banking Usage Data</li><li>• Insurance Usage Data</li></ul> <div><b>Note:</b> This file type is not applicable for financial services.</div> <ul style="list-style-type: none"><li>• Payment Upload Data</li></ul>
Mapping Algorithm	Indicates the mapping algorithm which is triggered when you upload a file.
Validation Algorithm	Indicates the validation algorithm which is triggered once the file is uploaded in the system.
To Do Algorithm	Indicates whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.
Extract Algorithm	Indicates the extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>File Type</b> screen appears where you can edit the details of the file type. <div><b>Note:</b> You can edit the details of a file type when no files are uploaded using the file type.</div>
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the file type. <div><b>Note:</b> You can only delete a file type which is not yet used for uploading a file.</div>

You can define a file type by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4322.

## Defining a File Type

### Prerequisites

To define a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1\_ODBDALGO** algorithm type

### Procedure

To define a file type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.  
The **File Type** screen appears.
3. Click the **Add** link in the upper right corner of the **File Types** zone.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"><li>• Banking Usage Data</li></ul> <div>Note: This file type is not applicable for health insurance business.</div> <ul style="list-style-type: none"><li>• Insurance Usage Data</li></ul> <div>Note: This file type is not applicable for financial services.</div> <ul style="list-style-type: none"><li>• Payment Upload Data</li></ul>	Yes
Disable Move to Staging	Used to indicate whether you want to disable the <b>Move to Staging</b> functionality in the <b>Payment Upload</b> screen. <div>Note: This field appears when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</div>	No
Mapping Algorithm	Used to attach a mapping algorithm which is triggered when you upload a file.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>C1-CSVUPLPAY</b> algorithm type is designed for uploading payment data and the <b>C1-CSVPMALGO</b> algorithm type is designed for uploading usage data. The <b>C1-CSVUPLPAY</b> algorithm type does the following:</p> <ul style="list-style-type: none"> <li>a. Validates whether the file is in the CSV format</li> <li>b. Validates whether at least one payment record is available in the CSV file</li> <li>c. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database</li> <li>d. Uploads the payments records in the pre-staging area</li> </ul> <p>However, the <b>C1-CSVPMALGO</b> algorithm type does the following:</p> <ul style="list-style-type: none"> <li>a. Validates whether the file is in the CSV format</li> <li>b. Validates whether the CSV file contains data in the required format</li> <li>c. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> <li>• Account Identifier Type</li> <li>• Account Identifier</li> <li>• Division</li> <li>• Price Item</li> <li>• Description</li> </ul> </li> <li>d. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b></li> </ul> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
To Do Algorithm	Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>C1_ODBTDALGO</b> algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>To Do Role For Submitter</b> - Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.</li> <li>• <b>To Do Type For Submitter</b> - Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records.</li> <li>• <b>To Do Role For Approver</b> - Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.</li> <li>• <b>To Do Type For Approver</b> - Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval.</li> </ul> <p>This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Validation Algorithm	Used to attach a validation algorithm which is triggered once the file is uploaded in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>C1-PUPLVALID</b> algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to <b>Valid</b>, <b>Invalid</b>, or <b>Error</b>. For more information about the pre-defined validations, see <a href="#">Upload Payment Records in the Pre-Staging Area</a> on page 1168.</p> <p>However, the <b>C1-VLDALGO</b> algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the <b>C1-VLDALGO</b> algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	<p><b>Note:</b> This field is required when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p>
Extract Algorithm	Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

In addition, it contains the following two sections:

- **Map Divisions** - Used to indicate the divisions for which you want to use the file type.

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

- **Custom Labels** - Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

**Note:**  
  
This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.  
  
If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Enter the required details.

**Note:**  
  
You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.  
  
If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑) icon corresponding to the division.

5. Click **Save**.  
The file type is defined.

## Editing a File Type

### Prerequisites

To edit a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1\_ODBDALGO** algorithm type

**Note:** You can edit the details of a file type when no files are uploaded using the file type.

### Procedure

To edit a file type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.  
The **File Type** screen appears.
3. Click the **Edit** (✎) icon in the **Edit** column corresponding to the file type whose details you want to edit.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"><li>• Banking Usage Data</li></ul> <div><b>Note:</b> This file type is not applicable for health insurance business.</div> <ul style="list-style-type: none"><li>• Insurance Usage Data</li></ul> <div><b>Note:</b> This file type is not applicable for financial services.</div> <ul style="list-style-type: none"><li>• Payment Upload Data</li></ul>	Yes
Disable Move to Staging	Used to indicate whether you want to disable the <b>Move to Staging</b> functionality in the <b>Payment Upload</b> screen. <div><b>Note:</b> This field appears when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</div>	No
Mapping Algorithm	Used to attach a mapping algorithm which is triggered when you upload a file.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>C1-CSVUPLPAY</b> algorithm type is designed for uploading payment data and the <b>C1-CSVPMALGO</b> algorithm type is designed for uploading usage data. The <b>C1-CSVUPLPAY</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>Validates whether the file is in the CSV format</li> <li>Validates whether at least one payment record is available in the CSV file</li> <li>Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database</li> <li>Uploads the payments records in the pre-staging area</li> </ol> <p>However, the <b>C1-CSVPMALGO</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>Validates whether the file is in the CSV format</li> <li>Validates whether the CSV file contains data in the required format</li> <li>Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> <li>Account Identifier Type</li> <li>Account Identifier</li> <li>Division</li> <li>Price Item</li> <li>Description</li> </ul> </li> <li>Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b></li> </ol> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
To Do Algorithm	Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>C1_ODBDALGO</b> algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>To Do Role For Submitter</b> - Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.</li> <li>• <b>To Do Type For Submitter</b> - Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records.</li> <li>• <b>To Do Role For Approver</b> - Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.</li> <li>• <b>To Do Type For Approver</b> - Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval.</li> </ul> <p>This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Validation Algorithm	Used to attach a validation algorithm which is triggered once the file is uploaded in the system.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>C1-PUPLVALID</b> algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to <b>Valid</b>, <b>Invalid</b>, or <b>Error</b>. For more information about the pre-defined validations, see <a href="#">Upload Payment Records in the Pre-Staging Area</a> on page 1168.</p> <p>However, the <b>C1-VLDALGO</b> algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the <b>C1-VLDALGO</b> algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	<p><b>Note:</b> This field is required when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p>
Extract Algorithm	Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

In addition, it contains the following two sections:

- **Map Divisions** - Used to indicate the divisions for which you want to use the file type.

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** This section does not appear when the feed type is set to **Payment Upload Data**.

- **Custom Labels** - Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

**Note:**  
This section does not appear when the feed type is set to **Payment Upload Data**.  
If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Modify the required details.

**Note:**  
You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.  
If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑) icon corresponding to the division.

5. Click **Save**.  
The changes made to the file type are saved.

# Deleting a File Type

**Procedure**

To delete a file type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.  
The **File Type** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the file type that you want to delete.  
A message appears confirming whether you want to delete the file type.

**Note:** You can only delete a file type which is not yet used for uploading a file.

4. Click **OK**.  
The file type is deleted.

# On Demand Billing

The **On Demand Billing** screen allows you to search for a file group based on various search criteria. Through this screen, you can:

- Define a file group
- Edit a file group
- Delete a file group
- Close a file group
- Generate adhoc bills for a file group
- Freeze and complete adhoc bills of a file group
- View all bills generated for a file group
- View usage data files of a file group
- Cancel a usage data file

This screen consists of the following zones:

- [Search](#) on page 1105
- [Group Files](#) on page 1107

## Search

The **Search** zone allows you to search for file groups for which bills are processed and/or generated in the system. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Used to specify the file group.	No
Description	Used to specify the description for the file group.	No

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to specify the name of the user who has uploaded the usage data files in the file group.	No
Bill After Date	Used to specify the date after which the bills must be generated for the file group.	No
Status	Used to indicate the status of the file group. The valid values are: <ul style="list-style-type: none"> <li>Closed</li> <li>Open</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a file group.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Group	Displays the name of the file group.
	<b>Note:</b> It has a link. On clicking the link, the <b>File Group</b> screen appears where you can view the details of the file group.
Bill After Date	Displays the date after which the bills must be generated for the file group.
Default Usage Start Date	Displays the date from when the price item was used.
Default Usage End Date	Displays the date till when the price item was used.
Status	Displays the status of the file group. The valid values are: <ul style="list-style-type: none"> <li>Open</li> <li>Close</li> </ul>
Close	On clicking the <b>Close</b> (✖) icon, you can close a file group.
	<b>Note:</b> You can only close a file group in which all the records of the usage data files are either in the processed or cancelled status.
Generate Bill	On clicking the <b>Generate Bill</b> (📄) icon, you can generate bills for a file group.
Complete Bill	On clicking the <b>Complete Bill</b> (🔒) icon, you can freeze and complete the bills of a file group.
Total	Displays the total number of records that are uploaded through the file group.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Processed	Displays the number of valid records for which billable charges are already created.
Rejected	Displays the number of records which are rejected by the approver.
Cancelled	Displays the number of records which are cancelled in the system.

Column Name	Column Description
Unbilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Bills	Displays the number of bills generated for the file group.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Bill Data</b> screen appears where you can view all bills generated for the usage data file.
Last Batch Status	Indicates the batch that was last executed on the file group and its current status.
	<b>Note:</b> It has a link. On clicking the link, the <b>Batch Run Tree</b> screen appears where you can view the execution details of the batch.

**Group Files**

The **Group Files** zone allows you to view the usage data files uploaded using a file group. This zone contains the following two sections:

- **Search Criteria** - the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to specify the type of usage data file.	No
File Upload From Date	Used to specify the start date of the period during which the usage data file that you want to search was uploaded in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
File Upload To Date	Used to specify the end date of the period during which the usage data file that you want to search was uploaded in the system.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file of the file group and its related details.
Total	Displays the total number of records that are uploaded through the usage data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Rejected	Displays the number of records which are rejected by the approver.
Processed	Displays the number of valid records for which billable charges are already created.
Cancelled	Displays the number of records of a usage data file which are cancelled.
UnBilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Cancel	On clicking the <b>Cancel</b> (⊗) icon, you can cancel a file.

By default, the **Group Files** zone does not appear in the **On Demand Billing** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the file group in the **Search Results** section.

**Note:** By default, the **Group Files** zone displays a list of usage data files that are uploaded using the file group in the **Search Results** section. However, you can filter the list of usage data files by specifying a search criteria in the **Search Criteria** section.

# Searching for a File Group

**Procedure**

To search for a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.

3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of file groups that meet the search criteria appears in the **Search Results** section.

## Defining a File Group

**Prerequisites**

To define a file group, you should have:

- Access to the divisions for which you want to define the file group

**Procedure**

To define a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.

The **File Group** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Used to specify the file group.	Yes
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group.	Yes
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes
	<b>Note:</b> The default usage start date cannot be later than the default usage end date.	
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is	Yes

Field Name	Field Description	Mandatory (Yes or No)
	not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	
	<b>Note:</b> The default usage end date cannot be earlier than the default usage start date.	

In addition, the **File Group** screen contains the following section:

**Map Divisions-** The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No
		<b>Note:</b> If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

- 4. Enter the required details.
- 5. If you want to define the file group for more than one division, click the **Add (+)** icon and then repeat step 5.

**Note:** However, if you want to remove a division from the file group, click the **Delete (🗑)** icon corresponding to the division.

- 6. Click **Save**.  
The file group is defined.

## Editing a File Group

**Procedure**

To edit a file group:

**Note:** You can edit the details of a file group when no usage data files of this group have been uploaded in the system or all the records in the usage data files of a file group are cancelled.

- 1. Click the **Menu** link in the **Application** toolbar.  
A list appears.

- 2. Select **Billing Management** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
- 3. Search for the file group in the **On Demand Billing** screen.
- 4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group whose *details* you want to edit.

The **File Group** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Displays the file group.	Not applicable
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group	Yes
Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file.	Yes
	<b>Note:</b> The default usage start date cannot be later than the default usage end date.	
Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file.	Yes
	<b>Note:</b> The default usage end date cannot be earlier than the default usage start date.	

In addition, the **Add/Edit File Group** screen contains the following section:

- **Map Divisions-** The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No
		<b>Note:</b> If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

- 5. Modify the required details.

**Note:** If you want to define the file group for more than one division, click the **Add (+)** icon and then specify the details. However, if you want to remove a division from the file group, click the **Delete (🗑)** icon corresponding to it.

- 6. Click **Save**.  
The changes made to the file group are saved.

Search zone	<a href="#">Search</a> on page 1105

## Deleting a File Group

### Procedure

To delete a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. Select **Billing Management** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group that you want to delete.  
The **File Group** screen appears.
5. Click **Delete**.  
The file group is deleted.

**Note:** The delete button appears only if the file group is not yet used. In other words, you cannot delete a file group that you have used for uploading usage data files.

## Closing a File Group

### Procedure

To close a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the **Close** (✖) icon in the **Close** column corresponding to the file group that you want to close.  
The status of the file group is changed to **Closed**.

**Note:** You can only close a file group in which all the records of the usage data files are either in the processed, cancelled, or rejected status. However, you may close a file group in which all the records are not in the cancelled and/or processed status, but in that case a to do entry is sent to the approver for approval of the pending records.

# Generating Adhoc Bills for a File Group

The **On Demand Billing** screen allows you to generate adhoc bills for a file group. However, you can generate bills only after you close the file group for which you want to generate adhoc bills.

**Procedure**

To generate adhoc bills for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Generate Bill**  icon corresponding to the file group for which you want to generate the adhoc bills.

The **Generate Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cutoff Date	Used to specify the cutoff date for the bill.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.
4. Click **OK**.

The adhoc bills are generated for the usage data files of a file group. An adhoc bill is generated for a usage data file and account combination when the bill after date is equal to or earlier than the current date. The status of the usage records is changed to **Billed**. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, a batch job is created using the **Adhoc Billing (C1-FABL)** batch. A message appears indicating the batch job ID. This batch job creates adhoc bills for the usage data file.

**Note:**

You can change the online bill creation limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Adhoc Billing (C1-FABL)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If an adhoc bill with the **Pending** status already exists for a usage data file and account combination, then the existing bill is deleted and regenerated. However, you can generate the bill again for a file group only after manually deleting the bill from the **Bill** screen.

On successful completion of the **Adhoc Billing (C1-FABL)** batch, a To Do entry is created using the **C1-FABL** To Do type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FABL** To Do type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of billable charges which were processed
- Number of billable charges for which the bill after date is a future date
- Number of adhoc bills generated for the usage data file
- Number of billable charges which could not be processed successfully

Once the batch is executed successfully, the status of the usage records in a usage data file of a file group is changed to **Billed**.

**Related Topics**

For more information on...	See...
How to search for a file group	<a href="#">Searching for a File Group</a> on page 1108

## Freezing All Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for the usage data files of a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

**Procedure**

To freeze and complete all adhoc bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Freeze and Complete** (🔒) icon corresponding to the file group whose adhoc bills you want to freeze and complete.

The **Complete Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Date	Used to specify the date on which the bill was completed.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.
4. Click **OK** in the message box.

A batch job is created using the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch. A message appears indicating the batch job ID. This batch job freezes and completes all adhoc bills of the usage data file which are in the **Pending** status. The system does not freeze and complete pending adhoc bills which have bill segments in the **Error** status. For more information on the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:**

On successful completion of the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, a To Do entry is created using the **C1-FCADH** To Do type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FCADH** To Do type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of bills which were picked up for completion
- Number of bills which were completed
- Number of bills which could not be completed successfully

Once the batch is executed successfully, the status of the bills is changed to **Complete**.

## Freezing Selected Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

**Procedure**

To freeze and complete selected adhoc bills of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose adhoc bills you want to freeze and complete.  
The **View Bill Data** screen appears.
3. Select the check box corresponding to the pending adhoc bill that you want to freeze and complete.

**Note:** The check box does not appear corresponding to the completed adhoc bills and pending adhoc bills which have bill segments in the **Error** status.

4. Click **Freeze/Complete**.

The **Complete Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Date	Used to specify the date on which the bill was completed.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

5. Enter the required details.

6. Click **OK** in the message box.  
The status of the bills is changed to **Complete**.

**Note:**

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a file group are in the **Complete** status
- Multiple bills are generated for a usage data file of a file group and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a file group where none of the bill segments are in the **Error** status.

## Viewing All Bills Generated for a File Group

**Procedure**

To view all bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose bills you want to view.

The **View Bill Data** screen appears. It contains the following fields:

Field Name	Field Description
File Group	Displays the name of the file group.
Description	Displays the description of the file group.
Bill Generation Date	Used to specify the date when the bills were generated for the file group.
Billing Method	Indicates the type of billing used for the file group. The valid values are: <ul style="list-style-type: none"><li>• Adhoc Billing</li></ul>
Bill Status	Used to indicate the status of the bill. The valid values are: <ul style="list-style-type: none"><li>• Pending</li><li>• Complete</li></ul>

In addition, this screen contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> </ul>
Bill Date	Displays the date when the bill was completed.
Accounting Date	Displays the accounting date for which the financial transaction of the bill is created.
Invoice Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Invoice Account ID	Indicates the account for which the bill is created. <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Display Bill	On clicking this link, you can view the details of the respective bill. <p><b>Note:</b> This link appears only for the bills that are in the <b>Complete</b> status. The facility to view the generated bills in PDF format is available only if Oracle Documaker is integrated with Oracle Revenue Management and Billing.</p>

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. Click **Search**.
4. View the bills generated for the usage data file in the **View Bill Data** screen.
5. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

6. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
7. If required, you can freeze and complete adhoc bills which are generated for the usage data file.

**Note:**

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a usage data file are in the **Complete** status
- Multiple bills are generated for a usage data file and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a usage data file where none of the bill segments are in the **Error** status.

## Viewing Usage Data Files of a File Group

**Procedure**

To view usage data files of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the file group whose usage data files you want to view.

The **Group Files** zone appears.

3. View the usage data files of the file group in the **Group Files** zone.

## Usage Data Processing

The **Usage Data Processing** screen allows you to search for a usage data file based on various search criteria. Through this screen, you can:

- Upload a usage data file
- Cancel a usage data file
- View all records uploaded through a usage data file
- View the valid, invalid, and cancelled records of a usage data file
- View the valid records of a usage data file which are submitted for approval
- View the valid records of a usage data file for which billable charges are already created
- View the rejected, billed and unbilled records of a usage data file
- Submit the valid records of a usage data file and create billable charges for them
- Approve or reject one or more valid records of a usage data file
- Revalidate the valid and invalid records of a usage data file
- Edit the valid, invalid and rejected records of a usage data file
- Export the usage data of a usage data file into a CSV file

This screen consists of the following zones:

- [Search](#) on page 1119

## Search

The **Search** zone allows you to search for usage data files that are uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** - the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to indicate the type of usage data file.	No
File Upload From Date	Used when you want to search for usage data files that were uploaded from a particular date onwards.	No
To	Used when you want to search for usage data files that were uploaded till a particular date.	No
User ID	Used to specify the name of the user who has uploaded the usage data file.	No
Billing Method	Used to specify the type of billing used for the usage data file. The valid values are: <ul style="list-style-type: none"><li>• Adhoc Billing</li><li>• Regular Billing</li></ul>	No
File Group	Used to specify the file group of the usage data file.	No

**Note:** You must specify at least one search criterion while searching for a usage data file.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file and its related details.
Revalidate	On clicking the <b>Revalidate</b> (🔄) icon, you can execute the validation process once again on the valid, invalid, and rejected records.  <b>Note:</b> The <b>Revalidate</b> icon appears when the usage records are in the <b>Valid</b> , <b>Invalid</b> , and/or <b>Rejected</b> status. In other words, you cannot revalidate a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Cancel	On clicking the <b>Cancel</b> (🚫) icon, you can cancel all valid, invalid, and rejected records of the usage data file.  <b>Note:</b> The <b>Cancel</b> icon appears when the usage records are in the <b>Valid</b> , <b>Invalid</b> , and/or <b>Rejected</b> status. In other words, you cannot cancel a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Submit	On clicking the <b>Submit</b> (👉) icon, you can submit the valid records and create billable charges for them. If the valid usage records need to be approved before creating the billable charges, a To Do entry is created for the approver to approve the valid records.

Column Name	Column Description
	<p><b>Note:</b> The <b>Submit</b> icon appears when all the records of a usage data file are in the <b>Valid</b> status. In other words, if a usage data file contains records in the <b>Invalid</b> status, you cannot create billable charges for a usage data file.</p>
Approve	<p>On clicking the <b>Approve</b> (☺) icon, the approver can approve all valid records of the usage data file.</p> <p><b>Note:</b> The <b>Approve</b> icon appears when the usage data file (with all usage records in the <b>Valid</b> status) is uploaded using a file type to which the To Do algorithm (for enabling approval workflow) is attached.</p>
Total	<p>Displays the total number of records that are uploaded through the usage data file.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all records uploaded through the usage data file.</p>
Valid	<p>Displays the number of records which are successfully validated in the system.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all valid records of the usage data file.</p>
Invalid	<p>Displays the number of records which could not pass through the validation process in the system.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all invalid records of the usage data file.</p>
Submitted	<p>Displays the number of valid records which are submitted for approval.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all submitted records of the usage data file.</p>
Rejected	<p>Displays the number of records which are rejected by the approver.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all rejected records of the usage data file.</p>
Processed	<p>Displays the number of valid records for which billable charges are already created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all processed records of the usage data file.</p>
Billed	<p>Displays the number of records for which billable charges are created and billed to the person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all billed records of the usage data file.</p>
Unbilled	<p>Displays the number of records for which billable charges are created, but are not yet billed to the person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all unbilled records of the usage data file.</p>

Column Name	Column Description
Cancelled	Displays the number of records which are cancelled in the system.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all cancelled records of the usage data file.
Batch Run Status	Indicates the batch that was last executed on the usage data file and its current status.
	<b>Note:</b> It has a link. On clicking the link, the <b>Batch Run Tree</b> screen appears where you can view the execution details of the batch.

You can upload a usage data file by clicking the **Upload** link in the upper right corner of this zone.

**Searching for a Usage Data File**

**Procedure**

To search for a usage data file:

- 1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
- 2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
- 3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 4. Click **Search**.  
A list of usage data files that meet the search criteria appears in the **Search Results** section.

**Related Topics**

Usage Data Processing screen	<a href="#">Usage Data Processing</a> on page 1118
Search zone	<a href="#">Search</a> on page 1119

**Uploading a Usage Data File**

**Prerequisites**

To upload a usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

**Procedure**

To upload a usage data file:

- 1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
- 2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
- 3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"><li>• Adhoc Billing</li><li>• Regular Billing</li></ul>	Yes
File Group	Used to specify the file group to which you want to add the usage data file.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Adhoc Billing</b> option from the <b>File Group</b> list. You can only view those file groups that are in the open status and to which you have access in the <b>File Group</b> list.	<b>Note:</b> If you select the billing method as <b>Adhoc Billing</b> , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the bill after date.
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage start date.
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage end date.
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the usage data file is available in the system.	

- 4. Enter the required details.
- 5. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
- 6. Browse to the location where the usage data file that you want to upload is available.
- 7. Click **Open**.  
The usage data file name and path appears in the **File Name** field.
- 8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

**Note:**

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files - each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

- 9. Click **OK** in the message box.  
Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

## Replacing an Existing File

### Prerequisites

To replace an existing usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

### Procedure

To replace an existing usage data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. Select **Billing Management** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"><li>• Adhoc Billing</li><li>• Regular Billing</li></ul>	Yes
File Group	Used to specify the file group to which you want to add the usage data file.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Adhoc Billing</b> option from the <b>File Group</b> list. You can only view those file groups that are in the open status and to which you have access in the <b>File Group</b> list.	<b>Note:</b> If you select the billing method as <b>Adhoc Billing</b> , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the bill after date.

Field Name	Field Description	Mandatory (Yes or No)
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage start date.
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage end date.
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate that you want to replace any existing file in the system.	Yes
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the usage data file is available in the system.	

4. Select the **Replace Existing File** check box.

**Note:** You can replace an existing file when the usage records of a usage data file are in any of the statuses:

- **Valid** and/or **Invalid**
- **Rejected**
- **Cancelled**

In other words, you cannot replace a file when the billable charges are already created for the usage records of a usage data file, or are pending for approval with the approver.

5. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the usage data file that you want to replace is available.
7. Click **Open**.  
The usage data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files - each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Viewing All Records of a Usage Data File

**Procedure**

To view all records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.

2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the usage records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Used to specify the status of the usage record. The valid values are: <ul style="list-style-type: none"><li>• Valid</li><li>• Invalid</li><li>• Submitted for Approval</li><li>• Processed</li><li>• Rejected</li><li>• Cancelled</li></ul>	No
Division	Used to specify the division to which the usage record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the usage records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose usage records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
	<b>Note:</b> This column appears only for the valid records for which billable charges have been created.
ACCOUNT ID TYPE	Indicates the account identifier type.

Column Name	Column Description
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.

Column Name	Column Description
SQVALUE1, SQVALUE2, ....., SQVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (◀), **Previous** (◀), **Next** (▶), and **Last** (▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

**Note:** You can download details of all the records of a usage data file in a CSV file format using the **Export TO Excel** link provided in the **Search** section.

- 3. View the records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to *navigate* between pages.
- 6. If required, you can filter the usage records in the **Usage Data** screen.
- 7. If required, you can click the **Export TO Excel** link to download details of all the records of a usage data file *in* a CSV file format.

## Viewing Valid Records of a Usage Data File

**Procedure**

To view valid records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Valid** column corresponding to the usage data file whose valid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the valid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all valid records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the valid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the valid records.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose valid records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all valid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.

Column Name	Column Description
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the valid records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- 6. If required, you can filter the valid records in the **Usage Data** screen.

**Related Topics**

For more information on...	See...

## Viewing Invalid Records of a Usage Data File

**Procedure**

To view invalid records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Invalid** column corresponding to the usage data file whose invalid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the invalid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all invalid records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the invalid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the invalid records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose invalid records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all invalid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.

Column Name	Column Description
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.

Column Name	Column Description
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the invalid records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

Note:

By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- 6. If required, you can filter the invalid records in the **Usage Data** screen.

Viewing Submitted Records of a Usage Data File

Procedure

To view submitted records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Submitted** column corresponding to the usage data file whose submitted records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the submitted records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all records submitted for approval are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the submitted record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the submitted records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose submitted records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all submitted records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.

Column Name	Column Description
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. <b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. <b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. <b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. <b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter. <b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).

Column Name	Column Description
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the submitted records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the submitted records in the **Usage Data** screen.

## Viewing Processed Records of a Usage Data File

**Procedure**

To view processed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Processed** column corresponding to the usage data file whose processed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the processed records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all processed records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the processed record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the processed records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose processed records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all processed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.

Column Name	Column Description
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (◀◀), **Previous** (◀), **Next** (▶), and **Last** (▶▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the processed records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

Note:

## Viewing Cancelled Records of a Usage Data File

Procedure

To view cancelled records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Cancelled** column corresponding to the usage data file whose cancelled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the cancelled records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all cancelled records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the cancelled record belongs.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the identifier type based on which you want to search for the cancelled records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose cancelled records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all cancelled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
	<b>Note:</b> This column appears only if you have cancelled a valid record for which billable charges have been created.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.

Column Name	Column Description
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.

Column Name	Column Description
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.
REASON	Indicates the reason why the usage record was cancelled.
COMMENTS	Displays additional information entered while cancelling a usage record.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (◀), **Previous** (◀), **Next** (▶), and **Last** (▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the cancelled records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (◀), **Previous** (◀), **Next** (▶), and **Last** (▶) buttons to navigate between pages.
- 6. If required, you can filter the cancelled records in the **Usage Data** screen.

## Viewing Rejected Records of a Usage Data File

**Procedure**

To view rejected records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Rejected** column corresponding to the usage data file whose rejected records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the rejected records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all rejected records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the rejected record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the rejected records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose rejected records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all rejected records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.

Column Name	Column Description
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. <b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. <b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. <b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE 1, PARAM TYPE 2, ....., PARAM TYPE 15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. <b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE 1, PARAM VALUE 2, ....., PARAM VALUE 15	Displays the value of the price item parameter. <b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQVALUE1, SQVALUE2, ....., SQVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY 1, CURRENCY 2, ....., CURRENCY 10	Displays the currency in which the amount is charged.

Column Name	Column Description
MEMO ONLY 1, MEMO ONLY 2, ....., MEMO ONLY 10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY 1, SUMMARY 2, ....., SUMMARY 10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL 1, SHOW ON BILL 2, ....., SHOW ON BILL 10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE 1, CHARTYPE 2, ....., CHARTYPE 10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL 1, CHARVAL 2, ....., CHARVAL 10	Displays the value of the characteristic type.
REASON	Indicates the reason why the usage record was rejected by the approver.
COMMENTS	Displays additional information entered while rejecting a usage record.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the rejected records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the rejected records in the **Usage Data** screen.

## Viewing Billed Records of a Usage Data File

### Procedure

To view billed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Billed** column corresponding to the usage data file whose billed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the billed records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all billed records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the billed record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the billed records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose billed records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all billed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQVALUE1, SQVALUE2, ....., SQVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (◀◀), **Previous** (◀), **Next** (▶), and **Last** (▶▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the billed records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

Note:

By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (◀◀), **Previous** (◀), **Next** (▶), and **Last** (▶▶) buttons to navigate between pages.
- 6. If required, you can filter the billed records in the **Usage Data** screen.

## Viewing Unbilled Records of a Usage Data File

Procedure

To view unbilled records of a usage data file:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the link in the **Unbilled** column corresponding to the usage data file whose unbilled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** - This section allows you to filter the unbilled records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all unbilled records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the unbilled record belongs.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the identifier type based on which you want to search for the unbilled records.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose unbilled records you want to view.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** - By default, all unbilled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.

Column Name	Column Description
	<b>Note:</b> This column appears when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (◀), **Previous** (◀), **Next** (▶), and **Last** (▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- 3. View the unbilled records of the usage data file in the **Usage Data** screen.
- 4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values - 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- 5. If required, you can click the **First** (◀), **Previous** (◀), **Next** (▶), and **Last** (▶) buttons to navigate between pages.
- 6. If required, you can filter the unbilled records in the **Usage Data** screen.

# Submitting a Valid Record

**Procedure**

To submit a valid record:

- 1. Search for the usage data file in the **Usage Data Processing** screen.
- 2. In the **Search Results** section, click the **Submit** (📤) icon corresponding to the usage data file whose valid records you want to submit.

The system behaves in the following manner when:

- **Billing Method - Adhoc Billing, Approval Workflow - Off, and Bill After Date - Current or Future Date:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **Y** and the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message

appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**.

- **Billing Method - Adhoc Billing, Approval Workflow - On, and Bill After Date - Current or Future Date:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.
- **Billing Method - Regular Billing, Approval Workflow - Off, and Bill After Date - Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** and the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account in the bill cycle in which the bill after date falls.
- **Billing Method - Regular Billing, Approval Workflow - Off, and Bill After Date - Not Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** in the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account based on the bill cycle defined for the account.
- **Billing Method - Regular Billing and Approval Workflow - On:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.

Note:

You can change the transaction limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Billable Charge Creation (C1-ODBCH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If you want to create billable charges for valid usage records where start date is a future date, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.

If a batch job is created automatically, the number of valid records for which billable charges are created in each work unit depends on the value defined for the **Billable Charge Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

In case an account belongs to an invoicing group, the billable charge is created for the member account and the bill is generated for the master account.

On successful completion of the **Billable Charge Creation (C1-ODBCH)** batch, a To Do entry is created using the **C1-ODBCH To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODBCH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records for which billable charges were created
- Number of records for which billable charges could not be created successfully

3. If a batch job is created automatically, click **OK** in the message box.

## Approving a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

**Note:** The system will not allow you to approve or reject a usage record submitted by you.

### Procedure

To approve a valid record:

1. Do either of the following:

If you want to...	Then...
Approve the usage record from the Usage Data Processing screen	<p>a. Search for the usage data file in the <b>Usage Data Processing</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the <b>Approve</b> (☺) icon corresponding to the usage data file whose records you want to review.</p>
Approve the usage record from the To Do List screen	<p>a. From the <b>Main Menu</b>, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</p> <p>b. Select the type of To Do entries you want to view. The <b>To Do List</b> screen appears.</p> <p>c. Select <b>Open</b> from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>d. Click the <b>Submitted Message</b> link corresponding to the To Do entry whose records you want to review.</p>

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

If you want to...	Then...
Approve one or more usage records	<p>a. If the usage record is accurate, then select the check box corresponding to the usage record.</p> <p>b. Click <b>Approve</b>.</p> <p>The system behaves in the following manner when:</p> <ul style="list-style-type: none"><li>• <b>Billing Method - Adhoc Billing and Bill After Date - Current or Future Date:</b> A billable charge is created for each valid record which is approved. The <b>Adhoc Bill</b> flag is set to <b>Y</b> and the <b>Bill After Date</b> is stamped on the billable charge. The status of the usage record is changed to <b>Processed</b>.</li><li>• <b>Billing Method - Regular Billing and Bill After Date - Specified:</b> A billable charge is created for each valid record which is approved. The <b>Adhoc Bill</b> flag is set to <b>N</b> and the <b>Bill After Date</b> is stamped on the billable charge. The status of the usage record is changed to <b>Processed</b>. The bills will be generated for the account in the bill cycle in which the bill after date falls.</li></ul>

If you want to...	Then...
	<ul style="list-style-type: none"> <li>• <b>Billing Method - Regular Billing and Bill After Date - Not Specified:</b> A billable charge is created for each valid record which is approved. The <b>Adhoc Bill</b> flag is set to <b>N</b> in the billable charge. The status of the usage record is changed to <b>Processed</b>. The bills will be generated for the account based on the bill cycle defined for the account.</li> </ul>
Approve all usage records	<p>a. Click <b>Approve All</b>.</p> <p>The system behaves in the following manner when:</p> <ul style="list-style-type: none"> <li>• <b>Billing Method - Adhoc Billing and Bill After Date - Current or Future Date:</b> A billable charge is created for each valid record which is approved. The <b>Adhoc Bill</b> flag is set to <b>Y</b> and the <b>Bill After Date</b> is stamped on the billable charge. If the total number of records that you want to approve exceeds the transaction limit, a batch job is created using the <b>Billable Charge Creation (C1-ODBCH)</b> batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to <b>Processed</b>.</li> <li>• <b>Billing Method - Regular Billing and Bill After Date - Specified:</b> A billable charge is created for each valid record which is approved. The <b>Adhoc Bill</b> flag is set to <b>N</b> and the <b>Bill After Date</b> is stamped on the billable charge. If the total number of records that you want to approve exceeds the transaction limit, a batch job is created using the <b>Billable Charge Creation (C1-ODBCH)</b> batch. ## Rejecting a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

**Note:** The system will not allow you to approve or reject a usage record submitted by you.

**Procedure**

To reject a valid record:

1. Do either of the following:

If you want to...	Then...
Reject the usage record from the <b>Usage Data Processing</b> screen	<p>a. Search for the usage data file in the <b>Usage Data Processing</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the <b>Approve</b> (☺) icon corresponding to the usage data file whose records you want to review.</p>
Reject the usage record from the <b>To Do List</b> screen	<p>a. From the <b>Main Menu</b>, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</p>

If you want to...	Then...
	<p>b. Select the type of To Do entries you want to view.</p> <p>The <b>To Do List</b> screen appears.</p> <p>c. Select <b>Open</b> from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>d. Click the <b>Submitted Message</b> link corresponding to the To Do entry whose records you want to review.</p>

The **Usage Data** screen appears.

- 2. Review the usage records which you want approve or reject.
- 3. Do either of the following:

If you want to...	Then...
Reject one or more usage records	<p>a. If the usage record is not appropriate, then select the check box corresponding to the usage record.</p> <p>b. Click <b>Reject</b>.</p>
Reject all usage records	<p>a. Click <b>Reject All</b>.</p>

The **Rejection Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason	Used to indicate the reason why you want to reject the usage record.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

- 4. Select the reason for rejecting the usage record and enter the comments in the respective field.

**Note:** The **ODB\_REJ\_RSN\_FLG** lookup field values appear in the **Reason** list.

- 5. Click **OK**.  
The status of the usage record is changed to **Rejected**. A To Do entry is created for the submitter to include correct or missing data.

For more information on...	See...
How to search for a usage data file	<a href="#">Searching for a Usage Data File</a> on page 1121

## Cancelling a Usage Data File

There might be situations when incorrect usage data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. Once the usage data file is cancelled, the status of the file and all usage records in the file is changed to **Cancelled**. However, note that you can cancel a usage data file when there are no records (in other words, zero records) in the **Processed** and **Submitted** statuses.

Procedure

To cancel a usage data file:

1. Do either of the following:

If you want to...	Then...
Cancel the usage data file from the Usage Data Processing screen	<p>a. Search for the usage data file in the <b>Usage Data Processing</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the <b>Cancel</b> (🚫) icon corresponding to the usage data file that you want to cancel.</p>
Cancel the usage data file from the On Demand Billing screen	<p>a. From the <b>Main Menu</b>, select <b>Billing Management</b> and then click <b>On Demand Billing</b>.</p> <p>The <b>On Demand Billing</b> screen appears.</p> <p>b. Search for the file group whose usage data file you want to cancel.</p> <p>The search results appears.</p> <p>c. Click the <b>Broadcast</b> (📡) icon corresponding to the required file group.</p> <p>The <b>Group Files</b> zone appears. The <b>Group Files</b> zone lists the usage data files that are uploaded using the file group.</p> <p>d. Click the <b>Cancel</b> (🚫) icon corresponding to the usage data file that you want to cancel.</p>

A message appears confirming whether you want to cancel the usage data file.

2. Click **OK**.

The **Cancel Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason	Used to indicate the reason why you want to cancel the usage data file.	Yes
Comments	Used to specify additional information while cancelling the usage data file.	Yes

3. Select the reason for cancelling the usage data file and enter the comments in the respective field.

**Note:** The **ODB\_CAN\_RSN\_FLG** lookup field values appear in the **Reason** list.

4. Click **OK**.

The status of the usage data file is changed to **Cancelled**.

**Related Topics**

## Revalidating a Usage Data File

There might be situations when you want to execute the validation process once again on the usage data file. For example, initially when the usage data file was uploaded, accounts didn't have an active contract and therefore the status of the usage records was set to **Invalid**. Later, a contract was created and activated for each account (whose usage records are available in the usage data file). In such case, you need to execute the validation process once again on the usage data file. However, note that when you revalidate a usage data file, only the records in the **Valid** and **Invalid** status are revalidated.

### Procedure

To revalidate a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Click the **Revalidate** (🔄) icon corresponding to the usage data file on which you want to execute the validation process once again.

The valid and invalid records are revalidated, and accordingly the status of records is changed. A message appears indicating that the validation process has completed successfully.

**Note:**

If the usage data file size exceeds the file size limit set in the **On Demand Billing (C1-ODBFC)** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job revalidates the usage data file. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If a batch job is created automatically, the number of usage records that are revalidated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

3. Click **OK** in the message box.  
Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

## Editing a Valid, Invalid, or Rejected Usage Record

If the usage record validation fails or the approver rejects the usage record due to some reason, the status of the record is changed to **Invalid** or **Rejected**, respectively. You need to then correct the existing data or add the missing data. The system allows you to edit the valid, invalid, and rejected usage records.

### Procedure

To edit a valid, invalid or rejected usage record:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Depending on whether you want to edit a valid, invalid, or rejected record, click the link in the **Valid, Invalid, or Rejected** column corresponding to the usage data file whose records you want to edit.  
The **Usage Data** screen appears. The columns in the **Search Results** section are editable.

**Note:**

In case of rejected records, all columns except the **Reason** and **Comments** columns are editable.

In case of invalid record, the field with incorrect or missing data is highlighted with the red color. This helps to easily identify the reason why the validation process failed.

3. Enter the correct or missing data in the respective field.
4. Click **Save**.  
All valid, invalid, or rejected usage records are validated once again. Once the validation process has completed successfully, the status of the records is changed accordingly.

## Exporting Usage Data into CSV file

Oracle Revenue Management and Billing provides you the facility to export the usage data into a CSV file. However, you can download the usage data in a CSV file only if the billable charges are not yet created. In other words, you can download the usage data only when all the records of a usage data file are in the valid and/or invalid status. Once the usage data is downloaded, you can edit the usage records and reupload the usage data file.

**Note:** When you download the usage data file using the **Export To Excel** option, the downloaded file is saved on your system with a unique ID. Once you make the required changes in the downloaded usage data file, you need to save the modified file with the same name as it exists in Oracle Revenue Management and Billing, and then upload the file into the system to replace the existing file.

### Procedure

To export usage data into CSV file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose usage records you want to export.  
The **Usage Data** screen appears.
3. Click the **Export TO Excel** link in the **Search** section to download details of all the valid and/or invalid records of a usage data file in a CSV file format.

A message appears indicating that all valid and invalid records will be exported.

4. Click **OK**.

The system prompts you to save the file.

## Filtering Usage Records

---

**Procedure**

To filter records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Depending on whether you want to filter total, valid, invalid, submitted, processed, rejected, cancelled, billed, or unbilled usage records, click the link in the respective column corresponding to the usage data file.  
The **Usage Data** screen appears.
3. Enter the search criteria based on which you want to filter the records.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

## Upload Validated Payment Data

---

### Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Sample CSV](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data - one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file
- Apply payments on the unpaid bills of an account or a statement

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1171. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 1168.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 1173 and [Payment Record Status Transition](#) on page 1174, respectively.

# Payment Upload Process

---

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 1168
- [Move Payment Records to the Staging Area](#) on page 1169
- [Create Payment Events and Payments](#) on page 1169

## Upload Payment Records in the Pre-Staging Area

---

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1171.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID**, **Tender Amount**, **Payment Amount**, **Date Received**, **Bank Account**, and **Payment Type** columns in the CSV file.
- The data is available in the **Match Type** and **Match Value** columns in the CSV file.

**Note:** This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

**Note:** If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

**Note:** This validation is done when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

**Note:** This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.

- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 1174.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

**Note:** If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

## Move Payment Records to the Staging Area

---

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** (📁) icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** (📁) icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** (📁) icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

## Create Payment Events and Payments

---

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events

- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

## Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

**Note:** If you want to use the **Payment Upload** feature in an ORMB Cloud Service Premium Edition environment, you need to set the **Payment Upload Extendable Lookup and Bucket** option type of the **C1-CFS** feature configuration.

How to set the <b>C1-CFS</b> feature configuration	<a href="#">Setting the C1-CFS Feature Configuration</a> on page 4368

# CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Account ID	Used to specify the payee account ID.	Yes
Match Type	Used to specify the match type using which you want to match the payment.	Yes (Conditional)
		<b>Note:</b> This data is required when the match value is specified.
Match Value	Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment.	Yes (Conditional)
	<b>Note:</b> If you specify a match type where the entity type is set to <b>Account</b> , the match value should not be provided. The payee account ID is derived from the payment data record. If the payee account ID is not available in the payment data record, it is derived using the payee account identifier type and identifier value. The system then derives the unpaid bills of the payee account using the manual distribution algorithm attached to the respective match type.  If you specify a match type where the entity type is set to <b>Statement</b> , the match value should not be provided. The statement ID is derived from the payment data record. The system then derives the unpaid bills of the statement using the manual distribution algorithm attached to the respective match type.	<b>Note:</b> This data is required when the match type is specified.
Tender ID	Used to specify the payment tender ID.	Yes
	<b>Note:</b> If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	
Tender Amount	Used to specify the tender amount.	Yes
	<b>Note:</b> You must not specify the value less than or equal to 0.  The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	
Payment Amount	Used to specify the amount paid through the tender.	Yes

Column Name	Column Description	Mandatory (Yes or No)
	<b>Note:</b> You must not specify the value less than or equal to 0.  The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.	
Date Received	Used to specify the date when the payment is made.	Yes
	<b>Note:</b> You must specify the date in the MM/DD/YYYY format.	
Bank Account	Used to specify the external source ID which is associated with the tender source.	Yes
Payment Type	Used to specify the type of tender through which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Currency	Used to specify the currency in which the payment is made.	No
	<b>Note:</b> If the currency is not specified, it is set to the payor account's invoice currency.	
External Reference Id	Used to specify the external reference ID which is associated with the tender source.	No
Account ID Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the account identifier is specified.
Account Identifier	Used to specify the account for which the payment is made.	Yes (Conditional)
		<b>Note:</b> This data is required when the account identifier type is specified.
Payment Char Type1, Payment Char Type2, ....., Payment Char Type5	Used to indicate the characteristic that must be defined for the payment.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic value is specified.
Payment Char Value1, Payment Char Value2, ....., Payment Char Value5	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic type is specified.

Column Name	Column Description	Mandatory (Yes or No)
MICR ID	Used to specify the MICR code.	No
Payor ID	Used to specify the payor account ID.	No
	<b>Note:</b> If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same.	
Statement ID	Used to specify the statement ID for applying payments at the statement level.	Yes (Conditional)
		<b>Note:</b> This data is required when the Statement ID is specified.

**Note:**

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

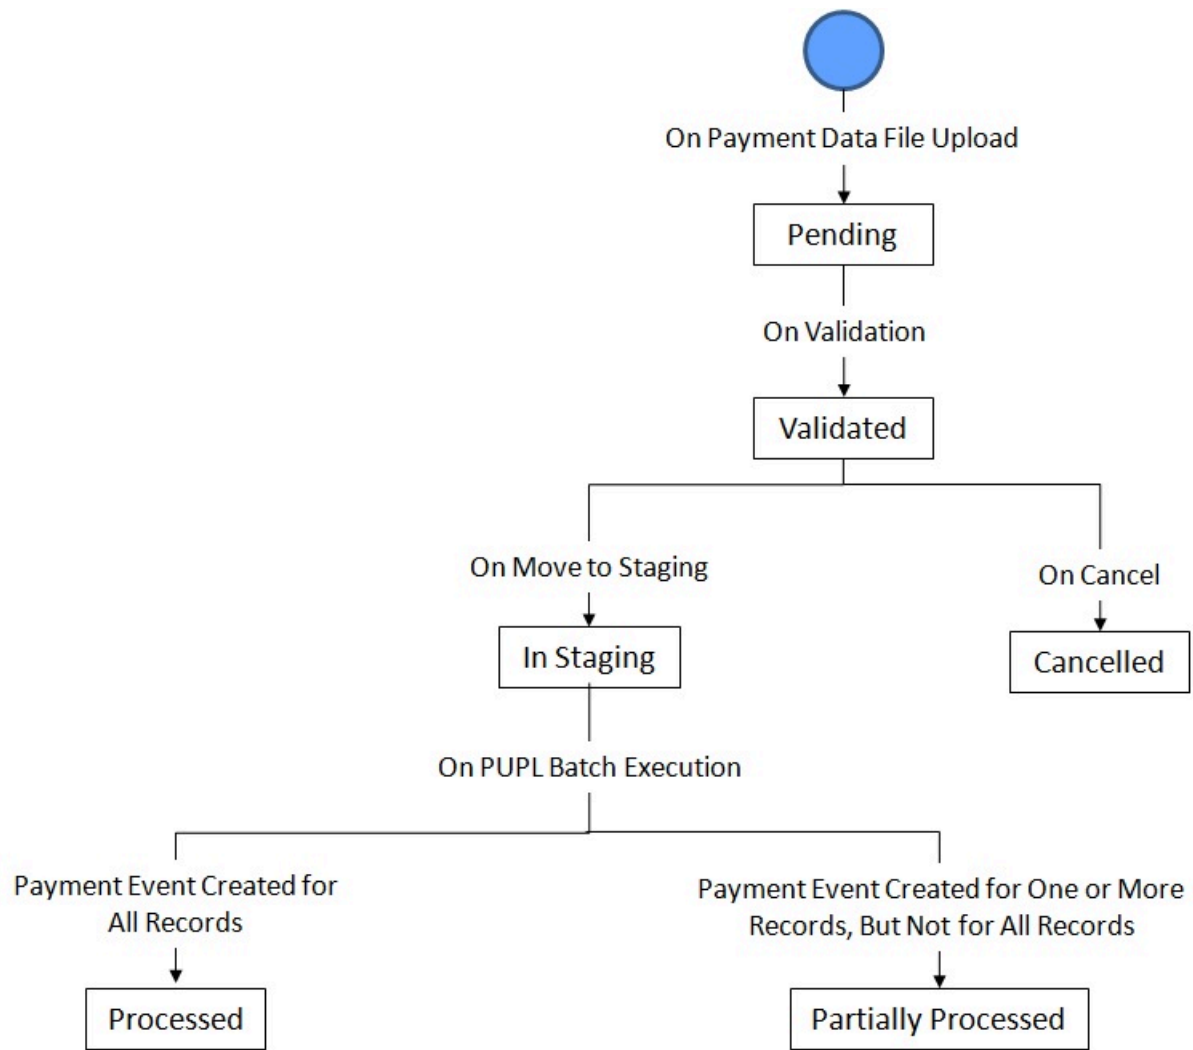

The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

## Sample CSV

```
1640731871,STMPAY,344749531005,0100232,500.85,500.85,08/1/2022,TEST_EXT_SRC,
CASH,00100,USD,ABC8080808080,,,,,,,,,,,,,111,1640731871,041939614879
```

## Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

## Payment Record Status Transition

---

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

Scenario	Payment Record Status
The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record.	Invalid
The payee account ID specified in the payment record does not exist in the system.	Invalid
The payee account ID, account identifier type, or account identifier are not specified in the payment record.	Invalid
The match type is not specified in the payment record.	Invalid
The match type specified in the payment record does not exist in the system.	Error
The match value is not specified in the payment record.	Invalid
The currency code does not exist in the system.	Invalid
The tender amount is either zero or not specified in the payment record.	Invalid
The payment amount is either zero or not specified in the payment record.	Invalid
The bank account is not specified in the payment record.	Invalid
The payment type (i.e. tender type) does not exist in the system.	Invalid
The payment type is not specified in the payment record.	Invalid

Scenario	Payment Record Status
The tender ID is not specified in the payment record.	Invalid
The date received is not specified in the payment record.	Invalid
The payor account ID specified in the payment record does not exist in the system.	Invalid
The characteristic type specified in the payment record does not exist in the system.	Invalid
If a characteristic type is specified, but the characteristic value is not specified in the payment record.	Invalid
If a characteristic value is specified, but the characteristic type is not specified in the payment record.	Invalid
The characteristic value does not match any predefined value when the characteristic value type is set to <b>Predefined Value</b> .	Invalid

**Note:** The system does the match type and match value related validations when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

## Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

Message Number	Error Message	Message Category	Possible Issues
80110	File cannot be reuploaded as some records have already been processed.	11111	The possible issues could be: <ul style="list-style-type: none"><li>You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created.</li></ul>
1463	This file already exists in the system. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"><li>You are trying to upload a file which is already uploaded in the system without selecting the <b>Replace Existing File</b> check box.</li></ul>
1465	Please upload a file in the CSV format.	17000	The possible issues could be: <ul style="list-style-type: none"><li>You are trying to upload a file which is not in the CSV format.</li></ul>
80113	Duplicate Header for column %1 in file.	11111	The possible issues could be: <ul style="list-style-type: none"><li>The file has two or more columns with the same header.</li></ul>
80111	Length of value %1 too long for Field %2. Maximum length: %3 Found %4.	11111	The possible issues could be:

## Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the staging records of a payment data record
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 1180
- [Payment Data Records](#) on page 1182
- [Payment Staging Records](#) on page 1184
- [Payment Data File Log](#) on page 1184

## Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to search a particular payment data file.	No
User ID	Used to search payment data files which are uploaded by a particular user.	No
File Type	Used to search payment data files which are uploaded using a particular file type.	No
Upload From Date	Used to search payment data files which are uploaded from a particular date onwards.	No
	<b>Note:</b> By default, the date is set to the current date minus 7 days. You can change the date, if required.	
File Status	Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"><li>• Cancelled</li><li>• In Staging</li><li>• Partially Processed</li><li>• Pending</li><li>• Processed</li><li>• Validated</li></ul>	No
Upload To Date	Used to search payment data files which are uploaded till a particular date.	No
	<b>Note:</b> By default, the date is set to the current date. You can change the date, if required.	

**Note:** You must specify at least one search criterion while searching for a payment data file.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the payment data file.
File Type	Indicates the type of the payment data file.
Upload Date	Displays the date and time when the payment data file was uploaded in the system.
Status	Indicates the status of the payment data file. The valid values are: <ul style="list-style-type: none"><li>Cancelled</li><li>In Staging</li><li>Partially Processed</li><li>Pending</li><li>Processed</li><li>Validated</li></ul>
Total	Displays the total number of records that are uploaded through the payment data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Error	Displays the number of records where the data is incorrect.
In Staging	Displays the number of records which are copied from the pre-staging to staging area.
Processed	Displays the number of records for which payment events are created.
Staging Error	Displays the number of records for which payment events could not be created.
Cancel	On clicking the <b>Cancel</b> (⊗) icon, you can cancel the payment data file.
	<b>Note:</b> The <b>Cancel</b> icon appears when the status of the payment data file is <b>Validated</b> . In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.
Move to Staging	On clicking the <b>Move to Staging</b> (↗) icon, you can move the valid and error records of the payment data file to the staging area.
	<b>Note:</b> The <b>Move to Staging</b> icon appears when: <ul style="list-style-type: none"><li>The status of the payment data file is <b>Validated</b>.</li><li>There are no invalid records in the payment data file.</li><li>The <b>Disable Move to Staging</b> check box is not selected in the respective file type.</li></ul>

**Note:**  
Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.  
You can view the **Filter** area by clicking the **Filters** (∇) icon in the upper right corner of this zone.

You can upload a payment data file by clicking the **Upload** button in the **Page Title** area of the **Payment Upload** screen. On clicking the **Broadcast** (📡) icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

**Payment Data Records**

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

Column Name	Column Description
Payor Account ID	Indicates the account through which the payment is made.
Payee Account ID	Indicates the account for which the payment is made.
Statement ID	Indicates the statement for which the payment is made.
Match Type	Indicates the match type using which the payment must be matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment must be matched.
Entity Type	Indicates the entity type.
Pay Tender ID	Displays the payment tender ID.
Tender Amount	Displays the tender amount.
Payment Amount	Displays the amount paid through the tender.
Currency	Indicates the currency in which the payment is made.
Date Received	Displays the date when the payment is made.

Column Name	Column Description
Bank Account	Displays the bank account from which the payment is made.
Tender Type	Indicates the type of tender through which the payment is made.
Check Number	Displays the check number if the payment is made through check.
MICR ID	Displays the MICR code.
Status	Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"><li>Valid</li><li>Invalid</li><li>Error</li><li>In Staging</li><li>Processed</li><li>Error in Staging</li></ul>
Payment Event Information	Displays information about the payment event which is created for the payment record.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears with the details of the respective payment event. The data appears in this column when the status of the payment record is <b>Processed</b> .
Messages	On clicking the <b>View</b> (🔗) icon, the <b>Error Messages</b> window appears where you can view the reasons why the status of the payment record is <b>Invalid</b> or <b>Error</b> .
	<b>Note:</b> The <b>View</b> icon appears when the payment data record is in the <b>Error</b> or <b>Invalid</b> status.

**Note:**

Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Check Number**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

## Payment Staging Records

The **Payment Staging Records** zone lists the staging records of the payment data file. This zone contains the following columns:

Column Name	Column Description
View	On clicking the <b>View</b> (🔍) icon, you can view the payment upload staging details.
External Source ID	Displays the external source ID which is associated with the tender source.
External Reference ID	Displays the external reference ID which is associated with the tender source.
External Transmission ID	Displays the external transmission ID which is associated with the tender source.
External Batch ID	Displays the batch of payments in a transmission.
Payee Account ID	Indicates the account for which the payment is made.
Match Type	Indicates the match type using which the payment is matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment is matched.
Payment Amount	Displays the amount paid through the tender source.

By default, the **Payment Staging Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data record in the **Payment Data Records** zone.

### Related Topics

## Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action is performed on the payment data file.
Log Details	Displays the details of the action performed on the payment data file.
User	Indicates the user who performed the action on the payment data file.

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

## Searching for a Payment Data File

---

### Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

### Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.  
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of payment data files that meet the search criteria appears in the **Search Results** section.

Search Payment Data File zone	<a href="#">Search Payment Data File</a> on page 1180

## Uploading a Payment Data File

---

### Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

### Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.  
The **Payment Upload** screen appears.
3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.  
The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the type of payment data file.	Yes
	<b>Note:</b> The list includes only those file types where the feed type is set to <b>Payment Upload Data</b> .	
File Name	Used to specify the name and path of the payment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the payment data file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

4. Select the type of payment data file from the **File Type** list.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the payment data file that you want to upload is available.

7. Click **Open**.

The payment data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

**Note:** The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**.

Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

- If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
- If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the [Payment Record Status Transition](#) on page 1174.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

### Related Topics

<b>Search Payment Data File</b> zone	<a href="#">Search Payment Data File</a> on page 1180

## Replacing an Existing File

### Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

### Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.  
The **Payment Upload** screen appears.
3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.

The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the file type for uploading the payment data file.	Yes
	<b>Note:</b> The list includes only those file types where the feed type is set to <b>Payment Upload Data</b> .	
File Name	Used to indicate the name and path of the payment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse the location of the payment data file available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system.	No
	<b>Note:</b>  You must select this check box only when you want to upload the same file once again.  You can replace an existing file when the payment data file is in the <b>Validated</b> status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.	

4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to replace is available.
7. Click **Open**.

The payment data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully.

**Note:** The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**

Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

- If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
- If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the [Payment Record Status Transition](#) on page 1174.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

**Related Topics**

## Cancelling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

**Procedure**

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** (⊗) icon in the **Cancel** column corresponding to the payment *data* file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

**Note:** The **Cancel** icon appears when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

**Related Topics**

How to search for a payment data file	<a href="#">Searching for a Payment Data File</a> on page 1185

## Moving the Payment Records to the Staging Area

### Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** (📁) icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

**Note:**

The **Move to Staging** icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.  
A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.
4. Click **OK** in the message box.  
The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

## Editing a Payment Staging Record

You can edit a payment record when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

### Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose staging records you want to edit.  
The **Payment Data Records** and **Payment Data File Log** zones appear.
3. In the **Payment Data Records** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose staging records you want to edit.  
The **Payment Staging Records** zone appear.
4. In the **Payment Staging Records** zone, click the **View** (🔍) icon in the **Payment Staging Record** column corresponding to the payment staging record whose details you want to edit.  
The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** - Enables you to view and edit the tender control staging details.
  - **Payment Advice** - Enables you to view and edit the payment staging details.
  - **Payment Characteristics** - Enables you to view and edit the payment characteristic staging details.
5. Edit or remove the tender details, if required.
  6. Edit or remove the payment advice details, if required.
  7. Edit or remove the payment characteristics, if required.
  8. Click the **Save** button in the **Page Title** area of the **Payment Upload Staging** screen.  
The changes made to the payment staging record are saved.

## Viewing the Errors of a Payment Data Record

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

### Procedure

To view the errors of a payment data record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose *payment* records are in the **Error** or **Invalid** status.  
The **Payment Data Records** and **Payment Data File Log** zones appear.
3. In the **Payment Data Records** zone, click the **View** (🔍) icon in the **Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.  
The **Error Messages** window appears.
4. View the error messages of the payment data record in the **Error Messages** window.

### Note:

The error messages window lists the reasons why the payment data record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add the missing information in the CSV file and then re-upload the CSV file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to staging area.

The **View** icon appears when the payment data record is in the **Error** or **Invalid** status.

5. Click **OK**.

## Freeze Payments on Notification

---

### Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI\_APAY\_STAGE\_UP
- CI\_APAY\_STAGE\_UP\_REM
- CI\_APAY\_STGUP\_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 1195.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record when it is in the **Pending** or **Error** status, and you can delete an automatic payment or refund clearing staging record when it is in the **Pending** status. During the freeze payments on notification process,

the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 1200.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 1198.

## Freeze Payments on Notification Process

---

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 1195
2. [Generating a Flat File](#) on page 1195
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 1196
4. [Retry Automatic Payment](#) on page 1196
5. [Freezing or Canceling Automatic Payments](#) on page 1197
6. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 1197
7. [Generating To Do Entries](#) on page 1198
8. [Creating Tender Controls](#) on page 1198

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Maintain Additional Information for Staging Record (C1-APRCH)
5. Upload Response from Auto Clearing House (C1-APACK)
6. Freeze or Cancel Automatic Payments (APAYRA)
7. Cancel Automatic Refunds (AREFRA)
8. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
9. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

### Creating Automatic Payments and Refunds

---

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI\_BILL\_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI\_APAY\_CLR\_STG** and **CI\_ADJ\_CLR\_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

### Generating a Flat File

---

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

## Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing ID in the **CI\_APAY\_STAGE\_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI\_APAY\_STGUP\_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI\_APAY\_STGUP\_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY\_DIST\_FRZ\_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** An additional table named **CI\_APAY\_STGUP\_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

**Note:** You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1200.

## Retry Automatic Payment

In the Freeze Payments on Notification feature, the system enables you to freeze or cancel the automatic payment based on the review comments received from the auto clearing house. Until now, the system did not allow to resend the

automatic payment clearing records to the auto clearing house for review in case of rejection. Now, the system enables you to resend the rejected automatic payment clearing records to the auto clearing house for review.

To enable this feature, you need to set the **C1-APMSG** characteristic type for the required divisions. Here, you must set the maximum automatic payment reattempts allowed while using the Freeze Payments on Notification feature.

A new batch named **C1-APRCH** is introduced in this release. You need to execute this batch in between the following two batches - **C1-APACK** and **APAYRA**. The **C1-APRCH** batch considers the automatic payment clearing staging records which are in the **Pending** status from the **CI\_APAY\_STAGE\_UP** table. The system then checks whether the **APAY\_UPL\_RSN\_TYPE** column corresponding to the automatic payment clearing staging record is set to **SUCC** or **CANC**. If the **APAY\_UPL\_RSN\_TYPE** column corresponding to the automatic payment clearing staging record is set to **SUCC**, the system updates the last extract date of the automatic payment clearing staging record to the extract date which is available corresponding to the clearing record in the **CI\_APAY\_CLR\_STG** table. However, if the **APAY\_UPL\_RSN\_TYPE** column corresponding to the automatic payment clearing staging record is set to **CANC**, the system checks whether the number of automatic payment clearing staging records for the clearing record is equal to or greater than one. If the number of automatic payment clearing staging records for the clearing record is equal to or greater than one, the system increments the retry count of the clearing ID. If the retry count is greater than zero and less than the maximum automatic payment reattempt limit defined for the division, the system does the following:

- Recalculates the extract date and stamps it against the corresponding clearing record in the **SCHED\_EXTRACT\_DT** column of the **CI\_APAY\_CLR\_STG** table
- Clears the **BATCH\_NBR** column of the corresponding clearing record in the **CI\_APAY\_CLR\_STG** table
- Clears the **APAY\_DIST\_FRZ\_DT** column of the corresponding clearing record in the **CI\_APAY\_CLR\_STG** table

Finally, the status of the automatic payment clearing staging record is set to **RETR**. A To Do is created using the **C1-APRET** To Do type to notify that the status of an automatic payment clearing staging record is changed to **RETR**.

## Freezing or Canceling Automatic Payments

---

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e. NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancellation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

## Voiding Refund Requests and Canceling Refund Adjustments

---

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI\_APAY\_STAGE\_UP** - Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI\_APAY\_STAGE\_UP\_REM** - Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI\_APAY\_STGUP\_CHAR** - Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

## Generating To Do Entries

---

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the **APAYUPTD** To Do type when an exception is logged for an automatic payment clearing staging record in the **CI\_APAY\_STGUP\_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI\_APAY\_STGUP\_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

## Creating Tender Controls

---

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

## Prerequisites

---

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

**Note:** You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY\_UPL\_NOC\_LOOKUP** lookup field.

**Note:** The **APAY\_UPL\_NOC\_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

**Note:** You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

**Note:** You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

**Note:** You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.
- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
  - Line Separator
  - Field Separator
  - Reject Upload Reason
  - Success Upload Reason

# Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

## EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

Tag	Attribute	Description	Mandatory (Yes or No)
OTI	Reference Number	Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house.	Yes
OTI	Acknowledgement Code	Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify <b>TE</b> or <b>TR</b> as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can	No

Tag	Attribute	Description	Mandatory (Yes or No)
		either specify any value other than <b>TE</b> or <b>TR</b> or leave this attribute blank.	
TED	Error Code	Used to indicate either of the following: <ul style="list-style-type: none"><li>The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house.</li></ul>	Yes (Conditional)
		<b>Note:</b> You must specify a payment cancellation reason which is already defined in the system.	<b>Note:</b> This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.
		<ul style="list-style-type: none"><li>The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC).</li></ul>	
		<b>Note:</b> You must specify a NOC reason which is already defined in the <b>APAY_UPL_NOC_LOOKUP</b> lookup field.	
TED	Error Description	Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC).	No

## Sample EDI 824 File Format

```
OTI*TR*TN*411302586842\  
TED*WA01*WRONG ACCOUNT\  
OTI*TF*TN*411302525641\  
OTI*TO*TN*806152348038\  
TED*BR01*Bill Reopened\  
OTI*TO*TN*806152307159\  
OTI*TE*TN*806152307229\  
TED*WA01*WRONG ACCOUNT\
```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string "WRONG ACCOUNT" and "Bill Reopened" are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1200.

# Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 1202

## Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Reason	Displays the upload reason.
Reason Type	Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"><li>• Cancel</li><li>• Success</li></ul>
Eligible for Processing	Indicates whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul>
Description	Displays the description of the upload reason.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Automatic Payment and Refund Upload Reason</b> screen appears where you can edit the details of the upload reason.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the upload reason.

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

### Related Topics

For more information on...	See...
How to define an upload reason	<a href="#">Defining an Upload Reason</a> on page 1202
How to edit an upload reason	<a href="#">Editing an Upload Reason</a> on page 1204
How to delete an upload reason	<a href="#">Deleting an Upload Reason</a> on page 1206

## Defining an Upload Reason

### Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

**Procedure**

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.  
The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason.	Yes
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"><li>• <b>Cancel</b> - This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided.</li><li>• <b>Success</b> - This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the <b>C1-ACH</b> To Do type for all NOC reasons specified in the automatic payment clearing staging record.</li></ul>	Yes
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional)

Column Name	Column Description	Mandatory (Yes or No)
		<b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to <b>Success</b> , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to <b>Cancel</b> , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Code Search</b> window appears.  On specifying the algorithm code, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	<b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.

4. Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

**Note:** If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑) icon corresponding to the algorithm.

5. Click **Save**.  
The upload reason is defined.

## Editing an Upload Reason

**Prerequisites**

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

**Procedure**

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.

- 2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**. The **Automatic Payment and Refund Upload Reason** screen appears.
- 3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Displays the upload reason.	Not applicable
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"><li>• <b>Cancel</b> - This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided.</li><li>• <b>Success</b> - This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the <b>C1-ACH</b> To Do type for all NOC reasons specified in the automatic payment clearing staging record.</li></ul>	Yes
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional)
		<b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to <b>Success</b> , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to <b>Cancel</b> , you must attach either automatic payment	Yes (Conditional)
		<b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.

Column Name	Column Description	Mandatory (Yes or No)
	cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.	
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Code Search</b> window appears.  On specifying the algorithm code, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

**Note:** If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑) icon corresponding to the algorithm.

5. Click **Save**.  
The changes made to the upload reason are saved.

## Deleting an Upload Reason

**Procedure**

To delete an upload reason:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.  
The **Automatic Payment and Refund Upload Reason** screen appears.
- In the **Upload Reasons** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload reason that you want to delete.  
A message appears confirming whether you want to delete the upload reason.
- Click **OK**.  
The upload reason is deleted.

# Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics of the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 1207
- [Associated Clearing Staging Records](#) on page 1209
- [Clearing Staging Upload Reasons](#) on page 1210
- [Clearing Staging Characteristics](#) on page 1211

## Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** - the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"><li>• Automatic Payment</li><li>• Automatic Refund</li></ul>	Yes
Clearing ID	Used to search a particular clearing record.	No
Account ID	Used to search clearing records which are created for a particular account.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Person Name	Used to search clearing records which are created for accounts of a particular person.	No
Extract From Date	Used to search clearing records that are extracted on or after a particular date.	No
Extract To Date	Used to search clearing records that are extracted on or before a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search clearing records which are created against a bill.	No
Alternate Bill ID	Used to search clearing records which are created against a bill with the specified alternate bill ID.	No
Batch Control	Used to search clearing records where the <b>APAYACH</b> batch control is stamped. The valid value is <b>APAYACH</b> .	No
Batch Run Number	Used to search clearing records which are activated in a particular batch run.	No

**Note:** You must specify at least one search criterion while searching for a clearing record.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Clearing ID	Displays the clearing ID.
Account Information	Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Bill Information	Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Payment Amount	Displays the payment amount.
	<b>Note:</b> This column appears only when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
Pay Tender ID	Displays the payment tender ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective tender. This column appears when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
Tender Status	Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> <li>• Valid</li> <li>• Canceled</li> </ul>
	<b>Note:</b> This column appears when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.

Column Name	Column Description
Extract Date	Displays the date when the clearing record is extracted in a flat file.
Payment Freeze Date	Displays the date when the automatic payment must be frozen in the system.
	<b>Note:</b> This column appears when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
External Source ID	Indicates the tender source through which the payment was remitted.
Entity Type	Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"><li>Refund Request</li></ul>
	<b>Note:</b> This column appears when you select the <b>Automatic Refund</b> option from the <b>Search By</b> list.
Entity ID	Displays the entity ID.
	<b>Note:</b> This column appears when you select the <b>Automatic Refund</b> option from the <b>Search By</b> list.
Account Number	Indicates the bank account through which the automatic payment is made.
Batch Control	Indicates the batch control which is stamped on the clearing record.
Batch Run Number	Indicates the batch run in which the clearing record was activated.
Alternate Bill ID	Indicates the bill against which the clearing record is created.

**Related Topics**

How to search for a clearing record	<a href="#">Searching for a Clearing Record</a> on page 1211

**Associated Clearing Staging Records**

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"><li>Pending</li><li>Complete</li><li>Error</li></ul>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Edit Clearing Staging Record</b> screen appears where you can edit the details of the clearing staging record.
	<b>Note:</b> You can edit a clearing staging record when it is in the <b>Pending</b> or <b>Error</b> status.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the clearing staging record.
	<b>Note:</b> You can delete a clearing staging record when it is in the <b>Pending</b> status.

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing record in the **Search Clearing Record** zone.

**Related Topics**

## Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund.
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Upload Reason	Indicates whether the auto clearing house has accepted or rejected the clearing record.
Cancel Reason	Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column.
NOC Reason	Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC).
NOC Reason Description	Displays the description of the NOC reason.

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

**Related Topics**

For more information on...	See...
How to view the upload reason specified in the clearing staging record	<a href="#">Viewing the Upload Reason Specified in the Clearing Staging Record</a> on page 1212

## Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics of the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the characteristic value.

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

### Related Topics

## Searching for a Clearing Record

### Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Automatic Payment and Refund Clearing Staging**.  
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for *automatic* payment or refund clearing records.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of clearing records that meet the search criteria appears in the **Search Results** section.

## Editing a Clearing Staging Record

**Prerequisites**

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY\_UPL\_NOC\_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

**Note:** You can edit a clearing staging record when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI\_APAY\_STGUP\_EXC** table.

**Procedure**

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose *associated* clearing staging record you want to edit.  
The **Associated Clearing Staging Records** zone appears.
3. In the **Associated Clearing Staging Records** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Clearing Staging ID	Displays the clearing staging ID.	Not applicable
Clearing ID	Indicates the clearing record against which the clearing staging record is added.	Not applicable
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"><li>• Pending</li></ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Complete</li><li>Error</li></ul>	
Upload Date	Used to specify the date when the clearing staging record was uploaded or added in the system.	Yes

In addition, this screen contains the following two sections:

- Upload Reasons** - Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"><li>Cancel</li><li>Success</li></ul>	Yes
Sub Reason Code	Used to specify either of the following: <ul style="list-style-type: none"><li>Payment cancelation reason or void status reason (for automatic refund) when the reason type is set to <b>Cancel</b></li><li>Notice to Change (NOC) reason when the reason type is set to <b>Success</b></li></ul>	No
Sub Reason Description	Used to specify the description of the NOC reason.	No

**Note:** The upload reason, payment cancelation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- Characteristics** - Used to define the characteristics for the clearing staging record.

4. Modify the required details in the **Edit Clearing Staging Record** screen.

**Note:** If you want to add more than one reason or sub reason code, click the **Add (+)** icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete (🗑)** icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.

6. Click **Save**.

The changes made to the clearing staging record are saved.

**Related Topics**

For more information on...	See...
How to search for a clearing record	<a href="#">Searching for a Clearing Record</a> on page 1211
Associated Clearing Staging Records zone	<a href="#">Associated Clearing Staging Records</a> on page 1209

For more information on...	See...
How to define a characteristic for a clearing staging record	<a href="#">Defining a Characteristic for a Clearing Staging Record</a> on page 1215

## Defining a Characteristic for a Clearing Staging Record

### Prerequisites

To define a characteristic for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

### Procedure

To define a characteristic for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the clearing staging record.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Auto Payment Upload</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the clearing staging record, click the **Delete** (🗑️) icon corresponding to the characteristic.

### Related Topics

For more information on...	See...
How to edit a clearing staging record	<a href="#">Editing a Clearing Staging Record</a> on page 1213

## Deleting a Clearing Staging Record

---

### Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose *associated* clearing staging record you want to delete.  
The **Associated Clearing Staging Records** zone appears.
3. In the **Associated Clearing Staging Records** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the clearing staging record that you want to delete.  
A message appears confirming whether you want to delete the clearing staging record.

**Note:** You can delete a clearing staging record when it is in the **Pending** status.

4. Click **OK**.  
The clearing staging record is deleted.

### Related Topics

# Chapter 16

---

## Construct

---

### Topics:

- [Prerequisites](#)
- [Construct Status Transition](#)
- [Template](#)
- [Construct \(Used for Searching\)](#)
- [Construct \(Used for Viewing\)](#)
- [Billing and Settlement Hierarchy](#)

Oracle Revenue Management and Billing provides you with a flexible way to define the billing hierarchy using the construct based billing feature. In a construct, you can include:

- **Usage Accounts** - A set of usage accounts of different persons whose charges and/or adjustments must be billed through an invoice account. These persons need not belong to the same person hierarchy. The system allows you to select a set of usage accounts based on the criteria using the account selection template. The persons' and their child persons' usage accounts that meet the specified criteria are included in the construct.
- **Billable Charges** - A set of billable charges that you want to bill through an invoice account. The system will only consider billable charges of those usage accounts for which the construct is defined. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.
- **Adjustments** - A set of adjustments that you want to bill through an invoice account. The system will only consider adjustments of those usage accounts for which the construct is defined. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

You can bill the charges and adjustments of usage accounts on the same invoice account. Or, you can bill the charges of usage accounts on one invoice account and the adjustments on another invoice account. Or, you can bill the charges or adjustments of the usage accounts on more than one invoice account. You can define different types of constructs. At present, the system supports only invoice and settlement construct. Here, settlement includes receivables and payables.

One usage account can belong to only one active construct and not to multiple active constructs at the same time. The system also allows you to exclude some usage accounts when you do not want to include all usage accounts that satisfy the criteria in the construct. While defining a construct, you can use an existing invoice account. The contracts for the invoice account are created when you activate the construct. One contract is created for every target contract type set on usage accounts' contracts' contract type.

You can use a construct during the construct based billing process when the construct is in the **Active** status. The following batches are designed to support the construct based billing process:

- **Construct Based - Pending Bill Generation (BILLOPEN)** - This batch is used to generate pending bills for accounts that meet the criteria.
- **Construct Based - Bill Segment Generation (BSGENREG)** - This batch is used to generate the bill segments on the pending bills.
- **Construct Based - Bill Completion (POSTPROC)** - This batch is used to generate post processing bill segments during the bill completion process. It changes the status of the bill to **Complete**.

During the bill generation process, all accounts that meet the criteria are considered for billing. These accounts may be usage or invoice accounts. All billable charges (with the **Adhoc** flag set to **No**) whose start date is earlier than or equal to the batch business date are considered during bill segment generation. If a billable charge satisfies the rule defined on any active construct, the bill segment is generated on the respective invoice account. And, if a billable charge does not satisfy the rule defined on any active construct, the bill segment is generated on the usage account. The post-processing bill segments, if any, are generated on the invoice or usage account depending on the type of price assignment.

**Note:** The construct based billing batches are currently not designed to consider billable charges whose end date is earlier than or equal to the batch business date.

For more information on how to setup the construct based billing process, refer to [Prerequisites](#) on page 1219.

# Prerequisites

To setup the construct based billing process, you need to do the following:

- Define the Target Contract Type characteristic for usage accounts' contracts' contract type.
- Set the **C1-INCT** feature configuration.
- Create a default account creation algorithm using the C1-ACTCR-IC algorithm type.
- Create a default contract creation algorithm using the C1-CTMP-IC algorithm type.
- Create a usage account construct mapping algorithm using the C1-UACM-IC algorithm type.
- Associate the usage account construct mapping algorithm to a division whose usage accounts you want to include in any existing active construct.

**Note:** There might be situations when a usage account is created after the construct is activated. If you want to include such usage account in any existing active construct, you need to associate the usage account construct mapping algorithm to a division in which you are creating the usage account. If the usage account satisfies the criteria specified in any active construct, it is included in the construct once the usage account is created.

- Define the required templates, profiles and constructs in the application.
- Define values for the PAGE\_NUMBER lookup field.
- Define approval workflow group, approval workflow chain, approval workflow criteria, and approval workflow group chain linkage for construct.
- Configure the approval workflow settings for construct.
- Define approval workflow reasons which are required while rejecting a construct.
- Assign the **C1-IC\_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct.
- Transfer adjustments algorithm defined using the **C1-IC-AD-XFR** algorithm type.
- Define an algorithm of the BS-CRE-INVCN algorithm type and attach it on the **Create Algorithm** spot of the bill segment type.

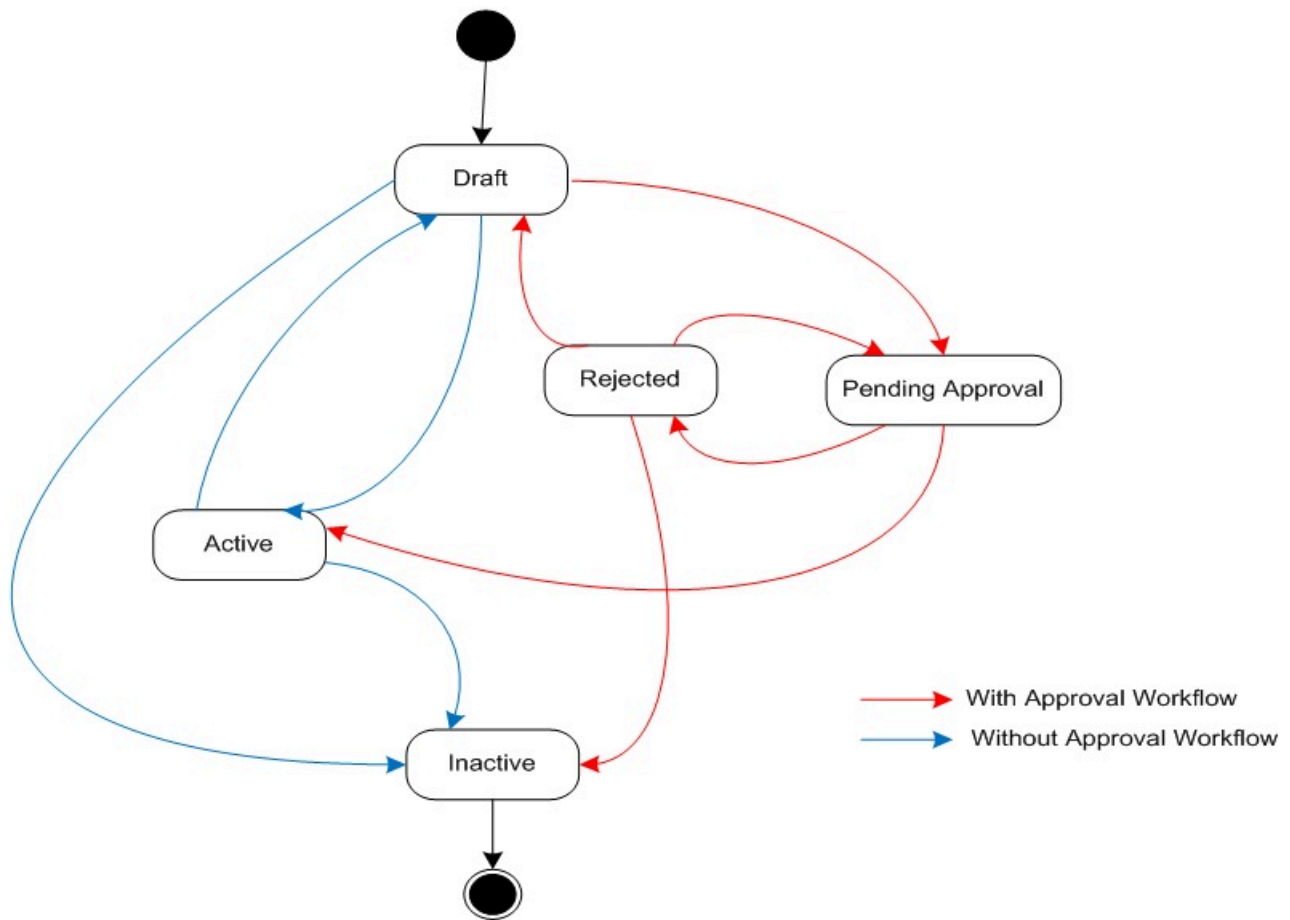

**Note:** If you want to use the regular billing process, you need to attach an algorithm of the BS-CRE-PRICE algorithm type on the **Create Algorithm** spot of the bill segment type. However, if you want to use the construct based billing process, you need to attach an algorithm of the BS-CRE-INVCN algorithm type on **Create Algorithm** spot of the bill segment type.

**Related Topics**

For more information on...	See...
How to set the <b>C1-INCT</b> feature configuration	<a href="#">Setting the C1-INCT Feature Configuration</a> on page 4350

# Construct Status Transition

The following figure graphically indicates how a construct moves from one status to another during its lifecycle:

## Template

Template is used to select a set of usage accounts, billable charges, or adjustments based on the criteria. In a template, you can define a SELECT statement to retrieve data from a table or view based on a condition. You can use the bind variables in the where clause (condition). The bind variables must be alphanumeric and prefixed with the colon (:). The values for these bind variables are specified while defining a construct.

You can validate the syntax of the SELECT statement. If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

You can define the following three types of templates:

- **Account Selection** - Used for selecting a set of usage accounts based on the criteria.
- **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria.
- **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria.

You can only use templates which are active while defining or editing a construct. The **Template** screen allows you to define, edit, and delete a template. You can edit a template even if it is used in any construct. However, any changes made to a template will not be reflected in a construct where the template is already used unless you use the latest template in the construct. This screen consists of the following zones:

- [Search Template](#) on page 1221

## Search Template

The **Search Template** zone allows you to search for a template using various search criteria. This zone contains the following two sections:

- **Search Criteria** - Used to search by different search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	No
Description	Used to specify the description for the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"><li>• <b>Adjustment Selection</b> - Used for selecting a set of adjustments based on the criteria.</li><li>• <b>Bill Segment Selection</b> - Used for selecting a set of bill segments based on the criteria.</li><li>• <b>Billable Charge Selection</b> - Used for selecting a set of billable charges based on the criteria.</li><li>• <b>Usage Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li><li>• <b>Usage and Invoice Account Selection</b> - Used for selecting a set of usage and invoice accounts based on the criteria.</li></ul>	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	No

**Note:** You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the name of the template.
Description	Displays the description of the template.
Purpose	Indicates the purpose of the template. The valid values are: <ul style="list-style-type: none"><li>• Adjustment Selection</li><li>• Billable Segment Selection</li><li>• Billable Charge Selection</li><li>• Usage Account Selection</li><li>• Usage and Invoice Account Selection</li></ul>
Status	Indicates the status of the template. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>

Column Name	Column Description
View	On clicking the <b>View</b> (🔍) icon, the <b>View Template</b> screen appears where you can view the details of the template.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Template</b> screen appears where you can edit the details of the template.
	<b>Note:</b> If a template is used in any construct, a message appears confirming whether you want to edit the template.

You can create a new template by clicking the **Add** button in the upper right corner of this zone.

# Searching for a Template

**Procedure**

To search for a template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.  
The **Template** screen appears.
3. Enter the search criteria in the **Search Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of templates that meet the search criteria appears in the **Search Results** section.

<b>Template</b> screen	<a href="#">Template</a> on page 1220
<b>Search Template</b> zone	<a href="#">Search Template</a> on page 1221

## Defining a Template

**Procedure**

To define a template:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **T** and then click **Template**.  
A sub-menu appears.
- 3. Click the **Add** option from the **Template** sub-menu.

The **Template** screen appears. It consists of the following zone:

- **Search Template** - Used to specify basic details about the template. It consists of the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	Yes
Description	Used to search for a template by it's description.	Yes
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"><li>• <b>Adjustment Selection</b> - Used for selecting a set of adjustments based on the criteria.</li><li>• <b>Bill Segment Selection</b> - Used for selecting a set of bill segments based on the criteria.</li><li>• <b>Billable Charge Selection</b> - Used for selecting a set of billable charges based on the criteria.</li><li>• <b>Usage Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li><li>• <b>Usage and Invoice Account Selection</b> - Used for selecting a set of usage and invoice accounts based on the criteria.</li></ul>	Yes
Status	Used to specify additional information about the template.	Yes

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"><li>• Date</li><li>• Numeric</li><li>• String</li></ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.

Field Name	Field Description	Mandatory (Yes or No)
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Zone	Used to specify the zone for the template.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone/Code Description</b> window appears.	<b>Note:</b> This field is required when you are defining a bind variable.

4. Enter the required details in the **Main** tab.
5. If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details.

**Note:** However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

**Note:** If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define characteristics for the template, if required.
8. Click **Validate and Save**.  
The system validates the syntax of the SELECT statement and then accordingly saves the template.

How to define a characteristic for a template	<a href="#">Defining a Characteristic for a Template</a> on page 1224

## Defining a Characteristic for a Template

**Prerequisites**

To define a characteristic for a template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Template)

**Procedure**

To define a characteristic for a template:

1. Click the **Characteristics** tab in the **Template** screen when you are creating or editing a template.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the template.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the template.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the template.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the template.

2. Enter the required details.
3. If you want to define more than one characteristic for the template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the template, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Validate and Save**.  
The characteristics are defined for the template.

How to edit a template	<a href="#">Editing a Template</a> on page 1225

## Editing a Template

**Procedure**

To edit a template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.  
The **Template** screen appears.
3. In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the template whose details you want to edit.

**Note:** If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)								
Template	Used to indicate the template name.	Not applicable								
Description	Used to specify the description for the template.	Yes								
Detailed Description	Used to specify additional information about the template.	No								
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"><li>• <b>Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li><li>• <b>Adjustment Selection</b> - Used for selecting a set of adjustments based on the criteria.</li><li>• <b>Billable Charge Selection</b> - Used for selecting a set of billable charges based on the criteria.</li><li>• <b>Usage Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li><li>• <b>Usage and Invoice Account Selection</b> - Used for selecting a set of usage and invoice accounts based on the criteria.</li></ul>	Yes								
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes								
Select	Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.  The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required. <table><tr><th>If you have set the purpose of the template to....</th><th>Then, the default value is...</th></tr><tr><td>Account Selection</td><td>ACCT_ID</td></tr><tr><td>Adjustment Selection</td><td>ADJ_ID</td></tr><tr><td>Billable Charge Selection</td><td>BILLABLE_CHG_ID</td></tr></table>	If you have set the purpose of the template to....	Then, the default value is...	Account Selection	ACCT_ID	Adjustment Selection	ADJ_ID	Billable Charge Selection	BILLABLE_CHG_ID	Yes
If you have set the purpose of the template to....	Then, the default value is...									
Account Selection	ACCT_ID									
Adjustment Selection	ADJ_ID									
Billable Charge Selection	BILLABLE_CHG_ID									
From	Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data.	Yes								
Where	Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:  {column_name}{operator}:{bind_variable}	No								

Field Name	Field Description	Mandatory (Yes or No)
	The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the <b>Bind Variables</b> section.	

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"><li>• Date</li><li>• Numeric</li><li>• String</li></ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone/Code Description</b> window appears.	<b>Note:</b> This field is required when you are defining a bind variable.

4. Modify the details in the **Main** tab, if required.
5. If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details.

**Note:** However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

**Note:** If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics of the template, if required.
8. Click **Validate and Save**.  
The system validates the syntax of the SELECT statement and then accordingly saves the changes [Defining a Characteristic for a Template](#) on page 1224 made to the template.

## Deleting a Template

**Procedure**

To delete a template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.  
The **Template** screen appears.
3. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the template that you want to delete.  
A message appears confirming whether you want to delete the template.

**Note:** You can only delete a template which is not yet used in any construct.

4. Click **OK**.  
The template is deleted.

# Construct (Used for Searching)

The **Construct** screen allows you to search for a construct using various search criteria. Through this screen, you can define, edit, view, copy, inactivate a construct. It contains the following zones:

- [Search Construct](#) on page 1229

## Search Construct

The **Search Construct** zone allows you to search for a construct using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct ID	Used to specify the construct ID.	No
Description	Used to specify the description for the construct.	No
Construct Type	Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"><li>• Invoice Only</li><li>• Invoice and Settlement</li><li>• Settlement Only</li></ul>	No
Status	Used to indicate the status of the construct. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Draft</li><li>• Inactive</li><li>• Pending Approval</li><li>• Rejected</li></ul>	No
Effective Start Date	Used to specify the date from when the construct is effective.	No
Effective End Date	Used to specify the date till when the construct is effective.	No
Usage Account Identifier Type	Used to indicate the usage account's identifier type based on which you want to search for a construct.	No
	<b>Note:</b> This field appears when you select the <b>Invoice Only</b> or <b>Invoice and Settlement</b> option from the <b>Construct Type</b> list.	
Usage or Invoice Account Identifier Type	Used to indicate the usage or invoice account's identifier type based on which you want to search for a construct.	No
	<b>Note:</b> This field appears when you select the <b>Settlement Only</b> option from the <b>Construct Type</b> list.	
Usage Account Identifier	Used to indicate the usage account which belongs to the construct.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Invoice Only</b> or <b>Invoice and Settlement</b> option from the <b>Construct Type</b> list.	
Usage or Invoice Account Identifier	Used to indicate the usage or invoice account which belongs to the construct. <b>Note:</b> This field appears when you select the <b>Settlement Only</b> option from the <b>Construct Type</b> list.	No
Invoice Account Identifier Type	Used to indicate the invoice account's identifier type based on which you want to search for a construct. <b>Note:</b> This field appears when you select the <b>Invoice Only</b> or <b>Invoice and Settlement</b> option from the <b>Construct Type</b> list.	No
Settlement Account Identifier Type	Used to indicate the settlement account's identifier type based on which you want to search for a construct. <b>Note:</b> This field appears when you select the <b>Settlement Only</b> option from the <b>Purpose</b> list.	No
Invoice Account Identifier	Used to indicate the invoice account which is used in the construct. <b>Note:</b> This field appears when you select the <b>Invoice Only</b> or <b>Invoice and Settlement</b> option from the <b>Construct Type</b> list.	No
Settlement Account Identifier	Used to indicate the settlement account which is used in the construct. <b>Note:</b> This field appears when you select the <b>Settlement Only</b> option from the <b>Construct Type</b> list.	No

**Note:** You must specify at least one search criterion while searching for a construct.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Indicates the purpose of the construct. The valid values are: <ul style="list-style-type: none"><li>• Invoice Only</li><li>• Invoice and Settlement</li><li>• Settlement Only</li></ul>
Effective Start Date	Displays the date from when the construct is effective.

Column Name	Column Description
Effective End Date	Displays the date till when the construct is effective.
Status	Indicates the status of the construct. The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Draft</li><li>Inactive</li><li>Pending Approval</li><li>Rejected</li></ul>
Copy	On clicking the <b>Copy</b> (📄) icon, the <b>Construct</b> screen appears where you can create a construct using an existing construct.
View	On clicking the <b>View</b> (🔍) icon, the <b>Construct</b> screen appears where you can view the details of the construct.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Construct</b> screen appears where you can edit the details of the construct.
Inactivate	On clicking the <b>Inactivate</b> icon (⊘), in the <b>Inactivate</b> column, the <b>Inactivate</b> window appears confirming whether you want to inactivate the selected construct.
	<b>Note:</b> You can only inactivate the construct which is in <b>Active</b> status. The <b>Inactivate</b> icon appears in the <b>Inactivate</b> column, only in front of the construct which is in <b>Active</b> status.

You can create a new construct by clicking the **Add** button in the upper right corner of the **Construct** screen.

## Searching for a Construct

**Procedure**

To search for a construct:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select the **Billing Management** and then click **Construct**.  
A sub-menu appears.
- Click the **Search** option from the **Construct** sub-menu.  
The **Construct** screen appears.
- Enter the search criteria in the **Search Construct** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of constructs that meet the search criteria appears in the **Search Results** section.

## Defining a Construct

**Procedure**

To define a construct:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Billing Management** and then click **Construct**.  
A sub-menu appears.
- Click the **Add** option from the **Construct** sub-menu.

The **Construct** screen appears. It consists of the following sections:

- Main** - Used to specify basic details about the construct.
- Characteristics** - Used to define the characteristics for the construct.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the construct.	Yes
Construct Type	Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"><li><b>Invoice</b> - Indicates that you want to use the construct for billing.</li><li><b>Invoice and Settlement</b> - Indicates that you want to use the construct for billing and settlement.</li><li><b>Settlement</b> - Indicates that you want to use the construct for settlement.</li></ul>	Yes
	<b>Note:</b> Here, settlement includes receivables and payables	
Status	Used to indicate the status of the construct. By default, the <b>Draft</b> option is selected from the list.	Not applicable
Effective Start Date	Used to specify the date from when the construct is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The effective from date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the construct is effective.	No
	<b>Note:</b> The effective to date cannot be earlier than the effective start date.	

**Tip:** Alternatively, you can access the **Construct** screen by clicking the **Add** button on the top-right of the **Construct** screen.

- 4. Enter the required details in the **Main** section.
- 5. Define characteristics for the construct, if required.
- 6. Do either of the following:

If you want to...	Then...
Save the construct in the draft version	<b>a. Click Save as Draft.</b>  The construct is created and the status of the construct is set to <b>Draft</b> . The construct ID is generated automatically when the construct is created.
Activate the construct	<b>a. Click Activate.</b>  The construct is created and the status of the construct is set to <b>Active</b> . The construct ID is generated automatically when the construct is created.  <b>Note:</b> The <b>Activate</b> button appears while defining a construct when the approval workflow process is not configured for construct.
Send the construct for approval	<b>a. Click Send for Approval.</b>  The construct is created and the approval workflow request is raised for the construct. The status of the construct is set to <b>Pending Approval</b> . In addition, the construct ID is generated automatically when the construct is created.  <b>Note:</b> The <b>Send for Approval</b> button appears while defining a construct when the approval workflow process is configured for construct.

## Defining a Characteristic for a Construct

### Prerequisites

To define a characteristic for a construct, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Construct)

### Procedure

To define a characteristic for a construct:

1. Ensure that the **Characteristics** section is expanded in the **Construct** screen when you are creating or editing a construct. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the construct.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the construct.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the construct.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the construct.
	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.	

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the construct, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the construct, click the **Delete** (🗑️) icon corresponding to the characteristic.

### Related Topics

For more information on...	See...
How to define a construct	<a href="#">Defining a Construct</a> on page 1232
How to edit a construct	<a href="#">Editing a Construct</a> on page 1235

## Editing a Construct

You can only edit a construct in the **Draft**, **Active**, or **Rejected** status. If a bill is already generated through a construct and it is in the **Pending** status, you cannot edit the details of the construct. You can only edit the effective to date of a construct when all bills generated through the construct are in the **Completed** status. The effective to date must be later than the last completed bill's bill date. Otherwise, the system will not allow you to edit the effective to date of the construct.

### Procedure

To edit a template:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.  
A sub-menu appears.
3. Click on **Search**.  
The **Construct** screen appears.
4. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the **Construct ID** whose details you want to edit.

**Note:** If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template name.	Not applicable
Description	Used to specify the description for the template.	Yes
Detailed Description	Used to specify additional information about the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"><li>• <b>Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li><li>• <b>Adjustment Selection</b> - Used for selecting a set of adjustments based on the criteria.</li><li>• <b>Billable Charge Selection</b> - Used for selecting a set of billable charges based on the criteria.</li><li>• <b>Usage Account Selection</b> - Used for selecting a set of usage accounts based on the criteria.</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)								
	<ul style="list-style-type: none"><li>• <b>Usage and Invoice Account Selection</b> - Used for selecting a set of usage and invoice accounts based on the criteria.</li></ul>									
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes								
Select	<p>Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.</p> <p>The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required.</p> <table><tr><th>If you have set the purpose of the template to....</th><th>Then, the default value is...</th></tr><tr><td>Account Selection</td><td>ACCT_ID</td></tr><tr><td>Adjustment Selection</td><td>ADJ_ID</td></tr><tr><td>Billable Charge Selection</td><td>BILLABLE_CHG_ID</td></tr></table>	If you have set the purpose of the template to....	Then, the default value is...	Account Selection	ACCT_ID	Adjustment Selection	ADJ_ID	Billable Charge Selection	BILLABLE_CHG_ID	Yes
If you have set the purpose of the template to....	Then, the default value is...									
Account Selection	ACCT_ID									
Adjustment Selection	ADJ_ID									
Billable Charge Selection	BILLABLE_CHG_ID									
From	Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data.	Yes								
Where	<p>Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:</p> <p><code>{column_name}{operator}:{bind_variable}</code></p> <p>The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the <b>Bind Variables</b> section.</p>	No								

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"><li>Date</li><li>Numeric</li></ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>String</li></ul>	
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone/Code Description</b> window appears.	<b>Note:</b> This field is required when you are defining a bind variable.

5. Modify the details in the **Main** tab, if required.

**Note:** If you want to define more than one bind variable, click the **Add (+)** icon in the **Bind Variables** section and then enter the required details. However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete (🗑)** icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

**Note:** If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics of the template, if required.

8. Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the changes made to the template.

## Copying a Construct

Instead of creating a construct from scratch, you can create a new construct using an existing construct. This is possible through copying a construct. On copying a construct, the usage accounts, billable charges, and adjustments' selection criteria and characteristics are copied to the new construct. You can then edit the details, if required.

**Prerequisites**

To copy a construct, you should have:

- Construct (whose copy you want to create) defined in the application

**Procedure**

To copy a construct:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.  
A sub-menu appears.
3. Click on **Search**.  
The **Construct** screen appears.
4. In the **Search Results** section, click the **Copy** (📋) icon in the **Copy** column corresponding to the construct whose copy you want to create.

The **Construct** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the new construct.	Yes
Effective From	Used to specify the date from when the new construct is effective.	Yes
	<b>Note:</b> The effective from date cannot be later than the effective to date.	
Effective To	Used to specify the date till when the new construct is effective.	No
	<b>Note:</b> The effective to date cannot be earlier than the effective from date.	

5. Enter the required details in the **Main** section and the **Characteristics** section.
6. Click **Save and Next**.  
The **Construct** screen appears.
7. Edit the details of the new construct, if required.

**Related Topics**

## Viewing the Construct Details

**Procedure**

To view the details of a construct:

1. Search for the construct in the **Construct** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the construct whose details you want to view.

The **Construct** screen appears. It contains the following sections:

- **Construct Information** - Displays basic details about the construct.
  - **Include Usage/Invoice Accounts** - Indicates the persons and their usage accounts or the Invoice accounts for which the construct is defined.
  - **Include Bill Segments** - Indicates the bill segments of the usage accounts
  - **Include Billable Charges** - Indicates the billable charges of the usage accounts which are billed through a settlement account.
  - **Exclude Usage/Invoice Accounts** - Indicates the usage accounts of the persons to which this construct is not applicable.
  - **Include Adjustments** - Indicates the adjustments of the usage accounts which are billed through an invoice account.
  - **Linked Accounts** - Indicates the linked accounts which are included in the construct.
3. View the basic details of the construct in the **Construct Information** section.

# Construct (Used for Viewing)

The **Construct** screen allows you to view the details of the construct as well as the log entries. Through this screen, you can define, edit, delete various details of a construct and add log entries. It consists of the following tabs:

- [Construct - Main](#) on page 1239
- [Construct - Log](#) on page 1244

## Construct - Main

The **Main** tab displays the details of the construct. It contains the following zones:

- [Construct Information](#) on page 1239
- [Include Usage/Invoice Accounts](#) on page 1241
- [Include Billable Charges](#) on page 1241
- [Include Adjustments](#) on page 1242
- [Include Bill Segments](#) on page 1243
- [Linked Accounts](#) on page 1243
- [Exclude Usage/Invoice Accounts](#) on page 1244

## Construct Information

The **Construct Information** zone displays the basic details of the construct. It contains the following sections:

- **Main** - The **Main** section contains the following fields:

Field Name	Field Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Displays the type of the construct.

Field Name	Field Description
Status	Displays the status of the construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays date till when the construct is effective.

- **Characteristics** - The **Characteristics** section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the construct.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the construct.
	<b>Note:</b> The <b>Edit</b> button appears when the construct is in the <b>Draft</b> status.
Delete	Used to delete the construct.
	<b>Note:</b> The <b>Delete</b> button appears when the construct is in the <b>Draft</b> status.
Submit	Used to submit the details of the construct.
	<b>Note:</b> The <b>Submit</b> button appears when the construct is in the <b>Draft</b> status.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the construct is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the construct business object.
Status Date Time	Displays the date and time when the construct status is updated
Create Date Time	Displays the date and time when the construct is created.

Include Usage/Invoice Accounts

The **Include Usage/Invoice Accounts** zone displays the details of usage and invoice accounts. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the details of the usage and invoice accounts.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the usage and invoice accounts.

Include Billable Charges

The **Include Billable Charges** zone displays the details of the billable charges which should be included in the construct. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the account. In addition, a <b>Context Menu</b> (▼) appears corresponding to this field which helps in navigating to other screens in the application.

Field Name	Field Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

**Include Adjustments**

The **Include Adjustments** zone displays the details of the adjustments which should be included in the construct. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the account. In addition, a <b>Context Menu</b> (▼) appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

Include Bill Segments

The **Include Bill Segments** zone displays the details of the bill segments which should be included in the construct. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Settlement Account Information	Displays the information of the settlement account. In addition, a <b>Context Menu</b> (▼) appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

**Note:** The **Include Bill Segments** zone appears when you select **Settlement** from the **Construct Type** field drop-down list while searching for a construct.

**Construct - Log**

The **Log** tab contains the following zone:

- [Construct Log](#) on page 1244

**Construct Log**

The **Construct Log** zone lists the complete trail of actions performed on the construct. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the construct.
Details	Displays the details about the action performed on the construct..
User	Indicates the user who has performed the action on the construct..
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the construct..
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the construct. is changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the construct by clicking the **Add Log Entry** link in the upper right corner of the **Construct Log** zone.

**Including Usage Accounts in a Construct**

While defining a construct, you need to indicate the persons and their usage accounts for which you want to define the construct. The system allows you to select a set of usage accounts based on the criteria using the account selection template. You need to ensure that all usage and invoice accounts in the construct should have the same bill cycle. Otherwise, erroneous results might occur.

**Note:** One usage account can belong to only one active construct and not to multiple active constructs at the same time.

**Prerequisites**

To include usage accounts in a construct, you should have:

- Persons, usage accounts, and account selection templates defined in the application

**Procedure**

To include usage accounts in a construct:

1. Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

Field Name	Field Description
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Payment Request Type</b> screen appears where you can edit the details of the payment request type.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the payment request type.

- Click the **Add** link at the top-right side of the **Include Usage/Invoice Accounts** zone. The **Selection Criteria** screen appears.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.
- The **Usage Accounts** are included in the construct.

**Related Topics**

For more information on...	See...

## Including Usage and Invoice Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage and invoice accounts for which you want to define the construct. The system allows you to select a set of usage and invoice accounts based on the criteria using the usage and invoice account selection template. You need to ensure that all usage and invoice accounts in the construct should have the same bill cycle. Otherwise, erroneous results might occur.

**Note:** One usage and invoice account can belong to only one active construct and not to multiple active constructs at the same time.

**Prerequisites**

To include usage and invoice accounts in a construct, you should have:

- Persons, usage and invoice accounts, and account selection templates defined in the application

**Procedure**

To include usage and invoice accounts in a construct:

- Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

- 2. Click the **Add** link at the top-right side of the **Include Usage/Invoice Accounts** zone. The **Selection Criteria** screen appears.
- 3. Enter the required details and click **Save**.
- 4. If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.  
The **Usage and Invoice Accounts** are included in the construct.

**Related Topics**

**Excluding Usage Accounts from a Construct**

The system will determine the usage accounts based on the criteria defined in the **Exclude Usage Accounts** section. There might be situations when you do not want to include all usage accounts that satisfy the criteria in the construct. In such cases, you can list the usage accounts that should be excluded from the construct.

**Procedure**

To exclude usage accounts from a construct:

- 1. Ensure that **Exclude Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Account ID	Displays the account ID.

Field Name	Field Description
Account Information	Displays the information of the account. In addition, this column has a <b>Context Menu</b> (▼) which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

- 2. Click the **Add** link at the top-right side of the **Exclude Usage/Invoice Accounts** zone. The **Exclude Usage Accounts** screen appears.
- 3. Search for the usage account that you want to exclude from the construct.

**Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.

- 4. If you want to exclude more than one usage account, click the **Add** (+) icon and then repeat the step 3.

**Note:** However, if you do not want a usage account to be excluded from the construct, click the **Delete** (🗑) icon corresponding to the excluded usage account.

- 5. Enter the required details and click **Save**. The **Usage Accounts** are excluded from the construct.

**Related Topics**

**Excluding Usage and Invoice Accounts from a Construct**

The system will determine the usage and invoice accounts based on the criteria defined in the **Exclude Usage/Invoice Accounts** section. There might be situations when you do not want to include all usage and invoice accounts that satisfy the criteria in the construct. In such cases, you can list the usage and invoice accounts that should be excluded from the construct.

**Procedure**

To exclude usage and invoice accounts from a construct:

- 1. Ensure that **Exclude Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Account ID	Displays the account ID.

Field Name	Field Description
Account Information	Displays the information of the account. In addition, this column has a <b>Context Menu</b> (▼) which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

- 2. Click the **Add** link at the top-right side of the **Exclude Usage/Invoice Accounts** zone. The **Exclude Usage/Invoice Accounts** screen appears.
- 3. Search for the usage and invoice account that you want to exclude from the construct.

**Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.

- 4. If you want to exclude more than one usage and invoice account, click the **Add** (+) icon and then repeat the step 3.

**Note:** However, if you do not want a usage and invoice account to be excluded from the construct, click the **Delete** (🗑) icon corresponding to the excluded usage and invoice account.

- 5. Enter the required details and click **Save**. The **Usage And Invoice Accounts** are excluded from the construct.

**Including Billable Charges in a Construct**

While defining a construct, you need to indicate the billable charges that you want to bill through an invoice account. You can use an existing invoice account. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.

**Prerequisites**

To include billable charges in a construct, you should have:

- Billable charge selection templates defined in the application
- Invoice account defined in the application (in case you want to use an existing invoice account)

**Procedure**

To include billable charges in a construct:

- 1. Ensure that **Include Billable Charges** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

Field Name	Field Description
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the account. In addition, this column has a <b>Context Menu</b> (▼) which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

- Click the **Add** link at the top-right side of the **Include Billable Charges** zone.  
The **Selection Criteria** screen appears.
- Search for the billable charge selection template that you want to use for selecting a set of billable charges.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.  
The **Usage And Invoice Accounts** are included in the construct.

How to edit a construct	<a href="#">Editing a Construct</a> on page 1235

## Including Bill Segments in a Construct

While defining a construct, you need to indicate the bill segments that you want to bill through a settlement account. You can use an existing settlement account. The system allows you to select multiple bill segments based on the criteria using the bill segment selection template.

**Prerequisites**

To include bill segments in a construct, you should have:

- Bill segment selection templates defined in the application
- Settlement account defined in the application (in case you want to use an existing settlement account)

**Procedure**

To include bill segments in a construct:

- Ensure that **Include Bill Segments** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Settlement Account Information	Displays the information of the settlement account. In addition, this column has a context menu (▼) which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

- 2. Click the **Add** link at the top-right side of the **Include Bill Segments** zone.  
The **Selection Criteria** screen appears.
- 3. Search for the bill segment selection template that you want to use for selecting bill segments.
- 4. Enter the required details and click **Save**.
- 5. If you want to include more than one bill segments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.  
The bill segments are included from the construct.

**Related Topics**

For more information on...	See...
How to define a construct	<a href="#">Defining a Construct</a> on page 1232
How to edit a construct	<a href="#">Editing a Construct</a> on page 1235

## Including Adjustments in a Construct

While defining a construct, you need to indicate the adjustments that you want to bill through an invoice or settlement account. You can use an existing invoice or settlement account. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

**Prerequisites**

To include adjustments in a construct, you should have:

- Adjustment selection templates defined in the application
- Invoice or settlement account defined in the application (in case you want to use an existing invoice account)

**Procedure**

To include adjustments in a construct:

1. Ensure that **Include Adjustments** zone is expanded while defining, editing, viewing or copying a construct in the **Construct** screen. It contains the following fields:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	<b>Note:</b> The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the invoice account. In addition, this column has a context menu ( ▾ ) which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Edit	On clicking the <b>Edit</b> (✎) icon in the <b>Edit</b> column, the <b>Selection Criteria</b> screen appears where you can edit the construct.
Delete	On clicking the <b>Delete</b> (🗑) icon in the <b>Delete</b> column, you can delete the construct.

2. Click the **Add** link at the top-right side of the **Include Adjustments** zone.  
The **Selection Criteria** screen appears.
3. Search for the adjustment selection template that you want to use for selecting a set of adjustments.
4. Enter the required details and click **Save**.
5. If you want to include more than one usage adjustments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.  
The **Adjustments** are included in the construct.

**Related Topics**

<b>Construct</b> screen	<a href="#">Construct (Used for Searching)</a> on page 1229
<b>Include Adjustments</b> zone	<a href="#">Include Adjustments</a> on page 1242

# Activating a Construct

Only active constructs which are effective are used during the construct based billing process. Therefore, you need to activate a construct.

**Prerequisites**

To activate a construct, you should have:

- Target contract type (characteristic type) defined on usage accounts' contracts' contract type
- Default account creation algorithm defined using the C1-ACTCR-IC algorithm type
- Default contract creation algorithm defined using the C1-CTMP-IC algorithm type

- Assign the **C1-IC\_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct

**Procedure**

To activate a construct:

1. Search for the draft construct in the **Construct** screen.
2. In the **Search Results** section, click **View** (🔍) icon in the **View** column corresponding to the construct that you want to activate.  
The **Construct** screen appears.
3. Click **Submit** button in the **Construct Information** zone.

A message appears confirming whether you want to activate a construct.

**Note:** If you click on **Edit** (✎) icon or **Copy** icon (📄) in the respective columns while searching for a construct, click on **Save and Next** button and then click **Submit** button in the **Construct Information** zone.

4. Click **OK**.

The construct is activated.

How to search for a construct	<a href="#">Searching for a Construct</a> on page 1231

# Billing and Settlement Hierarchy

The **Billing and Settlement Hierarchy** screen allows you to search for a person/account hierarchy using various search criteria. Through this screen, you can search and view person/account hierarchy. It contains the following zones:

- [Search Hierarchy](#) on page 1253
- [Linked Accounts](#) on page 1243
- [Criteria](#) on page 1256

## Search Hierarchy

The **Search Hierarchy** zone allows you to search for a person or an account with its billing/settlement hierarchy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: <ul style="list-style-type: none"><li>• <b>Person-Billing Hierarchy</b></li><li>• <b>Person-Settlement Hierarchy</b></li><li>• <b>Account-Billing Hierarchy</b></li><li>• <b>Account-Settlement Hierarchy</b></li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for accounts which belong to a particular person.	Yes
	<b>Note:</b> This field appears when you select the <b>Person-Billing Hierarchy</b> and <b>Person-Settlement Hierarchy</b> option from the <b>Search By</b> list.	
	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person.	Yes
	<b>Note:</b> This field appears when you select the <b>Person-Billing Hierarchy</b> and <b>Person-Settlement Hierarchy</b> option from the <b>Search By</b> list.	
View Option	Used to indicate whether you want to view invoice or usage account billing details. The valid values are: <ul style="list-style-type: none"><li>• <b>Invoice Account</b> - Used when you want to view the usage accounts billed through an invoice account.</li><li>• <b>Usage Account</b> - Used when you want to view the invoice accounts through which a usage account is billed.</li></ul>	No
	<b>Note:</b> This field appears when you select the <b>Account-Billing Hierarchy</b> and <b>Account-Settlement Hierarchy</b> option from the <b>Search By</b> list.	
Account ID	Used to specify the invoice or usage account ID.	No
	<b>Note:</b> This field appears when you select the <b>Account-Billing Hierarchy</b> and <b>Account-Settlement Hierarchy</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a person or an account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Invoice Account Information	Displays the information of the invoice account.

Column Name	Column Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.  This field appears when you select the <b>Person-Billing Hierarchy</b> and <b>Account-Billing Hierarchy</b> (if <b>View Option</b> is selected as <b>Settlement Account</b> ) option from the <b>Search By</b> list.
Settlement Account Information	Displays the information of the settlement account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.  This field appears when you select the <b>Account-Billing Hierarchy</b> and <b>Account-Settlement Hierarchy</b> option from the <b>Search By</b> list.
Construct Information	Displays additional information about the construct.
	<b>Note:</b> It has a link. On clicking the link, the <b>Construct</b> screen appears where you can view the details of the respective construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

On clicking the **Broadcast** icon (📢) corresponding to the account, **Linked Accounts** zone and **Criteria** zone appears with the details of the respective account.

**Related Topics**

For more information on...	See...
Billing and Settlement Hierarchy zone	<a href="#">Billing and Settlement Hierarchy</a> on page 1253

# Linked Accounts

The **Linked Accounts** zone displays various accounts linked to a person. It contains the following columns:

Field Name	Field Description
Account ID	Displays the account IDs of all the accounts linked to a person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Account Category	Displays the category of an account.
Person Name	Displays the name of a particular person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.

**Note:**

The **Linked Accounts** zone does not appear automatically. It appears when you click the **Broadcast** (📢) icon in the search results section of the **Search Hierarchy** zone.

**Related Topics**

For more information on...	See...
<b>Billing and Settlement Hierarchy</b> screen	<a href="#">Billing and Settlement Hierarchy</a> on page 1253
<b>Search Hierarchy</b> zone	<a href="#">Search Hierarchy</a> on page 1253

## Criteria

The **Criteria** zone displays the details of all the criteria of a particular person/account hierarchy. It contains the following columns:

Column Name	Column Description
Criteria Type	Displays the criteria type for billing to the account.
Priority	Displays the order in which the bill segments must be generated for a set of billable charges or adjustments on the invoice account.
Selection Criteria	Displays the selection criteria for the construct

**Related Topics**

For more information on...	See...
How to view the details of the construct	<a href="#">Viewing the Construct Details</a> on page 1238

## Viewing Person Billing Hierarchy Details

**Procedure**

To view the details of a construct with person billing hierarchy:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast** (📢) icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.  
The details of all the active constructs with invoice only or invoice and settlement purposes are displayed.
5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

**Related Topics**

For more information on...	See...
Billing and Settlement Hierarchy screen	<a href="#">Billing and Settlement Hierarchy</a> on page 1253
Linked Accounts zone	<a href="#">Linked Accounts</a> on page 1255
Criteria zone	<a href="#">Criteria</a> on page 1256

## Viewing Person Settlement Hierarchy Details

### Procedure

To view the details of a construct with person settlement hierarchy:

1. Search for the construct in the **Billing and Settlement Hierarchy** screen.
2. Select **Person-Settlement Hierarchy** option from the **Search By** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.  
The details of all the active constructs with settlement only types of construct are displayed.
5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

### Related Topics

## Viewing Usage Accounts Billed through an Invoice Account

### Procedure

To view the usage accounts billed through an invoice account:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Billing and Settlement Hierarchy**.

The **Billing and Settlement Hierarchy** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are:	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Person-Billing Hierarchy</b></li> <li>• <b>Person-Settlement Hierarchy</b></li> <li>• <b>Account-Billing Hierarchy</b></li> <li>• <b>Account-Settlement Hierarchy</b></li> </ul>	
Person ID	Used to search for accounts which belong to a particular person.	Yes
	<b>Note:</b> This field appears when you select the <b>Person-Billing Hierarchy</b> and <b>Person-Settlement Hierarchy</b> option from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person.	Yes
	<b>Note:</b> This field appears when you select the <b>Person-Billing Hierarchy</b> and <b>Person-Settlement Hierarchy</b> option from the <b>Search By</b> list.	
View Option	Used to indicate whether you want to view invoice or usage account billing details. The valid values are: <ul style="list-style-type: none"> <li>• <b>Invoice Account</b> - Used when you want to view the usage accounts billed through an invoice account.</li> <li>• <b>Usage Account</b> - Used when you want to view the invoice accounts through which a usage account is billed.</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Account-Billing Hierarchy</b> and <b>Account-Settlement Hierarchy</b> option from the <b>Search By</b> list.	
Account ID	Used to specify the invoice or usage account ID.	No
	<b>Note:</b> This field appears when you select the <b>Account-Billing Hierarchy</b> and <b>Account-Settlement Hierarchy</b> option from the <b>Search By</b> list.	

4. Select the **Invoice Account** option from the **View Option** list.
5. Enter the date and invoice account ID in the respective fields.
6. Click **Search**.

A list of usage accounts which are billed through the invoice account appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Usage Account	Indicates the usage account which is billed through the invoice account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Construct Description	Indicates the construct in which the usage account is included.
	<b>Note:</b> It has a link. On clicking the link, the <b>Construct</b> screen appears where you can view the details of the respective construct.
Selection Criteria	Indicates the criteria used to select a set of usage account's charges or adjustments.

**Related Topics**

For more information on...	See...
Billing and Settlement Hierarchy screen	<a href="#">Billing and Settlement Hierarchy</a> on page 1253

**Viewing Invoice Accounts through which a Usage Account is Billed**

**Procedure**

To view the invoice accounts through which a usage account is billed:

- 1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
- 2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View Option** list in the **Search Hierarchy** zone.
- 3. Enter the **Account ID** and click **Search** button.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 4. Click **Search**.

A list of invoice accounts through which the usage account's charges or adjustments are billed appears in the search results. The **Search Results** section contains the following fields:

Field Name	Field Description
Construct Description	Indicates the construct in which the usage account is included.
	<b>Note:</b> It has a link. On clicking the link, the <b>Construct</b> screen appears where you can view the details of the respective construct.

In addition, this section contains the following columns:

Column Name	Column Description
Invoice Account	Indicates the invoice account through which the usage account's charges or adjustments are billed.

Column Name	Column Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Priority	Indicates the order in which the bill segments must be generated for a set of billable charges or adjustments on the invoice account.
Selection Criteria	Indicates the criteria used to select a set of billable charges or adjustments.

**Related Topics**

For more information on...	See...
Billing and Settlement Hierarchy screen	<a href="#">Billing and Settlement Hierarchy</a> on page 1253

## Viewing Settlement Accounts through which a Usage or Invoice Account is Settled

**Procedure**

To view construct in which a settlement account is used:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Settlement Hierarchy** option from the **Search By** list and **Settlement Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.  
The details of all the active constructs linked with the settlement accounts are displayed.
4. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

**Related Topics**

## Trial Billing

---

### Topics:

- [Prerequisites](#)
- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** - This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** - This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

**Note:** The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** - This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** - This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

# Prerequisites

To setup the trial billing feature, you need to do the following:

- Set the **Trial Bill Characteristics Conversion** option type of the **C1\_FINTRANOP** feature configuration.

**Related Topics**

For more information on...	See...
How to setup the <b>C1_FINTRANOP</b> feature configuration	<a href="#">Setting the C1_FINTRANOP Feature Configuration</a> on page 4340

# Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 1265

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 1268

# Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"><li>• Trial Bill Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Trial Bill Details</b> option is selected.	
Person ID	Used to search trial bills which are generated for a particular person.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Trial Bill ID	Used to search for a particular trial bill.	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bills which are generated for a particular account.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Division	Used to search trial bills which are generated for accounts belonging to a particular division.	No
From Trial Bill Date	Used to search trial bills which are generated from a particular date onwards.	No
Invoice Currency	Used to search trial bills which are generated in a particular invoice currency.	No
To Trial Bill Date	Used to search trial bills which are generated till a particular date.	No
Batch Run Date	Used to search trial bills which are generated on a particular batch run date.	No
Trial Bill Description	Used to search trial bills which are generated in a particular batch run.	Yes (Conditional)
		<b>Note:</b> This field is required when you are searching for trial bills using the batch run date.

**Note:** You must specify at least one search criterion while searching for a trial bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Information	Displays additional information about the trial bill.
	<b>Note:</b> It has a link. On clicking the link, the <b>Trial Bill</b> screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.
Account Information	Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Person Name	Indicates the person for whom the trial bill is generated.
Division	Indicates the division to which the account belongs.
Batch Run Date	Displays the date when the batch is executed to generate the trial bill.
Batch Run Number	Indicates the batch run in which the trial bill is generated.

**Related Topics**

For more information on...	See...
How to search for a trial bill	<a href="#">Searching for a Trial Bill</a> on page 1267
How to view the details of a trial bill	<a href="#">Viewing the Trial Bill Details</a> on page 1267

## Searching for a Trial Bill

### Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

### Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Trial Bill**.  
The **Trial Bill** screen appears.
3. Enter the search criteria in the **Search Trial Bill** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of trial bills that meet the search criteria appears in the **Search Results** section.

## Viewing the Trial Bill Details

### Procedure

To view the details of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.  
The **Trial Bill** screen appears.
3. View the basic details of the trial bill in the **Trial Bill** zone.
4. View the segments of the trial bill in the **Trial Bill Segments** zone.
5. View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.
6. View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
7. View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

## Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment
- View the details of the policy, plan, and membership for which a trial bill segment is created

It contains the following zones:

- [Trial Bill](#) on page 1268
- [Trial Bill Segments](#) on page 1269
- [Trial Bill Segment Calc Lines](#) on page 1271
- [Trial Bill Segment SQ Details](#) on page 1272
- [Trial Bill Segment Financial Details](#) on page 1273
- [Policy Details](#) on page 1273

## Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** - This section provides basic information about the trial bill. It contains the following fields:

Field Name	Field Description
Trial Bill ID	Displays the trial bill ID.
Trial Bill Information	Displays additional information about the trial bill.
Trial Bill Description	Displays the description of the batch run in which the trial bill is generated.

Field Name	Field Description
Account Information	Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

- **Trial Bill Summary** - This section summarizes the financial impact of the bill. It contains the following fields:

Field Name	Field Description
New Charges	Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill.
Adjustments	Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill.
Corrections	Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill.
Total	Displays the sum of new charges, adjustments, and corrections.
No. of Bill Segments in Error	Indicates the number of bill segments in the trial bill which are in the <b>Error</b> status.

- **Trial Bill Messages** - This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

Column Name	Column Description
Message Code	Displays the code that uniquely identifies the bill message.
Message on Bill	Displays the bill message.
Priority	Indicates the priority which determines the order in which the bill message must be printed on the trial bill.
Insert Code	Indicates whether the bill message must be sent separately along with the trial bill.

- **Characteristics** - This section lists characteristics of the trial bill. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

## Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bill segments which are generated for a particular usage account.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Contract Type	Used to search trial bill segments which are generated against a particular type of contract.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.	
Trial Bill Segment Type	Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"><li>• Post Processing</li><li>• Regular</li></ul>	No
Price Item	Used to search trial bill segments which are generated for a particular price item.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	
Trial Bill Segment Status	Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"><li>• Error</li><li>• Freezable</li></ul>	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Segment ID	Displays the trial bill segment ID.
Status	Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"><li>• Error</li><li>• Freezable</li></ul>
Start Date	Displays the start date of the trial bill segment.
End Date	Displays the end date of the trial bill segment.
Calculated Amount (Pricing Currency)	Displays the trial bill segment amount in the pricing currency.
Price Item	Indicates the price item for which the trial bill segment is generated.
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.

Column Name	Column Description
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment ID	Indicates the price item pricing which is used during calculation.
Billable Charge ID	Indicates the billable charge for which the trial bill segment is generated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Construct ID	Indicates the construct through which the trial bill segment is generated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Construct</b> screen appears where you can view the details of the respective construct.

On clicking the **Broadcast** (📡) icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear with the details of the respective trial bill segment.

**Related Topics**

## Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the trial bill.
Calculated Amount (Pricing Currency)	Displays the calculated charge amount associated with the calculation line in the pricing currency.
Calculated Amount (Invoice Currency)	Displays the calculated charge amount associated with the calculation line in the invoice currency.
Print	Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are:

Column Name	Column Description
	<ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>
Appears in Summary	Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Price Component ID	Indicates the price component which is used during calculation.
Service Quantity Identifier	Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Base Amount	Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount.
Rate Component Sequence	Indicates the sequence of the rate component on the effective rate version which is used while calculating the line.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Distribution Code	Indicates the distribution code associated with the rate component.

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

**Related Topics**

## Trial Bill Segment SQ Details

The **Trial Bill Segment SQ Details** zone lists the service quantity identifiers associated with the contract against which the trial bill segment is created. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.

By default, the **Trial Bill Segment SQ Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

**Related Topics**

For more information on...	See...
How to view the service quantity details of a trial bill segment	<a href="#">Viewing the SQ Details of a Trial Bill Segment</a> on page 1276

## Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the distribution code will be considered for deriving the GL account.
Distribution Code	Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount.
Amount	Displays the amount that will be debited or credited to the GL account.

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

### Related Topics

## Policy Details

The **Policy Details** zone lists the policy, plan, and membership for which the trial bill segment is created. It contains the following columns:

Column Name	Column Description
Policy Information	Displays the information about the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.
External Membership ID	Indicates the membership in which the member is included.
Member's Primary Identifier	Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:).
Member Name	Indicates the member for whom the trial bill segment is generated.
Plan Information	Displays information about the policy plan.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective policy plan.

By default, the **Policy Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

## Printing a Trial Bill in the PDF Format

---

**Prerequisites**

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

**Procedure**

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill that you want to print in the PDF format.  
The **Trial Bill** screen appears.
3. Click the **Display Trial Bill** button in the **Trial Bill** zone.  
The trial bill is printed in the PDF format.

**Related Topics**

## Filtering the Trial Bill Segments

### Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

### Procedure

To filter the trial bill segments:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.  
The **Trial Bill** screen appears.
3. Enter the search criteria in the **Trial Bill Segments** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
The search results are filtered based on the specified criteria.

# Chapter

# 18

---

## Bill Tolerance

---

### Topics:

- [Prerequisites](#)

Oracle Revenue Management and Billing allows you to define tolerance limit for the bill amount. If the difference between the previous and current bill amount exceeds either positive or negative tolerance limit, a To Do entry is generated when you initiate the bill completion process. In addition, a To Do entry is generated for the first bill of an account during the bill completion process. Until you review and close the To Do entry, you cannot complete the bill. After you close the To Do entry, you need to initiate the bill completion process once again to freeze and complete the bill. Note that the To Do entries are generated only for regular bills and not for adhoc bills.

The **Bill Tolerance** feature is supported when you freeze and complete the regular bills through the user interface and through the charge based billing batch named **Bill Completion (C1-BLPPR)**. It is not yet supported when you freeze and complete the bill through the **BILLING** batch. In addition, this feature is not yet designed to work when bills are generated through the construct based billing batches.

For more information on how to setup the bill tolerance feature, refer to [Prerequisites](#) on page 1280.

# Prerequisites

To setup the bill tolerance feature, you need to do the following:

- Define an algorithm of the C1-BILL\_TOLR algorithm type and attach it to the **Pre-Bill Completion Review** system event on the respective customer class. This algorithm type has the following parameters:
  - **Positive Tolerance Percentage** - Used to specify the positive tolerance limit in percentage.
  - **Negative Tolerance Percentage** - Used to specify the negative tolerance limit in percentage.
  - **Positive Tolerance Amount** - Used to specify the positive tolerance limit in amount.
  - **Negative Tolerance Amount** - Used to specify the negative tolerance limit in amount.
  - **Tolerance To Do Type** - Used to indicate that To Do entry of the specified To Do type must be created when the bill amount difference exceeds either positive or negative tolerance limit. This parameter is mandatory.
  - **First Bill To Do Type** - Used to indicate that To Do entry of the specified To Do type must be created when the first bill is generated for an account. This parameter is mandatory.
  - **Tolerance To Do Role** - Used to indicate that users with the specified To Do role can only view the "%1 Bill Tolerance Limit Exceeded" To Do entry. This parameter is mandatory.
  - **First Bill To Do Role** - Used to indicate that users with the specified To Do role can only view the "%1 To-do generated for First Bill" To Do entry. This parameter is mandatory.

For example, if you set the **Positive Tolerance Percentage** parameter to 10 and the **Negative Tolerance Percentage** parameter to 15 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Calculation	To Do Entry Generated (Yes or No)	Reason
120	100	$100+(100*10)/100=110$	Yes	Current Bill Amount is above Positive Tolerance Limit
115	105	$105+(105*10)/100=115.5$	No	Current Bill Amount is within Positive Tolerance Limit
80	100	$100-(100*15)/100=85$	Yes	Current Bill Amount is below Negative Tolerance Limit
95	110	$110-(110*15)/100=93.5$	No	Current Bill Amount is within Negative Tolerance Limit

If the tolerance limit is specified in both percentage and amount, the system calculates the tolerance amount using percentage and amount, considers the minimum value, and then creates the To Do entry accordingly. For example, if you set the **Positive Tolerance Percentage** parameter to 10, the **Positive Tolerance Amount** parameter to 15, the **Negative Tolerance Percentage** parameter to 5, and the **Negative Tolerance Amount** parameter to 25 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Calculation	To Do Entry Generated (Yes or No)	Reason
120	100	$100+(100*10)/100=110$ (Derived using positive tolerance percentage) $100+15=115$ (Derived using positive tolerance amount)	Yes	Current Bill Amount is above Positive Tolerance Limit

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Amount Calculation	To Do Entry Generated (Yes or No)	Reason
		Minimum Value is 110 in Positive Scenario		
180	200	$200 - (200 * 5) / 100 = 190$ (Derived using negative tolerance percentage) $200 - 25 = 175$ (Derived using negative tolerance amount) Minimum Value is 190 in Negative Scenario	Yes	Current Bill Amount is below Negative Tolerance Limit

During the tolerance amount calculation, the system checks whether the **Multi-Currency Accounts** feature is enabled or disabled. If the **Multi-Currency Accounts** feature is enabled, the system converts the previous and current bill amount in the division's base currency when the invoice currency is different from the division's base currency. Once the currency conversion is done, the tolerance amount is calculated and To Do entry is generated accordingly.

- Set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration to **True** if you want to enable the currency conversion feature during tolerance amount calculation
- Define the Tolerance and First Bill To Do types using the following information:
  - Navigation Option** - billMaint
  - Priority** - Priority 10 - Highest
  - Message Category** - 11105
  - Message Number** - 11009
  - Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Bill ID	Yes	Ascending

- Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BILL	BILL_ID

### Related Topics

# Chapter

# 19

---

## GL Account Validation

---

### Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 1284 and [Dynamic GL Account Validation](#) on page 1284, respectively.

## Static GL Account Validation

---

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

"GL Account is validated on YYYY-MM-DD"

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

"GL Account is invalid"

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

## Dynamic GL Account Validation

---

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the GLA\_VAL\_DT column of the CI\_TRL\_FT\_GL or CI\_FT\_GL table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the C1-GLASN or GLASSGN2 batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

## Upload Validated Adjustment Data

---

### Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Upload Request Type](#)
- [Adjustment Upload Request \(Used for Searching\)](#)
- [Adjustment Upload Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 1287.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 1288 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 1289.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object. If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

# Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

# CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

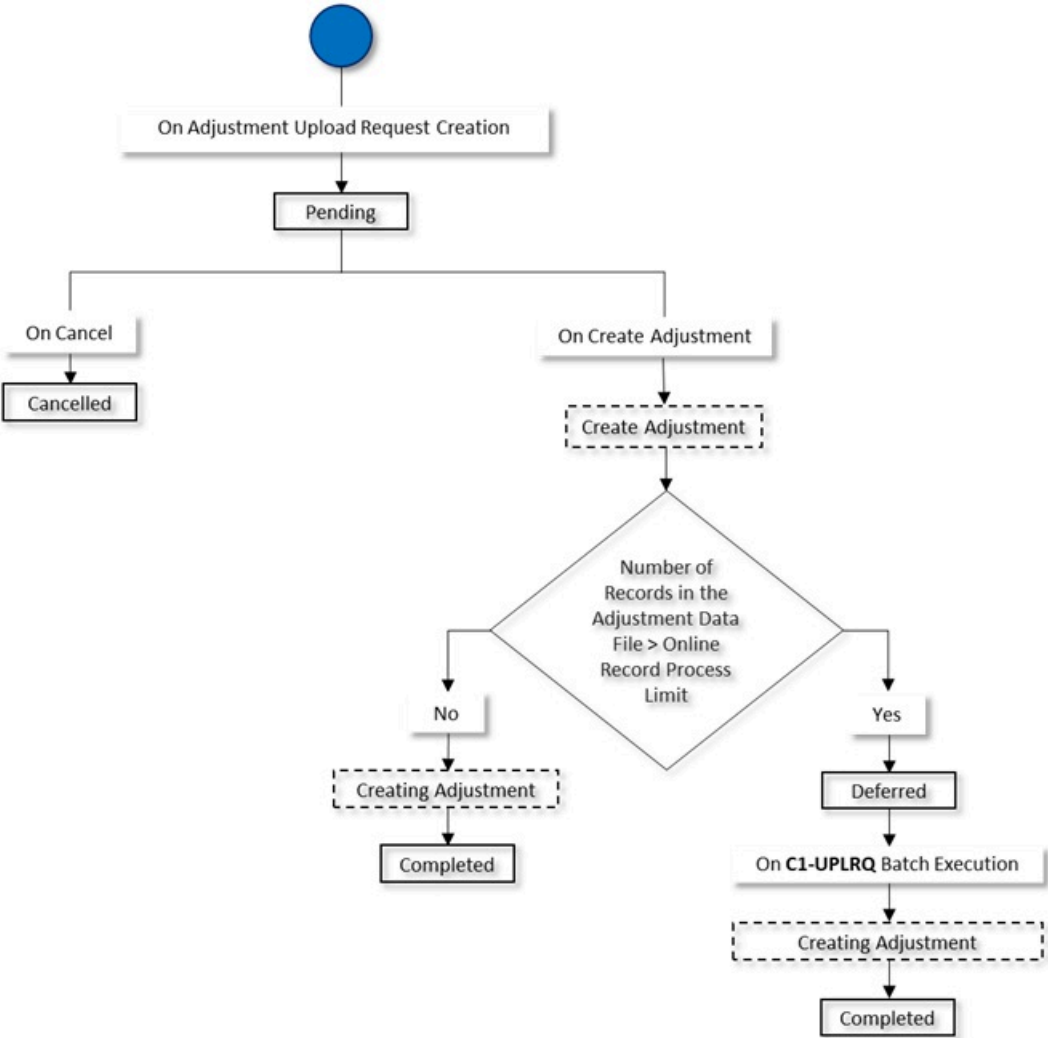

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and account ID is not specified.
Account Identifier	Used to specify the account identifier.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and account ID is not specified.
Account ID	Used to indicate the account for which the adjustment must be created.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified.

Column Name	Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which the adjustment must be created.	Yes
Match Value	Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	Yes
	<b>Note:</b> The adjustment type must be included in the adjustment type profile which is attached to the contract type.	
Adjustment Amount	Used to specify the adjustment amount.	Yes
	<b>Note:</b> The adjustment amount precision must match the precision (decimal positions) defined for the currency.	
Currency Code	Used to indicate the currency in which the adjustment must be created.	Yes
Comments	Used to specify additional information about the adjustment.	No
Bill ID	Used to indicate the bill on which the adjustment must be created.	No
Arrears Date	Used to specify the date from when the amount is outstanding on the bill.	No
Char Type 1, Char Type 2, ....., Char Type 5	Used to indicate the characteristic that must be defined for the adjustment.	Yes (Conditional)
		<b>Note:</b> This data is required if the characteristic value is specified.
Char Value 1, Char Value 2, ....., Char Value 5	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required if the characteristic type is specified.

**Note:** If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

# Adjustment Upload Request (Without Approval) Status Transition

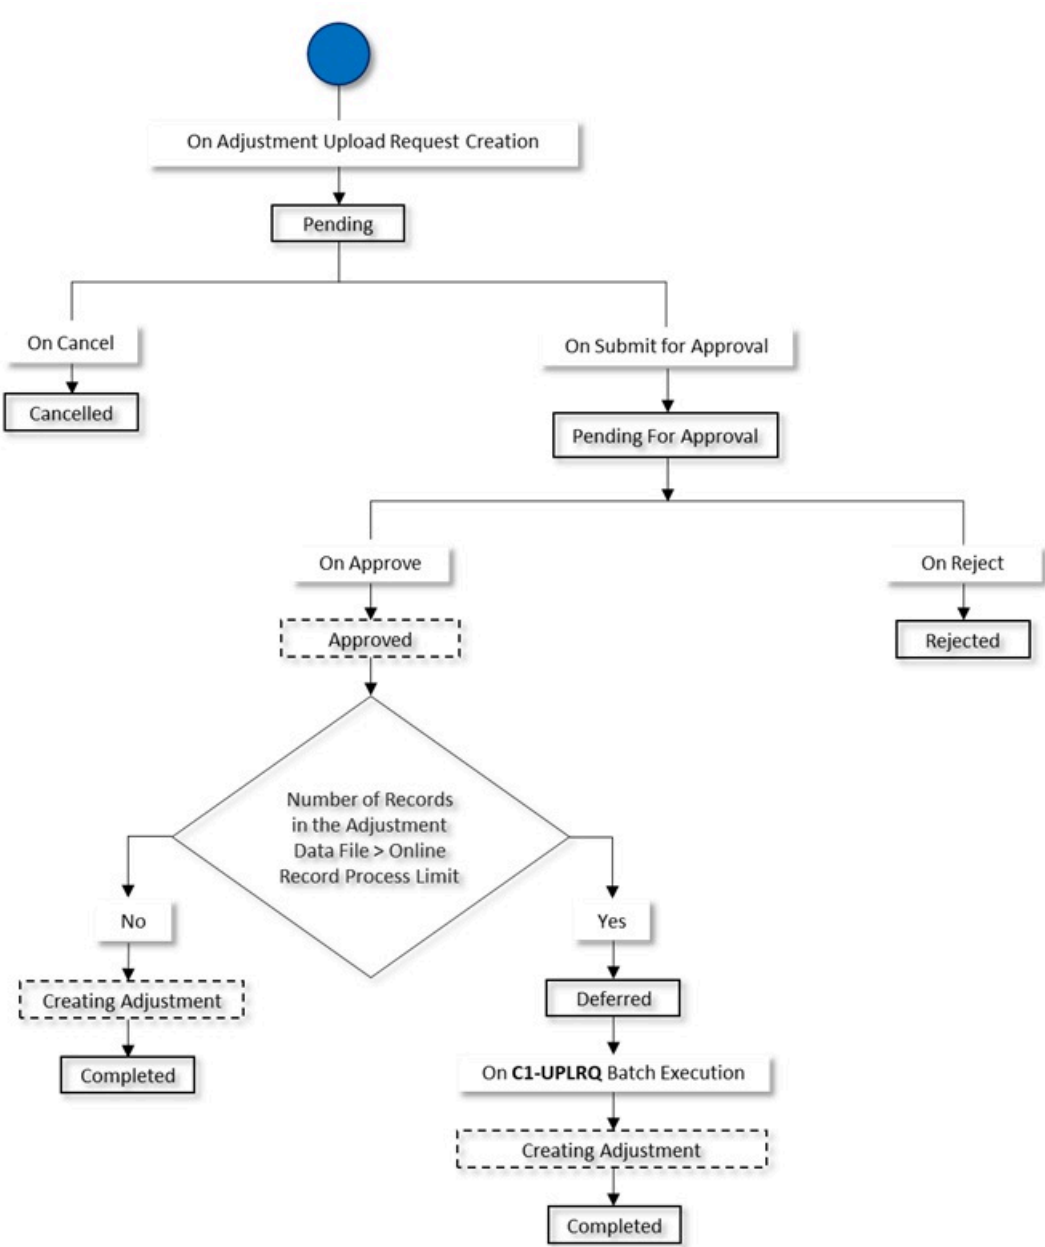

The following figure graphically indicates how an adjustment upload request moves from one status to another when the approval process is not configured in the upload request type:

## Adjustment Upload Request (With Approval) Status Transition

---

The following figure graphically indicates how an adjustment upload request moves from one status to another when the approval process is configured in the upload request type:

## Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FLREQ-INF	C1-FLREQ-INF	This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:

System Event	Algorithm	Algorithm Type	Description
			<ul style="list-style-type: none"> <li>Upload Request Type Description</li> <li>Upload Request Description</li> <li>Upload Request ID</li> </ul>
Validation	C1-ADVALREQ	C1-ADVALREQ	<p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below:</p> <ol style="list-style-type: none"> <li>1. Mandatory column data checks</li> <li>2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount.</li> <li>3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows:</li> </ol> <ul style="list-style-type: none"> <li>Validating mandatory column data</li> <li>Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount.</li> <li>Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID.</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Cancelled	-	-	-	-
Create Adjustment	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	<p>This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object is changed to <b>Create</b> or <b>Approved</b> status.</p>
Deferred	Monitor	C1-ADJ-MNTR	C1-ADJ-MNTR	<p>This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the <b>Upload Request Monitor</b> batch. This algorithm transitions the</p>

Status	System Event	Algorithm	Algorithm Type	Description
				business object status from <b>Deferred</b> to <b>Creating</b> .
Pending for Approval	Enter	C1-ADJUPAPVL	C1-ADJUPAPVL	This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object enters <b>Submitted - Pending For Approver</b> status.
Approved	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object is changed to <b>Create</b> or <b>Approved</b> status.
Rejected	-	-	-	-
Completed	-	-	-	-
Creating Adjustment	Enter	C1-ADJCRTION	C1-ADJCRTION	This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction.

# Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

This section lists the match types that are shipped with the product:

- Contract
- Contract Type

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to <b>Contract (CONT)</b> .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to <b>Contract Type (CNTY)</b> . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1294
- [Upload Request Type](#) on page 1295

## Upload Request Type List

The **Upload Request Type List** zone lists the upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Upload Request Type</b> screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Upload Request Type</b> screen appears where you can define a new upload request type using an existing upload request type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the upload request type.
	<b>Note:</b> You can delete an upload request type only when an upload request is not yet created using the upload request type.
Mapping	On clicking the <b>Mapping</b> (🔗) icon, the <b>Upload Request Mapping</b> screen appears where you can do the following: <ul style="list-style-type: none"><li>• Map the data of the CSV file to the schema of the respective upload request business object. The system will then store the data in the respective tags of the upload request business object schema.</li><li>• Configure the search filters for the respective upload request type. The system will then display the search filters (in the specified sequence) in the <b>Data Records</b> zone of the <b>Upload Request</b> screen while viewing the details of the respective upload requests.</li></ul>
	<b>Note:</b> This column is applicable only for an upload request type which is created using the <b>C1-UplRequestType</b> business object and not for an upload request type which is created using the <b>C1-AdjRequestType</b> business object.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"><li>• ACTIVE</li><li>• INACTIVE</li></ul>

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

How to view the details of an upload request type	<a href="#">Viewing the Upload Request Type Details</a> on page 1319

## Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. It contains the following sections:

- **Main** - Displays the basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object using which an upload request should be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>
File Size (KB)	Indicates the maximum file size (in kilobytes) allowed while uploading files using the upload request type. If you upload a file that exceeds the maximum file size, the system will not allow you to upload the file.
	<b>Note:</b> This field appears when the upload request type is created using the <b>Adjustment Upload Request Type (C1-AdjRequestType)</b> business object.
Defer Algorithm	Indicates the algorithm that is triggered when you create adjustments for an adjustment upload request or when you approve the adjustment data file uploaded through an adjustment upload request.
	<b>Note:</b>  The <b>C1-UPLDEFEVL</b> algorithm is shipped with the product. You need to attach this algorithm to the <b>Defer Algorithm</b> field. This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode (i.e., when the <b>C1-UPLRQ</b> batch is executed).  This field appears when the upload request type is created using the <b>Adjustment Upload Request Type (C1-AdjRequestType)</b> business object.  It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Entity Business Object	Indicates the Business Object of the entity when you create the upload request type.

Field Name	Field Description
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the Search icon the <b>Business Object Search</b> window appears.
Approval Required	Indicates whether approval is required while uploading a file using the upload request type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when a upload request is submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do Type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve a upload request which is submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>On selecting the <b>To Do Type</b>, the <b>To Do Roles</b> configured on the <b>To Do Type</b> is populated.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.</p>
FK Reference Code	<p>Indicates the foreign key reference which specifies the created upload request type.</p> <p><b>Note:</b></p> <p>This field appears when you create upload request type using <b>Upload Request Type</b> business object.</p> <p>It has a link. On clicking the link, the <b>Foreign Key Reference</b> screen appears where you can view the details of the respective To Do role.</p> <p>U</p>

• **Adjustment Match Type**

In addition, this section has the following columns:

**Note:** The **Match Type** column is displayed for **Adjustment Upload Request** Business Object.

Column Name	Column Description
Match Type	<p>Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"><li>Contract</li><li>Contract Type</li></ul> <p><b>Note:</b> The <b>Match Type</b> column is displayed for <b>Adjustment Upload Request</b> business object (C1-AdjRequestType).</p>

Column Name	Column Description
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears with the details of the respective algorithm. The <b>Algorithm</b> column is displayed for <b>Adjustment Upload Request</b> Business Object (C1-AdjRequestType).

- **Characteristics** - Lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the upload request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an upload request type.
Delete	Used to delete the upload request type.
	<b>Note:</b> You can delete an upload request type when a upload request is not yet created using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which an upload request type is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

## Defining an Upload Request Type

### Prerequisites

To define an upload request type, you should have:

If you want to create...	Then, you should have...
An adjustment upload request type	<ul style="list-style-type: none"> <li>Upload request type business objects defined in the application</li> <li>Upload request business objects defined in the application</li> <li>Defer algorithm created using the <b>C1-UPLDEFEV</b> algorithm type in the system</li> <li>Required To Do role assigned to the <b>C1-ADJUP</b> To Do type in the application</li> <li>Algorithm created using the <b>C1-MTCIALG</b> or <b>C1-MTCTALG</b> algorithm type depending on the match type using which you want to create the adjustments</li> </ul>
An account bill cycle upload request type	<ul style="list-style-type: none"> <li>Upload request type business objects defined in the application</li> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-BCUUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-AccountBO) defined in the application</li> <li>Required foreign key reference (for example, C1-ACCT) defined in the application</li> </ul>
A bill group derivation and pricing parameters upload request type	<ul style="list-style-type: none"> <li>Upload request type business objects defined in the application</li> <li>Upload request business objects defined in the application</li> <li>An approval To Do type named <b>C1-BGDVP</b> created with the following specifications: sort key - <b>Upload Request ID</b>, drill key table - <b>C1_UPLOAD_REQ</b>, and drill key field - <b>UPLOAD_REQ_ID</b></li> <li>Required To Do role assigned to the <b>C1-BGDVP</b> To Do type in the application</li> <li>Required entity business object (for example, C1-AccountBO) defined in the application</li> <li>Required foreign key reference (for example, C1-ACCT) defined in the application</li> </ul>
A bill group sorting upload request type	<ul style="list-style-type: none"> <li>Upload request type business objects defined in the application</li> <li>Upload request business objects defined in the application</li> <li>An approval To Do type named <b>C1-BGSRT</b> created with the following specifications: sort key - <b>Upload Request ID</b>, drill key table - <b>C1_UPLOAD_REQ</b>, and drill key field - <b>UPLOAD_REQ_ID</b></li> <li>Required To Do role assigned to the <b>C1-BGSRT</b> To Do type in the application</li> <li>Required entity business object (for example, C1-BillingGroupSortId) defined in the application</li> <li>Required foreign key reference defined in the application</li> </ul>

If you want to create...	Then, you should have...
A billable charge creation upload request type (for the financial services business)	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-BCUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1-BILLCHARGE) defined in the application</li> <li>• Required foreign key reference (for example, C1-BCHIN) defined in the application</li> </ul>
A billable charge creation upload request type (for the fully insured group and individual lines of business)	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-BCUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1-BILLCHARGE) defined in the application</li> <li>• Required foreign key reference (for example, C1-BCHIN) defined in the application</li> </ul>
A contract rider upload request type	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-CRUUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1_SA) defined in the application</li> <li>• Required foreign key reference (for example, C1-SATY) defined in the application</li> </ul>
A hold request creation upload request type	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-HLDUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1-HoldRequest) defined in the application</li> <li>• Required foreign key reference (for example, C1-HLDRE) defined in the application</li> </ul>
A refund request creation upload request type	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-REFUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1-RefundReq) defined in the application</li> <li>• Required foreign key reference (for example, C1-REFWO) defined in the application</li> </ul>
A policy reinstatement upload request type	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-RPUR</b> To Do type in the application</li> <li>• Required entity business object (for example, C1-POLICY) defined in the application</li> <li>• Required foreign key reference (for example, C1-POLCY) defined in the application</li> </ul>
A payment tender cancellation upload request type	<ul style="list-style-type: none"> <li>• Upload request type business objects defined in the application</li> <li>• Upload request business objects defined in the application</li> <li>• Required To Do role assigned to the <b>C1-TNDCL</b> To Do type in the application</li> </ul>

If you want to create...	Then, you should have...
	<ul style="list-style-type: none"><li>Required foreign key reference (for example, C1-PEVT) defined in the application</li></ul>
A write off request creation upload request type	<ul style="list-style-type: none"><li>Upload request type business objects defined in the application</li><li>Upload request business objects defined in the application</li><li>Required To Do role assigned to the <b>C1-WOUR</b> To Do type in the application</li><li>Required entity business object (for example, C1-WORequest) defined in the application</li><li>Required foreign key reference (for example, C1-REFWO) defined in the application</li></ul>

**Procedure**

To define an upload request type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
- Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	<p>Used to indicate the business object using which you want to create the upload request type. The valid values are:</p> <ul style="list-style-type: none"><li><b>Adjustment Upload Request Type (i.e., C1-AdjRequestType)</b> - Enables you to maintain an adjustment upload request type.</li><li><b>Upload Request Type (i.e., C1-UplRequestType)</b> - Enables you to maintain an upload request type.</li></ul> <p><b>Note:</b> The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the <b>Upload Request Type</b> (i.e., C1-UPLREQTYP) maintenance object.</p>	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

- Select the required upload request type business object from the respective field.
- Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- Main** - Used to specify the basic details for the upload request type.

- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

**Note:** This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the business object using which you are defining the upload request type.	Not applicable
Upload Request Business Object	<p>Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the <b>C1-AdjRequestType</b> business object, the valid value is:</p> <ul style="list-style-type: none"><li>• <b>Adjustment Upload Request (i.e., C1-ADJUPLD)</b> - Enables you to maintain an adjustment upload request.</li></ul> <p>However, if you are creating an upload request type using the <b>C1-UplRequestType</b> business object, the valid values are:</p> <ul style="list-style-type: none"><li>• <b>Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)</b> - Enables you to maintain an account bill cycle upload request.</li><li>• <b>Bill Group Derivation &amp; Pricing Parameter (i.e., C1-BillLevelUploadRequest)</b> - Enables you to maintain a bill group derivation and pricing parameters upload request.</li><li>• <b>Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)</b> - Enables you to maintain a bill group sorting upload request.</li><li>• <b>Billable Charge Upload (i.e., C1-BillableChargeUploadRequest)</b> - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain.</li><li>• <b>Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)</b> - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business.</li><li>• <b>Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq</b> - Enables you to maintain a contract rider upload request.</li><li>• <b>Hold Request Upload (i.e., C1-HoldUploadRequest)</b> - Enables you to maintain a hold request creation upload request.</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Refund Request Upload (i.e., C1-RefundUploadRequest)</b> - Enables you to maintain a refund request creation upload request.</li> <li>• <b>Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)</b> - Enables you to maintain a policy reinstatement upload request.</li> <li>• <b>Tender Cancellation Upload Request (i.e., C1-TndrCnclUploadRequest)</b> - Enables you to maintain a payment tender cancellation upload request.</li> <li>• <b>Write Off Request Upload (i.e., C1-WriteOffUploadRequest)</b> - Enables you to maintain a write off request creation upload request.</li> </ul> <p><b>Note:</b> The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the <b>Upload Request (Adjustment Upload)</b> (i.e., <b>C1-UPLREQ</b>) or <b>Upload Request</b> (i.e., <b>C1-UPLOADREQ</b>) maintenance object depending on the business object used to create the upload request type.</p>	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	<p>Used to specify additional information about the upload request type.</p> <p><b>Note:</b> You can resize the text box depending on your requirement by clicking the <b>Resize Handle</b> (↗) icon at the bottom right corner of the text box.</p>	No
Status	<p>Used to indicate the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
File Size (KB)	<p>Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request.</p> <p><b>Note:</b> You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the <b>C1-AdjRequestType</b> business object.</p>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the <b>Create Adjustment</b> or <b>Approve</b> button.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Defer Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>You need to attach an algorithm created using the <b>C1-UPLDEFEVL</b> algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode.</p> <p>The <b>Deferred</b> mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is executed. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when you are creating an upload request type using the <b>C1-AdjRequestType</b> business object.</p>	
Entity Business Object	<p>Used to indicate the business object using which you want to create the entities through the respective upload request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Entity Business Object</b> field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> <p>This field appears when you are creating an upload request type using the <b>C1-UplRequestType</b> business object.</p> <p>The <b>Upload Request</b> feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.  This field appears when the <b>Approval Required</b> option is selected.  You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)
	<b>Note:</b> The list includes only those To Do roles which are associated with the approval To Do type.  This field appears when the <b>Approval Required</b> option is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request. The system displays the entity information in the <b>Data Records</b> zone of the <b>Upload Request</b> screen.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>FK Reference Code</b> field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears.  This field appears when you are creating an upload request type using the <b>C1-UplRequestType</b> business object.	

6. Enter the required details in the **Main** section.
7. Associate a match type with the adjustment upload request type.
8. Define characteristics for the upload request type, if required.
9. Click **Save**.  
The upload request type is defined.

How to associate a match type with an adjustment upload request type	<a href="#">Defining a Match Type for an Adjustment Upload Request Type</a> on page 1851
How to define a characteristic for an upload request type	<a href="#">Defining a Characteristic for an Upload Request Type</a> on page 1305

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request Type**)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Upload Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing an Upload Request Type

### Prerequisites

To edit an upload request type, you should have:

If you want to edit...	Then, you should have...
An adjustment upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Defer algorithm created using the <b>C1-UPLDEFEVL</b> algorithm type in the system</li> <li>Required To Do role assigned to the <b>C1-ADJUP</b> To Do type in the application</li> <li>Algorithm created using the <b>C1-MTCIALG</b> or <b>C1-MTCTALG</b> algorithm type depending on the match type using which you want to create the adjustments</li> </ul>
An account bill cycle upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-BCUUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-AccountBO) defined in the application</li> <li>Required foreign key reference (for example, C1-ACCT) defined in the application</li> </ul>
A bill group derivation and pricing parameters upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>An approval To Do type named <b>C1-BGDVP</b> created with the following specifications: sort key - <b>Upload Request ID</b>, drill key table - <b>C1_UPLOAD_REQ</b>, and drill key field - <b>UPLOAD_REQ_ID</b></li> <li>Required To Do role assigned to the <b>C1-BGDVP</b> To Do type in the application</li> <li>Required entity business object (for example, C1-AccountBO) defined in the application</li> <li>Required foreign key reference (for example, C1-ACCT) defined in the application</li> </ul>
A bill group sorting upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>An approval To Do type named <b>C1-BGSRT</b> created with the following specifications: sort key - <b>Upload Request ID</b>, drill key table - <b>C1_UPLOAD_REQ</b>, and drill key field - <b>UPLOAD_REQ_ID</b></li> <li>Required To Do role assigned to the <b>C1-BGSRT</b> To Do type in the application</li> <li>Required entity business object (for example, C1-BillingGroupSortId) defined in the application</li> <li>Required foreign key reference defined in the application</li> </ul>
A billable charge creation upload request type (for the financial services business)	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-BCUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-BILLCHARGE) defined in the application</li> </ul>

If you want to edit...	Then, you should have...
	<ul style="list-style-type: none"> <li>Required foreign key reference (for example, C1-BCHIN) defined in the application</li> </ul>
A billable charge creation upload request type (for the fully insured group and individual lines of business)	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-BCUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-BILLCHARGE) defined in the application</li> <li>Required foreign key reference (for example, C1-BCHIN) defined in the application</li> </ul>
A contract rider upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-CRUUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1_SA) defined in the application</li> <li>Required foreign key reference (for example, C1-SATY) defined in the application</li> </ul>
A hold request creation upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-HLDUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-HoldRequest) defined in the application</li> <li>Required foreign key reference (for example, C1-HLDRE) defined in the application</li> </ul>
A refund request creation upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-REFUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-RefundReq) defined in the application</li> <li>Required foreign key reference (for example, C1-REFWO) defined in the application</li> </ul>
A policy reinstatement upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-RPUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-POLICY) defined in the application</li> <li>Required foreign key reference (for example, C1-POLCY) defined in the application</li> </ul>
A payment tender cancellation upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-TNDCL</b> To Do type in the application</li> <li>Required foreign key reference (for example, C1-PEVT) defined in the application</li> </ul>
A write off request creation upload request type	<ul style="list-style-type: none"> <li>Upload request business objects defined in the application</li> <li>Required To Do role assigned to the <b>C1-WOUR</b> To Do type in the application</li> <li>Required entity business object (for example, C1-WORequest) defined in the application</li> <li>Required foreign key reference (for example, C1-REFWO) defined in the application</li> </ul>

### Procedure

To edit an upload request type:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
- 3. Click the **Search** option from the **Upload Request Type** sub-menu.  
The **Upload Request Type** screen appears.
- 4. In the **Upload Request Type List** zone, click the **Edit** (🔗) icon in the **Edit** column corresponding to the *upload request type* whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the upload request type.
- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

**Note:** This section appears when you are editing an upload request type which is created using the **C1-AdjRequestType** business object.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the business object which is used while defining the upload request type.	Not applicable
Upload Request Business Object	<p>Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the <b>C1-AdjRequestType</b> business object, the valid value is:</p> <ul style="list-style-type: none"><li>• <b>Adjustment Upload Request (i.e., C1-ADJUPLD)</b> - Enables you to maintain an adjustment upload request.</li></ul> <p>However, if you are creating an upload request type using the <b>C1-UplRequestType</b> business object, the valid values are:</p> <ul style="list-style-type: none"><li>• <b>Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)</b> - Enables you to maintain an account bill cycle upload request.</li><li>• <b>Bill Group Derivation &amp; Pricing Parameter (i.e., C1-BillLevelUploadRequest)</b> - Enables you to maintain a bill group derivation and pricing parameters upload request.</li><li>• <b>Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)</b> - Enables you to maintain a bill group sorting upload request.</li><li>• <b>Billable Charge Upload (i.e., C1-BillableChargeUploadRequest)</b> - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain.</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)</b> - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business.</li> <li>• <b>Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq)</b> - Enables you to maintain a contract rider upload request.</li> <li>• <b>Hold Request Upload (i.e., C1-HoldUploadRequest)</b> - Enables you to maintain a hold request creation upload request.</li> <li>• <b>Refund Request Upload (i.e., C1-RefundUploadRequest)</b> - Enables you to maintain a refund request creation upload request.</li> <li>• <b>Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)</b> - Enables you to maintain a policy reinstatement upload request.</li> <li>• <b>Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)</b> - Enables you to maintain a payment tender cancellation upload request.</li> <li>• <b>Write Off Request Upload (i.e., C1-WriteOffUploadRequest)</b> - Enables you to maintain a write off request creation upload request.</li> </ul> <p><b>Note:</b> The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the <b>Upload Request</b> (i.e., <b>C1-UPLOADREQ</b>) maintenance object.</p>	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	<p>Used to specify additional information about the upload request type.</p> <p><b>Note:</b> You can resize the text box depending on your requirement by clicking the <b>Resize Handle</b> (↗) icon at the bottom right corner of the text box.</p>	No
Status	<p>Used to indicate the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of an upload request type to <b>Inactive</b> when the corresponding upload request is in a status other than <b>Canceled</b>, <b>Rejected</b>, <b>Completed</b>, or <b>Processed</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request.	Yes
	<p><b>Note:</b></p> <p>You must specify a positive integer value in this field.</p> <p>This field appears when you are editing an upload request type which is created using the <b>C1-AdjRequestType</b> business object.</p>	
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the <b>Create Adjustment</b> or <b>Approve</b> button.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Defer Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>You need to attach an algorithm created using the <b>C1-UPLDEFEVL</b> algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode.</p> <p>The <b>Deferred</b> mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is executed. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when you are editing an upload request type which is created using the <b>C1-AdjRequestType</b> business object.</p>	
Entity Business Object	Used to indicate the business object using which you want to create the entities through the respective upload request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (Q) icon appears corresponding to the <b>Entity Business Object</b> field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> <p>This field appears when you are editing an upload request type which is created using the <b>C1-UplRequestType</b> business object.</p>	
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> (Q) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the <b>Approval Required</b> option is selected.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>FK Reference Code</b> field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears.  This field appears when you are editing an upload request type which is created using the <b>C1-UplRequestType</b> business object.	

**Tip:** Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

- 5. Modify the required details in the **Main** section.
- 6. Define, edit, or remove a match type from the adjustment upload request type, if required.
- 7. Define, edit, or remove characteristics of the upload request type, if required.
- 8. Click **Save**.  
The changes made to the upload request type are saved.

## Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

**Prerequisites**

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type

- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

**Procedure**

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.  
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Duplicate**() icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request type.
- **Adjustment Match Type** - Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type.

**Note:** This field appears when **Adjustment Upload Request Type (C1-AdjRequestType)** business object is selected.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object using which you are defining an upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request. When you create upload request type using upload request business object, the valid values are: <ul style="list-style-type: none"><li>• Bill Cycle Update Upload (i.e C1-BillCycleUpdateUplReq)</li><li>• Bill Group Derivation &amp; Pricing Parameter (i.e C1-BillLevelUploadRequest)</li><li>• Bill Group Sorting Upload Request (i.e C1-BillGrpSortUploadRequest)</li><li>• Billable Charge Upload (i.e C1-BillableChargeUploadRequest)</li><li>• Billable Charge Upload for Fully Insured (i.e C1-BillableChargeUploadFI)</li><li>• Contract Rider Upload (i.e C1-ContractRiderUpdateUplReq)</li><li>• Hold Request Upload (i.e C1-HoldUploadRequest)</li><li>• Refund Request Upload (i.e C1-RefundUploadRequest)</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Reinstatement Upload Request (i.e C1-ReinstatementUploadRequest)</li> <li>Tender Cancellation Upload Request (i.e C1-TndrCnclUploadRequest)</li> <li>Write Off Request Upload (i.e C1-WriteOffUploadRequest)</li> </ul>	
	<p><b>Note:</b></p> <p>The above mentioned business objects are shipped with the product. It enables you to maintain an upload request type.</p> <p>The list includes those business objects which are created using an <b>Upload Request</b> (i.e., <b>C1-UPLOADREQ</b>) maintenance object.</p>	
Description	Used to specify the description for an upload request type.	Yes
Detailed Description	Used to specify additional information about an upload request type.	No
	<p><b>Note:</b> You can resize the text box depending on your requirement by clicking the <b>Resize Handle</b> (↘) icon at the bottom right corner of the text box.</p>	
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<p><b>Note:</b> You cannot change the status of an upload request type to <b>Inactive</b> when the corresponding upload request is in a status other than <b>Cancelled</b>, <b>Approved</b>, <b>Rejected</b>, or <b>Completed</b>.</p>	
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<p><b>Note:</b> This field appears when <b>Adjustment Upload Request Type</b> business object (<b>C1-AdjRequestType</b>) is selected.</p>	
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).</p> <p>This field appears when <b>Adjustment Upload Request Type</b> business object (<b>C1-AdjRequestType</b>) is selected.</p> <p>In <b>Upload Request Type</b>, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from <b>Validated</b> to <b>Deferred Processing</b> else the status is changed to <b>Processed</b>.</p> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Entity Business Object	<p>Used to indicate the business object that you want to use to create the upload request type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> <p>This field appears when <b>Upload Request Type</b> business object (<b>C1-UplRequestType</b>) is selected.</p>	No
Approval Required	Used to indicate whether approval is required while uploading a file using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)																										
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.  This field appears when the <b>Approval Required</b> option is selected.  The following table lists the <b>To Do type</b> using which the To Do must be generated for the different upload requests:	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.																										
	<table><tr><th>Upload Request</th><th>To Do Type</th></tr><tr><td>Adjustment</td><td>C1-ADJUP</td></tr><tr><td>Bill Cycle Update</td><td>C1-BCUUR</td></tr><tr><td>Billable Charge</td><td>C1-BCUR</td></tr><tr><td>Contract Rider Update</td><td>C1-CRUUR</td></tr><tr><td>Hold Request</td><td>C1-HLDUR</td></tr><tr><td>Refund Request</td><td>C1-REFUR</td></tr><tr><td>Write Off Request</td><td>C1-WOUR</td></tr><tr><td>Policy Reinstatement</td><td>C1-RPUR</td></tr><tr><td>Bill Group Sorting</td><td>C1-BGSRT</td></tr><tr><td>Bill Group Derivation and Pricing Parameters</td><td>C1-BGDVP</td></tr><tr><td>Tender Cancellation Request Upload</td><td>C1-TndrCnclUploadRequest</td></tr><tr><td>Billable Charge Upload for Fully Insured</td><td>C1-BillableChargeUploadFI</td></tr></table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	Tender Cancellation Request Upload	C1-TndrCnclUploadRequest	Billable Charge Upload for Fully Insured	C1-BillableChargeUploadFI	
	Upload Request	To Do Type																										
	Adjustment	C1-ADJUP																										
	Bill Cycle Update	C1-BCUUR																										
	Billable Charge	C1-BCUR																										
	Contract Rider Update	C1-CRUUR																										
	Hold Request	C1-HLDUR																										
	Refund Request	C1-REFUR																										
	Write Off Request	C1-WOUR																										
	Policy Reinstatement	C1-RPUR																										
	Bill Group Sorting	C1-BGSRT																										
	Bill Group Derivation and Pricing Parameters	C1-BGDVP																										
	Tender Cancellation Request Upload	C1-TndrCnclUploadRequest																										
	Billable Charge Upload for Fully Insured	C1-BillableChargeUploadFI																										
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)																										
	<b>Note:</b> The list includes only those To Do roles which are associated with the approval To Do type.  This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.																										
FK Reference Code	Used to indicate the FK Reference code to display the entity information.	No																										

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears.  This field appears when <b>Upload Request Type</b> business object ( <b>C1-UplRequestType</b> ) is selected.	

**Tip:** Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

5. Enter the required details in the **Main** section.

**Note:**

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑) icon corresponding to the match type.

6. Define a match type for an adjustment upload request type.
7. Define, edit, or remove characteristics of the upload request type, if required.
8. Click **Save**.
- The new upload request type is defined.

## Mapping Data and Configuring Filters for an Upload Request Type

In order to read the data from a Comma-Separated Values (CSV) file, you need to map its columns with the schema of the upload request business object. The system will then store the data in the respective tags of the upload request business object schema. While mapping the columns with the schema, you need to specify the column headers that would appear in the CSV file. The system will then create the XML tags by converting the column header into camelCase after removing the spaces from the column header. For example, if the header in the CSV file is Account Id, then the corresponding XML tag formed by the system is accountId. The system will then store the data from the column in the respective tag.

The system enables you to configure the search filters for an upload request type. It then displays the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests. Once an upload request is created using an upload request type, you cannot change the search filters

of the upload request type. In addition, while copying an upload request type, the system does not automatically copy the search filters from the upload request type. You will then have to manually configure the search filters for the new upload request type.

**Note:** This configuration option is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the **C1-AdjRequestType** business object.

**Procedure**

To configure search filters for an upload request type:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
- 3. In the **Upload Request Type List** zone, click the **Mapping**() icon in the **Mapping** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Mapping** screen appears. It contains the following field:

Field Name	Field Description
Upload Request Type	Displays the description of the upload request type.

In addition, it contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the column header (i.e., field) using which you want to filter the data records.	Yes (Conditional)
		<b>Note:</b> This field is required when you are configuring a search filter for the upload request type.
Searchable	Used to indicate whether the field should be searchable or not. The system will then accordingly display the field in the <b>Data Records</b> zone in the <b>Upload Request</b> screen.  <b>Note:</b> You can set maximum 10 fields as searchable in an upload request type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are configuring a search filter for the upload request type.
Sequence	Used to indicate the order in which you want to display the field in the <b>Data Records</b> zone in the <b>Upload Request</b> screen.  <b>Note:</b> You must specify a unique value which is less than or equal to 10.	Yes (Conditional)
		<b>Note:</b> This field is required when you are configuring a search filter for the upload request type.

- 4. Enter the required details in **Upload Request Mapping** screen.

**Note:** If you want to add more than one mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** () icon corresponding to the column header.

- 5. Click **Save**.  
The columns are mapped to the CSV files for upload request type.

## Deleting an Upload Request Type

### Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.  
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

**Note:** You can delete an upload request type only when an upload request is not yet created using the upload request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

5. Click **OK**.  
The upload request type is deleted.

## Viewing the Upload Request Type Details

### Procedure

To view the details of an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.

The **Upload Request Type** screen appears.

4. In the **Upload Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the upload request type whose details you want to view.  
The **Upload Request Type** zone appears.

5. View the details of the upload request type in the **Upload Request Type** zone.

# Adjustment Upload Request (Used for Searching)

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 1320
- [Adjustment Upload Request](#) on page 1328
- [Adjustment Data Records](#) on page 1330

## Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to search adjustment upload requests which are created using a particular upload request type.	No
Status	Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"><li>• Approved</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Cancelled</li><li>Completed</li><li>Create Adjustment</li><li>Creating Adjustment</li><li>Deferred</li><li>Pending</li><li>Rejected</li><li>Pending For Approval</li></ul>	
Upload From Date	Used to search adjustment upload requests which are created from a particular date onwards.	No
	<b>Note:</b> By default, the current date appears in this field.	
To	Used to search adjustment upload requests which are created till a particular date.	No
	<b>Note:</b> By default, the current date appears in this field.	
File Name	Used to search an adjustment upload request which is created while uploading an adjustment data file.	No

**Note:** You must specify at least one search criterion while searching for an adjustment upload request.

- Search Results** - On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the adjustment data file is uploaded in the system.
Upload Request Information	Displays information about the adjustment upload request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Upload Request</b> screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the adjustment upload request.
Upload Request Type	Indicates the upload request type using which the adjustment data file is uploaded in the system.
File Name	Displays the name of the adjustment data file.

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

# Searching for an Adjustment Upload Request

**Prerequisites**

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

**Procedure**

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.  
The **Adjustment Upload Request** screen appears.
4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

**Related Topics**

# Uploading an Adjustment Data File

**Prerequisites**

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

**Procedure**

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.  
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Upload Adjustment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	<b>Note:</b> The list includes only those upload request types which are in the <b>Active</b> status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	<b>Note:</b> You can replace an existing file when the adjustment upload request is in the <b>Pending</b> or <b>Cancelled</b> status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

- 5. Select the upload request type using which you want to upload the adjustment data file.
- 6. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
- 7. Browse to the location where the adjustment data file that you want to upload is available.
- 8. Click **Open**.  
The adjustment data file name and path appears in the **File Name** field.
- 9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	<b>Note:</b> This column appears when you click the <b>Save</b> button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.

Column Name	Column Description
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

**Note:** If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

# Replacing an Adjustment Data File

**Prerequisites**

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

**Procedure**

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.  
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	<b>Note:</b> The list includes only those upload request types which are in the <b>Active</b> status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	<b>Note:</b> You can replace an existing file when the adjustment upload request is in the <b>Pending</b> or <b>Cancelled</b> status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.  
The adjustment data file name and path appears in the **File Name** field.
10. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.

Column Name	Column Description
	<b>Note:</b> This column appears when you click the <b>Save</b> button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

**Note:** If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

#### 11. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.

- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

## Viewing the Adjustment Upload Request Details

**Procedure**

To view the details of an adjustment upload request:

1. Search for an adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose details you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
  - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
  - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.

3. View the details of the adjustment upload request in the **Adjustment Upload Request** zone.

## Viewing All Records of an Adjustment Data File

**Procedure**

To view all records of an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file whose records you want to view) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file whose records you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:

- **Adjustment Upload Request** - Displays the details of the adjustment upload request.
  - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. View the list of adjustment records which are uploaded through the adjustment data file in the **Adjustment Data Records** zone.

**Related Topics**

<b>Adjustment Data Records</b> zone	<a href="#">Adjustment Data Records</a> on page 1330

# Adjustment Upload Request (Used for Viewing)

The **Adjustment Upload Request** screen allows you to:

- Edit the details of an adjustment upload request
- Delete or cancel an adjustment upload request
- View the details of an adjustment upload request
- Submit an adjustment upload request for processing
- Approve or reject an adjustment upload request
- Request the submitter to resubmit an adjustment upload request for approval
- Withdraw an adjustment upload request
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

It consists of the following tabs:

- [Adjustment Upload Request - Main](#) on page 1328
- 

## Adjustment Upload Request - Main

The **Main** tab displays information about the adjustment upload request. It contains the following zones:

- [Adjustment Upload Request](#) on page 1328
- [Adjustment Data Records](#) on page 1330

## Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- **Header** - This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the adjustment upload request. The information string contains the following comma-separated values: <ul style="list-style-type: none"><li>• Upload Request Type Description</li><li>• Status Description</li></ul>

Field Name	Field Description
	<ul style="list-style-type: none"> <li>Upload Request ID</li> </ul>
	<b>Note:</b> This information string is generated using the <b>C1-FLREQ-INF</b> algorithm which is attached to the <b>Information</b> system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.
Status	Indicates the status of the adjustment upload request. The valid values are: <ul style="list-style-type: none"> <li>Approved</li> <li>Cancelled</li> <li>Completed</li> <li>Create Adjustment</li> <li>Creating Adjustment</li> <li>Deferred</li> <li>Pending</li> <li>Rejected</li> <li>Pending for Approval</li> </ul>
Status Reason	Indicates the reason why the adjustment data file is cancelled or rejected.
	<b>Note:</b> This field appears when the adjustment upload request is in the <b>Cancelled</b> or <b>Rejected</b> status.
File Name	Displays the name of the adjustment data file for which the adjustment upload request is created.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Cancel File	Used to cancel an adjustment data file.
	<b>Note:</b> The <b>Cancel File</b> button appears when the adjustment upload request is in the <b>Pending</b> status.
Create Adjustment	Used to create adjustments for the records which are uploaded through the adjustment data file.
	<b>Note:</b> The <b>Create Adjustment</b> button appears when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending</b> status.</li> <li>The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.</li> </ul>
Submit for Approval	Used to submit the adjustment data file for approval.
	<b>Note:</b> The <b>Submit for Approval</b> button appears only when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending</b> status.</li> <li>The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.</li> </ul>
Approve	Used to approve the adjustment data file.

Button Name	Button Description
	<b>Note:</b> The <b>Approve</b> button appears when: <ul style="list-style-type: none"><li>The adjustment upload request is in the <b>Pending for Approval</b> status.</li><li>A user with the approval To Do role is reviewing the adjustment data file.</li></ul>
Reject	Used to reject the adjustment data file. <b>Note:</b> The <b>Reject</b> button appears when: <ul style="list-style-type: none"><li>The adjustment upload request is in the <b>Pending for Approval</b> status.</li><li>A user with the approval To Do role is reviewing the adjustment data file.</li></ul>

**Note:** The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled**, **Completed**, **Deferred**, or **Rejected**.

- Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the adjustment upload request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears with the details of the respective business object.
Status Date/Time	Displays the date and time when the adjustment upload request status is updated.
Create Date/Time	Displays the date and time when the adjustment upload request is created.

**Related Topics**

**Adjustment Data Records**

The **Adjustment Data Records** zone lists the adjustment records which are uploaded through the adjustment data file. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment that is created using the adjustment record.

Column Name	Column Description
	<b>Note:</b> The data appears in this column when the status of the adjustment upload request is <b>Completed</b> .  It has a link. On clicking the link, the <b>Adjustment</b> screen appears with the details of the respective adjustment.  The information string appears when an algorithm of the <b>C1-ADI-INFO</b> algorithm type is attached to the <b>Adjustment Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options - Framework</b> screen.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Adjustment Match Value	Indicates the contract against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1, Char Type 2, ....., Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 1, Char Value 2, ....., Char Value 5	Displays the value of the characteristic type.

## Adjustment Upload Request - Log

The **Log** tab contains the following zone:

- [Adjustment Upload Request - Log](#) on page 1331

### Adjustment Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the adjustment upload request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the funding request was rejected by the approver.
	<b>Note:</b> The data appears in this column when the funding request is in the <b>Rejected</b> status.

**Note:** You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Adjustment Upload Request Log** zone.

**Related Topics**

## Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file when the adjustment upload request is in the **Pending** status.

**Prerequisites**

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

**Note:** While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

**Procedure**

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancellation Reason	Used to indicate the reason why you want to cancel the adjustment data file.	Yes

**Note:** The **Cancel File** button appears when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.
- The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

**Related Topics**

For more information on...	See...
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 1322
<b>Adjustment Upload Request</b> zone	<a href="#">Adjustment Upload Request</a> on page 1328

## Creating Adjustments for an Adjustment Data File

**Procedure**

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The **Defer** algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the **Defer** algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records

in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

**Note:**

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

**Related Topics**

How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 1322
Adjustment Upload Request zone	<a href="#">Adjustment Upload Request</a> on page 1328
Adjustment Data Records zone	<a href="#">Adjustment Data Records</a> on page 1330

## Submitting an Adjustment Data File for Approval

**Procedure**

To submit an adjustment data file for approval:

1. Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

**Note:**

The **Submit for Approval** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

**Related Topics**

For more information on...	See...
Adjustment Upload Request zone	<a href="#">Adjustment Upload Request</a> on page 1328
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 1322

## Approving an Adjustment Data File

**Procedure**

To approve an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
  4. If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The **Defer** algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the **Defer** algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

**Note:**

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

**Related Topics**

For more information on...	See...
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 1322

# Rejecting an Adjustment Data File

**Prerequisites**

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

**Procedure**

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
  - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
  - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.

- 3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
- 4. If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rejection Reason	Used to indicate the reason why you want to reject the adjustment data file.	Yes

**Note:**  
The **Reject** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

- 5. Select the rejection reason from the list.
- 6. Click **Save**.  
The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

**Related Topics**

## Viewing the Log of an Adjustment Upload Request

**Procedure**

To view the log of an adjustment upload request:

- 1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
- 2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
- 3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the adjustment upload request.

Column Name	Column Description
Details	Displays the details about the action performed on the adjustment upload request.
User	Indicates the user who has performed the action on the adjustment upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the adjustment upload request.
Status Reason	Indicates the reason why the adjustment upload request was rejected or cancelled.

**Note:** You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

**Related Topics**

For more information on...	See...
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 1322
How to add a log entry for an adjustment upload request	<a href="#">Adding a Log Entry for an Adjustment Upload Request</a> on page 1338

## Adding a Log Entry for an Adjustment Upload Request

**Procedure**

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
    - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
    - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.  
The **Log** tab appears.
  4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the adjustment upload request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments for the adjustment upload request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.  
The log entry is added in the **Upload Request Log** zone.

## Foreign Exchange Gain Loss

---

### Topics:

- [Foreign Exchange Gain Loss Calculation](#)
- [Prerequisites](#)
- [Foreign Exchange Gain Loss Scenarios](#)

In a multi-currency environment, financial transactions such as payments and adjustments created for an account can result in loss or gain due to fluctuations in the exchange rate at different point in time. This loss or gain is booked under the Foreign Exchange Gain Loss in the General Ledger and does not impact the account balance of the person.

The Foreign Exchange Gain or Loss might occur when:

- Exchange Rate for Invoice Currency to Division' Base Currency is different on Bill Completion Date and Payment Freeze Date

**Assumption:** In this case, the Invoice Currency and Payment Currency are same.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Adjustment Freeze Date

**Assumption:** In this case, the Adjustment Currency and Invoice Currency are same, but they are different from the Division's Base Currency.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Payment Freeze Date

**Assumption:** In this case, the Adjustment Currency, Payment Currency, and Invoice Currency are same, but they are different from the Division's Base Currency.

Oracle Revenue Management and Billing facilitates you to calculate the foreign exchange gain or loss and book it against an FXLG distribution code. However, you can calculate the foreign exchange gain or loss when you have enabled the FT GL Extension feature. For more information on how the system calculates the foreign exchange gain loss, see [Foreign Exchange Gain Loss Calculation](#) on page 1342. For more information on how to setup the Foreign Exchange Gain Loss feature, see [Prerequisites](#) on page 1342.

<p><b>Note:</b> The system can calculate the foreign exchange gain or loss appropriately when the Division's Base Currency is same on Bill Completion Date and Adjustment/Payment Freeze Date. Otherwise, erroneous results might occur.</p>
--

## Foreign Exchange Gain Loss Calculation

During the Foreign Exchange Gain Loss calculation, the system considers the following types of financial transactions:

- Payments (i.e. Pay Segments)
- Credit adjustments which are created against a bill after the bill completion
- Write-off adjustments which are created against a bill
- Write Up adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type
- Write Down adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type

**Note:** The system does not consider financial transactions which are created due to payment and adjustment cancellation.

To understand how foreign exchange gain or loss is calculated, see [Foreign Exchange Gain Loss Scenarios](#) on page 1343.

You can calculate the foreign exchange gain loss when you have enabled the FT GL Extension feature. Oracle Revenue Management and Billing provides you a batch named **Foreign Exchange Loss Gain (C1-FXLG)** which calculates the foreign exchange gain loss. This batch considers payment and adjustment FTs when:

- Division's Base Currency is different from the Payment or Adjustment Currency
- Payment or Adjustment Freeze Date is different from the Bill Completion Date
- Match Event ID exists in the financial transaction
- FXLG\_CALC\_STATUS column corresponding to the financial transaction in the CI\_FT table is set to N or NULL

Once the foreign exchange gain or loss is calculated, two entries are added corresponding to each financial transaction in the CI\_FT\_GL and CI\_FT\_GL\_EXT tables. One entry for foreign exchange gain loss is booked against the distribution code for FXLG and another entry for foreign exchange gain loss is booked against the distribution code which is used for contract balancing. The foreign exchange loss is recorded as positive entry and the foreign exchange gain is recorded as negative entry. In the CI\_FT\_GL table, the foreign exchange gain loss is recorded in the financial transaction currency. And, in the CI\_FT\_GL\_EXT table, the foreign exchange gain loss is recorded in the division's base currency.

You must execute the **Foreign Exchange Loss Gain (C1-FXLG)** batch prior to the **Assign GL Account to Financial Transaction (C1-GLASN)** or **Insert Records in CI\_FTTEMP (GLASSGN1)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Prerequisites

To setup the Foreign Exchange Gain Loss feature, you need to do the following:

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to enable FT GL extension feature
- Set the following parameters of an algorithm which is created using the **FTFREZGLEXTN** algorithm type to **R** (i.e. arrears date):
  - Exchange Rate Date Type for Adjustments with Freeze At Will Option (Valid Values: A, R, F, C)
  - Exchange Rate Date Type for Adjustments with Freeze At Bill Completion Option (Valid Values: A, R, F, C, E)
  - Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)
  - Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C)
- Create an algorithm of the **C1\_CURALGBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature

- Create an algorithm of the **C1\_CURALGAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1\_CURALGPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature
- Set the **Bill Segment Freeze Option** to **Freeze At Bill Completion** in the **Billing** tab of the **Installation Options** screen
- Define the required exchange rates for currency conversion
- Define the distribution code against which you want to book the foreign exchange gain loss
- Set the **Adjustment Freeze Option** to **Freeze At Bill Completion** for adjustment types whose adjustments are presented and impacts the next bill of an account

# Foreign Exchange Gain Loss Scenarios

To understand how foreign exchange gain loss is calculated, refer to the following different scenarios:

- [Payment Scenarios](#) on page 1343
- [Credit Adjustment Scenarios](#) on page 1347
- [Write Off Adjustment Scenarios](#) on page 1348
- [Write Up/Down Adjustment Scenarios](#) on page 1350

## Payment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for payments which are matched against bills:

- Scenario 1 - Payment Freeze Date = Bill Completion Date; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-01-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-01-2001)
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	Not applicable

**Observation:** In the Scenario 1, the foreign exchange gain or loss is not applicable because Bill Completion Date and Payment Freeze Date are same.

- Scenario 2 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	50000-50000 = 0

**Observation:** In the Scenario 2, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 3 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	51
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*51 = 51000
Foreign Exchange Gain or Loss	-	50000-51000 = -1000

**Observation:** In the Scenario 3, there is foreign exchange gain of 1000 INR on 01-02-2001 because of difference in exchange rate.

- Scenario 4 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	First Partial Payment Freeze Date (01-02-2001)	Second Partial Payment Freeze Date (01-03-2001)
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	50	50
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-	-
Payment Amount	-	500	500
Payment Amount in Base Currency on Bill Completion Date	-	500*50 = 25000	500*50 = 25000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	500*50 = 25000	500*50 = 25000
Foreign Exchange Gain or Loss	-	25000-25000 = 0	25000-25000 = 0

**Observation:** In the Scenario 4, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 5 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	First Partial Payment Freeze Date (01-02-2001)	Second Partial Payment Freeze Date (01-03-2001)
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	51	48
Invoice/Payment Currency	USD	USD	USD

	<b>Bill Completion Date (01-01-2001)</b>	<b>First Partial Payment Freeze Date (01-02-2001)</b>	<b>Second Partial Payment Freeze Date (01-03-2001)</b>
<b>Invoice Amount</b>	1000	-	-
<b>Base Currency</b>	INR	INR	INR
<b>Booked Revenue in Base Currency</b>	$1000 * 50 = 50000$	-	-
<b>Payment Amount</b>	-	800	200
<b>Payment Amount in Base Currency on Bill Completion Date</b>	-	$800 * 50 = 40000$	$200 * 50 = 10000$
<b>Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date</b>	-	$800 * 51 = 40800$	$200 * 48 = 9600$
<b>Foreign Exchange Gain or Loss</b>	-	$40000 - 40800 = -800$	$10000 - 9600 = 400$

**Observation:** In the Scenario 5, there is foreign exchange gain of 800 INR on 01-02-2001 and foreign exchange loss of 400 INR on 01-03-2001.

- Scenario 6 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount > Invoice Amount (i.e. Overpayment)

	<b>Bill Completion Date (01-01-2001)</b>	<b>Payment Freeze Date (01-02-2001)</b>
<b>Exchange Rate From</b>	USD	USD
<b>Exchange Rate To</b>	INR	INR
<b>Exchange Rate</b>	50	49
<b>Invoice/Payment Currency</b>	USD	USD
<b>Invoice Amount</b>	1000	-
<b>Base Currency</b>	INR	INR
<b>Booked Revenue in Base Currency</b>	$1000 * 50 = 50000$	-
<b>Payment Amount</b>	-	1200
<b>Payment Amount in Base Currency on Bill Completion Date</b>	-	$1000 * 50 = 50000$
<b>Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date</b>	-	$1000 * 49 = 49000$
<b>Foreign Exchange Gain or Loss</b>	-	$50000 - 49000 = 1000$

**Observation:** In the Scenario 6, there is foreign exchange loss of 1000 INR on 01-02-2001 because of difference in exchange rate. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

- Scenario 7 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount > Invoice Amount (i.e. Overpayment)

	<b>Bill Completion Date (01-01-2001)</b>	<b>First Partial Payment Freeze Date (01-02-2001)</b>	<b>Second Partial Payment Freeze Date (01-03-2001)</b>
<b>Exchange Rate From</b>	USD	USD	USD
<b>Exchange Rate To</b>	INR	INR	INR
<b>Exchange Rate</b>	50	49	52
<b>Invoice/Payment Currency</b>	USD	USD	USD
<b>Invoice Amount</b>	1000	-	-
<b>Base Currency</b>	INR	INR	INR
<b>Booked Revenue in Base Currency</b>	$1000 * 50 = 50000$	-	-
<b>Payment Amount</b>	-	800	400
<b>Payment Amount in Base Currency on Bill Completion Date</b>	-	$800 * 50 = 40000$	$200 * 50 = 10000$
<b>Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date</b>	-	$800 * 49 = 39200$	$200 * 52 = 10400$
<b>Foreign Exchange Gain or Loss</b>	-	$40000 - 39200 = 800$	$10000 - 10400 = -400$

**Observation:** In the Scenario 7, there is foreign exchange loss of 800 INR on 01-02-2001 and foreign exchange gain of 400 INR on 01-03-2001. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

**Note:** If a payment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

## Credit Adjustment Scenarios

An adjustment which is posted against a bill after the bill completion is treated as payment towards the bill. The following scenarios indicate how foreign exchange gain or loss is calculated for credit adjustments which are created against a bill after the bill completion:

- Scenario 1 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

	<b>Bill Completion Date (04-30-2015)</b>	<b>Adjustment Freeze Date (05-10-2015)</b>
<b>Exchange Rate From</b>	USD	USD
<b>Exchange Rate To</b>	INR	INR
<b>Exchange Rate</b>	50	40
<b>Invoice/Adjustment Currency</b>	INR	INR
<b>Invoice Amount</b>	1000	-
<b>Base Currency</b>	USD	USD
<b>Booked Revenue in Base Currency</b>	$1000 / 50 = 20$	-
<b>Adjustment Amount</b>	-	400

	Bill Completion Date (04-30-2015)	Adjustment Freeze Date (05-10-2015)
Adjustment Amount in Base Currency on Bill Completion Date	-	$400/50 = 8$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$400/40 = 10$
Foreign Exchange Gain or Loss	-	$8-10 = -2$

**Observation:** In the Scenario 1, there is foreign exchange gain of 2 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

	Bill Completion Date (04-11-2014)	Adjustment Freeze Date (04-30-2014)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	55	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	2000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$2000/55 = 36.36$	-
Adjustment Amount	-	200
Adjustment Amount in Base Currency on Bill Completion Date	-	$200/55 = 3.63$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$200/60 = 3.33$
Foreign Exchange Gain or Loss	-	$3.63-3.33 = 0.30$

**Observation:** In the Scenario 2, there is foreign exchange loss of 0.30 USD on 04-30-2014 because of difference in exchange rate.

Note:

Multi-currency is not supported while creating credit adjustments against a bill after the bill completion. Therefore, the credit adjustment's currency must be same as the invoice currency.

If the amount of credit adjustment exceeds the bill amount, you need to match the excess amount against another bill while freezing the adjustment. Otherwise, the adjustment is not considered during foreign exchange gain loss calculation.

If a credit adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

### Write Off Adjustment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for write off adjustments which are created against a bill:

- Scenario 1 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Full Bill Amount is Written Off

	Bill Completion Date (04-30-2015)	Adjustment Freeze Date (05-10-2015)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$1000/50 = 20$	-
Adjustment Amount	-	1000
Adjustment Amount in Base Currency on Bill Completion Date	-	$1000/50 = 20$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$1000/60 = 16.67$
Foreign Exchange Gain or Loss	-	$20 - 16.67 = 3.33$

**Observation:** In the Scenario 1, there is foreign exchange loss of 3.33 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Bill Amount is Written Off

	Bill Completion Date (01-30-2014)	Adjustment Freeze Date (03-03-2015)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	60	55
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$1000/60 = 16.67$	-
Adjustment Amount	-	600
Adjustment Amount in Base Currency on Bill Completion Date	-	$600/60 = 10$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$600/55 = 10.91$
Foreign Exchange Gain or Loss	-	$10 - 10.91 = -0.91$

**Observation:** In the Scenario 2, there is foreign exchange gain of 0.91 USD on 03-03-2015 because of difference in exchange rate.

**Note:** If a write off adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

## Write Up/Down Adjustment Scenarios

If the lower or upper tolerance limit defined in the Bill Weighted Payment Distribution algorithm is met when a payment is matched against a bill using the Bill Weighted match type, the Write Up or Write Down adjustment is automatically created. The following scenarios indicate how foreign exchange gain or loss is calculated for write up or write down adjustments:

- Scenario 1 - Payment/Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Matched against a Bill with Two Bill Segments (BS1 - 50 INR; BS2 - 50 INR)

	Bill Completion Date (04-30-2015)	Payment Freeze Date (05-14-2015)	Write Up/Down Adjustment (Against BS1) Freeze Date (05-14-2015)	Write Up/Down Adjustment (Against BS2) Freeze Date (05-14-2015)
Exchange Rate From	USD	USD	USD	USD
Exchange Rate To	INR	INR	INR	INR
Exchange Rate	50	45	45	45
Invoice/Payment/Adjustment Currency	INR	INR	INR	INR
Invoice Amount	100	-	-	-
Base Currency	USD	USD	USD	USD
Booked Revenue in Base Currency	$100/50 = 2$	-	-	-
Payment/Adjustment Amount	-	95	2.5	2.5
Payment/Adjustment Amount in Base Currency on Bill Completion Date	-	$95/50 = 1.9$	$2.5/50 = 0.05$	$2.5/50 = 0.05$
Realized Revenue (Payment/Adjustment Amount) in Base Currency on Payment/Adjustment Freeze Date	-	$95/45 = 2.11$	$2.5/45 = 0.056$	$2.5/45 = 0.056$
Foreign Exchange Gain or Loss	-	$1.9 - 2.11 = -0.21$	$0.05 - 0.056 = -0.006$	$0.05 - 0.056 = -0.006$

**Observation:** In the Scenario 1, two Write Up adjustments are created - one against BS1 and another against BS2. While freezing the payment which is matched against the bill, there is foreign exchange gain of 0.21 USD on 05-14-2015. However, while freezing the Write Up adjustments which are created against BS1 and BS2, there is foreign exchange gain of 0.006 and 0.006 USD, respectively, on 05-14-2015.

**Note:** If a write up or write down adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments.

If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Creation Request \(Without Approval\) Status Transition](#) on page 1356 and [Payment Creation Request \(With Approval\) Status Transition](#) on page 1357.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 1355.

# Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

Match Type	Description	Payment Distribution Override Algorithm	Manual Distribution Algorithm	Entity Type	Match Type Search Zone	Entity Flag
BILLR	By Bill Regular	C1-PDOV-PYBL	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILLW	By Bill Weighted	C1-PDOV-WTBS	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILL-WO	By Bill Weighted Outstanding Amount	C1-PDOV-WTOA		Account	C1_ACCT_SRCH	Bill
BILLSEG	By Bill Segment	C1-PDOV-PYBS	C1-MD-BSEG	Account	C1_ACCTSRCH	Bill Segment
BYSATY	By Suspense Contract	C1-PDOV-SATY	C1-MD-ONSA	Account	C1_ACCTSRCH	Contract
SETT-ID	By Settlement ID	C1-PDOV-PYSL	C1-MD-SID	Account	C1_ACCTSRCH	Settlement
BYBILL	By Bill	C1-PDOV-PYBL or C1-PDOV-WTBS	C1-MDBYBILL	Bill	CI BILL	Bill
BILL-BS	By Bill - Pay By Bill Segment Oldest	C1-PDOV-BSDT		Account	C1_ACCT_SRCH	Bill

**Note:** The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

**Note:** The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen
- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration

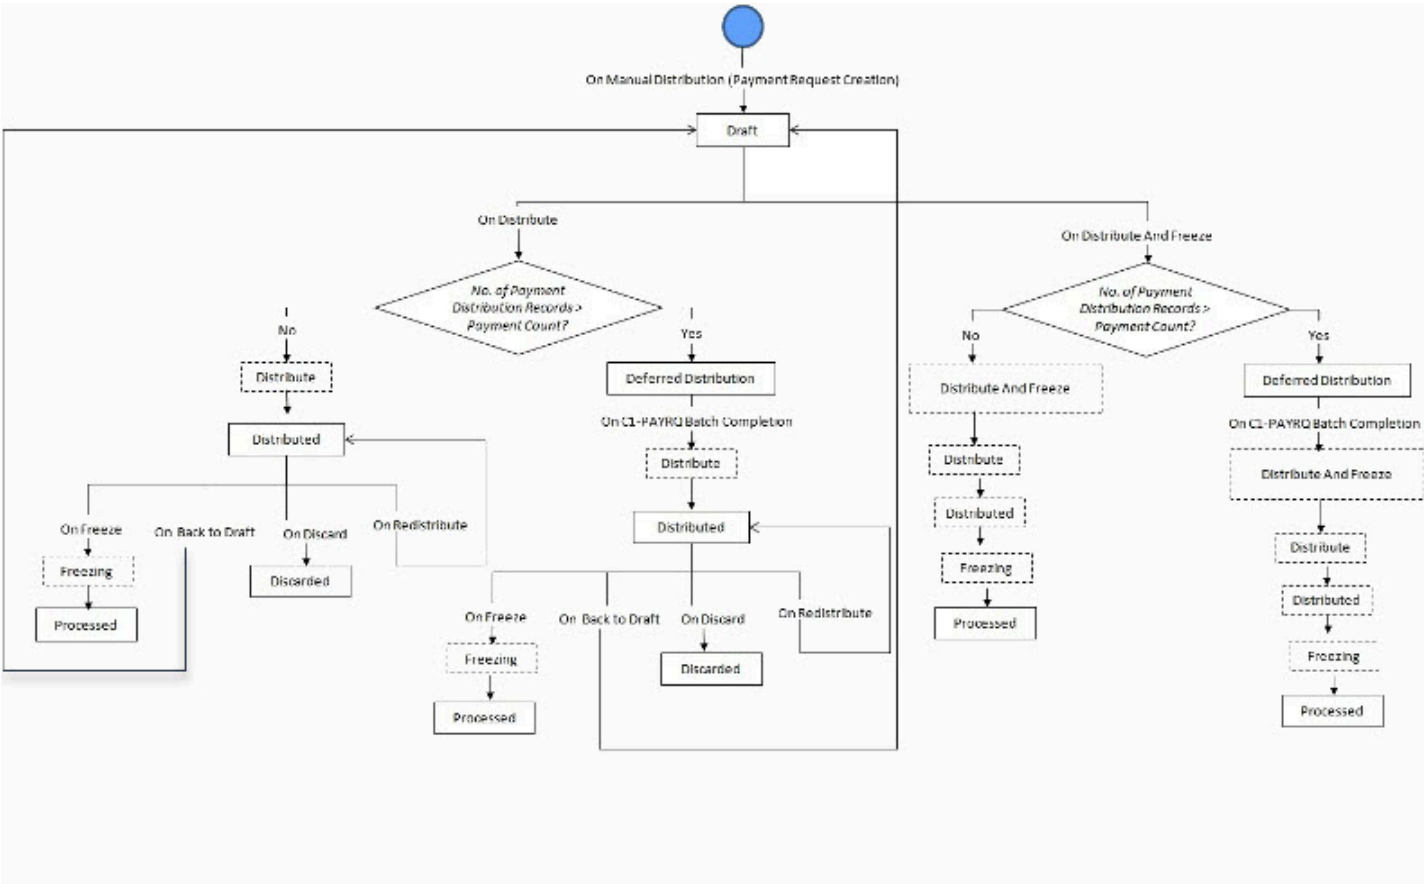

- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## C1-PAYRQ-INF

This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Request Type Description
- Payment Request Status Description
- Payment Request ID

## C1-PAYREQPOS

---

This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the **C1\_PAY\_DISTRIBUTION** table when you remove a match type while editing a payment request.

## C1-PAYREQVAL

---

This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the **Generate Auto Pay** option is selected. This algorithm is triggered when you click the **Manual Distribution** button.

**Note:** You do not specify the tender and auto pay details while creating a payment transfer request.

## C1-PAY-DFT

---

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

## C1-PAYDFTEXT

---

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

## C1-PAY-PFA

---

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

## C1-PAYPFAEXT

---

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

## F1-TODOCOMPL

---

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

**Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

## C1-PAY-APP

---

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

## C1-PAY-DIST

---

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

## C1-PAY-MONT

---

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

## C1-PAYCREATE

---

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1\_PAY\_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1\_PAY\_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

## C1-FRZ-VALID

---

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

## C1-PAY-V-FRZ

---

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

## C1-PAY-FRZ

---

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

## C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

## C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

## Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	Refer to <a href="#">C1-PAYRQ-INF</a> on page 1363
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	Refer to <a href="#">C1-PAYREQPOS</a> on page 1364
Validation	C1-PAYREQVAL	C1-PAYREQVAL	Refer to <a href="#">C1-PAYREQVAL</a> on page 1364

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PYTRDF	C1-PYTRDF	Refer to <a href="#">C1-PYTRDF</a> on page 1367
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	Refer to <a href="#">C1-PAY-DFT</a> on page 1364
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	Refer to <a href="#">C1-PAYDFTEXT</a> on page 1364
Payment Derivation Pending	Monitor	C1-PYTR-MONT	C1-PYTR-MONT	Refer to <a href="#">C1-PYTR-MONT</a> on page 1367
Update Transfer Amount	Enter	C1-PYTR-UPDT	C1-PYTR-UPDT	Refer to <a href="#">C1-PYTR-UPDT</a> on page 1368
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	Refer to <a href="#">C1-PAY-PFA</a> on page 1364
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	Refer to <a href="#">C1-PAYPFAEXT</a> on page 1364
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1364
Approved	Enter	C1-PAY-APP	C1-PAY-APP	Refer to <a href="#">C1-PAY-APP</a> on page 1365
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	Refer to <a href="#">C1-PAY-DIST</a> on page 1365

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	Refer to <a href="#">C1-PAY-MONT</a> on page 1365
Distributed	Enter	C1-PAYCREATE	C1-PAYCREATE	Refer to <a href="#">C1-PAYCREATE</a> on page 1365
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	Refer to <a href="#">C1-FRZ-VALID</a> on page 1365
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1364
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	Refer to <a href="#">C1-PAY-V-FRZ</a> on page 1365
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	Refer to <a href="#">C1-PAY-FRZ</a> on page 1365
Processed	-	-	-	-
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	Refer to <a href="#">C1-PAY-RJT</a> on page 1366
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	Refer to <a href="#">C1-PAY-RJT</a> on page 1366
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	Refer to <a href="#">C1-ISFREEZE</a> on page 1366
Cancel	-	-	-	-

## C1-PYTRDF

---

This algorithm invokes manual distribution algorithm of the match types that you have selected while creating a payment transfer request. It checks whether the payment transfer count exceeds the defer processing count. If the payment transfer count exceeds the defer processing count, the system changes the status of the payment transfer request to **Payment Derivation Pending**.

## C1-PAY-DFT

---

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

## C1-PAYDFTEXT

---

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

## C1-PYTR-MONT

---

This algorithm is invoked from the **Payment Transfer Deferred Periodic Monitor (C1-PAYTR)** monitor batch. The system fetches the list of payments depending on whether payment transfer is done at the payment event or payment level. It then considers the payments which are eligible for transfer from the payment list based on the following transfer priority:

1. Payments created on the suspense contract (if any)
2. Payments created on the on account contract (if any)
3. Payments created on the excess credit contract (if any)
4. Payments created against bills in the descending order of bill date followed by the descending order of payment amount (when there two or more bills with the same bill date)

Once the system identifies the payments for transfer from the payment list, the payment transfer request is created and the status is changed from **Payment Derivation Pending** to **Draft**. A payment transfer record is created in the **C1\_PAY\_DETAILS** table along with the transfer priority and cancel switch.

## C1-PYTR-UPDT

---

This algorithm is invoked when you click the **Update Transfer Amount** button. The system allows you to change the transfer amount, if required. On changing the transfer amount, system determines the payments which are eligible for transfer and changes the status of the payment transfer request to **Payment Derivation Pending** or **Draft**.

## C1-PAY-PFA

---

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

## C1-PAYPFAEXT

---

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

## F1-TODOCOMPL

---

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

**Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

## C1-PAY-APP

---

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

## C1-PAY-DIST

---

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status

of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

## C1-PAY-MONT

---

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

## C1-PAYTRANS

---

his algorithm is invoked when the status of the payment transfer request is changed to **Distributed**. A payment is created for each record in the **C1\_PAY\_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the new payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1\_PAY\_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

## C1-PAYCREATE

---

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1\_PAY\_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1\_PAY\_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

## C1-FRZ-VALID

---

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

## C1-PAY-V-FRZ

---

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

## C1-PAY-FRZ

---

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

## C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

## C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

# Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 1370
- [Payment Request Type](#) on page 1371

## Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Request Type	Displays the payment request type.
Description	Displays the description of the payment request type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Payment Request Type</b> screen appears where you can edit the details of the payment request type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Payment Request Type</b> screen appears where you can define a payment request type using an existing payment request type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the payment request type.
	<b>Note:</b> You can delete a payment request type when you have not created a payment request using the payment request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

## Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** - This section provides basic information about the payment request type. It contains the following fields:

Field Name	Field Description
Payment Request Type	Displays the payment request type.
Payment Request Business Object	Indicates the business object that will be used to create the payment request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the payment request type.
Detailed Description	Displays additional information about the payment request type.
Status	Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>
Defer Algorithm	Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.

Field Name	Field Description
	<b>Note:</b> Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)  It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Approval Required	Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type.
Approval To Do Type	Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.  <b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve the payment request submitted for approval.  <b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.
Transfer	Indicates whether the payment request type will be used to create payment transfer or payment creation request.
Defer Payment Processing Count	Indicates whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count.  <b>Note:</b> This field appears when the <b>Transfer</b> option is selected.

- **Characteristics** - This section lists the characteristics of the payment request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment request type.
Delete	Used to delete the payment request type.

Button Name	Button Description
	<b>Note:</b> You can delete a payment request type when you have not created a payment request using the payment request type.
Duplicate	Used to create a new payment request type using an existing payment request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a payment request type in the **Payment Request Type List** zone.

## Defining a Payment Request Type

**Prerequisites**

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

**Procedure**

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.

3. Click the **Add** option from the **Payment Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type Business Object	Used to indicate the business object that you want to use to create the payment request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On selecting the <b>Algorithm</b>, the description of the algorithm appears corresponding to the <b>Defer Algorithm</b> field.</p>	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> check box is selected.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On selecting the <b>To Do Type</b>, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No
Defer Payment Processing Count	<div>Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count.</div> <div><b>Note:</b> This field appears when the <b>Transfer</b> option is selected.  You cannot specify a negative value in the <b>Defer Payment Processing Count</b> field. If you do not specify the defer payment processing count, by default, it is set to zero (0).  Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.  If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately).</div>	No

6. Enter the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.

8. Click **Save**.  
The payment request type is defined.

Payment Request Type screen	<a href="#">Payment Request Type</a> on page 1370
Payment Request Type List zone	<a href="#">Payment Request Type List</a> on page 1370
How to define a characteristic for a payment request type	<a href="#">Defining a Characteristic for a Payment Request Type</a> on page 1377

## Defining a Characteristic for a Payment Request Type

### Prerequisites

To define a characteristic for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

### Procedure

To define a characteristic for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Payment Request Type

### Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

### Procedure

To edit a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Displays the payment request type.	Not applicable
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On selecting the <b>Algorithm</b>, the description of the algorithm appears corresponding to the <b>Defer Algorithm</b> field.</p>	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> check box is selected.</p> <p>The <b>Search</b> (Q) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On selecting the <b>To Do Type</b>, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>
Approval To Do Role	<p>Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p><b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No
Defer Payment Processing Count	<p>Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceeds the defer processing count.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Transfer</b> option is selected.</p> <p>You cannot specify a negative value in the <b>Defer Payment Processing Count</b> field. If you do not specify the defer payment processing count, by default, it is set to zero (0).</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately).</p>	No

**Tip:** Alternatively, you can click the **Edit** button in the **Payment Request Type** zone to edit the details of the payment request type.

5. Modify the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

- 6. Define, edit, or remove characteristics of the payment request type, if required.
- 7. Click **Save**.  
The changes made to the payment request type are saved.

## Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

**Prerequisites**

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

**Procedure**

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Duplicate**(📄) icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On selecting the <b>Algorithm</b>, the description of the algorithm appears corresponding to the <b>Defer Algorithm</b> field.</p>	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	<p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> check box is selected.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On selecting the <b>To Do Type</b>, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No
Defer Payment Processing Count	<p>Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceeds the defer processing count.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Transfer</b> option is selected.</p> <p>You cannot specify a negative value in the <b>Defer Payment Processing Count</b> field. If you do not specify the defer payment processing count, by default, it is set to zero (0).</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately).</p>	No

**Tip:** Alternatively, you can click the **Duplicate** button in the **Payment Request Type** zone to create a copy of the payment request type.

5. Enter the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment request type, if required.

7. Click **Save**.

The new payment request type is defined.

## Deleting a Payment Request Type

### Procedure

To delete a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the payment request type that you want to delete.  
A message appears confirming whether you want to delete the payment request type.

**Note:** You can delete a payment request type when you have not created a payment request using the payment request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.

5. Click **OK**.  
The payment request type is deleted.

## Viewing the Payment Request Type Details

### Procedure

To view the details of a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the payment request type whose details you want to view.  
The **Payment Request Type** zone appears.

5. View the details of the payment request type in the **Payment Request Type** zone.

## Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. It contains the following zone:

- [Search Payment Request](#) on page 1386

Through this screen, you can navigate to the following screen:

- [Payment Request \(Used for Viewing\)](#) on page 1390

## Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"><li>Request Details</li><li>Payment Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Creation From Date	Used to search payment requests which are created from a particular date and time onwards.	No
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can either manually specify the date or select it using the <b>Date Picker</b> icon corresponding to the field. The creation from date cannot be later than the created to date.	
Payment Request Status	Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"><li>Approval In Progress</li><li>Cancel</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Deferred Distribution</li> <li>Discarded</li> <li>Distribute And Freeze</li> <li>Distributed</li> <li>Draft</li> <li>Payment Derivation Pending</li> <li>Processed</li> <li>Rejected</li> </ul>	
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Created To	<p>Used to search payment requests which are created till a particular date and time.</p> <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can either manually specify the date or select it using the <b>Date Picker</b> icon corresponding to the field. The created to date cannot be earlier than the creation from date.</p>	No
User ID	<p>Used to search payment requests which are created by a particular user.</p> <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>User Search</b> window appears.</p>	No
Payment Request Type	<p>Used to search payment requests which are created using a particular payment request type.</p> <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.</p>	No
Payment Request ID	<p>Used to search a particular payment request.</p> <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.</p>	No
Payment Event ID	Used to search a payment request through which a payment event is created.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when you select the <b>Payment Details</b> option from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Payment Event Search</b> window appears.	
Payor Account ID	Used to search payment requests which are created for a particular payor account.  <b>Note:</b> This field appears when you select the <b>Payment Details</b> option from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	No
Payment Date	Used to search payment requests through which payments are created on a particular date.  <b>Note:</b> This field appears when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	No
Payor Name	Used to search payment requests which are created for a particular payor.  <b>Note:</b> This field appears when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a payment request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the payment request was created in the system.
Payment Request Information	Displays information about the payment request.  <b>Note:</b> It has a link. On clicking the link, the <b>Payment Request</b> screen appears where you can view the details of the respective payment request.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Cancel</li><li>• Deferred Distribution</li><li>• Discarded</li><li>• Distribute And Freeze</li><li>• Distributed</li></ul>

Column Name	Column Description
	<ul style="list-style-type: none"><li>• Draft</li><li>• Payment Derivation Pending</li><li>• Processed</li><li>• Rejected</li></ul>
Payment Event Information	Displays information about the payment event which is created through the payment request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears with the details of the respective payment event.
Created By	Indicates the user who has created the payment request.
Payor Account Information	Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Payment Request

**Prerequisites**

To search for a payment request, you should have:

- Payment request types defined in the application

**Procedure**

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request** sub-menu.  
The **Payment Request** screen appears.
4. Enter the search criteria in the **Search Payment Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of payment requests that meet the search criteria appears in the **Search Results** section.

## Viewing the Payment Request Details

**Procedure**

To view the details of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following three zones:
    - **Payment Request** - Displays the details of the payment request.
    - **Payment Details** - Displays the payments transferred through the payment request.
    - **Payment Distribution** - Lists the payment distribution records of the payment request.
  - **Log** - This tab lists the complete trail of actions performed on the payment request.
3. View the details of the payment request in the **Payment Request** zone.
  4. View the payments transferred through the payment request in the **Payment Details** zone.
  5. View the payment distribution records of the payment request in the **Payment Distribution** zone.

**Related Topics**

## Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request
- View the payments transferred through a payment request
- Update the transfer amount against each entity
- Redistribute the tender or payment amount of a payment segment

It consists of the following tabs:

- [Payment Request - Main](#) on page 1391
- [Payment Request - Log](#) on page 1399

## Payment Request - Main

---

The **Main** tab displays information about the payment request. It contains the following zones:

- [Payment Request](#) on page 1391
- [Payment Details](#) on page 1396
- [Payment Distribution](#) on page 1397

## Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** - This section provides basic information about the payment request. It contains the following fields:

Field Name	Field Description
Payment Request Information	Displays information about the payment request.
Payment Request Type	Indicates the payment request type using which the payment request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Request Type</b> screen appears where you can view the details of the payment request type.
Payment Request Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Cancel</li><li>• Deferred Distribution</li><li>• Discarded</li><li>• Distribute And Freeze</li><li>• Distributed</li><li>• Draft</li><li>• Payment Derivation Pending</li><li>• Processed</li></ul>

Field Name	Field Description
	<ul style="list-style-type: none"><li>Rejected</li></ul>
Status Reason	Indicates the reason why the payment request is rejected.
	<b>Note:</b> This field appears when the payment request is in the <b>Rejected</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the rejected reason.
Payor Account Information	Displays information about the payor's account for which the payment request is created.
	<b>Note:</b> This field appears when you are viewing the details of a payment creation request. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Payment Date	Displays the date when the payment event and payments are created.
Payment Event Information	Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.
	<b>Note:</b> This field does not appear when the payment request is in the <b>Rejected</b> status. If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the <b>Draft</b> status. It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Maximum Transfer Amount	Displays the maximum amount which can be transferred.
	<b>Note:</b> This field appears when you are viewing the details of a payment transfer request.
Transfer Amount	Displays the total payment amount which you want to transfer.
	<b>Note:</b> This field appears when you are viewing the details of a payment transfer request.
Transfer Reason	Indicates the reason why you want to transfer the payment amount.
	<b>Note:</b> This field appears when you are viewing the details of a payment transfer request.

- Tender Details** - This section provides details about the tender used in the payment request. This section appears when you are viewing the details of a payment creation request. It contains the following fields:

Field Name	Field Description
Tender Type	Indicates the type of tender through which the payment was made.
Tender Amount	Displays the tender amount.
Currency	Indicates the currency in which the payment was made.
Check Number	Displays the cheque number if the payment is made through the cheque.
Auto Pay Route Type Code	Indicates when and how automatic payment request of the account is routed to a financial institution.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freed in the system.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Account Number	Indicates the bank account number through which the automatic payment was made.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Expires On	Displays the date when the tender type will expire.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Name	Displays the name of the person as maintained in the financial institution's system.
	<b>Note:</b> This field appears when you select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.
Tender Control Information	Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Field Name	Field Description
	<b>Note:</b> This field appears only when the payment request is in the <b>Distributed, Approval In Progress, Processed</b> , or <b>Rejected</b> status. It has a link. On clicking the link, the <b>Tender Control</b> screen appears where you can view the details of the respective tender control.
Deposit Control Information	Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> This field appears only when the payment request is in the <b>Distributed, Approval In Progress, Processed</b> , or <b>Rejected</b> status. It has a link. On clicking the link, the <b>Deposit Control</b> screen appears where you can view the details of the respective deposit control.
Pay Tender ID	Displays the payment tender ID. <b>Note:</b> This field appears only when the payment request is in the <b>Processed</b> status.
Tender Status	Indicates the current status of the tender. The valid values are: <ul style="list-style-type: none"><li>Valid</li><li>Cancelled</li></ul> <b>Note:</b> This field appears when the payment request is in the <b>Processed</b> status.
MICR ID	Displays the MICR code on the payment.
Ext. Reference ID	Displays the external reference number of the payment as it appears in the payment upload interface record.
Person ID	Indicates the person's account ID as it appears in the payment upload interface record.
Name	Indicates the person name as it appears in the payment upload interface record.

- Characteristics** - This section lists the characteristics of the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- Record Actions** - This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment request.

Column Name	Column Description
	<b>Note:</b> The <b>Edit</b> button appears when the payment request is in the <b>Draft</b> status.
Delete	Used to delete the payment request.
	<b>Note:</b> The <b>Delete</b> button appears when the payment request is in the <b>Draft</b> status.
Update Transfer Amount	Used to update the transfer amount.
	<b>Note:</b> The <b>Update Transfer Amount</b> button appears when the payment transfer request is in the <b>Draft</b> status. It is used for changing the transfer process from full to partial payment.
Update Tender Details	Used to update the tender details.
	<b>Note:</b> The <b>Update Tender Details</b> button appears when the payment transfer request is in the <b>Processed</b> status.
Distribute	Used to distribute the tender or payment amount.
	<b>Note:</b> The <b>Distribute</b> button appears when the payment request is in the <b>Draft</b> status.
Submit for Approval	Used to submit the payment request for approval.
	<b>Note:</b> The <b>Submit for Approval</b> button appears when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Distributed</b> status.</li> <li>The <b>Approval Required</b> check box is selected in the payment request type using which the payment request is created.</li> </ul>
Freeze	Used to freeze the payments which are created through the payment request.
	<b>Note:</b> The <b>Freeze</b> button appears when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Distributed</b> status.</li> <li>The <b>Approval Required</b> check box is not selected in the payment request type using which the payment request is created.</li> </ul>
Approve	Used to approve the payment request.
	<b>Note:</b> The <b>Approve</b> button appears when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the payment request.</li> </ul>
Reject	Used to reject the payment request.
	<b>Note:</b> The <b>Reject</b> button appears when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the payment request.</li> </ul>
Back to Draft	Used to change the status of the payment request to <b>Draft</b> .

Column Name	Column Description
	<b>Note:</b> The <b>Back to Draft</b> button appears when the payment request is in the <b>Distributed</b> status.
Discard	Used to discard the payment creation or transfer request.
	<b>Note:</b> The <b>Discard</b> button appears when the payment request is in the <b>Distributed</b> status.
Distribute And Freeze	Used to distribute and freeze the payments at the same time.
	<b>Note:</b> The <b>Distribute And Freeze</b> button appears only when the payment request is in the <b>Draft</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the payment request status is updated
Create Date/Time	Displays the date and time when the payment request is created.

- **Match Types** - This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which you want to match the payment.
Match By	Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment.

Payment Details

The **Payment Details** zone lists the payments which are transferred through the payment request. This zone contains the following column:

Column Name	Column Description
Payment Information	Displays the concatenated string consisting of payment information which is separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Column Name	Column Description
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.</p> <p>This zone appears only when the following conditions are met:</p> <ul style="list-style-type: none"><li>Partial payment transfer is done at the payment event level</li><li>Full or partial payment transfer is done at the payment level</li></ul>

Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the payment was matched.
Payee Account ID	Indicates the account for which the payment was made.
	<p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Match Value	Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched.
Match Entity	Indicates the type of entity against which the payment was matched. The valid values are: <ul style="list-style-type: none"><li>Bill</li><li>Bill Segment</li><li>Contract</li><li>Settlement</li></ul>
Original Bill Amount	Displays the entity amount.
	<p><b>Note:</b> In case of contract, the original bill amount would be zero (0).</p>
Write Off Adjustment Amount	Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit.
	<p><b>Note:</b></p> <p>The data appears in this column when the match type is <b>Bill Weighted</b> and the payment amount is within the underpayment or overpayment tolerance limit.</p> <p>This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>
Paid Amount	Displays the amount which is already paid against the entity.
	<p><b>Note:</b> This column appears when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
	<p><b>Note:</b> This column appears when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>

Column Name	Column Description
Payment Amount	Displays the payment amount. If the <b>Show Default</b> check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the <b>Show Default</b> check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where <b>Show Default</b> check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required.
Payment Currency	Indicates the currency in which the payment was made.
Payment ID	Displays the payment ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears with the details of the respective payment.  This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Payment Status	Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Error</li> <li>• Freezable</li> <li>• Frozen</li> <li>• Incomplete</li> </ul>
	<b>Note:</b> This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Error Message	Indicates the reason why the payment is in the <b>Error</b> status.
	<b>Note:</b> This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Detail	On clicking the <b>Detail</b> button, the <b>Edit Payment Segment Amount</b> screen appears where you can edit the payment segment amount.
	<b>Note:</b> The <b>Detail</b> button appears in the <b>Detail</b> column when: <ul style="list-style-type: none"> <li>• The payment request is in the <b>Distributed</b>, <b>Processed</b> or <b>Approval In Progress</b> status.</li> <li>• The payment is in the <b>Freezable</b> status.</li> </ul> However, a user with the approval To Do role will not be able to edit the payment segment amount.
Redistribute	On clicking the <b>Redistribute</b> button, you can redistribute the payment amount among the payment segments.

Column Name	Column Description
	<b>Note:</b> This column appears when the payment request is in the <b>Distributed, Processed</b> or <b>Approval In Progress</b> status. The <b>Redistribute</b> button appears in the <b>Redistribute</b> column when: <ul style="list-style-type: none"><li>The payment request is in the <b>Distributed, Processed</b> or <b>Approval In Progress</b> status.</li></ul>
Payment Characteristics	On clicking the <b>Characteristic</b> button, the <b>Payment Characteristics</b> screen appears where you can add the payment characteristics. <b>Note:</b> The <b>Characteristic</b> button appears in the <b>Payment Characteristics</b> column when: <ul style="list-style-type: none"><li>The payment request is in the <b>Distributed, Processed</b> or <b>Approval In Progress</b> status.</li></ul>

You can edit the payment amount by clicking the **Update Payment Amount** link in the upper right corner of this zone.

<b>Note:</b> The <b>Update Payment Amount</b> link appears when the payment creation or transfer request is in the following status: <ul style="list-style-type: none"><li>Differed Distribution</li><li>Discarded</li><li>Distribute And Freeze</li><li>Draft</li><li>Rejected</li></ul>
---

## Creating a Payment Creation Request

**Prerequisites**

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

**Procedure**

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.  
A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment creation request.	Yes
	<b>Note:</b> The list includes only those payment request types where the <b>Transfer</b> check box is not selected.	

**Tip:** Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

- 4. Select the required payment request type from the respective field.
- 5. Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.  On specifying the account ID, the information about the account appears corresponding to the <b>Payor Account Information</b> field.	
Payment Date	Used to specify the date when the payment was made.	Yes
	<b>Note:</b> By default, the current date appears in this field.	

- **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment is made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
	<b>Note:</b> By default, this field is disabled. It is enabled when you specify the payor account information.  You must not specify the value less than or equal to 0.  The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	
Currency	Used to indicate the currency in which the payment is made.	Yes
	<b>Note:</b> By default, this field is disabled. It is enabled when you specify the payor account information.	

Field Name	Field Description	Mandatory (Yes or No)
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Auto Pay Route Type Search</b> window appears.  On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the <b>Auto Pay Route Type Code</b> field.	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	<b>Note:</b> The data appears only when you: <ul style="list-style-type: none"> <li>• Select a tender type where the <b>Generate Auto Pay</b> check box is selected.</li> <li>• Specify the values for <b>Auto Pay Route Type Code</b> and <b>Auto Pay Source Code</b> fields.</li> </ul>	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Auto Pay Source Search</b> window appears.  On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the <b>Auto Pay Source Code</b> field.	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freezed in the system.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The data appears only when you: <ul style="list-style-type: none"> <li>Select a tender type where the <b>Generate Auto Pay</b> check box is selected.</li> <li>Specify the values for <b>Auto Pay Route Type Code</b> and <b>Auto Pay Source Code</b> fields.</li> </ul>	
Account Number	Used to indicate the bank account number through which the automatic payment is made.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Expires On	Used to specify the date till when the tender is effective.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected. By default, the payor name appears in this field.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to specify the person's account ID mentioned in the payment upload interface record.	No
Name	Used to specify the name of the person as it appears in the payment upload interface record.	No
Tender Control ID	Used to indicate the tender control ID.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Tender Control Search</b> window appears. On specifying the tender control ID, the description of the tender control ID appears corresponding to the <b>Tender Control ID</b> field.	
Deposit Control Information	Used to indicate the deposit control ID.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> It is a read-only field.  The data appears in this field when the tender control ID is specified.	

**Note:** If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.  On specifying the business object, the description of the business object appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	<b>Note:</b> By default, the <b>Show Default</b> check box is selected when you select the match type.	
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> <li>• <b>Account</b> - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>• <b>Bill</b> - Enables you to select the unpaid bill against which you want to match the payment.</li><li>• <b>Statement</b> - Enables you to select the statement against which you want to match the payment.</li></ul>	
Entity ID	Used to specify the account, bill ID, or statement ID depending on the match type entity.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, based on the selected match type, the relevant entity <b>Search</b> window appears. On specifying the entity, the description of the entity appears corresponding to the <b>Entity ID</b> field.	

6. Enter the required details.

**Note:**  
You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.  
  
If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑) icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.

8. Click **Manual Distribution**.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account

Match Type	Match Entity	Entities
		<b>Note:</b> Only contracts of the contract type where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> are listed in the <b>Payment Distribution</b> zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> ) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in <b>Payment Distribution</b> zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

**Note:**  
If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.  
  
The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs) do not exist for the payee account.

**Defining a Characteristic for a Payment Tender**

**Prerequisites**

To define a characteristic for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

**Procedure**

To define a characteristic for a payment tender:

- 1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

- 2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- 3. If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑) icon corresponding to the characteristic.

How to edit a payment request	<a href="#">Editing a Payment Creation Request</a> on page 1409

**Editing the Payment Amount**

**Procedure**

To edit the payment amount against each entity:

- 1. Search for the payment creation or transfer request in the **Payment Request** screen.
- 2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request whose details you want to edit.  
The **Payment Request** screen appears.
- 3. Ensure that the **Main** tab is selected.
- 4. Click the **Update Payment Amount** link in the upper right corner of the **Payment Distribution** zone.

The **Payment Request - Edit Payment Amount** screen appears. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description
Match Type	Used to search the entities which are considered using a particular match type.
	<b>Note:</b> By default, the <b>All</b> option is selected.
Sort By	Used to indicate the entity based on which the search result is sorted.
	<b>Note:</b> By default, the <b>All</b> option is selected.
Sort By	Used to indicate the entity fields based on which the search result is sorted.
	<b>Note:</b> By default, the <b>All</b> option is selected. The data in this field appears when the match type is selected.
Match Value	Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID).
Order	Used to indicate the sequence for the search result. The valid values are:
	<ul style="list-style-type: none"> <li>• Ascending</li> <li>• Descending</li> </ul>

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the entity is considered.
Payee Information	Displays information about the account for which the payment was made.
Entity Information	Displays information about the entity against which the payment was matched.
Original Bill Amount	Displays the entity amount.
	<b>Note:</b> In case of contract, the entity amount would be zero (0).
Paid Amount	Displays the amount which is already paid against the entity.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
Payment Amount	Used to specify the payment amount.
	<b>Note:</b> If the <b>Allow Overpayment</b> option type of the <b>C1-PAYPORTAL</b> feature configuration is set to <b>true</b> , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity.
Payment Currency	Indicates the currency in which the payment is made.

In addition, the **Search Results** section contains the following fields:

Field Name	Field Description
Total Amount	Displays the tender or transfer amount.
Running Total	Displays the total payment amount which is specified against each entity.
Running Balance	Displays the difference between the total amount and running total.
	<b>Note:</b> The running balance is highlighted in the red color when the difference amount is non-zero.

**Note:** Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

5. Modify the payment amount against an entity, if required.

**Note:** The sum of payment amount should be equal to the tender or transfer (payment) amount.

6. Click **Save**.  
The changes made in the payment amount are saved.
7. Click **Close**.  
The payment amount is updated in the **Payment Distribution** zone.

**Editing a Payment Creation Request**

**Procedure**

To edit a payment creation request:

1. Search for the payment creation request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation request whose details you want to edit.  
The **Payment Request** screen appears.
3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment creation request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which the payment creation request is created.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment creation request.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears.  On specifying the payor account, the description of the payor account appears corresponding to the <b>Payor Account Information</b> field.	Yes
Payment Date	Used to specify the date when the payment is made.	Yes

- **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment is made.	Yes
Tender Amount	Used to specify the tender amount.  <b>Note:</b> You must not specify the value less than or equal to 0.  The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	Yes
Currency	Used to indicate the currency in which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.  <b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Auto Pay Route Type Search</b> window appears.  On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the <b>Auto Pay Route Type Code</b> field.	Yes (Conditional)  <b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> The data appears only when you: <ul style="list-style-type: none"> <li>Select a tender type where the <b>Generate Auto Pay</b> check box is selected.</li> <li>Specify the values for <b>Auto Pay Route Type Code</b> and <b>Auto Pay Source Code</b> fields.</li> </ul>	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Auto Pay Source Search</b> window appears.  On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the <b>Auto Pay Source Code</b> field.	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Distribution Freeze Date and	Displays the date when the automatic payment must be distributed and freezed in the system.	Not applicable
	<b>Note:</b> The data appears only when you: <ul style="list-style-type: none"> <li>Select a tender type where the <b>Generate Auto Pay</b> checkbox is selected in the <b>Tender Type</b> screen.</li> <li>Specify the values for <b>Auto Pay Route Type Code</b> and <b>Auto Pay Source Code</b> fields.</li> </ul>	
Account Number	Used to indicate the bank account number through which the automatic payment is made.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Expires On	Used to specify the date till when the tender is effective.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Name	Used to specify the name of the person as it appears in the financial institution's system.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to specify the person's account ID mentioned in the payment upload interface record.	No
Name	Used to specify the name of the person as it appears in the payment upload interface record.	No
Tender Control ID	Used to indicate the payment tender ID.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Tender Control Search</b> window appears.  On specifying the tender control ID, the description of the tender control ID appears corresponding to the <b>Tender Control ID</b> field.	No
Deposit Control Information	Used to indicate the deposit control ID.  <b>Note:</b> It is a read-only field.  The data appears in this field when the tender control ID is specified.	No

**Note:** If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to edit the characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> <p>On specifying the business object, the description of the business object appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the payment tender.</p>

- **Match Types** - Used to edit match types for the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	<p>Used to indicate whether the default payment amount should be displayed against the match type entities.</p> <p><b>Note:</b> By default, the <b>Show Default</b> check box is selected when you select the match type.</p>	No
Entity	<p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account</b> - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li>• <b>Bill</b> - Enables you to select the unpaid bill against which you want to match the payment.</li> <li>• <b>Statement</b> - Enables you to select the statement against which you want to match the payment.</li> </ul>	Not applicable
Entity ID	<p>Used to specify the account or bill ID depending on the match type entity.</p> <p><b>Note:</b></p> <p>This field appears as read-only while you are viewing the match types which are added for the payment creation request.</p> <p>If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information. In that case, the <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, based on the selected match type, the relevant entity <b>Search</b> window appears. On specifying the entity, the description of the entity appears corresponding to the <b>Entity ID</b> field.</p>	Yes

**Note:** The **Edit** button appears when the payment creation request is in the **Draft** status.

4. Modify the details of the payment creation request, if required.

**Note:**

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

- 5. Define, edit, or remove characteristics of the payment request, if required.
- 6. Click **Manual Distribution**.  
The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

**Deleting a Payment Creation or Transfer Request**

**Procedure**

To delete a payment creation or transfer request:

- 1. Search for the payment creation or transfer request in the **Payment Request** screen.
- 2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request that you want to delete.  
The **Payment Request** screen appears.
- 3. Click the **Delete** button in the **Payment Request** zone.  
A message appears confirming whether you want to delete the payment creation or transfer request.

**Note:** The **Delete** button appears when the payment creation or transfer request is in the **Draft** status.

- 4. Click **OK**.  
The payment creation or transfer request is deleted.

## Distributing the Tender or Payment Amount

### Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.  
The **Payment Request** screen appears.
3. Click the **Distribute** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

### Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

### Note:

The **Distribute** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

**Distributing and Freezing the Tender or Payment Amount**

**Procedure**

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.  
The **Payment Request** screen appears.
3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The **Defer** algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the **Defer** algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

**Note:**

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

**Note:**

The **Distribute And Freeze** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

## Redistributing the Tender or Payment Amount

**Procedure**

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.  
The **Payment Request** screen appears.
3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.  
The required payment gets redistributed among the account's contracts.

**Note:** The **Redistribute** button appears when the payment status is in **Incomplete**, **Error**, or **Freezable** status.

## Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount when there are multiple pay segments in a payment.

**Procedure**

To edit the payment segment amount:

- 1. Search for the payment request in the **Payment Request** screen.
- 2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.  
The **Payment Request** screen appears.
- 3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

Field Name	Field Description
Payment Event Information	Displays information about the payment event which is created through the payment request.
Payment Information	Displays information about the payment which is created through the payment event.
Payee Account Information	Displays information about the account for which the payment is made.
Match Value	Displays information about the entity against which the payment is matched.
Payment Amount	Displays the total payment amount.
Running Total	Displays the sum of payment amount specified against each pay segment.
Running Balance	Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sr No	Indicates the sequence number of the pay segment.	Not applicable
Entity Information	Displays information about the entity (such as bill segment or contract) against which the pay segment is created.	Not applicable
Total Amount	Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount.	Not applicable
Unpaid Amount	Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount.	Not applicable
Payment Amount	Used to specify the payment amount that you want to distribute against the pay segment.	Yes
	<b>Note:</b> This field is non-editable when: <ul style="list-style-type: none"><li>• There is only one pay segment in a payment.</li><li>• A user with the approval To Do role is reviewing the pay segment amount.</li></ul>	
Payment Currency	Indicates the currency in which the payment was made.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Pay Segment ID	Displays the pay segment ID.	Not applicable

Note:

The **Detail** button appears in the **Detail** column when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.  
The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

## Freezing Payments Created Through a Payment Request

Procedure

To feeeeze the payments created through a payment request:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.  
The **Payment Request** screen appears.
- If required, you can edit the amount of a payment segment before freezing the payments.
- Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Freezing the payments created through a payment creation request	The status of the payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . In addition, the status of the payment request is changed to <b>Processed</b> .

If you are...	Then
Freezing the payments created through a payment transfer request	The status of the old payments which are in the <b>Frozen</b> status is changed to <b>Cancelled</b> . The old payments which are in the <b>Error</b> status are deleted. The status of the new payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . The status of the payment event is changed to <b>Balanced</b> when there are no new payments in the <b>Error</b> status. In addition, the status of the payment request is changed to <b>Processed</b> .

Note:

The **Freeze** button appears when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

## Submitting a Payment Creation or Transfer Request for Approval

Procedure

To submit a payment creation or transfer request for approval:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request that you want to submit for approval.  
The **Payment Request** screen appears.
3. If required, you can edit the amount of a payment segment before submitting the payment creation or transfer request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.  
The status of the payment creation or transfer request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

**Note:**

The **Submit for Approval** button appears when:

- The payment creation or transfer request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment creation or transfer request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment creation or transfer request for approval.

**Approving a Payment Creation or Transfer Request**

You can view the number of payment creation or transfer requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment creation or transfer request based on the observations.

**Note:** The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

**Procedure**

To approve a payment creation or transfer request:

1. Do either of the following:

If you want to	Then
Approve a payment creation or transfer request through the <b>Payment Request</b> screen	<p>a. Search for the payment creation or transfer request in the <b>Payment Request</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the link in the <b>Payment Request Information</b> column corresponding to the payment creation or transfer request which you want to review.</p>
Approve a payment creation or transfer request from the <b>To Do List</b> screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</p> <p>The <b>To Do Type for User Search</b> window appears.</p> <p>c. Enter <b>C1-PAYRQ</b> in the <b>To Do Type</b> field.</p> <p>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p>

If you want to	Then
	f. Click the link in the <b>Message</b> column corresponding to the To Do of the payment creation or transfer request that you want to review.

The **Payment Request** screen appears.

- 2. Review the payment creation or transfer request details.
- 3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Approving a payment creation request	The status of the payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . In addition, the status of the payment creation request is changed to <b>Processed</b> .
Approving a payment transfer request	The status of the old payments which are in the <b>Frozen</b> status is changed to <b>Cancelled</b> . The old payments which are in the <b>Error</b> status are deleted. The status of the new payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . The status of the payment event is changed to <b>Balanced</b> when there are no new payments in the <b>Error</b> status. In addition, the status of the payment transfer request is changed to <b>Processed</b> .

**Note:** The **Approve** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

**Related Topics**

## Rejecting a Payment Creation or Transfer Request

**Prerequisites**

To reject a payment creation or transfer request, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting a payment creation or transfer request, you need to specify the reason why you want to reject the payment creation or transfer request. If you are rejecting a payment creation request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

**Procedure**

To reject a payment creation or transfer request:

1. Do either of the following:

If you want to...	Then...
Reject a payment creation or transfer request through the Payment Request screen	<p>a. Search for the payment creation or transfer request in the <b>Payment Request</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the link in the <b>Payment Request Information</b> column corresponding to the payment creation or transfer request which you want to review.</p>
Reject a payment creation or transfer request from the To Do List screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</p> <p>The <b>To Do Type for User Search</b> window appears.</p> <p>c. Enter <b>C1-PAYRQ</b> in the <b>To Do Type</b> field.</p> <p>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>f. Click the link in the <b>Message</b> column corresponding to the To Do of the payment creation or transfer request that you want to review.</p>

The **Payment Request** screen appears.

2. Review the payment creation or transfer request details.
3. If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
4. Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment creation or transfer request.	Yes

**Note:** The **Reject** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

5. Select the rejection reason from the **Status Reason** list.
6. Click **Save**.
- If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

## Discarding a Payment Creation or Transfer Request

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

Note:

The **Discard** button appears only when the payment creation or transfer request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment creation or transfer request is similar to rejecting a payment creation or transfer request. However, you can only reject a payment creation or transfer request, when the approval workflow is on while creating a payment creation or transfer request but discarding a payment creation or transfer request can be done in both the cases, when the approval workflow is on or off.

## Viewing the Log of a Payment Creation or Transfer Request

Procedure

To view the log of a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following two zones:
  - **Payment Request** - Displays the details of the payment creation or transfer request.
  - **Payment Distribution** - Lists the payment distribution records of the payment creation or transfer request.
- **Log** - This tab lists the complete trail of actions performed on the payment creation or transfer request.

3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the payment creation or transfer request.
Details	Displays the details about the action performed on the payment creation or transfer request.
User	Indicates the user who has performed the action on the payment creation or transfer request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment creation or transfer request.
Status Reason	Indicates the reason why the payment creation or transfer request was rejected.

**Note:** You can manually add a log entry for the payment creation or transfer request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

# Adding a Log Entry for a Payment Creation or Transfer Request

**Procedure**

To add a log entry for a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request whose log you want to edit.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following two zones:
  - **Payment Request** - Displays the details of the payment creation or transfer request.
  - **Payment Distribution** - Lists the payment distribution records of the payment creation or transfer request.
- **Log** - This tab lists the complete trail of actions performed on the payment creation or transfer request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

The **Add Payment Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment creation or transfer request.	Not applicable
Log Details	Used to specify additional comments for the payment creation or transfer request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.  
The log entry is added in the **Payment Request Log** zone.

# Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 1426
- [Payments](#) on page 1430
- [Payment Segments](#) on page 1431

## Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are: <ul style="list-style-type: none"><li>• Payor Account/Payment Event</li><li>• Tender Details</li><li>• Suspense/Excess Credit Contract</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> By default, the <b>Payor Account/Payment Event</b> option is selected.	
Payment Event ID	Used to search a particular payment event.  <b>Note:</b> This field appears when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Payment Event Search</b> window appears.	No
Payor Account ID	Used to search payment events which are created for a particular payor account.  <b>Note:</b> This field appears when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	No
Payor Name	Used to search payment events which are created for a particular payor.  <b>Note:</b> This field appears when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list.	No
Payment Date	Used to search payment events which are created on a particular date.  <b>Note:</b> This field appears when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list. You can either manually specify the date or select it using the <b>Date Picker</b> icon corresponding to the field.	No
Tender Type	Used to search payment events where a particular tender type is used.  <b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	No
Check Number	Used to search a payment event which includes payments made through a particular check.  <b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No
	<b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	
Contract ID	Used to search payment events which include payments made against a particular suspense or excess credit contract.	No
	<b>Note:</b> This field appears when you select the <b>Suspense/Excess Credit Contract</b> option from the <b>Search By</b> list. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Search</b> window appears.	
External Reference ID	Used to search payment events which include payments made with a particular external reference id.	No
	<b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	
Payment Date From	Used to search payment events which are created on a particular date.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list. You can either manually specify the date or select it using the <b>Date Picker</b> icon corresponding to the field. The payment date from date cannot be later than the payment date to date.	<b>Note:</b> This field is required when the <b>Payment Date To</b> is specified.
Payment Date To	Used to search payment events which are created till a particular date.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Tender Details</b> option from the <b>Search By</b> list. You can either manually specify the date or select it using the <b>Date Picker</b> icon corresponding to the field. The payment date to date cannot be earlier than the payment date from date.	<b>Note:</b> This field is required when the <b>Payment Date From</b> is specified.
Characteristic Type	Used to search payment events where a particular characteristic type is used.	No

**Note:** You must specify at least one search criterion while searching for a payment event.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Transfer	On clicking the <b>Transfer</b> button, you can transfer all payments (which are in either <b>Frozen</b> and <b>Error</b> status) of the payment event to another payee account.
	<b>Note:</b> The <b>Transfer</b> button appears when: <ul style="list-style-type: none"><li>One or more payments of the payment event are in the <b>Frozen</b> or <b>Error</b> status.</li><li>There is no payment transfer request which is currently in progress for the payment event.</li></ul>
Cancel	On clicking the <b>Cancel</b> button, you can cancel all payments (which are in the <b>Frozen</b> status) of the payment event.
	<b>Note:</b> The <b>Cancel</b> button appears when: <ul style="list-style-type: none"><li>One or more payments of the payment event are in the <b>Frozen</b> status.</li><li>One or more payments of the payment event are not in the <b>Freezable</b> or <b>Error</b> status.</li><li>There is no payment transfer request which is currently in progress for the payment event.</li></ul>
Delete	On clicking the <b>Delete</b> button, you can delete the payment event.
	<b>Note:</b> The <b>Delete</b> button appears when the payments of a payment event are in the <b>Freezable</b> , <b>Error</b> or <b>Incomplete</b> status.
Additional Information	Displays information about the status of the payment event.
Payment Date	Displays the date when the payment was made.
Payor Name	Indicates the person who has made the payment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Payor Account ID	Indicates the account which made the payment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

## Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears with the details of the respective payment.
Payee Account Information	Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Payment Amount	Displays the amount paid through the tender.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"><li>• Incomplete</li><li>• Error</li><li>• Freezable</li><li>• Frozen</li><li>• Canceled</li></ul>
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched.
Error Message	Indicates the reason why the payment is in the <b>Error</b> status.
Payor Account ID	Indicates the account which made the payment.
Refund Amount	Displays the amount which is already refunded to the payor account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Transfer	Used to transfer the payment to another payee account.
	<b>Note:</b> You can transfer a payment when it is in the <b>Frozen</b> or <b>Error</b> status.
Cancel	Used to cancel the payment.

Button Name	Button Description
	<b>Note:</b> You can cancel a payment when it is in the <b>Frozen</b> status.
Delete	Used to delete the payment.
	<b>Note:</b> You can delete a payment when it is in the <b>Freezable</b> or <b>Error</b> status.
Refund	Used to refund the payment amount to the payor account.
	<b>Note:</b> You can refund the payment amount to the payor account when: <ul style="list-style-type: none"><li>• The payment is matched against the suspense or excess credit contract.</li><li>• The payment is in the <b>Frozen</b> status.</li></ul>

**Payment Segments**

The **Payment Segments** zone lists payment segments of a payment. This zone contains the following columns:

Column Name	Column Description
Pay Segment ID	Displays the payment segment ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Pay Segments</b> tab of the <b>Payment</b> screen appears where you view the details of the payment segment.
Contract Information	Displays information about the contract against which the payment segment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Payment Amount	Displays the payment segment amount.
Match Event ID	Indicates the match event which is created for the payment segment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Match Event</b> screen appears where you can view the details of the respective match event.

## Searching for a Payment Event

**Prerequisites**

To search for a payment event, you should have:

- Tender types defined in the application

**Procedure**

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Payments** and then click **Payment Event Summary**.  
The **Payment Event Summary** screen appears.
4. Enter the search criteria in the **Search Payment Event** zone.

**Note:**

You can search for a payment event and payor account by clicking the **Search** (🔍) icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of payment events that meet the search criteria appears in the **Search Results** section.

**Related Topics**

<b>Payment Event Summary</b> screen	<a href="#">Payment Event Summary</a> on page 1426
<b>Search Payment Event</b> zone	<a href="#">Search Payment Event</a> on page 1426

## Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

**Prerequisites**

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

**Procedure**

To create a payment transfer request:

- 1. Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- 2. Do either of the following:

If you want to...	Then...
Transfer all payments of a payment event	a. In the <b>Search Results</b> section, click the <b>Transfer</b> button in the <b>Transfer</b> column corresponding to the payment event whose payments you want to transfer.
	<b>Note:</b> The <b>Transfer</b> button appears only when: <ul style="list-style-type: none"><li>• One or more payments of the payment event are in the <b>Frozen</b> or <b>Error</b> status.</li><li>• There is no payment transfer request which is currently in progress for the payment event.</li></ul>
Transfer one or more payments of a payment event	a. In the <b>Search Results</b> section, click the <b>Broadcast</b> (📡) icon corresponding to the payment event whose payments you want to view.  The <b>Payments</b> zone appears.
	b. Select the check box corresponding to the payments that you want to transfer.
	c. Click the <b>Transfer</b> button in the <b>Payments</b> zone.
	<b>Note:</b> You can transfer a payment when it is in the <b>Frozen</b> or <b>Error</b> status.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment transfer request.	Yes
	<b>Note:</b> The list includes only those payment request types where the <b>Transfer</b> check box is selected.	

- 3. Select the required payment request type from the respective field.
- 4. Click **OK**.
  - **Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment transfer request.	Not applicable
Payment Event Information	Displays information about the payment event whose payments you want to transfer.	Not applicable
Maximum Transfer Amount	Displays the maximum payment amount which you can transfer.	Not applicable
	<b>Note:</b> This is a read-only field.	
Transfer Amount	Used to specify the total payment amount which you want to transfer.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> By default, the maximum transfer amount appears in this field.	
Payment Date	Used to specify the date when the payment is transferred.  <b>Note:</b> By default, the current date appears in this field. This field appears when you want to transfer all the payments of a payment event.	Yes
Transfer Reason	Used to indicate the reason why you want to transfer the payments.  <b>Note:</b> The list includes only those payment cancel reasons where the <b>Payment Transfer</b> check box is selected.	Yes

- **Match Types** - Used to define match types for the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.  <b>Note:</b> The <b>Show Default</b> check box is selected when you select the match type.	No
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> <li>• <b>Account</b> - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li>• <b>Bill</b> - Enables you to select the unpaid bill against which you want to match the payment.</li> <li>• <b>Statement</b> - Enables you to select the statement against which you want to match the payment.</li> </ul> <b>Note:</b> By default, this is a read-only field.	Not applicable
Entity ID	Used to indicate the account, bill ID, or statement ID depending on the match type entity.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, based on the selected match type, the relevant entity <b>Search</b> window appears.	Yes

#### 5. Enter the required details.

**Note:** If you want to specify more than one match type within the payment transfer request, click the **Add (+)** icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete (X)** icon corresponding to the match type.

6. Click **Manual Distribution**.

The payment transfer request is created and the status of the payment transfer request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment transfer request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account
		<b>Note:</b> Only contracts of the contract type where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> are listed in the <b>Payment Distribution</b> zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> ) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in <b>Payment Distribution</b> zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

**Note:**

If a payment transfer request is already created for a payee account and is currently in progress, the system will not allow you to create another payment transfer request for the payee account until the previous payment transfer request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment transfer request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

If the entire refund amount is already processed for the payee account, the system will not allow you to create a payment transfer request.

Editing a Payment Transfer Request

Procedure

To edit a payment transfer request:

1. Search for the payment transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment transfer request whose details you want to edit.  
The **Payment Request** screen appears.
3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment transfer request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment transfer request is created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Payment Event Information	Displays information about the payment event.	Not applicable
Maximum Transfer Amount	Displays the maximum payment amount which you can transfer.	Not applicable
Transfer Amount	Displays the total payment amount which can be transferred.	Not applicable
	<b>Note:</b> This is a read-only field.	
Transfer Reason	Used to indicate the reason why you want to transfer the payments.	Yes
	<b>Note:</b> The list includes only those payment cancel reasons where the <b>Payment Transfer</b> check box is selected.	
Payment Date	Displays the date when the payment is made.	Yes

- **Match Types** - Used to edit match types for the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Indicates the match type using which you want to match the payment.	Yes
	<b>Note:</b> This field appears as read-only while you are viewing the match types which are added for the payment transfer request.	
Show Default	Indicates whether the default payment amount should be displayed against the match type entities.	No
	<b>Note:</b> This field appears as read-only while you are viewing the match types which are added for the payment transfer request.  The <b>Show Default</b> check box is selected when you select the match type.	
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> <li>• <b>Account</b> - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li>• <b>Bill</b> - Enables you to select the unpaid bill against which you want to match the payment.</li> <li>• <b>Statement</b> - Enables you to select the statement against which you want to match the payment.</li> </ul>	Not applicable
	<b>Note:</b> By default, this is a read-only field.	

Field Name	Field Description	Mandatory (Yes or No)
Entity ID	Used to indicate the account or bill ID depending on the match type entity.	Yes
	<b>Note:</b>  This field appears as read-only while you are viewing the match types which are added for the payment transfer request.  If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information. In that case, the <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, based on the selected match type, the relevant entity <b>Search</b> window appears. On specifying the entity, the description of the entity appears corresponding to the <b>Entity ID</b> field.	

4. Modify the details of the payment transfer request, if required.

**Note:**  
  
If you want to specify more than one match type within the payment transfer request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete** (🗑) icon corresponding to the match type.  
  
You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Click **Manual Distribution**.

The changes made to the payment transfer request are saved. The **Payment Request** screen appears. Depending on the information specified in the **Match Types** section, the following entities are listed in the **Payment Distribution** zone.

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account

Match Type	Match Entity	Entities
		<b>Note:</b> Only contracts of the contract type where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> are listed in the <b>Payment Distribution</b> zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> ) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in <b>Payment Distribution</b> zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

## Cancelling a Payment Tender

**Prerequisites**

To cancel a payment tender, you should have:

- Payment cancel reasons defined in the application

**Procedure**

To cancel a payment tender:

1. Search for the payment tender in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Tender Cancel** link in the **Cancel** column corresponding to the payment tender that you want to cancel.

The **Payment Event** screen appears.

**Note:** The **Tender Cancel** link appears when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

- 3. Ensure that the **Tenders** tab is selected.
- 4. Click the **Cancel** button in the **Tender Cancel** row.

The **Tender Cancel** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Cancel Reason	Used to indicate the reason why you want to cancel the payment tender.	Yes						
Bank Account To Charge	Used to specify the bank details for cancellation charge purposes.	Yes						
	<table><tr><th>Field Name</th><th>Field Description</th></tr><tr><td>Bank Code</td><td>Used to indicate the bank code which should be charged for cancellation.</td></tr><tr><td>Bank Account Key</td><td>Used to indicate the bank account which should be charged for cancellation.</td></tr></table>		Field Name	Field Description	Bank Code	Used to indicate the bank code which should be charged for cancellation.	Bank Account Key	Used to indicate the bank account which should be charged for cancellation.
	Field Name		Field Description					
	Bank Code		Used to indicate the bank code which should be charged for cancellation.					
Bank Account Key	Used to indicate the bank account which should be charged for cancellation.							

- 5. Click **OK**.  
The payment tender and all payments in the payment event are cancelled.

## Deleting a Payment Event

You can delete a payment event when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

**Procedure**

To delete a payment event:

- 1. Search for the payment event in the **Payment Event Summary** screen.
- 2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment event that you want to delete.  
A message appears confirming whether you want to delete the payment event.

**Note:** The **Delete** button appears when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

- 3. Click **OK**.  
The payment event is deleted.

## Updating the Transfer Amount in a Payment Transfer Request

**Procedure**

To update the transfer amount in a payment transfer request:

- 1. Search for the payment transfer request in the **Payment Request** screen.
- 2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment transfer request whose transfer amount you want to change.  
The **Payment Request** screen appears.
- 3. Click the **Update Transfer Amount** button in the **Payment Request** zone.  
The **Update Transfer Amount** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Maximum Transfer Amount	Displays the maximum payment amount which you can transfer.	Not applicable
	<b>Note:</b> This is a read-only field.	
Transfer Amount	Used to specify the total payment amount which you want to transfer.	Yes
	<b>Note:</b> By default, the maximum transfer amount appears in this field.	

**Note:** The **Update Transfer Amount** button appears when the payment transfer request is in the **Draft** status.

- 4. Update the transfer amount, if required.
- 5. Click **Save**  
The transfer amount in the payment transfer request is updated.

**Note:** By clicking the **Update Transfer Amount** button you can convert a full payment transfer into partial payment transfer.

## Updating the Tender Details in a Payment Transfer Request

### Procedure

To update the tender details in a payment transfer request:

1. Search for the payment transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment transfer request whose details you want to view.

The **Payment Request** screen appears.

3. Click the **Update Tender Details** button in the **Payment Request** zone.  
The **Update Tender Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Indicates the type of tender through which the payment is made.	Not applicable
Tender Amount	Displays the tender amount.	Not applicable
Currency	Indicates the currency in which the payment is made.	Not applicable
Check Number	Indicates the check number if the payment is made through check.	Not applicable
Pay Tender ID	Indicates the payment tender ID.	Not applicable
Tender Status	Indicates the status of the tender. The valid values are: <ul style="list-style-type: none"><li>• Valid</li></ul>	Not applicable
Tender Control ID	Used to indicate the tender control ID.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Tender Control Search</b> window appears.  On specifying the tender control ID, the description of the tender control ID appears corresponding to the <b>Tender Control ID</b> field.	
Deposit Control Information	Used to indicate the deposit control ID.	No
	<b>Note:</b> It is a read-only field.  The data appears in this field when the tender control ID is specified.	
MICR ID	Used to specify the MICR code on the payment.	No

Field Name	Field Description	Mandatory (Yes or No)
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to specify the person's account ID mentioned in the payment upload interface record.	No
Name	Used to specify the name of the person as it appears in the payment upload interface record.	No

In addition to the above fields, this screen contains the following section:

**Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.  On specifying the business object, the description of the business object appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

- 4. Enter the required details.
- 5. Define characteristics for the payment tender, if required.
- 6. Click **Save**.

## Account Receivable Central

---

### Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

# Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

**Note:** The **Unapply** button appears when the offset request is in the **Processed** status

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1200	-\$800	\$400	Bill 1 amount \$1200 is offset against Bill 2.
Bill 2	-\$1000	\$500	-\$500	From Bill 2, \$500 is offset against from Bill 1.
Bill 3	-\$300	\$300	0	From Bill 3, \$300 is offset against from Bill 1.

# Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$2000	-\$700	\$1300	The Offset amount \$400 is offset against Bill 2.
Bill 2	-\$400	\$400	0	Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000.
Bill 3	-\$300	\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600.

## Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

Bill Information	Outstanding Amount	Outstanding Amount (in Offset currency)	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$300	\$300	-\$130.1	\$169.9	Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$)
Bill 2	-£100	-\$130.1	\$130.1	0	Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1.

**Note:** In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

**Note:** The adjustments are created in the currency of the bill.

## Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

## Refund

---

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

## Write Off

---

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

## Dispute

---

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

## Account Receivable Central

---

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1451

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1512
- [Hold Request \(Used for Viewing\)](#) on page 1715
- [Refund Request](#) on page 2582
- [Write Off Request](#) on page 2615
- [Dispute Request \(Used for Viewing\)](#) on page 2060

## Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"><li><b>Person Details</b></li><li><b>Account Details</b></li><li><b>Bill Details</b></li></ul>	Yes
	<b>Note:</b> By default, the <b>Person Details</b> option is selected.	
Person ID	Used to select the person ID based on which you want to search for bills of a person.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search for bills of a person.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the person identifier type as a search criteria, you have to select the person identifier.
Bills on Hold	Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"><li>No</li></ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Yes</li> </ul>	
Bill Balance	Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> <li>Equal to Zero</li> <li>Greater Than Zero</li> <li>Less Than Zero</li> <li>Not Equal to Zero</li> </ul>	No
Pending Bills	Used to indicate whether the bill is pending.	No
Account ID	Used to search for bills of a particular account.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to specify the account identifier type of the account whose bill you want to search.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier	Used to select the account identifier based on which you want to search for bills of a particular account.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
Invoice Currency	Used to search for bills which are billed in a particular currency.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Bill Outstanding Amount From	Used to search bills with a particular minimum outstanding amount.	

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills with a particular maximum outstanding amount.	

**Note:** You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Outstanding Amount	Displays the current bill balance amount.
Bill Date	Used to specify the date on which the bill was generated.
Hold Amount	Displays the amount from the bill that is on hold.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective bill.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective bill.

This zone contains following buttons:

Button Name	Button Description
Single Offset	Used to add the selected bill with same currency to an offset request.
Mass Offset	Used to add the selected bills with same currency to an offset request.
Cross Currency Offset	Used to add the selected bills with different currency to an offset request.
Hold	Used to add the selected bill to hold request to be put on hold.
Write Off	Used to add the selected bill to a write off request.
Refund	Used to add the selected bill to a refund request.
Dispute	Used to add the selected bill to a dispute request.

## Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- [Hold Details](#) on page 1454
- [Offset Details](#) on page 1454
- [Garnishment Details](#) on page 1455
- [Bill Line Items](#) on page 1455

## Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

Column Name	Column Description
Offset Request Information	Displays additional information about the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total offset amount.
Creation Mode	Displays the mode of creation for offset request . The valid values are: <ul style="list-style-type: none"><li>• Automatic</li><li>• Manual</li></ul>

## Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Displays the type of entity.
Hold Entity	Displays additional information about the bill which is put on hold.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.

Column Name	Column Description
Start Date	Displays the start date of the hold request.
End Date	Displays the end date of the hold request.

## Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

Column Name	Column Description
Garnishment Contract	Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Garnishment Amount	Displays the total garnishment amount.

## Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

Field Name	Field Description
Bill Line Item	Displays the bill line item (bill segment/adjustment) of the selected bills.
Bill Line Item Information	Displays the information about the bill line item.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen or <b>Adjustments</b> screen appears with the details of the respective bill line item or adjustments.
Amount	Displays the amount of the bill line item.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

## Searching for a Bill

### Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**.  
The **Account Receivable Central** screen appears.
3. Enter the search criteria in the **Search Bill** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

**Note:** The wild card search for searching bill in the **Search Bill** zone is applicable when you select the **Bill Details** option from the **Search By** list.

4. Click **Search**.  
A list of bills that meet the search criteria appears in the **Search Results** section.

## Viewing the Bill Details

---

### Procedure

To view the details of a bill:

1. Search for the bill in the **Account Receivable Central** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▼) icon corresponding to the bill whose details you want to view.  
A menu appears.
3. Click the **Go To Bill Information** menu option.  
The **Bill Information** screen appears.
4. View the details of the bills in the **Bill Information** screen.

Oracle Revenue Management and Billing allows you to offset the credit and debit bills across accounts of the person and/or its hierarchy. However, you can offset bills across person's hierarchy when the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**.

You can offset a credit bill with a debit bill and vice-versa. You can offset one or more credit bills with one or more debit bills and vice-versa. You can offset the credit and debit bills in the same currency or in the different currencies. The system enables you to offset bills through an offset request. You can create an offset request from the following screens:

- [Account Receivable Central](#) on page 1450
- [Offset Request \(Used for Searching\)](#) on page 1506

You can create the following types of offset request from both the above screens:

- [Single Offset](#) on page 1459
- [Mass Offset](#) on page 1460
- [Cross Currency Offset](#) on page 1462

While creating an offset request, you need to specify an offset request type using which you want to create the offset request. It is the offset request type which helps the system to determine:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustment should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether the transfer or offset adjustments should be created while offsetting bills through an offset request.

In addition, while creating an offset request, you need to specify a primary bill for which you want to create the offset request. A primary bill can be a debit or credit bill. Once the primary bill is added to an offset request, you can never remove it from the offset request.

Once you specify an offset request type and primary bill, the offset request is created in the **Draft** status. You can then add one or more debit or credit bills in the same or different currencies to the offset request depending on whether you want to create single, mass, or cross currency offset request. These bills

are called as secondary bills. You can remove a secondary bill from the offset request when it is in the **Draft** status.

Once both the debit and credit bills are added to an offset request, the default offset amount is calculated for each bill. You can then update the offset amount of a bill, if required. Once the offset amount is specified for each bill, you can submit the offset request. On submitting an offset request, the system checks whether the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type). If the number of financial transactions does not exceed the defer processing count, the system creates the transfer or offset adjustments in the **Frozen** status. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. The batch then creates the transfer or offset adjustments for these offset requests in the **Frozen** status.

You can optionally configure the approval process for the offset request. The approver can either approve or reject an offset request based on the observations. The system also enables you to unapply (i.e. cancel) an offset request. On canceling an offset request, the transfer or offset adjustments created for bills through the offset request are canceled.

An offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1465 and [Offset Request \(With Approval\) Status Transition](#) on page 1466. Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request feature, see [Prerequisites](#) on page 1464.

# Single Offset

Single offset means you can offset one credit bill against multiple debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for single offset:

Account	Bill	Due Date	Bill Segment	Contract Type	Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A1	Bill 1	06-18-2018	BS1	10		-\$100	-\$100	-\$20
	Bill 2	06-12-2018	BS2	10		\$30	\$30 (This is because \$20 is already paid.)	\$10
			BS3	20		\$20		
	Bill 3	06-22-2018	BS4	10		\$30	\$30	\$10
	Bill 4	06-28-2018	BS5	20		\$30	\$40	-
			BS6	30		\$10		

The system enables you to offset these bills through a single offset request. While creating a single offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills - Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 - (-\$20)) = (-\$100 + \$20) = -\$80$$

Sum of debit bills' amount which is available for offsetting:

$$((\$30 - \$10) + (\$30 - \$10) + (\$40)) = \$80$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

**Note:** If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a single offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the single offset with respect to the above example:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"><li>• \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1</li></ul>

Transfer	Transfer Adjustments
	<ul style="list-style-type: none"><li>• -\$20 transfer adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2</li></ul>
2	<ul style="list-style-type: none"><li>• \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1</li><li>• -\$20 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4</li></ul>
3	<ul style="list-style-type: none"><li>• \$30 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1</li><li>• -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5</li></ul>
4	<ul style="list-style-type: none"><li>• \$10 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1</li><li>• -\$10 transfer adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6</li></ul>

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$80 offset adjustment is created for Bill 1 and matched to -\$100 Bill Segment Cancellation (BS1) FT 1
- -\$20 offset adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2
- -\$20 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- -\$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5
- -\$10 offset adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [C1-OFST-DIST](#) on page 1475.

You can create a single offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a single offset request, see [Creating an Offset Request](#) on page 1510.

## Mass Offset

Mass offset means you can offset one or more credit bills against one or more debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for mass offset:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A11	Bill 1	01-15-2019	BS1	10	-\$50	-\$100	-
			BS2	20	-\$50		
	Bill 2	01-20-2019	BS3	10	-\$50	-\$50	-
	Bill 3	01-18-2019	BS4	10	\$30	\$50	-
			BS5	10	\$20		
A12	Bill 4	01-21-2019	BS6	10	\$30	\$30	-
	Bill 5	01-25-2019	BS7	20	\$30	\$40	-
			BS8	30	\$10		

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A13	Bill 6	01-29-2019	BS9	10	\$20	\$20	-

The system enables you to offset these bills through a mass offset request. While creating a mass offset request, you can add the Bill 1 as the primary bill. Once the offset request is created, you can add another credit bill (i.e. Bill 2) and the debit bills - Bill 3, Bill 4, Bill 5, and Bill 6. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 + (-\$50)) = (-\$100 - \$50) = -\$150$$

Sum of debit bills' amount which is available for offsetting:

$$(\$50 + \$30 + \$40 + \$20) = \$140$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. In this case, the default offset amount is set to \$140. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

**Note:** If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a mass offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the mass offset with respect to the above example:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"><li>• \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1</li><li>• -\$30 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4</li></ul>
2	<ul style="list-style-type: none"><li>• \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1</li><li>• -\$20 transfer adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5</li></ul>
3	<ul style="list-style-type: none"><li>• \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2</li><li>• -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6</li></ul>
4	<ul style="list-style-type: none"><li>• \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2</li><li>• -\$20 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7</li></ul>

Transfer	Transfer Adjustments
5	<ul style="list-style-type: none"><li>\$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3</li><li>-\$10 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7</li></ul>
6	<ul style="list-style-type: none"><li>\$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3</li><li>-\$10 transfer adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8</li></ul>
7	<ul style="list-style-type: none"><li>\$20 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3</li><li>-\$20 transfer adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9</li></ul>

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS1) FT 1
- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS2) FT 2
- \$40 offset adjustment is created for Bill 2 and matched to -\$50 Bill Segment Cancellation (BS3) FT 3
- \$30 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- \$20 offset adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5
- \$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6
- \$30 offset adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
- \$10 offset adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8
- \$20 offset adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [C1-OFST-DIST](#) on page 1475.

You can create a mass offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a mass offset request, see [Creating an Offset Request](#) on page 1510.

## Cross Currency Offset

Cross currency offset means you can offset one credit bill against multiple debit bills and vice-versa in the different currencies. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for cross currency offset:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A1	Bill 1	09-18-2018	BS1	10	-\$250	-\$250	-
	Bill 2	09-12-2018	BS2	10	€10	€30	-
			BS3	20	€20	-	-
	Bill 3	09-22-2018	BS4	10	€50	€50	-
	Bill 4	09-28-2018	BS5	20	€30	€70	-
			BS6	30	€40		

The system enables you to offset these bills through a cross currency offset request. While creating a cross currency offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills - Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. In a cross currency offset request, you can offset the bills which are in the currency different from the primary bill. For example, if you have added a primary bill with credit balance in USD, you can only add the debit bills in the currency other than USD. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills’ amount which is available for offsetting:

- \$250

Sum of credit bills’ amount which is available for offsetting (in offset currency):

- €227

Sum of debit bills’ amount which is available for offsetting:

(30€+50€+70€) = €150

Sum of debit bills’ amount which is available for offsetting (in offset currency):

\$33+\$55+\$77=\$165

The system considers the credit or debit bills’ total (in the primary bill's currency) whichever is less as the default offset amount. In this case, the default offset amount is set to \$165. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

**Note:** If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a cross currency offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the cross currency offset with respect to the above example:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"><li>• \$11 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1</li><li>• -€10 transfer adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2</li></ul>
2	<ul style="list-style-type: none"><li>• \$22 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1</li><li>• -€20 transfer adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3</li></ul>
3	<ul style="list-style-type: none"><li>• \$55 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1</li><li>• -€50 transfer adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4</li></ul>
4	<ul style="list-style-type: none"><li>• \$33 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1</li></ul>

Transfer	Transfer Adjustments
	<ul style="list-style-type: none"> <li>-€30 transfer adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5</li> </ul>
5	<ul style="list-style-type: none"> <li>\$44 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1</li> <li>-€40 transfer adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6</li> </ul>

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$165 offset adjustment is created for Bill 1 and matched to -\$250 Bill Segment Cancellation (BS1) FT 1
- €10 offset adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
- €20 offset adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
- €50 offset adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
- €30 offset adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
- €40 offset adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [C1-OFST-DIST](#) on page 1475.

To use the cross currency offset request feature, you need to do the following:

- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.

You can create a cross currency offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a cross currency offset request, see [Creating an Offset Request](#) on page 1510.

## Prerequisites

To setup the offset request feature, you need to do the following:

- Define the required offset adjustment types where the **A/P Request Type Code** field is not set to **REFUND**.
- Define a default offset amount algorithm using the **C1-OFST-AMT** algorithm type.
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive a To Do while submitting an offset request for approval.
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must not approve an offset request.
- Define the required offset request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Offset Request**.
- Define the values for the **CAN\_RSN\_CD\_FLG** lookup field.
- Set the parameters of the **C1-UPD-FUND**, **C1-DFRUNAPLY**, **C1-WTBS-CRBL**, and **C1-OFST-DIST** algorithms.
- Define the status reasons for the **Rejected** and **Unapplied Offset** statuses of the **C1-OffsetRequest** business object in the **Status Reason** screen.
- Set the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration.
- Define the required exchange rates in the system.

- Define a currency conversion algorithm for bill segments using the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.
- Set the batch control type of the **Offset Request Periodic Monitor (C1-OFSRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

# Offset Request (Without Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when the approval process is not configured in the offset request type:

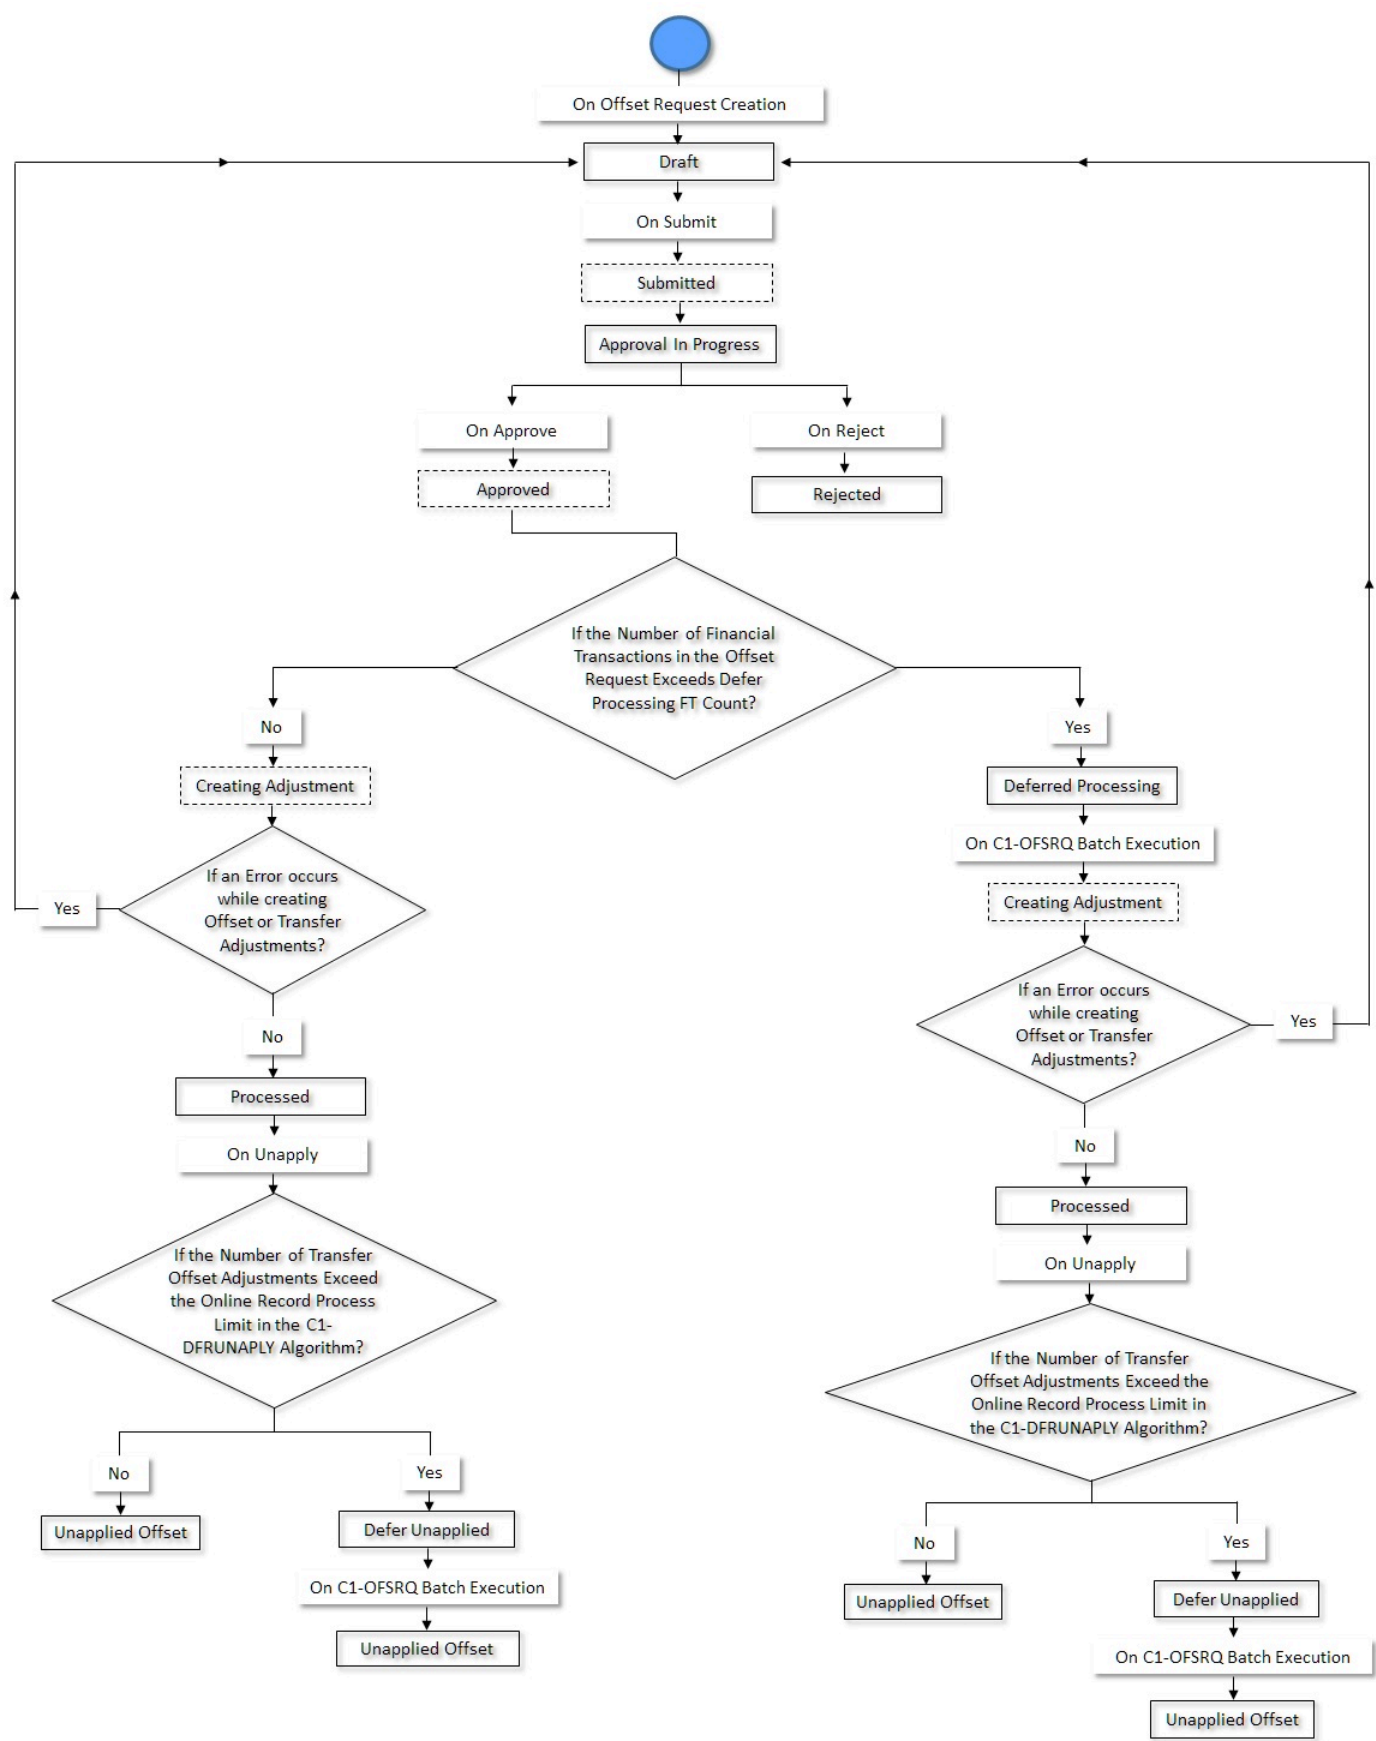

## Offset Request (With Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when the approval process is configured in the offset request type:

# Bill Line Items Level Offset

Until now, while offsetting two or more bills through an offset request, the system did not allow to consider a debit bill with a credit line item as a credit bill while offsetting. In addition, the system did not allow to add a bill with zero balance having debit and credit line items in an offset request.

Now, a new option named **Bill Line Items Level Offset** is available while defining an offset request type. If you select the **Bill Line Items Level Offset** option in an offset request type, the system allows you to do the following:

- Consider a debit bill with a credit line item as a credit bill while offsetting through an offset request
- Add a bill with zero balance having debit and credit line items in an offset request

For example, if you include a debit bill (BILL1) with the following line items in an offset request which is created using an offset request type where the **Bill Line Items Level Offset** option is selected:

Bill Line Item	Amount
BS1	100\$
BS2	100\$
BS3	200\$
AD1	-200\$

The system allows you add BILL1 as a credit bill in the offset request. Earlier, the system used to internally offset the bill and the outstanding bill amount was then available for offsetting with another bills in an offset request. Now, if you consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will not internally offset the bill and the credit line items would be available for offsetting with another bills in the offset request. However, if you do not consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will first internally offset the bill and then outstanding amount would be available for offsetting against another bills in the offset request.

If you select the **Bill Line Items Level Offset** option in an offset request type, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**. Otherwise, erroneous results might occur.

If you create an offset request using an offset request type where the **Bill Line Items Level Offset** option is selected, then:

- The following columns are additionally available in the **Offset Details** section while editing the offset request:
  - **Debit Balance** - Displays the sum of the unpaid debit line items of a bill
  - **Credit Balance** - Displays the sum of the open credit line items of a bill
  - **Credit Bill** - Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable. Note that you cannot select this option for a debit bill which no credit line item and therefore, in such case, this option is disabled.
- The default offset amount is set either to the sum of open credit balance of all credit bills in the offset request or to the sum of outstanding amount of all debit bills in the offset request whichever is less. While editing the offset amount, the system validates the following:
  - Offset amount is not greater than the outstanding amount of the debit bill
  - Offset amount is not greater than the open credit balance of the credit bill
- The **Debit Balance**, **Credit Balance**, and **Credit Bill** columns appear in the **Selected Bills** zone of the **Offset Request** screen.

As mentioned earlier, the system now allows you to add a bill with zero balance having debit and credit line items in an offset request. You can add a bill with zero balance from the following screens:

- Offset Request
- Account Receivable Central

While creating an offset request for a zero balance bill from the **Account Receivable Central** screen or while adding a zero balance bill to an offset request, the system validates the following:

- The **Bill Line Items Level Offset** option is selected the respective offset request type.
- The selected bill with zero balance is not fully matched.

We recommend you to add maximum 4 to 5 bills while offsetting the bills through an offset request using the **Bill Line Items Level Offset** feature.

## Internal Offsetting of Zero Balance Bill

---

Oracle Revenue Management and Billing provides a new option type named **Avoid internal match event creation for zero dollar bill** in the **C1\_FINTRANOP** feature configuration. You can set the value of this option type to:

- **Y** - Used when you do not want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.
- **N** - Used when you want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.

If you want to consider a zero balance bill for offsetting against another bills in an offset request, you should set the **Avoid internal match event creation for zero dollar bill** option type of the **C1\_FINTRANOP** feature configuration to **Y**.

## Automatic Offset of Debit and Credit Bill Line Items

---

The fully insured individual business do come across various scenarios wherein the customers would need a facility to automatically offset the debit and credit bill line items of an account. For example:

- An individual enrolls for a health plan. But the individual fails to pay the binder payment before the membership start date. Such individual memberships are canceled once the appropriate inbound message is received to cancel the individual membership. On canceling the individual membership, an adhoc invoice is generated in the system and the premium billed for the individual membership is reversed. In this scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account.
- An individual enrolls for a health plan having subsidy. The subsidy fully covers the premium, and therefore a zero balance bill is generated. If you internally offset a zero balance bill, the system matches the debit and credit line items of a zero balance bill on the bill completion. But, in this case, the match events are not created at the bill line item level. In such scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account such that match events are created at the bill line item level.

Oracle Revenue Management and Billing facilitates you with the auto maintenance process for accounts wherein the system will automatically offset the debit and credit bill line items of the accounts. The auto maintenance process is driven using the **Offset Request** feature ensuring that the match events are created at the bill line item level. Note that, at present, the auto maintenance process for accounts is only tested and certified for the different lines of business in the health insurance domain.

While running the auto maintenance process for an account, the system creates an auto maintenance offset request for the account when either of the following criteria is met:

- Total amount of the open and unmatched items of the account is equal to zero. For example, an A1 account has two bills - B1 for Jan 2023 with the open balance 200 and B2 for Feb 2023 with the open balance -200 and thereby the A1 account balance is zero.
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero. For example, an A2 account has three bills - B1 for Jan 2023 with the open balance 300, B2 for Feb 2023 with the open balance 300, and B3 for Feb 2023 with the open balance -300. Here, the overall account balance of A2 is not zero, but the account balance of A2 for Feb 2023 is zero.

**Note:** While running the auto maintenance process for an account, the system does not consider the payments applied on the On Account, Excess Credit, and Suspense contracts of the account.

The system creates an auto maintenance offset request for an account using an offset request type where the offset category is set to **Auto Maintenance**. A new field named **Offset Category** is available while defining an offset request type. It helps to differentiate between the traditional (i.e. manual) offset requests and automatic offset requests. If you want to create a manual offset request using an offset request type, you must set the offset category in the offset request type to **Regular**. However, if you want to create an automatic offset request using an offset request type, you must set the offset category in the offset request type to **Auto Maintenance**. By default, the offset category is set to **Regular**. Note that you cannot edit the offset category in an offset request type when an offset request is already created using the offset request type.

The system enables you to skip a set of accounts for which auto maintenance is not required. A new field named **SKIP\_AUTOM\_SW** is added in the **CI\_ACCT** table. It indicates whether you want to skip auto maintenance for the account. At present, you can provide the skip auto maintenance information for an account through a healthcare inbound message and not from the user interface. The system then displays the skip auto maintenance information of an account in the **Main** section of the **Account Information** zone on the **Account** tab of the **Customer 360° Information** screen. Note that the **Skip Auto Maintenance** field appears in the **Main** section for the account only when it is set to **Y**.

To use the auto maintenance feature for accounts, you need to do the following:

- Create an offset request type where the offset category is set to **Auto Maintenance**

**Note:** While creating an offset request type for auto maintenance of accounts, you need to ensure that the **Bill Line Items Level Offset** option is selected and the **Transfer Adjustment** option is not selected.

- Set the **Avoid internal match event creation for zero dollar bill** option type of the **C1\_FINTRANOP** feature configuration to **Y**

A new batch named **C1-AUTOM** is introduced in this release. It considers those accounts for auto maintenance where the **Skip Auto Maintenance** field is set to **N**. It then checks whether either of the following criteria is met for the account:

- Total amount of the open and unmatched items of the account is equal to zero
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero

Here, the system considers the eligible accounts with zero and non-zero balance. If the eligible account has zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items can be offset. If the eligible account has non-zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items of the same coverage period can be offset.

If either of the above two criteria is met, the system creates and processes an auto maintenance offset request. The auto maintenance offset request automatically closes the open and unmatched bill line items of the account that amounts to zero balance. To close an open and unmatched bill line item of the account, the system creates an offset request adjustment against each such debit or credit financial transaction. If the match event is present on any financial transaction, the same match event is stamped on the offset request adjustment. However, if the match event does not exist on any financial transaction, the system creates a new match event and stamps it against the financial transaction and its corresponding offset request adjustment.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Division	Yes (Conditional)	Used when you want to run the auto maintenance process for the accounts which belong to a particular division.
		<b>Note:</b> This parameter is required when you specify a customer class while executing this batch.

Parameter Name	Mandatory (Yes or No)	Description
Customer Class	No	Used when you want to run the auto maintenance process for the accounts which belong to a particular customer class.
Offset Request Type	Yes	Used to indicate the offset request type using which you want to create auto maintenance offset requests for the accounts.
		<b>Note:</b> Here, you must specify an offset request type where the offset category is set to <b>Auto Maintenance</b> .
Freeze Number of Days	Yes	Used to specify the number of days. The system considers those accounts for auto maintenance whose financial transactions are frozen in the last specified number of days.
		<b>Note:</b> The parameter value must be greater than or equal to zero.
Skip Auto Maintenance for Accounts with Open Refund or Write Off Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the refund or write off request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
		<b>Note:</b> By default, the parameter value is set to <b>Y</b> .
Skip Auto Maintenance for Accounts with Open Payment, Payment Transfer Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the payment creation or payment transfer request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
		<b>Note:</b> By default, the parameter value is set to <b>Y</b>
Skip Auto Maintenance for Accounts with Open Offset Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the manual offset request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
		<b>Note:</b> By default, the parameter value is set to <b>Y</b>
Account ID	No	Used when you want to run the auto maintenance process for a particular account.
Fetch Only Open Overdue Bills	Yes	Used to indicate whether you want to consider the overdue bills or all the open bills of the account for auto maintenance. The valid values are:

Parameter Name	Mandatory (Yes or No)	Description
		<ul style="list-style-type: none"> <li><b>Y</b> - Used when you want to consider only the overdue bills of the account for auto maintenance.</li> <li><b>N</b> - Used when you want to consider all the open bills of the account for auto maintenance.</li> </ul>
		<b>Note:</b> By default, the parameter value is set to <b>Y</b> .
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

On successful completion of this batch, the system creates and processes an auto maintenance offset request for an account that meets the criteria. You can view the details of an auto maintenance offset request through the **Offset Request** screen.

While viewing the details of an auto maintenance offset request, the system displays the **Auto Maintenance Financial Transactions** zone instead of the **Selected Bills** and **Offset Request Adjustments** zones in the **Main** tab of the **Offset Request** screen. The system also displays the account information in the **Main** section of the **Offset Request** zone. The **Auto Maintenance Financial Transactions** zone lists the financial transactions of the account for which the corresponding offset request adjustments are created during the auto maintenance process.

To design the auto maintenance process for accounts, the following algorithms are enhanced:

- **C1-OFFSUBENT** - Here, some of the existing validations are skipped for an auto maintenance offset request and few new validations are introduced for an auto maintenance offset request.
- **C1-OFFST-DIST** - Here, additional logic is added to handle the offset category and to create auto maintenance offset requests for accounts that meet the criteria. Note that the **Match Type**, **Match Type Entity**, and **Credit Bill Distribution Algorithm** parameters are not applicable while creating offset request adjustments for an auto maintenance offset request.

The system enables you to cancel an auto maintenance offset request, if required, through the **Unapply** button. While canceling an offset request, you need to specify a reason why you want to cancel an offset request. On canceling an auto maintenance offset request, the system cancels the offset request adjustments and opens the corresponding bill line items which were offset during auto maintenance of the account.

## Algorithms Used in C1-OffsetRequest

The following table lists the algorithm which is attached to the **C1-OffsetRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-OFFST-INF	C1-OFFST-INF	Refer to <a href="#">C1-OFFST-INF</a> on page 1473.

The following table lists the algorithms which are used in the lifecycle of the **C1-OffsetRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1364.
Submitted	Enter	C1-OFFSUBENT	C1-OFFSUBENT	Refer to <a href="#">C1-OFFSUBENT</a> on page 1474.
Approval Progress	Enter	C1-OFFAPPENT	C1-OFFAPPENT	Refer to <a href="#">C1-OFFAPPENT</a> on page 1474.
	Exit	C1-OFFAPPEXT	C1-OFFAPPEXT	Refer to <a href="#">C1-OFFAPPEXT</a> on page 1474.

Status	System Event	Algorithm	Algorithm Type	Description
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1364.
Approved	Enter	C1-OFSAPRENT	C1-OFSAPRENT	Refer to <a href="#">C1-OFSAPRENT</a> on page 1474.
Rejected	-	-	-	-
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1474.

	Enter	C1-UPDT-FUND	C1-UPDT-FUND	Refer to <a href="#">C1-UPDT-FUND</a> on page 1476.

## C1-OFFST-INF

This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Offset Request Type Description
2. Offset Request Status Description
3. Offset Request ID

## F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

**Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

## C1-OFFSUBENT

---

This algorithm is invoked when you click the **Submit** button. It validates the following:

- Whether the outstanding amount of the selected bills is not zero
- Whether the selected bills are in the **Complete** status
- Whether the overridden offset amount of a bill is not zero
- Whether the sum of the debit bills' offset amount is equal to the sum of the credit bills' offset amount
- Whether at least one debit and credit bills are selected in the offset request

If the validation is successful, it checks whether the **Approval Required** option is selected in the respective offset request type. If the **Approval Required** option is selected in the respective offset request type, it changes the status of the offset request to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective offset request type, it checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

## C1-OFFAPPENT

---

This algorithm is invoked when the status of the offset request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type which is specified in the respective offset request type. Once a To Do is created, it is assigned to all users with the approval To Do role which is specified in the respective offset request type. In addition, it creates a log entry for the offset request when the To Do is created.

## C1-OFFAPPEXT

---

This algorithm checks whether the approver is associated with the approval To Do role which is specified in the respective offset request type. If so, it allows the approver to approve or reject the offset request. It also ensures that the submitter does not approve or reject the offset request.

## C1-OFSAPRENT

---

This algorithm is invoked when you click the **Approve** button. It checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

## F1-AT-RQJ

---

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.

- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-OFST-DIST

This algorithm is invoked when the status of the offset request is changed to **Creating Adjustment**. It creates offset adjustments using the adjustment type specified in the offset request and sets the status of the offset adjustments to **Frozen**. If the **Transfer Adjustment** option is selected in the respective offset request type, it creates transfer adjustments in the **Frozen** status.

This algorithm distributes the offset amount of a bill in the following manner:

1. **Internal Offsetting Within Each Bill** - This happens when a bill contains both debit and credit line items. The internal offsetting happens either at the bill segment or contract level depending on the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. If the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BILL** or **SA**, the internal offsetting happens at the contract level. However, if the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BSEG**, the internal offsetting happens at the bill segment level. In the bill, the internal offsetting is done starting from a credit contract with highest payment priority against a debit contract with highest payment priority by creating transfer adjustments. This continues until the sum of credit or debit amount within a bill is exhausted.
2. **Offsetting Across Debit and Credit Bills** - This offsetting is always done from the credit bills to the debit bills with the objective to reduce the debit bill balance. This algorithm checks whether any match event is created for the bill. If so, it creates the offset adjustments against the bill using the existing match event. If there are no match events created for the bill, this algorithm creates match events using the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. It distributes the amount from the credit bill starting with the oldest due date. This continues until the credit bill balance is exhausted.

It contains the following parameters:

- **Match Type** - Used to specify the match type using which you want to distribute the offset amount. You must specify a match type where the payment distribution override algorithm is attached.

**Note:** If a bill which is offset is partially paid using a match type, this algorithm uses the same match type for offset distribution. However, if no payment is received for a bill which is offset, this algorithm uses the match type which is specified in the **Match Type** parameter for offset distribution.

- **Match Type Entity (Valid Values: BILL, BSEG, SA)** - Used to indicate the entity, such as bill, bill segment, or contract, against which you want to create match event. It is used to create match events for bills which are unpaid. The valid values are:
  - **BILL** - Used when you want to stamp same match event on all financial transactions of the bill.
  - **BSEG** - Used when you want to stamp unique match event on each bill segment or adjustment financial transaction.
  - **SA** - Used when you want to stamp same match event on all financial transactions which are created for the same contract.
- **Credit Bill Distribution Algorithm** - Used to specify an algorithm which helps to create offset adjustments for a credit bill at the bill segment level. This parameter is required when the **Transfer Adjustment** option is not selected in the respective offset request type.

**Note:** The C1-WTBS-CRBL algorithm type is shipped with the product. You can attach an algorithm created using the C1-WTBS-CRBL algorithm type to the **Credit Bill Distribution Algorithm** parameter. For more information, see [C1-WTBS-CRBL](#) on page 1477.

## C1-UPD-HOLD

---

This algorithm updates the hold request whenever a bill on hold is offset through an offset request. If the remaining outstanding amount of a bill after offsetting is not zero and is less than the current hold amount, this algorithm updates the hold amount to the current hold amount plus remaining outstanding bill balance. For example, if the original outstanding amount is 80\$, hold amount is 40\$, offset amount is 20\$, then the remaining outstanding amount (i.e.  $80\$ - 40\$ - 20\$ = 20\$$ ) is less than the current hold amount (i.e. 40\$). Therefore, this algorithm updates the hold amount of the bill in the hold request to 60\$ (i.e.  $40\$ + 20\$$ ).

However, if the remaining outstanding amount of a bill after offsetting is zero and the bill is included in any active hold request, the hold end date of the bill in the hold request is changed to the system date.

In both the above scenarios, this algorithm creates a log entry for the offset and hold requests. The bill whose hold details (i.e. either hold amount or hold end date) are updated through the offset request is maintained in its log. Similarly, the old and updated hold amount and hold end date of the bill are maintained in the respective hold request log.

## C1-UPD-FUND

---

If a bill which is offset through an offset request is present in a funding request which is in the **Draft** status, this algorithm updates the funding amount of the bill in the funding request. If entire sum of the funding and garnishment amount of a bill is offset through the offset request, the bill is excluded from the funding request.

It contains the following parameter:

- **Funding Exclusion Reason Code** - Used to indicate the reason why you want to exclude the bill from the funding request. This parameter is mandatory while excluding a bill from a funding request. You must specify a value which is already defined in the **CAN\_RSN\_CD\_FLG** lookup field.

## C1-DFRUNAPLY

---

This algorithm is invoked when you click the **Unapply** button. It checks whether the number of transfer or offset adjustments created through the offset request exceeds the online record process limit defined in this algorithm. If the number of transfer or offset adjustments does not exceed the online record process limit, the system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**. However, if the number of transfer or offset adjustments exceeds the online record process limit, the system changes the status of the offset request to **Defer Unapplied**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of transfer or offset adjustments you can process in the real time (i.e. immediately).

## C1-UNAPOFST

---

This algorithm is invoked when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is executed. It cancels all transfer or offset adjustments created through the offset request and then changes the status of the offset request to **Unapplied Offset**.

## C1-UPDT-FUND

---

Once the transfer or offset adjustments of a bill are canceled, it checks whether the bill is included in any funding request which is in the **Draft** status. If so, it updates the funding amount of the bill in the respective funding request.

## C1-WTBS-CRBL

---

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** - Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
  - **F** - Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
  - **C** - Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1\_FT\_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

## C1\_CURALGBS

---

The **C1\_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation

- FT GL Creation for Bill Segments

The **C1\_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_EXCRTBS

The **C1\_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.

## C1\_CURALGAD

The **C1\_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct

reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_CURALGAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_EXCRTAD

The **C1\_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

- 1. Division-specific direct exchange rate
- 2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
- 3. Division-specific exchange rate through base currency
- 4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
- 5. Global direct exchange rate
- 6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
- 7. Global exchange rate through base currency
- 8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_EXCRTAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"><li>• Direct Rate First</li><li>• Division First</li></ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>	No

Parameter	Description	Mandatory (Yes or No)
	If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.

# Additional Algorithms Used in Offset Request

Besides using the algorithms attached to the lifecycle, the system uses the following algorithms for the **Offset Request** feature:

- [C1-OFST-AMT](#) on page 1484
- [C1-WTBS-CRBL](#) on page 1477

## C1-OFST-AMT

This algorithm calculates the default offset amount whenever a bill is added to the offset request. The default offset amount is equal to the sum of outstanding amount of the debit or credit bills whichever is less. For example, if the following bills are added to the offset request:

- Bill 1 (-100\$) where due date is set to 01-01-2018
- Bill 2 (-100\$) where due date is set to 01-01-2019
- Bill 3 (25\$) where due date is set to 01-01-2018
- Bill 4 (25\$) where due date is set to 06-01-2018

In such case, the system sets the default offset amount of Bill 1 to 50\$.

**Note:** This algorithm does not calculate the default offset amount until both the debit and credit bills are added to the offset request.

## C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** - Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
  - **F** - Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
  - **C** - Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1\_FT\_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

## Offset Request Type

Oracle Revenue Management and Billing allows you to define an offset request type using which you can create an offset request. It is the offset request type which helps the system to determine the following:

- The business object using which the offset request should be created in the system.
- Whether automatic offset is required for the debit and credit bill line items of an account.

**Note:** This process for accounts is only tested and certified for the different lines of business in the health insurance domain.

- Whether automatic offset request is required to settle the unpaid bill amount of a person or an account using the advance deposit available at the parent customer or policy level through a delinquency process.

**Note:** This process for accounts is only tested and certified for the different lines of business in the health insurance domain.

- The default adjustment type using which the transfer or offset adjustments should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately).
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether transfer or offset adjustments should be created while offsetting bills through an offset request.
- Whether a debit bill with credit line item as a credit bill should be created in an offset request.

The **Offset Request Type** screen allows you to define, view, edit, copy, and delete an offset request type. It contains the following zones:

- [Offset Request Type List](#) on page 1485
- [Offset Request Type](#) on page 1486

## Offset Request Type List

The **Offset Request Type List** zone lists the offset request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Offset Request Type</b> screen appears where you can edit the details of the offset request type.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (🔗) icon, the <b>Offset Request Type</b> screen appears where you can define a new offset request type using an existing offset request type.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the offset request type. <b>Note:</b> You can delete an offset request type only when an offset request is not yet created using the offset request type.

On clicking the **Broadcast** (📡) icon corresponding to an offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

<b>Offset Request Type</b> screen	<a href="#">Offset Request Type</a> on page 1485
<b>Offset Request Type</b> zone	<a href="#">Offset Request Type</a> on page 1486

## Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. It contains the following sections:

- **Main** - Displays basic information about the offset request type. It contains the following fields:

Field Name	Field Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Offset Request Business Object	Indicates the business object using which the offset request is created in the system. In addition, a context menu (☑️) icon appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the offset request type.
Status	Indicates the status of the offset request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>
Offset Category	Indicates the category to which the offset request type belongs. The valid values are: <ul style="list-style-type: none"><li>• Advance Deposit</li></ul>

Field Name	Field Description
	<p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li>Auto Maintenance</li> </ul> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li>Regular</li> </ul>
Adjustment Type	<p>Indicates the adjustment type using which the transfer or offset adjustments should be created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.</p>
Default Offset Amount Algorithm	<p>Indicates the algorithm using which the default offset amount should be calculated while adding a bill in an offset request.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p>
Defer Processing FT Count	<p>Displays the count which helps to determine whether an offset request must be processed in the deferred mode (i.e. in the background) or in the online mode (i.e. immediately).</p>
Approval Required	<p>Indicates whether approval is required while offsetting bills (created using the offset request type) for an entity.</p>
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do Type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve an offset request which is submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do Role.</p>
Submitter To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.</p>

Field Name	Field Description
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval.
	<b>Note:</b> It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.
Bill Search Period	Displays the maximum search period (in days) which is allowed while searching bills in an offset request.
Transfer Adjustment	Indicates whether transfer adjustments should be created while offsetting bills through an offset request.
Bill Line Items Level Offset	Indicates the following: <ul style="list-style-type: none"> <li>Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request</li> <li>Whether a bill with zero balance having debit and credit line items should be created in an offset request</li> </ul>

- **Characteristics** - Lists the characteristics defined for the offset request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request type.
Delete	Used to delete the offset request type.
	<b>Note:</b> You can delete an offset request type only when an offset request is not yet created using the offset request type.
Duplicate	Used to create a new offset request type using an existing offset request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request type is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears when you click the **Broadcast** (☺) icon corresponding to an offset request type in the **Offset Request Type List** zone.

## Defining an Offset Request Type

### Prerequisites

To define an offset request type, you should have:

- Offset request type business objects defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

### Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Offset Request Type** sub-menu.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define a list of characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are:	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of an offset request type to <b>Inactive</b> when the corresponding offset request is in a status other than <b>Processed</b>, <b>Rejected</b>, or <b>Unapplied Offset</b>.</p>	
Offset Category	<p>Used to indicate the category of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Advance Deposit</b> - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to <b>Advance Deposit</b>.</li> </ul> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li><b>Auto Maintenance</b> - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to <b>Auto Maintenance</b>.</li> </ul> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li><b>Regular</b> - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to <b>Regular</b>.</li> </ul> <p><b>Note:</b> By default, the <b>Regular</b> option is selected.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Adjustment Type</b> field.</p> <p>You can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	Yes
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Offset Amount Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Default Offset Amount Algorithm</b> field.</p> <p>You must specify an algorithm which is created using the <b>C1-OFST-AMT</b> algorithm type in the <b>Default Offset Amount Algorithm</b> field.</p>	
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p><b>Note:</b></p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch is invoked. You can configure the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p>	No
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p> <p>The <b>C1-OFSRQ</b> To Do type is shipped with the product. You can use the <b>C1-OFSRQ</b> To Do type or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Submitter To Do Type</b> field.</p> <p>The <b>C1-OFSSB</b> To Do type is shipped with the product. You can use the <b>C1-OFSSB</b> To Do type or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)
	<p><b>Note:</b> The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> If you do not specify any value, by default, it is set to <b>30</b> .  If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.	
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.  <b>Note:</b> By default, the <b>Transfer Adjustment</b> option is selected.  This impacts the system performance when the match type entity is set to <b>BSEG</b> and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the <b>Transfer Adjustment</b> option is not selected in the respective offset request type.	No
Bill Line Items Level Offset	Used to indicate the following: <ul style="list-style-type: none"><li>Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request</li><li>Whether a bill with zero balance having debit and credit line items should be created in an offset request</li></ul> <b>Note:</b> If you select the <b>Bill Line Items Level Offset</b> option, you need to ensure that <b>Match Type Entity (Valid Values: BILL, BSEG, SA)</b> parameter in the <b>C1-OFST-DIST</b> algorithm (which is attached to the <b>Creating Adjustment</b> status in the lifecycle of the <b>C1-OffsetRequest</b> business object) is set to <b>BSEG</b> .	No

**Tip:** Alternatively, you can access the **Offset Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

- 4. Enter the required details in the **Main** section.
- 5. Define characteristics for the offset request type, if required.
- 6. Click **Save**.  
The offset request type is defined.

## Defining a Characteristic for an Offset Request Type

### Prerequisites

To define a characteristic for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**).

### Procedure

To define a characteristic for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you *are* defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Offset Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the offset request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the offset request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the offset request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing an Offset Request Type

### Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

### Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Displays the offset request type.	Not applicable
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of an offset request type to <b>Inactive</b> when the corresponding offset request is in a status other than <b>Processed</b> , <b>Rejected</b> , or <b>Unapplied Offset</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Offset Category	<p>Used to indicate the category of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Advance Deposit</b> - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to <b>Advance Deposit</b>.</li> </ul> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li><b>Auto Maintenance</b> - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to <b>Auto Maintenance</b>.</li> </ul> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li><b>Regular</b> - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to <b>Regular</b>.</li> </ul> <p><b>Note:</b> By default, the <b>Regular</b> option is selected.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Adjustment Type</b> field.</p> <p>You can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	Yes
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Offset Amount Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Default Offset Amount Algorithm</b> field.</p> <p>You must specify an algorithm which is created using the <b>C1-OFST-AMT</b> algorithm type in the <b>Default Offset Amount Algorithm</b> field.</p>	
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p><b>Note:</b></p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch is invoked. You can configure the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p>	No
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.</p> <p>The <b>C1-OFSRQ</b> To Do type is shipped with the product. You can use the <b>C1-OFSRQ</b> To Do type or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears when the <b>Approval Required</b> option is selected.</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Submitter To Do Type</b> field.</p> <p>The <b>C1-OFSSB</b> To Do type is shipped with the product. You can use the <b>C1-OFSSB</b> To Do type or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)
	<p><b>Note:</b> The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>If you do not specify any value, by default, it is set to <b>30</b>.</p> <p>If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.</p>	
Transfer Adjustment	<p>Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.</p> <p><b>Note:</b></p> <p>By default, the <b>Transfer Adjustment</b> option is selected.</p> <p>This impacts the system performance when the match type entity is set to <b>BSEG</b> and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the <b>Transfer Adjustment</b> option is not selected in the respective offset request type.</p>	No
Bill Line Items Level Offset	<p>Used to indicate the following:</p> <ul style="list-style-type: none"> <li>Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request</li> <li>Whether a bill with zero balance having debit and credit line items should be created in an offset request</li> </ul> <p><b>Note:</b> If you select the <b>Bill Line Items Level Offset</b> option, you need to ensure that <b>Match Type Entity (Valid Values: BILL, BSEG, SA)</b> parameter in the <b>C1-OFST-DIST</b> algorithm (which is attached to the <b>Creating Adjustment</b> status in the lifecycle of the <b>C1-OffsetRequest</b> business object) is set to <b>BSEG</b>.</p>	No

**Tip:** Alternatively, you can edit an offset request type by clicking the **Edit** button in the **Offset Request Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove characteristics from the offset request type, if required.
- Click **Save**.  
The changes made to the offset request type are saved.

## Deleting an Offset Request Type

### Procedure

To delete an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the offset request type that you want to delete.

A message appears confirming whether you want to delete the offset request type.

**Note:** You can delete an offset request type only when an offset request is not yet created using the offset request type.

**Tip:** Alternatively, you can delete an offset request type by clicking the **Delete** button in the **Offset Request Type** zone.

5. Click **OK**.  
The offset request type is deleted.

## Copying an Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

### Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application

- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

**Procedure**

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** (🔗) icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of an offset request type to <b>Inactive</b> when the corresponding offset request is in a status other than <b>Processed</b> , <b>Rejected</b> , or <b>Unapplied Offset</b> .	
Offset Category	Used to indicate the category of the offset request type. The valid values are: <ul style="list-style-type: none"><li>• <b>Advance Deposit</b> - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to <b>Advance Deposit</b>.</li></ul> <div><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</div> <ul style="list-style-type: none"><li>• <b>Auto Maintenance</b> - The auto maintenance offset requests are automatic offset requests. You can create an auto</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>maintenance offset request using an offset request type where the offset category is set to <b>Auto Maintenance</b>.</p> <div> <p><b>Note:</b> This option for accounts is only tested and certified for the different lines of business in the health insurance domain.</p> <ul style="list-style-type: none"> <li><b>Regular</b> - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to <b>Regular</b>.</li> </ul> </div> <p><b>Note:</b> By default, the <b>Regular</b> option is selected.</p>	
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Adjustment Type</b> field.</p> <p>You can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Offset Amount Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Default Offset Amount Algorithm</b> field.</p> <p>You must specify an algorithm which is created using the <b>C1-OFST-AMT</b> algorithm type in the <b>Default Offset Amount Algorithm</b> field.</p>	Yes
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing</p>	No

Field Name	Field Description	Mandatory (Yes or No)
	count, the system will process the offset request in real time (i.e. immediately).	
	<b>Note:</b> You cannot specify a negative value in this field.  Deferred mode means in the background when the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch is invoked. You can configure the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i> .  If you set the defer processing count to zero (0), the system resets the default value to 50.	
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Approval To Do Type</b> field.  The <b>C1-OFSRQ</b> To Do type is shipped with the product. You can use the <b>C1-OFSRQ</b> To Do type or a custom To Do type, if required.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The list includes only those To Do roles which are associated with the approval To Do type.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the <b>Submitter To Do Type</b> field.</p> <p>The <b>C1-OFSSB</b> To Do type is shipped with the product. You can use the <b>C1-OFSSB</b> To Do type or a custom To Do type, if required.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)
	<p><b>Note:</b> The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No
	<p><b>Note:</b></p> <p>If you do not specify any value, by default, it is set to <b>30</b>.</p> <p>If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.</p>	
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.	No
	<p><b>Note:</b></p> <p>By default, the <b>Transfer Adjustment</b> option is selected.</p> <p>This impacts the system performance when the match type entity is set to <b>BSEG</b> and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the <b>Transfer Adjustment</b> option is not selected in the respective offset request type.</p>	
Bill Line Items Level Offset	<p>Used to indicate the following:</p> <ul style="list-style-type: none"> <li>Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request</li> <li>Whether a bill with zero balance having debit and credit line items should be created in an offset request</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> If you select the <b>Bill Line Items Level Offset</b> option, you need to ensure that <b>Match Type Entity (Valid Values: BILL, BSEG, SA)</b> parameter in the <b>C1-OFST-DIST</b> algorithm (which is attached to the <b>Creating Adjustment</b> status in the lifecycle of the <b>C1-OffsetRequest</b> business object) is set to <b>BSEG</b> .	

**Tip:** Alternatively, you can copy an offset request type by clicking the **Duplicate** button in the **Offset Request Type** zone.

- 5. Enter the required details in the **Main** section.
- 6. Define, edit, or remove characteristics from the offset request type, if required.
- 7. Click **Save**.  
The new offset request type is defined.

## Viewing the Offset Request Type Details

Procedure

- To view the details of an offset request type:
- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
  - 2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
  - 3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
  - 4. In the **Offset Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the offset request type whose details you want to view.  
The **Offset Request Type** zone appears.
  - 5. View the details of the offset request type in the **Offset Request Type** zone.

## Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- [Search Offset Request](#) on page 1506

Through this screen, you can navigate to the following screen:

- [Offset Request \(Used for Viewing\)](#) on page 1512

## Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using the offset request details or the bill details. The valid values are: <ul style="list-style-type: none"><li>• Request Details</li><li>• Bill Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Offset Request ID	Used to search a particular offset request.	No
	<b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Creation From Date	Used to search offset requests which are created from a particular date onwards.	No
	<b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
User ID	Used to search offset requests which are created by a particular user.	No
	<b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Created To	Used to search offset requests which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Status	<p>Used to search offset requests which are in a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Defer Unapplied</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> <li>• Unapplied Offset</li> </ul> <p><b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.</p>	No
Person ID	<p>Used to search offset requests which include bills of a particular person.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Person ID</b> field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears where you can search for a particular person.</p>	No
Offset Request Type	<p>Used to search offset requests which are created using a particular offset request type.</p> <p><b>Note:</b></p> <p>The list includes only those values which are present in the <b>C1_OFFSET_REQ-TYPE</b> table.</p> <p>This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.</p>	No
Account ID	<p>Used to search offset requests which include bills of a particular account.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears where you can search for a particular account.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search offset requests which include a particular bill.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears where you can search for a particular bill.	
Bill Date From	Used to search offset requests which include bills created from a particular date onwards.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Alternate Bill ID	Used to search offset requests which include a particular bill.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Bill Date To	Used to search offset requests which include bills created till a particular date.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total amount which is offset through the offset request.
Status	Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Defer Unapplied</li><li>• Deferred Processing</li><li>• Draft</li><li>• Processed</li><li>• Rejected</li><li>• Unapplied Offset</li></ul>

Column Name	Column Description
Created By	Indicates the user who has created the offset request.
Creation Mode	Indicates whether the offset request is created manually or automatically. The valid values are: <ul style="list-style-type: none"><li>Automatic</li><li>Manual</li></ul>
Primary Bill	Indicates the bill for which the offset request is created. In addition, a context menu (☺) icon appears corresponding to this column which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for an Offset Request

**Prerequisites**

To search for an offset request, you should have:

- Offset request types defined in the application

**Procedure**

To search for an offset request:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**.  
A sub-menu appears.
- Click the **Search** option from the **Offset Request** sub-menu.  
The **Offset Request** screen appears.
- Enter the search criteria in the **Search Offset Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.  
A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

1. Do either of the following:

If you want to...	Then...
Create a single offset request from the Account Receivable Central screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>Accounting and Receivable</b> and then click <b>Account Receivable Central</b>.</p> <p>The <b>Account Receivable Central</b> screen appears.</p> <p>c. Search for the required bill in the <b>Search Bill</b> zone.</p> <p>d. In the <b>Search Results</b> section, select the check box corresponding to the bill which you want to offset through a single offset request.</p> <p>e. Click <b>Single Offset</b>.</p>
Create a mass offset request from the Account Receivable Central screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>Accounting and Receivable</b> and then click <b>Account Receivable Central</b>.</p> <p>The <b>Account Receivable Central</b> screen appears.</p> <p>c. Search for the required bill in the <b>Search Bill</b> zone.</p> <p>d. In the <b>Search Results</b> section, select the check box corresponding to the bill which you want to offset through a mass offset request.</p> <p>e. Click <b>Mass Offset</b>.</p>
Create a cross currency offset request from the Account Receivable Central screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>Accounting and Receivable</b> and then click <b>Account Receivable Central</b>.</p> <p>The <b>Account Receivable Central</b> screen appears.</p> <p>c. Search for the required bill in the <b>Search Bill</b> zone.</p>

If you want to...	Then...
	<p><b>d.</b> In the <b>Search Results</b> section, select the check box corresponding to the bill which you want to offset through a cross currency offset request.</p> <p><b>e.</b> Click <b>Cross Currency Offset</b>.</p>
Create a single, mass, or cross currency offset request from the Offset Request screen	<p><b>a.</b> Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p><b>b.</b> From the <b>Main</b> menu, select <b>Accounting and Receivable</b> and then click <b>Offset Request</b>.</p> <p>A sub-menu appears.</p> <p><b>c.</b> Click the <b>Add</b> option from the <b>Offset Request</b> sub-menu.</p>

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the offset request type using which you want to create the offset request.	Yes
Bill	<p>Used to indicate the bill which you want to offset through the offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.</p> <p>On specifying the bill, the information about the bill appears corresponding to the <b>Bill</b> field.</p> <p>This field is automatically populated by the bill ID for an offset request created from the <b>Account Receivable Central</b> screen.</p>	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

- 2. Enter the required details in the **Add Offset Request** screen.
- 3. Click **OK**.

The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.
- 4. Add debit and/or credit bills in the offset request.
- 5. Define characteristics for the offset request, if required.

## Viewing the Offset Request Details

### Procedure

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.  
The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the offset request in the **Offset Request** zone.

Offset Request screen	<a href="#">Offset Request (Used for Viewing)</a> on page 1512
Offset Request zone	<a href="#">Offset Request</a> on page 1513

## Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- Search for a debit or credit bill based on bill, account, or person details
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request
- View the financial transactions of an auto maintenance offset request type
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request

- Add a log entry for the offset request

It consists of the following tabs:

- [Offset Request - Main](#) on page 1513
- [Offset Request - Log](#) on page 1523

## Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- [Offset Request](#) on page 1513
- [Selected Bills](#) on page 1515

**Note:** This zone appears when you are viewing the debit and credit bills added to the offset request.

- [Search Bill](#) on page 1517
- [Offset Request Adjustments](#) on page 1521

**Note:** This zone appears when you are viewing the offset or transfer adjustments created for the bill through the offset request.

- [Auto Maintenance Financial Transactions](#) on page 1522

**Note:** This zone appears when you are viewing the details of an auto maintenance offset request.

## Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request Type</b> screen appears where you can view the details of the respective offset request type.
Status	Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Defer Unapplied</li><li>• Deferred Processing</li><li>• Draft</li><li>• Processed</li><li>• Rejected</li><li>• Unapplied Offset</li></ul>
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled).

Field Name	Field Description
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective status reason.</p> <p>This field appears when the offset request is in the <b>Rejected, Defer Unapplied, or Unapplied Offset</b> status.</p>
Adjustment Type	<p>Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.</p>
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	<p>Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p> <p>This field appears when you are viewing the details of an auto maintenance offset request.</p>
Comments	<p>Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request.</p> <p><b>Note:</b> This field appears when the offset request is in the <b>Rejected, Defer Unapplied, or Unapplied Offset</b> status.</p>

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request.
	<b>Note:</b> The <b>Edit</b> button appears when the offset request is in the <b>Draft</b> status.
Delete	Used to delete the offset request.
	<b>Note:</b> The <b>Delete</b> button appears when the offset request is in the <b>Draft</b> status.
Submit	Used to submit the offset request.

Button Name	Button Description
	<b>Note:</b> The <b>Submit</b> button appears when the offset request is in the <b>Draft</b> status.
Approve	Used to approve the offset request. <b>Note:</b> The <b>Approve</b> button appears when: <ul style="list-style-type: none"><li>The offset request is in the <b>Approval In Progress</b> status.</li><li>A user with the approval To Do role is reviewing the offset request.</li></ul>
Reject	Used to reject the offset request. <b>Note:</b> The <b>Reject</b> button appears when: <ul style="list-style-type: none"><li>The offset request is in the <b>Approval In Progress</b> status.</li><li>A user with the approval To Do role is reviewing the offset request.</li></ul>
Unapply	Used to unapply (i.e. cancel) the offset request. <b>Note:</b> The <b>Unapply</b> button appears when the offset request is in the <b>Processed</b> status.

- Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

**Related Topics**

For more information on...	See...

How to reject an offset request	<a href="#">Rejecting an Offset Request</a> on page 1536
How to unapply (i.e. cancel) an offset request	<a href="#">Unapplying an Offset Request</a> on page 1537

**Selected Bills**

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

Column Name	Column Description
Bill Information	Indicates the debit or credit bill which is added to the offset request. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Debit Balance	Displays the sum of unpaid debit line items of a bill.
Credit Balance	Displays the sum of open credit line items of a bill.
Credit Bill	Indicates whether you want to consider a debit bill with a credit line item as a credit bill in the offset request.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through a hold request.
Offset Amount	Displays the amount which you want to offset from the debit or credit bill.
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).
	<b>Note:</b> This column does not appear when the offset request is in the <b>Processed</b> or <b>Unapplied Offset</b> status.
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.
	<b>Note:</b> This column does not appear when the offset request is in the <b>Processed</b> or <b>Unapplied Offset</b> status.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Bill ID	Displays the bill ID.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

**Note:** The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4322.

**Search Bill**

The bills listed in the **Search Bill** zone varies depending on the following scenarios:

If...	Then...
The single offset request is created through the <b>Account Receivable Central</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>Y</b>	The <b>Search Bill</b> zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed bills of all accounts of its effective child persons. If the primary bill is a debit bill, it lists credit bills of the main customer and its child persons. However, if the primary bill is a credit bill, it lists debit bills of the main customer and its child persons. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer and its child persons which are in USD.
The single offset request is created through the <b>Account Receivable Central</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>N</b>	The <b>Search Bill</b> zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). If the primary bill is a debit bill, it lists credit bills of the main customer. However, if the primary bill is a credit bill, it lists debit bills of the main customer. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer which are in USD.
The mass offset request is created through the <b>Account Receivable Central</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>Y</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD.
The mass offset request is created through the <b>Account Receivable Central</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>N</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD.
The cross currency offset request is created through the <b>Account Receivable Central</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>Y</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in the currency other than USD.
The cross currency offset request is created through the <b>Account Receivable Central</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the currency different

If...	Then...
screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>N</b>	from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in the currency other than USD.
The offset request is created through the <b>Offset Request</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>Y</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD.
	<b>Note:</b> This zone lists the debit and credit bills in the currency different from the primary bill when the <b>Show Cross Currency Bills</b> option is selected.
The offset request is created through the <b>Offset Request</b> screen and the <b>Allow Offsetting Across Persons</b> option type of the <b>C1-OFFSETREQ</b> feature configuration is set to <b>N</b>	The <b>Search Bill</b> zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD.
	<b>Note:</b> This zone lists the debit and credit bills in the currency different from the primary bill only when the <b>Show Cross Currency Bills</b> option is selected.

It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Person Details</li> <li>• Account Details</li> <li>• Bill Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person Details</b> option is selected.	
Person ID	Used to search completed bills of a particular person.	No
	<b>Note:</b> This field appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Person ID</b> field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Bill Date From	Used to search completed bills which are created from a particular date onwards.	Yes

Field Name	Field Description	Mandatory (Yes or No)						
	<b>Note:</b> By default, it is set to a date which is calculated as follows:  Bill Date To -- Bill Search Period ' (Specified in Offset Request Type)							
Bills on Hold	Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are: <ul style="list-style-type: none"><li>No</li><li>Yes</li></ul>	No						
Bill Date To	Used to search completed bills which are created till a particular date.  <b>Note:</b> By default, it is set to the current date.	Yes						
Bill Balance	Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"><li>Equal to Zero</li><li>Greater Than Zero</li><li>Less Than Zero</li><li>Not Equal to Zero</li></ul> <b>Note:</b> If a single or cross currency offset request is created through the <b>Account Receivable Central</b> screen, this field is disabled, and by default, it is set to the following: <table><tr><th>If the primary bill is a...</th><th>Then, it is set to...</th></tr><tr><td>Credit Bill</td><td>Greater Than Zero</td></tr><tr><td>Debit Bill</td><td>Less Than Zero</td></tr></table>	If the primary bill is a...	Then, it is set to...	Credit Bill	Greater Than Zero	Debit Bill	Less Than Zero	No
If the primary bill is a...	Then, it is set to...							
Credit Bill	Greater Than Zero							
Debit Bill	Less Than Zero							
Show Cross Currency Bills	Used to indicate whether you want to search completed bills in the currencies different from the primary bill.  <b>Note:</b> This option is disabled when a single or cross currency offset request is created through the <b>Account Receivable Central</b> screen.  By default, this option is selected when a cross currency offset request is created through the <b>Account Receivable Central</b> screen.	No						
Account ID	Used to search completed bills which created for a particular account.	Yes						

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Account Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Bill ID	Used to search a particular completed bill.  <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Due Date	Displays the date when the debit or credit bill is due for payment.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset.
	<b>Note:</b> This column appears when the offset request is a cross-currency offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the offset request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

**Offset Request Adjustments**

The **Offset Request Adjustments** zone lists the offset or transfer adjustments which are created for the bill through the offset request. It appears when the offset request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the offset or transfer adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
From Bill ID	Indicates the bill from where the amount is offset.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective adjustment.
From Adjustment ID	Indicates the adjustment from where the amount is offset.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
To Bill ID	Indicates the bill against which the amount is offset.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective adjustment.
To Adjustment ID	Indicates the adjustment against which the amount is offset.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Current Amount	Displays the adjustment amount.

Auto Maintenance Financial Transactions

The **Auto Maintenance Financial Transactions** zone lists the financial transactions which are added to the offset request for auto maintenance. It contains the following columns:

Column Name	Column Description
Coverage Start Date	Displays the date of the financial transaction from where the coverage starts.
Coverage End Date	Displays the date of the financial transaction till where the coverage ends.
Financial Transaction ID	Displays the financial transaction ID added to the offset request for auto maintenance.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective financial transaction.
Amount	Displays the bill amount added in the offset request for auto maintenance.
Entity Information	Displays additional information about the bill segment. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the details of the respective bill segment on clicking the link.
Adjustment Information	Displays additional information about the adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Auto Maintenance Amount	Displays the amount automatically offset against the corresponding bill amount.

**Note:**  
Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.  
  
The **Auto Maintenance Financial Transactions** zone appears only when you are viewing the details of an auto maintenance offset request.

Adjustment

The **Adjustment** zone lists the advance deposit details of an offset request. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays additional information about the adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Creation Date	Displays the date when the adjustment is created.

Column Name	Column Description
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	Indicates the account for which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to an adjustment, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

**Note:** The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4322.

## Offset Request - Log

The **Log** tab contains the following zone:

- [Offset Request Log](#) on page 1523

### Offset Request Log

The **Offset Request Log** zone lists the complete trail of actions performed on the offset request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the offset request.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled).

**Note:** You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

## Adding a Debit or Credit Bill to an Offset Request

---

**Prerequisites**

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

**Procedure**

To add a debit or credit bill to an offset request:

1. Search for the offset request in the **Offset Request** screen.

- 2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.  
The **Offset Request** screen appears.
- 3. Ensure that the **Main** tab is selected.
- 4. Enter the search criteria in the **Search Bill** zone.

**Note:**

The **Search Bill** zone appears when the offset request is in the **Draft** status.

The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 5. Click **Search**.  
A list of completed bills that meet the search criteria appears in the **Search Results** section.
- 6. Select the check box corresponding to a completed bill that you want to add to the offset request.
- 7. Click the **Add** button in the **Search Bill** zone.  
A message appears indicating that the bill is added to the offset request.

**Note:** You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

- 8. Click **OK**.  
The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

**Note:** The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see [C1-OFST-AMT](#) on page 1484.

## Editing an Offset Request

**Prerequisites**

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

**Procedure**

To edit an offset request:

- 1. Search for the offset request in the **Offset Request** screen.
- 2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.  
The **Offset Request** screen appears.
- 3. Ensure that the **Main** tab is selected.
- 4. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the offset request.
- **Characteristics** - Used to define the characteristics for the offset request.
- **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

**Note:** You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request.	Yes
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.  On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Adjustment Type</b> field.	
Comments	Used to specify additional information about the offset request.	No

**Note:** The **Edit** button appears when the offset request is in the **Draft** status.

- 5. Modify the required details in the **Main** section.
- 6. Define, edit, or remove characteristics of the offset request, if required.
- 7. Edit the offset amount of a debit or credit bill, if required.
- 8. Remove a debit or credit bill from the offset request, if required.
- 9. Click **Save**.  
The changes made to the offset request are saved.

## Defining a Characteristic for an Offset Request

### Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

### Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the offset request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Offset Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.

- 2. Enter the required details in the **Characteristics** section.
- 3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑️) icon corresponding to the characteristic.

- 4. Click **Save**.  
The characteristics are defined for the offset request.

## Editing the Offset Amount of a Debit or Credit Bill

**Prerequisites**

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

**Procedure**

To edit the offset amount of a debit or credit bill:

- 1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

The **Offset Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Total Debit Offset Amount	Displays the total offset amount of all debit bills which are included in the offset request.	Not applicable
Total Credit Offset Amount	Displays the total offset amount of all credit bills which are included in the offset request.	Not applicable
Total Offset Amount	Displays the sum of the total debit and credit offset amount.	Not applicable

In addition, this section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Indicates the debit or credit bill which is added to the offset request.	Not applicable
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.	Not applicable
Due Date	Displays the date when the debit or credit bill is due for payment.	Not applicable
Debit Balance	Displays the sum of the unpaid debit line items of a bill.	Not applicable
Credit Balance	Displays the sum of the open credit line items of a bill	Not applicable
Credit Bill	Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable.	No
	<b>Note:</b> You cannot select this option for a debit bill for which no credit line item exists, and therefore, in such case, this option is disabled.	
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.	Not applicable
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset.	Not applicable
	<b>Note:</b> This field appears when the offset request is a cross-currency offset request.	
Offset Amount	Used to specify the amount which you want to offset from the debit or credit bill.	Yes
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).	Not applicable
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.	Not applicable

The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

- 2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
- 3. Click **Save**.  
The changes made to the offset request are saved.

For more information on...	See...
How to remove a debit or credit bill from an offset request	<a href="#">Removing a Debit or Credit Bill from an Offset Request</a> on page 1531

## Removing a Debit or Credit Bill from an Offset Request

### Procedure

To remove a debit or credit bill from an offset request:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.
2. Click the **Delete** (🗑️) icon corresponding to the debit or credit bill that you want to remove from the offset request.  
A message appears confirming whether you want to delete the bill.

**Note:** The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills. It does not appear corresponding to the primary debit or credit bill. This is because you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

3. Click **OK**.  
The debit or credit bill is removed from the offset request.

### Related Topics

For more information on...	See...
How to edit an offset request	<a href="#">Editing an Offset Request</a> on page 1526

## Deleting an Offset Request

### Procedure

To delete an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to delete.  
The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Offset Request** zone.  
A message appears confirming whether you want to delete the offset request.

**Note:** The **Delete** button appears when the offset request is in the **Draft** status.

5. Click **OK**.  
The offset request is deleted.

# Submitting an Offset Request

### Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

### Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to submit.  
The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Approval Required</b> option is selected in the respective offset request type	A To Do of the <b>C1-OFSRQ</b> To Do type is created and sent to the approver. The status of the offset request is then changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> option is not selected in the respective offset request type and the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)	The status of the offset request is changed to <b>Deferred Processing</b> . On executing the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, the system considers the offset requests which are in the <b>Deferred Processing</b> status. If the <b>Transfer Adjustment</b> option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to <b>Frozen</b> . However, if the <b>Transfer Adjustment</b> option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to <b>Frozen</b> . Finally, the status of the offset request is changed to <b>Processed</b> .

If...	Then
	<b>Note:</b> If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to <b>Open</b> . However, if the entire match type entity amount is offset, the status of the corresponding match event is set to <b>Balanced</b> . For more information on how the offset amount is distributed, see <a href="#">C1-OFST-DIST</a> on page 1475.
The <b>Approval Required</b> option is not selected in the respective offset request type and the number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)	<p>If the <b>Transfer Adjustment</b> option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. ## Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

**Note:** The system will not allow you to approve or reject an offset request submitted by you.

### Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

### Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the Offset Request screen	<ol style="list-style-type: none"><li>a. Search for the offset request in the <b>Offset Request</b> screen.</li><li>b. In the <b>Search Results</b> section, click the link in the <b>Offset Request Information</b> column corresponding to the offset request which you want to review.</li></ol>
Approve an offset request through the To Do List screen	<ol style="list-style-type: none"><li>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li><li>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li><li>c. Enter <b>C1-OFSRQ</b> in the <b>To Do Type</b> field.</li><li>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li><li>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li><li>f. Click the link in the <b>Message</b> column corresponding to the To Do of the offset request that you want to review.</li></ol>

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)	The status of the offset request is changed to <b>Deferred Processing</b> . On executing the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, the system considers the offset requests which are in the <b>Deferred Processing</b> status. If the <b>Transfer Adjustment</b> option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to <b>Frozen</b> . However, if the <b>Transfer Adjustment</b> option is not selected in the respective offset request type, the system creates the offset adjustments

If...	Then
	using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to <b>Frozen</b> . Finally, the status of the offset request is changed to <b>Processed</b> .
	<b>Note:</b> If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to <b>Open</b> . However, if the entire match type entity amount is offset, the status of the corresponding match event is set to <b>Balanced</b> . For more information on how the offset amount is distributed, see <a href="#">C1-OFST-DIST</a> on page 1475.
The number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)	If the <b>Transfer Adjustment</b> option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to <b>Frozen</b> . However, if the <b>Transfer Adjustment</b> option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to <b>Frozen</b> . Finally, the status of the offset request is changed to <b>Processed</b> .
	<b>Note:</b> If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to <b>Open</b> . However, if the entire match type entity amount is offset, the status of the corresponding match event is set to <b>Balanced</b> . For more information on how the offset amount is distributed, see <a href="#">C1-OFST-DIST</a> on page 1475.

**Note:** The **Approve** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

## Rejecting an Offset Request

### Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

**Note:** The system will not allow you to approve or reject an offset request submitted by you.

### Procedure

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the Offset Request screen	<p>a. Search for the offset request in the <b>Offset Request</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the link in the <b>Offset Request Information</b> column corresponding to the offset request which you want to review.</p>
Reject an offset request through the To Do List screen	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</p> <p>The <b>To Do Type for User Search</b> window appears.</p> <p>c. Enter <b>C1-OFSRQ</b> in the <b>To Do Type</b> field.</p> <p>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>f. Click the link in the <b>Message</b> column corresponding to the To Do of the offset request that you want to review.</p>

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

- Note:** The **Reject** button appears when:
  - The offset request is in the **Approval In Progress** status.
  - A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.

5. Click **Save**.

The status of the offset request is changed to **Rejected**.

**Related Topics**

For more information on...	See...
How to search for an offset request	<a href="#">Searching for an Offset Request</a> on page 1509
<b>Offset Request</b> screen	<a href="#">Offset Request (Used for Viewing)</a> on page 1512
<b>Offset Request</b> zone	<a href="#">Offset Request</a> on page 1513

## Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request when the offset request is in the **Processed** status.

**Prerequisites**

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

**Procedure**

To cancel an offset request:

1. Search for the offset request in the **Offset Request** screen.

2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to cancel.

The **Offset Request** screen appears.

3. Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Unapply Reason	Used to indicate the reason why you want to cancel the offset request.	Yes
Comments	Used to specify additional information while canceling the offset request.	No

- Note:** The **Unapply** button appears when the offset request is in the **Processed** status.

4. Select the reason for canceling the offset request from the **Unapply Reason** list.

5. Click **Save**.

The system behaves in the following manner:

If...	Then...
The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the <b>C1-DFRUNAPLY</b> algorithm)	The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to <b>Unapplied Offset</b> .
The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the <b>C1-DFRUNAPLY</b> algorithm)	The system changes the status of the offset request to <b>Defer Unapplied</b> . On executing the <b>Offset Request Periodic Monitor (C1-OFSRQ)</b> batch, the system considers the offset requests which are in the <b>Defer Unapplied</b> status. The system then cancels the frozen transfer or offset adjustments of the offset request and changes the status of the offset request to <b>Unapplied Offset</b> .

## Viewing the Log of an Offset Request

**Procedure**

To view the log of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.  
The **Offset Request** screen appears.
3. Click the **Log** tab.  
The **Log** tab appears.
4. View the complete trail of actions performed on the offset request in the **Offset Request Log** zone.

**Related Topics**

## Adding a Log Entry for an Offset Request

**Procedure**

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.

- 2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request for which you want to add a log entry.  
The **Offset Request** screen appears.
- 3. Click the **Log** tab.  
The **Log** tab appears.
- 4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.  
The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the offset request.	Not applicable
Log Details	Used to specify additional comments for the offset request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.  
The log entry is added in the **Offset Request Log** zone.

## Funding Request

---

### Topics:

- [Prerequisites](#)
- [Funding Request \(Without Approval\) Status Transition](#)
- [Funding Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-FundingReq](#)
- [Funding Request Type](#)
- [Funding Request \(Used for Searching\)](#)
- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI\_BILL\_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI\_BILL\_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

**Note:** In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

**Note:** In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

**Note:** The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

**Note:** The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI\_BILL\_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount

in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1544.

## Prerequisites

---

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN\_RSN\_CD\_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1\_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1\_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Funding Request (Without Approval) Status Transition

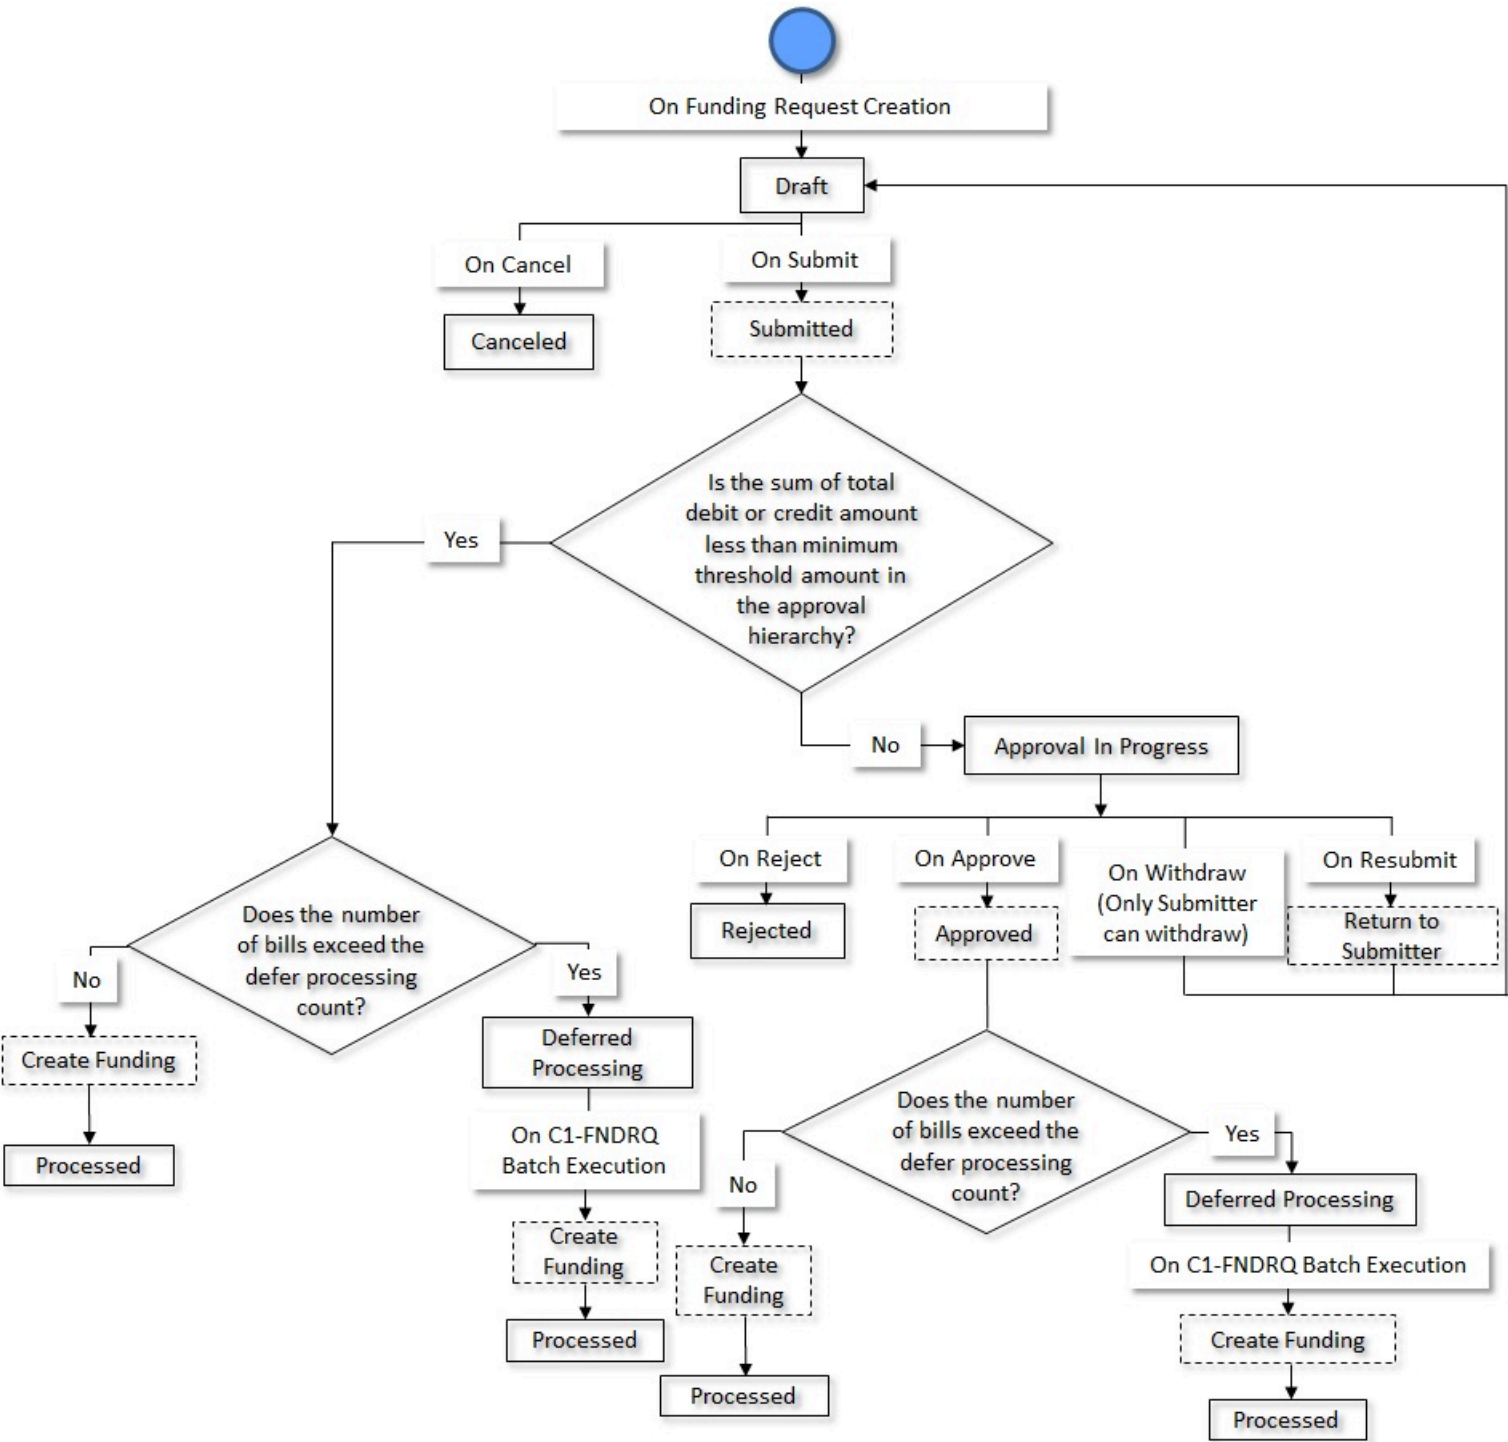

---

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

## Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

## Algorithms Used in C1-FundingReq

The following table lists the algorithm which is attached to the **C1-FundingReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FUNDINFO	C1-FUNDINFO	Refer to <a href="#">C1-FUNDINFO</a> on page 1547

The following table lists the algorithms which are used in the lifecycle of the **C1-FundingReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1364
Submitted	Enter	C1-FUNDSUBMT	C1-FUNDSUBMT	Refer to <a href="#">C1-FUNDSUBMT</a> on page 1547
Approval In Progress	Enter	C1-FUNDAPP	C1-FUNDAPP	Refer to <a href="#">C1-FUNDAPP</a> on page 1548

Processed	-	-	-	-
Canceled	Enter	C1-FUNDCANCL	C1-FUNDCANCL	Refer to <a href="#">C1-FUNDCANCL</a> on page 1550

## C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

## C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which

is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

**Note:** If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

## C1-FUNDAPP

---

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

**Note:** If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

## C1-FUNDAPRVD

---

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

**Note:** If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

## F1-TODOCOMPL

---

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

**Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

## F1-AT-RQJ

---

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-FNDRESUBM

---

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

## C1-FUNDVAL

---

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount - Garnishment Amount). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

## C1-FUNDAPAY

---

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI\_BILL\_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI\_BILL\_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI\_BILL\_ACH** table, the status of the record in the funding request is changed to **Error**.

## C1-FUNDADJCR

---

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

**Points to Note:**

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
  - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
  - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).
  - **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

## C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

## Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

**Note:** In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

**Note:** In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1551
- [Funding Request Type](#) on page 1551

## Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Funding Request Type</b> screen appears where you can edit the details of the funding request type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Funding Request Type</b> screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the funding request type.
	<b>Note:</b> You can delete a funding request type when you have not created a funding request using the funding request type.

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

## Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Field Name	Field Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Field Name	Field Description
	<p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Detailed Description	Displays additional information about the funding request type.
Status	<p>Indicates the status of the funding request type. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.
Default Funding Adjustment Type	<p>Indicates the adjustment type using which the funding adjustments must be created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.</p>
Default Garnishment Adjustment Type	<p>Indicates the garnishment adjustment type using which the garnishment adjustments must be created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears with the details of the respective adjustment type.</p>
Threshold Range Algorithm	<p>Indicates the threshold range for a bill based on the payments done for the bill.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p>
Defer Processing Count	<p>Displays the number of bills to determine if the funding request will be processed in deferred mode.</p> <p><b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b>, the funding request will be processed in real time (i.e. immediately).</p>
Approval Required	Indicates whether approval is required while creating the funding adjustments using the funding request type.
Approval Profile	<p>Indicates the approval profile which must be used to define approval hierarchy for the funding request type.</p> <p><b>Note:</b></p> <p>The <b>Approval Profile</b> field appears when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>Approval Profile</b> screen appears where you can view the details of the respective approval profile.</p>

Field Name	Field Description
Submitter To Do Type	Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.
	<b>Note:</b> The <b>Submitter To Do Type</b> field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.
	<b>Note:</b> The <b>Submitter To Do Role</b> field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.
Currency Conversion Adjustment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.
Currency Conversion Payment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.

- **Characteristics** - The **Characteristics** section lists the characteristics of the funding request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	Used to delete the funding request type.
	<b>Note:</b> You can delete a funding request type when you have not created a funding request using the funding request type.
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to the funding request type in the **Funding Request Type List** zone.

# Defining a Funding Request Type

**Prerequisites**

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

**Procedure**

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

- 4. Select the required funding request type business object from the respective field.
- 5. Click **OK**.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Defer Processing Count	<p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> You must specify the <b>C1-FNDSB To Do</b> type in the <b>Submitter To Do Type</b> field. The <b>Search</b>  icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears. This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

- 6. Enter the required details in the **Main** section.
- 7. Define characteristics for the funding request type, if required.
- 8. Click **Save**.  
The funding request type is defined.

How to define a characteristic for a funding request type	<a href="#">Defining a Characteristic for a Funding Request Type</a> on page 1560

**Defining a Characteristic for a Funding Request Type**

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Funding Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, you can search for a predefined characteristic value.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the funding request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the funding request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Funding Request Type

**Prerequisites**

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

**Procedure**

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the funding request type whose details you want to edit.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes
	<b>Note:</b>  The list includes only those currencies which are defined in the system.  If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (Q) icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (Q) icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Defer Processing Count	<p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> You must specify the <b>C1-FNDSB</b> To Do type in the <b>Submitter To Do Type</b> field.  The <b>Search</b>  icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The list includes only those To Do roles which are associated to the specified submitter To Do type.	
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (Q) icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (Q) icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

**Tip:** Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

- 5. Modify the details in the **Main** section, if required.
- 6. Define, edit, or remove characteristics of the funding request type, if required.
- 7. Click **Save**.  
The changes made to the funding request type are saved.

## Deleting a Funding Request Type

### Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the funding request type that you want to delete.

A message appears confirming whether you want to delete the funding request type.

**Note:** You can delete a funding request type when you have not created a funding request using the funding request type.

**Tip:** Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

5. Click **OK**.  
The funding request type is deleted.

## Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

### Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)

- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

**Procedure**

To copy a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Duplicate** (🔗) icon in the **Duplicate** column corresponding to the funding request type whose copy you want to create.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Defer Processing Count	<p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> You must specify the <b>C1-FNDSB To Do type</b> in the <b>Submitter To Do Type</b> field.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  This field appears when the <b>Approval Required</b> option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.	
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The list includes only those To Do roles which are associated to the specified submitter To Do type.	
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> option is selected.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

**Tip:** Alternatively, you can copy a funding request type by clicking the **Duplicate** button in the **Funding Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.  
The new funding request type is defined.

## Viewing the Funding Request Type Details

### Procedure

To view the details of a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the funding request type whose details you want to view.  
The **Funding Request Type** zone appears.
5. View the details of the funding request type in the **Funding Request Type** zone.

### Related Topics

## Funding Request (Used for Searching)

The **Funding Request** screen allows you to search for a funding request using various search criteria. It also allows you to create a funding request. It contains the following zone:

- [Search Funding Request](#) on page 1575

Through this screen, you can navigate to the following screen:

- [Funding Request \(Used for Viewing\)](#) on page 1580

## Search Funding Request

The **Search Funding Request** zone allows you to search for a funding request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a funding request using the funding request or bill details. The valid values are: <ul style="list-style-type: none"><li>• Request Details</li><li>• Bill Details</li></ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Created From	Used to search funding requests which are created from a particular date onwards.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Status	Used to search funding requests with a particular status. The valid values are:  <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul> <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Created To	Used to search funding requests which are created till a particular date.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
User ID	Used to search funding requests which are created by a particular user.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Funding Request Type	Used to search funding requests which are created using a particular funding request type.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Person Name	Used to search funding requests which includes bills of a particular person.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Funding Request ID	Used to search a particular funding request.  <b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	No
Creation Mode	Used to search funding requests which are created in a particular mode. The valid values are:  <ul style="list-style-type: none"> <li>• Automatic</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"><li>Manual</li></ul>	
	<b>Note:</b> This field appears when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Bill ID	Used to search funding requests which include a particular bill.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Bill Date From	Used to search funding requests which include bills that are created from a particular date onwards.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Alternate Bill ID	Used to search funding requests which include a particular bill.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Bill Date To	Used to search funding requests which include bills that are created till a particular date.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Division	Used to search funding requests which includes bills of accounts which belong to a particular division.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** You must specify at least one search criterion while searching for a funding request.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the funding request is created.

Column Name	Column Description
Funding Request Information	Displays information about the funding request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Funding Request</b> screen appears where you can view the details of the respective funding request.
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Deferred Processing</li><li>• Draft</li><li>• Processed</li><li>• Rejected</li></ul>
Total Debit Amount	Displays the total amount of the debit bills which are added in the funding request.
Total Credit Amount	Displays the total amount of the credit bills which are added in the funding request.
Created By	Indicates the user who has created the funding request.
Creation Mode	Indicates how the funding request is created. The valid values are: <ul style="list-style-type: none"><li>• Automatic</li><li>• Manual</li></ul>

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

# Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.  
The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of funding requests that meet the search criteria appears in the **Search Results** section.

## Creating a Funding Request

**Prerequisites**

To create a funding request, you should have:

- Funding request types defined in the application

**Procedure**

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.  
A sub-menu appears.
3. Click the **Add** option from the **Funding Request** sub-menu.

The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

4. Select the required funding request type from the respective field.
5. Click **OK**.  
The funding request is created in the **Draft** status.

## Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- [Funding Request - Main](#) on page 1581
- [Funding Request - Bills](#) on page 1587
- [Funding Request - Log](#) on page 1592

## Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- [Funding Request](#) on page 1581
- [Search Bill](#) on page 1584

### Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Funding Request Type</b> screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Deferred Processing</li><li>• Draft</li><li>• Processed</li><li>• Rejected</li></ul>
Status Reason	Indicates the reason why the funding request is rejected.
	<b>Note:</b> This field appears when the funding request is in the <b>Rejected</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the adjustment type using which the A/P adjustment is created against a credit bill.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information entered while rejecting the funding request.
	<b>Note:</b> This field appears when the funding request is in the <b>Rejected</b> status.

Field Name	Field Description
Creation Mode	Indicates whether the funding request is created automatically or manually. The valid values are: <ul style="list-style-type: none"><li>Automatic</li><li>Manual</li></ul>

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Credit Funding Amount	Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.
	<b>Note:</b> If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.
Total Debit Funding Amount	Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type.
	<b>Note:</b> If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request.
	<b>Note:</b> The <b>Edit</b> button appears when the funding request is in the <b>Draft</b> status.
Delete	Used to delete the funding request.
	<b>Note:</b> The <b>Delete</b> button appears when the funding request is in the <b>Draft</b> status.

Button Name	Button Description
Submit	Used to submit the funding request.
	<b>Note:</b> The <b>Submit</b> button appears when the funding request is in the <b>Draft</b> status.
Cancel	Used to cancel the funding request.
	<b>Note:</b> The <b>Cancel</b> button appears when the funding request is in the <b>Draft</b> status.
Approve	Used to approve the funding request.
	<b>Note:</b> The <b>Approve</b> button appears when: <ul style="list-style-type: none"><li>• The funding request is in the <b>Approval In Progress</b> status.</li><li>• A user with the approval To Do role is reviewing the funding request.</li></ul>
Reject	Used to reject the funding request.
	<b>Note:</b> The <b>Reject</b> button appears when: <ul style="list-style-type: none"><li>• The funding request is in the <b>Approval In Progress</b> status.</li><li>• A user with the approval To Do role is reviewing the funding request.</li></ul>
Re Submit	Used to request for resubmitting the funding request.
	<b>Note:</b> The <b>Re Submit</b> button appears when: <ul style="list-style-type: none"><li>• The funding request is in the <b>Approval In Progress</b> status.</li><li>• A user with the approval To Do role is reviewing the funding request.</li></ul>
Withdraw	Used to withdraw the funding request.
	<b>Note:</b> The <b>Withdraw</b> button appears when: <ul style="list-style-type: none"><li>• The funding request is in the <b>Approval In Progress</b> status.</li><li>• A user with the submitter To Do role is viewing the funding request.</li></ul>

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the funding request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

**Search Bill**

The **Search Bill** zone allows you to search for a bill using various search criteria. It appears when the funding request is in the **Draft** status and the creation mode is set to **Manual**. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"><li>• Bill Details</li><li>• Account Details</li><li>• Person Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b> (🔍) icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list. By default, the current date appears in this field.	
Alternate Bill ID	Used to search a particular bill. <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	No
Bill Date To	Used to search bills which are created till a particular date. <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list. By default, the current date appears in this field.	Yes
Bill Balance	Used to indicate whether you want to search bills with debit or credit balance. The valid values are: <ul style="list-style-type: none"> <li>Credit</li> <li>Debit</li> </ul> <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	No
Bill Due Date From	Used to search bills which are due from a particular date onwards. <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	No
Division	Used to search bills of accounts which belong to a particular division. <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	No
Bill Due Date To	Used to search bills which are due till a particular date. <b>Note:</b> This field appears when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	No
Account ID	Used to search bills of a particular account.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<b>Note:</b> This field appears when the <b>Account Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when the <b>Account Details</b> option is selected from the <b>Search By</b> list.
Person ID	Used to search bills which belong to a particular person.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when:
		<ul style="list-style-type: none"><li>• The <b>Person Details</b> option is selected from the <b>Search By</b> list.</li><li>• The person name is not specified in the search criteria.</li></ul>
Person Name	Used to search bills which are created for accounts of a particular person.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when:
		<ul style="list-style-type: none"><li>• The <b>Person Details</b> option is selected from the <b>Search By</b> list.</li><li>• The person ID is not specified in the search criteria.</li></ul>
Country	Used to search bills of persons who reside in a particular country.	No
	<b>Note:</b> This field appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Due Date	Displays the date when the bill is due for payment.
Outstanding Amount	Displays the unpaid amount of the bill.
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.

Column Name	Column Description						
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:						
	<table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)</td></tr></table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)
	Bill Type	Funding Amount for the Bill					
	Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)					
	Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)					
Person Name	Indicates the person to whom the bill belongs. In addition, this column has a context menu which helps in navigating to other screens in the application.						
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.						
Bill ID	Displays the bill ID.						
Defer Auto Pay	Indicates whether the <b>Defer Auto Pay</b> option is selected on the customer class of the account for which the bill is created. The valid values are: <ul style="list-style-type: none"><li>N</li><li>Y</li></ul>						

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the funding request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the funding request.

**Related Topics**

How to add a debit or credit bill to a funding request	<a href="#">Adding a Debit or Credit Bill to a Funding Request</a> on page 1593

## Funding Request - Bills

The **Bills** tab lists the bills which are added in the funding request. It contains the following zones:

- [Currency Statistics](#) on page 1588
- [Selected Bills](#) on page 1588
- [Funding Payment Details](#) on page 1591

**Note:** This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in debit.

- [Funding Adjustments](#) on page 1591

**Note:** This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in credit.

Currency Statistics

A funding request might include bills in different currencies. The **Currency Statistics** zone lists the sum total of various amount of bills which are created in the same currency. It contains the following columns:

Column Name	Column Description
Currency Code	Indicates the currency in which the sum total is calculated.
	<b>Note:</b> Here, the system lists those currencies in which the bills added to the funding request are created.
Total Outstanding Amount	Displays the sum of outstanding amount of all bills which are created in the respective currency.
Total Hold Amount	Displays the sum of hold amount of all bills which are created in the respective currency.
Total Garnishment Amount	Displays the sum of garnishment amount of all bills which are created in the respective currency.
Total Debit Funding Amount	Displays the sum of funding amount (which is in debit) of all bills which are created in the respective currency.
Total Credit Funding Amount	Displays the sum of funding amount (which is in credit) of all bills which are created in the respective currency.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the funding request. It contains the following columns:

Column Name	Column Description	
Bill Date	Displays the date when the bill is created.	
Person Identifier	Displays the primary identifier of the person for whom the bill is created.	
Person Country	Indicates the country where the person is located.	
Invoice Account Identifier	Displays the primary identifier of the account for which the bill is created.	
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:	
	Bill Type	Funding Amount for the Bill
	Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)
	Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)

Column Name	Column Description	
	<b>Bill Type</b>	<b>Funding Amount for the Bill</b>
		request) - Garnishment Amount (set on the bill in a funding request)
	<b>Note:</b> The funding amount is calculated in the bill's currency.	
Currency Code	Indicates the currency in which the funding amount is calculated.	
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.	
Offset Amount	Displays the amount of the bill which is offset against another bill through an offset request.	
Garnishment Amount	Displays the amount of the credit bill which is transferred to the garnishment contracts of the account through the funding request.	
Original Outstanding Amount	Displays the original outstanding amount when the bill was added in the funding request.	
Bill ID	Displays the bill ID.	
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.	
Open Bills	Indicates whether there are any unpaid bills of the person. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	
Garnishment Contract	Indicates whether the garnishment contract exists for the account. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	
	<b>Note:</b> This column appears when the funding request is in the <b>Draft</b> status. The data appears in this column when a credit bill is added to the funding request. It has a link. On clicking the link, the <b>Edit Garnishment Details</b> screen appears where you can transfer the funding amount from the credit bill to one or more garnishment contracts of the account.	
Garnishment	On clicking the <b>View</b> (🔗) icon, the <b>View Garnishment Details</b> screen appears where you can view the funding amount transferred to the different garnishment contracts of the account.	
	<b>Note:</b> This column does not appear when the funding request is in the <b>Draft</b> status. The <b>View</b> (🔗) icon appears in this column when the funding request is in the <b>Processed</b> status.	
Record Status	Indicates the status of the bill record in the funding request. The valid values are:	

Column Name	Column Description
	<ul style="list-style-type: none"><li>Excluded</li><li>Invalid</li><li>Masked</li><li>Pending</li><li>Processed</li><li>Valid</li><li>Error</li></ul>
Threshold Range	Indicates the threshold range for a bill which is calculated based on the number of payments made for the bill in the specified period.
Person Name	Indicates the person whose bill is added in the funding request.
Bill Information	Displays the information about the bill.
Split Banking	Indicates whether the split automatic payment feature is used for the account. The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>
Funding Currency Amount	Displays the funding amount which is converted in the funding currency defined on the account.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Delete	Used to delete a bill from the funding request.
	<b>Note:</b> The <b>Delete</b> button appears when the funding request is created manually and it is in the <b>Draft</b> status.
Edit	Used to exclude a debit or credit bill from the funding request.
	<b>Note:</b> The <b>Edit</b> button appears when the funding request is created automatically and it is in the <b>Draft</b> status.
Hold	Used to create a hold request for one or more bills. However, you cannot select more than 20 bills. On activating or releasing a hold request, the funding amount is automatically updated in the funding request.
	<b>Note:</b> The <b>Hold</b> button appears only when the funding request is in the <b>Draft</b> status.
Offset	Used to create an offset request for a bill. On processing or unapplying an offset request, the funding amount is automatically updated in the funding request.
	<b>Note:</b> The <b>Offset</b> button appears when the funding request is in the <b>Draft</b> status.

A check box appears corresponding to each bill when the funding request is in the **Draft** status. On selecting the check box, you can delete the bill from the funding request. You can also select multiple bills at the same time. In addition, you

can select the check box corresponding to the column header. This allows you to delete all bills listed in the respective page from the funding request.

On clicking the **Broadcast** (📡) icon corresponding to a debit or credit bill, the **Funding Payment Details** or **Funding Adjustments** zone appears, respectively.

**Note:** The **Broadcast** icon does not appear when the funding request is in the **Draft** status.

You can filter the list using various search criteria (such as, **Bill ID**, **Alternate Bill ID**, **Record Status**, **Bill Balance**, **Funding Amount From**, **Person ID**, **Funding Amount To**, **Currency**, **Funding Amount Threshold Range**, and **Country**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

**Funding Payment Details**

The **Funding Payment Details** zone lists the payment events which are created for a debit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Payment Amount	Displays the amount for which automatic payment is created.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

**Funding Adjustments**

The **Funding Adjustments** zone lists the funding and garnishment adjustments which are created for a credit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the funding or garnishment adjustment.

Column Name	Column Description
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Adjustment Amount	Displays the adjustment amount.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Funding Request - Log

The **Log** tab contains the following zone:

- [Funding Request Log](#) on page 1592

### Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the funding request was rejected by the approver.
	<b>Note:</b> The data appears in this column when the funding request is in the <b>Rejected</b> status.

**Note:** You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

## Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

### Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

**Note:**

The **Search Bill** zone appears when the funding request is in the **Draft** status.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.  
A message appears indicating that the bill is added to the funding request.

**Note:** You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.  
The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

## Deleting a Debit or Credit Bill from a Funding Request

### Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to delete from the funding request.
5. Click the **Delete** button in the **Selected Bills** zone.  
A message appears confirming whether you want to delete the bill from the funding request.

**Note:** The **Delete** button appears when the funding request is in the **Draft** status.

6. Click **OK**.  
The debit or credit bill is deleted from the funding request.

## Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

**Prerequisites**

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN\_RSN\_CD\_FLG** lookup field

**Procedure**

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to exclude from the funding request.
5. Click the **Edit** button in the **Selected Bills** zone.

The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Bill Information	Displays the information about the bill.	Not applicable						
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable						
Funding Amount	<div>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</div> <table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)</td></tr></table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)	Not applicable
Bill Type	Funding Amount for the Bill							
Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)							
Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)							
Status	<div>Used to indicate the status of the record in the funding request. The valid values are:</div> <ul style="list-style-type: none"><li>Excluded</li><li>Invalid</li><li>Masked</li><li>Pending</li><li>Processed</li><li>Valid</li></ul>	Yes						
Cancel Reason	<div>Used to indicate the reason why you want to exclude the bill from the funding request.</div> <div><b>Note:</b> The list includes only those values which are defined in the <b>CAN_RSN_CD_FLG</b> lookup field.</div>	<div>Yes (Conditional)</div> <div><b>Note:</b> This field is required when you want to exclude the bill from the funding request.</div>						

**Note:** The **Edit** button appears when the creation mode of the funding request is set to **Automatic** and the funding request is in the **Draft** status.

6. Select the **Excluded** option from the **Status** field.
7. Select the required cancel reason from the respective field.
8. Click **Save**.  
The bill is excluded from the funding request. The status of the bill record in the funding request is set to **Excluded**.

Editing a Funding Request

Prerequisites

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Edit** button in the **Funding Request** zone.

The **Edit Funding Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request.
- **Characteristics** - Used to define the characteristics for the funding request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill.	Yes (Conditional)
	<b>Note:</b>  The <b>Search</b> (🔍) icon appears corresponding to the <b>Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.  In the <b>Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b> .	<b>Note:</b> This field is required while creating an A/P adjustment against a credit bill.
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	created when the amount from the credit bill is transferred to the garnishment contract of the account.	<b>Note:</b> This field is required while creating garnishment adjustments for a credit bill.
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.  In the <b>Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b> .	
Comments	Used to specify additional information about the funding request.	No

**Note:** The **Edit** button appears when the funding request is in the **Draft** status.

- 4. Modify the details of the funding request, if required.
- 5. Define, edit, or remove characteristics of the funding request, if required.
- 6. Click **Save**.  
The changes made to the funding request are saved.

How to define a characteristic for a funding request	<a href="#">Defining a Characteristic for a Funding Request</a> on page 1597

**Defining a Characteristic for a Funding Request**

**Prerequisites**

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

**Procedure**

To define a characteristic for a funding request:

- 1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.  
The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Funding Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the funding request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, you can search for a predefined characteristic value.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the funding request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the funding request, click the **Delete** (🗑) icon corresponding to the characteristic.

## Cancelling a Funding Request

**Prerequisites**

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

**Procedure**

To cancel a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.  
The **Funding Request** screen appears.
- Click the **Cancel** button in the **Funding Request** zone.

The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request.	Yes
	<b>Note:</b> The list includes only those reasons which are defined for the <b>Canceled</b> status of the <b>C1-FundingRequest</b> business object in the <b>Status Reason</b> screen.	

**Note:** The **Cancel** button appears when the funding request is in the **Draft** status.

- Select the cancellation reason from the **Status Reason** list.
- Click **Save**.  
The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

## Submitting a Funding Request

### Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

### Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to submit.  
The **Funding Request** screen appears.
3. Click the **Submit** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...						
The <b>Approval Required</b> option is selected in the funding request type using which the funding request is created	It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:						
	<table><tr><th>If...</th><th>Then...</th></tr><tr><td>The sum total is less than the minimum threshold amount in the approval hierarchy</td><td>The system automatically approves the funding request and changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.</td></tr><tr><td>The sum total is equal to or greater than the threshold amount specified at the</td><td>The system changes the status of the funding request to <b>Approval In Progress</b>. It creates a To</td></tr></table>	If...	Then... ## Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

**Note:** The system will not allow you to approve, reject or resubmit a funding request submitted by you.

### Procedure

To approve a funding request:

1. Do either of the following:

If you want to...	Then...
Approve a funding request through the Funding Request screen	<ol style="list-style-type: none"><li>a. Search for the funding request in the <b>Funding Request</b> screen.</li><li>b. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</li></ol>
Approve a funding request from the To Do List screen	<ol style="list-style-type: none"><li>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li><li>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li><li>c. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</li><li>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li><li>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li><li>f. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</li></ol>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to <b>Approval In Progress</b> . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.

If...	Then...
The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy	<p>The system changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is executed, it checks whether there are any funding requests in the <b>Deferred Processing</b> status. If so, it changes the status of the funding request to <b>Create Funding</b>.</p> <p>Once the status of a funding request is changed to <b>Create Funding</b>, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the <b>CI_BILL_ACH</b> table. Then, on executing the <b>Create Automatic Payments and Refunds (APAYCRET)</b> batch, the system creates automatic payment and payment event for such bill.</p> <p><b>Note:</b> The funding and garnishment adjustments are created in the <b>Frozen</b> status.</p>

**Note:** The **Approve** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

**Related Topics**

For more information on...	See...
How to search for a funding request	<a href="#">Searching for a Funding Request</a> on page 1578
<b>Funding Request</b> screen	<a href="#">Funding Request (Used for Viewing)</a> on page 1580

## Rejecting a Funding Request

**Prerequisites**

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Note:

While rejecting a funding request, you need to specify the reason why you want to reject the funding request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To reject a funding request:

1. Do either of the following:

If you want to...	Then...
Reject a funding request through the Funding Request screen	<div>a. Search for the funding request in the <b>Funding Request</b> screen.</div> <div>b. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</div>
Reject a funding request from the To Do List screen	<div>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</div> <div>A list appears.</div> <div>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</div> <div>The <b>To Do Type for User Search</b> window appears.</div> <div>c. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</div> <div>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</div> <div>The <b>To Do List</b> screen appears.</div> <div>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</div> <div>f. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</div>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

The **Reject Funding Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the funding request.	Yes
	<b>Note:</b> The list includes only those reasons which are defined for the <b>Rejected</b> status of the <b>C1-FundingRequest</b> business object in the <b>Status Reason</b> screen.	
Comments	Used to specify additional information while rejecting the funding request.	No

Note: The **Reject** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.

5. Click **Save**.  
The status of the funding request is changed to **Rejected**.

## Requesting to Resubmit a Funding Request

**Procedure**

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
<b>Request for resubmitting a funding request through the Funding Request screen</b>	<p>a. Search for the funding request in the <b>Funding Request</b> screen.</p> <p>b. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</p>
<b>Request for resubmitting a funding request from the To Do List screen</b>	<p>a. Click the <b>Menu</b> link in the <b>Application</b> toolbar.</p> <p>A list appears.</p> <p>b. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</p> <p>The <b>To Do Type for User Search</b> window appears.</p> <p>c. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</p> <p>d. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>e. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>f. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</p>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the funding request for approval, then click the **Re Submit** button in the **Funding Request** zone.

The **Resubmit Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

**Note:** The **Re Submit** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.  
A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

**Related Topics**

## Withdrawing a Funding Request

**Prerequisites**

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

**Procedure**

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to withdraw.  
The **Funding Request** screen appears.
3. If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.  
The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed when the submitter To Do role is associated with the To Do type specified in the approval profile.

**Note:** The **Withdraw** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

# Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

### Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

**Note:** The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

### Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding to a credit bill whose funding amount you want to transfer to a garnishment contract of the account.

The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

5. Enter the required details in the **Edit Garnishment Details** screen.
6. If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add (+)** icon and then repeat step 5.

**Note:** However, if you want to remove a garnishment record from the funding request, click the **Delete (🗑)** icon corresponding to the garnishment record.

7. Click **Save**.  
The changes made to the funding request are saved.

## Viewing the Garnishment Details of a Credit Bill

### Procedure

To view the garnishment details of a credit bill:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, click the **Broadcast**  icon in the **Garnishment** column corresponding to the credit bill whose garnishment details you want to view.

The **View Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Info	Indicates the credit bill whose garnishment details you are viewing.

In addition, this screen contains the following columns:

Column Name	Column Description
Garnishment Contract	Indicates the garnishment contract of the account against which amount from the credit bill is transferred.
Garnishment Amount	Displays the amount which is transferred to the garnishment contract.

### Note:

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View**  icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

## Viewing the Payments Created Through a Funding Request

### Procedure

To view the payments created through a funding request:

- 1. Search for the funding request in the **Funding Request** screen.
- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.  
The **Funding Request** screen appears.
- 3. Click the **Bills** tab.  
The **Bills** tab appears.
- 4. In the **Selected Bills** zone, click the **Broadcast** (📡) icon corresponding to a debit bill whose payment details you want to view.  
The **Funding Payments Details** zone appears.

**Note:** The **Broadcast** (📡) icon appears when the funding request is in the **Processed** status.

- 5. View the payments created for the debit bill through the funding request in the **Funding Payments Details** zone.

**Note:** The data appears in the **Funding Payments Details** zone when the **Create Automatic Payments and Refunds (APAYCRET)** batch is executed to create the automatic payment and payment event for the debit bill. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

**Viewing the Adjustments Created Through a Funding Request**

**Procedure**

To view the adjustments created through a funding request:

- 1. Search for the funding request in the **Funding Request** screen.
- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.  
The **Funding Request** screen appears.
- 3. Click the **Bills** tab.  
The **Bills** tab appears.
- 4. In the **Selected Bills** zone, click the **Broadcast** (📡) icon corresponding to a credit bill whose adjustment details you want to view.  
The **Funding Adjustments** zone appears.

**Note:** The **Broadcast** (📡) icon appears when the funding request is in the **Processed** status.

- 5. View the A/P adjustments and garnishment adjustments (if any) created for the credit bill through the funding request in the **Funding Adjustments** zone.

## Viewing the Log of a Funding Request

### Procedure

To view the log of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to view.  
The **Funding Request** screen appears.
3. Click the **Log** tab.  
The **Log** tab appears.
4. View the complete trail of actions performed on the funding request in the **Funding Request Log** zone.

## Adding a Log Entry for a Funding Request

### Procedure

To add a log entry for a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to edit.  
The **Funding Request** screen appears.
3. Click the **Log** tab.  
The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the funding request.	Not applicable
Log Details	Used to specify additional comments for the funding request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.  
The log entry is added in the **Funding Request Log** zone.

Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. A hold may be enforced due to various reasons, including natural calamities, disaster recovery, disputes, suspicious activity, pending investigations, uncleared checks, legal restrictions, and so on.

Oracle Revenue Management and Billing enables you to hold certain processes at the person, account, or bill level through a hold request. You need to specify a period (i.e., duration) for which the hold request is initiated. Depending on the entity level, you need to add the entities, such as persons, accounts, or bills in the hold request. You need to define a period for which you want to keep the entities on hold. The hold entity period should be within the hold request period. Similarly, depending on the entity level, you need to add the processes, such as bill generation, overdue, auto pay, funding, delinquency, or refund, respectively, that you want to keep on hold for the entity through the hold request. The system will hold the process for the entity when the entity date range falls within the respective process date range. You can create multiple hold requests for the same entity with different hold reasons.

# Prerequisites

To setup the hold request feature, you need to do the following:

- Define the required hold request types in the system
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive a To Do while submitting a hold activation or release request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive a To Do while requesting to resubmit a hold activation or release request for approval
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the **Environment Type** option type of the **SYSDT** feature configuration
- Set the **C1-HOLDSRCH** feature configuration
- Attach the **CI\_COPAICP** algorithm to the **Cancel Logic** system event of the respective overdue process templates
- Attach the **CI\_OE-NO-DEP** algorithm to the **Cancel Logic** system event of the respective overdue event type
- Define the values for the **HOLD\_PROCESS\_FLG** and **HOLD\_REASON\_FLG** lookup fields.
- Define the status reasons for the **Discarded**, **Rejected**, and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)**, **Hold Request Monitor (C1-HLMON)**, **Delete Pending Bills and its Bill Segments (C1-DELBI)**, and **Hold Request Entity Derivation Monitor (C1-HLDET)** batches to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

# Hold Request Lifecycle

While creating a hold request, you need to specify the hold request type using which you want to create the hold request. It is the hold request type which helps the system to determine the following:

- The hold request business object using which a hold request should be created through the hold request type.
- The processes which can be kept on hold for different entities through the respective hold requests.
- Whether approval process is required while activating and/or releasing the respective hold requests.
- Whether partial hold is allowed when a bill is kept on hold through the respective hold requests.

**Note:** You cannot create a past dated hold request, but you can surely create a future dated hold request.

Once a hold request is created, you can add more processes and entities before activating the hold request. You can then click the **Submit** button to activate the hold request. On activating a hold request, the system checks whether the number

of entities added in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities. However, if the number of entities added in the hold request exceeds the defer processing count, the system changes the status of the hold request to **Deferred Processing**. On executing the **C1-HLDRQ** batch, the status of the hold request is changed to **Active**.

You can optionally configure the approval process, if required, while activating the hold request. If the activation approval process is configured in the respective hold request type, the status of the hold request is changed to **Activation Approval In Progress**. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes to it. On approving the hold activation request, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities.

Note that all the selected processes of the entities may not be kept on hold on activating a hold request. Only when the entity date falls within the process date range and the process start date is earlier than the system date or batch business date, the system keeps the process of the respective entity on hold. You need to then execute the **C1-HLMON** batch at regular intervals. It will hold a process of an entity when the following conditions are met:

- Entity date falls within the process date range
- Process start date is earlier than the batch business date

The system enables you to manually release a hold request from the user interface. On manually releasing a hold request from the user interface, the system sets the hold request, hold entities, and hold processes end dates to the system date. In addition, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. You can optionally configure the approval process, if required, while releasing the hold request. If the release approval process is configured in the respective hold request type, the status of the hold request is changed to **Release Approval in Progress**. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes to it. On approving the hold release request, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities.

The system also automatically releases a hold request. On executing the **C1-HLMON** batch, it checks whether any active hold request's end date is earlier than the batch business date. If so, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. In addition, the release status reason is stamped corresponding to the hold request. The hold request, hold entity, and the hold process end dates are updated to the batch business date. Note that the entity and process end dates are updated only when their start date is not a future date.

A hold request goes through various statuses in its lifecycle. Note that lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object.

For more information on how to setup the hold request feature, see [Prerequisites](#) on page 1614.

# Hold Entities

Through a hold request, you can keep various entities, such as persons, accounts, or bills on hold. To keep the persons, accounts, or bills on hold, you need to set the entity level in the hold request to **Person**, **Account**, or **Bill**, respectively. The system enables you to keep the following processes on hold for the respective entity through a hold request:

Entity	Valid Hold Processes
Person	Bill Generation, Delinquency, and Funding
	<p><b>Note:</b></p> <p>If you keep the bill generation process on hold for a person, then the system will hold the bill generation process for all its immediate accounts.</p> <p>If you keep the delinquency process on hold for a person, then the system will hold the delinquency process for the person and its immediate accounts.</p> <p>If you keep the funding process on hold for a person, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount.</p>
Account	Auto Pay, Bill Generation, Delinquency, Funding, Overdue, and Refund
	<p><b>Note:</b></p> <p>You cannot select both the <b>Overdue</b> and <b>Delinquency</b> processes at the same time in the hold request. The <b>Overdue</b> process is valid for the financial services and health insurance domains, but the <b>Delinquency</b> process is valid only for the health insurance domain.</p> <p>If you keep the funding process on hold for an account, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount.</p> <p>If the auto pay process of an account is on hold, you cannot include any debit bill of the account in any funding request.</p> <p>On activating a hold request for an account, the system creates an alert for the account on the dashboard. On clicking the dashboard alert, the <b>Alerts</b> tab of the <b>Account</b> screen appears. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.</p>
Bill	Funding
	<p><b>Note:</b></p> <p>If the entity level is set to <b>Bill</b>, you can hold the funding process of only completed bills through the hold request.</p> <p>If you select the <b>Allow Partial Hold</b> for <b>Bill</b> option in the respective hold request type, you can hold the funding of partial outstanding amount of the bill through the hold request.</p> <p>If you want to hold the auto pay process for a bill, you need to use the <b>Stop Autopay</b> feature.</p>

While creating a hold request where the entity level is set to **Person**, you can select the **Hierarchy** option corresponding to each person included in the hold request. If the **Hierarchy** option is selected, the system keeps the respective processes on hold for all the accounts in the person’s hierarchy. Note that the system considers only the child persons and not the grandchild persons from the person’s hierarchy and then derives the accounts where the child person is the main customer. However, if the **Hierarchy** option is not selected, the system keeps the respective processes on hold only for the persons’ immediate accounts.

You can create multiple hold requests for the same entity with different hold reasons. If a bill is on hold through multiple hold requests with different hold reasons, then the maximum hold amount across the hold requests will be considered for the bill. Let us understand this with the help of an example.

Hold Request	Bill	Bill Outstanding Amount	Hold Amount
HR1	B1	100\$	50\$
HR2	B2	100\$	60\$
HR3	B3	-100\$	-30\$
HR4	B4	-100\$	-50\$

In this case, the hold amount for B1 would be 60\$ and the hold amount for B2 would be 50\$.

## Hold Processes

Through a hold request, you can keep the following processes on hold:

- **Auto Pay** – You can hold the auto pay process of an account. The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Auto Pay](#) on page 1618.
- **Bill Generation** – You can hold the bill generation process of a person or an account. The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see [Hold Bill Generation](#) on page 1622.
- **Delinquency** – You can hold the delinquency process of a person or an account. The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see [Hold Delinquency](#) on page 1626.

**Note:** The **Delinquency** process is tested and certified only for the health insurance domain and not for the financial services domain.

- **Funding** – You can hold the funding process of a person, account, or a bill. The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**. For more information, see [Hold Funding](#) on page 1631.
- **Overdue** – You can hold the overdue process of an account. The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Overdue Process](#) on page 1632.
- **Refund** – You can hold the refund process of an account. The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Refund](#) on page 1636.

## Hold Auto Pay

Oracle Revenue Management and Billing enables you to hold the auto pay process for an account through a hold request. If the auto pay process is kept on hold for an account, the system does not allow you to create automatic payments for the debit bills of the account.

**Note:** The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the auto pay process in a hold request, you need to specify the date range for which you want to hold the auto pay process for the accounts. The system enables you to hold the auto pay process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the auto pay process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the auto pay process for the account (the valid values are **Y** or **N**)
- Hold auto pay start date (required if the hold auto pay is set to **Y**)
- Hold auto pay end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

**Auto Pay Hold Activation**

On activating a hold request for an account, the system sets the defer auto pay date corresponding to the accounts whose date range falls within the auto pay process date range of the hold request. The defer auto pay date is set to the hold entity end date or auto pay process end date whichever is earlier. This means that the system will allow to create automatic payments for the accounts only after the respective defer auto pay date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the defer auto pay date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Auto Pay Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Auto Pay Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	30-Jan-2025	

Scenario		Start Date	End Date	Defer Auto Pay Date
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 is set to 15-Jan-2025 and the defer auto pay date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the auto pay process end date. However, in the scenario 2, the defer auto pay date for the Account 1 is set to 20-Jan-2025. This is because the auto pay process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the defer auto pay date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the defer auto pay date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the defer auto pay date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the defer auto pay date of the Account 3 is updated to 25-Jan-2025

In the scenario 4, the defer auto pay date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the defer auto pay date to the auto pay process end date when the entity end date is not specified in the hold request. In the scenario 5, the defer auto pay date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the defer auto pay date to hold request end date when both the entity end date and auto pay process end date are not specified in the hold request. In the scenario 6, the defer auto pay date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the defer auto pay date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the auto pay process or hold entity is later than the hold request start date, the defer auto pay date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the auto pay process or hold entity start date). For example,

Scenario		Start Date	End Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Auto Pay Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the defer auto pay date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the defer auto pay date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the defer auto pay date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

**Note:** The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

### Auto Pay Hold Release

On releasing a hold request for an account, the system sets the defer auto pay date to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI\_BILL\_ACH** table. Let us understand how the defer auto pay date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Auto Pay Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Defer Auto Pay Date
	Auto Pay Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the defer auto pay date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the defer auto pay date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The defer auto pay date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

**Note:** The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

## Hold Bill Generation

Oracle Revenue Management and Billing enables you to hold the bill generation process of a person or an account through a hold request. If the bill generation process is kept on hold for an account, the system does not allow you to create any bills for the account from the user interface or through a batch process. If the bill generation process is kept on hold for a person, the system does not allow you to create bills for any of its accounts from the user interface or through a batch process.

**Note:**  
The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

While adding the bill generation process in a hold request, you need to specify the date range for which you want to hold the bill generation process for the persons or accounts. The system enables you to hold the bill generation process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the bill generation process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the bill generation process for the person or account (the valid values are Y or N)
- Hold bill generation start date (required if the hold bill generation is set to Y)
- Hold bill generation end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

### Bill Generation Hold Activation

On activating a hold request for an account, the system sets the bill after date corresponding to the accounts whose date range falls within the bill generation process date range of the hold request. The bill after date is set to the hold entity end date or bill generation process end date whichever is earlier. This means that the system will allow to create bills for the accounts only after the respective bill after date.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for an account which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI\_BILL\_DEL\_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Let us understand how the bill after date is derived for an account that is kept on hold through a hold request.

The following table illustrates how the bill after date is derived for an account that is kept on hold through a hold request:

Scenario		Start Date	End Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Bill Generation Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Bill Generation Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025

Scenario		Start Date	End Date	Bill After Date
Scenario 6	Account 2	01-Jan-2025	-	31-Jan-2025
	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the bill after date for the Account 1 is set to 15-Jan-2025 and the bill after date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the bill generation process end date. However, in the scenario 2, the bill after date for the Account 1 is set to 20-Jan-2025. This is because the bill generation process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the bill after date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the bill after date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the bill after date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the bill after date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the bill after date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the bill after date to the bill generation process end date when the entity end date is not specified in the hold request. In the scenario 5, the bill after date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the bill after date to hold request end date when both the entity end date and bill generation process end date are not specified in the hold request. In the scenario 6, the bill after date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the bill after date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the bill generation process or hold entity is later than the hold request start date, then bill after date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the bill generation process or hold entity start date). For example,

Scenario		Start Date	End Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Mar-2025	-
	Bill Generation Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the bill after date for the Account 1 can be derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the bill after date for the Account 2 will be derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the bill after date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

**Note:**

The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On activating a hold request for a person, the system sets the bill after date to the entity end date or process end date whichever is earlier either for all the accounts in the person’s hierarchy or only for the persons’ immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person’s hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is derived for the person’s accounts is same as that of an individual account kept on hold through a hold request.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for a person which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI\_BILL\_DEL\_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** The bill after date then appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. Note that when the entity level is set to **Person**, the system always sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

**Bill Generation Hold Release**

On releasing a hold request for an account, the system clears the bill after date for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.

Let us understand how the bill after date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025				
	Auto Pay Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Bill Generation Process	05-Jan-2025	20-Jan-2025				

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Bill After Date
	Account 3	05-Jan-2025	20-Jan-2025				-
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	
	Bill Generation Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the bill after date for the Account 1 and Account 2 is cleared when the hold request is manually released on 10-Jan-2025. In the scenario 2, the bill after date for the Account 1 is cleared when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the bill after date for the Account 3 is not cleared when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The bill after date for the Account 3 is cleared when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

**Note:** The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On releasing a hold request for a person, the system clears the bill after date either for all the accounts in the person’s hierarchy or only for the persons’ immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person’s hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is updated for the person’s accounts is same as that of an individual account whose hold is released either manually or automatically.

**Note:** The bill after date is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately clears the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Note that when the entity level is set to **Person**, the system always clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

## Hold Delinquency

Oracle Revenue Management and Billing enables you to hold the delinquency process for a person or an account through a hold request. If the delinquency process is kept on hold for an account, the system does not allow you to continue the delinquency process (if any) created for the account. Similarly, if the delinquency process is kept on hold for a person, the system does not allow you to continue the delinquency process (if any) created for the person and its accounts.

**Note:**

The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

While adding the delinquency process in a hold request, you need to specify the date range for which you want to hold the delinquency process for the persons or accounts. The system enables you to hold the delinquency process while creating a hold request from the user interface or through the upload request feature. If you want to create a hold request

to hold the delinquency process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the delinquency process for the person or account (the valid values are **Y** or **N**)
- Hold delinquency start date (required if the hold delinquency is set to **Y**)
- Hold delinquency end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

**Delinquency Hold Activation**

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the delinquency process date range of the hold request. The postpone credit review until date is set to the hold entity end date or delinquency process end date whichever is earlier. If the postpone credit review until date stamped on the delinquent account is later than the system date, the system will then hold the delinquency process, if any, initiated for the account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Delinquency Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Delinquency Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the delinquency process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the delinquency process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the delinquency process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and delinquency process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the delinquency process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after delinquency process or hold entity start date). For example,

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Delinquency Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On activating a hold request for a person, the system sets postpone credit review until date to the entity end date or process end date whichever is earlier for the respective person and its immediate accounts (where the person is the main customer). If the postpone credit review until date does not exist for the person or if the postpone credit review until date already exists for the person but is earlier than the system date, then the postpone credit review until date is set to the entity end date or process end date whichever is earlier. However, if the postpone credit review until date already exists for the person but is later than the derived hold end date (i.e., entity end date or process end date whichever is earlier), then the postpone credit review until date of the person is not updated.

If the postpone credit review until date does not exist for the person's immediate account or if the postpone credit review until date already exists for the person's immediate account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's immediate account but is later than the derived hold end date, then the postpone credit review until date of the account is not updated.

If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. If the postpone credit review until date does not exist for the person's child person or if the postpone credit review until date already exists for the person's child person but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's child person but is later than the derived hold end date, then the postpone credit review until date of the child person is not updated.

Similarly, if the postpone credit review until date does not exist for the child person's account or if the postpone credit review until date already exists for the child person's account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the child person's account but is later than the derived hold end date, then the postpone credit review until date of the child person's account is not updated.

If the postpone credit review until date stamped on the delinquent person or account is later than the system date, the system will then hold the delinquency process, if any, initiated for the person or account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

**Note:**

On executing the **C1-DPMON** batch, the status of the delinquency process is then changed to **On Hold** when the algorithm (i.e., **C1-HLDELPRC**) attached to the **Hold Delinquency Process Criteria** system event in the respective delinquency process type is triggered.

The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the **Delinquency** process is added in the hold request, the system derives the entity level of the hold request. If the entity level is set to **Account**, the system checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, the system determines whether the number of entities in the hold request exceeds the defer processing count (specified in the respective hold request type). If the number of entities in the hold request is less than or equal to the defer processing count, the system sets the status of the hold request to **Active**. In addition, it immediately sets the postpone credit review until date for the respective account. However, if the number

of entities in the hold request is greater than the defer processing count, the system sets the status of the hold request to **Deferred Processing**. The system then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

However, if a group membership is billed to the account, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Similarly, if the entity level is set to **Person**, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective persons and its accounts in the deferred mode when the **C1-HLMON** batch is executed.

**Note:** You need to execute the **C1-DPMON** batch after executing the **C1-HLDRQ** or **C1-HLMON** batch.

### Delinquency Hold Release

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				-
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Delinquency Process	01-Jan-2025	20-Jan-2025				-
	Auto Pay Process	01-Jan-2025	25-Jan-2025				-
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				-
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	-
	Delinquency Process	05-Jan-2025	20-Jan-2025				-
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Delinquency Process	10-Jan-2025	25-Jan-2025				-
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until

date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On releasing a hold request for a person, the system sets the postpone credit review until date to the system date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the postpone credit review until date is updated for the person, its immediate accounts, its child persons, and its child persons' accounts is same as that of an individual account whose hold is released either manually or automatically.

**Note:** The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

The system does not consider the defer processing count while releasing a hold request where the delinquency process is kept on hold for an account or a person. The system sets the postpone credit review until date in the deferred mode when the **C1-HLMON** batch is executed.

**Note:** You need to execute the **C1-DPMON** batch after executing the **C1-HLMON** batch.

## Hold Funding

Oracle Revenue Management and Billing enables you to hold the funding process for a person, account, or a bill through a hold request. If the funding process is kept on hold for a bill, the system does not allow you to add the bill in a funding request. If the funding process is kept on hold for an account, the system does not allow you to add any bills of the account in a funding request. However, if the funding process is kept on hold for a person, the system does not allow you to add any bills of any of its accounts in a funding request.

**Note:** The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**.

While adding the funding process in a hold request, you need to specify the date range for which you want to hold the funding process for the persons, accounts, or bills. The system enables you to hold the funding process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the funding process for a person, account, or a bill through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the funding process for the person, account, or bill (the valid values are **Y** or **N**)
- Hold funding start date (required if the hold auto pay is set to **Y**)
- Hold funding end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

### Funding Hold Activation

On activating a hold request for a bill, the system does not allow you to add the bill in a funding request. On activating a hold request for an account, the system does not allow you to add any bills of the account in a funding request. However, on activating a hold request for a person, the system does not allow you to add any bills of any of its accounts in a funding request. In addition, if the **Hierarchy** option is selected, the system does not allow you to add any bills of the accounts in

the person's hierarchy in a funding request. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

### Funding Hold Release

On releasing a hold request for a bill, the system allows you to add the bill in a funding request. On releasing a hold request for an account, the system allows you to add any bills of the account in a funding request. However, on releasing a hold request for a person, the system allows you to add any bills of any of its accounts including its child persons' bills (if the **Hierarchy** option is selected) in a funding request.

## Hold Overdue Process

Oracle Revenue Management and Billing enables you to hold the overdue process for an account through a hold request. If the overdue process is kept on hold for an account, the system does not allow you to initiate an overdue process for the account. In addition, if an active overdue process (if any) exists for the account kept on hold, the system cancels the respective overdue process of the account and changes its status to **Inactive**.

### Note:

The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

The existing active overdue process (if any) is inactivated only when the following conditions are met:

- The **CI\_COPAICP** algorithm is attached to the **Cancel Logic** system event of the respective overdue process template.
- The **CI\_OE-NO-DEP** algorithm is attached to the **Cancel Logic** system event of the respective overdue event type.

While adding the overdue process in a hold request, you need to specify the date range for which you want to hold the overdue process for the accounts. The system enables you to hold the overdue process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the overdue process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the overdue process for the account (the valid values are **Y** or **N**)
- Hold overdue start date (required if the hold overdue is set to **Y**)
- Hold overdue end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

### Overdue Hold Activation

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the overdue process date range of the hold request. The postpone credit review until date is set to the hold entity end date or overdue process end date whichever is earlier. This means that the system will allow to initiate an overdue process for the account only after the respective postpone credit review until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Overdue Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Overdue Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Overdue Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the overdue process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the overdue process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request

is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the overdue process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and overdue process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the overdue process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the overdue process or hold entity start date). For example,

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Overdue Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

**Overdue Hold Release**

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Overdue Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Overdue Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Overdue Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

**Note:** The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

## Hold Refund

Oracle Revenue Management and Billing enables you to hold the refund process for an account through a hold request. If the refund process is kept on hold for an account, the system does not process the refund requests (if any) created for the account. Note that the system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

**Note:**  
The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the refund process in a hold request, you need to specify the date range for which you want to hold the refund process for the accounts. The system enables you to hold the refund process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the refund process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the refund process for the account (the valid values are **Y** or **N**)
- Hold refund start date (required if the hold refund is set to **Y**)
- Hold refund end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3105.

### Refund Hold Activation

On activating a hold request for an account, the system sets the hold refund until date corresponding to the accounts whose date range falls within the refund process date range of the hold request. The hold refund until date is set to the hold entity end date or refund process end date whichever is earlier. This means that the system will allow to process the refund request for the accounts only after the respective hold refund until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the hold refund until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Refund Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Refund Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Refund Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 is set to 15-Jan-2025 and the hold refund until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the refund process end date. However, in the scenario 2, the hold refund until date for the Account 1 is set to 20-Jan-2025. This is because the refund process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the hold refund until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the hold refund until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the hold refund until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the hold refund until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the hold refund until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the hold refund until date to the refund process end date when the entity end date is not specified in the hold request. In the scenario 5, the hold refund until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the hold refund until date to hold request end date when both the entity end date and refund process end date are not specified in the hold request. In the scenario 6, the hold refund until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the hold refund until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the refund process or hold entity is later than the hold request start date, the hold

refund until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after refund process or hold entity start date). For example,

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Refund Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the hold refund until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the hold refund until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the hold refund until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

**Note:** The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date for the respective accounts. In addition, the system changes the status of the non-final refund request (if any) for the respective accounts to **Hold**. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. In addition, the **C1-HLDRQ** batch changes the status of the non-final refund request (if any) for the respective accounts to **Hold**.

**Refund Hold Release**

On releasing a hold request for an account, the system sets the hold refund until date to the system date for the respective accounts. Let us understand how the hold refund until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Refund Process	01-Jan-2025	20-Jan-2025				

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Hold Refund Until Date
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Refund Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Refund Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the hold refund until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the hold refund until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The hold refund until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

**Note:** The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date to the system date for the respective accounts. In addition, the system immediately changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. In addition, the **C1-HLMON** batch changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status.

## Hold Mass Accounts Using Selection Criteria

Oracle Revenue Management and Billing enables you to add multiple accounts in a hold request by specifying their respective account ID. Alternatively, you can also specify the selection criteria to derive the list of accounts that you want to add in a hold request. The **Use Selection Criteria** option is available when you set the entity level to **Account** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from

the **Hold Request** screen. Instead, a section named **Account Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving accounts using the account, person, policy, or individual membership details. You can specify the criteria for deriving accounts using the policy or individual membership details only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**.

On saving a hold request with the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **Y**
- Creates the hold request in the **Entity Derivation Pending** status

**Note:** You cannot edit the account selection criteria when the hold request is in the **Entity Derivation Pending** status.

However, while saving a hold request without the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **N**
- Creates the hold request in the **Draft** status
